 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   208 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   9818605.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    208 Source(s);       5 Source Group(s); and     970
Receptor(s)

                 with:      5 POINT(s), including
                            0 POINTCAP(s) and      0 POINTHOR(s)
                  and:    203 VOLUME source(s)
                  and:      0 AREA type source(s)
                  and:      0 LINE source(s)
                  and:      0 RLINE/RLINEXT source(s)
                  and:      0 OPENPIT source(s)
                  and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
```

```
                and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    30.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                 ;
Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.4 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Terreno_Ops.err

 **File for Summary of Results:   Terreno_Ops.sum

Terreno Industrial-5 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Demolition (2025) - Unmitigated

3.3. Site Preparation (2025) - Unmitigated

3.5. Grading (2025) - Unmitigated

3.7. Building Construction (2025) - Unmitigated

3.9. Building Construction (2026) - Unmitigated

3.11. Infrastructure Improvements (2026) - Unmitigated

3.13. Paving (2026) - Unmitigated

3.15. Architectural Coating (2026) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Terreno Industrial-5
Construction Start Date	8/26/2025
Operational Year	2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.20
Precipitation (days)	17.8
Location	1855 139th St, Gardena, CA 90249, USA
County	Los Angeles-South Coast
City	Gardena
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4543
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	224	1000sqft	5.02	223,509	15,564	—	—	—

Parking Lot	6.21	Acre	6.21	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.45	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	29.9
AQ-PM	85.8
AQ-DPM	69.2
Drinking Water	39.5
Lead Risk Housing	91.2
Pesticides	68.6
Toxic Releases	97.8
Traffic	49.5
Effect Indicators	—

CleanUp Sites	98.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	99.0
Healthy Places Index Score for Project Location (b)	35.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	per site plan building and landscaping sf based on the gross total lot acreage based on the footprint total
Construction: Construction Phases	per construction questionnaire and client input
Construction: Off-Road Equipment	added two pumps to the building construction and infrastructure improvement phases to account for concrete pumps per client input
Construction: Trips and VMT	added four vendor trips to building construction and infrastructure improvement phases to account for two concrete trucks/day per client input

Operations: Vehicle Data	warehouse = warehouse truck trips parking lot = passenger vehicle trips
Operations: Fleet Mix	warehouse = warehouse truck trips parking lot = passenger vehicle trips
Construction: Off-Road Equipment EF	pump EF taken from CARB OFFROAD 2021 for Los Angeles County, 2025

Noise Summary

Table 1: Existing Noise Measurement Locations and Measurements						
Site	**Location**	**Measurement Period**	**Duration**	**Daytime Average (dBA L_{eq})**	**Nighttime Average (dBA L_{eq})**	**24-hour Average (dBA L_{eq})**

dBA = A-weighted decibel; L_{eq} = equivalent continuous sound level

1. Project construction equipment (including combustion engines), fixed or mobile, will be equipped with noise shielding and muffling devices consistent with manufacturers' standards or the Best Available Control Technology. Mufflers would reduce construction noise levels by a minimum of 10 dBA. Source: Federal Highway Administration, *Special Report - Measurement, Prediction, and Mitigation, Chapter 4 Mitigation*, 2017.
2. The ambient daytime noise levels were obtained by Kimley-Horn and Associates on January 28, 2025. Refer to Table 1 for noise measurement data.
3. Construction equipment was conservatively modeled from the Project site property line to the nearest sensitive receptor property line.
4. Noise levels calculated using the Federal Highway Administration, *Roadway Construction Noise Model*, 2006.
5. Combined noise levels calculated based on the logarithmic addition of decibels.

Table 3: Typical Construction Equipment Vibration Levels			
Equipment	**Reference Level PPV at 25 Feet (in/sec)[1]**	**PPV at 15 Feet (in/sec)[2,3,4]**	**PPV at 755 Feet (in/sec) [2,4]**
Excavator/Caisson Drill	0.089	0.19	<0.01
Building Damage Threshold	-	0.5	0.5
Human Perception Threshold	-	-	0.2
Exceeds Threshold?	-	**No**	**No**

PPV = peak particle velocity

1. Since the FTA does not provide vibration levels for an excavator, the FTA reference vibration level for a large bulldozer was conservatively used as a worst-case scenario.
2. The structure nearest the Project site are the commercial uses to the west. An excavator would be used as close as 15 feet from the commercial uses to the west of the Project site. The sensitive receptor nearest the Project site are the residential uses located 755 feet to the north. It is unknown how close the excavator would be used from the northern Project site property line. It is conservatively assumed the excavator would be used at the northern Project site property line, approximately 755 feet from the nearest sensitive receptors.
3. The commercial uses to the west of the Project site are not considered sensitive receptors; therefore, the human perception threshold is not applicable.
4. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from *Table 7-4 of the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018

Table 4: Operational Noise Levels

Receptor	Direction	Distance (feet)[1]	Reference Noise Level at 50 ft (dBA)	Noise Level at Receiver (dBA)[2]	Daytime Ambient Noise Level (dBA)[3]	Daytime Exterior Threshold[4]	Nighttime Ambient Noise Level (dBA)[3]	Nighttime Exterior Threshold[4]	Exceed Threshold?[5]
Mechanical Equipment

Truck and Loading Docks									
Residential	North	778	64.4[7]	40.6	53.3	55	N/A[8]	N/A[8]	**No**
Cargo Forklifts									
Residential	North	778	60.6[9]	36.8	53.3	55	N/A[8]	N/A[8]	**No**
Back-up Alarms									
Residential	North	778	73.3[10]	49.5	53.3	55	N/A[8]	N/A[8]	**No**
Parking									
Residential	North	775	61.0[11]	37.2	53.3	55	N/A[8]	N/A[8]	**No**
Composite Noise Level (Mechanical Equipment + Truck and Loading Docks + Cargo Forklifts + Back-up Alarms + Parking)									
Residential	North	N/A[12]	74.3[13]	50.4	53.3	55	N/A[8]	N/A[8]	**No**

dBA = A-weighted decibels; N/A = not applicable.

1. Distance measured from the noise source location to the nearest sensitive receptor.
2. Noise levels were calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$, where dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance.
3. The ambient noise levels were taken by Kimley-Horn and Associates, January 28 to January 29, 2025. Refer to Table 1 for noise measurement data.
4. The City's Municipal Code Section 8.36.040 establishes the exterior residential daytime (55 dBA) and nighttime (50 dBA) noise standard. Pursuant to the City's Municipal Code Section 8.36.040, the ambient noise level shall become the noise standard where the ambient noise level exceeds the established noise standards.
5. The higher noise level between the City's established exterior noise standard and the measured ambient noise level becomes the significance threshold.
6. Mechanical equipment reference noise level from Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, June 26, 2015.
7. Loading dock reference noise level measurements conducted by Kimley-Horn on December 18, 2018.
8. Pursuant to the City's Municipal Code Section 8.36.070, the noise sources associated with loading and unloading activities (i.e., truck and loading dock, cargo forklifts, back-up alarms, and parking) would cease at 10:00 p.m. Therefore, the City's exterior nighttime noise standard would only apply to the mechanical equipment.
9. Cargo forklift reference noise level from Noise Testing Workplace Noise Consultants, *Warehouse & Forklift Workplace Noise Levels*, https://www.noisetesting.info/blog/warehouse-forklift-workplace-noise-levels/, accessed February 2025.
10. Back-up beeper reference noise level from Environmental Health Perspectives, *Vehicle Motion Alarms: Necessity, Noise Pollution, or Both?*, https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3018517/, accessed February 2025.
11. Parking reference noise level from Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
12. A composite noise source distance is not applicable because the operational noise sources would be located at various locations throughout the Project site and from different distances to the nearest sensitive receptors.
13. The composite reference noise level was calculated based on the logarithmic decibel scale and the reference noise levels for mechanical equipment, truck and loading docks, cargo forklifts, back-up beepers, and parking noise levels identified above.

Table 5: Existing and Existing Plus Project Traffic Noise Levels

Project Driveway to 139th Street	64.6	64.9	64.9	0.3	0.0	**No**
139th Street to South of 139th Street	64.9	65.3	65.3	0.4	0.0	**No**
ADT = average daily trips; dBA = A-weighted decibels; CNEL = day-night noise level 1. Noise level at 100 feet from the roadway centerline. 2. A significant impact would result only if both the combined and incremental effects significance threshold has been exceeded. A 3-dBA increase is considered a "barely perceptible" difference and is used as the significance threshold.						
Source: Based on traffic data within the Terreno Gardena Traffic Assessment Report prepared by Armen Hovanessian Transportation Consulting, March 2025. Average daily traffic (ADT) volumes were calculated assuming PM peak hour * 10.						

Noise Measurement Field Data

Project:	Terreno Industrial	**Job Number:**	194091014
Site No.:	ST-1	**Date:**	1/28/2025
Analyst:	Dharma Truong and Jun Kim	**Time:**	9:48-9:58 AM
Location:	13650 Gramercy Place		
Noise Sources:	fire truck w/ emergency sirens, people talking, roadway traffic, car activity (starting, closing doors, lock beep), music, helicopter, and industrial back-up beepers		

Results (dBA):

Kimley»Horn

MEMORANDUM

To:	Kevin La, Planning Assistant City of Gardena Planning Department 1700 West 162nd Street, Gardena, CA 90247
From:	Max Bieber and Jessica Mauck, MA, RPA Kimley-Horn and Associates, Inc. 3801 University Ave., Ste 300, Riverside, CA 92501
Date:	May 21, 2025
Subject:	Historical Resources Assessment for the Terreno Industrial Center Project in the City of Gardena, Los Angeles County, California

---

At the request of the City of Gardena ("City"), Kimley-Horn and Associates, Inc. (Kimley-Horn) conducted a Historical Resources Assessment of the Terreno Industrial Center Project (Project) located in the City of Gardena, County of Los Angeles ("County"), California. This study was completed to support the City's review of potential impacts to historical resources within the property as a result of the proposed Project. A records search, literature review, and field survey were conducted for the Project site to identify and record any historic built environment resources that could be adversely impacted by the Project. In addition, recorded properties were evaluated to assess for potential eligibility for listing within the California Register of Historical Resources (CRHR) and to identify if they meet the definition of a "historical resource" under the California Environmental Quality Act (CEQA). One resource was identified as a result of this study, KHA-GAR-25-01, consisting of a historic-aged industrial building originally constructed in 1965 and extensively remodeled in 1978. Kimley Horn does not recommend KHA-GAR-25-01 as eligible for listing in the CRHR under Criteria 1-4.

Project Description

The Project site is within the northwestern portion of the City of Gardena near the corner of Western Avenue and West 139th Street (Figure 1). The Project site is comprised of eight lots tied together to form a single parcel (APN 4061-025-130) totaling 11.10 acres. The Project site is fully improved and occupied by two connected concrete tilt up warehouse buildings totaling 233,634 square feet (SF) with 35 loading docks to accommodate 53-foot truck trailers, as well as associated improvements and

landscaping; see Figure 2: Project Site. The existing warehouse buildings have been occupied by the same tenant, Z Gallerie, since 1997 and used as their corporate headquarters, administrative offices, manufacturing/ assembly and furniture warehousing storage for nationwide distribution.

The Project proposes to demolish all existing structures and site improvements and construct three multi-tenant industrial buildings totaling 223,509 SF and designed to accommodate a range of industrial uses for 15 tenants. Access improvements include relocating two existing driveways along West 139th Street, constructing one new driveway at the site's southeastern end with access to Western Avenue, and improving the existing driveway access to the Saint Andrews Place and 137th Street cul-de-sacs. Offsite improvements involve removing and replacing sidewalks and curbs along the Project site's 137th Street, 139th Street, and Western Avenue frontages, and establishing a street easement with the City's Public Works Department for the property's northeastern portion to create a 40-foot radius at the 137th Street cul-de-sac on West 137th Street.

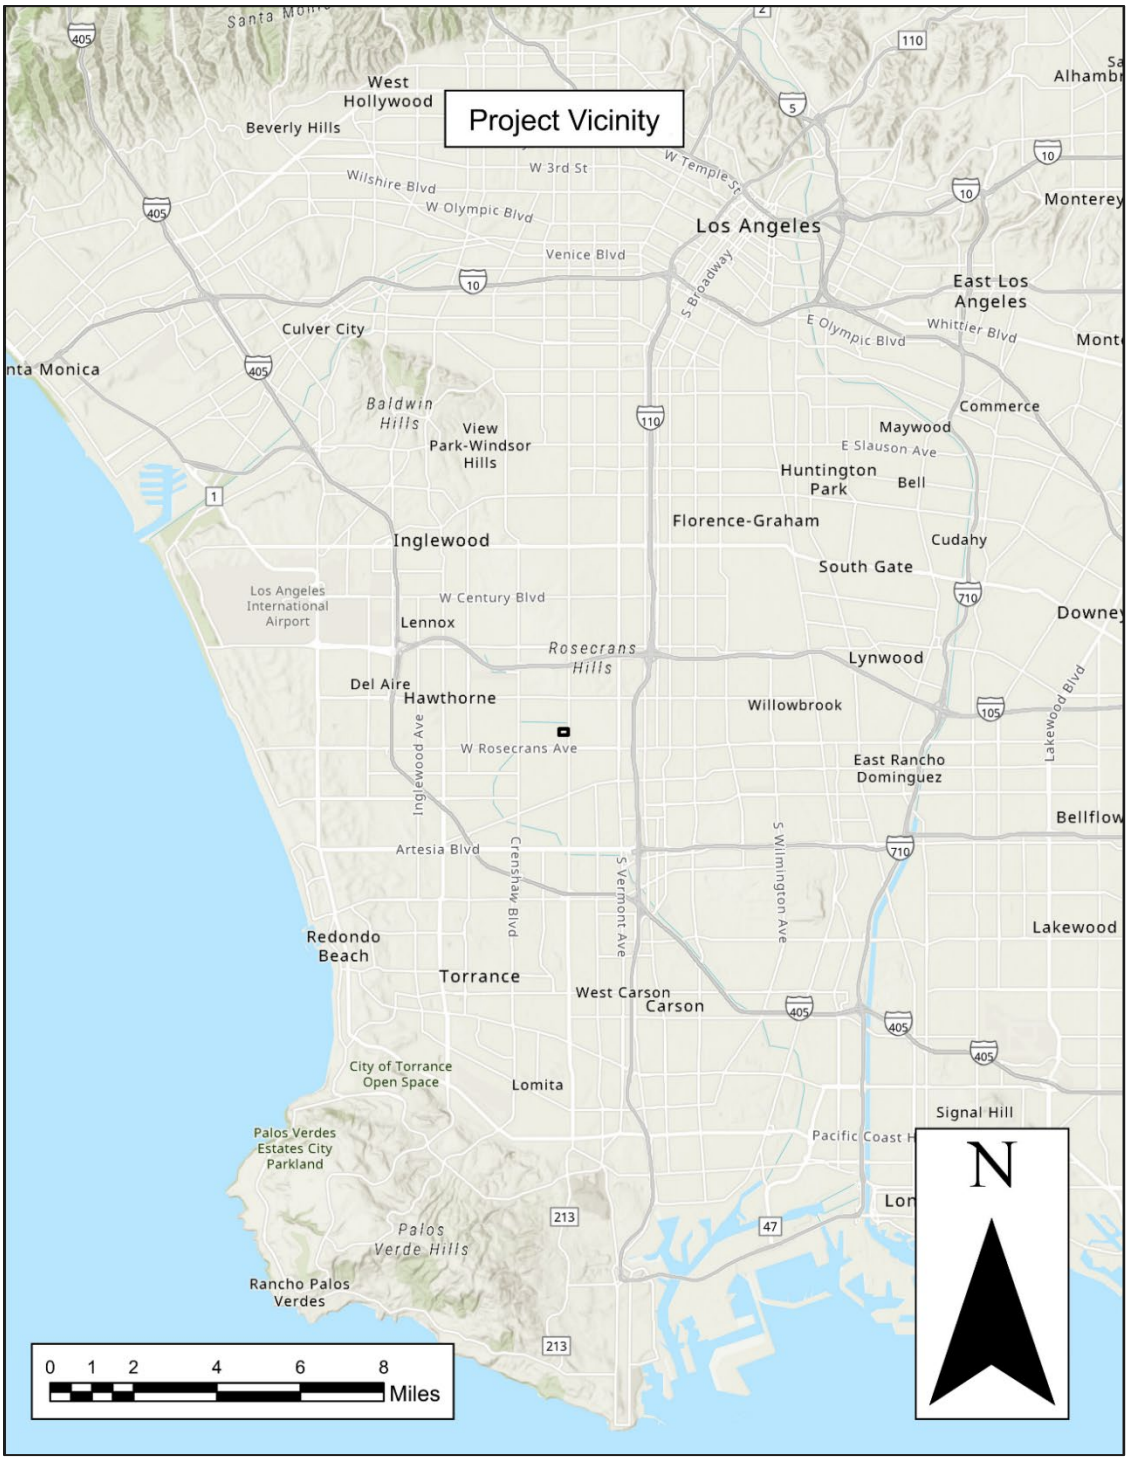

Figure 1: Project Vicinity

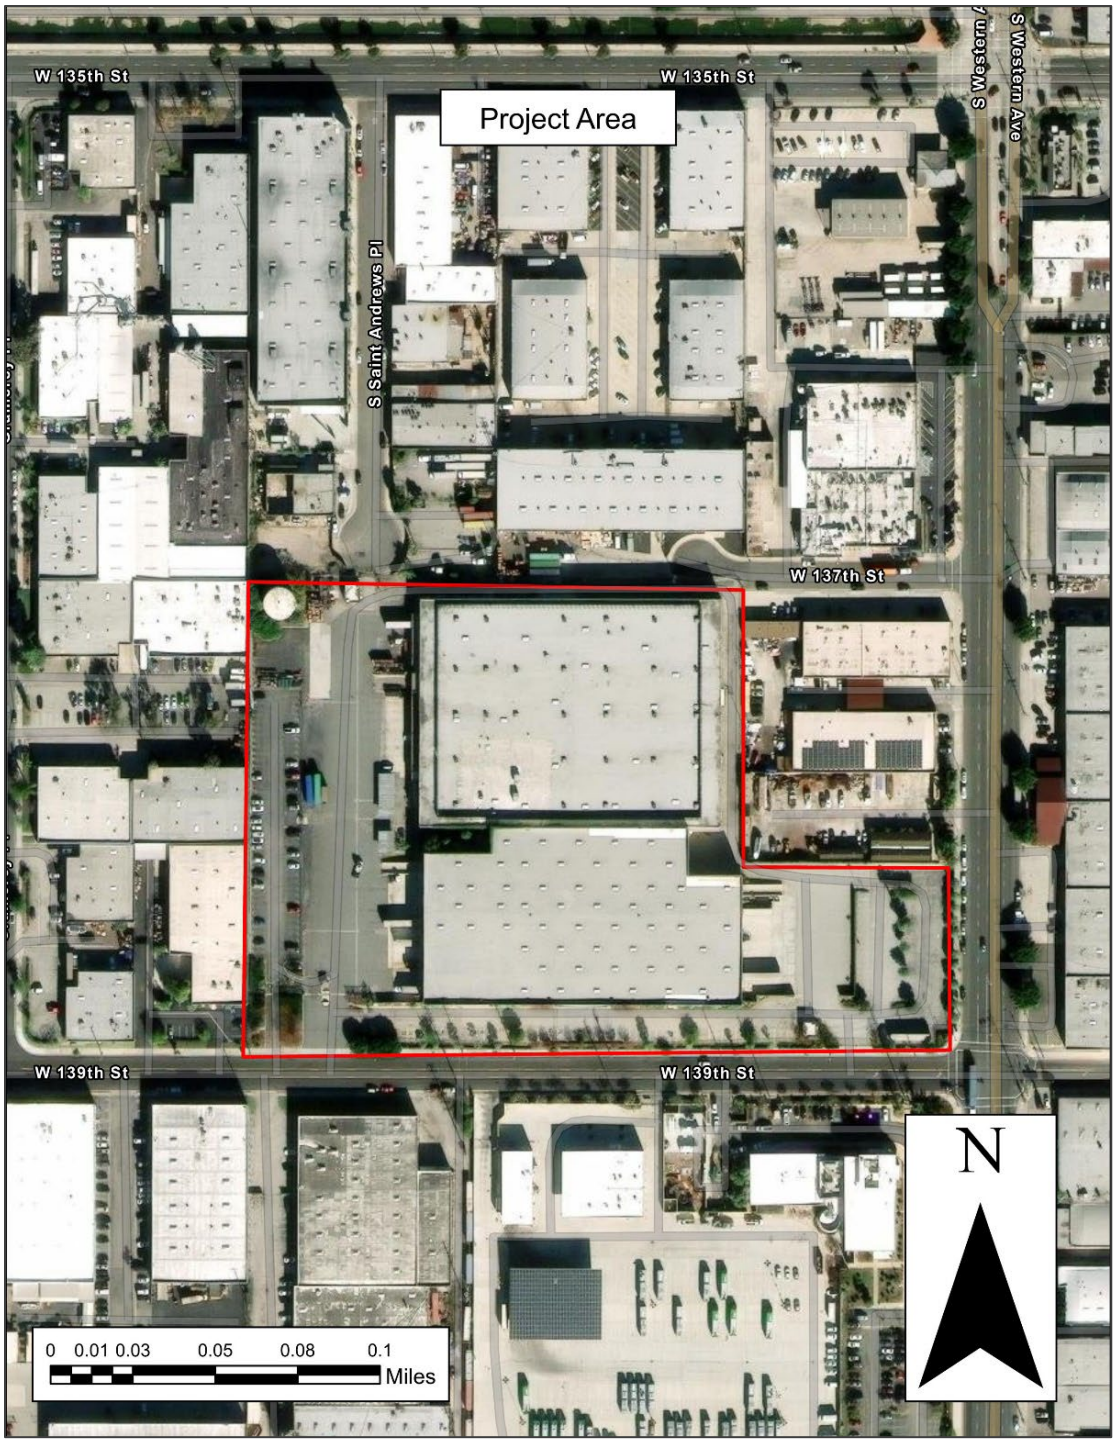

Figure 2: Project Site

Natural Setting

The Project is located within the Los Angeles Basin and is bounded on the northeast by the Puente Hills approximately 16 miles to the northeast and the Pacific Coast to the approximately 6 miles to the west and 11 miles to the south. The Compton Fault, which trends coast to coast northwest/southeast through Lomita, is located southwest of the Project site. The Dominguez Channel is located to the south, where it flows southeast toward Long Beach (USGS). The Project site naturally consists of younger Pleistocene-aged alluvial deposits (Qoa) (Saucedo et al. 2016). The area, like much of California, contains a unique and diverse climate and environment. This regional diversity provided Native Californians the ability to exploit a range of different plants, animals, and natural resources.

Cultural/Historical Setting

The proposed Project site is located within the ancestral territory of the Gabrieleño/Tongva. Although Alfred Kroeber recorded the territories of southern California tribes in 1925, the ancient territorial borders remain vague for two reasons: first, territorial boundaries were flexible and, secondly, indigenous borders and land use were not recorded until after European contact destroyed native lifeways. Although firm and defining borders cannot be known, archaeological, ethnographic, and historic evidence exists to support the prehistoric use by the Gabrieleño/Tongva (Gabrieleño [Tongva] Band of Mission Indians).

After the decimation of the Gabrieleño/Tongva population, including the removal of many to the San Gabriel Mission established in 1771, the Project site was included within the Rancho San Pedro Spanish land grant established in 1800. It was then later named the Rosecrans Rancho when 16,000 acres of the land grant was purchased by Union Army Major General William Starke Rosecrans after the Civil War. The area of present-day Gardena saw the beginnings of modern growth by the late 1800s and was officially incorporated as the City of Gardena in 1930. By that time, the City was well-established as a small farming community, with berries highlighted as its most popular crop (LA County Library). In 1936, the first card room was established within the City by Ernest J. Primm. At the same time, the City became home to many Japanese-Americans, both before and after their Federally-ordered internment from 1942 to 1945. This population, as well as many other blue-collar workers from the fringe of Los Angeles, played a large role in creating a fairly robust economy for the City through use of legal cardrooms from the 1930s to 1980, at which time the industry

suffered as a result of poker legalization in nearby areas (Ferrell 1998). During this same era, particularly in the mid-century, the City saw a shift away from agricultural to industrial uses as a result of its proximity to a robust freeway network, Los Angeles International Airport, coastal ports, and the general Los Angeles area. Today, the City of Gardena remains an active residential and business community, with the Japanese-American population contributing to one of the largest concentration of Japanese companies within the mainland United States in Los Angeles' South Bay (LA County Library).

Literature Review

Kimley-Horn cultural resources management staff conducted a cultural resources records search for the Project site plus a 0.5-mile buffer at the South Central Coastal Information Center (SCCIC) on January 16, 2025 (Figure 3: Project Site with the 0.5-mile Record Search Buffer). The record search noted that four (4) previous cultural studies have been conducted within 0.5 miles of the Project site, however, none that intersected with the Project site (Appendix A: SCCIC Record Search Results). One (1) previously recorded cultural resource was identified within the 0.5-mile buffer, 19-190623, located at 13200 S. Western Avenue, 0.35 miles northwest of the Project site. The resource consists of a professional building constructed in the Modern/Contemporary style, originally constructed in 1961.

In addition to the records search at the SCCIC, Kimley-Horn reviewed available historical and topographic maps and aerial imagery to ascertain the level of existing disturbance, as well as to identify the presence of any built historic resources, within the Project site. Historic topographic maps from 1896 show the Project was undeveloped and located at the base of a small hill. By 1927, the Project site had been developed as part of the Dycer Airport (Figure 4: 1927 Commerce Department Airway Bulletin depicting Dycer Airport).

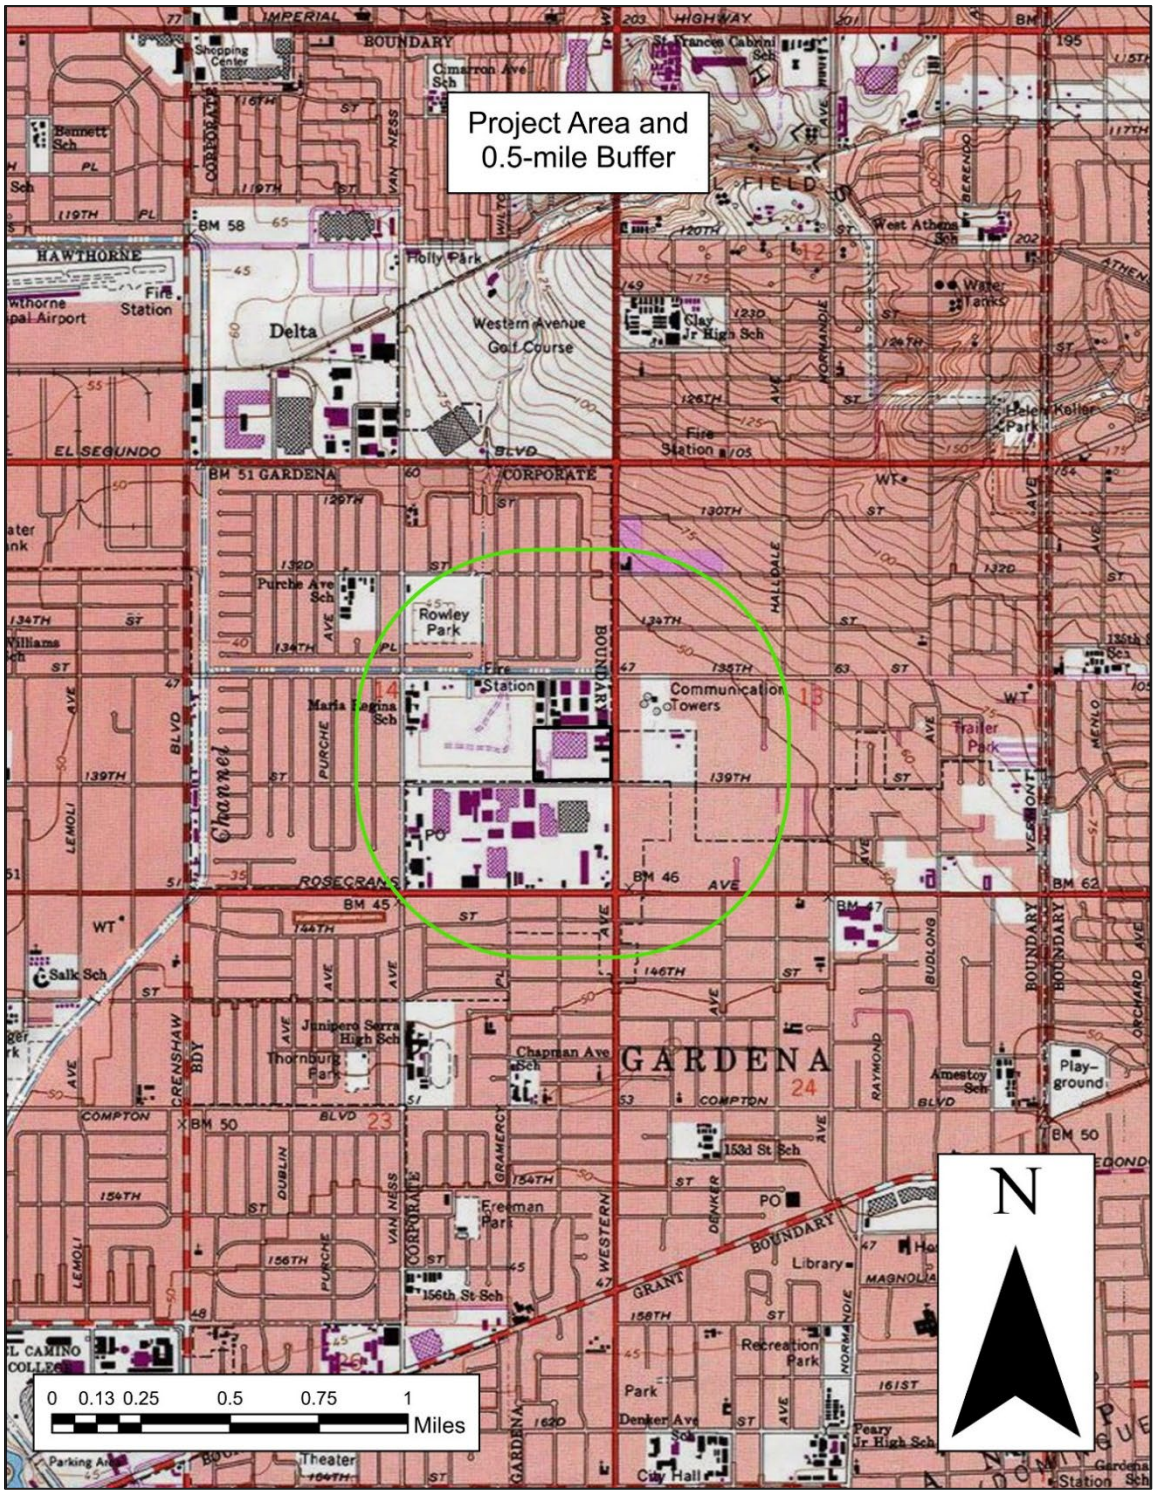

Figure 3: Project Site with the 0.5-mile Record Search Buffer

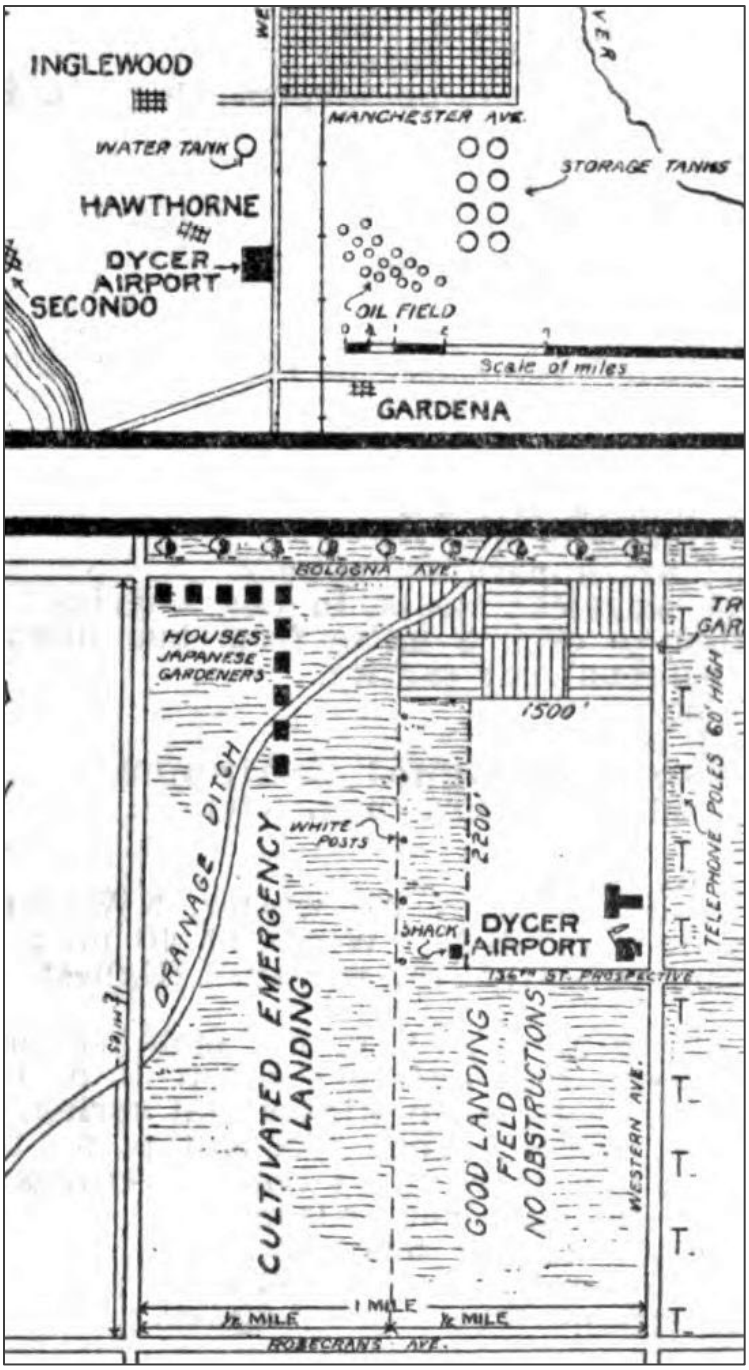

Figure 4: 1927 Commerce Department Airway Bulletin depicting Dycer Airport

Dycer Airport was developed by Charles Dycer and was damaged by flooding in 1930 (Figure 5: Flooded Dycer Airport, circa 1930 (Freeman 2016), Freeman 2016). By 1939, the Airport was renamed to Western Avenue Airport and consisted of three runways in an "X" configuration. The airport flooded once again in 1940 (Figure 6: Flooded Western Avenue Airport, 12/24/1940, Freeman 2016). By 1946, the airport was again renamed to "Gardena Valley Airport." In a 1950 aerial photo, the Gardena Valley Airport is shown having an east/west configuration with the largest runway being 2,600 feet in length (Figure 7: Gardena Valley Airport, Aerial view looking north, 1950). The 1952 aerial imagery shows the Project site was still a part of the airport and included the southeast portion of the airfield and two hangars (Figure 8: 1952 Historic Aerial Imagery).

By 1954, the airfield had ceased operations, and the Project site had been redeveloped with a quarter-mile oval racetrack known as Gardena Stadium. The Stadium operated from 1954 to 1962 and hosted various events, including National Association for Stock Car Auto Racing (NASCAR) races (Figures 9: Race at Gardena Stadium, circa 1958 and Figure 10: 1963 Historic Aerial Imagery). In 1965, the racetrack was demolished, and an industrial warehouse was constructed in its place, which remains on the Project site today (Freeman 2016). The 1972 aerial imagery shows the redeveloped Project site with the 1965 industrial warehouse building, adjacent parking lot, and water feature. It also showed one additional building present in the southwest corner of the Project site, though it was demolished sometime between 1980 and 1985 (Figures 11: 1972 Historic Aerial Imagery, Figure 12: 1980 Historic Aerial imagery, and Figure 13: 1985 Historic Aerial Imagery). Around that same time, a water tower was constructed in the northwest corner of the Project site and a guard booth was constructed at the south entrance of the Property, both of which remain on the property (Figure 13). The Project site only had minimal changes until 2003, when a second industrial warehouse building was constructed immediately south of the existing warehouse (Figure 14: 2003 Historic Aerial Imagery). The site remains in a similar condition today as it did after 2003 modifications (Figure 15: 2022 Historic Aerial Imagery).

Field Survey

Kimley-Horn cultural resources management staff conducted a field survey of the Project site on January 28, 2025, to document historic-aged built environment resources on the property. Four buildings/structures were located within the Project site, though only one building, a warehouse constructed in 1965, was identified as a

historic aged resources during review of the literature (Figures 16: Aerial Imagery Outlining KHA-GAR-25-01 and Figure 17: Loading Area, Western Façade of KHA-GAR-25-01). This resource was recorded during the field survey as KHA-GAR-25-01 (Appendix B: Site Records).

Figure 17: Loading Area, Western Façade of KHA-GAR-25-01

Site Description

Prior to development of the Project site as an industrial warehouse facility, the Project site functioned as an airport from 1927 until 1954, and then as an automobile racetrack until 1962. It was then developed for industrial use, to include the construction of KHA-GAR-25-01. This resource was recorded as a large, rectangular industrial building that was originally constructed in the vernacular style with a wooden frame, a concrete foundation, and a mixture of stucco/wood cladding (Appendix B). Records did not identify the original architect or designer, however records did note that the building was re-constructed from its original 1965 construction with an effective year of 1978 (LA County Assessor). It was developed as a part of a large-scale shift in the immediate area's land use to industrial, which was a consequence of its location to the greater Los Angeles area, including shipping ports and the Los Angeles International Airport, and a large freeway network (LA County Library).

Evaluation

As a part of this study, KHA-GAR-25-01 was evaluated for eligibility for listing in the CRHR. To be eligible for listing in the CRHR, a resource must meet at least one of the following criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
2. Is associated with the lives of persons important to local, California, or national history.
3. Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values.
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

Though the City of Gardena has not yet developed a Citywide Historic Context Statement under which to evaluate historic built environment resources in relation to the above-referenced criteria, the nature and location of KHA-GAR-25-01 indicates it would likely fall under a theme related to mid-century industrial growth within the City. However, research did not indicate this resource was particularly significant in its association with this period and is not otherwise associated with individuals or events that have made a significant contribution to broader California history. As such, the Project site is not recommended eligible for listing in the CRHR under Criteria 1 or 2. Additionally, research did not identify the original designer/architect of the building, and its construction in the vernacular does not embody any particular characteristics that would otherwise indicate that it is of architectural value. As such, the Project site is not recommended eligible for listing in the CRHR under Criterion 3. Furthermore, the resource is a well-known resource type that is not likely to yield information important to history and, as such, is not recommended eligible for listing under Criterion 4.

In addition to its lack of recommended eligibility under CRHR criteria, it is important to note that the structure's re-development in 1978 greatly compromised its physical integrity and, despite maintaining the same general footprint, the building is no longer representative of its original 1965 construction. As such, this resource is not recommended eligible for listing in the CRHR and, consequently, it does not meet the definition of a "historical resource" under CEQA.

Recommendations

Kimley-Horn did not identify any "historical resources" within the Project site as a part of the Historical Resources Assessment. Additionally, though this assessment was focused on the presence of historic built environment resources, the history of development and physical impacts to the Project site indicate a low likelihood for the presence of intact archaeological resources. However, it is recommended that Project include conditions that outline process for the inadvertent discovery and treatment of archaeological resources, as well as conditions outlining the process for inadvertent discovery of human remains referenced in California State Health and Safety Code 7050.5 and Public Resources Code Section 5097.98. The City's standard Condition of Approval for the Inadvertent Discovery of Unknown Archaeological Resources and applicable language included in Gardena Municipal Code (GMC) 18.42.210 is below:

1. Native American/Tribal Cultural Resources
    a. If Native American or tribal cultural resources are found on the site, the Applicant shall enter into a cultural resources treatment agreement with a local Native American tribe traditionally and culturally affiliated with Gardena that is acknowledged by the Native American Heritage Commission, which shall address the following:
        i. Treatment and disposition of cultural resources;
        ii. Designation, responsibilities, and participation of professional tribal monitors during grading, excavation and ground disturbing activities;
        iii. Project grading and development scheduling;
        iv. Terms of compensation for the tribal monitors;
        v. Treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on site;
        vi. Tribal monitor's authority to stop and redirect grading in order to evaluate the significance of any potential resources discovered on the property, and to make recommendations as to treatment; and
        vii. The Applicant's agreement to relinquish ownership of all cultural resources, including all archaeological artifacts that are found on the project area, to the tribe for proper treatment and disposition; and the Applicant's agreement that all tribal sacred sites are to be avoided and preserved.

2. Archaeological Resources
    a. If any archaeological materials are encountered during the course of Project development, all further development activity in the vicinity of the materials shall halt and the services of an archaeologist shall then be secured by contacting the South Central Coastal Information Center (657-278-5395) located at California State University Fullerton, or a member of the Society of Professional Archaeologist (SOPA) or a SOPA-qualified archaeologist, who shall assess the discovered material(s) and prepare a survey, study, or report evaluating the impact;
    b. The archaeologist's survey, study or report shall contain a recommendation(s), if necessary, for the preservation, conservation, or relocation of the resource; and
    c. The Project Applicant shall comply with the recommendations of the evaluating archaeologist, as contained in the survey, study, or report.
    d. Project development activities may resume once copies of the archaeological survey, study or report are submitted to:

        SCCIC Department of Anthropology
        McCarthy Hall 477
        CSU Fullerton
        800 North State College Boulevard
        Fullerton, CA 92834

    e. Prior to building permit issuance, Applicant shall submit a letter to the case file indicating what, if any, archaeological reports have been submitted, or a statement indicating that no material was discovered.
    f. A covenant and agreement binding the Applicant to this condition shall be recorded prior to the issuance of a grading permit.

3. Human Remains
    a. In compliance with state law, if human remains are unearthed, the project developer, pursuant to State Health and Safety Code Section 7050.5, will contact the county coroner and ensure no further disturbance occurs until the county coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98.
    b. If the remains are determined to be of Native American descent, the Native American Heritage Commission (NAHC) must be notified within twenty-four hours.

c. Pursuant to State Health and Safety Code Section 7050.5, if human remains are encountered unexpectedly during construction demolition and/or grading activities, it is required that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California PRC Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed:
    i. Stop immediately and contact the County Coroner:
    1104 N. Mission Road
    Los Angeles, CA 90033
    323-343-0512
    (8 a.m. to 5 p.m.Monday through Friday) or 323-343-0714 (after hours, Saturday, Sunday, and holidays)
    ii. If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American.
    iii. The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
    iv. If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

Sincerely,

Max Bieber

d. UTM: (Give more than one for large and/or linear resources) Zone 11S , 378801 mE/ 3752602 mN

e. Other Locational Data: (e.g., parcel #, directions to resource, elevation, decimal degrees, etc., as appropriate)
APN: 4061-025-130

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject property includes one industrial building constructed in 1965. This resource is a large, rectangular industrial building that was originally constructed in the vernacular style with a wooden frame, a concrete foundation, and a mixture of stucco/wood cladding. Records did not identify the original architect or designer, though did note that the building was re-constructed from its 1965 construction with an effective year of 1978. It was developed as a part of a large-scale shift in the immediate area's land use to industrial, which was a consequence of its location to the greater Los Angeles area, including shipping ports and the Los Angeles International Airport, and a large freeway network.

Period of Significance N/A **Property Type** Industrial building **Applicable Criteria** N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Though the City of Gardena has not yet developed a Citywide Historic Context Statement under which to evaluate historic built environment resources, the nature and location of KHA-GAR-25-01 indicates it would likely fall under a theme related to mid-century industrial growth within the City. However, research did not indicate this resource was particularly significant in its association with this period, and is not otherwise associated with individuals or events that have made a significant contribution to broader California history. As such, the property is not recommended eligible for listing in the CRHR under Criteria 1 or 2. Additionally, research did not identify the original designer/architect of the building, and its construction in the vernacular does not embody any particular characteristics that would otherwise indicate it is of architectural value. As such, the property is not recommended eligible for listing in the CRHR under Criterion 3. Furthermore, the resource is a well-known resource type that is not likely to yield information important to history and, as such, is not recommended eligible for listing under Criterion 4. In addition to its lack of recommended eligibility under CRHR criteria, it is important to note that the structure's re-development in 1978 greatly compromised its physical integrity and, despite maintaining the same general footprint, the building is no longer representative of its original 1965 construction. As such, this resource is not recommended eligible for listing in the CRHR and, consequently, it does not meet the definition of a "historical resource" under CEQA.

(This space reserved for official comments.)

The subject property is located within the boundaries of the 43,000-acre Rancho San Pedro land grant awarded to Juan Jose Dominguez in 1800. In the late 19th century, this portion of the Rancho was purchased by Major General William Rosecrans and renamed Rancho Rosecrans. In the late 19th and early 20th century, Rancho Rosecrans changed private ownership several times and became known for strawberry farming. During this time, the Strawberry Park neigborhood was developed south of the subject property. In 1927, the subject property was developed into an airport by Charles Dycer, and continued to function as an airport until 1954 when the airport ceased operations. The Property was then redeveloped as a quarter-mile oval racetrack known as Gardena Stadium and operated racing events from 1954-1962. In 1965, the racetrack was demolished and the industrial warehouse building was constructed in its place. Since 1997, the building has been leased by "Z Gallery," a furniture retailer, and has been used as a warehouse and outlet store. In 2003, a second warehouse of similar size was constructed immediately south of the historic warehouse.

INTRODUCTION

This traffic assessment study is prepared for the proposed Terreno Gardena warehouse development project located at 1855 W. 139th Street in Gardena, California. The methodology and base assumptions used in the analysis were established based on discussions with the City of Gardena staff. This study evaluates the potential project-specific transportation effects of the proposed project. The analysis focuses on traditional mobility considerations as well as safety, sustainability, smart growth, and the reduction of greenhouse gas emissions.

PROJECT DESCRIPTION

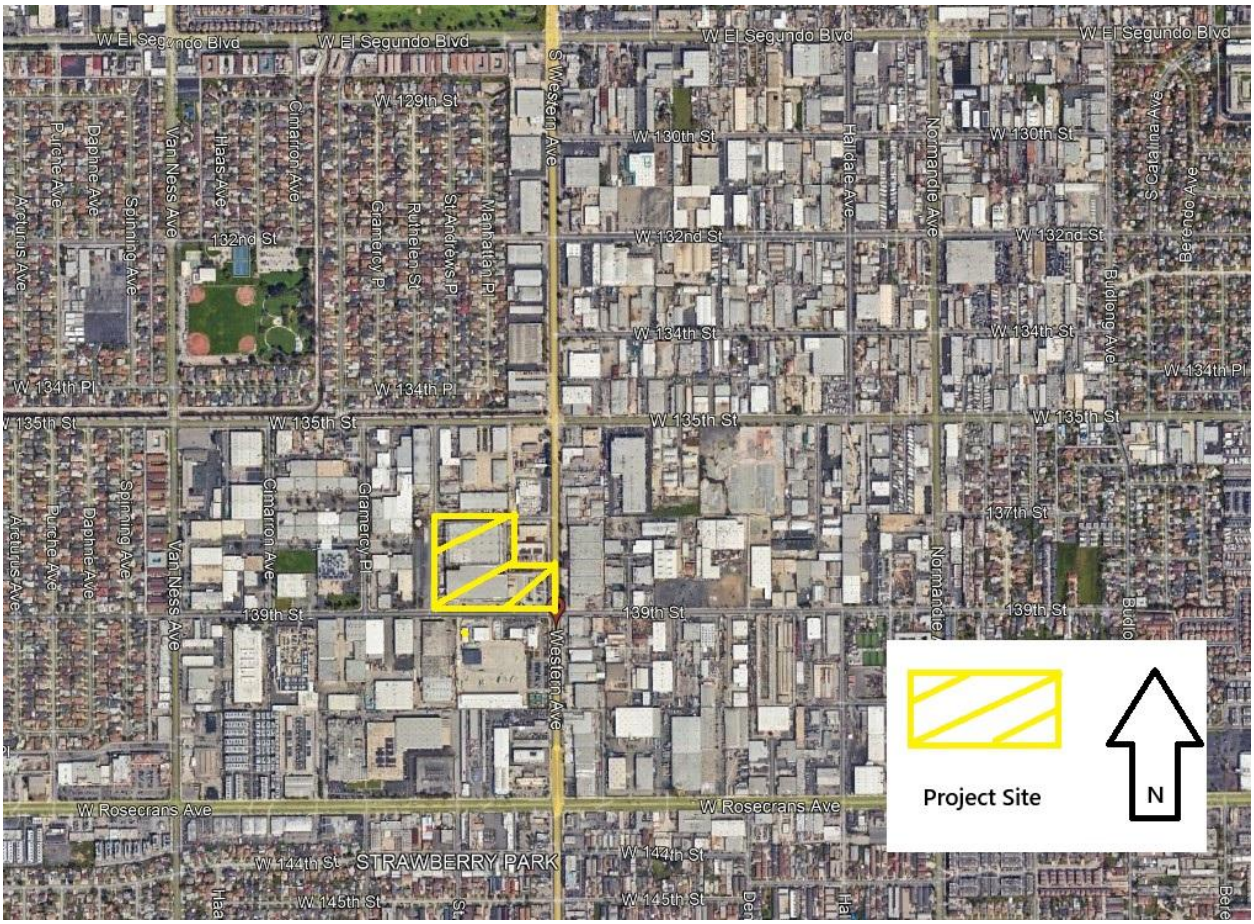
Project Characteristics

The project proposes constructing three new concrete tilt-up industrial buildings and associated parking and site improvements with 223,509 square foot total building area, 353 total parking stalls, and 46 total bike parking on a 488,943 square foot site.

Project Location

As illustrated in the project area map in Figure 1, the project is located on the northwest corner of the intersection of 139th Street and Western Avenue (APN Number 4061-025-130).

Figure 1 – Project Area Map



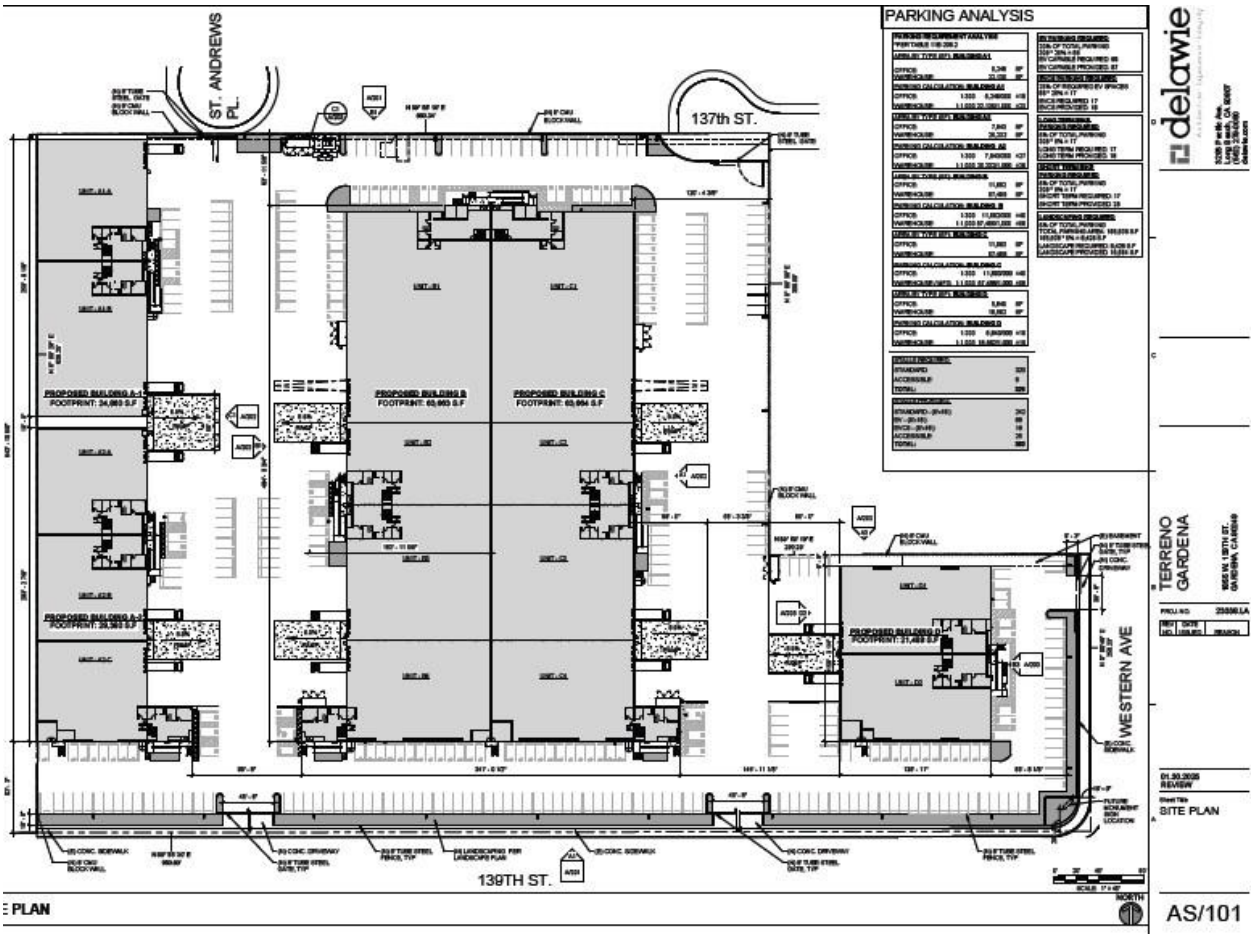
Project Site Plan

Figure 2 illustrates the project site plan showing the location of the proposed project driveways from the nearest intersection of 139th Street and Western Avenue.

Project Site Vehicle Access

As shown in Figure 2, the project proposes relocating two existing driveways on 139th Street and constructing one new driveway on Western Avenue. The two driveways on 139th Street will be 40 feet wide and used for commercial and passenger vehicles while the driveway on Western Avenue will be used by passenger vehicles only. Additionally, the project will improve one driveway on 137 Street and one driveway on St. Andrews Place for passenger and emergency vehicle access.

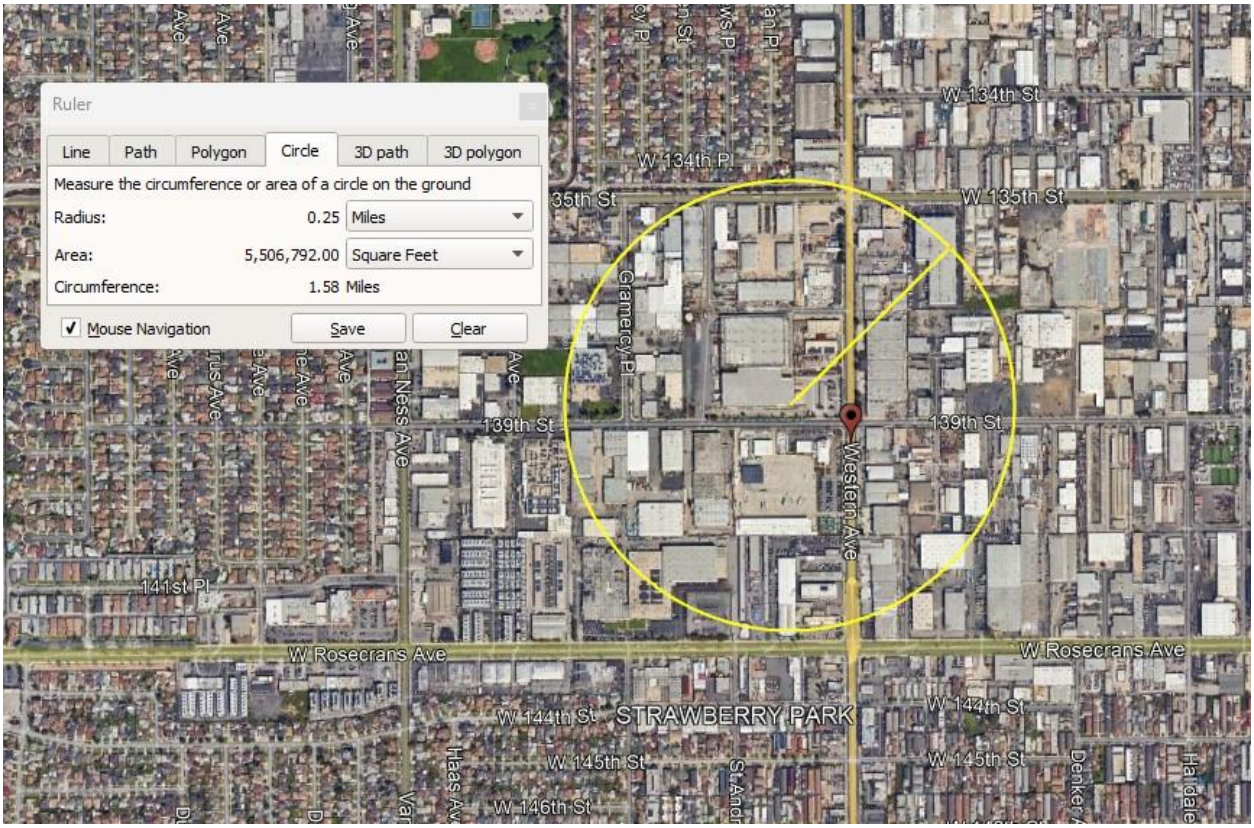
Figure 2 – Project Site Plan



PROJECT CONTEXT

A comprehensive analysis and an inventory of the existing transportation infrastructure and conditions within a ¼ mile radius of the project site, as shown in the aerial map in Figure 3, was collected. The collected data was analyzed to determine the roadway designations, classifications, and modal priorities.

Figure 3 – ¼ Mile Radius Area Map



The following describes the details of the transportation infrastructure in the vicinity of the project:

Non-Vehicular Transportation System

A review of the project area to evaluate the effects of the project on the non-vehicular transportation system for Pedestrian Facilities, Bicycle Facilities, and Transit Services was conducted.

Pedestrian Facilities

A review of the project area was conducted to evaluate the effects of the project on pedestrian activity within a ¼-mile radius of the project. As part of this analysis, we inventoried the existing sidewalks within 1,320 feet of the edge of the project site, as shown in Figure 3.

Sidewalks

A sidewalk inventory within the ¼ mile vicinity of the project was taken. The data collected for existing pedestrian sidewalks is listed in Table 1 below:

Table 1 - Sidewalk Inventory

Street Name	Street Side	Sidewalk Width	Condition
139th Street	NS/SS	~8 Feet	Good
Western Avenue	ES/WS	~10 Feet	Good
135th Street	NS/SS	~8 Feet	Good

Crosswalks, Curb Ramps & Pedestrian Push Buttons

Within ¼ mile vicinity of the project site, pedestrian crosswalks, curb ramps and pedestrian push buttons are available at the following locations, shown in Table 2:

Table 2 -Crosswalk, Curb Ramp & Pedestrian Push Button Inventory

Intersection Name		Control	Ped Push Button	Crosswalk Type	Curb Ramp	Cond.
139th Street	Western Avenue	Signal	Yes	North Leg Regular	Yes	Good
				South Leg Regular	Yes	Good
				East Leg Regular	Yes	Good
				West Leg Regular	Yes	Good
137th Street	Western Avenue	Stop Sign	N/A	North Leg No Crosswalk	No	N/A
				South Leg No Crosswalk	No	N/A
				N/A	N/A	N/A
				West Leg No Crosswalk	Yes	N/A
135th Street	Western Avenue	Signal	Yes	North Leg Regular	Yes	Good
				South Leg Regular	Yes	Good
				East Leg Regular	Yes	Good
				West Leg Regular	Yes	Good

Bicycle Facilities

Within a ¼-mile radius of the project site bicycle facilities are not installed.

Transit Services

Transit services in the area are provided by City of Gardena Transit. The nearest transit lines to the project site are lines 1X and 2. Appendix 1 includes the transit route map.

Vehicular Transportation System
An assessment of the roadway system within ¼ mile radius of the project site was conducted. The assessment included the number of traffic lanes, direction of flow, and the presence of peak period travel lanes affecting roadway travel capacity, the presence of bicycle lanes, and any other significant street information.

Regional Freeway System
The project area is served by Interstate 105 (I-105), I-110, I-405, and State Route 91 freeways.

Area Roadway System
The project area is mainly served by the following surrounding roadways:

- Western Avenue
- 139th Street
- Van Ness Avenue

CEQA TRANSPORTATION IMPACT ANALYSIS

This analysis conforms to the requirements of Senate Bill 743 (SB 743) and is consistent with the California Environmental Quality Act (CEQA), requiring the use of Vehicle Miles Traveled (VMT) as the primary metric for evaluating a project's transportation impacts. The City of Gardena standard of significance for evaluating VMT was adopted from guidance provided by the California Governor's Office of Planning and Research (OPR) in the publication Transportation Impacts (SB 743) CEQA Guidelines Update and Technical Advisory, 2018.

A qualitative VMT analysis was used to determine the Project's VMT impact. As previously mentioned in the Project Description, the proposed project is comprised of 223,509 square feet of warehouse. The proposed uses will be replacing identical existing uses comprised of 233,634 square feet of warehouse. Both the existing and proposed warehouse uses include ancillary office uses, which are a part of the overall warehouse VMT. Therefore, the proposed project will be reducing the size of the warehouse use by a total of 10,125 square feet. As shown in the Project Trip Generation tables in this report (pages 9 and 10), the change in size of these identical uses will result in reduced vehicle trips difference between proposed and existing development on the project site. By replacing the uses on site with less square footage of same use, the project reduces VMT. Therefore, the project will have a less than significant VMT impact.

NON-CEQA CIRCULATION TRANSPORTATION ANALYSIS

Operational Evaluation
An operational evaluation of the project area was conducted to determine any project impact on access, safety, and circulation on the roadway network in the vicinity of the project.

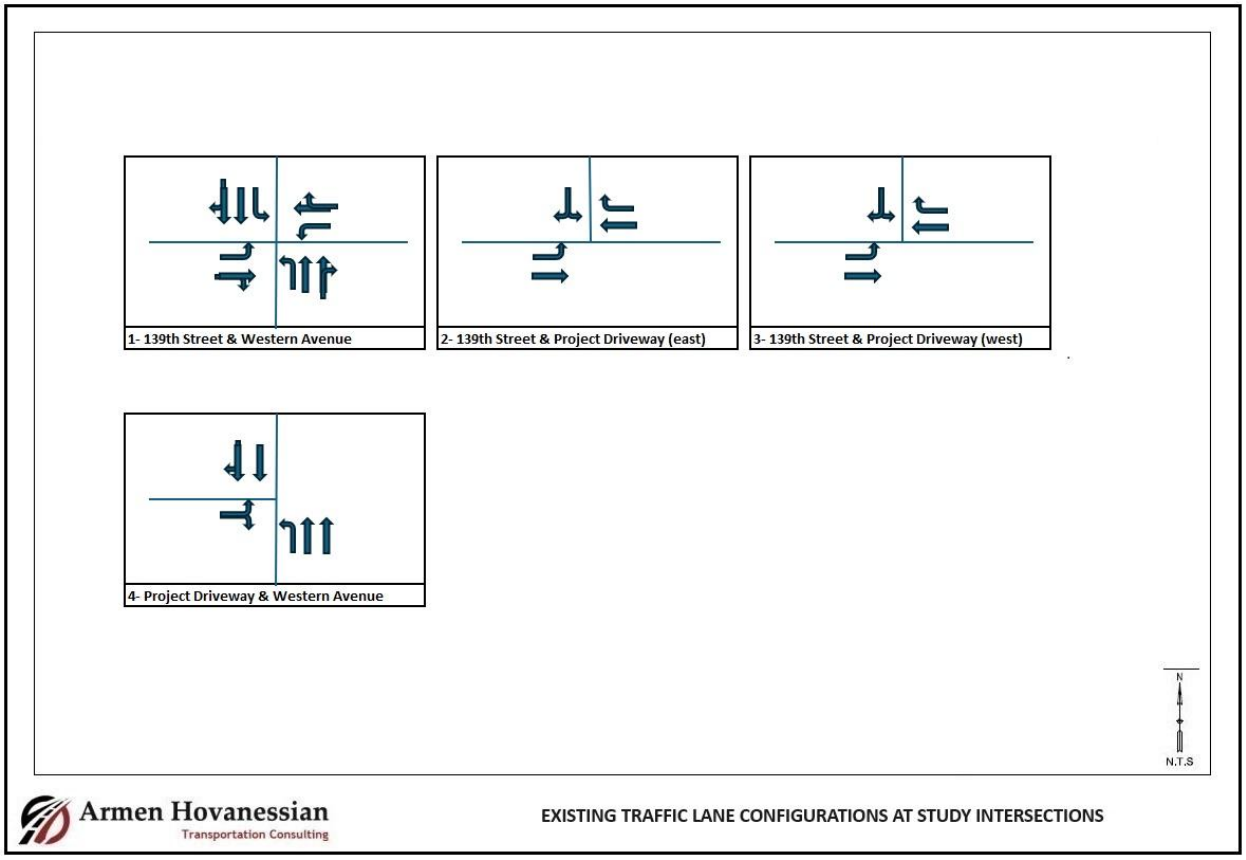
Study Intersections
After consultation with the City of Gardena, it was determined that the following intersections would be analyzed and evaluated for operational assessment, as shown in Table 3 below:

Table 3 – Study Intersections

Intersection(s)	Configuration	Existing Control
139th Street and Western Avenue	4-legged	Traffic Signal Control
139th Street and Project Driveway East	T-intersection	Stop Sign Control
139th Street and Project Driveway West	T-intersection	Stop Sign Control
Western Avenue and Project Driveway	T-intersection	Stop Sign Control

Refer to Figure 4 below for a depiction of the configurations of traffic lanes at the approaches to the study intersections.

Figure 4 – Study Intersections Lane Configurations

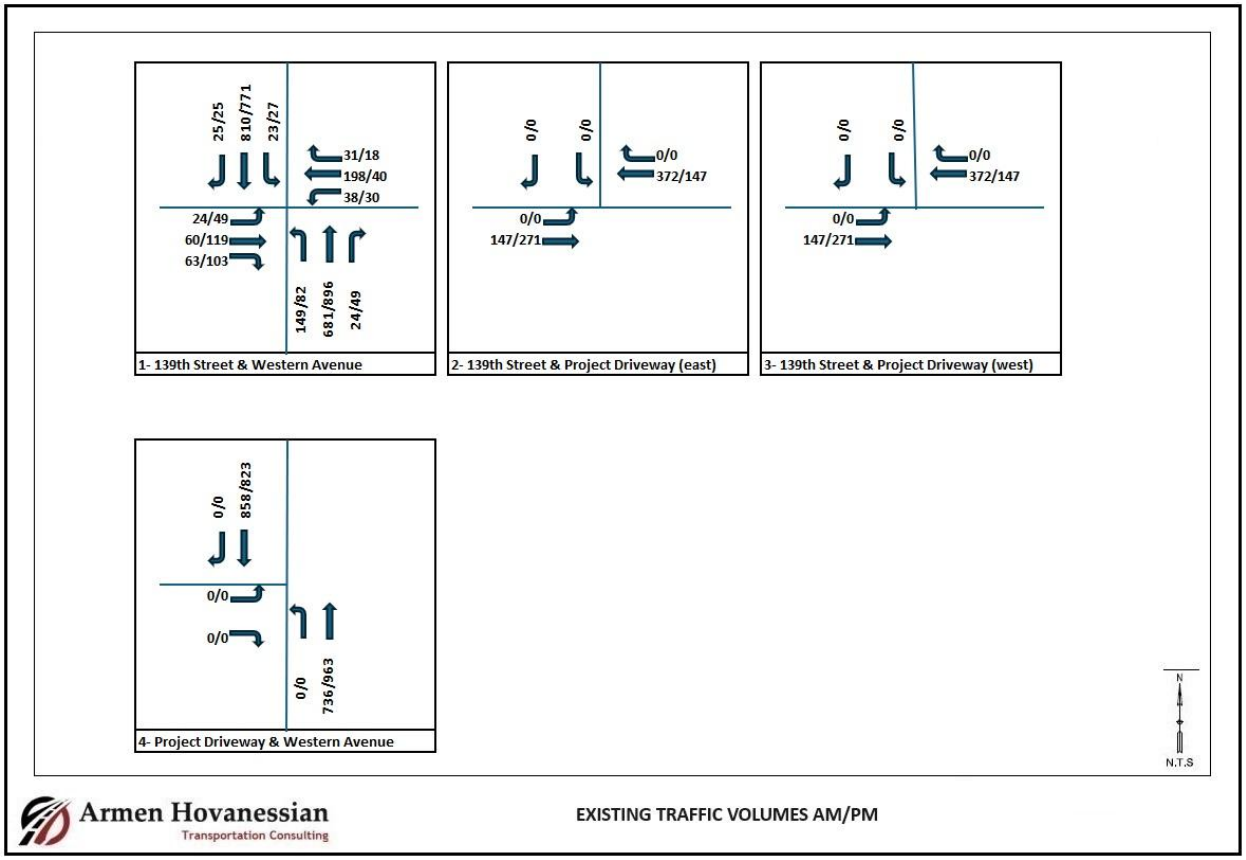


Traffic Volume Counts

Traffic volume counts were obtained for vehicular turning movements at the intersection of 139th Street and Western Avenue. The vehicle turning movement count was conducted on Wednesday, February 26, 2025, during the typical commuter hours of 7:00 AM to 10:00 AM and 3:00 PM to 6:00 PM, to obtain existing traffic volumes for the AM and PM peak hours.

Please refer to Appendix 2 for the manual traffic counts, and Figure 5 below for Existing (AM/PM Peak) Traffic Volumes for an illustration of the AM and PM peak-hour turning movement counts used for the study intersections. The traffic count data at the intersection of 139th Street and Western Avenue was used to calculate the through traffic movements on 139th Street and Western Avenue at the project driveways for the analysis.

Figure 5 – Existing Traffic Volumes at Study Intersections



Project Trip Generation

Trip rates from the *Institute of Transportation Engineers (ITE) Trip Generation Manual 11th Edition* were used in this analysis for Warehousing, ITE code 150, and General Office ITE code 710.

As shown in the project trip generation Table 4 below, the project is forecasted to result in -3 AM and -1 PM net new peak hour and -16 daily trips after existing use trip credits. However, the calculations for the project driveways will not consider the existing use trip credits.

Table 4 - Project Trip Generation

	Land Use (ITE Code)	Size	Unit	AM Peak Hour Trips				PM Peak Hour Trips				Daily Trips	
				Rate	Total	In	Out	Rate	Total	In	Out	Rate	Total
Proposed	Warehousing (150)	223.509	KSF	0.21	*Split*	*66%*	*34%*	0.23	*Split*	*24%*	*76%*	1.71	383

The client estimates approximately 70% of all the traffic to and from the site would be truck traffic. Therefore, using Passenger Car Equivalent (PCE) rate (2.5:1) for truck traffic will result in -6 AM and -2 PM net new peak hour and -33 daily trips after existing use trip credits. Table 5 below depicts a comparison of project trip generation with and without PCE.

Table 5 - Comparison of Project Trip Generation with & without PCE

	Land Use (ITE Code)	Size	Unit	AM Peak Hour Trips				PM Peak Hour Trips				Daily Trips

Source: ITE Trip Generation Manual, 11th Edition * Assuming 70% Truck Traffic													

In summary, the proposed project would generate less traffic compared to the existing use on the project site. The local transportation analysis will use the more conservative trip generation numbers from Table 4 to analyze the project traffic.

Project Trip Distribution and Assignment

Trip distribution assumptions are used to determine the origin and destination of new vehicle trips associated with the project. The geographic distribution of project trips is based on the functional classification of streets in the vicinity, the magnitude of traffic volumes, as well as local knowledge of the roadway network. Based on the project trip generation, shown in Table 4, and the regional trip distribution assumptions, a proposed study area for the traffic analysis was derived. The location and the number of the intersections to be analyzed were reviewed and approved by the City of Gardena. Refer to Figures 6, 7, and 8 below for illustrations showing the Project's Trip Distributions and Assignments at the study intersections.

Figure 6 – Project Trip Distribution Percentages

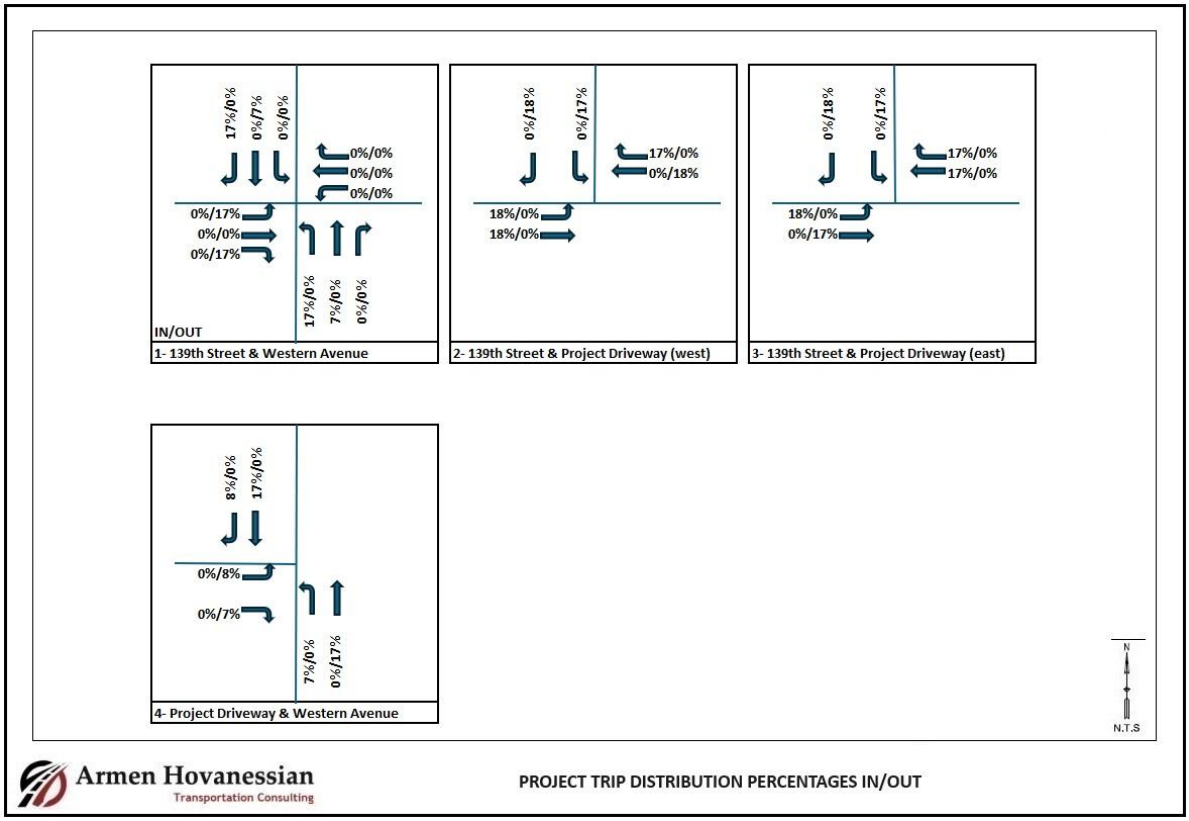

Figure 7 - Project Trip Assignments (Without Existing Use Credit at Driveways) for AM/PM Peak Hours

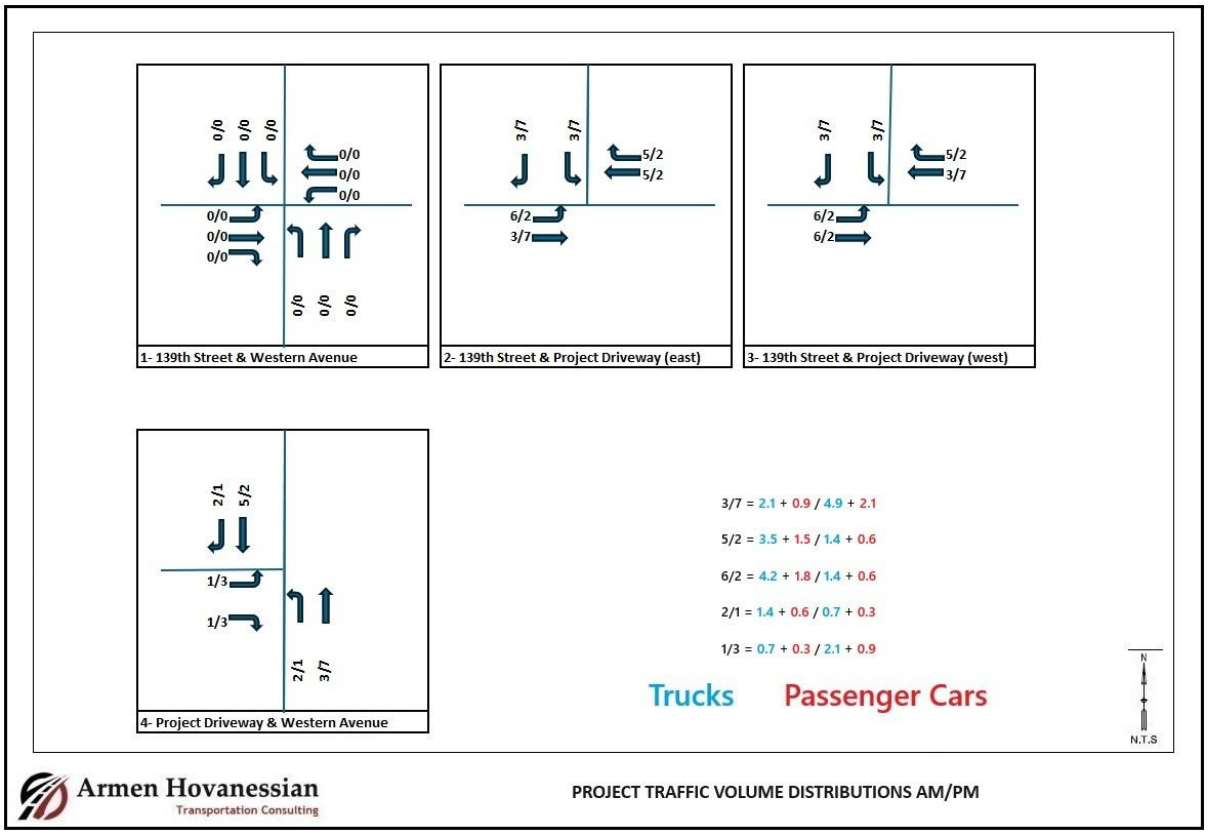

Figure 8 – Existing Plus Project Traffic Volumes (Without Existing Use Credit at Driveways)

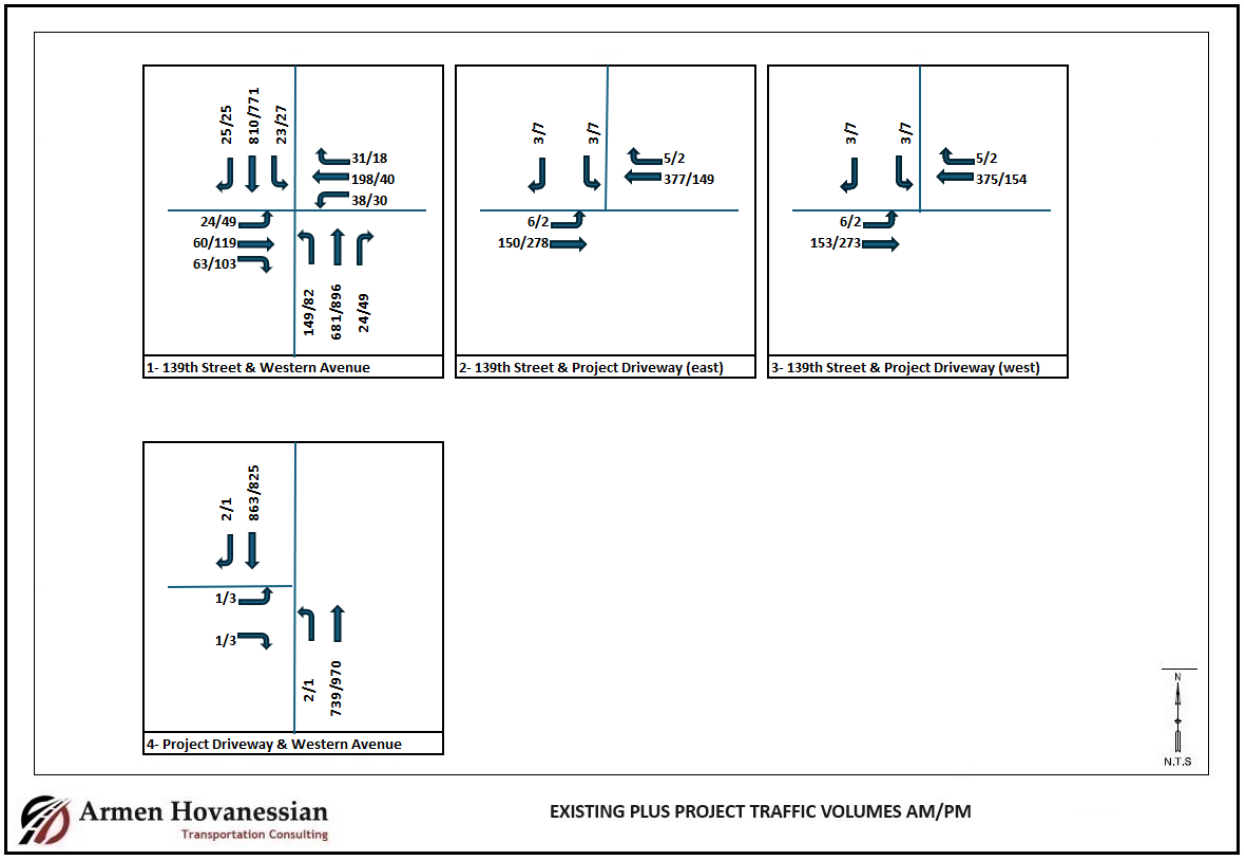

Traffic Forecasts

In general, future peak hour traffic projections for the study intersections are estimated to include future growth due to (1) related projects within ¼ to ½ mile of the project site and (2) ambient traffic growth. In this analysis the related projects within one (1) mile of the project site were included.

Related Projects

To understand the relative traffic impacts for the projected year of completion, this traffic study analyzed potential traffic trips due to the development of related projects in the area. Eleven such related projects were identified by the City of Gardena. A map of the related projects' location, with respect to the project site is shown in Figure 9. Therefore, the analysis at the study intersections will include the trips generated by the identified projects.

Figure 9 – Related Projects Map

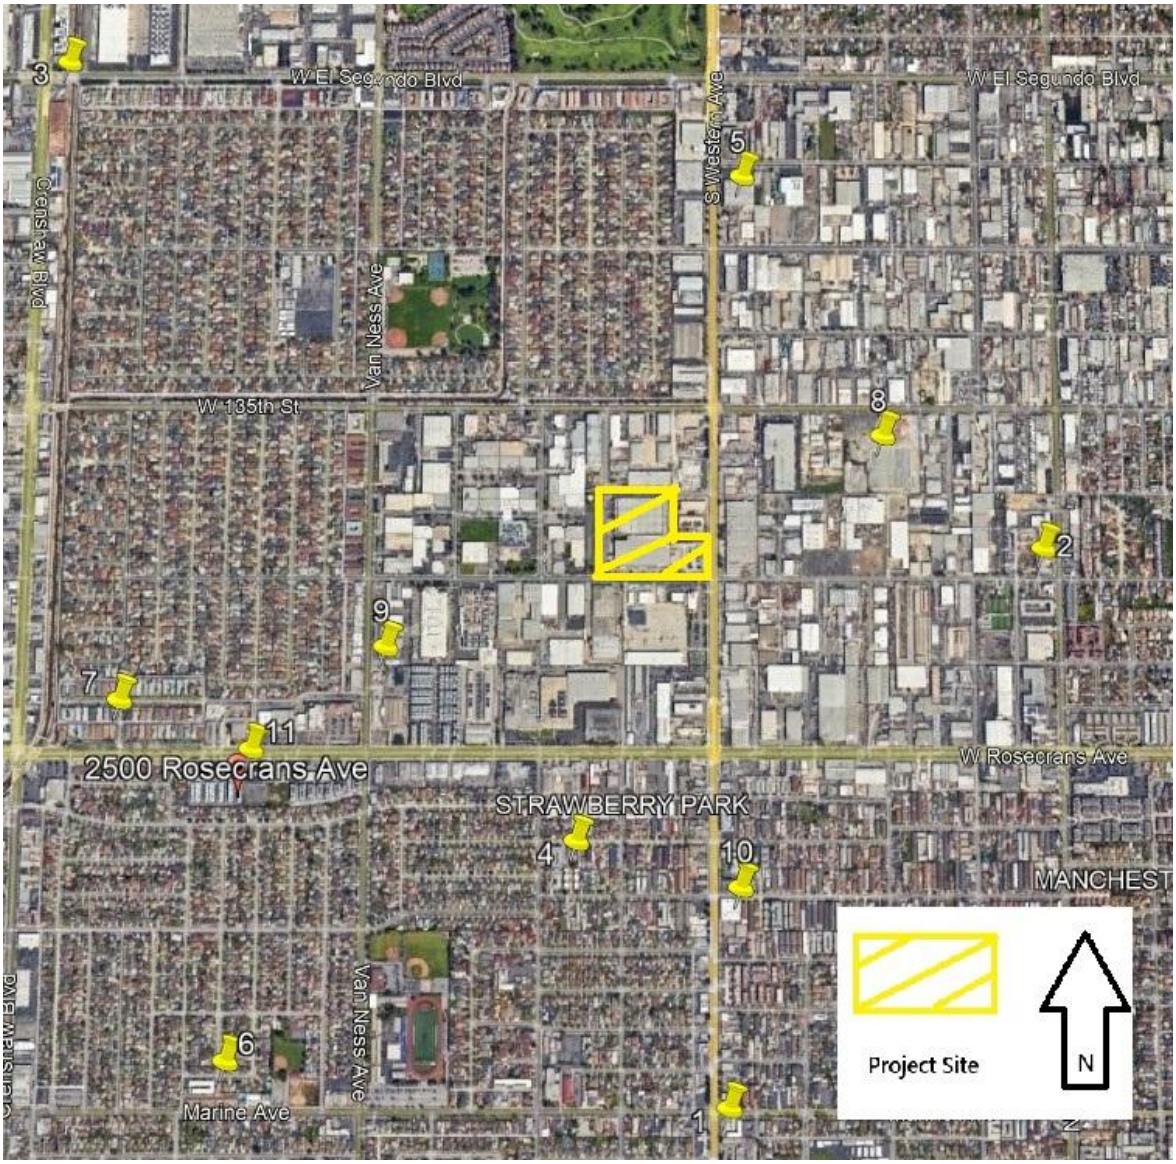

Table 6 provides information regarding the identified related project with the corresponding traffic volumes which will be included at the study intersections:

Project Number	Notes	Location	Land Use	Size	Unit	AM Peak Hour Trips				PM Peak Hour Trips				Daily Trips

Table 6 - Related Projects List & Trip Generation

Ambient Traffic Growth

To account for the future ambient traffic growth from intensification of existing developments, and other projects that are located further than a half mile from the project site, the existing traffic volumes were increased by an ambient growth rate of 1% per year to 2030 to be more conservative in calculating future traffic conditions despite the actual anticipated year of completion being 2026. These values were used in addition to the related project trip generation to forecast future traffic volumes without project traffic volumes as shown in Figure 10.

Figure 10 – Future (2030) Traffic Volumes Without Project

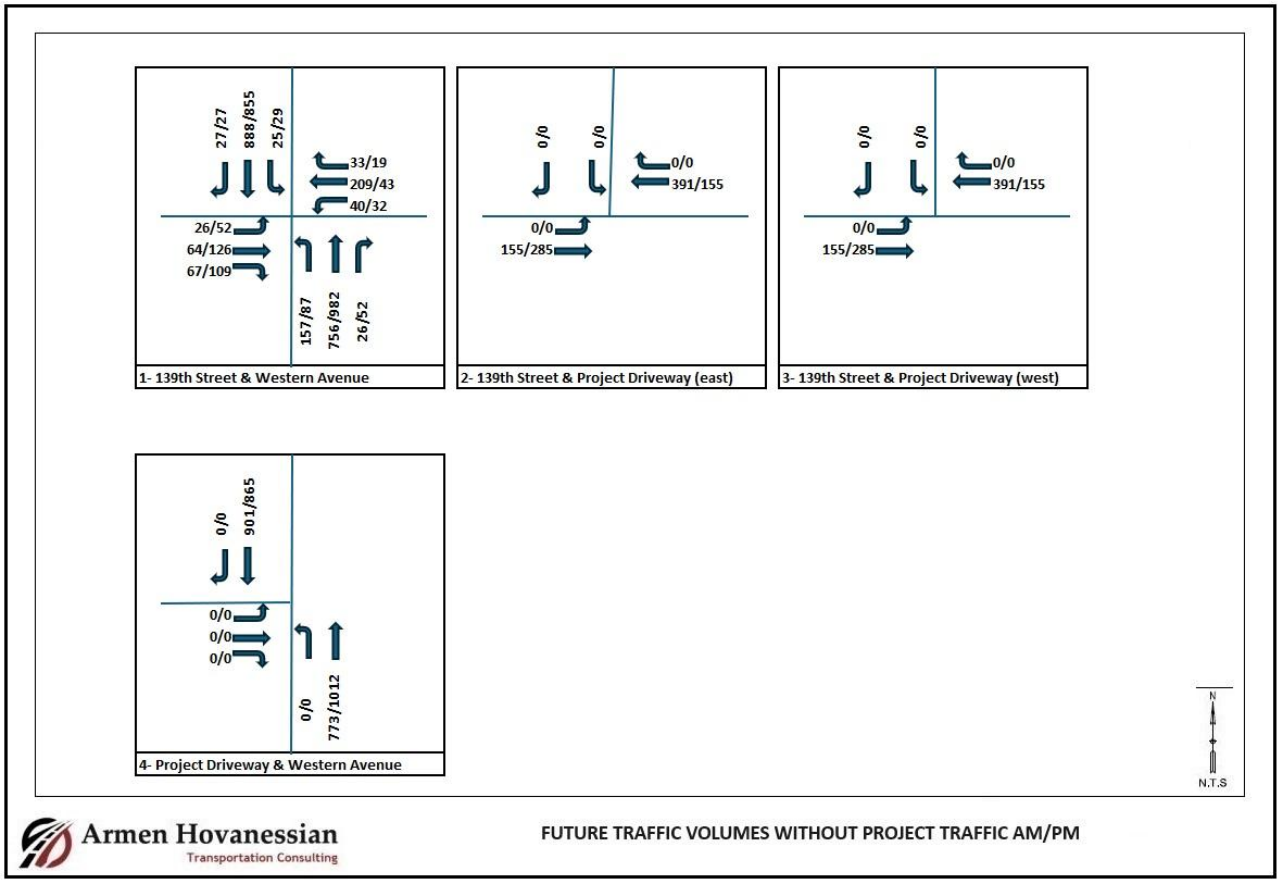

Figure 11 – Future (2030) Traffic Volumes with Project (Without Existing Use Credit at Driveways)

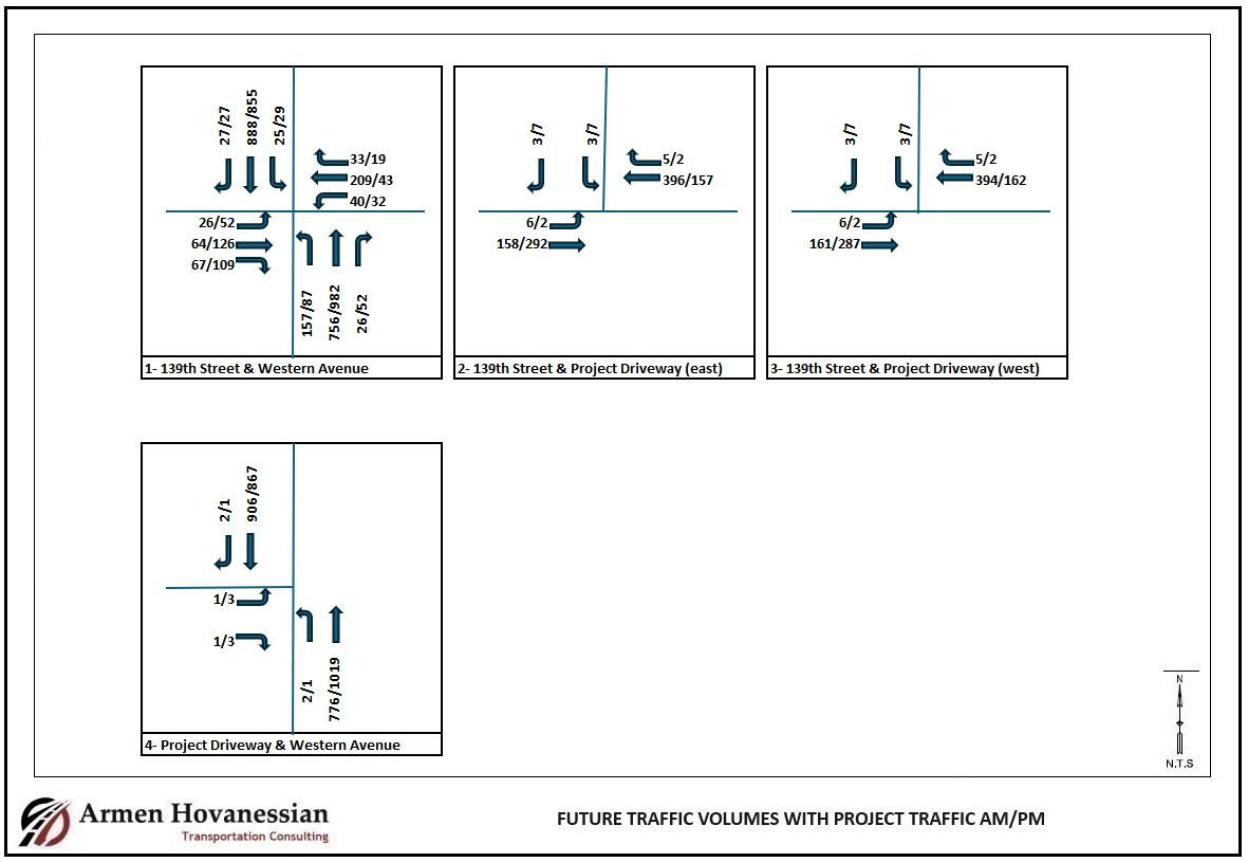

Operational Analysis

Operational analyses of vehicle delays, levels of service, and queueing were conducted at the study intersections for the following conditions:

1) Existing Traffic Conditions
2) Existing Plus Project Traffic Conditions
3) Future Without Project Traffic Conditions
4) Future Plus Project Traffic Conditions

Delay and Queueing Methodology

Signalized Intersections

For signalized intersections, the Highway Capacity Manual (HCM) operations methodology for performing signalized intersection capacity analysis is used. This method relies on the determination of a delay or Level of Service (LOS) at each of the study intersections by first determining their corresponding average control delay per vehicle. Control delay includes initial deceleration delay, queue move-up time, stopped delay and final acceleration delay. It is a measure of driver discomfort, frustration, fuel consumption and lost travel time.

LOS varies from at best LOS A (free flow/excellent) to at worst LOS of F (stop-and-go/failure). Shown below, in Table 7, are the LOS categories and their corresponding HCM average control delay ranges for signalized intersections.

Table 7 - LOS at Signalized Intersection

Level of Service	Average Control Delay per Vehicle (Sec/Veh)	Definition
A	0 to 10.00	LOS A describes operations with a control delay of 10 s/veh or less. This level is typically assigned when the volume-to-capacity ratio is low and either progression is exceptionally favorable, or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.
B	10.01 to 20.00	LOS B describes operations with control delay between 10 and 20 s/veh. This level is typically assigned when the volume-to-capacity ratio is low and either progression is highly favorable, or the cycle length is short. More vehicles stop than with LOS A.
C	20.01 to 35.00	LOS C describes operations with control delay between 20 and 35 s/veh. This level is typically assigned when progression is favorable, or the cycle length is moderate. Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
D	35.01 to 55.00	LOS D describes operations with control delay between 35 and 55 s/veh. This level is typically assigned when the volume-to-capacity ratio is high and either progression is ineffective, or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.
E	55.01 to 80.00	LOS E describes operations with control delay between 55 and 80 s/veh. This level is typically assigned when the volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.
F	Over 80.00	LOS F describes operations with control delay exceeding 80 s/veh. This level is typically assigned when the volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.

Unsignalized Intersections

This analysis utilizes the Highway Capacity Manual (HCM) methodologies for performing stop-controlled intersection capacity analyses. For stop-controlled intersection analysis, LOS is calculated for each movement of the intersection and the most critical LOS (i.e., the movement with highest delay) is the one that represents the effectiveness of that intersection. The LOS thresholds for stop-controlled intersections differ from those for signalized intersections to reflect different driver expectations. Table 8 below shows the LOS categories and their most common corresponding HCM average control delay ranges for stop-controlled intersections.

Table 8 - LOS at Unsignalized Intersections

Level of Service	Average Control Delay per Vehicle (Sec/Veh)
A	0 to 10.00
B	Over 10 to 15
C	Over 15 to 25
D	Over 25 to 35
E	Over 35 to 50
F	Over 50

Level of Service and Queueing Analysis

The results of the operational analyses for each study intersection are provided in tables Appendix 3 to summarize LOS, Delays and Queue Lengths for each traffic movement for the following traffic conditions:

- Existing
- Existing plus project
- Future without project
- Future with project

Please refer to Appendix 4 for the (HCM) analysis worksheets for the analyzed intersections.

Table 9 below provides a comparison of the intersectional LOS and Delay analysis for the aforementioned traffic conditions.

Table 9 - Comparison of Intersectional LOS & Delay for Various Conditions

Summary of Delay and Level of Service									
#	Intersection	Peak Hour	Existing		Existing + Project		Future		Future + Project	
			Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1	139th Street & Western Avenue	AM	26.2	C	26.2	C	26.8	C	26.8	C
		PM	25.3	C	25.4	C	26	C	26.2	C
2	139th Street & Project Driveway (east)	AM	0	A	0.2	A	0	A	0.2	A
		PM	0	A	0.5	A	0	A	0.5	A
3	139th Street & Project Driveway (west)	AM	0	A	0.2	A	0	A	0.2	A
		PM	0	A	0.5	A	0	A	0.5	A
4	Project Driveway & Western Avenue	AM	0	A	0	A	0	A	0	A
		PM	0	A	0.1	A	0	A	0.1	A

As shown in Table 8, the project does not have major adverse effects on access, safety, and circulation in the roadway system at the analyzed intersections.

Recommended Actions

It is recommended to install a stop sign for egress traffic at each proposed project driveway.
