GENERAL NOTES

1. UNLESS OTHERWISE NOTED, THE WORK DESCRIBED ON THE PLANS AND SPECIFICATIONS SHALL INCLUDE THE FURNISHING AND INSTALLATION OF ALL LABOR AND MATERIALS NECESSARY FOR COMPLETE AND OPERATIONAL HVAC SYSTEMS.
2. ALL WORK SHALL BE IN ACCORDANCE WITH ALL CODES, RULES, AND REGULATIONS OF GOVERNING AGENCIES AND SHALL COMPLY WITH THE REQUIREMENTS OF THE SERVING UTILITY COMPANIES.
3. ALL DUCTWORK, INSULATION, EQUIPMENT AND INSTALLATION SHALL CONFORM TO THE LATEST EDITION OF CALIFORNIA ADMINISTRATIVE CODE TITLE 24 AND C.M.C. DUCT MATERIALS AND CONSTRUCTION SHALL BE PER CHAPTER 6 OF C.M.C. SEAL DUCTS FOR 1% LEAKAGE MAXIMUM.
4. ALL EQUIPMENT, DUCTWORK AND PIPING INSTALLATION SHALL BE SEISMICALLY BRACED IN ACCORDANCE WITH THE LATEST EDITION OF CALIFORNIA BUILDING AND MECHANICAL CODES. HANGING PIPES AND DUCTS ISAT, ROOF SUPPORT PHP DESIGN, AND/OR MASON VIBREX DESIGN.
5. CALIFORNIA MECHANICAL CODE SECTION 608, CONTRACTOR SHALL PROVIDE SHUTOFF FOR SMOKE CONTROL FOR ALL AIR-MOVING SYSTEMS SUPPLYING AIR IN EXCESS OF 2,000 CUBIC FEET PER MINUTE TO ENCLOSED SPACES WITHIN BUILDINGS. AUTOMATIC SHUTOFF SHALL BE ACCOMPLISHED BY INTERRUPTING THE POWER SOURCE OF THE AIR-MOVING EQUIPMENT UPON DETECTION OF SMOKE IN THE MAIN SUPPLY AIR DUCT SERVED BY SUCH EQUIPMENT. SMOKE DETECTORS WHICH WILL DETECT PRODUCTS OF COMBUSTION OTHER THAN HEAT AND WHICH COMPLY WITH THE CALIFORNIA BUILDING CODE, SHALL BE LABELED BY AN APPROVED AGENCY FOR AIR-DUCT INSTALLATION AND SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURERS'S INSTALLATION INSTRUCTIONS. SUCH DEVICES SHALL BE COMPATIBLE WITH THE OPERATING VELOCITIES, PRESSURES, TEMPERATURES AND HUMIDITIES OF THE SYSTEM. WHERE AN ELECTRICAL CENTRAL FIRE ALARM DETECTION OR ALARM SYSTEM IS PROVIDED FOR THE BUILDING, THE SMOKE DETECTORS REQUIRED BY THIS SECTION SHALL BE FURNISHED AND SUPERVISED BY SUCH SYSTEM AND SHALL ACTIVATE THE SHUTDOWN. REFER TO OTHER DOCUMENTS FOR SMOKE CONTROL AND SMOKE EVACUATION SPECIFIC REQUIREMENTS AND CONTROLS.
6. INFORMATION GIVEN ON THE DRAWING IS AS EXACT AS POSSIBLE BUT DIAGRAMMATIC. ABSOLUTE ACCURACY IS NOT GUARANTEED, AND THE CONTRACTOR SHALL OBTAIN AND VERIFY EXACT LOCATIONS, MEASUREMENTS, LEVEL, SPACE REQUIREMENTS, POTENTIAL CONFLICTS WITH OTHER TRADES AT THE SITE AND SHALL SATISFACTORILY ADAPT HIS WORK TO ACTUAL CONDITIONS AT THE BUILDING.
7. COORDINATE AND ADJUST ALL WORK BETWEEN TRADES IN ORDER TO ACCOMPLISH A COORDINATED, INTEGRATED AND EFFICIENT INSTALLATION. PROVIDE FOR PHASING AND TEMPORARY SYSTEMS REQUIRED TO COMPLETE THE WORK ON SCHEDULE IN CONFORMANCE WITH THE PROJECT DOCUMENTS.
8. COORDINATE EXACT LOCATION OF ALL CEILING DIFFUSERS, REGISTERS AND GRILLES WITH LIGHTING LAYOUT, CEILING TILE PATTERN WITH ARCHITECTURAL REFLECTED CEILING PLANS. IN CASE OF CONFLICT, ARCHITECTURAL REFLECTED CEILING PLANS WILL TAKE PRECEDENCE. WHERE CEILING IS EXTREMELY TIGHT, CAREFULLY COORDINATE DUCT SIZES AND ROUTING WITH ARCHITECTURAL, STRUCTURAL, ELECTRICAL, PLUMBING AND FIRE PROTECTION SYSTEMS. WHERE INTERFERENCES EXIST TRANSITION TO SUITABLE RECTANGULAR DUCTWORK TO MAINTAIN REQUIRED CEILING HEIGHT.
9. INSTALL THE HVAC SYSTEMS IN CONFORMANCE WITH SOUND AND SECURITY REQUIREMENTS SPECIFIED BY OTHER DISCIPLINES. DUCT LINER IS NOT USED UNLESS SPECIFIED BY ACOUSTICAL. OTHERWISE SEAL AROUND ALL PENETRATIONS OF WALLS AND FLOORS AND PER FIRE STOPPING REQUIREMENTS. PROVIDE SOUND BOOTS OF 3-LB DENSITY FIBER BOARD AT PLENUM WALL PENETRATION FOR RETURN AIR ABOVE CEILING.
10. FIELD COORDINATE THE EXACT LOCATION OF ALL TEMPERATURE SENSORS, THERMOSTATS WITH ANY EQUIPMENT, SHELVING, RACKS, CABINETS OR OTHER FACILITY SUPPLIED FURNITURE AND EQUIPMENT, BASED ON THE ARCHITECTURAL DRAWINGS.
11. UNLESS SPECIFICALLY SHOWN ON THESE PLANS, NO STRUCTURAL MEMBER SHALL BE CUT, DRILLED OR NOTCHED WITHOUT WRITTEN AUTHORIZATION FROM THE STRUCTURAL ENGINEER AND ARCHITECT.
12. PROVIDE MANUAL VOLUME DAMPER UPSTREAM OF EACH AIR INLET/OUTLET TO FACILITATE PROPER BALANCE, WHETHER SHOWN OR NOT. VOLUME DAMPER AT DIFFUSERS AND REGISTER OBD'S IF INSTALLED SHALL NOT BE USED FOR AIR BALANCING.
13. SEAL ALL OPENINGS AROUND PIPING AND DUCTWORK PENETRATING FIRE RESISTIVE RATED WALLS AND FLOORS TO MAINTAIN RATING INTEGRITY.
14. CONTRACTOR SHALL COORDINATE DEVICES REQUIRING ACCESS. PROVIDE CEILING, WALL OR FLOOR ACCESS PANELS FOR TERMINAL BOXES, VALVES, COMBINATION SMOKE/FIRE DAMPERS AND VOLUME DAMPERS, ACTUATORS, BACK-DRAFT DAMPERS AS REQUIRED. COORDINATE WITH ARCHITECT FOR EXACT LOCATION AND FINAL COUNT OF ACCESS PANELS. MINIMUM SIZE OF ACCESS PANELS SHALL BE 18" X 18". THE MINIMUM CLEARANCE WORKING SPACE AROUND AND CLEAR FOR MAINTENANCE SHALL BE 4 FT. PERMANENT PROVIDE PLATFORMS AND HAND RAILS FOR SERVICE, AND SEPARATE LOCK OUT TAG OUT DISCONNECTS. COMPLY WITH ALL OSHA AND UNION MAINTENANCE SERVICE REQUIREMENTS. COMPLY WITH ALL COLLEGE SECURITY AND ENVIRONMENTAL REQUIREMENTS FOR PERSONAL SAFETY, AND DISPOSAL OF MATERIALS.
15. INSTALL EQUIPMENT IN ACCESSIBLE LOCATIONS AND PROVIDE ADEQUATE SERVICE CLEARANCE 4 FT FOR NORMAL MAINTENANCE WITHOUT REMOVING ARCHITECTURAL, ELECTRICAL OR STRUCTURAL ELEMENTS.
16. FLEXIBLE DUCT LENGTH SHALL NOT EXCEED 7'-0" AT CONNECTION TO ENVIRONMENTAL AIR OUTLETS. MINIMUM RADIUS SHALL BE 1-1/2 DIAMETER OF DUCT. FLEXIBLE DUCT SHALL NOT BE USED IN SYSTEM IF UTILIZED AS PART OF BUILDING SMOKE CONTROL.
17. PROVIDE ISOLATION VALVES AND UNIONS ON PIPING ADJACENT TO ALL CONTROL VALVES AND OTHER APPURTENANCES OR EQUIPMENT. LOCATE VALVES SO THAT EQUIPMENT CAN BE REMOVED WITHOUT DISMANTLING ANY BRANCH LINES.
18. IN CONCEALED IN-ACCESSIBLE CEILING PROVIDE REMOTE MANUAL VOLUME DAMPER REGULATOR OPERATOR AT ACCESSIBLE LOCATION.
19. ALL CURBS, ROOF JACKS AND EQUIPMENT SUPPORT PADS SHALL BE COMPATIBLE WITH ROOFING SYSTEM.
20. REFER TO PLUMBING DRAWINGS OR ALL CONDENSATE DRAIN PIPING. REFER TO MECHANICAL FOR CONDENSATE TRAP DEPTH REQUIREMENTS.
21. A MAINTENANCE LABEL SHALL BE AFFIXED TO MECHANICAL EQUIPMENT. A MAINTENANCE MANUAL SHALL BE PROVIDED FOR THE OWNER'S USE. LABEL EACH ROOF MOUNTED EQUIPMENT TO IDENTIFY THE AREA IT SERVES. SEE SPECIFICATIONS.
22. ALL DUCTWORK AND EQUIPMENT WHICH ARE EXPOSED SHALL HAVE FINISHED APPEARANCE. THEYH SHALL BE APPLIED WITH PRIMER AND ENAMEL PAINT WHERE EXPOSED TO VIEW. COLOR SHALL BE SELECTED BY THE ARCHITECT. ALL DUCTWORK EXPOSED UNDER THE CEILING SHALL BE PAINTED WITH PRIMER AND ENAMEL PAINT TO MATCH THE SURROUNDINGS. SEE ARCHITECTURAL DRAWINGS.
23. PROVIDE SHEET METAL WEATHER HOOD COVER FOR ALL DAMPER ACTUATORS, SMOKE DETECTOR, MOTORS LOCATED OUTDOORS.
24. WHERE ATTIC OR ABOVE CEILING IS TO BE USED AS RETURN PLENUM, IT SHALL CONTAIN NO COMBUSTIBLE MATERIALS, PLASTIC PIPE OR RUBBER INSULATION. ALL CEILING MATERIALS SHALL BE NON-COMBUSTIBLE OR APPROVED FOR PLENUM INSTALLATION.
25. PROVIDE WALL OPENING ABOVE CEILING LEVEL FOR RETURN AIR IN EACH ROOM AS REQUIRED.
26. FIRE DAMPERS INSTALLED IN DUCTWORK SYSTEM WITHOUT ELECTRIC ACTUATOR SHALL BE U.L. LISTED DYNAMIC TYPE (SPRING LOADED).
27. PROVIDE SECURITY BARS ON ALL EXHAUST FAN OPENINGS AND GRAVITY VENT OPENINGS THROUGH HE ROOF GREATER THAN 16"x16".
28. AIR HANDLING DUCT SYSTEM, EXCEPT GREASE EXHAUST DUCT SYSTEM, SHALL BE CONSTRUCTED, INSTALLED AND INSULATED AS PROVIDED IN CHAPTER 6 OF CMC OF METAL GALVANIZED COPPER BEARING SHEET STEEL.
29. ALL WORK SHALL BE IN ACCORDANCE WITH SMACNA IAQ GUIDELINES FOR OCCUPIED BUILDINGS UNDER CONSTRUCTION SECOND EDITION.
30. GENERAL CONTRACTOR SHALL COMPLY/ SUBMIT CONSTRUCTION WASTE MANAGEMENT PER SEC.5-408.1
31. HVAC MOTORS FOR FANS THAT ARE LESS THAN 1 HP AND 1/12 HP OR GREATER SHALL BE ELECTRONICALLY-COMMUNTATED MOTORS OR SHALL HAVE A MINIMUM MOTOR EFFICIENCY OF 70 PERCENT WHEN RATED IN ACCORDANCE WITH NEMA STANDARD MG 1-2006 AT FULL RATING CONDITIONS. MOTORS IN SPACE CONDITIONING EQUIPMENT AND TERMINAL UNITS THAT OPERATE ONLY WHEN PROVIDING HEATING TO THE SPACE SERVED ARE EXCEPTED.
32. ALL MECHANICAL EQUIPMENT, PLUMBING LINES, HEATING AND COOLING UNITS AND STORAGE TANKS AND DUCTWORK, ROOF OR GROUND MOUNTED, SHALL BE INCORPORATED INTO THE BUILDING ENVELOPE. WHEN THAT IS NOT FEASIBLE, ALL SUCH ITEMS SHALL BE SCREENED ON ALL SIDES WITH SOLID MATERIAL ARCHITECTURALLY COMPATIBLE WITH THE MAIN STRUCTURE. (ORD. 1738 § 39, 2012: ORD. 1683 § 65, 2006; URG. ORD. 1682; PRIOR CODE § 10-3.2116). ALL EXPOSED CONDUIT SHALL BE PAINTED TO MATCH SUBSTRATE.
33. ALL DIMENSIONS SHOWN ON THE DRAWINGS FOR DUCTWORK ARE INSIDE CLEAR DIMENSIONS.

NOTES FOR CCR T24 MANDATORY MEASURES

1. GENERAL: ALL EQUIPMENT AND SYSTEMS INSTALLED IN THIS PROJECT SHALL COMPLY WITH THE ENERGY EFFICIENCY STANDARDS FOR NON RESIDENTIAL BUILDINGS AS PUBLISHED BY THE STATE OF CALIFORNIA.

2. EQUIPMENT AND SYSTEMS EFFICIENCY
   - A HVAC EQUIPMENT SHALL MEET MINIMUM EFFICIENCY REQUIREMENTS AS SCHEDULED ON THE PLANS.
   - B DUCTS AND PIPING SHALL BE INSULATED IN ACCORDANCE WITH ENERGY EFFICIENCY STANDARD 123.
   - C AIR HANDING DUCT SYSTEMS SHALL BE CONSTRUCTED, INSTALLED, SEALED TO 1%%% LEAKAGE, AND INSULATED AS PROVIDED IN CHAPTER 6 OF THE UNIFORM MECHANICAL CODE AND THESE REGULATIONS.

3. VENTILATION
   - A BUILDING SHALL BE VENTILATED AS PROVIDED FOR ON THE PLANS.
   - B GRAVITY OR AUTOMATIC DAMPERS INTERLOCKED AND CLOSED ON FAN SHUTDOWN SHALL BE PROVIDED ON THE OUTSIDE AIR INTAKES AND DISCHARGES OF ALL SPACE CONDITIONING AND EXHAUST SYSTEMS.
   - C ALL GRAVITY VENTILATING SYSTEMS SHALL BE PROVIDED WITH AUTOMATIC OR READILY ACCESSIBLE MANUALLY OPERATED DAMPERS IN ALL OPENINGS TO THE OUTSIDE, EXCEPT FOR COMBUSTION AIR OPENINGS.
   - D AIR BALANCING: ALL SPACE CONDITIONING AND VENTILATION SYSTEMS SHALL BE BALANCED IN THE QUANTITIES SPECIFIED IN THESE PLANS, IN ACCORDANCE WITH THE ASSOCIATED AIR BALANCE (AABC) NATIONAL STANDARDS.
   - E OUTSIDE AIR CERTIFICATION: THE SYSTEMS SHALL PROVIDED THE MINIMUM OUTSIDE AIR AS SHOWN ON THE MECHANICAL DRAWINGS, AND SHALL BE MEASURED AND CERTIFIED BY THE INSTALLING LICENSED C-20 MECHANICAL CONTRACTOR.

4. WHEN COMPLETE THE BUILDING CLOSE-OUT MANUAL SHALL INCLUDE: AS-BUILT DOCUMENTS, MAINTENANCE REQUIREMENTS & SPARE PARTS LISTS, ORIGINAL SYSTEM DESIGN AND OPERATION INFORMATION, AND SHALL BE POSTED WITH APPROPRIATE CERTIFICATES AND DOCUMENTS FOR THE COLLEGE AND INSPECTOR.

2019 CALIFORNIA GREEN BUILDING STANDARDS CODE

5.410.4 TESTING, ADJUSTING AND BALANCING: DURING CONSTUCTION TAPE/BLANK OFF AND SEAL HVAC EQUIPMENT OPENINGS FROM CONSTRUCTION DEBRIS, DUST, AND WATER. CLOSE GRILLES, AIR OPENINGS, AND FIN COILS TO PREVENT CONTAMINATION INSIDE/OUITSIDE TO THE EQUIPMENT, TO THE FILTERS, AND THE DUCTWORK. DO NOT OPERATE THE EQUIPMENT AND DUCTWORK DURING THE CONSTRUCTION PERIOD UNTIL AFTER APPROVED CLEAN-UP IS COMPLETE. COVER EQUIPMENT AND PANELS TO PREVENT WEATHER, SPLASH AND WATER ENTRY. ANY ELECTRICAL PANELS AND COMPONENTS EXPOSED TO WATER OR DUST WILL NEED TO BE REPLACED AT NO COST TO THE OWNER.

5.410.4.4 REPORTING: DELIVER WRITTEN POINT TO POINT COMMISSIONING FUNCTIONALITY REPORT AND TEST AND BALANCE REPORT.

5.410.4.5.1 INSPECTIONS AND REPORTS: INSPECTIONS AND REPORTS DOCUMENTING THE ENTIRE SYSTEM HAS BEEN INSPECTIED AND APPROVED BY THE ENFORCING AGENCY.

5.504.3 COVERING OF DUCT OPENINGS AND PROTECTION OF MECHANICAL EQUIPMENT DURING CONSTRUCTION TIME OF ROUGH INSTALLATION AND DURING STORAGE ON THE CONSTRUCTION SITE AND UNTIL FINAL STARTUP OF THE HEATING, COOLING AND VENTILATING EQUIPMENT, ALL DUCT AND OTHER RELATED AIR DISTRIBUTION COMPONENT OPENINGS SHALL BE COVERED WITH TAPE, PLASTIC, SHEETMETAL OR OTHER METHODS ACCEPTABLE TO THE ENFORCING AGENCY TO REDUCE THE AMOUNT OF DUST, WATER AND DEBRIS WHICH MAY ENTER THE SYSTEM.

MEP COMPONENT ANCHORAGE NOTE

ALL MECHANICAL, PLUMBING, AND ELECTRICAL COMPONENTS SHALL BE ANCHORED AND INSTALLED PER THE DETAILS ON THE DSA APPROVED CONSTRUCTION DOCUMENTS. WHERE NO DETAIL IS INDICATED, THE FOLLOWING COMPONENTS SHALL BE ANCHORED OR BRACED TO MEET THE FORCE AND DISPLACEMENT REQUIREMENTS PRESCRIBED IN THE 2019 CBC, SECTIONS 1616A1.18 THROUGH 1616A1.26 AND ASCE 7-16 CHAPTER 13.26 AND 30.

1. ALL PERMANENT EQUIPMENT AND COMPONENTS.
2. TEMPORARY OR MOVABLE EQUIPMENT THAT IS PERMANENTLY ATTACHED (E.G. HARD WIRED) TO THE BUILDING UTILITY SERVICES SUCH AS ELECTRICITY, GAS OR WATER.
3. MOVABLE EQUIPMENT WHICH IS STATIONED IN ONE PLACE FOR MORE THAN 8 HOURS AND HEAVIER THAN 400 POUNDS ARE REQUIRED TO BE ANCHORED WITH TEMPORARY ATTACHMENTS.

FOR THOSE ELEMENTS THAT DO NOT REQUIRE DETAILS ON THE APPROVED DRAWINGS, THE INSTALLATION SHALL BE SUBJECT TO THE APPROVAL OF THE STRUCTURAL ENGINEER OF RECORD AND THE DSA DISTRICT STRUCTURAL ENGINEER. THE PROJECT INSPECTOR WILL VERIFY THAT ALL COMPONENTS AND EQUIPMENT HAVE BEEN ANCHORED IN ACCORDANCE WITH ABOVE REQUIREMENTS.

PIPING, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEM BRACING NOTE

PIPING, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEMS SHALL BE BRACED TO COMPLY WITH THE FORCES AND DISPLACEMENTS PRESCRIBED IN ASCE 7-16 SECTION 13.3 AS DEFINED IN ASCE 7-16 SECTION 13.6.5.6, 13.6.7, 13.6.8, AND 2019 CBC, SECTIONS 1616A1.23, 1616A1.24, 1615A1.25, AND 1616A.4.26.

THE METHOD OF SHOWING BRACING AND ATTACHMENTS TO THE STRUCTURE FOR THE IDENTIFIED DISTRIBUTION SYSTEM AREA AS NOTED BELOW, WHEN BRACING AND ATTACHMENTS ARE BASED ON A PRE-APPROVED INSTALLATION GUIDE (E.G., SMACNA, OR OSHPD OPM), COPIES OF THE MANUAL SHALL BE AVAILABLE ON THE JOBSITE PRIOR TO THE START OF HANGING AND BRACING OF THE PIPE, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEMS. STRUCTURAL NEEDED SPECIFIC DETAILS. THE STRUCTURAL ENGINEER OF RECORD SHALL VERIFY THE ADEQUACY OF THE STRUCTURE TO SUPPORT THE HANGER AND BRACE LOADS

MECHANICAL PIPING (MP), MECHANICAL DUCTS (MD), PLUMBING PIPING (PP), ELECTRICAL DISTRIBUTION SYSTEMS (E):

MP☒MD☐PP☐E☐ - OPTION 1: DETAILED ON THE APPROVED DRAWINGS WITH PROJECT SPECIFIC NOTES AND DETAILS.

MP☐MD☐PP☐E☐ - OPTION 2: SHALL COMPLY WITH THE APPLICABLE OSHPD PRE-APPROVED (OPM#) #OPM-0043-13 MASON WEST. THE CONTRACTOR SHALL SUBMIT CALCULATIONS AND SHOP DRAWINGS (STAMPED BY A REGISTERED STRUCTURAL ENGINEER) AS A DELEGATED SUBMITTAL OF THE SUPPORTS AND BRACIN SYSTEMS TO BE INSTALLED PER THE OPM PRE-APPROVAL. THE ENGINEER OF RECORD SHALL REVIEW THE DELEGATED SUBMITTAL AS NOTED ABOVE.

PLOT DATE: 7/26/2023 8:04:11 PM

STATE OF CALIFORNIA
Envelope Component Approach
NRCC-ENV-E — CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE — **NRCC-ENV-E**

This document is used to demonstrate compliance with mandatory requirements in §110.8(e) and §120.7(b) for newly constructed buildings, and §141.0(b)1 for alterations, related to roof, wall and floor assemblies. It is also used to demonstrate compliance with prescriptive requirements in §140.3 for newly constructed buildings, and §141.0 for additions and alterations, related to roof, wall, floor, door, fenestration and daylighting requirements.

Project Name: The City of Gardena Senior Center and Aquatics — **Report Page:** (Page 1 of 21)
Project Address: 1654 W 166th Street — **Date Prepared:** 5/5/2023

A. GENERAL INFORMATION

01	Project Location (city)		05	# of Stories (Habitable Above Grade)	1
02	Zipcode	90247	06	Total Conditioned Floor Area (ft²)	9349
03	Climate Zone	8	07	Total Unconditioned Floor Area (ft²)	0
04	Occupancy Types Within Project: (select all that apply): If one occupancy constitutes >= 80% of the conditioned floor area, the entire building envelope may be designed to comply with the provisions of that occupancy per §100.0(f).		08	☐ Project includes unconditioned enclosed space(s) > 5,000 ft.² under a roof with a ceiling height of at least 15 ft.[1]	
	☒ All Nonresidential, including Relocatable Public School Building certified for use in one climate zone Occupancy: A / B / E / F / H / M / S / U	☐ Relocatable Public School Building for use in all climate zones Occupancy: E	☐ High-Rise Residential Occupancy: R-2 / R-3	☐ Hotel/Motel Guest Rooms Occupancy: R-1	

[1] *FOOTNOTE: Enclosed spaces > 5,000 ft.² directly under roof with ceiling height > 15 ft in climate zones 2 through 15 are required to meet the minimum daylighting requirements defined in §140.3(c). Compliance with §140.3(c) is documented in Table L. This is the only prescriptive requirement which applies to unconditioned spaces.*

B. PROJECT SCOPE

This table specifies project envelope components within the permit application demonstrating compliance using the prescriptive paths outlined in §140.3 and §141.0(a)1 and §141.0(b)1 and 2 for additions and alterations.

My project consists of (check all that apply)		Component Types					
		01		02			
☒	New Construction or Newly Conditioned Space	☒	Roof	☒	Walls	☒	Exterior Doors
	☐ One or more enclosed spaces > 5,000 ft.² directly under roof with ceiling height > 15ft			☐	Floors	☒	Fenestration/ Glazed Doors[1]
☐	Addition of conditioned space	☐	Roof	☐	Walls	☐	Exterior Doors
	☐ One or more enclosed spaces > 5,000 ft.² directly under roof with ceiling height > 15ft			☐	Floors	☐	Fenestration/ Glazed Doors[1]
☐	Alteration of conditioned space	☐	Roof Assembly	☐	Walls		Exterior Doors NA. for Alts.
	☐ One or more enclosed spaces > 5,000 ft.² directly under roof with ceiling height > 15ft and lighting system installed for the first time	☐	Roofing Material	☐	Floors	☐	Fenestration/ Glazed Doors

[1] *FOOTNOTE: Doors that are more than 25% glass in area are considered Glazed Doors and should be documented on table K with fenestration.*

Project Address: 1654 W 166th Street — **Date Prepared:** 5/5/2023

C. COMPLIANCE RESULTS

Results in this table are automatically calculated from data input and calculations in Tables F through L. Note: If any cell on this table says "COMPLIES with Exceptional Conditions" refer to Table D. Exceptional Conditions for guidance or see the applicable table referenced below.

Opaque Envelope Components							
Roof Assembly	Roofing Materials	Walls	Floors	Doors	Fenestration	Daylighting Spaces > 5,000ft²	Compliance Results
01	02	03	04	05	06	07	08
(See Table F)	(See Table G)	(See Table H)	(See Table I)	(See Table J)	(See Table K)	(See Table L)	COMPLIES
Yes	Yes	Yes		Yes	Yes		

D. EXCEPTIONAL CONDITIONS

This table is auto-filled with uneditable comments because of selections made or data entered in tables throughout the form.

E. ADDITIONAL REMARKS

This table includes remarks made by the permit applicant to the Authority Having Jurisdiction.

F. ROOF ASSEMBLY SCHEDULE

This table demonstrates compliance for prescriptive roof assembly requirements in §140.3(a)1B for new construction or additions, or §141.0(b)2BIII for alterations.

01 — Indicate roof types included in the project: ☒ Framed ☐ SIPS ☐ Span Deck & Concrete ☐ Metal Panels ☐ Metal Building

Framed Roof Assemblies

01: ☒ Include Framed Roof Assemblies in Area-Weighted Average U-factor Calculation[1]

02	03	04	05	06
Tag/Plan Detail ID	Name/Description	Status	Exception to Roof Insulation Requirements in §141.0(b)2BiII (Alts. Only)	Occupancy Type
R-30 Roof Cathedral_Gardena	Roof	New		Nonresidential/ Relocatable 1 CZ
R-30 Roof Cathedral_Gardena	Roof	New		Nonresidential/ Relocatable 1 CZ
R-30 Roof Cathedral_Gardena	Roof	New		Nonresidential/ Relocatable 1 CZ
R-30 Roof Cathedral_Gardena	Roof	New		Nonresidential/ Relocatable 1 CZ

[1] *FOOTNOTES: Mixed Roof Assemblies: Area-Weighted Average U-factor Calculation is required when more than one roof assembly is specified in the project. Refer to §140.3(a)1B for new construction or additions, or §141.0(b)2B for alterations.*

CERTIFICATE OF COMPLIANCE		NRCC-ENV-E
Project Name:	The City of Gardena Senior Center and Aquatics	Report Page: (Page 19 of 21)
Project Address:	1654 W 166th Street	Date Prepared: 5/5/2023

K. FENESTRATION AND GLAZED DOOR SCHEDULE

Overhang Details for RSHGC per §140.3

26	27	28	29	30	31	32
SHGC of Window	Depth (ft)	Height from Bottom of Sill to Overhang (ft)	Left Extent[3] (ft)	Right Extent[3] (ft)	Orientation	RSHGC
0.25	10	0.1	10	10	North Facing	0.198

FOOTNOTES: If any individual fenestration product is non-compliant, products may show compliance using an area-weighted calculation. Chromogenic glazing is not included in area-weighted calculations. Area-weighted calculation shown in separate area-weighted table below.

[2]The NA6 Default Calculation can only be used for buildings with less than 2000ft[2] of site built glazing. If the project has greater than 2000ft[2], the only options for determining fenestration values are NFRC Certification or the Default Tables in 110.6.

[3] Overhangs must extend past the left and right window the same distance as the depth of the overhang or greater to show an affect on the RSHGC. If an overhang does not meet this requirement, the effect of the overhang will be ignored.

[4]Projecting includes casement and awning windows.

Area-Weighted Average U-factor, SHGC, VT Compliance Calculation for Vertical Fenestration And Glazed Doors

01	02	03		04		05

N. DECLARATION OF REQUIRED CERTIFICATES OF ACCEPTANCE

Selections have been made based on information provided in previous tables of this document. If any selection needs to be changed, form user must provide an explanation in Table E Additional Remarks. These documents must be provided to the building inspector during construction and can be found online at https://www.energy.ca.gov/title24/2019standards/2019_compliance_documents/Nonresidential_Documents/NRCA/. Individuals who perform the field testing and verification work, and provide the information required for completion of the fenestration Certificate of Acceptance documentation are not required to be licensed professionals. However, the person who signs the Certificate of Acceptance document to certify compliance with the acceptance requirements shall be licensed as specified in Standards Section 10-103(a)4 and NA7.3.1

DOCUMENTATION AUTHOR'S DECLARATION STATEMENT

I certify that this Certificate of Compliance documentation is accurate and complete.

Documentation Author Name: Nikolaos J. Kourasios	Documentation Author Signature:
Company: Alfa Tech	Signature Date: 2023-05-05
Address: 421 E. Huntington Dr.	CEA/ HERS Certification Identification (If applicable): MI31713
City/State/Zip: Monrovia CA 91016	Phone: (213) 212-9860

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. To the best of my knowledge, a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

[1]FOOTNOTES: Equipment shall be the smallest size, within the available options of the desired equipment line, necessary to meet the design heating and cooling loads of the building per §140.4(a). Heathcare facilities are excepted.

[2]It is common practice to show rated output capacity on the equipment schedule. Sensible cooling output comes from specification sheet tables.

[3] If equipment is heating only, leave cooling output and load blank. If equipment is cooling only, leave heating output and load blank.

[4] Authority Having Jurisdiction may ask for load calculations used for compliance per §140.4(b).

H. FAN SYSTEMS & AIR ECONOMIZERS

This table is used to demonstrate compliance with prescriptive requirements found in §140.4(c), §140.4(e) and §140.4(m) for fan systems. Fan systems serving only process loads are exempt from these requirements and do not need to be included in Table H.

System Name:	1F RTU 1-1 Senior Daycare	Economizer[1]	Fixed Temperature	Economizer Controls:	Designed per §140.4(e) and (m)	System Fan Type:	Constant Volume
01	02	03	04	05	06	07	08

[1] *FOOTNOTES: System CFM should include both mechanical and natural ventilation for the zone/system*

[2] *Air filtration requirements apply to the following three system types per §120.1(c)14 : space conditioning systems utilizing ducts to supply air to occupiable space; supply-only ventilation systems providing outside air to occupiable space; supply side of balanced ventilation systems including heat recovery and energy recovery ventilation systems providing outside air to occupiable space.*

[3] *Uniform Mechanical Code may have more stringent ventilation requirements; the most stringent code requirement takes precedence.*

[4] *See Standards Tables 120.1-A and 120.1-B.*

[5] *For lecture halls with fixed seating, the expected number of occupants shall be shall be determined in accordance with the California Building Code.*

[6] *§120.2(e)3 requires systems serving rooms that are required by §130.1(c) to have lighting occupancy sensing controls to also have occupancy sensing zone controls for ventilation. Examples of spaces which require lighting occupancy sensors include offices 250ft² or smaller, multipurpose rooms less than 1,000 ft², classrooms, conference rooms, restrooms, aisles and open areas in warehouses, library book stack aisles, corridors, stairwells, parking garages, and loading and unloading zones, unless excepted by §130.1(c).*

L. DISTRIBUTION (DUCTWORK and PIPING)

This table is used to show compliance with mandatory pipe insulation requirements found in §120.3 and prescriptive requirements found in §140.4(l) for duct leakage testing.

Duct Leakage Sealing

The answers to the questions below apply to the following duct systems: 1F RTU 1-1 Senior Daycare | Duct leakage testing triggered for these systems? | No

11	No	The scope of the project includes only duct systems serving healthcare facilities
12	Yes	Duct system provides conditioned air to an occupiable space for a constant volume, single zone, space-conditioning system.
13	Yes	The space conditioning system serves less than 5,000 ft² of conditioned floor area.
14	No	The combined surface area of the ducts in the following locations is more than 25% of the total surface area of the entire duct system:
	☐	Outdoors
	☐	In a space directly under a roof that has a U-factor greater than the u-factor of the ceiling, or if the roof does not meet the requirements of §140.3(a)1B or if the roof has fixed vents or openings to the outside/ unconditioned spaces
	☐	In an unconditioned crawl space
	☐	In other unconditioned spaces
15		The scope of the project includes extending an existing duct system, which is constructed, insulated or sealed with asbestos.
16		The scope of the project includes an existing duct system that is documented to have been previously sealed as confirmed through field verification and diagnostic testing in accordance with procedures in the Reference Nonresidential Appendix NA2.
17	Yes	Duct system shall be sealed in accordance with the California Mechanical Code

The answers to the questions below apply to the following duct systems: 2F RTU 2-3 Classroom | Duct leakage testing triggered for these systems? | No

11	No	The scope of the project includes only duct systems serving healthcare facilities
12	Yes	Duct system provides conditioned air to an occupiable space for a constant volume, single zone, space-conditioning system.
13	Yes	The space conditioning system serves less than 5,000 ft² of conditioned floor area.
14	No	The combined surface area of the ducts in the following locations is more than 25% of the total surface area of the entire duct system:
	☐	Outdoors
	☐	In a space directly under a roof that has a U-factor greater than the u-factor of the ceiling, or if the roof does not meet the requirements of §140.3(a)1B or if the roof has fixed vents or openings to the outside/ unconditioned spaces
	☐	In an unconditioned crawl space
	☐	In other unconditioned spaces
15		The scope of the project includes extending an existing duct system, which is constructed, insulated or sealed with asbestos.
16		The scope of the project includes an existing duct system that is documented to have been previously sealed as confirmed through field verification and diagnostic testing in accordance with procedures in the Reference Nonresidential Appendix NA2.
17	Yes	Duct system shall be sealed in accordance with the California Mechanical Code

The answers to the questions below apply to the following duct systems: 1F MAU 1-1 Restroom and Shower | Duct leakage testing triggered for these systems? | No

11	No	The scope of the project includes only duct systems serving healthcare facilities
12	Yes	Duct system provides conditioned air to an occupiable space for a constant volume, single zone, space-conditioning system.
13	Yes	The space conditioning system serves less than 5,000 ft² of conditioned floor area.
14	No	The combined surface area of the ducts in the following locations is more than 25% of the total surface area of the entire duct system:
	☐	Outdoors
	☐	In a space directly under a roof that has a U-factor greater than the u-factor of the ceiling, or if the roof does not meet the requirements of §140.3(a)1B or if the roof has fixed vents or openings to the outside/ unconditioned spaces
	☐	In an unconditioned crawl space

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

Domestic Water Heating System
NRCC-PLB-E
CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE			NRCC-PLB-E
Project Name:	The City of Gardena Senior Center and Aquatics	Report Page:	(Page 1 of 6)
Project Address:	1654 W 166th Street	Date Prepared:	5/5/2023

This document is used to demonstrate compliance for nonresidential occupancies with requirements in §120.1, §110.3, §120.8, and §140.5, and with requirements in §141.0 for additions and alterations, for domestic water heating scopes using the prescriptive path. For high-rise residential and hotel/motel occupancies compliance is demonstrated with requirements in §160.1, §110.3, §120.5, §150.0 and §150.1(c)8, and with requirements §150.2 for additions.

A. GENERAL INFORMATION

01 Project Location (city)	Gardena	02 Climate Zone	8

03 Occupancy Types Within Project (select all that apply):

☒ Nonresidential	☐ High-Rise Residential	☐ Hotel/Motel
☐ State Building	☐ Healthcare Facility	☐ Other (Write In)

B. PROJECT SCOPE

This table includes domestic water heating systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive paths outlined in §140.5 §150.1(c)8, and §141.0(b)1 or §141.0(b)2N for additions or alterations. Solar water heating systems are documented on the NRCC-SRA compliance document. Combined hydronic water heating systems are documented on the NRCC-MCH compliance document.

01	02	03	
My project consists of (check all that apply):	System Type[1,2]	System Components	
☒ New system (DHW system being installed for the first time in newly constructed building)	Individual System (serving nonresidential spaces)	☒ Equipment	☒ Distribution ☒ Controls
☐ System Alteration (equipment, distribution or controls)		☐ Equipment	☐ Distribution ☐ Controls

[1]FOOTNOTES: Point of use water heaters, or other non-central systems used to serve nonresidential spaces, are considered individual systems.

[2] Dwelling units refers to hotel/motel guest rooms and units in a high-rise residential occupancy.

G. DOMESTIC HOT WATER DISTRIBUTION SYSTEM

This table is used to demonstrate compliance for nonresidential occupancies with distribution requirements in §120.3 and §140.5. For high-rise residential and hotel/motel occupancies, compliance is demonstrated with requirements §160.2(c), §120.3, §120.5, §160.1

Mandatory Pipe Insulation All Occupancies

12	☒	For systems serving nonresidential spaces, pipe insulation for the following applications is specified to comply with Table 120.3-A (see below) per §120.3 : • Recirculating system piping, including supply and return piping of the water heater • The first 8 ft of hot and cold outlet piping, including between storage tank and heat trap, for a nonrecirculating storage system • Pipes that are externally heated
13	☒	Insulation shall be protected from damage, including that due to sunlight, moisture, equipment maintenance, and wind. Insulation exposed to weather shall be installed with a cover suitable for outdoor service per §120.3(b) and §150.0(i)3

TABLE 120.3-A PIPE INSULATION THICKNESS

Fluid Temperature Range (°F)	Conductivity Range (Btu-in per hour per ft² per °F)	Insulation Mean Rating Temp (°F)	Nominal Pipe Diameter (in)		
			< 1	1 to < 1.5	1.5 to < 4
			Minimum Insulation Required		
105-140	0.22 - 0.28	100	1.0 in or R-7.7	1.5 in or R-12.5	1.5 in or R-11

H. DOMESTIC HOT WATER CONTROLS

This table is used to demonstrate compliance with control requirements in §110.3 for all occupancies. For high-rise residential and hotel/motel occupancies, compliance is also demonstrated with requirements in §160.1(c)8

	Yes	No	Not Applicable	Requirement
01	☒	☐	☐	Construction documents require manufacturer certification that service water-heating systems are equipped with automatic temperature controls capable of adjusting temperature settings per §110.3(a).
02	☒	☐	☐	Systems with capacity > 167,000 BTUH equipped with outlet temperature controls per §110.3(c)1 unless covered by California Plumbing Code §13.0.
03	☐	☐	☒	Controls for circulating pumps or electrical heat trace systems are capable of automatically turning off the system per §110.3(c)2 unless systems serves healthcare facility.
04	☐	☐	☒	For recirculation systems serving multiple dwelling units, design includes automatic pump controls per §150.1(c)8Bii, or §150.2 for additions or alterations.
05	☐	☐	☒	For recirculation systems serving individual dwelling units; design includes manual on/off controls as specified in Reference Appendix RA4.4.9 per §150.1(c)8.
06	☐	☐	☒	For replacement single heat pump water heaters serving individual dwelling units in climate zone 1-15, design includes communication interface that meets demand responsive control requirements of §110.12(a) per §150.2(b)1Hii.

I. DECLARATION OF REQUIRED CERTIFICATES OF INSTALLATION

Selections have been made based on Information provided in this document. If any selection have been changed by permit applicant, an explanation should be included in Table E. Additional Remarks. These documents must be provided to the building inspector during construction and can be found online at https://www.energy.ca.gov/title24/2019standards/2019_compliance_documents/Nonresidential_Documents/NRCV

Form/Title	Field Inspector	
	Pass	Fail

KEYNOTES

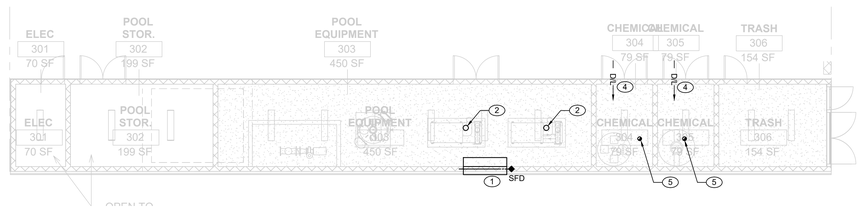
1. (2) 68"x24" HIGH & LOW COMBUSTION AIR LOUVER WITH SFD. (1) COMMENCING 12" AFF AND (1) COMMENCING 12" BELOW STRUCTURE ABOVE. PROVIDE DUCT SLEEVE AS NEEDED. SEE ARCHITECTURAL DRAWING.
2. 8" DIA. BOILER DUCT FLUE UP THRU ROOF WITH FLUE CAP.
3. 8" DIA. BOILER DUCT FLUE WITH FLUE CAP DN THRU ROOF.
4. MIN. 12"x8" DOOR LOUVER. SEE ARCHITECTURAL DRAWING.
5. 6" DIA. EA DUCT UP THRU ROOF AND CONNECT TO EXHAUST FAN. PROVIDE 1/2" WIRE MESH SCREEN AT EA DUCT OPENING.

MECHANICAL ROOF PLAN - POOL BUILDING | 1/8" = 1'-0" | 2



COMBUSTION AIR VENT CALCULATION

4000 BTU REQUIRED OPENING = 1 SQ IN. (PER CMC)
1.5 MILLION BTU REQUIRED OPENING = (1,500,000 ÷ 4000) =375 SQ IN.

(LOUVER WILL BE 50% FREE AREA)
REQUIRED COMBUSTION AIR LOUVER = 375 X 2 = 750 SQ IN.

2 x 1.5 MILLION BUT REQUIRED OPENING = 750 x 2 = 1500 SQ IN.

PROVIDED COMBUSTION AIR LOUVER (HI & LOW) = 1632 SQ IN.

MECHANICAL PLAN - POOL BUILDING | 1/8" = 1'-0" | 1

ALTERNATIVE HOLD DOWN DETAIL

NOTE:
ALTERNATIVE ONLY FOR 9" LONG HOLD DOWN WITH (8) SCREWS AT TOP AND (4) SCREWS AT BOT EQUALLY SPACED

1. INFORMATION SHOWN ON THE STAMPED CANFAB CURB DRAWING IS THE MINIMUM REQUIREMENTS FOR THE CURB CONSTRUCTION AND INSTALLATION. NO STRUCTURAL OBJECTION TO THE USE OF LARGER SIZE SCREWS AND THICKER GAUGE SHEET METAL THAN THE INFORMATION SHOWN ON THE DRAWING AND SPECIFICATIONS.
2. NO STRUCTURAL OBJECTION TO SHIFTING THE ATTACHMENT CLIPS ALONG THE CURB, FIRST AND LAST CLIP IN THE SERIES OF CLIPS SHALL BE LOCATED PER CLIP LOCATION DETAIL PER STAMPED CANFAB CURB DRAWING. DISTANCE SHIFTED SHALL NOT BE LARGER THAN THE LENGTH OF THE CLIP.
3. NO STRUCTURAL OBJECTION TO CUTTING THE ATTACHMENT CLIPS PER REQUIREMENTS AS SHOWN ON BELOW SKETCH.

CLIP LOCATION DETAIL

NOTE:
SEE TABLE 2 FOR CLIP LOCATION

TABLE 2 CLIP LOCATION

CURB	EDGE [IN]	SPACING [IN]

NOTE: FINISH CURB HEIGHT IS 13.5" TALLER THAN DIMENSION A.

ATTACHMENT TO STRUCTURAL CONCRETE

"B" 5/8" HILTI KWIK BOLT TZ SS 304, HALF EACH LONG SIDE.
"C" 5/8" HILTI KWIK BOLT TZ SS 304, HALF EACH SHORT SIDE.

NOTE:
–MIN. 5" AWAY FROM THE NEAREST CONCRETE EDGE (INSTALL PER ICC–ES ESR–1917).
–STRUCTURALLY ACCEPTABLE TO SUBSTITUTE HILTI KBTZ STAINLESS STEEL BOLTS WITH HILTI KBTZ CARBON STEEL BOLTS ONLY IF ALL THE BOLTS ARE COMPLETELY WATERPROOFED AND PROTECTED AGAINST THE WEATHER.
–BOLTS SHALL BE EQUALLY SPACED

ATTACHMENT TO STRUCTURAL STEEL

1/8" FILLET WELD, 2" LONG, "S" ON CENTER.

NOTE:
–PROVIDE MIN 2 CONNECTIONS WHERE THE CURB SIDE IS SHORTER THAN THE WELD SPACING.
–PROVIDE WELDS ON ALL SIDES.

ATTACHMENT TO WOOD

"L" 3/8"x4" LAG SCREWS, HALF EACH LONG SIDE.
"F" 3/8"x4" LAG SCREWS, HALF EACH SHORT SIDE.

NOTE:
–SCREWS SHALL BE EQUALLY SPACED.

ALL WORK SHALL CONFORM TO THE STANDARD OF 2018 INTERNATIONAL BUILDING CODE & 2019 CALIFORNIA BUILDING CODE.

SEISMIC DESIGN CRITERIA
– SDS = 1.5 Ip = 2.5
– I = 1.5 Rp = 2.0

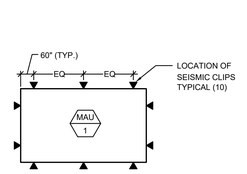
WIND DESIGN CRITERIA
– 110 MPH ULTIMATE
– EXPOSURE C
– 175 MPH, 3 SECOND GUST WIND

NOTE:
INSTALLER TO VERIFY WITH A LICENSED STRUCTURAL ENGINEER IN THE CORRESPONDING STATE THE ADEQUACY OF THE STRUCTURE FOR THE SEISMIC AND WIND DESIGN OF THE CURB IN ADDITION TO ALL OTHER LOADS.
– INSTALLER TO VERIFY WITH A LICENSED STRUCTURAL ENGINEER IN THE CORRESPONDING STATE THAT THE SEISMIC AND WIND DESIGN CRITERIA NOTED ON THIS DRAWING INCLUDES ALL LOADS IMPOSED ON THE CURB UNLESS OTHERWISE. CONTACT CANFAB FABRICATION FOR A SITE SPECIFIC ANALYSIS AND DRAWINGS.

CURB CONSTRUCTION
– U @ WELDED
– 21 @ SCREWED
– 21 @ RIVGLOCK
– ALL WELDING CONSTRUCTION CERTIFIED TO AWS D1.1 STRUCTURAL WELDING CODE–STEEL.
– SELF–DRILLING SCREW SHALL MEET ASTM C1513 SPECIFICATION AND INSTALLED PER MANUFACTURER.
– NO GAP IS ALLOWED BETWEEN TWO METAL SHEET SURFACES WHERE SHEET METAL SCREW IS CONNECTED

CURB AND UNIT INFORMATION
– 14 GAUGE GALVANIZED STEEL CURB

– SEE TABLE 3 FOR ALLOWABLE CURB AND UNIT DIMENSIONS AND WEIGHT.



– SEE TABLE 4 FOR TABULATED CURB AND ANCHORAGE INFORMATION PER VARYING CURB HEIGHT.
– ALPHA DESIGNATIONS "A" THRU "M", CAN BE FOUND ON TABLE 4, PAGE 3

REMARKS
(1) PROVIDE FACTORY VIBRATION ISOLATION CURB.
(2) PROVIDE MERV 13 FILTER WITH FACTORY INSTALLED CONTROLLER TIED TO RTU.
(3) PROVIDE 0-100% FULLY MODULATING ECONOMIZER AND INTEGRAL POWER EXHAUST WITH DRY-BULB INTEGRATED CONTROL. PROVIDE DUAL, SEPARATE POWER TO UNIT AND POWER EXHAUST. PROVIDE CARBON DIOXIDE (CO2) SENSOR FOR DCV CONTROL.
(4) VERTICAL SUPPLY AND RETURN DUCT DISCHARGE
(5) PROVIDE DUCT SMOKE DETECTOR ON SA DUCT PER FIRE ALARM DRAWINGS.
(6) PROVIDE SEPARATE POWER FOR POWER EXHAUST.
(7) PROVIDE FAULT DETECTION DIAGNOSTICS PER T-24 120.2(I).
(8) PROGRAMMABLE THERMOSTAT TIED TO RTU. PROVIDE ALL NECESSARY CONTROLS, EQUIPMENT, PROGRAMMING, WIRING AND CONDUITS FOR CONNECTION EXISTING EMS.
(9) PROVIDE 0-100% FULLY MODULATING ECONOMIZER WITH DRY-BULB INTEGRATED CONTROL AND BUILT IN RELIEF DAMPER.
(10) HORIZONTAL SUPPLY & RETURN DUCT DISCHARGE.
(11) ADDED 5% ON THE UNIT WIGHT FOR OTHER MANUFACTURER CAN BID ON THE PROJECT.

NOTES:
1. SEE ARCHITECTURAL PLANS FOR CEILING TYPE. PROVIDE LAY-IN TYPE BORDER FOR ACOUSTICAL TILE CEILINGS AND SURFACE MOUNT BORDER FOR GYPSUM BOARD AND OTHER TYPES OF CEILING OR WALLS.
2. PROVIDE 24x24 MODULE FOR STANDARD LAY-IN CEILINGS. PROVIDE 12x12 MODULE FOR SMALL ROOMS WHERE 24x24 GRID LOCATIONS ARE NOT AVAILABLE.
3. INCREASE NECK SIZE 2" FOR 2 AND 3 WAY BLOW APPLICATIONS.
4. DIFFUSER AND REGISTER COLOR AND FINISH SHALL BE SELECTED BY THE ARCHITECT. WHITE LISTED AS STANDARD.
5. PROVIDE SQUARE TO ROUND TRANSITION FOR RETURN, EXHAUST AND TRANSFER GRILLES WHERE THEY ARE CONNECTED WITH FLEXIBLE DUCTWORK.
6. PROVIDE SECTIONING BAFFLES FOR 1,2, AND 3 WAY BLOW APPLICATIONS.
7. FOR FIRE RATED CEILING, PROVIDE DIFFUSER WITH MANUFACTURER'S FIRE RATED OPTION.
8. FOR CEILING MOUNTED RETURN/EXHAUST GRILLES, PROVIDE MINIMUM 3" PLENUM BEHIND GRILLE.
9. ALL DIFFUSERS SHALL BE SELECTED AT MAX. NC-25.

CONTROLS SYSTEM ARCHITECTURE | SCALE NONE | 5

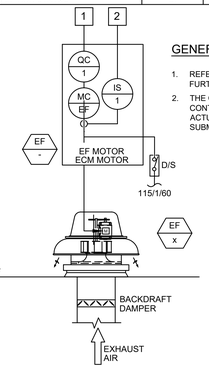
GENERAL NOTES:

- THIS DIAGRAM REPRESENTS INTERNAL CONTROL POINTS FOR COMMON MANUFACTURERS EQUIPMENT OFFERINGS. THE DIAGRAMS ARE TO SHOW INTENT AND EXPECTED LEVEL OF QUALITY/OPERATION.
- CONTROL FOR THE PACKAGED UNIT SHALL BE PROVIDED BY THE EQUIPMENT MANUFACTURER, AND SET UP BY THE MANUFACTURER'S REPRESENTATIVE. FIELD MOUNTED UNIT CONTROLS ARE NOT ACCEPTABLE SINCE ITS DX.
- THE BAS CONTRACTOR SHALL BE RESPONSIBLE FOR STANDARD POINTS OF CONNECTION TO THE BUILDING BAS NETWORK.
- THE BAS CONTRACTOR SHALL BE RESPONSIBLE FOR WIRING REMOTE DEVICES INCLUDING TEMP SENSORS, DP SENSORS, ETC.
- THE BAS CONTRACTOR SHALL HELP WITH THE UNIT SETUP AND PROGRAMMING RELATED TO INPUT/OUTPUT VALUES FOR TEMPERATURES, ALARMS, AND TIME OF DAY SCHEDULES.
- IF A SMOKE DAMPER OR FIRE-SMOKE DAMPER IS REQUIRED THEN THE SMOKE DAMPER ACTUATOR POWER SHALL ORIGINATE IN THE UNIT'S CONTROL CABINET AND WIRED TO AUX CONTACTS. THE SMOKE DAMPER ACTUATOR WILL BE PROVIDED BY MECHANICAL TO BE 24V SPRING CLOSED. WHEN THE UNIT IS ON, CONTROL POWER FROM THE (FAN) CONTROL CIRCUITS SHALL PROVIDE POWER TO OPEN THE DAMPER WHEN THE UNIT IS ON. WHEN THE UNIT IS OFF, CONTROL POWER WILL BE OFF, SO THE SPRING IN THE SMOKE DAMPER ACTUATOR SHALL CLOSE AUTOMATICALLY. THE COMMISSIONING FIELD TEST WILL BE TO HAVE THE FIRE-SMOKE DAMPER CLOSE WHEN THE UNIT IS MANUALLY TURNED OFF.

SEQUENCE OF OPERATION:

A. THE UNIT WILL BE ENERGIZED TO OCCUPIED MODE BY TIME OF DAY PROGRAMMING VIA MANUFACTURER'S PROGRAMMABLE THERMOSTAT. WHEN ENERGIZED, MANUFACTURER'S INTEGRAL CONTROLLER SHALL CONTROL ALL UNIT'S FANS, COMPRESSORS, HOT GAS VALVES AND AUXILIARIES TO MAINTAIN COOLING AND HEATING SET POINTS.
B. DURING OCCUPIED PERIODS, WHEN ENERGIZED, THE FAN SHALL RUN CONTINUOUSLY.
C. DURING UNOCCUPIED PERIODS, THE FAN WILL CYCLE WITH A CALL FOR HEATING OR COOLING TO MAINTAIN UNOCCUPIED SET POINTS.
D. CONTROL POINTS FOR MFR.'S CONTROLLER:
   1. UNIT STATUS - ON/OFF/MODE.
   2. UNIT ALARM.
   3. DIRTY FILTER ALARM.
   4. OUTSIDE AIR TEMPERATURE.
   5. SPACE TEMPERATURE.
   6. SPACE TEMPERATURE SET POINT.
   7. SPACE HUMIDITY SET POINT.
E. COOLING CONTROL: WHEN SPACE CONDITIONS INDICATE TEMPERATURE ABOVE SET POINT OF 72° F (ADJUSTABLE), ENERGIZE COOLING MODE.
F. MFR.'S INTEGRAL CONTROLS OPERATES REFRIGERANT SYSTEMS TO MAINTAIN SPACE TEMPERATURE SET POINT. UPON SATISFYING SPACE TEMPERATURE SETPOINT, THE UNIT'S FAN VFD SHALL MODULATE THE FAN SPEED TO PREVENT OVERCOOLING OF THE SPACE.
G. FOR SYSTEMS WITH HOT GAS REHEAT COILS, MODULATE REHEAT BASED UPON SPACE HUMIDITY WHILE CONTROLLING COOLING TO SPACE TEMPERATURE SET POINT.
H. FOR SYSTEMS WITHOUT HOT GAS REHEAT, CYCLE FAN ON AND OFF WITH FULL COMPRESSOR CAPACITY WITHOUT FAN OFF TIME DELAY RELAYS.
I. HEATING CONTROL: WHEN SPACE CONDITIONS INDICATE AN AIR TEMPERATURE BELOW HEATING SET POINT OF 68° F (ADJUSTABLE), ENERGIZE HEATING MODE.
J. MFR.'S INTEGRAL CONTROLS OPERATES HEATING CONTROLS TO MAINTAIN SPACE TEMPERATURE SET POINT.
K. OUTSIDE AIR VENTILATION: THE INTEGRAL CONTROLS SHALL MODULATE THE OA DAMPER TO MAINTAIN MINIMUM REQUIRED OUTDOOR AIR. THIS IS TO BE ACHIEVED EITHER BY AN AIRFLOW MEASURING STATION OR BY DP ACROSS THE OA DAMPER. THE OA DAMPER SHALL MODULATE BETWEEN THE SETPOINTS OF THE DP AT THE SUPPLY FANS' MAXIMUM AND MINIMUM FLOWS.
L. FILTERS: PROVIDE DIRTY FILTER SWITCH FOR EACH FILTER SECTION WITH DIRTY FILTER ALARM.

BASIC FEATURES OF PACKAGED DX UNIT



- FILTER DP SWITCH OR SENSOR
- OA DAMPER, NORMALLY CLOSED
- FAN STATIC PRESSURE HIGH LIMIT SWITCH
- HIGH AND LOW TEMPERATURE LIMIT SETPOINTS AND ALARMS
- INTEGRAL CONTROLS CABINET SECTION
- INTEGRAL MICROPROCESSOR CONTROLLER & LOGIC
- SINGLE POINT POWER CONNECTION
- INLET AND DISCHARGE RAIN HOODS
- IMPACT RESISTANCE LABEL

- FIRE ALARM SHUTDOWN DIGITAL INPUT
- SUPPLY AIR TEMP CONTROL, DEWPOINT CONTROL/DEHUM MODE

WCO	WALL CLEAN OUT
WHA	WATER HAMMER ARRESTOR
WSFU	WATER SUPPLY FIXTURE UNIT

PLUMBING NOTES

A. PRIOR TO BID THE CONTRACTOR SHALL VERIFY THE EXACT LOCATIONS, ELEVATIONS, POINTS OF CONNECTIONS AND CHARACTERISTICS OF ALL UTILITY PIPING AND SHALL IMMEDIATELY NOTIFY THE ARCHITECT OF ANY DISCREPANCIES.

B. PROVIDE PIPING, EQUIPMENT, AND MATERIALS IN ACCORDANCE WITH APPLICABLE PLUMBING CODE REGULATIONS, STANDARDS, AUTHORITY HAVING JURISDICTION REQUIREMENTS AND AS OTHERWISE RECOMMENDED OR DIRECTED BY MANUFACTURERS.

C. COORDINATE INSTALLATION OF PIPING BELOW GRADE WITH STRUCTURAL COMPONENTS AND OTHER SYSTEM INSTALLATIONS.

D. COORDINATE INSTALLATION OF PIPING, FIXTURES, EQUIPMENT, ETC. WITH ARCHITECTURAL, STRUCTURAL, MECHANICAL AND ELECTRICAL PRIOR TO INSTALLATION.

E. CLEANOUTS SHALL BE PROVIDED AS REQUIRED BY CODE AND SHALL BE READILY ACCESSIBLE. THE CONTRACTOR SHALL COORDINATE ALL LOCATIONS WITH EQUIPMENT, CABINETS, ETC., WITH ARCHITECT PRIOR TO ANY INSTALLATION. ALL CLEANOUTS SHALL BE SIZED PER CODE.

F. SEE PLUMBING FIXTURE SCHEDULE FOR PIPE CONNECTION SIZES. PROVIDE LOOSE KEY STOPS TO ALL FIXTURES.

G. PROVIDE CEILING ACCESS PANELS FOR ALL VALVES LOCATED ABOVE INACCESSIBLE CEILING SYSTEMS. MAINTAIN FIRE RATINGS WHERE REQUIRED.

H. SEE ARCHITECTURAL DRAWINGS FOR EXACT FIXTURE LOCATIONS.

I. ALL SEWER / DRAINAGE PIPING BELOW GRADE SHALL BE SLOPED AT 2% (1/4" PER FOOT) UNO.

J. DO NOT RUN ANY PIPES OVER ANY ELECTRICAL PANEL OR SWITCHGEAR, NO PLUMBING WORK SHALL BE INSTALLED ABOVE ELECTRICAL SERVICE EQUIPMENT. COORDINATE PIPE LOCATIONS TO AVOID ELECTRICAL PANELS.

K. PROVIDE MANUFACTURER'S RECOMMENDED AND CODE REQUIRED CLEARANCES AROUND ALL PIECES OF EQUIPMENT. PIPING & CONDUIT SHALL NOT INTERFERE WITH REQUIRED ACCESS.

L. EQUIPMENT LAYOUT IS BASED ON EQUIPMENT LISTED IN EQUIPMENT SCHEDULES. ANY OTHER EQUIPMENT USED IS SUBJECT TO MEETING PERFORMANCE REQUIREMENTS OF LISTED EQUIPMENT. CONTRACTOR SHALL MAKE ALL NECESSARY ADJUSTMENTS TO ASSURE OTHER EQUIPMENT WILL FIT IN AVAILABLE SPACE AND WILL NOT EXCEED WEIGHT AND ELECTRICAL REQUIREMENTS.

M. CLEANOUTS SHALL BE FLUSH WITH FINISHED FLOOR AT SEALED CONCRETE / TILE.

N. REFER TO STRUCTURAL DRAWINGS FOR ALLOWABLE METHODS/LOADS FOR HANGING PIPING FROM STRUCTURAL MEMBERS.

O. ANCHORAGE DETAILS FOR EQUIPMENT ARE SUBJECT TO APPROVAL OF THE STRUCTURAL ENGINEER PRIOR TO INSTALLATION AND INSPECTION. UNLESS SPECIFICALLY SHOWN ON THESE PLANS, NO STRUCTURAL MEMBER SHALL BE CUT, DRILLED NOR NOTCHED WITHOUT PRIOR WRITTEN AUTHORIZATION FROM THE STRUCTURAL ENGINEER.

P. SEAL ALL PIPE PENETRATIONS OF WALLS WITH AIRTIGHT SEALANT (FIRE RATED SYSTEM AT RATED WALLS), REFER TO ARCHITECTURAL DRAWINGS FOR RATED WALL LOCATIONS.

Q. EACH PLUMBING VENT SHALL TERMINATE NOT LESS THAN TEN (10) FEET FROM TO THREE (3) FEET ABOVE ANY WINDOW, DOOR, AIR INTAKE, OR VENT SHAFT, AND SHALL HAVE A VANDAL RESISTANT VENT CAP.

R. REFER TO ARCHITECTURAL CODE PLAN FOR AREAS WHERE FIRE PENETRATION MATERIALS ARE REQUIRED.

S. MOUNT HOSE BIBBS @ 36" ABOVE GRADE/FF. UNO. PROVIDE WITH NON-REMOVABLE VACUUM BREAKER.

T. PROVIDE INSULATION FOR PIPES PER CALIFORNIA STATE ENERGY CODE (TITLE 24) AND PER SPECIFICATIONS. IN THE EVENT OF CONFLICTS, PROVIDE MATERIAL WHICH MEETS THE MOST STRINGENT REQUIREMENT.

U. PROVIDE ISOLATION VALVE AT EACH BRANCH CONNECTION TO MAIN (CW AND HW).

V. DIELECTRIC ISOLATION FITTINGS AT POINTS OF CONNECTION OF ALL COPPER TUBING AND ANY DISSIMILAR METALS.

W. GRAVITY FLOW WASTE PIPE SIZES SHALL REMAIN AT INDICATED DOWNSTREAM SIZE WHERE SIZES ARE NOT SHOWN.

X. WHERE DOMESTIC COLD AND/OR HOT WATER PIPING DROPS INTO A PIPE CHASE, THE SIZE SHOWN FOR THE PIPE DROPS SHALL BE USED TO THE LAST FIXTURE.

Y. PROVIDE FIRE STOPS ON PIPING TO MAINTAIN RATING OF FIRE RATED WALLS WHERE PENETRATED BY PIPING.

Z. WHERE DOMESTIC HW/CW PIPE SIZES ARE NOT INDICATED, SUPPLY PIPE SIZE SHALL REMAIN LAST INDICATED UPSTREAM SIZE. CIRCULATION PIPE SHALL REMAIN LAST INDICATED DOWNSTREAM SIZE.

AA. WHERE INDICATED PIPE SIZE IS NOT COMMERCIALLY AVAILABLE, PROVIDE NEXT LARGER AVAILABLE SIZE.

AB. PROVIDE WATER HAMMER ARRESTOR (WHA) ON HOT AND COLD WATER BRANCHES THAT SERVE WATER CLOSETS, SINKS, URINALS, WASHING MACHINES, DISHWASHERS, HOSE BIBS, SHOWERS, TUBS, AND OTHER FIXTURES WITH QUICK-CLOSING VALVES. PLACE WHA WITHIN 6 FEET UPSTREAM OF FIXTURE. PROVIDE WITH ACCESS PANEL IF REQUIRED BY LOCAL CODE.

AC. PROVIDE MINIMUM 1/8" SLOPE ON ALL CONDENSATE PIPING. CONDENSATE PIPING SHALL BE INSULATED AND JACKETED.

AD. ALL BURRED ENDS OF WATER PIPING AND TUBING SHALL BE REAMED TO THE FULL BORE OF THE PIPE OR TUBE AND ALL CHIPS SHALL BE REMOVED (SEE CALIFORNIA PLUMBING CODE, 2019 EDITION, SECTION 309.3) ADDITIONALLY, TOOLS USED IN CUTTING OR REAMING SHALL BE KEPT FREE FROM OIL OR GREASE AND WHERE SUCH CONTAMINATION HAS OCCURRED, THE ITEMS AFFECTED SHALL BE REWORKED AND RINSED.

WASTE, STORM DRAIN	ABOVE FLR			●				PROVIDE TYLER 2-BAND NO-HUB COUPLINGS
	BELOW FLR			●				PROVIDE TYLER 4-BAND NO-HUB COUPLINGS
VENT	ABOVE FLR			●				PROVIDE TYLER 2-BAND NO-HUB COUPLINGS
	BELOW FLR			●				PROVIDE TYLER 2-BAND NO-HUB COUPLINGS
CONDENSATE DRAIN	INSIDE		●					95-5 SOLDERED FITTINGS
	OUTSIDE		●					95-5 SOLDERED FITTINGS
NATURAL GAS	INSIDE				●			SCH. 40 THREADED FITTINGS
	OUTSIDE					●		SCH. 40 THREADED FITTINGS
	UNDERGROUND					●		SOLVENT WELD FITTINGS

LEAD-FREE NOTE

ALL PLUMBING PIPING/FITTINGS AND PLUMBING FIXTURES INTENDED TO CONVEY OR DISPENSE WATER FOR DRINKING OR COOKING SHALL BE "LEAD FREE" IN COMPLIANCE WITH AB 1953. CONTRACTOR SHALL PROVIDE CERTIFICATION AS PART OF THE PLUMBING SUBMITTALS THAT ALL PLUMBING PRODUCTS COMPLY WITH AB 1953.

APPLICABLE CODES AND STANDARDS

1. CITY OF BELL GARDENS MUNICIPAL CODE
2. 2019 CALIFORNIA BUILDING CODE
3. 2019 CALIFORNIA ELECTRICAL CODE
4. 2019 CALIFORNIA MECHANICAL CODE
5. 2019 CALIFORNIA PLUMBING CODE
6. 2019 CALIFORNIA ENERGY CODE
7. 2019 CALIFORNIA GREEN BUILDING CODE
8. 2019 CALIFORNIA FIRE CODE
9. ALL CODES TO INCLUDE COUNTY OF LOS ANGELES CODE AMENDMENTS

GREEN BUILDING COMPLIANCE

A. PLUMBING FIXTURES AND FITTINGS SHALL MEET THE STANDARDS REFERENCED IN 2019 CALIFORNIA GREEN BUILDING STANDARD CODE 5.303.

B. PER 2019 CALIFORNIA GREEN BUILDING STANDARD CODE SECTION 4.303, PLUMBING FIXTURES (WATER CLOSETS AND URINALS) AND FITTINGS (FAUCETS AND SHOWERHEADS) SHALL COMPLY WITH THE FOLLOWING:

1. WATER CLOSETS SHALL NOT EXCEED 1.28 GALLONS PER FLUSH.
2. URINALS SHALL NOT EXCEED 0.5 GALLONS PER FLUSH.
3. SHOWERHEADS SHALL HAVE A MAXIMUM FLOW RATE OF 1.8 GALLONS PER MINUTE AT 80 PSI.
4. LAVATORY FAUCETS SHALL NOT EXCEED 1.2 GALLONS PER MINUTE AT 60 PSI.
5. KITCHEN FAUCETS SHALL NOT EXCEED 1.8 GALLONS PER MINUTE AT 60 PSI.

PLUMBING SCOPE OF WORK

PROVIDE PLUMBING UTILITIES (WASTE, VENT, STORM, NATURAL GAS, HOT, COLD & RETURN WATER PIPING) TO POOL LOCKER ROOMS, RESTROOMS, MECHANICAL ROOMS, PANTRY AREA AND POOL EQUIPMENT ROOMS.

1. PROVIDE AN INSTANTANEOUS ELECTRIC HOT WATER HEATER TO POOL EQUIPMENT HAND SINK AND EMERGENCY FIXTURES..
2. THE REST OF THE BUILDINGS HOT WATER WILL BE FEED FROM A GAS WATER HEATER IN MECHANICAL ROOM.

MEDIUM PRESSURE GAS SIZING CHART

A. POOL EQUIPMENT (2 @ 1500)	3000 CFH
B. MAKE-UP AIR UNIT (1 @ 120)	120 CFH
C. WATER HEATER (1 @ 285)	285 CFH
GRAND TOTAL CONNECTED LOAD	3405 CFH

PIPE SIZE	CFH
1/2"	433
3/4"	905
1"	1710
1-1/4"	3500
1-1/2"	5250
2"	10100

NOTE: 1. NATURAL GAS SYSTEM BASED ON 2019 CPC, TABLE 1215.2(6) SCHEDULE 40 METALLIC PIPE.
2. SYSTEM DEVELOPED LENGTH = 400 FT..5 PSI, 3.5 PSI PRESSURE DROP

LOW PRESSURE GAS SIZING CHART (POOL AREA)

A. POOL EQUIPMENT (2 @ 1500)	3000 CFH
B. MAKE-UP AIR UNIT (1 @ 120)	120 CFH
C. WATER HEATER (1 @ 285)	285 CFH
GRAND TOTAL CONNECTED LOAD	3405 CFH

PIPE SIZE	CFH
1/2"	172
3/4"	360
1"	678
1-1/4"	1390
1-1/2"	2090
2"	4020

NOTE: 1. NATURAL GAS SYSTEM BASED ON 2019 CPC, TABLE 1215.2(1) - SCHEDULE 40 METALLIC PIPE
2. SYSTEM MAXIMUM DEVELOPED LENGTH = 10 FT, LESS THAN 2 PSI, 0.5" W.C. PRESSURE DROP

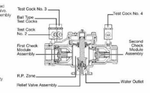
LEAD FREE

Series LF009

Reduced Pressure Zone Assemblies



Sizes: ¼" - 3"

Watts LF009 Reduced Pressure Zone Assemblies are designed to protect potable water supplies in accordance with national plumbing codes and water authority requirements. This series can be used in a wide variety of applications, from residential to industrial, where cross connections in piping systems or for containment at the service line entrance. The coating on this backflow assembly uses AmerTek™ powder coating technology that is certified to be free of lead (≤0.25%) or excessive metal substrate. The LF009 features Lead Free* construction to comply with Lead Free* installation requirements.

The LF009 features a bronze body, stainless steel valves, captured springs and replaceable check seats with an intermediate relief valve. Its compact modular design facilitates easy maintenance and assembly access. Sizes ¼" – 1" shutoffs have two handles.

LF009

Features

- Single access cover and modular check construction for simplified maintenance
- Top entry – all internals immediately accessible
- Captured springs for safe maintenance
- Internal relief valve for reduced installation clearances
- Replaceable seats for economical repair
- UMpire advanced AmerTek™ coating technology to resist corrosion and wear
- Lead Free* cast copper silicon alloy body construction for durability and strength
- Fusion epoxy coated cast iron body 2½" and 3"
- Ball valve test cocks – screwdriver slotted 1½" – 2"
- Large body passages provides low pressure drop
- Compact, space saving design
- No special tools required for servicing

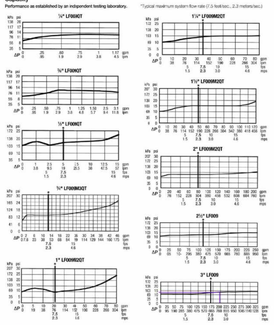
Specifications

A Reduced Pressure Zone Assembly shall be installed at each potential health hazard location to prevent backflow due to backsiphonage and backpressure. The assembly shall consist of two independently acting differential relief valves located in a zone between two positive seating check valves. The pressure in the zone between the check valves and the relief valve discs shall be maintained in both check modules and the inlet valve. There shall be no threads or screws in the waterway exposed to the water. The relief valve shall discharge to the atmosphere. The relief valve cover secured with stainless steel bolts. Body and shutoffs shall be constructed using Lead Free* cast copper silicon alloy materials. Lead Free* shall mean not more than a weighted average of 0.25% lead for wetted surfaces and standards, where applicable, requiring reduced lead content.

The assembly shall also include two resilient seated isolation valves, four test cocks, and a union on the inlet shutoff valve. The coating on the body shall be a coating system with dual-chamber corrosion-inhibitive anti-microbial thermosetting polyester.* The assembly shall meet the requirements of: USC, AWW Std. 1013, AWWA Std. C511 & CSA B64.x. (Use the x Watts Series #209)

Now Available
WattsBox Insulated Enclosures.
For more information, send for literature ES-WB.

NOTICE
Inquire with governing authorities for local installation requirements.



NOTICE
The information contained herein is not intended to replace the full Watts Installation, Operation and Maintenance manual. It is the responsibility of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.

***The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.**

* Amerlock coating applies to the 2½" and 3" models only.

Capacity

Performance as established by an independent testing laboratory. *(typical maximum system flow rate (7.5 feet/sec., 2.3 meters/sec.)

BACKFLOW PREVENTER	SCALE NONE	4

Model ZW209BP

Pressure Reducing Valve with Low Flow By-Pass

Application
The Zurn Wilkins Model ZW209BP Pilot Operated Pressure Reducing Valve with Low Flow By-pass is designed for many applications where the reduction of high inlet pressures to safe and stable outlet pressure is required. The pilot assembly is a direct acting, spring loaded, adjustable device that will cause the main valve to modulate between the open and closed position ensuring a constant downstream set pressure. Once the downstream pressure reaches the pilot setting, the main valve will seal shut. When the main valve closes, the low flow by-pass will supply the downstream demand automatically. It will handle very low flows up to 10 GPM which there is off peak demand. (An additional bypass may be needed to handle leakage flows greater than the by-pass capacity.) In addition the Model ZW209BP comes standard with blue epoxy coating internally and externally for corrosion protection as well as isolation valves and pressure gauges for quick and easy maintenance or repair.

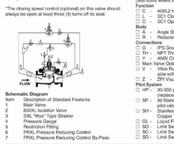
Standards Compliance:
- ANSI/AWWA C530
- Meets the requirements of NSF/ANSI/CAN 61*
*0.25% MAX. WEIGHTED AVERAGE LEAD CONTENT

BODY / CAP(S) MATERIAL		SLIME (FULL BORE) SIZE	ANGLE BODY
END CONNECTION	PRESSURE RATING	INLET OUTLET	INLET OUTLET
Threaded	300 psi / 20bar (Cast Bronze)	¼" - 2"	¼" - 2"
Flanged	300 psi / 20bar (Cast Bronze) ANSI Class 150 150 psi / 10bar (Ductile Iron)	2½" - 4"	2½" - 4"
Grooved	300 psi / 20bar (Cast Bronze)	1 ¼" - 4"	n/a 1 ¼" - 4"

UNIMOUNT BALL / PASSURE TYPE

Pilot Spring Range: 15-150 psi
Temperature Rating: Water 33°F to 140°F

Standard Features
- ☐ Blue Epoxy Coated, FDA Approved
- ☐ Stainless Steel
- ☐ "Wye" Type Strainer
- ☐ Opening Speed Control (sizes 1 1/4" - 4")
- ☐ Isolation Valves
- ☐ Inlet and Outlet Pressure Gauges
- ☐ ANSI Class 150 Flanges
- ☐ Copper Tubing and Brass Fittings
- ☐ Low-Flow By-Pass Valves: 1/2" PRSL (sizes 1 1/4" -3) 3/4" NRSNL-BP (size 4")



Options
(Add suffix letters to ZW209BP)
Function
- ☐ A - ASSLZ Hydraulic Check with Isolation Valve
- ☐ L - SCI Closing Speed Control*
- ☐ O - SCI Opening Speed Control (Standard 1 1/4" - 4")

Body
- ☐ Y - Angle Style Body
- ☐ R - Reduced Port Body

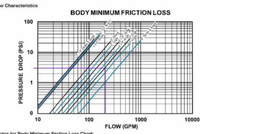
Connections
- ☐ S - NPS Shoured
- ☐ SH - NPT Threaded
- ☐ Y - ANSI Class 300 Flanges

Main Valve Options
- ☐ V - Viton Rubber Internals, Rated 180°F (only available in 1 1/4" - 4" sizes)
- ☐ Z - ZPI Visual Position Indicator

Pilot System
- ☐ HP - 40-300 psi High Pressure Range Pst-PRD Pilot (replaces PSSL)
- ☐ SP - All Stainless Steel Pilotry (replaces all brass fittings, pilot valve and copper tubing, "QL" Option included)
- ☐ SH - Stainless Steel Braided Hoses (only replaces "SP" Option)
- ☐ OL - Liquid Filled Gauge
- ☐ SO - Limit Switch Open Trip
- ☐ SC - Limit Switch Closed Trip
- ☐ SD - Limit Switch Dual Trip

Schematic Diagram

Item	Description of Standard Features
1	Main Valve
2	800L Isolation Valve
3	"Wye" Type Strainer
4	Pressure Gauge
5	Restriction Fitting
6	PRSL Pressure Reducing Control
7	PRXL Pressure Reducing Control By-Pass



*The closing speed control (optional) on this valve should always be open at least three (3) turns off its seat.

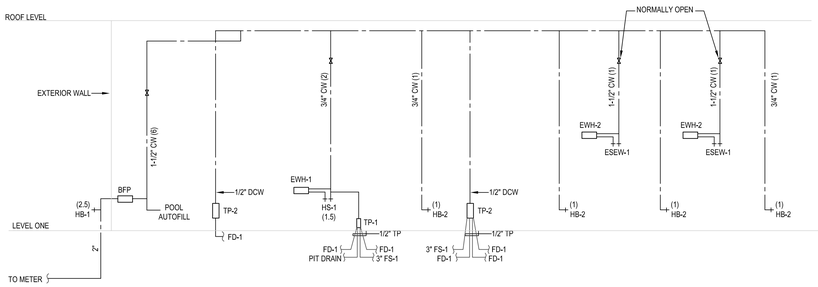
Flow Characteristics

BODY MINIMUM FRICTION LOSS

*** Notes for Body Minimum Friction Loss Chart:**
Minimum inlet pressure is 10 psi higher than set point or the additional body friction loss intended flow, whichever is higher. Strainer loss must be accounted for in addition to valve.
Example: A 4" valve intended to flow 3000 GPM at 100 psi has a friction loss of 35 psi at 3000 GPM. The minimum inlet pressure would be 150 + 20 + 170 psi. When inlet pressure is below set point, the outlet pressure will be the pressure at the inlet minus the friction loss.

WATERWORKS PRESSURE REDUCTION LIMIT CHART



Notes for Pressure Reduction Limit Chart: Check that operating pressure is within the safe operating zone for your Zurn Automatic Control Valve. First, find the system inlet pressure on the left axis and draw a horizontal line from that point across the chart. Then find the outlet reduced flowing pressure on the bottom axis and draw a vertical line up to where it meets the first line. The point where the lines intersect should be in the open "Safe Continuous Operating Zone" below and to the right of the yellow "Noise Zone". If the operating point is in the area labeled "Noise Zone" or "Cavitation Damage Zone", the valve will be noisy and subject to damage. Valves should not be operated in these areas for extended periods of time. Internal components may cause high pressure downstream and/or external leaks. To move out of the cavitation or noise zone you will need to place two valves in series in order to safely reduce pressure. Use the chart to pick an intermediate pressure in the green zone that you will set the first valve in series to. The intermediate pressure you pick will then become the inlet pressure for the 2nd valve and you can verify it will be in the green zone using the chart.

GENERAL NOTES

1. THESES DRAWINGS AND SPECIFICATIONS ARE INTENDED TO COVER A COMPLETE INSTALLATION OF SYSTEMS. THE OMISSION OR EXPRESSED REFERENCE TO ANY ITEM OF LABOR OR MATERIALS REQUIRED FOR THE PROPER EXECUTION OF THE WORK IN ACCORDANCE WITH PRESENT PRACTICE OF THE TRADE SHALL NOT RELIEVE THE CONTRACTOR FROM PROVIDING SUCH ADDITIONAL LABOR AND MATERIALS.

2. THESE PLANS AND SPECIFICATIONS AND ALL WORK AND MATERIALS SHALL BE IN FULL ACCORDANCE WITH ALL LEGAL AND INDUSTRY REQUIREMENTS AND STANDARDS INCLUDING WITHOUT LIMITATION THE FOLLOWING:
   a. CALIFORNIA CODE OF REGULATIONS TITLE 24, PARTS 1 AND 2 (CALIFORNIA BUILDING CODE), 2019 EDITION.
   b. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 3 (CALIFORNIA ELECTRICAL CODE), 2019 EDITION.
   c. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 6 (CALIFORNIA ENERGY CODE), 2019 EDITION.
   d. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 9 (CALIFORNIA FIRE CODE), 2019 EDITION.
   e. OTHER REGULATING AGENCIES WHICH MAY HAVE AUTHORITY OVER ANY PORTION OF THE WORK, INCLUDING THE STATE OF CALIFORNIA DIVISION OF INDUSTRIAL SAFETY, AND THOSE CODES AND STANDARDS LISTED IN THESE NOTES AND SPECIFICATIONS.
   f. THE ELECTRICAL SYSTEMS FUNCTIONALITY STANDARDS SET FORTH IN TITLE 7 OF THE CALIFORNIA CIVIL CODE (THE "RIGHT TO REPAIR ACT").
   g. THE MANUFACTURER'S REQUIREMENTS OR RECOMMENDATIONS FOR ANY INCORPORATED PRODUCTS.
   h. THE MOST CURRENT APPROVED ISSUES OF ANY NOTED SPECIFICATIONS, CODES AND STANDARDS, INCLUDING SUPPLEMENTS, UNLESS NOTED OTHERWISE.

3. THE PLANS REPRESENT ONLY THE FINISHED ELECTRICAL, FIRE ALARM AND LOW VOLTAGE SYSTEMS, AND THEY ARE NOT INTENDED TO INDICATE OR REQUIRE ANY CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES OR PROCEDURES.

4. IN USING THE PLANS FOR BIDDING OR CONSTRUCTION PURPOSES, THE CONTRACTOR IS REQUIRED TO REVIEW ALL OF THE PROJECT'S CONSTRUCTION DOCUMENTS AS A WHOLE IN ORWER TO IDENTIFY ALL REQUIREMENTS THAT DIRECTLY OR INDIRECTLY AFFECT ITS PORTION OF THE ELECTRICAL WORK, EVEN REQUIREMENTS LOCATED IN SECTIONS DESIGNATED AS APPLICABLE TO OTHER TRADES. IN CASE OF CONFLICTS, THE CONTRACTOR SHALL EITHER OBTAIN DIRECTION FROM AN APPROPRIATE OWNER REPRESENTATIVE OR OTHERWISE APPLY THE MORE STRINGENT REQUIREMENT.

5. IN INTERPRETING THE PLANS, THE FOLLOWING GENERAL RULES APPLY:
   a. WRITTEN DIMENSIONS SHALL TAKE PRECEDENCE OVER SCALED DRAWINGS.
   b. SCALED DIMENSIONS AND GRAPHICALLY SHOWN LOCATIONS ARE TO BE CONSIDERED ONLY APPROXIMATE, FIELD VERIFY DIMENSIONS PRIOR TO BID.

6. IN INTERPRETING THE PLANS, THE FOLLOWING GENERAL RULES APPLY:
   a. BECAUSE THE PLANS ARE INTENDED TO SET FORTH THE REQUIREMENTS FOR CONSTRUCTION IN ONLY AN INDUSTRY-STANDARD LEVEL OF QUALITY AND DETAIL, AND THEREFORE ARE INTENDED TO BE SUPPLEMENTED BY APPROPRIATE REQUESTS FOR CLARIFICATION AND INFORMATION, ERRORS AND OMISSIONS AND TO BRING THESE ERRORS AND OMISSIONS TO THE ATTENTION OF AN APPROPRIATE OWNER REPRESENTATIVE IN A TIMELY MANNER AND ASSUMES THE RISK OF THE CONSEQUENCES OF FAILING TO DO SO BEFORE BIDDING OR OTHERWISE PROCEEDING.
   b. THE CONTRACTOR SHALL REVIEW AND VERIFY ALL DIMENSIONS PRIOR TO STARTING CONSTRUCTION, AND NOTIFY THE ARCHITECT IMMEDIATELY OF ANY DISCREPANCIES OR INCONSISTENCIES.

7. SUBMITTALS WILL BE REVIEWED BY THE ELECTRICAL ENGINEER, IF AT ALL, ONLY PURSUANT TO THE INDUSTRY-STANDARD PROTOCOL SET FORTH IN AIA DOCUMENT A201, AND IN NO EVENT WILL THE THE SUBMITTAL REVIEW PROCESS RELIEVE OR LESSEN THE SUBMITTING CONTRACTOR'S RESPONSIBILITY FOR AN INAPPROPRIATE SUBMITTAL.

8. IN NO EVENT WILL ANY SITE VISITS BY THE ELECTRICAL ENGINEER CONCERN CONSTRUCTION MEANS AND METHODS OR CONSTRUCTION SAFETY, AND ALL SUCH MATTERS SHALL REMAIN THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

9. COPIES OF THE THE PLANS PROVIDED IN ANY ELECTRONIC FORM ARE SUBJECT TO THE SAME PROVISIONS AS THE OTHER INSTRUMENTS OF SERVICE PREPARED BY OR ON BEHALF OF ELECTRICAL ENGINEER FOR THE PROJECT, INCLUDING WITHOUT LIMITATION THE ENGINEER'S COMMON LAW, STATUTORY OR OTHER RESERVED RIGHTS, INCLUDING COPYRIGHTS. A RECIPIENT IS GRANTED AT MOST A TRANSFERABLE NON-EXCLUSIVE LICENSE TO REUSE THE PLANS SOLELY FOR PROJECT PURPOSES; AND NO RECIPIENT IS AUTHORIZED TO USE OR TO ALLOW THE USE OF ALL OR ANY PORTION OF THESE PLANS FOR ANY OTHER PURPOSE, AND ANY USE FOR ANY OTHER PURPOSE WOULD CONSTITUTE ACTIONABLE PLAGIARISM. ELECTRICAL ENGINEER PROVIDES DOCUMENTS IN AN ELECTRONIC FORM ONLY IN ITS STANDARD FORMATS AND CONVENTIONS AND WITH NO GUARANTEE OF COMPATIBILITY WITH ANY RECIPIENT'S SOFTWARE OR HARDWARE AND ANY USE WITH OR CONVERSION TO OTHER FORMATS OR CONVENTIONS, OR THE USE WITH ANY PARTICULAR SOFTWARE OR HARDWARE, IS AT THE RECIPIENT'S SOLE RISK.

10. ALL CONDUIT, STRUCTURES AND INSTALLATION FOR POWER AND TELEPHONE UTILITIES SHALL CONFORM WITH THE REQUIREMENTS (MINIMUM BEND RADIUS, CONCRETE ENCASEMENT, CONDUIT, TYPE, ETC.) OF THE UTILITIES COMPANY. VERIFY ALL REQUIREMENTS WITH UTILITY COMPANY PRIOR TO BID AND INCLUDE ALL COSTS IN BID.

11. CONTRACTOR SHALL OBTAIN SOUTHERN CALIFORNIA EDISON CO. (SCE CO.) CONSTRUCTION DRAWINGS PRIOR TO CONSTRUCTION AND SHALL INSTALL POWER CONDUIT AND STRUCTURES ACCORDING TO SCE CO. DRAWINGS. EXTRA PAYMENTS WILL NOT BE GRANTED FOR FAILURE TO DO SO.

12. LOCATIONS OF EXISTING UTILITIES ARE NOT SHOWN AND CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN EXCAVATING AND TRENCHING ON THIS SITE TO AVOID EXISTING DUCTS, PIPING OR CONDUIT, ETC. AND TO PREVENT HAZARD TO PERSONNEL AND/OR DAMAGE TO EXISTING UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN AND INSTALLED BY ANY OTHER CONTRACTS. THE ENGINEER IS NOT RESPONSIBLE FOR THE LOCATION OF UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN OR DETAILED BY ANY OTHER CONTRACTS. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER SHOULD SUCH UNIDENTIFIED CONDITIONS BE DISCOVERED. THESE DRAWINGS

13. REFER TO THE DRAWINGS AND SHOP DRAWINGS OF OTHER TRADES FOR ADDITIONAL DETAILS WHICH AFFECT THE PROPER INSTALLATION OF THIS WORK.

14. THE DRAWINGS INDICATE, IN A DIAGRAMMATIC MANNER, THE DESIRED LOCATIONS AND ARRANGEMENT OF THE COMPONENTS OF ELECTRICAL WORK. DETERMINE EXACT CONDUIT ROUTING, CONDUIT BENDS, AUXILIARY JUNCTION BOXES, SUPPORTS AND UNDEFINED CONSTRUCTION DETAILS AS A JOB CONDITION TO BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE CODE REQUIREMENTS. PROPER JUDGEMENT MUST BE EXERCISED IN EXECUTING THE WORK SO AS TO SECURE THE BEST POSSIBLE INSTALLATION IN THE AVAILABLE SPACE AND TO OVERCOME LOCAL DIFFICULTIES DUE TO SPACE LIMITATIONS OR INTERFERENCE OF CONDITIONS ENCOUNTERED.

15. IN THE EVENT CHANGES IN THE INDICATED LOCATIONS OR ARRANGEMENTS ARE NECESSARY, DUE TO DEVELOPED CONDITIONS IN THE BUILDING CONSTRUCTION OR REARRANGEMENT OF EQUIPMENT, SUCH CHANGES SHALL BE MADE WITHOUT COST PROVIDING THE CHANGE IS ORDERED BEFORE THE CONDUIT RUNS, ETC., AND WORK DIRECTLY CONNECTED TO SAME IS INSTALLED AND NO EXTRA MATERIALS ARE REQUIRED.

16. ELECTRICAL PLANS DO NOT SHOW ELECTRICAL REQUIREMENTS FOR MECHANICAL AND PLUMBING EQUIPMENT CONTROL. REFER TO MECHANICAL AND PLUMBING PLANS AND SPECIFICATIONS. WHERE EQUIPMENT IS INDICATED TO BE BY ELECTRICAL CONTRACTOR PROVIDE ALL CONDUIT, WIRE, J-BOX, OUTLET BOXES, RELAY SWITCHES, TIME SWITCHES, CONTROL CIRCUITS, ETC. REQUIRED FOR A COMPLETE AND OPERABLE MECHANICAL AND PLUMBING INSTALLATION. ALL WIRE SHALL BE INSTALLED IN CODE SIZED CONDUIT.

17. LOCATIONS OF DISCONNECT SWITCHES AND CONNECTIONS FOR MECHANICAL AND PLUMBING EQUIPMENT ARE SHOWN DIAGRAMMATICALLY. VERIFY ACTUAL CONNECTION LOCATIONS WITH EQUIPMENT SHOP DRAWINGS AND LOCATE DISCONNECT SWITCHES TO PROVIDE CODE REQUIRED CLEARANCES AND ACCESS. DISCONNECT SWITCHES ON ROOF SHALL BE 30" MINIMUM ABOVE ROOF. MOUNTING OF DISCONNECTS DIRECTLY ON MECHANICAL EQUIPMENT IS NOT ACCEPTABLE. PROVIDE ANGLE IRON SUPPORT BRACKETS BOLTED TO ROOF FRAMING. FIELD GALVANIZE ALL FIELD CUT ENDS OF SUPPORTS. PROVIDE ROOF FLASHING AS REQUIRED.

18. PROVIDE ALL EQUIPMENT WITH ENCLOSURES LISTED OR LABELED FOR USE AND LOCATION WHERE SUCH EQUIPMENT IS INSTALLED.

19. PROVIDE UL LISTED FIRE STOP FOR ALL PENETRATIONS THROUGH FIRE RATED FLOORS, WALLS AND CEILINGS TO MAINTAIN ALL FIRE RATINGS. THE FIRE STOP MATERIALS SHALL BE RE-ENTERABLE AND REUSABLE.

20. GROUNDING SHALL BE EXECUTED IN ACCORDANCE WITH ALL APPLICABLE CODES AND REGULATIONS, BOTH OF THE STATE OF CALIFORNIA AND LOCAL AUTHORITIES HAVING JURISDICTION.

21. PROVIDE GROUND WIRE IN EACH CONDUIT CONTAINING CIRCUITS FEEDING RECEPTACLES. THE CONDUIT SHALL NOT BE PERMITTED TO SERVE AS THE ONLY ELECTRICAL GROUND RETURN PATH.

22. PROVIDE HANDLE TIES AT CIRCUIT BREAKERS TO SIMULTANEOUSLY DISCONNECT ALL UNGROUNDED CONDUCTORS OF MULTI-WIRE BRANCH CIRCUITS WITH A SHARED NEUTRAL.

23. UNLESS NOTED OTHERWISE ALL 120 VOLT HOMERUNS OVER 100 FEET SHALL BE #10 AWG MINIMUM, OVER 175 FEET SHALL BE #8 AWG MINIMUM. ADJUST CONDUIT SIZE ACCORDINGLY.

24. CONDUIT FOR TELEPHONE/DATA CABLING SHALL COMPLY WITH THE FOLLOWING ADDITIONAL REQUIREMENTS:
   a. INSIDE BEND RADIUS SHALL BE AT LEAST 10 TIMES ITS INTERNAL DIAMETER.
   b. PROVIDE PULL BOXES WHENEVER CONDUIT LENGTH EXCEEDS 150 FEET AND WHEN COMBINED BENDS ARE GREATER THAN 180 DEGREES.
   c. ALL CONDUIT SHALL BE PROVIDED WITH INSULATED BUSHINGS.
   d. MAINTAIN A MINIMUM CLEARANCE OF 4 FEET FROM MOTORS AND TRANSFORMERS.
   e. MAINTAIN A MINIMUM CLEARANCE OF 12 INCHES FROM POWER CIRCUITS.
   f. MAINTAIN A MINIMUM CLEARANCE OF 12 INCHES FROM FLUORESCENT LIGHT FIXTURES.

25. COORDINATE LOCATION OF ALL CARD READERS, DOOR CONTACTS, ELECTRIC LOCKS AND ASSOCIATED CONDUIT REQUIREMENTS WITH SECURITY/BUILDING ACCESS CONTROLS INSTALLER.

26. COORDINATE MOUNTING HEIGHTS OF RECEPTACLES, SWITCHES, A/V DEVICES, SECURITY DEVICES, ETC. MOUNTED ON COMMON WALLS SO THAT ALL OUTLETS ARE MOUNTED TO ALIGN HORIZONTALLY.

27. NOTIFY THE ARCHITECT IN WRITING WHEN INSTALLATION IS COMPLETE AND THAT A FINAL INSPECTION OF THIS WORK CAN BE PERFORMED. IN THE EVENT DEFECTS OR DEFICIENCIES ARE FOUND DURING THIS FINAL INSPECTION, THEY SHALL BE CORRECTED TO THE SATISFACTION OF THE ARCHITECT BEFORE FINAL ACCEPTANCE CAN BE ISSUED.

28. ALL RECEPTACLES MOUNTED AT +5'-6" OR LOWER IN DWELLING UNITS SHALL BE TAMPER-RESISTANT TYPE, EXCEPT RECEPTACLES FOR FIXED APPLIANCES AND/OR EQUIPMENT. SEE SPECIFICATIONS SECTION 26 05 15.

29. PER 2016 NEC ARTICLE 210.12(A): ALL 120 VOLT, SINGLE PHASE, 15- AND 20- AMPERE BRANCH CIRCUITS SUPPLYING OUTLETS INSTALLED IN DWELLING UNIT FAMILY ROOMS, DINING ROOMS, LIVING ROOMS, PARLORS, LIBRARIES, DENS, BEDROOMS, SUNROOMS, RECREATIONS ROOMS,CLOSETS, HALLWAYS, OR SIMILAR ROOMS OR AREAS SHALL BE PROTECTED BY A LISTED ARC-FAULT CIRCUIT INTERRUPTER, COMBINATION TYPE, INSTALLED TO PROVIDE PROTECTION OF THE CIRCUIT.

30. GROUNDING AND BONDINGTERMINALS SHALL BE IDENTIFIED FOR USE IN WET AND CORROSIVE ENVIRONMENTS. FIELD-INSTALLED GROUNDING AND BONDING CONNECTIONS IN A DAMP, WET, OR CORROSIVE ENVIRONMENT SHALL BE COMPOSED OF COPPER, COPPER ALLOY, OR STAINLESS STEEL. THEY SHALL BE LISTED FOR DIRECT BURIAL USE." [680.7, 2019 CEC]

SYMBOL LIST

(ALL SYMBOLS NOT NECESSARILY USED ON THESE DRAWINGS)
ALL SYMBOL DESCRIPTIONS ARE SUBJECT TO MODIFICATION AS NOTED ON THE DRAWINGS.
VERIFY EXACT LOCATIONS AND HEIGHTS OF OUTLETS WITH ARCHITECTURAL INTERIOR ELEVATIONS PRIOR TO ROUGH-IN.

NOTE:
REFER TO E-0.02 FOR LIGHTING FIXTURE SYMBOLS AND E-0.02A FOR LIGHTING CONTROLS.

EXIT SIGN SINGLE FACE, ON FLUSH CEILING MOUNTED OUTLET BOX. ARROW INDICATES DIRECTIONAL ARROW ON EXIT SIGN FACE.

EXIT SIGN DOUBLE FACE, ON FLUSH CEILING MOUNTED OUTLET BOX.

SINGLE POLE TOGGLE SWITCH, ON FLUSH WALL MOUNTED OUTLET BOX, +45". INSTALL MULTIPLE SWITCHES UNDER COMMON COVER PLATE. SUBSCRIPT OR SUPERSCRIPT AT SWITCH SYMBOL INDICATES THE FOLLOWING:

2 - DOUBLE POLE 4 - FOUR WAY M - MANUAL MOTOR STARTERS
3 - THREE WAY P - PILOT LIGHT K - KEY OPERATED
R - SPDT MOMENTARY CONTACT RELAY SWITCH V - VAPOR PROOF
a,b,c,d, ETC. - MULTIPLE SWITCHES WITH IDENTIFICATION OF OUTLET CONTROLLED.

SWITCH FOR CONTROL OF LOW VOLTAGE LIGHTING RELAY(S), ON FLUSH WALL MOUNTED OUTLET BOX, +45". INSTALL MULTIPLE SWITCHES UNDER COMMON COVER PLATE.

OCCUPANCY MOTION SENSOR ON FLUSH CEILING MOUNTED OUTLET BOX. REFER TO E-0.02A.

OCCUPANCY MOTION/PHOTO SENSOR ON FLUSH CEILING MOUNTED OUTLET BOX. REFER TO E-0.02A.

OCCUPANCY MOTION SENSOR SWITCH, ON FLUSH WALL MOUNTED OUTLET BOX, +45". REFER TO E-0.02A.

VACANCY SENSOR SWITCH, ON FLUSH WALL MOUNTED OUTLET BOX, +45". REFER TO E-0.02A.

LOW VOLTAGE LIGHTING SWITCH, ON FLUSH WALL MOUNTED OUTLET BOX, +45". REFER TO E-0.02A.

DUPLEX CONVENIENCE RECEPTACLE VERTICAL ON FLUSH WALL MOUNTED OUTLET BOX, +18". STEM INDICATES WALL MOUNTED OUTLET BOX, TYPICAL.

DUPLEX CONVENIENCE RECEPTACLE HORIZONTAL ON FLUSH WALL MOUNTED OUTLET BOX, +6" ABOVE COUNTER SPLASH.

DUPLEX CONVENIENCE RECEPTACLE SPLIT WIRED, IMPRINTED "CONTROLLED", ON FLUSH WALL MOUNTED OUTLET BOX, +18".

DUPLEX CONVENIENCE RECEPTACLE SPLIT WIRED, ON FLUSH WALL MOUNTED OUTLET BOX, +18".

DOUBLE DUPLEX (FOUR-PLEX) CONVENIENCE RECEPTACLE ON ONE FLUSH WALL MOUNTED OUTLET BOX +18".

DOUBLE DUPLEX (FOUR-PLEX) CONVENIENCE RECEPTACLE SPLIT-WIRED. ONE PLUG TO BE IMPRINTED "CONTROLLED", ON FLUSH WALL MOUNTED OUTLET BOX, +18".

SINGLE RECEPTACLE, NEMA CONFIGURATION PER EQUIPMENT MANUFACTURER REQUIREMENTS, ON FLUSH WALL MOUNTED OUTLET BOX, +18".

DUPLEX CONVENIENCE RECEPTACLE WITH INTEGRAL GROUND FAULT INTERRUPTER, VERTICAL ON FLUSH WALL MOUNTED OUTLET BOX +18".

DUPLEX CONVENIENCE RECEPTACLE WITH INTEGRAL GROUND FAULT INTERRUPTER, HORIZONTAL ON FLUSH WALL MOUNTED OUTLET BOX, +6" ABOVE COUNTER SPLASH.

WP DUPLEX CONVENIENCE RECEPTACLE IN DAMP LOCATION, WITH INTERNAL GROUND FAULT INTERRUPTER, IN FLUSH WALL MOUNTED OUTLET BOX WITH HINGED DOOR, LOCK AND KEY, +18".

NOTE: RECEPTACLES LOCATED IN "WET LOCATIONS" SHALL HAVE AN ENCLOSURE THAT IS WEATHERPROOF WHETHER OR NOT THE ATTACHMENT PLUG CAP IS INSERTED, PER CEC 406.9 (B)(1). PROVIDE P&S WIUCAST1 OR EQUAL BY HUBBELL.

WP DUPLEX CONVENIENCE RECEPTACLE IN DAMP LOCATION, WITH INTERNAL GROUND FAULT INTERRUPTER, ON FLUSH WALL MOUNTED OUTLET BOX WITH SPRING DOOR COVER, +18".

NOTE: RECEPTACLES LOCATED IN "WET LOCATIONS" SHALL HAVE AN ENCLOSURE THAT IS WEATHERPROOF WHETHER OR NOT THE ATTACHMENT PLUG CAP IS INSERTED, PER CEC 406.9 (B)(1). PROVIDE P&S WIUCAST1 OR EQUAL BY HUBBELL.

DUPLEX CONVENIENCE RECEPTACLE ON FLUSH, FLOOR MOUNTED OUTLET BOX.

DUPLEX CONVENIENCE RECEPTACLES, TYPE ON FLUSH FLOOR MOUNTED OUTLET BOX.

DUPLEX CONVENIENCE RECEPTACLE, ON FLUSH CEILING MOUNTED OUTLET BOX.

JUNCTION BOX, FLUSH WALL MOUNTED, +18".

JUNCTION BOX CONCEALED ABOVE ACCESSIBLE CEILING.

INDICATES CONNECTION TO EQUIPMENT AS REQUIRED, TYPICAL.

RECESSED FLAT PANEL TV/DISPLAY WALL BOX WITH FLUSH GROMMETED COVER PANEL (FSR #PWB-100). REFER TO ARCHITECTURAL ELEVATION PLANS FOR MOUNTING HEIGHT INFORMATION. PROVIDE WITH (1) POWER RECEPTACLE, (2) EHTERNET OUTLETS WITH 3/4"C., & (1) HDMI OUTLET WITH 1 1/4"C. ROUTE CONDUIT TO NEAREST ACCESSIBLE CEILING SPACE OR TO ROOM AS NOTED (RM. ###) ON FLOOR PLAN.

PANELBOARD, ADJACENT LINE INDICATES PANEL FRONT. ADJACENT BALLOON INDICATES PANEL DESIGNATION "A", SEE DRAWING E-1 FOR PANEL SCHEDULE.

FLOOR STANDING SWITCHGEAR ADJACENT BALLOON INDICATES EQUIPMENT DESIGNATION "DBA", SEE DRAWING E-1 FOR SINGLE LINE DIAGRAM AND/OR SCHEDULE.

CIRCUIT BREAKER STATIONARY (NON-DRAWOUT), SECONDARY VOLTAGE.

FUSED SAFETY SWITCH (DISCONNECT), HORSE POWER RATED. MOUNT ON WALL +45", OR ON EQUIPMENT +36". PROVIDE SWITCH AND FUSES SIZED PER EQUIPMENT MANUFACTURER REQUIREMENTS.

CONDUIT, INSTALLED CONCEALED IN WALL OR IN CEILING SPACE.

CONDUIT, INSTALLED CONCEALED IN OR UNDER FLOOR OR BELOW GRADE, 3/4" CONDUIT MINIMUM.

CONDUIT, INSTALLED EXPOSED.

HOMERUN TO PANEL "B" FOR CIRCUITS 5, 7, 9 WITH SEPARATE NEUTRALS.

UNDERGROUND CONDUIT STUBOUT, STUB 5'-0" FROM BUILDING OR WALKWAY, CAP, MARK AND RECORD.

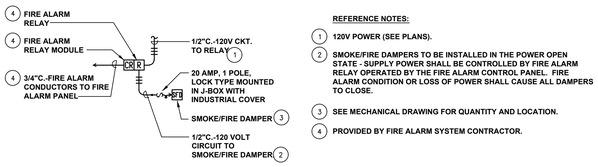
CONDUIT STUBOUT. CONDUIT QUANTITY & SIZE PER PLANS. CAP, MARK AND RECORD.

CONNECTED TO SOLID GROUND REFERENCE POINT

TERMINAL CABINET OR EQUIPMENT CABINET. ADJACENT LINE INDICATES CABINET FRONT.

TELEPHONE OUTLET MOUNTED AT +18" AFF - UON. PROVIDE 3/4"C. TO POINT ABOVE ACCESSIBLE CEILING SPACE OR NEAREST TEL. BACKBOARD.

C - OUTLET HORIZONTAL IN FLUSH WALL MOUNTED OUTLET BOX, +6" ABOVE COUNTER SPLASH.
W - OUTLET ON FLUSH WALL MOUNTED OUTLET BOX, +45".



COMBINATION TELEPHONE/DATA OUTLET MOUNTED AT +18" AFF - UON. PROVIDE 3/4"C. TO POINT ABOVE ACCESSIBLE CEILING SPACE OR NEAREST TEL. BACKBOARD.
W - DENOTES WALL MOUNTED AT +45" AFF - UON

DATA OUTLET MOUNTED AT +18" AFF - UON. PROVIDE 3/4"C. TO POINT ABOVE ACCESSIBLE CEILING SPACE OR NEAREST TEL. BACKBOARD.
W - DENOTES WALL MOUNTED AT +45" AFF - UON

C / E-2 DETAIL CALLOUT, "C" INDICATES DETAIL, "E-2" INDICATES DRAWING WHERE DETAIL OCCURS.

EF / 1 MECHANICAL EQUIPMENT CALLOUT. REFER TO MECHANICAL DRAWINGS FOR EXACT LOCATIONS AND REQUIREMENTS OF MECHANICAL EQUIPMENT.

1 NOTE CALLOUT. REFER TO CORRESPONDING NOTE ON DRAWING WHERE CALLOUT OCCURS.

REFERENCE NOTES:

1. 120V POWER (SEE PLANS).
2. SMOKE/FIRE DAMPERS TO BE INSTALLED IN THE POWER OPEN STATE - SUPPLY POWER SHALL BE CONTROLLED BY FIRE ALARM RELAY OPERATED BY THE FIRE ALARM CONTROL PANEL. FIRE ALARM CONDITION OR LOSS OF POWER SHALL CAUSE ALL DAMPERS TO CLOSE.
3. SEE MECHANICAL DRAWING FOR QUANTITY AND LOCATION.
4. PROVIDED BY FIRE ALARM SYSTEM CONTRACTOR.

SMOKE FIRE DAMPER TO FIRE ALARM SYSTEM INTERCONNECTION DETAIL

SMOKE FIRE DAMPER 120V CIRCUITS

- 1st FLOOR: P1-53
- 2nd FLOOR: P1A-34
- POOL BUILDING: P2-41

NOTES:

1. AREA AND/OR DUCT SMOKE DETECTORS AS REQUIRED SHALL BE PROVIDED BY THE FIRE ALARM SYSTEM CONTRACTOR.

FIRE ALARM SYSTEM GENERAL NOTES

1. THE FIRE ALARM SYSTEM SHALL BE CODE MINIMUM REQUIREMENT AND SHALL BE DESIGN/BUILD BY THE CONTRACTOR.
2. INSTALLATION OF THE FIRE ALARM SYSTEM SHALL NOT BE STARTED UNTIL SHOP DRAWINGS ARE SUBMITTED AND APPROVED BY THE LOCAL AUTHORITIES HAVING JURISDICTION (AHJ).
3. PROVIDE ALL DRAWINGS, ENGINEERING CALCULATIONS, EQUIPMENT SPECIFICATIONS, ETC. AS NECESSARY TO SUBMIT FOR REVIEW AND OBTAIN APPROVAL BY THE AHJ.
4. FIRE ALARM SHALL BE MONITORED BY A U.L. CERTIFICATED CENTRAL STATION MONITORING COMPANY.
5. PROVIDE WIRING INTEGRATION BETWEEN FIRE ALARM SYSTEM AND HVAC CONTROL SYSTEM. SEE MECHANICAL DRAWINGS FOR REQUIREMENTS.
6. FIRE ALARM SYSTEM SHALL MONITOR ALL FIRE SPRINKLER CONTROL VALVES, FLOW SWITCHES,AND PIV.
7. PROVIDE THE QUANTITY OF DEVICES REQUIRED FOR A COMPLETE AND OPERABLE FIRE ALARM SYSTEM TO MEET THE CITY OF GARDENA FIRE DEPARTMENT, AND STATE FIRE MARSHAL REQUIREMENTS.

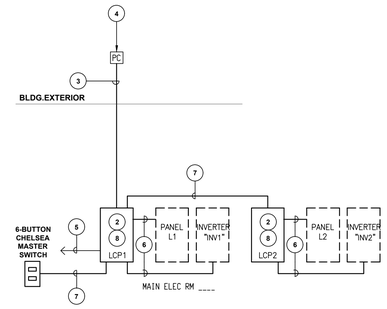
FIXTURE NOTES



1. **IT IS THE CONTRACTORS RESPONSIBILITY TO VERIFY ACTUAL CEILING CONSTRUCTION TYPE AS DEFINED ON THE ARCHITECTURAL DRAWINGS AND FURNISH ALL LIGHTING FIXTURES WITH THE CORRECT MOUNTING DEVICES WHETHER OR NOT SUCH VARIATIONS ARE INDICATED BY THE FIXTURE CATALOG NUMBER. THE CONTRACTOR SHALL VERIFY DEPTH OF ALL RECESSED LIGHTING FIXTURES WITH ARCHITECTURAL DRAWINGS PRIOR TO ORDERING FIXTURES. ANY DISCREPANCIES THAT WOULD CAUSE RECESSED FIXTURES NOT TO FIT INTO CEILING SHALL BE REPORTED TO THE ARCHITECT PRIOR TO ORDERING FIXTURES.**
2. **CEILING INSULATION SHALL BE INSTALLED TO ALLOW 3" MINIMUM CLEARANCE FROM SIDES AND TOP OF RECESSED LIGHT FIXTURES.**
3. **VERIFY MOUNTING HEIGHT OF ALL WALL AND PENDANT MOUNTED FIXTURES WITH ARCHITECT PRIOR TO ROUGH-IN.**
4. **REFER TO ARCHITECTURAL REFLECTED CEILING PLANS FOR EXACT LOCATION OF ALL LIGHT FIXTURES.**
5. **DO NOT INSTALL LIGHTING FIXTURES IN MECHANICAL ROOMS UNTIL DUCTWORK AND PIPING IS LAID OUT. LOCATE LIGHTING FIXTURES TO AVOID ALL SUCH DUCTWORK AND PIPING TO PROVIDE OPTIMUM LIGHTING.**
6. **LAMPS FOR ALL FIXTURES, INCLUDING DECORATIVE FIXTURES, SHALL BE PROVIDED AND INSTALLED BY ELECTRICAL CONTRACTOR.**
7. **ADDITIONAL EXIT SIGNS AND EMERGENCY LIGHTING MAY BE REQUIRED AT FINAL. A PRELIMINARY WALK-THROUGH INSPECTION IS RECOMMENDED.**

Site Lighting Fixture Schedule

Symbol	Label	Area Utilized	Mounting	Manufacturer	Catalog Number	Description	Lamp	Lumens	Lumens Per Watt	Wattage
	S1	Pool deck & building exit doors.	Surface, wall, +8'-0" to bottom.	Lithonia	WEDG2-LED-P3-35K-80CRI-VW-MVOLT-SRM-AWS-DDBXD	LED wall mounted wedge fixture. Dark bronze finish.	LED	3200	142	23

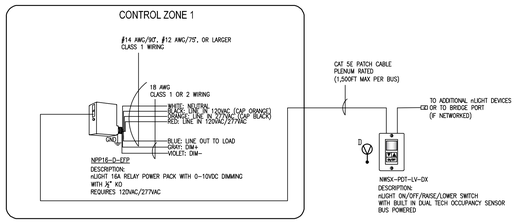
MULTIPLE ZONE SPACE W/ DAYLIGHTING & EM (INV/GEN)

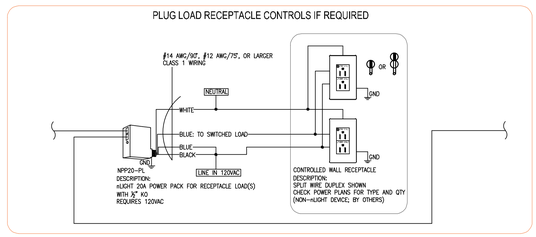
1 – TYPICAL PARTITION CONTROL DETAIL

LIGHTING CONTROL GENERAL NOTES

1. THE TYPICAL CONTROL DIAGRAM IS AN EXAMPLE ONLY AND DEPICTS ONLY THE INTENT OF THE LIGHTING CONTROLS. LIGHTING CONTROL SYSTEM BASIS OF DESIGN IS AN nLIGHT SYSTEM BY ACUITY CONTROLS.
2. PROVIDE MANUFACTURER SPECIFIC INSTALLATION SHOP DRAWINGS. SHOP DRAWINGS SHALL INCLUDE 1/8 SCALE FLOOR PLANS INDICATING ALL REQUIRED CONTROL DEVICE LOCATIONS AND POINT-TO-POINT WIRING. SHOP DRAWINGS SHALL INCLUDE PRODUCT DATA CUT SHEETS AND SINGLE LINE SCHEMATIC DIAGRAM.
3. WHETHER OR NOT DETAILED ON ELECTRICAL DRAWINGS, PROVIDE ALL CONTROL DEVICES AS REQUIRED FOR A COMPLETE, FULLY OPERABLE AND CODE COMPLIANT SYSTEM.
4. PROVIDE UL924 DEVICES IN ANY AREA THAT REQUIRES EMERGENCY EGRESS LIGHTING WHETHER OR NOT SPECIFICALLY HEREIN DETAILED. REFER TO LIGHTING PLANS FOR ALL EMERGENCY EGRESS 'EM' LIGHTING FIXTURES.
5. PROVIDE CONTROL DEVICES AS REQUIRED FOR LIGHTING ZONES AS SHOWN ON LIGHTING PLANS. SCHEMATIC DIAGRAM EXAMPLES SHOWN HEREIN ARE NOT SPECIFIC FOR EACH LIGHTING CONTROL CONDITION DEPICTED ON LIGHTING PLANS.
6. ALL 0-10VDC DIMMING CONDUCTORS SHALL BE INSTALLED IN CONDUIT.
7. VERIFY CORRECT LIGHTING CONTROL CONFIGURATIONS AND OPERATION IN EACH ROOM. REFER TO LIGHTING PLANS.
8. SIMULATE NORMAL SOURCE POWER FAILURE BY 'OPENING' (TURN OFF) BUILDING MAIN SERVICE DISCONNECT AND VERIFY CONNECTIONS AND OPERATION OF UL 924 DEVICES FOR EMERGENCY LIGHTING FIXTURES.
9. SETUP, PROGRAM, AND FUNCTION TEST LIGHTING CONTROL SYSTEMS TO PERFORM EACH OF THE INDICATED CONTROL FUNCTIONS.
10. REMOTE LED DRIVERS AND/OR LIGHTING CONTROL RELAYS/RELAY PANELS SHALL BE MOUNTED IN NEAREST ACCESSIBLE CEILING SPACE AND/OR UTILITY ROOM CEILING SPACE. WHERE THIS IS NOT POSSIBLE, AND A CEILING ACCESS PANEL IS REQUIRED, THE LOCATION OF THE ACCESS PANEL SHALL BE REVIEWED AND APPROVED BY THE ARCHITECT PRIOR TO INSTALLATION.



T24 COMPLIANT SEQUENCE OF OPERATION:

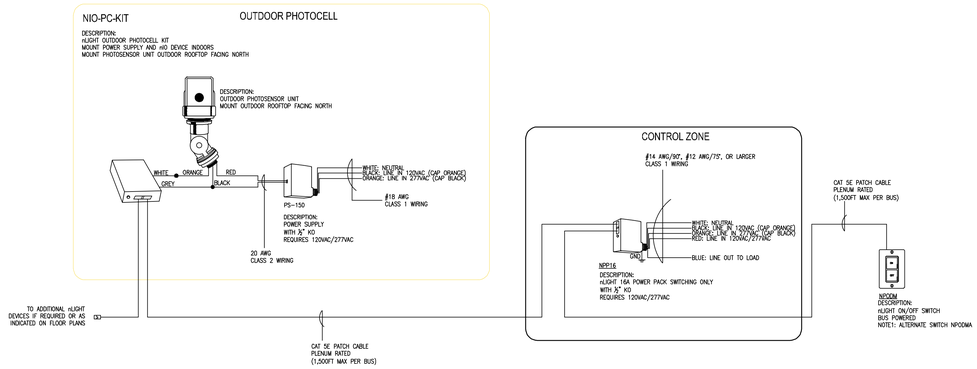


1. OCCUPANCY SENSOR PROVIDES AUTOMATIC ON/OFF OF LIGHTS/LOAD BASED ON ROOM OCCUPANCY (USE DEFAULT TIME DELAY FOR OCCUPANCY SENSOR)
2. DUAL ZONE PHOTOCELL SHALL AUTOMATICALLY REDUCE GENERAL LIGHTING IN BOTH PRIMARY AND SECONDARY DAYLIT ZONES BASED ON DAYLIGHT TO MAINTAIN DESIGN ILLUMINANCE.
3. SWITCH PROVIDES MANUAL OVERRIDE OF THE LIGHTS. NPODM-4S-DX PROVIDES 4 PRESET SCENES PLUS ALL ON/OFF/RAISE/LOWER SCENE SWITCH) . NPOD-TOUCH PROVIDES 16 CHANNELS/ZONES FOR ON/OFF/RAISE/LOWER CONTROL AND 16 PRESET SCENES.
4. UPON LOSS OF NORMAL POWER, ALL "-ER" POWER PACK (S) SHALL SHUNT CLOSED AND KEEP 0-10VDC DIMMING AT HIGH END TRIM LEVEL.

nLIGHT SYSTEM NOTE:

1. OCCUPANCY SENSOR IS CAPABLE OF DOING PARTIAL ON 50%-70% LIGHTING POWER AND FULL AUTO OFF. PROVIDE IN SPACES WHERE REQUIRED SUCH AS CONFERENCE ROOMS, OFFICES < 250SQFT, MULTIPURPOSE ROOMS < 1000SQFT, AND CLASSROOMS.
2. OCCUPANCY SENSORS HAVE DRY CONTACT OUTPUT OPTION FOR HVAC SYSTEM; SPECIFY "-AR" OPTION ON OCCUPANCY SENSOR; REFER TO SPEC SHEET.

1-ZONE SMALL ROOM



TITLE 24 COMPLIANT SEQUENCE OF OPERATION:

1. OCCUPANCY SENSOR PROVIDES AUTOMATIC ON/OFF OF LIGHTS/LOAD BASED ON ROOM OCCUPANCY (USE DEFAULT TIME DELAY FOR OCCUPANCY SENSOR) .
2. SWITCH PROVIDES MANUAL OVERRIDE OF THE LIGHTS: ON/OFF/RAISE/LOWER.

nLIGHT SYSTEM NOTE:

1. OCCUPANCY SENSOR IS CAPABLE OF DOING PARTIAL ON 50%-70% LIGHTING POWER AND FULL AUTO OFF. PROVIDE IN SPACES WHERE REQUIRED SUCH AS CONFERENCE ROOMS, OFFICES < 250SQFT, MULTIPURPOSE ROOMS < 1000SQFT, AND CLASSROOMS.

EXTERIOR LIGHTS W/ FEW ZONES

T24 COMPLIANT SEQUENCE OF OPERATION:

1. PHOTOCELL OR ASTRONOMICAL TIME-SWITCH CONTROL SHALL AUTOMATICALLY SHUT-OFF EXTERIOR LIGHTING WHEN DAYLIGHT IS AVAILABLE.
2. AUTOMATIC SCHEDULING CONTROLS VIA TIME CLOCK AT NLIGHT ECLYPSE CONTROLLER (NECY) SHALL REDUCE LIGHTING POWER BY 50%-90% AND FULL OFF DURING UNOCCUPIED TIMES.
3. AUTOMATIC SCHEDULING CONTROLS VIA TIME CLOCK AT NLIGHT ECLYPSE CONTROLLER (NECY) SHALL ALLOW SCHEDULING OF A MINIMUM OF TWO NIGHTTIME PERIODS AT DIFFERENT LIGHTING LEVELS.
4. SYSTEM MAY INCLUDE AN OVERRIDE FUNCTION WALL SWITCH THAT TURNS LIGHT ON FOR 2 HOURS MAX DURING DIMMED OR OFF STATE.

nLIGHT SYSTEM NOTE:

1. EXTERIOR LIGHTING SHALL COMPLY WITH T24 2019 PART 6 SECTION 130.2c3 MOTION SENSOR CONTROLS NOT SHOWN IN THIS DIAGRAM.

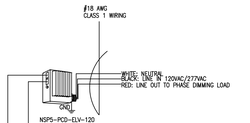
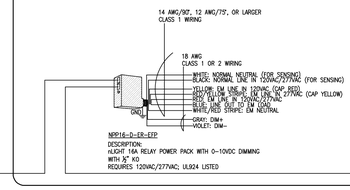
UL924 EM SHUNT RELAY FOR NSP5-PCD-SERIES DEVICE

PP16-SHUNT-EITP
DESCRIPTION:
SENSORSWITCH EM UL924 SHUNT RELAY
WITH ½" KO
REQUIRES 120VAC/277VAC UNSWITCHED NORMAL HOT FOR SENSING AND
REQUIRES SEPARATE 120VAC/277VAC UNSWITCHED EM HOT FOR EM LOAD
(REFER TO SPEC SHEET FOR WIRING DETAL TO BYPASS NSP5-PCD DEVICE)
NOTE1: WIRE TO EM POWERED NLIGHT NSP5-PCD-SERIES DEVICE
NOTE2: ONE PER EM POWERED NLIGHT NSP5-PCD-SERIES DEVICE



FORWARD PHASE DIMMING LOADS

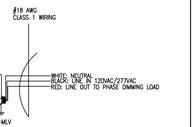
NSP5-PCD-2W
DESCRIPTION:
nLIGHT PHASE DIMMING POWER PACK WITH ½" KO
FOR 2-WIRE FORWARD PHASE DIMMING (120-277VAC)
MAX LOAD CAPACITY 575W@120VAC, 1375W@277VAC
NOTE1: WORKS FOR TRIAC, LEADING EDGE AND INCANDESCENT DIMMABLE LOADS



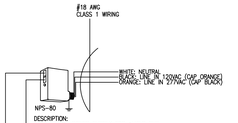
TO ADDITIONAL nLIGHT DEVICES IF REQUIRED OR AS INDICATED ON FLOOR PLANS

REVERSE PHASE DIMMING LOADS

NSP5-PCD-ELV-120
DESCRIPTION:
nLIGHT PHASE DIMMING POWER PACK WITH ½" KO
FOR ELECTRONIC LOW VOLTAGE, REVERSE PHASE (120VAC ONLY)
MAX LOAD CAPACITY 475W@120VAC
NOTE1: WORKS FOR ELV AND TRAILING EDGE DIMMABLE LOADS



EMERGENCY 0-10VDC DIMMING LOADS



NPP16-D-ER-EITP
DESCRIPTION:
nLIGHT 16A RELAY POWER PACK WITH 0-10VDC DIMMING
WITH ½" KO
REQUIRES 120VAC/277VAC; UL924 LISTED

TO ADDITIONAL nLIGHT DEVICES IF REQUIRED OR AS INDICATED ON FLOOR PLANS

MAGNETIC LOW VOLTAGE DIMMING LOADS

NSP5-PCD-MLV
DESCRIPTION:
nLIGHT PHASE DIMMING POWER PACK WITH ½" KO (120-277VAC)
FOR MAGNETIC LOW VOLTAGE (MLV) DIMMABLE LOADS
MAX LOAD CAPACITY 575W@120VAC, 1375W@277VAC

NPS-80
DESCRIPTION:
nLIGHT 80mA POWER SUPPLY FOR nLIGHT BUS
WITH ½" KO, REQUIRES 120VAC/277VAC
NOTE1: REQUIRED FOR NSP5-PCD DEVICES WHEN BUS POWER IS NOT AVAILABLE ON CAT 5E; EACH PORT POWERS UP TO 4 NSP5-PCD DEVICES
NOTE2: NOT REQUIRED IF NPP16-SERIES RELAY POWER PACK IS UTILIZED

GENERAL SYSTEM NOTES:

ON DIGITAL SYSTEMS, ALL DEVICES TO BE CONNECTED IN A DAISY CHAIN PATTERN SO THAT THE FIRST AND LAST DEVICE IN THE CHAIN HAS AN OPEN PORT. NO T-TAP CONNECTIONS. EXCEPTIONS FOR NLIGHT "RJB" DEVICES UTILIZING THEIR INCLUDED RJ45 SPLITTER INSIDE PACKAGING.

ON DIGITAL SYSTEMS, CONTRACTOR SHALL NOTE AND LABEL ADDRESS AND LOCATION OF EACH DEVICE ON THE SYSTEM ONE-LINE DIAGRAMS OR SYSTEM LAYOUT DRAWINGS AT TIME OF INSTALLATION.

WIRING SHALL CONFORM TO THE NATIONAL ELECTRICAL CODE (NEC) AND APPLICABLE LOCAL CODES, INCLUDING PROVISION OF EQUIPMENT GROUNDING AS REQUIRED BY THE NEC.

POWER CONDUCTORS SHALL BE SIZED PER THE NEC AMPACITY TABLES (ARTICLE 310), INCLUDING ADJUSTMENT FACTOR AND NEUTRAL CONDUCTOR REQUIREMENTS (FEED AND BRANCH NEUTRAL CONDUCTORS MUST BE COUNTED AS CURRENT CARRYING CONDUCTORS). RUN SEPARATE NEUTRAL CONDUCTORS FOR EACH DIMMED LOAD CIRCUIT.

FOR 0-10VDC DIMMING SYSTEMS, VIOLET AND GRAY CONDUCTORS ARE FOR 0-10VDC LOW VOLTAGE TERMINATIONS ONLY. NEVER TERMINATE LINE VOLTAGE (120/230/277VAC) TO VIOLET AND GRAY.

CONTRACTOR IS RESPONSIBLE FOR ALL CONTROL TERMINATIONS. NO SPLICES ARE PERMITTED IN CONTROL WIRING.

POWER AND CONTROL CONDUCTORS MUST NOT SHARE THE SAME RACEWAY OR CONDUIT EXCEPT WHERE ALLOWED.

LIGHTING CONTROL EQUIPMENT MUST BE INSTALLED, MAINTAINED, AND OPERATED IN AN "OFFICE CLEAN" DRY ENVIRONMENT, INDOOR DRY LOCATIONS ONLY, 10% - 90% RELATIVE HUMIDITY; AMBIENT TEMPERATURE 0°- 40°C (32°-104°F) - 0°- 35°C (32°- 95°F) RECOMMENDED.

SENSORS IN ELECTRICAL/MECHANICAL LOCATIONS NEED TO BE VERIFIED WITH AUTHORITY HAVING JURISDICTION. REFER TO NEC 110.26.D.

RELAY AND DIMMER PANEL SCHEDULES SHALL CONTAIN BREAKER PANEL INPUTS AS WELL AS ZONES/AREAS CONTROLLED.

VERIFY MAXIMUM CABLE LENGTHS BASED ON CONTROL SYSTEM. MANUFACTURER IS NOT RESPONSIBLE FOR SYSTEMS EXCEEDING CABLING PARAMETERS.

LOW VOLTAGE CABLE MUST BE INSTALLED AT LEAST 12 INCHES FROM ALL LINE VOLTAGE CONDUCTORS EXCEPT TO CROSS OR MAKE TERMINATIONS. CAT. 5 CABLE MUST BE KEPT AWAY FROM ALL EMF DEVICES SUCH AS BALLASTS OR TRANSFORMERS.

CONTRACTOR/INSTALLER TO VERIFY WITH THE MANUFACTURER TYPE AND QUANTITY OF OCCUPANCY SENSORS TO ENSURE 100% COVERAGE OF THE SPACE(S) WHERE SHOWN CONTROLLED BY OCCUPANCY SENSOR(S).

ONSITE SYSTEM STARTUP, PROGRAMMING AND END USER TRAINING SHALL BE PERFORMED BY FACTORY AUTHORIZED TECHICIAN/REPRESENTATIVE. CONTRACTOR SHALL INCLUDE THIS SERVICE LINE ITEM IN THEIR BID PACKAGE.

IMPORTANT: **MANUFACTURER OR AUTHORIZED LIGHTING REPRESENTATIVE OF CONTROL SYSTEM MUST VERIFY TYPE, QUANTITIES, PLACEMENT OF DEVICES TO MEET DESIGN INTENT AND TITLE 24 CODE COMPLIANCE, AND PROVIDE SHOP DRAWINGS FOR SPECIFIER APPROVAL. THIRD PARTY TAKE-OFFS OR LAYOUTS WILL NOT BE ACCEPTED. NO EXCEPTIONS.**

LED Striplight

ZL1N

24", 48" and 96" Lengths

Buy American

FEATURES & SPECIFICATIONS

INTENDED USE — Built on the compact, low-profile Z strip channel, this LED strip offers long maintenance-free life, several color temperatures, lumen outputs and lengths. Ideal for new construction and retrofit applications in T5 and T8 lengths. Ideal for uplight and downlight in commercial, retail, manufacturing, warehouse, core and display applications. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate. Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.**

CONSTRUCTION — Compact-design channel and cover are formed from code-gauge cold-rolled steel. Easy to install one aligner included for continuous row mounting.

Finish: Paint options include high-gloss, baked white enamel (WH), galvanized (GALV), matte black (MB) and smoke gray (SKD®). After fabrication, five-stage iron phosphate pre-treatment ensures superior paint adhesion and rust resistance.

OPTICS — Standard diffuse snap-on/snap-off lens eliminates pixels, improves uniformity and minimizes glare. LiLENS option available.

ELECTRICAL — L70=60,000hours. Utilizes high-output LEDs integrated on a two-layer circuit board, ensuring cool-running operation. Optional internal pluggable wiring harness for reduced labor cost in row-mounting applications. (See PLR_ ordering information on page 2.) Electronic LED driver is rated for 75 input watts maximum (see Operational Data on page 4 for actual wattage consumption), **multi-volt input and 0-10V dimming standard.** This fixture is designed to withstand a maximum line surge of 2.5kV at 0.75kA combination wave for indoor locations, for applications requiring higher level of protection additional surge protection must be provided.

LEDs provide nominal 80 CRI at 3000 K, 3500 K, 4000 K, or 5000 K.

Lumen output up to 2,000 lumens per foot. In 86°F (30°C) ambient environments. Luminaire should be installed in applications where ambient temperatures do not exceed 86°F (30°C).

INSTALLATION — Use #6 hex-head cover for easy installation.

Fixture may be surface mounted (with or without 2SPRG hanger), pendant or stem mounted with appropriate mounting options. Three-point aligner locks in place for easy continuous row mounting.

LISTINGS — CSA certified to US and Canadian safety standards. For use in damp locations between -40°F (-40°C) and 86°F (30°C).

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/customer-support/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a shaded background*
- This luminaire is part of an A+ Certified solution for nLight control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

Description

The Lumencore Small is a high-performance LED downlight for ceiling applications. Available in an array of trims and finishes, outputs (up to 4000lm), optics, color renderings, accessories, and a WET IP54 option, these luminaires are here to outperform. The Lumencore Small possesses a previously unseen lifespan, is quick to install, and can be used with a number of different control options.

Features

Output (nominal lumens)	700 lm, 1000 lm, 1300 lm, 2000 lm, 3000 lm, 4000 lm
Options	Emergency battery backup with hanger bar (Bodine BSL17C-C2), Emergency battery backup with hanger bar (Iota ILB-CP07-A TBTS), IP54-rating suitable for wet locations. For IP55 Shower Rated "Dead Front" applications see Lumencore Small Shower Rated specification sheet
Warranty	5-year limited warranty

Electrical and control

Wattage range	8.5W to 42W (wattage will vary based on voltage, output, color temperature, color rendering, optic, control and installation type, refer to Power Consumption table for details)

Physical

Trim	Round, Square trim with round hole, Trimless round, Square, Trimless square
Ceiling Thickness	0.04 in to 1 in ceiling thickness, 1.05 in to 2 in ceiling thickness
Tilt Optics Material	Clear polycarbonate
Weight	3.4 lbs with RM installation type, 4.75 lbs with NC installation type, 10.8 lbs with PC, IC, IC/AT and RMR installation types (weights are approximate based on the heaviest fixture configuration), please consult factory if exact fixture weight is needed

Width: 23-3/4 (60.3)
Depth: 2-3/8 (6.0)
Depth with Air supply/return: 2-3/4 (6.9)

All dimensions are inches (centimeters) unless otherwise specified.

DIGITAL NAVIGATION
Ordering Tree | nLight Platform | Sensor Switch JOT | Photometrics | Performance Data

FEATURES & SPECIFICATIONS

INTENDED USE — The BLT Best-in-Value Low Profile LED luminaire features a popular center basket design that offers a clean, versatile style and volumetric distribution. High efficacy LED light engines deliver energy savings and low maintenance compared to traditional sources. An extensive selection of configurations and options make the BLT the perfect choice for many lighting applications including schools, offices and other commercial spaces, retail, hospitals and healthcare facilities. The low profile BLT design (2-3/8") also makes it an excellent choice for renovation projects.

CONSTRUCTION — Prior to fabrication, BLT components are coated with a proprietary paint blend and die-formed for dimensional consistency.

The BLT reflector is available in both smooth and ribbed finishes. Choose RB from the fixture style section below for a ribbed finish.

End plates contain easy-to-position integral T-bar clips for securely attaching the luminaire to the T-grid. For additional T-grid security, optional screw-on T-bar clips are available.

Diffusers are extruded from impact modified acrylic for increased durability.

LED boards and drivers are accessible from the plenum.

OPTICS — Volumetric illumination is achieved by creating an optimal mix of light to walls, partitions and vertical and horizontal work surfaces — rendering the interior spaces, objects and occupants in a more balanced, complementary luminous environment. High performance extruded acrylic diffusers conceal LEDs and efficiently deliver light in a volumetric distribution. Four diffuser choices available - curved and square designs with ribbed or a smooth frosted finish.

ELECTRICAL — Long-life LEDs, coupled with high-efficiency drivers, provide superior quantity and quality of illumination for extended service life, 80% LED lumen maintenance at 60,000 hours (L80/60,000). Color Variation within 3-step MacAdam ellipse (SDCM).

Non-Configurable BLT: Generic 0-10 volt dimming driver. Dims to 10%

Configurable BLT: available in High Efficiency (HE) versions for applications where a lower wattage (over the standard product) is required. The High Efficiency versions deliver 3 x 50 LPW and can be specified via the Lumen Package designations in the Ordering Information below.

eldoLED driver options deliver choice of dimming range, and choices for control, while assuring flicker-free, low-current inrush, 89% efficiency and low EMI.

Optional integrated nLight® controls make each luminaire addressable - allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Connection to nLight is simple. It can be accomplished with integrated nLight AIR wireless IRD, RE37 sensors, or through standard Cat-5 cabling. nLight offers unique plug-and-play convenience as devices and luminaires automatically discover each other and self-commission. nLight AIR is commissioned easily through an intuitive mobile app.

Lumen Management: Unique lumen management system (option NDD) provides on board intelligence that actively manages the LED light source so that constant lumen output is maintained over the system life, preventing the energy waste created by the traditional practice of over-lighting.

Step-level dimming option allows system to be switched to 50% power for compliance with common energy codes while maintaining fixture appearance.

SENSOR — **Integrated sensor (individual control):** Sensor Switch WSTB2/10CX (Passive Infrared (PIR)) or WSDPITTBDCX (PIR/Microphonic) Dual Tech (PITT) Integrated occupancy sensor/automatic dimming photocell allows the luminaire to power off when the space is unoccupied or enough ambient light is entering the space. See page 4 for more details on the integrated sensor.

Integrated Sensor (nLight Wired Networking): This sensor is nLight-enabled, meaning it has the ability to communicate over an nLight network. When wired, using CAT-5 cabling, with other nLight-enabled sensors, power packs, or WallPods, an nLight control zone is created. Once linked to a Gateway, directly or via a Bridge, the zone becomes capable of remote status monitoring and control via SensorView software. See page 4 for the nLight sensor options.

Integrated Smart Sensor (nLight Air Wireless Platform): The BLT2 sensor is nLight AIR enabled, meaning it has the ability to communicate over the wireless nLight control platform. It is available with an automatic dimming photocell, and either a digital PIR or a microphonic (PDT) dual technology occupancy sensor. It pairs to other luminaires and wall switches through our mobile app, CLAIRITY, which allows for simple sensor adjustment. See page 4 for more details on the Integrated Smart Sensor.

Integrated Wireless Sensor (single room control): Sensor Switch WDTB2X AIR or ADVTITE5 luminaire-embedded occupancy and ambient light sensor allows the luminaire to power off when the space is unoccupied or when enough ambient light is entering the space. See page X for more details on the integrated wireless sensor.

INSTALLATION — The BLT's low profile design of only 2-3/8" provides increased installation flexibility especially in restrictive plenum applications. The BLT fits into standard 15/16" and exterior 9/16" T-grid ceiling systems.

Suitable for damp location.

For recessed mounting, in hard ceiling applications, Drywall Grid Adapters (DGA) are available as an accessory. See Accessories section.

LISTINGS — CSA Certified to meet U.S. and Canadian standards. IC rated. Tested in accordance with ISO 14644-1; suitable for ISO Class 5-9 positive and negative pressure clean rooms.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

NOTE: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.

							FA[16](fully assembled)

NOTE 1: HK – Retro Fit Kit, Mounting options do not apply to BS100LED-HK unit.
NOTE 2: Title 20 emergency pack: 120/277V, BPT: 1098, 1107 lumens; 4FT: 1098, 1135 lumens.
NOTE 3: VLO available for 4ft only.
NOTE 4: Surface mount is standard.
NOTE 5: Specify length for AC/EM", 2'", 3'", 4'", 5'", 6'", 8'" fully adjustable.
NOTE 6: DPK, SPK, CH, TM, & SVLDPK options must specify length.
NOTE 7: JM option – the unit is no longer wet location, but damp location.
NOTE 8: Magnetic mounts must be installed to steel beam measuring minimum 3/16" (4.7mm) thick.
NOTE 9: QMB must be used with JM.
NOTE 10: 18-8 stainless steel screws.
NOTE 11: Logics (Beghelli wireless and powerless control solutions). Contact factory for more details.
NOTE 12: FSP-221–requires wireless IR handheld remote (HHR-FSR9) for changing defaults and testing of occupancy sensor. Order as needed (item #A9781019R). For more details, contact factory.
NOTE 13: Downloadable smart phone app for sensor configuration.
NOTE 14: Does not apply to BS100LED-HK.
NOTE 15: Contact factory.
NOTE 16: Includes latches and grommets installed at the factory. Can be combined with the JM option.

Low-Profile Curved-Basket LED Wraparound

LBL4

4' LENGTH, NARROW HOUSING

LED

Buy American

eldoLED

FEATURES & SPECIFICATIONS

INTENDED USE — LBL LED wraparound provides a digital lighting platform to deliver general ambient lighting for surface-mount applications. The LED system delivers long life and excellent color to ensure a quality, low-maintenance lighting installation. Ideal for closets, storage rooms, hallways, stairwells and offices.

CONSTRUCTION — Metal parts are die formed from pre-painted code-gauge steel. Prismatic diffuser is 100% acrylic with sonically welded luminous ends. Continuous side flanges on fixture body provide light trap and continuous diffuser support to prevent accidental opening and simplify maintenance.

OPTICS — Curved prismatic diffuser with linear side prisms and highly transmissive overlap minimizes lamp image and provides high-angle brightness control. Luminous end plates soften appearance for improved aesthetics.

ELECTRICAL — Long-life LEDs, coupled with high-efficiency drivers, provide superior quantity and quality of illumination for extended service life. 90% L80 lumen maintenance at 50,000 hours (L90/50,000). The LEDs have a CRI of 82.

eldoLED driver options deliver choice of dimming range and choices for control, while assuring flicker-free, low-current inrush, 89% efficiency and low EMI.

Step-level dimming option allows system to be switched to 50% power for compliance with common energy code s while maintaining fixture appearance.

CONTROLS — Pair the LBL with the fixture mount Sensor Switch LSXR sensor for additional energy savings when the space is unoccupied. The LSXR0E sensor dims the fixture down to a low-level setting when there is no occupancy. This option is ideal for stairwells, back rooms, and closets due to the low occupancy level in these spaces.

Optional nLight® embedded controls continuously monitor system performance, allow for constant lumen management / compensation function, facilitate simple "plug-and-play" network and controls upgrading via Cat-5 cable. Ballast disconnect provided where required to comply with US and Canadian codes.

LISTINGS — CSA certified to meet U.S. and Canadian standards. Damp listed.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a shaded background*
- This luminaire is part of an A+ Certified solution for nLight control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

*See ordering tree for details

TYPE "F3A"

ENVIRONMENTALLY FRIENDLY, ENERGY EFFICIENT

- Lumen packages suitable for ceiling heights ranging from 8' to in excess of 100'
- Efficacies up to 124 lm/w
- Superior-quality white LED light output using Chip on Board technology
- Patented Hyperbolic Reflector (U.S. Patent No. 10,670,227 B2)

PRODUCT SPECIFICATIONS

Atrius™ - Ready Product: Select models of the Lunetas product line deliver valuable data and connectivity to the Atrius IoT location based platform services. For more information, please refer to www.acuitybrands.com/Atrius.

OPTICS

Hyperbolic: Patented hyperbolic shape (U.S. Patent No. 10,670,227 B2) optimized for small, directional LED source, maximizes fixture efficacy while creating the "Silent Ceiling" appearance by reducing lamp image and aperture brightness • Geometry of hyperbolic reflector provides narrow aperture appearance and smoother light distribution

Parabolic/Specular: Computer-optimized parabolic reflector with frosted conveyed lens regressed into aperture provides uniform distribution with no striations

Wall Wash: Available in Hyperbolic and Parabolic. Both providing uniform distributions with no striations

Baffle: White or black painted deep multigroove aluminum baffle insert with integral white painted flange and frosted conveyed glass lens

ELECTRICAL

LED Light Engine: Compact light source delivers uniform illumination without pixilation, enabling excellent beam control • 2SDCM (5000K within 3SDCM) • 80, 90 & 97 CRI

• Replaceable light engine with push in wire connections mounts directly to heat sink and is easily replaceable

Passive Cooling: Aluminum heat sink integrated directly with housing provides superior thermal management to ensure the long life of LED

LED Drivers: Power factor >0.9 • Easily replaceable from above or below the ceiling

Dimming: Dimmable via 0-10V protocol standard • Optional drivers available for use with eldoLED, Lutron EcoSystem, 2-wire dimmers, DMX, or DALI • For a list of compatible dimmers, see LED-DIM.

Life: Rated for 60,000 hours at 70% lumen maintenance • Available with optional Lumen Depreciation Indicator, LDI option B.I.5. Patent No. 9,119,269)

Emergency Battery Pack (Optional) output: Provides a minimum of 600 (BR & BR20C), or 1000 (FBR) lumens for a minimum duration of 90 minutes • BR720C option is CEC Title 20 compliant

Buy American: This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty: 5 years when used in accordance with manufacturing guidelines.
Specifications subject to change without notice.

GTL Series

2GTL

2' x 4' LED Recessed Troffer

Buy American

FEATURES & SPECIFICATIONS

INTENDED USE — The 2GTL LED recessed troffer offers a wide range of lumen packages, color temperatures, and lens options to meet the lighting needs for a wide range of applications such as schools, offices, and hospitals. The light engine delivers long life and excellent color to ensure a sound quality, low-maintenance lighting installation. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate. Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.**

CONSTRUCTION — Housing formed from 22 gauge cold-rolled steel. Smooth hemmed sides and smooth inward formed end flanges for safe handling. Includes integral T-bar clips. Lighter-weight fixture allows for safe, easy installation.

OPTICS — Highly transmissive pattern #12 lens diffuses the light source without compromising output. Pattern # 19 and satin white lens options also available.

ELECTRICAL — Long-life LEDs, coupled with high-efficiency drivers, provide extended service life, 80% LED lumen maintenance at 72,000 hours (L80/72,000).

eldoLED driver options deliver choice of dimming range, and choices for control, while assuring flicker-free, low-current inrush, 89% efficiency and low EMI.

Optional nLight® embedded controls make each luminaire addressable - allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all

Specifications

Depth: 7"
Height: 9"
Width: 11.5"
Weight: (without options) 13.5 lbs

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing a true site-wide solution. Embedded with nLight® AIR wireless controls, the WDGE family provides additional energy savings and code compliance.

WDGE2 delivers up to 6,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. When combined with multiple integrated emergency battery backup options, including an 18W cold temperature option, the WDGE2 becomes the ideal wall-mounted lighting solution for pedestrian scale applications in any environment.

LITHONIA LIGHTING

Catalog Number:
Notes:
Type:

FEATURES & SPECIFICATIONS

INTENDED USE — Ideal for applications requiring attractive die-cast aluminum signage, superior illumination and low energy consumption.

CONSTRUCTION — Precision-molded, die-cast aluminum construction — ultra-slim, compact housing. Fine-grain brushed aluminum faceplate with matte black electrostatic polymeric trim. Clear lacquer finish on brushed face inhibits fingerprints and other surface contaminants.
All electronics located inside housing.
Fully overlapping light seal prevents light leaks. Universal directional chevron knockouts are completely concealed and easily removed. Hinged faceplate and spring latches for easy lamp compartment access, no exposed hardware.
Letters 6" high with 3/4" stroke, with 100 ft viewing distance rating, based upon ULH24 standards.
U.S. Patent No. 5,739,639, 5,954,423 and 6,502,044. Canada Patent No. 2,204,210. Other patents pending.

OPTICS — Lamp is constructed using new LED technology. Provides perfectly uniform illumination to meet 3/4" letter stroke required by code.
The typical life of the exit LED lamp is 10 years, based on continuous operation. Unique LED lamp platform accommodates both single-face and double-face exits.
Low energy consumption — red exit consumes est .81W, 1.3W (120V), green exit consumes est 1 W, 1.5W (120V). Universal input voltage capabilities (120V through 277V, 50 or 60 HZ).

ELECTRICAL — Solid-state electronic elements to eliminate risk of electromechanical failures.
Surge protection meets ANSI/IEEE C62.41 category B and IEC 1000 immunity standards for high voltage surges, electrostatic discharges, high frequency electrical fast transients and line voltage dips/swells.
Emergency Operation (for EL N option only): Battery: Sealed, maintenance-free nickel-cadmium battery delivers 90 minutes capacity to lamp.
Self-diagnostics (SD option only): Two-state constant-current charger maximizes battery life and automatically recharges after battery discharge. Test switch provided for manual testing.
Self-diagnostic testing for five minutes every 30 days, 30 minutes at 180-day interval, and 90 minutes annually.
Diagnostic evaluation of LED light source, AC to DC transfer, charging and battery condition.
Continuously monitors AC functionality.
Low voltage disconnect prevents excessive deep discharge that can permanently damage the battery.
Single-point microcomputer control for all electronic features.
Crystal oscillator timing system with watchdog protection for precision accuracy.
AC/LED reset allows battery connection before AC power is applied and prevents battery damage from deep discharge.
Brownout protection is automatically switched to emergency mode when supply voltage drops below 80% of nominal.
Single multi-chromatic LED indicator to display two-state charging, test activation and three-state diagnostic status.
Test switch provides manual activation of 30-second diagnostic testing for on-demand visual inspection.

1 Small Battery Chargers Certified in the CA Title 20 Appliance Efficiency Database.

Signature — Die-Cast Aluminum Exits

LE surface

LRE recessed

LE and LRE

INPUT 20 W · LED · Buy American

INSTALLATION — Universal mounting (top, end or back). Double face available with top or end mounting only. LRE: Trim ring has 3/4" depth adjustment to ensure a flush fit against the surface. Protrudes 1/16" from the surface. No exposed hardware.
Die-cast aluminum canopy provided for surface mount only.
LISTINGS — UL damp location listed 50°F - 104°F (10°C - 40°C). Meets UL 924, NFPA 101 (current Life Safety Code), NEC and OSHA illumination standards. North Carolina Department of Insurance.
BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT.
Please refer to www.acuitybrands.com/buy-american for additional information.
WARRANTY — 5-year limited warranty. (Battery is prorated.) Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions
Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

PRE-2-M LED Specifications

Project Name:
Catalog Number:
Type:

Contemporary design meets the new generation of LED green technology in this stunning luminaire, the **PRE-2-M**. The PRE-2-M series provides up to fifty percent energy savings over traditional HID light sources; and offers excellent beam control and LED life beyond 100,000 hours for 350 milliamp systems. The PRE-2-M is offered in six optical distributions.

The PRE-2-M's fully-sealed housing features an exceptionally well-designed thermal management system that provides superior heat dissipation.

The PRE-2-M fixture is built with a cast aluminum housing, extruded aluminum arms and a spun aluminum, removable top.

The popular **PRE-2-M** is the perfect compliment to any university campus, business park, or walkway project where contemporary, architectural design is desired.

TYPE "X1W" / "X2W"

LITHONIA LIGHTING

Catalog Number:
Notes:
Type:

Wet Location
Exit Sign

WLTE

Specifications
Length: 12-1/2 (31.8)
Depth: 2-1/2 (6.4)
Height: 8-1/8 (20.6)
Weight: 4.3 lbs (1.9 kg)

All dimensions are inches (centimeters) unless otherwise indicated.

FEATURES & SPECIFICATIONS

INTENDED USE — Ideal for wet location areas requiring exit signs for AC only or battery back-up power that are subject to saturation with non-mechanically delivered water.

CONSTRUCTION — White, compact, contemporary design. Engineering-grade thermoplastic housing is impact-resistant, scratch-resistant and corrosion-proof. Universal directional Chevron inserts are easily removed and reinserted. UL94V-0 flame rating. UV-stable resin resists discoloration from natural and man-made light sources. Rugged, heavy-duty, polycarbonate clear housing lens. Housing also available in black or gray. Letters 6" high with 3/4" stroke, with 100 ft. viewing distance rating, based upon ULH24 standards.

OPTICS — Low energy consumption — fewer than 5 watts. The typical life of the exit LED lamp is 10 years, based on continuous operation.

ELECTRICAL — Dual voltage input capacity (120/277V).
Battery: (EL Option) – Sealed, maintenance free nickel-cadmium battery delivers 90 minutes rated capacity. Test switch provides manual activation of 30-second diagnostic testing for on-demand visual inspection.
Self-diagnostic testing (SD Option Only) for 30 seconds every 30 days, 30 minutes every 180 days and a 90-minute annual test. Diagnostic evaluation of LED light source, charging and battery condition.

INSTALLATION — Universal (top, end or back mount), canopy included. Junction box hole pattern for 4" octagon mounting. Flexible conduit entry.

LISTINGS — UL listed. Wet location listed. Standard cold temperature rating -4°F to 122°F (-20°C to 50°C). Meets UL 924, NFPA 101 (current Life Safety Code) and NFPA 70-NEC.

WARRANTY — 5-year limited warranty. (Battery is prorated.) Complete warranty terms located at: www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

ORDERING INFORMATION — Lead times will vary depending on options selected. Consult with your sales representative. **Example:** WLTE W 1 R EL

WLTE Series	Housing color	Number of faces	Letter color	Operation	Options
WLTE	W White, B Black, GY Gray	1 Single-face, 2 Double-face	R Red, G Green	(blank) AC only, EL Nickel-cadmium battery	TP Tamper-resistant screw hardware, SD Self-diagnostics[1]

Accessories: *Order as separate catalog number.*
ELA WG1 Wireguard (back mount only)

Notes
1 Only available with EL option.
2 See spec sheet ELA-WG.

LITHONIA LIGHTING

Catalog Number:
Notes:
Type:

Decorative Indoor

Traditional Square Vanity
VANITY LED

ADA · ENERGY STAR · U.S. PATENT PENDING

FEATURES & SPECIFICATIONS

INTENDED USE
Provides an LED lighting platform to deliver general or task lighting for residential and light commercial applications. Light engine delivers long life and excellent color to ensure a quality, low-maintenance light installation. Ideal for use in bathrooms, lavatories, hallways, corridors, stairways, utility areas and more.

CONSTRUCTION
The Traditional Square Vanity is constructed of an acrylic diffuser with housings available in brushed nickel. The white acrylic diffuser provides even illumination and softens the appearance of the LEDs for improved aesthetics.

OPTICS
2' produces 1300 lumens, 3' produces 1900 lumens, and 4' produces 2500 lumens at 3000K with 50,000 hours of life.
Extruded acrylic diffuser is of highly transmissive material to minimize LED image and provides high-angle brightness control.

ELECTRICAL
Long-life LEDs, coupled with a multivolt driver, provide extended service life. Standard input = 9.5 watts, (2') 26 watts, (3') 34 watts, (4'). Fixture is rated to deliver L70 performance at 50,000 hours and operates at 120-277 volts.
Use with non-dimmable switches only.

LISTINGS
UL Listed to US and Canadian safety standards. Listed for damp locations. ENERGY STAR® certified.

WARRANTY
5-year limited warranty. Complete warranty terms located at
www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx
NOTE: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

BUILDING ELECTRICAL SERVICE GROUND BUS DETAIL 1

(UFER GROUND) NOT TO SCALE

INTERSYSTEM BONDING TERMINATION BUS BAR 2

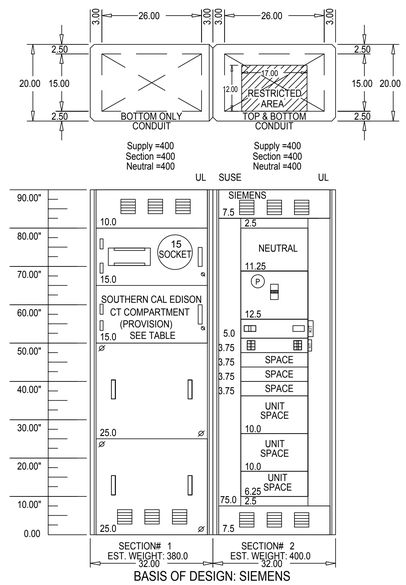
SCALE: NONE

SINGLE LINE DIAGRAM PLAN NOTES:

1. EMERGENCY LIGHTING BATTERY INVERTER SYSTEM. 2.8 KVA, 277V INPUT - 277V OUTPUT. (5) 20 AMP-1 POLE (NORMALLY ON) OUTPUT CIRCUIT BREAKERS. MYERS #4-EM4-S-BDA205-2YW OR APPROVED EQUAL.
2. TO UFER GROUND BUS. SEE DETAIL 1/E0.03.
3. PANEL PROVIDED AND INSTALLED BY POOL EQUIPMENT CONTRACTOR.
4. SWITCH AND FUSE SIZE PER ELEVATOR MANUFACTURERS REQUIREMENTS. PROVIDE NORMALLY OPEN AUXILIARY CONTACT FOR CONNECTION TO ELEVATOR CONTROLLER.
5. CONNECT SHUNT TRIP BREAKER RELAY COIL TO FIRE ALARM SYSTEM.
6. SHUNT TRIP CIRCUIT BREAKER. CIRCUIT BREAKER TO OPEN WHEN ELEVATOR MACHINE ROOM OR ELEVATOR SHAFT HEAT DETECTOR IS ACTIVATED.
7. PROVIDE EQUIPMENT GROUND CONDUCTORS. THE CONDUIT SHALL NOT BE USED AS THE SOLE GROUNDING MEANS.
8. (1) 3/4"C.O. CAP & MARK 12" ABOVE ROOF DECK AND MAKE WEATHERPROOF.
9. PANEL SHALL BE RATED FOR SERVICE ENTRANCE USE.
10. 3/4"C.-2#12, 1#12 GRD.

NOTE: PROVIDE FIELD MARKING PER NEC 110. 24.

SERVICE EQUIPMENT SHALL BE LEGIBLY MARKED IN THE FIELD WITH THE MAXIMUM AVAILABLE FAULT CURRENT. THE FIELD MARKING(S) SHALL INCLUDE THE DATE THE FAULT CURRENT CALCULATION WAS PERFORMED AND BE OF SUFFICIENT DURABILITY TO WITHSTAND THE ENVIRONMENT INVOLVED.



FIELD MARKING EXAMPLE:

⚠ WARNING

Maximum available fault current: 30,000 Symmetrical RMS Amperes
Date: ■■/■■/22

AVAILABLE FAULT CURRENT FIELD MARKING DETAIL 3

SCALE: NONE

BASIS OF DESIGN: SIEMENS

SWITCHBOARD "ACMSB" ELEVATION 4

SCALE: NONE

SINGLE LINE DIAGRAM GENERAL NOTES

1. THE ELECTRICAL DISTRIBUTION EQUIPMENT SHALL BE FULLY RATED FOR 65 K A.I.C., SERIES RATING NOT ALLOWED.
2. PROVIDE SHORT CIRCUIT PROTECTIVE DEVICE COORDINATION AND ARC-FLASH STUDY INCLUDING THE ENGINEERED SETTINGS FOR EACH FUSE AND ADJUSTABLE CIRCUIT BREAKER SHOWING THE CORRECT TIME AND CURRENT SETTINGS TO PROVIDE COORDINATION WITHIN THE LIMITS OF THE SPECIFIED EQUIPMENT. REFER TO ELECTRICAL SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
3. THE BASIS OF DESIGN AND DIMENSIONS USED FOR SWITCHBOARDS/METER BANKS ARE BASED UPON SIEMENS MANUFACTURED PRODUCTS. IF ANOTHER MANUFACTURES PRODUCT IS FURNISHED, CONTRACTOR SHALL INSURE THAT THE PRODUCT WILL FIT WITHIN THE SPACE PROVIDED.
4. PROVIDE EQUIPMENT GROUND CONDUCTOR IN ELEVATOR FEEDER. THE CONDUIT SHALL NO BE USED AS THE SOLE GROUNDING MEANS.

SEPARATION OF ELECTRICAL CIRCUITS FOR ELECTRICAL ENERGY MONITORING NOTE:
PER 2019 TITLE 24, PART 6 CALIFORNIA ENERGY CODE, SECTION 130.5(b) SEPARATION OF ELECTRICAL CIRCUITS, THE SWITCHBOARDS AND PANELBOARDS SPECIFIED HEREIN CAN ACCOMMODATE THE FOLLOWING METERING SYSTEMS
MANUFACTURERS:
EATON PX-BCM
EATON PX-MP
SEIMENS SEM3
GE MULTILIN EPM4600

PANEL SCHEDULE NOTES:

1 ROUTE CIRCUIT THROUGH DESIGNATED RELAY IN RESPECTIVE LIGHTING CONTROL PANEL REFER TO LIGHTING CONTROL SCHEDULES ON E0.02A.

2 PROVIDE RED CIRCUIT BREAKER AND LOCK-ON DEVICE.

B. PROJECT SCOPE

This table includes any lighting systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive path outlined in §140.6 or §141.0(b)2 for alterations.

Scope of Work	Conditioned Spaces		Unconditioned Spaces	
01	02	03	04	05
My Project Consists of (check all that apply):	Calculation Method	Area (ft²)	Calculation Method	Area (ft²)
☒ New Lighting System	Area Category Method	9892	Area Category Method	94
☐ New Lighting System - Parking Garage				
Total Area of Work (ft²)	9892		94	

C. COMPLIANCE RESULTS

If any cell on this table says "DOES NOT COMPLY" or "COMPLIES with Exceptional Conditions" refer to Table D. for guidance.

Lighting in conditioned and unconditioned spaces must not be combined for compliance per §140.6(b)1	Allowed Lighting Power per §140.6(b) (Watts)						Adjusted Lighting Power per §140.6(a) (Watts)				Compliance Results
	01	02	03	04	05		06	07		08	09
	Complete Building §140.6(c)1 (See Table I)	Area Category §140.6(c)2 (See Table I)	Area Category Additional §140.6(c)2G (+) (See Table J)	Tailored §140.6(c)3 (+) (See Table K)	**Total Allowed** (Watts)		Total Designed (Watts) (See Table F)	Adjustments PAF Lighting Control Credits §140.6(a)2 (-) (See Table P)		**Total Adjusted** (Watts) *Includes Adjustments	**05 must be >= 08 §140.6**
Conditioned		6,618.4	0		6,618	≥	6,366	0	=	6366	COMPLIES

F. OUTDOOR LIGHTING FIXTURE SCHEDULE

For new or altered lighting systems demonstrating compliance with §140.7 all new luminaires being installed and any existing luminaires remaining or being moved within the spaces covered by the permit application are included in the Table below. For altered lighting systems using the Existing Power method per §141.0(b)2I, only new luminaires being installed and replacement luminaires being installed as part of the project scope are included (ie, existing luminaires remaining or existing luminaires being moved are not included).

Designed Wattage:

01	02		03	04	05	06	07	08	09	10	
Name or Item Tag	Complete Luminaire Description		Watts per luminaire[1, 2]	How is Wattage determined	Total number luminaires [2]	Luminaire Status [3]	Excluded per §140.7(a)	Design Watts	Cutoff Req. > 6,200 initial lumen output §130.2(b) [4]	Field Inspector	
										Pass	Fail
S1	23w LED Wall Mounted Wedge Fixture. Dark Bronze Finish.	☐ Linear	22.5	Mfr. Spec	8	New	☐	180	NA: < 6200 lumens	☐	☐
S2	LED Low Voltage Bullet Fixture Mounted To Palm Tree Via Tree Ring.	☐ Linear	12.3	Mfr. Spec	45	New	☐	553.5	NA: < 6200 lumens	☐	☐

S4	8.4w LED Compact Adjustable Accent Light.	☐ Linear	8.4	Mfr. Spec	2	New	☐	16.8	NA: < 6200 lumens	☐	☐
							Total Design Watts:	1261.3			

* NOTES: Selections with a * require a note in the space below explaining how compliance is achieved.
EX: Luminaire is lighting a statue; EXCEPTION 2 to §130.2(b)

[1] FOOTNOTES: Authority Having Jurisdiction may ask for Luminaire cut sheets to confirm wattage used for compliance per §130.0(c)
[2] For linear luminaires, wattage should be indicated as W/ft instead of Watts/luminaire. Total linear feet should be indicated in column 05 instead of number of luminaires.
[3] Select "New" for new luminaires in a new outdoor lighting project, or for added luminaires in an alteration. Select "Altered" for replacement luminaires in an alteration. Select "Existing to Remain" for existing luminaires within the project scope that are not being altered and are remaining. Select "Existing Reinstalled" for existing luminaires which are being removed and reinstalled as part of the project scope.
[4] Compliance with mandatory cutoff requirements is required for luminaires with initial lumen output >= 6,200 unless exempted by §130.2(b)

G. CUTOFF REQUIREMENTS (BUG)

A. GENERAL INFORMATION

01	Project Location (city)	Gardena	04	Total Illuminated Hardscape Area (ft²)	19703
02	Climate Zone	8			
03	Outdoor Lighting Zone per Title 24 Part 1 §10.114 or as designated by Authority Having Jurisdiction (AHJ):				
☐	LZ-0: Very Low - Undeveloped Parkland	☐ LZ-2: Moderate - Rural Areas	☐	LZ-4: High - Must be reviewed by CA Energy Commission for Approval	
☐	LZ-1: Low - Developed Parkland	☒ LZ-3: Moderately High - Urban Areas			

B. PROJECT SCOPE

This table includes outdoor lighting systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive path outlined in §140.7 or §141.0(b)2I for alterations.

My Project Consists of:

01	02
☒ New Lighting System	Must Comply with Allowances from §140.7
☐ Altered Lighting System	Is your alteration increasing the connected lighting load (Watts)? ◯ Yes ◯ No

03	04	05
% of Existing Luminaires Being Altered[1]	Sum Total of Luminaires Being Added or Altered	Calculation Method
☐ < 10% ☐ >= 10% and < 50% ☐ >= 50%		

Please proceed to Table F. Outdoor Lighting Fixture Schedule to define the project's luminaires.

[1] FOOTNOTES: % of Existing Luminaires Being Altered = (Sum Total of Luminaires Being Added or Altered / Existing Luminaires within the Scope of the Permit Application) x 100.

DIRECTOR OF PUBLIC WORKS

SHT. 151 OF 195 DWG. NO. 5-2606

REFRAN: I:\535\050\E-0.06_535050.DWG
PLOTTIME: 9/26/2023 11:05:42 AM

CONDUIT DEPICTED IN DETAIL IS NOT REPRESENTATIVE OF ANY PARTICULAR FEEDER. REFER TO ELECTRICAL PLANS FOR ALL CONDUIT REQUIREMENTS.

FIELD COORDINATE LOCATIONS OF CONDUITS WITHIN SPECIFIC SECTIONS OF DUCT BANK.

COORDINATE ELECTRICAL AND TELECOM. SERVICES DUCT BANK REQUIREMENTS WITH DRY UTILITY PLANS, CIVIL PLANS, LANDSCAPE PLANS & SPECIFICATIONS AND SERVING UTILITY COMPANIES.

TELECOMMUNICATIONS AND POWER CONDUITS SHALL HAVE A 12" MIN. VERTICAL CLEARANCE FROM ALL OTHER UTILITY CONDUITS AND/OR PIPING IN ADDITION TO ALL OTHER REQUIREMENTS OF THE RESPECTIVE SERVING UTILITIES.

TYPICAL CONDIUT DUCT BANK DETAIL | SCALE: NONE | 2

SITE ELECTRICAL PLAN | SCALE: 3/32"=1'-0" | 1

PLAN NOTES

1. (1) 4"C.O. (SCE COMPANY TRANSFORMER SECONDARY). COORDINATE EXACT REQUIREMENTS WITH DRY UTILITY PLANS. SEE DETAIL 2/E-1.01.
2. (1) 5"C.O. (SCE COMPANY TRANSFORMER PRIMARY). COORDINATE EXACT REQUIREMENTS WITH DRY UTILITY PLANS. SEE DETAIL 2/E-1.01.
3. (1) 2"C. (AT&T) & (1) 3"C. (CHARTER) COORDINATE EXACT LOCATION AND REQUIREMENTS WITH DRY UTILITY PLANS. SEE DETAIL 2/E-1.01.
4. 94" X 72" TRANSFORMER PAD BOX PER SCE COMPANY REQUIREMENTS. COORDINATE EXACT REQUIREMENTS WITH DRY UTILITY PLANS.
5. (1) 1 1/4"C.O. (TELECOM.), (1) 1"C.O. (SECURITY), (1) 1"C.O. (ACCESS CONTROLS), & (1) 1"C.O. (CCTV). STUB UP INTO ACCESSIBLE CEILING SPACE OF BREAK ROOM AND +12" A.F.F. IN POOL BUILDING ELECTRICAL ROOM.
6. 3/4" C. - 2#12, 1#12 GRD.
7. 3/4" C. - 4#12, 1#12 GRD.
8. CONTINUE THROUGH REST OF BRANCH CIRCUIT RUN, UNLESS NOTED OTHERWISE.
9. ROUTE CIRCUIT THROUGH DESIGNATED RELAY IN DESIGNATED LIGHTING CONTROL PANEL (LCP#) SEE SCHEDULES ON E-0.02.
10. POOL PANELS "PL1 & PP1" PROVIDED & INSTALLED BY POOL EQUIPMENT CONTRACTOR. SEE E-0.03 FOR FEEDER REQUIREMENTS. COORDINATE EXACT LOCATION & REQUIREMENTS WITH POOL EQUIPMENT PLANS & SPECIFICATIONS.
11. PLACE CODE SIZED COMPOSITE PULLBOX IN PLANTER. LABEL "LIGHTING".
12. LOW VOLTAGE CABLING PER MANUFACTURER'S REQUIREMENTS.
13. 4S WEATHERPROOF J-BOX AT BASE OF TREE FOR SPEAKER CABLING. SEE DETAIL 3/E-4.01.
14. 1"C.O. (SPEAKER CABLING) TO TEL. BACKBOARD "TBP" IN POOL BUILDING.
15. 3/4"C.O. (SPEAKER CABLING).
16. 3/4"C.-6#12, 1#12 GRD.
17. UP TO LIGHTS AT SECOND FLOOR STAIR LANDING. SEE E-2.01, NOTE #3 FOR CONTINUATION.
18. INTERCEPT EXISTING 5"C. (SCE PRIMARY). COORDINATE EXACT LOCATION WITH SCE.
19. INTERCEPT EXISTING CHARTER AND AT&T CONDUITS. COORDINATE EXACT LOCATION WITH SERVING UTILITY.
20. 17" X 30" PULL BOX PER CHARTER/AT&T REQUIREMENTS. COORDINATE EXACT LOCATION AND REQUIREMENTS WITH SERVING UTILITY.
21. (1) 3"C.O. (CITY FIBER OPTIC) PER AT&T REQUIREMENTS. COORDINATE REQUIREMENTS WITH CITY.
22. INTERCEPT EXISTING FIBER OPTIC. COORDINATE REQUIREMENTS WITH THE CITY.

SITE PLAN GENERAL NOTES:

1. LOCATIONS OF EXISTING UTILITIES ARE NOT SHOWN AND CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN EXCAVATING AND TRENCHING ON THIS SITE TO AVOID EXISTING DUCTS, PIPING, OR CONDUITS, ETC., AND TO PREVENT HAZARDS TO PERSONNEL AND/OR DAMAGE TO EXISTING UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN AND INSTALLED BY ANY OTHER CONTRACTS. THE ENGINEER IS NOT RESPONSIBLE FOR THE LOCATION OF UNDERGROUND UTILITIES OR STRUCTURES, WHETHER OR NOT SHOWN OR DETAILED AND INSTALLED BY ANY OTHER CONTRACTS. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER, THE ENGINEER SHOULD SEARCH UNIDENTIFIED CONDITIONS BE DISCOVERED. THESE DRAWINGS AND SPECIFICATIONS DO NOT INCLUDE THE NECESSARY ELEMENTS FOR CONSTRUCTION SAFETY.
2. CONTRACTOR SHALL VERIFY THE LOCATION OF ANY EXISTING UNDERGROUND UTILITIES AND STRUCTURES PRIOR TO COMMENCEMENT OF WORK BY CONTACTING UNDERGROUND SERVICE ALERT (U.S.A.) AT 1(800) 422-4133, OR OTHER LOCAL APPLICABLE UNDERGROUND SERVICE ALERT AGENCIES.
3. THE DRAWINGS ILLUSTRATE LOCATIONS OF EQUIPMENT AND ASSEMBLIES, PULLBOXES, MANHOLES, HANDHOLES, AND VAULTS, INCLUDING OTHER ELECTRICAL UNDERGROUND STRUCTURES AND PATHWAYS. CONTRACTOR SHALL CLOSELY COORDINATE EXACT LOCATIONS AND MOUNTING DEPTHS OF ALL DEVICES, STRUCTURES AND PATHWAYS WITH OTHER TRADES PRIOR TO PLACEMENT, TO ENSURE FINAL LOCATIONS ARE OUTSIDE FEATURE LANDSCAPE AND ARCHITECTURAL AREAS AND ARE NOT IN CONFLICT WITH THE INSTALLATION OF MATERIALS BY OTHER TRADES.
4. SEE ARCHITECTURAL, CIVIL AND LANDSCAPE PLANS FOR EXACT LOCATION OF FIXTURES, PULLBOXES, MANHOLES, OTHER ELECTRICAL EQUIPMENT AND DEVICES, ETC. COORDINATE ALL UNDERGROUND STRUCTURES AND CONDUIT ROUTING WITH ARCHITECT OR OWNERS' REPRESENTATIVE PRIOR TO ROUGH-IN, TO ENSURE SUCH ITEMS ARE NOT PLACED IN PLANTING / HARDSCAPE AREAS.
5. ALL EQUIPMENT LOCATED OUTDOORS SHALL BE WEATHERPROOF, NEMA 3R RATED.
6. ALL UNDERGROUND CONDUIT SIZE SHALL NOT BE LESS THAN ¾" - U.N.O.
7. MINIMUM CONDUCTOR SIZE SHALL BE #10 AWG. - U.N.O.
8. ALL SITE BRANCH CIRCUIT CONDUIT RUNS SHALL INCLUDE AN EQUIPMENT GROUND THAT AT A MINIMUM, MATCHES THE SIZE OF THE LARGEST BRANCH CIRCUIT CONDUCTOR.
9. PROVIDE PULL STRING IN ALL EMPTY CONDUITS.
10. THE MEANS OF EGRESS TRAVEL SHALL BE ILLUMINATED AT ANY TIME THE BUILDING IS OCCUPIED WITH A LIGHT INTENSITY OF NOT LESS THAN 1 FOOT-CANDLE AT THE FLOOR LEVEL. BUILDING CODE 1008.2.1.

SITE UTILITY GENERAL NOTES

1. UTILITY POINTS OF SERVICE AND WORK/MATERIAL SHOWN ARE BASED UPON PRELIMINARY INFORMATION ONLY BY THE UTILITY COMPANIES AND ARE FOR BID PURPOSES ONLY, NOT FOR CONSTRUCTION.
2. CONTRACTOR SHALL COORDINATE WITH UTILITY COMPANY FOR FINAL AND EXACT WORK AND MATERIAL REQUIREMENTS AND CONSTRUCT TO UTILITY COMPANY ENGINEERING PLANS AND SPECIFICATIONS ONLY. CONTRACTOR SHALL FURNISH AND INSTALL ALL CONDUIT, PULL WIRES, CABLES, PULLBOXES, CONCRETE ENCASEMENT OF CONDUITS, TRANSFORMER PAD, BREAKERS, TRENCHING AND BACKFILL, AND PAY ALL UTILITY COMPANY FEES AND INCLUDE ALL REQUIREMENTS IN SCOPE OF WORK.
3. LOCATIONS OF UTILITIES WHERE SHOWN ARE APPROXIMATE AND CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN EXCAVATING AND TRENCHING ON SITE TO AVOID EXISTING DUCTS, PIPING, OR CONDUITS, ETC. AND TO PREVENT HAZARD TO PERSONNEL AND/OR DAMAGE TO EXISTING UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN AND INSTALLED BY ANY OTHER CONTRACTS. THE ENGINEER IS NOT RESPONSIBLE FOR THE LOCATION OF UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN OR DETAILED AND INSTALLED BY ANY OTHER CONTRACTS. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER SHOULD SUCH UNIDENTIFIED CONDITIONS BE DISCOVERED. THESE DRAWINGS AND SPECIFICATIONS DO NOT INCLUDE THE NECESSARY ELEMENTS FOR CONSTRUCTION SAFETY.
4. UNLESS SPECIFICALLY SHOWN AS (E), (R), (ER), (D), EXISTING OR NON-BOLD, ALL ELECTRICAL LINE WORK SHOWN IS NEW.

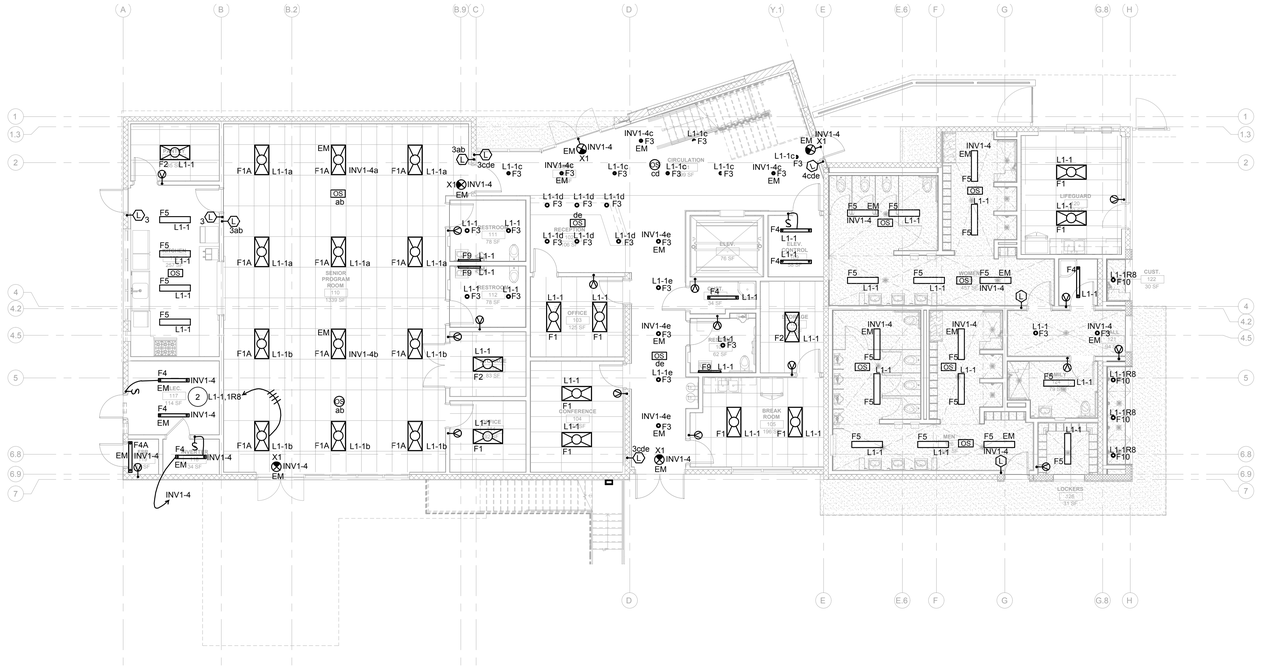
PLOT TIME: 9/26/2023 11:05:47 AM



PLAN NOTES

1. PROVIDE PARTITION CONTROLS TO PROVIDE CONTROL OF SPACE ENTIRE SPACE DEPENDING ON MOVEABLE PARTITION POSITION. SEE DETAIL 1/E-0.02A FOR ADDITIONAL INFORMATION.
2. ROUTE CIRCUIT THROUGH DESIGNATED RELAY IN LIGHTING CONTROL PANEL "LCP1", REFER TO SCHEDULE ON SHEET E-0.02.
3. DOWN TO LIGHTS BELOW. SEE E-1.01, NOTE #17 FOR CONTINUATION.

SCALE: 1 inch = 8 ft.

BUILDING SECOND FLOOR LIGHTING PLAN | SCALE: 1/8"=1'-0" | 2

SCALE: 1 inch = 8 ft.

BUILDING FIRST FLOOR LIGHTING PLAN | SCALE: 1/8"=1'-0" | 1

GENERAL NOTES

1. REFER TO TYPICAL LIGHTING CONTROL DIAGRAMS & NOTES ON E0.02.
2. FOR CLARITY, BRANCH CIRCUIT CONDUIT & CONDUCTOR REQUIREMENTS HAVE NOT BEEN SHOWN ON PLANS FOR NORMAL & EMERGENCY LIGHTING. FOR LIGHTING THROUGHOUT ALL SPACES, PROVIDE CONDUIT AND CONDUCTORS IN ACCORDANCE WITH ELECTRICAL SPECIFICATION. PROVIDE #12 CONDUCTORS UNLESS SPECIFICALLY NOTED OTHERWISE.
3. FOR EMERGENCY LIGHTING "EM" POWER BRANCH CIRCUITS, PROVIDE CONDUIT AND CONDUCTORS, SEPARATE FROM NORMAL POWER LIGHTING BRANCH CIRCUIT CONDUIT & CONDUCTORS. REFER TO NOTE #2 ABOVE. EMERGENCY LIGHTING BRANCH CIRCUITS SHALL HAVE SEPARATE NEUTRAL CONDUCTOR FOR EACH PHASE CONDUCTOR, SHARED NEUTRAL IS NOT ALLOWED. PROVIDE A NON-CONTROLLED (NON-SWITCHED) HOT CONDUCTOR, FROM EMERGENCY POWER SOURCE, FOR CONNECTION TO EXIT SIGNS.
4. THE MEANS OF EGRESS TRAVEL, INCLUDING THE EXIT DISCHARGE, SHALL BE ILLUMINATED AT ALL TIMES THE BUILDING SPACE SERVED BY THE MEANS OF EGRESS IS OCCUPIED WITH A LIGHT INTENSITY OF NOT LESS THAN 1 FOOT-CANDLE AT THE WALKING SURFACE AS REQUIRED BY BUILDING CODE 1008.2.
5. IN THE EVENT OF POWER SUPPLY FAILURE IN ROOMS, SPACES AND BUILDINGS THAT REQUIRE TWO OR MORE MEANS OF EGRESS, AN EMERGENCY ELECTRICAL SYSTEM FOR A DURATION OF NOT LESS THAN 90 MINUTES IN ACCORDANCE WITH THE PROVISIONS SET FORTH IN BUILDING CODE 1008.3.
6. THE PATH OF EGRESS TRAVEL TO EXITS SHALL BE MARKED BY READILY VISIBLE EXIT SIGNS TO CLEARLY INDICATE THE DIRECTION OF EGRESS TRAVEL AS REQUIRED BY BUILDING CODE 1013.1; AND SHALL BE INTERNALLY OR EXTERNALLY ILLUMINATED AS REQUIRED BY SECTION 1013.3 AND 1013.5. NOTE: ADDITIONAL EXIT SIGNS MAY BE REQUIRED AT THE TIME OF FIELD INSPECTION

BUILDING SECOND FLOOR POWER & SIGNAL PLAN

SCALE: 1/8"=1'-0" | 2

PLAN NOTES

1. OUTLETS FOR MONITOR . COORDINATE EXACT LOCATION & MOUNTING HEIGHT WITH ARCHITECT. REFER TO SYMBOLS LIST ON E-0.01 FOR OUTLET BOX REQUIREMENTS.
2. RECEPTACLE & SWITCH FOR GARBAGE DISPOSAL. MOUNT SWITCH +6" ABOVE COUNTER SPLASH. MOUNT RECEPTACLE UNDER SINK IN CABINET SPACE.
3. STUB INTO ACCESSIBLE CEILING SPACE.
4. CONNECT AS REQUIRED TO HAND DRYER. COORDINATE EXACT LOCATION AND REQUIREMENTS WITH ARCHITECT.
5. CONNECT AS REQUIRED TO MOTORIZED PARTITION. PROVIDE WIRING AND CONNECTIONS AS REQUIRED PER MANUFACTURERS REQUIREMENTS FOR A COMPLETE AND OPERABLE PARTITION.
6. SWITCH FOR PARTITION CONTROL. PROVIDE WIRING AND CONNECTIONS AS REQUIRED. COORDINATE EXACT LCOATION WITH ARCHITECT.
7. PARTITION SYSTEM LIMIT SWITCH. PROVIDE WIRING AND CONNECTIONS AS REQUIRED PER MANUFACTURERS REQUIREMENTS FOR A COMPLETE AND OPERABLE PARTITION. PROVIDE 3/4"C. WITH WIRING AND CONNECTIONS AS REQUIRED TO PARTITION MOTOR.
8. (1) 2"C. (TELECOM.) & (3) 2"C.O. (ACCESS, SECURITY & CCTV) STUB INTO ACCESSIBLE CEILING SPACE AND UP INTO 2nd FLOOR IT CLOSET.
9. LOW VOLTAGE CONDUIT TO POOL BUILDING. REFER TO NOTE #5 ON E-1.01 FOR QUANTITIES, SIZE AND CONTINUATION.
10. 3/4"C. - 3#12,1#12 GRD.
11. 3/4"C. - 3#10, 1#10 GRD.
12. 3/4"C.-2#12,1#12 GRD.
13. TO RECEPTACLE CIRCUIT IN ROOM.
14. POWERED BY OUTDOOR UNIT ON ROOF. PROVIDE 3/4"C.-2#12,1#12 GRD. TO RESPECTIVE OUTDOOR INIT ON ROOF.
15. CONTROLLED BY LINE VOLTAGE T-STAT. COORDINATE EXACT LOCATION & REQUIREMENTS WITH MECHANICAL.
16. DDC CONTROL PANEL BY MECHANICAL. COORDINATE LOCATION & REQUIREMENTS WITH MECHANICAL.
17. PROVIDE POWER CONNECTION TO AUTO SENSOR FOR FAUCETS AND URINALS. PROVIDE 3/4"C.-2#12, 1#12 GRD. FROM RESTROOM RECEPTACLE CIRCUIT P1-#. COORDINATE EXACT LOCATION AND REQUIREMENTS WITH PLUMBING.
18. RECEPTACLES FOR MICROWAVE BELOW COUNTER. COORDINATE EXACT LOCATION WITH ARCHITECT.
19. RECEPTACLE AVAILABLE FOR ASSITIVE LISTENING SYSTEM.
20. AUDIO/VISUAL (AV) EQUIPMENT LOCATION IN STORAGE ROOM. COORDINATE EXACT LOCATION WITH OWNER.

BUILDING FIRST FLOOR POWER & SIGNAL PLAN

SCALE: 1/8"=1'-0" | 1

SMOKE/FIRE DAMPER (SFD) GENERAL NOTES:

1. ELECTRICAL PLANS DO NOT SHOW ELECTRICAL REQUIREMENTS FOR SMOKE/FIRE DAMPERS (SFD). PROVIDE ALL CONDUIT, WIRE, J-BOXES, OUTLET BOXES, ETC. REQUIRED FOR A COMPLETE AND OPERABLE MECHANICAL INSTALLATION. CONNECT NO MORE THAN TEN DAMPERS PER CIRCUIT. REFER TO DETAIL 1/E-0.01.
2. REFER TO MECHANICAL PLANS FOR SMOKE/FIRE DAMPER LOCATIONS AND QUANTITIES.
3. PROVIDE QUANTITY OF AREA AND/OR DUCT SMOKE DETECTORS AS REQUIRED.
4. POWER FOR SMOKE/FIRE DAMPERS TO BE CONTROLLED BY FIRE ALARM RELAY OPERATED BY FIRE ALARM PANEL. CONTACT OF RELAY TO OPEN WITH FIRE ALARM CONDITION DISCONNECTING POWER FROM DAMPERS.

POWER & SIGNAL GENERAL NOTES:

1. ALL WALL MOUNTED DEVICE HEIGHTS SHALL BE VERIFIED WITH ARCHITECTURAL ROOM ELEVATIONS PRIOR TO ROUGH-IN.
2. PENETRATIONS THROUGH FIRE RATED WALLS SHALL BE PROTECTED WITH AN APPROVED FIRE STOP SYSTEM EQUAL TO OR GREATER THAN THE RATING OF THE WALL BEING PENETRATED.
3. ALL DEVICES MOUNTED BACK-TO-BACK ON COMMON WALLS SHALL BE INSTALLED IN SEPARATE BOXES OFFSET 24-INCHES MINIMUM OR PROVIDED WITH PUTTY OR ANOTHER APPROVED SOUNDPROOF BACKING.
4. WHEN EXPOSED CEILING OR OPEN GRID CONDITIONS EXIST, CONTRACTOR SHALL PROVIDE:
   - A. ALL BRANCH CIRCUITS TO BE INSTALLED IN EMT.
   - B. ALL BRANCH CIRCUITS SHALL BE ROUTED PARALLEL TO BUILDING STRUCTURES AND RACKED NEATLY IN GROUPS OF MULTIPLE PATHWAYS.
   - C. ALL LOW VOLTAGE CABLES SHALL BE:
     1) INSTALLED IN EMT CONDUIT PATHWAYS OR
     2) INSTALLED NEATLY IN CABLE MANAGEMENT OPEN BASKET OR LADDER TYPE WIREWAY SUPPORTED INDEPENDENTLY FROM STRUCTURE ABOVE.

   EXPOSED LOW VOLTAGE CABLING IN OPEN TYPE CEILING APPLICATIONS INSTALLED ON D-RINGS, J-HOOKS OR SIMILAR APPARATUS WILL NOT BE ACCEPTED UNLESS APPROVED IN WRITING BY ARCHITECT/ENGINEER PRIOR TO ANY ROUGH-IN OR INSTALLATION. CONTRACTOR SHALL INCLUDE AN ALLOWANCE IN HIS BASE BID FOR THE INSTALLATION OF LOW VOLTAGE CABLES IN OPEN CEILING AS DESCRIBED.
5. EXPOSED CABLE/CONDUCTORS INSTALLED IN A PLENUM SPACE SHALL BE LISTED FOR SUCH ENVIRONMENT AND INSTALLATION SHALL CONFORM TO NEC OR CEC WHERE ADOPTED ARTICLE 300.22(C).
6. ALL RECEPTACLES MOUNTED AT 5-FEET-6-INCHES OR LOWER SHALL BE TAMPER-RESISTANT TYPE, EXCEPT RECEPTACLES FOR FIXED APPLIANCES AND/OR EQUIPMENT.
7. COORDINATE LOCATION OF ALL OUTLETS, RECEPTACLES, AND SWITCHES WITH ARCHITECT PRIOR TO ROUGH-IN.

CONTROLLED RECEPTACLE DETAIL

NOTE:

SUBSCRIPT / SUPERSCRIPT "#,#C" INDICATES SPLIT WIRED RECEPTACLE CONTROLLED BY ROOM'S LIGHTING CONTROLS. REFER TO LIGHTING CONTROL SYSTEM DIAGRAM ON SHEET E002A FOR ADDITIONAL REQUIREMENTS. CONTROLLED PORTION OF RECEPTACLE SHALL BE IMPRINTED "CONTROLLED". REFER TO SYMBOLS LIST FOR ADDITIONAL INFORMATION.

BRANCH CIRCUIT GENERAL NOTES

1. FOR CLARITY, SOME BRANCH CIRCUIT CONDUIT & CONDUCTOR REQUIREMENTS HAVE NOT BEEN SHOWN ON PLANS FOR POWER BRANCH CIRCUITS. FOR POWER THROUGHOUT ALL SPACES, PROVIDE CONDUIT AND CONDUCTORS IN ACCORDANCE WITH ELECTRICAL SPECIFICATIONS. PROVIDE #12 CONDUCTORS UNLESS SPECIFICALLY NOTED OTHERWISE.

REFERN: I:\535\050\E-3.01_535050.DWG
PLOT TIME: 9/26/2023 11:05:57 AM

PLAN NOTES

1. 3/4"C - 2#12, 1#12 GRD.TO RESPECTIVE INDOOR FANCOIL UNIT. SEE NOTE #8 ON E3.01 FOR CONTINUATION.
2. 3/4"C - 2#10, 1#10 GRD.
3. 3/4"C - 3#10, 1#10 GRD.
4. 3/4"C - 2#8, 1#8 GRD.

MECHANICAL EQUIPMENT GENERAL NOTES

1. VERIFY EXACT LOCATION OF MECHANICAL EQUIPMENT WITH MECHANICAL CONTRACTOR PRIOR TO INSTALLATION OF CONDUIT.
2. ALL EQUIPMENT, DEVICES, SAFETY SWITCH, JUNCTION BOXES CONNECTIONS, ETC. MOUNTED ON THE ROOF OR EXTERIOR SHALL BE WEATHERPROOF.
3. REFER TO MECHANICAL CONTROL DIAGRAMS FOR ALL SENSORS, TIME CLOCKS, RELAYS, TIMERS, STARTERS, LINE AND LOW VOLTAGE CONDUIT AND PROVIDE AS REQUIRED.
4. SAFETY SWITCHES SHALL BE HORSEPOWER RATED WITH CURRENT LIMITING FUSES, SIZED PER THE MANUFACTURER'S RECOMMENDATION. SWITCHES SHALL HAVE "RK-1" FUSE REJECTION CLIPS.
5. ELECTRICAL PLAN DO NOT INDICATE MECHANICAL AND PLUMBING EQUIPMENT CONTROL. REFER TO MECHANICAL AND PLUMBING PLANS AND SPECIFICATIONS AND PROVIDE ALL CONDUIT, WIRE, J-BOXES, OUTLET BOXES, RELAY SWITCHES, TIME SWITCHES, CONTROL CIRCUITS, ETC. REQUIRED FOR A COMPLETE AND OPERABLE MECHANICAL AND PLUMBING INSTALLATION. ALL WIRE SHALL BE INSTALLED IN CODE SIZED CONDUIT.
6. LOCATIONS OF SAFETY SWITCHES AND CONNECTIONS FOR MECHANICAL AND PLUMBING EQUIPMENT ARE SHOWN DIAGRAMMATICALLY. VERIFY ACTUAL LOCATIONS WITH EQUIPMENT SHOP DRAWINGS AND LOCATE SAFETY SWITCHES AS TO PROVIDE CODE REQUIRED CLEARANCES AND ACCESS. SAFETY SWITCHES LOCATED ON THE ROOF SHALL BE MOUNTED 30" MINIMUM ABOVE THE ROOF.

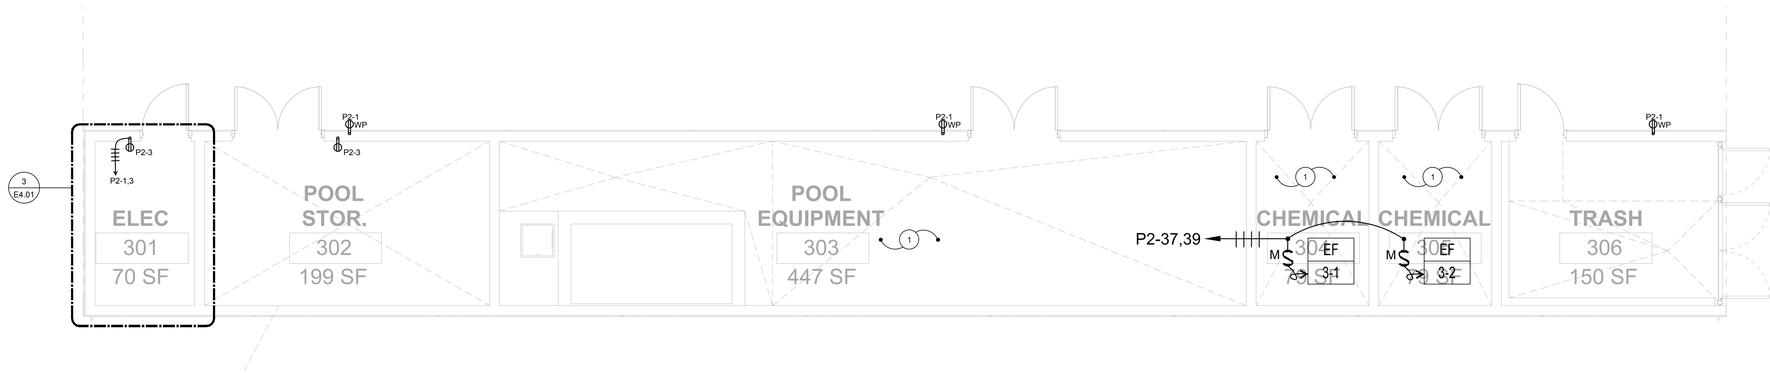
PLAN NOTES



1. ELECTRICAL INSTALLATION SHALL BE SUITABLE FOR A CORROSIVE ENVIRONMENT.

POOL BUILDING LIGHTING PLAN

SCALE: 1/4"=1'-0" | 2

POOL BUILDING POWER & SIGNAL PLAN

SCALE: 1/4"=1'-0" | 1

GENERAL NOTES

1. REFER TO TYPICAL LIGHTING CONTROL DIAGRAMS & NOTES ON E0.02.
2. FOR CLARITY, BRANCH CIRCUIT CONDUIT & CONDUCTOR REQUIREMENTS HAVE NOT BEEN SHOWN ON PLANS FOR NORMAL & EMERGENCY LIGHTING. FOR LIGHTING THROUGHOUT ALL SPACES, PROVIDE CONDUIT AND CONDUCTORS IN ACCORDANCE WITH ELECTRICAL SPECIFICATION . PROVIDE #12 CONDUCTORS UNLESS SPECIFICALLY NOTED OTHERWISE.
3. FOR EMERGENCY LIGHTING "EM" POWER BRANCH CIRCUITS, PROVIDE CONDUIT AND CONDUCTORS, SEPARATE FROM NORMAL POWER LIGHTING BRANCH CIRCUIT CONDUIT & CONDUCTORS. REFER TO NOTE #2 ABOVE. EMERGENCY LIGHTING BRANCH CIRCUITS SHALL HAVE SEPARATE NEUTRAL CONDUCTOR FOR EACH PHASE CONDUCTOR, SHARED NEUTRAL IS NOT ALLOWED. PROVIDE A NON-CONTROLLED (NON-SWITCHED) HOT CONDUCTOR, FROM EMERGENCY POWER SOURCE, FOR CONNECTION TO EXIT SIGNS.
4. COORDINATE WITH POOL ELECTRICAL PLANS, SPECIFICATIONS AND CONTRACTOR FOR ADDITIONAL ITEMS THAT MAY IMPACT THE ELECTRICAL SCOPE OF WORK AND ELECTRICAL INSTALLATION.

POWER & SIGNAL GENERAL NOTES:

1. ALL WALL MOUNTED DEVICE HEIGHTS SHALL BE VERIFIED WITH ARCHITECTURAL ROOM ELEVATIONS PRIOR TO ROUGH-IN.
2. PENETRATIONS THROUGH FIRE RATED WALLS SHALL BE PROTECTED WITH AN APPROVED FIRE STOP SYSTEM EQUAL TO OR GREATER THAN THE RATING OF THE WALL BEING PENETRATED.
3. ALL DEVICES MOUNTED BACK-TO-BACK ON COMMON WALLS SHALL BE INSTALLED IN SEPARATE BOXES OFFSET 24-INCHES MINIMUM OR PROVIDED WITH PUTTY OR ANOTHER APPROVED SOUNDPROOF BACKING.
4. WHEN EXPOSED CEILING OR OPEN GRID CONDITIONS EXIST, CONTRACTOR SHALL PROVIDE:
   - A. ALL BRANCH CIRCUITS TO BE INSTALLED IN EMT.
   - B. ALL BRANCH CIRCUITS SHALL BE ROUTED PARALLEL TO BUILDING STRUCTURES AND RACKED NEATLY IN GROUPS OF MULTIPLE PATHWAYS.
   - C. ALL LOW VOLTAGE CABLES SHALL BE:
     1) INSTALLED IN EMT CONDUIT PATHWAYS OR
     2) INSTALLED NEATLY IN CABLE MANAGEMENT OPEN BASKET OR LADDER TYPE WIREWAY SUPPORTED INDEPENDENTLY FROM STRUCTURE ABOVE.

     EXPOSED LOW VOLTAGE CABLING IN OPEN TYPE CEILING APPLICATIONS INSTALLED ON D-RINGS, J-HOOKS OR SIMILAR APPARATUS WILL NOT BE ACCEPTED UNLESS APPROVED IN WRITING BY ARCHITECT/ENGINEER PRIOR TO ANY ROUGH-IN OR INSTALLATION. CONTRACTOR SHALL INCLUDE AN ALLOWANCE IN HIS BASE BID FOR THE INSTALLATION OF LOW VOLTAGE CABLES IN OPEN CEILING AS DESCRIBED.
5. EXPOSED CABLE/CONDUCTORS INSTALLED IN A PLENUM SPACE SHALL BE LISTED FOR SUCH ENVIRONMENT AND INSTALLATION SHALL CONFORM TO NEC OR CEC WHERE ADOPTED ARTICLE 300.22(C).
6. ALL RECEPTACLES MOUNTED AT 5-FEET-6-INCHES OR LOWER SHALL BE TAMPER-RESISTANT TYPE, EXCEPT RECEPTACLES FOR FIXED APPLIANCES AND/OR EQUIPMENT.
7. COORDINATE LOCATION OF ALL OUTLETS, RECEPTACLES, AND SWITCHES WITH ARCHITECT PRIOR TO ROUGH-IN.
8. GROUNDING AND BONDINGTERMINALS SHALL BE IDENTIFIED FOR USE IN WET AND CORROSIVE ENVIRONMENTS. FIELD-INSTALLED GROUNDING AND BONDING CONNECTIONS IN A DAMP, WET, OR CORROSIVE ENVIRONMENT SHALL BE COMPOSED OF COPPER, COPPER ALLOY, OR STAINLESS STEEL. THEY SHALL BE LISTED FOR DIRECT BURIAL USE." [680.7, 2019 CEC]

BRANCH CIRCUIT POWER GENERAL NOTES:

1. FOR CLARITY, SOME BRANCH CIRCUIT CONDUIT & CONDUCTOR REQUIREMENTS HAVE NOT BEEN SHOWN ON PLANS FOR POWER BRANCH CIRCUITS. FOR POWER THROUGHOUT ALL SPACES, PROVIDE CONDUIT AND CONDUCTORS IN ACCORDANCE WITH ELECTRICAL SPECIFICATIONS. PROVIDE #12 CONDUCTORS UNLESS SPECIFICALLY NOTED OTHERWISE.

SMOKE/FIRE DAMPER (SFD) GENERAL NOTES:

1. ELECTRICAL PLANS DO NOT SHOW ELECTRICAL REQUIREMENTS FOR SMOKE/FIRE DAMPERS (SFD). PROVIDE ALL CONDUIT, WIRE, J-BOXES, OUTLET BOXES, ETC. REQUIRED FOR A COMPLETE AND OPERABLE MECHANICAL INSTALLATION. CONNECT NO MORE THAN TEN DAMPERS PER CIRCUIT. REFER TO DETAIL 1/E-0.01.
2. REFER TO MECHANICAL PLANS FOR SMOKE/FIRE DAMPER LOCATIONS AND QUANTITIES.
3. PROVIDE QUANTITY OF AREA AND/OR DUCT SMOKE DETECTORS AS REQUIRED.
4. POWER FOR SMOKE/FIRE DAMPERS TO BE CONTROLLED BY FIRE ALARM RELAY OPERATED BY FIRE ALARM PANEL. CONTACT OF RELAY TO OPEN WITH FIRE ALARM CONDITION DISCONNECTING POWER FROM DAMPERS.

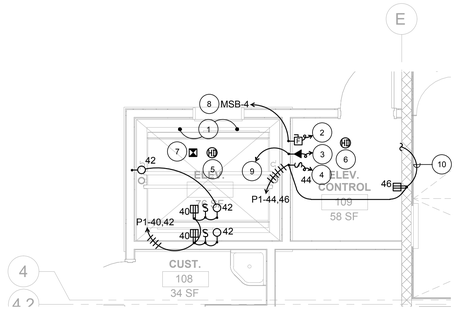
PLAN NOTES



1. LOCATE DEVICES IN ELEVATOR PIT/SHAFT PER ELEVATOR SUPPLIER REQUIREMENTS. LIGHT FIXTURE TO BE WALL MOUNTED, 2-FT, 4,000 LUMEN LED, VAPORTITE WITH HIGH IMPACT LENS AND WET LOCATION LISTED. METALUX #2VT2-LD5-4-DR-UNV-L840-CDI-WL OR EQUAL.
2. CONNECT TO ELEVATOR IN ACCORDANCE WITH THE ELEVATOR MANUFACTURER REQUIREMENTS. VERIFY EXACT LOCATION WITH ELEVATOR SUPPLIER.
3. CONNECT TO ELEVATOR FOR CAR EMERGENCY PHONE. VERIFY EXACT LOCATION WITH ELEVATOR SUPPLIER.
4. 120-VOLT, 20-AMP, SINGLE-PHASE, LOCKABLE, FUSED S.P.S.T. SWITCH FOR ELEVATOR CAR LIGHTS AND BLOWER WITH CONDUIT AND WIRE EXTENDED TO STUDS ON EACH ELEVATOR CONTROLLER. VERIFY EXACT LOCATION WITH ELEVATOR SUPPLIER.
5. HEAT DETECTOR IN ELEVATOR SHAFT LOCATED WITHIN 2'-0" PF SPRINKLER HEAD CONNECT TO FIRE ALARM SYSTEM AND TO SHUNT TRIP CIRCUIT BREAKER TO SHUT-OFF POWER TO ELEVATOR WHEN DETECTOR IS ACTIVATED. PROVIDE ACCESS FROM OUTSIDE SHAFT TO SERVICE DETECTOR.
6. HEAT DETECTOR IN ELEVATOR MACHINE ROOM LOCATED WITHIN 2'-0" OF EVERY SPRINKLER HEAD. VERIFY LOCATIONS AND QUANTITIES WITH FIRE PROTECTION DRAWINGS. CONNECT TO FIRE ALARM SYSTEM AND TO SHUNT TRIP CIRCUIT BREAKER TO SHUT-OFF POWER TO ELEVATOR WHEN DETECTOR IS ACTIVATED.
7. SMOKE DETECTOR LOCATED IN ELEVATOR SHAFT FOR ELEVATOR RECALL. PROVIDE ACCESS TO DETECTOR FROM OUTSIDE SHAFT.
8. REFER TO SINGLE LINE DIAGRAM, SHEET E-0.03 FOR FEEDER REQUIREMENTS.
9. 3/4"C.O. TO TELEPHONE BACKBOARD IN 2nd FLOOR IT CLOSET.
10. UP TO LIGHT FIXTURE IN ROOM. REFER TO E-2.01 FOR CONTINUATION.
11. DOOR SHALL OPEN IN THE DIRECTION OF EGRESS FROM ROOM AND BE PROVIDED WITH PANIC HARDWARE.
12. 3"H. CONCRETE HOUSEKEEPING PAD EXTENDING 3" BEYOND EQUIPMENT FOOTPRINT.
13. 3/4"-1#6 TO UFER GROUND BUS. SEE DETAIL 1/E-0.03.
14. 3/4"-1#6 TO POOL BUILDING GROUND ELECTRODE.
15. CONNECT AS REQUIRED TO TRAP PRIMER. VERIFY LOCATION & REQUIREMENTS WITH PLUMBING.

SWIMMING POOL PLAN

SCALE: 1/8" = 1'-0"

NORTH

KEYED NOTES

1. FINISHED DIMENSION OF POOL SHALL BE 75.04' MIN & 75.08' MAX. THIS TOLERANCE APPLIES TO ALL POINTS ON THE TURNING WALL FROM WATERLINE TO 5'-0" BELOW.
2. 1/2" MIN WHITE PLASTER FINISH
3. DISABLED ACCESS LIFT, SEE 5/SP2.1
4. 3/4 METER DIVING STAND, SEE 10/SP2.1
5. 4" WIDE SLIP-RESISTANT RED SLOPE BREAK TILE BAND
6. PORTABLE LIFEGUARD CHAIR (TYP 2)

GENERAL NOTES

1. SET GUTTER CAP TILE LEVEL WITHIN A TOLERANCE OF ± 0.05" AROUND PERIMETER OF POOL.
2. DIMENSIONS ARE TYP FOR OPPOSITE SIDE OF POOL UNO.
3. SEE SHEET SP4.1 FOR FLOOR INLET & MAIN DRAIN DIMENSIONS.
4. SEE SHEET SP4.1 FOR SAFETY SIGNS & SAFETY EQUIPMENT LOCATIONS.

GENERAL:

THE STRUCTURAL CONTRACT DRAWINGS AND SPECIFICATIONS REPRESENT THE FINISHED STRUCTURE. THEY DO NOT INDICATE THE METHOD OF CONSTRUCTION. THE STRUCTURE IS DESIGNED TO BE A STABLE UNIT AS A COMPLETED WHOLE. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DESIGN, ERECT AND INSPECT TEMPORARY SHORES, BRACES, ETC. TO SUPPORT THE STRUCTURE AGAINST ALL ANTICIPATED LOADS INCLUDING GRAVITY, WIND AND LATERAL EARTH PRESSURE UNTIL ITS COMPLETION. OBSERVATION VISITS TO THE SITE BY THE STRUCTURAL ENGINEER SHALL NOT INCLUDE INSPECTION OF THESE METHODS OF CONSTRUCTION. CONSTRUCTION MATERIAL SHALL BE PLACED ON FRAMED FLOORS AND ROOFS SUCH THAT THE DESIGN LIVE LOADS ARE NOT EXCEEDED.

THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS AND SITE CONDITIONS PRIOR TO STARTING CONSTRUCTION. RESOLVE ANY DISCREPANCY WITH THE ARCHITECT.

WORKMANSHIP AND MATERIALS SHALL COMPLY WITH THE 2019 CALIFORNIA BUILDING CODE AND ALL OTHER APPLICABLE REGULATIONS.

NOTES AND DETAILS ON THE DRAWINGS TAKE PRECEDENCE OVER THE GENERAL STRUCTURAL NOTES AND TYPICAL DETAILS. "TYPICAL" DETAILS ARE NOT FLAGGED ON THE DRAWINGS, BUT APPLY UNLESS NOTED OTHERWISE.

APPROVED FABRICATORS SHALL BE LICENSED BY GARDENA CITY BUILDING DEPARTMENT.

COORDINATION:

ALL DRAWINGS ARE CONSIDERED TO BE PART OF THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING THE DRAWINGS AND SPECIFICATIONS AMONG THE SUBCONTRACTORS PRIOR TO START OF CONSTRUCTION. ANY DISCREPANCIES THAT ARE FOUND SHALL BE BROUGHT TO THE ATTENTION OF THE ARCHITECT PRIOR TO START OF CONSTRUCTION. ANY WORK PERFORMED IN CONFLICT WITH THE CONTRACT DOCUMENTS OR ANY CODE REQUIREMENTS SHALL BE CORRECTED BY THE CONTRACTOR AT HIS OWN EXPENSE AND AT NO EXPENSE TO THE OWNER OR ARCHITECT.

COORDINATION SHALL INCLUDE, BUT NOT BE LIMITED TO, VERIFYING THE LOCATION AND WEIGHT OF ALL MECHANICAL AND ELECTRICAL EQUIPMENT AS WELL AS THE SIZE AND LOCATION OF ALL MECHANICAL OPENINGS IN ROOFS, FLOORS AND WALLS. UNLESS OTHERWISE NOTED ON THE DRAWINGS, DO NOT PENETRATE ANY STRUCTURAL ELEMENTS SUCH AS BEAMS, COLUMNS, WALLS, SLABS, ETC. WITHOUT PRIOR WRITTEN APPROVAL OF THE STRUCTURAL ENGINEER THROUGH THE ARCHITECT.

COORDINATION SHALL INCLUDE, BUT NOT BE LIMITED TO, DETERMINING THE LOCATION OF ALL EXISTING UTILITY LINES THAT MAY INTERFERE WITH THE INSTALLATION OF THE NEW STRUCTURAL ELEMENTS. THE CONTRACTOR SHALL INFORM THE OWNER IF INTERFERENCE IS ENCOUNTERED. THE OWNER WILL DETERMINE IF THE LINES ARE TO BE REMOVED OR RELOCATED.

SHOP DRAWINGS:

SHOP DRAWING SUBMITTAL TO THE ENGINEER ARE REQUIRED FOR ALL STRUCTURAL WORK, UNLESS OTHERWISE AGREED TO BY THE ARCHITECT/ENGINEER. NO WORK SHALL PROCEED WITHOUT THE REVIEW AND APPROVAL OF SHOP/ERECTION/LAYOUT DRAWINGS BY THE ARCHITECT AND ENGINEER. ALL SUBMITTALS SHALL BE MADE IN A TIMELY MANNER ALLOWING ADEQUATE TIME AS NEEDED BY THE ARCHITECT AND ENGINEER FOR REVIEW.

THE CONTRACTOR SHALL REVIEW AND APPROVE ALL SHOP DRAWINGS PRIOR TO ENGINEERING REVIEW. SUBMISSIONS FOR ENGINEERING REVIEW SHALL INCLUDE A REPRODUCIBLE AND ONE COPY; REPRODUCIBLE WILL BE MARKED AND RETURNED.

INSPECTIONS:

THE OWNER SHALL EMPLOY AN INSPECTOR TO PROVIDE INSPECTION PER CBC SECTION 1701 AND LOCAL CODES. ALL SPECIAL INSPECTORS SHALL BE APPROVED BY GARDENA CITY BUILDING DEPARTMENT.

CODE:

2019 CALIFORNIA BUILDING CODE

DESIGN LOADS:

POOL WALLS:

1. AT REST PRESSURE	88 PCF (TRIANGULAR)
2. SURCHARGE (100 PSF x0.30 AT-REST)	30 PSF (UNIFORM AT 8 FT. IN DEPTH)
3. SEISMIC EARTH LOAD	35 PCF (INVERTED TRIANGULAR AT RETAINING GREATER THAN 6 FT.)

SEISMIC:

SITE CLASS	D
Sds	1.196

FOUNDATION:

GEOTECHNICAL REPORT BY: SOUTHERN CALIFORNIA GEOTECHNICAL
22885 SAVI RANCH PARKWAY, SUITE E
YORBA LINDA, CA 92887

PROJECT NO. 21G242-1
NOVEMBER 18, 2021

ALLOWABLE SOIL BEARING PRESSURE:
2000 PSF NET ALLOWABLE SOIL BEARING PRESSURE
18" MIN. DEPTH, SBC MAY BE INCREASED BY 1/3 FOR SEISMIC

BACKFILL NOTES:

DO NOT PLACE BACKFILL BEHIND POOL WALLS BEFORE CONCRETE HAS REACHED FULL DESIGN STRENGTH. BACKFILL OPERATION SHALL NOT IMPART LATERAL PRESSURE AGAINST POOL WALLS. USE VERTICAL COMPACTION EQUIPMENT UNDER DIRECTION OF GEOTECHNICAL ENGINEER. WHEEL OR TRACK COMPACTION OF SOIL BEHIND POOL WALL IS NOT ALLOWED WITHOUT ADEQUATE TEMPORARY BRACING. THE CONTRACTOR SHALL PROVIDE FOR DESIGN, PERMITS AND INSTALLATION OF SUCH BRACING.

CONCRETE:

CONCRETE CONSTRUCTION SHALL CONFORM WITH THE LATEST EDITION OF ACI 301, "SPECIFICATIONS FOR STRUCTURAL CONCRETE FOR BUILDINGS" AND ACI 318, "BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE". SUBMIT MIX DESIGNS FOR EACH CLASS OF CONCRETE.

CONCRETE CONTAINING SUPERPLASTICIZING ADMIXTURE SHALL HAVE A SLUMP NOT EXCEEDING 3", TO BE FIELD VERIFIED, PRIOR TO ADDING ADMIXTURE, AND NOT EXCEEDING 8" AT PLACEMENT. ADDITION OF WATER TO A MIX WITH INSUFFICIENT SLUMP WILL NOT BE PERMITTED.

MECHANICALLY VIBRATE ALL CONCRETE WHEN PLACED, EXCEPT THAT SLABS ON GRADE NEED BE VIBRATED ONLY AROUND UNDER-FLOOR DUCTS, ETC.

SHOT PINS AT CURBS AND SLAB EDGES ARE NOT ALLOWED. THE USE OF EXPANSION ANCHORS AT CURBS IS NOT ALLOWED.

MINIMUM CONCRETE DESIGN STRENGTH SHALL BE AS FOLLOWS:

FOOTINGS	4000 PSI @ 28 DAYS	HARDROCK (145 PCF)
SLAB-ON-GRADE	4000 PSI @ 28 DAYS	HARDROCK
STRUCTURAL SLAB	4000 PSI @ 28 DAYS	HARDROCK
CONC. WALL	4000 PSI @ 28 DAYS	HARDROCK

REINFORCING STEEL:

DEFORMED BARS:

ASTM A615 GRADE 40 FOR #3 AND GRADE 60 FOR #4 AND LARGER. REINFORCING TO BE WELDED SHALL BE ASTM A706, GRADE 60, LOW ALLOY.

CLEAR CONCRETE COVERAGE (APPLIES UNLESS NOTED OTHERWISE):
CONCRETE CAST AGAINST AND PERMANENTLY EXPOSED TO EARTH ---------- 3"
FORMED CONCRETE EXPOSED TO EARTH OR WEATHER ---------- 2"
FORMED CONCRETE NOT EXPOSED TO EARTH OR WEATHER ---------- 1 1/2"
FROM TOP SURFACE OF SLAB ON GRADE ---------- 1 1/2"
CONCRETE FILL OVER METAL DECK ---------- 1"

WELDING:

UNLESS NOTED OTHERWISE, WELDING OF REINFORCING STEEL IS PROHIBITED. WHERE WELDING IS NOTED, WELD IN ACCORDANCE WITH AWS D1.1 USING E90 SERIES ELECTRODES. SUBMIT MILL TEST REPORTS ON THE REINFORCING TO BE WELDED AND THE PROPOSED WELDING PROCEDURE. (WPS) IN CONFORMANCE W/ 2001 CBC & AWS D1.4.

LAP SPLICES IN CONCRETE:

SEE TYPICAL DETAIL FOR LAP SPLICES IN CONCRETE BEAMS, WALLS, SLABS AND FOOTINGS. (UNLESS NOTED OTHERWISE, LAP SPLICES IN CONCRETE BEAMS, WALLS, SLABS AND FOOTINGS SHALL BE CLASS "B" TENSION LAP SPLICES AND LAP SPLICES IN CONCRETE COLUMNS SHALL BE STANDARD COMPRESSION LAP SPLICES PER LATEST EDITION OF ACI 318. STAGGER ALTERNATE SPLICES A MINIMUM OF ONE LAP LENGTH.) LAPS IN WELDED WIRE FABRIC SHALL BE MADE SO THAT THE OVERLAP MEASURED BETWEEN OUTERMOST CROSS WIRES OF EACH FABRIC SHEET IS NOT LESS THAN THE SPACING OF CROSS WIRES PLUS 2 INCHES. ALL SPLICE LOCATIONS SUBJECT TO APPROVAL.

PROVIDE BENT CORNER BARS TO MATCH AND LAP WITH HORIZONTAL BARS AT CORNERS AND INTERSECTIONS OF FOOTINGS AND WALLS. SPACING SHOWN FOR REINFORCING BARS ARE MAXIMUM ON CENTERS. ALL BARS PER CRSI SPECIFICATIONS AND HANDBOOK. DOWEL ALL VERTICAL REINFORCING TO THE FOUNDATION. CONCRETE COLUMN DOWEL EMBEDMENT SHALL BE A STANDARD COMPRESSION DOWEL EMBEDMENT LENGTH ACCORDING TO THE LATEST EDITION OF ACI 318. SECURELY TIE ALL BARS IN POSITION PRIOR TO PLACING CONCRETE. SUPPORT SLAB REINFORCEMENT WITH CONCRETE BLOCKS OR SUPPORT CHAIRS. REINFORCING SHALL NOT BE SUPPORTED BY STAKES DRIVEN INTO THE GROUND.

SHOTCRETE NOTES:

1. REINFORCING STEEL SHALL BE SECURELY TIED IN PLACE IN A MANNER THAT PREVENTS ANY MOVEMENT DURING THE WET MIX SHOTCRETING.
2. THE HEIGHT OF A LAYER SHALL BE LIMITED TO NOT MORE THAN THREE FEET AND A SUCCEEDING LAYER SHALL NOT BE PLACED IN LESS THAN THREE HOURS. NO SLOUGHING OR SAGGING SHALL BE PERMITTED.
3. REFER TO DRAWINGS FOR PLACEMENT OF DOWEL AND REINFORCEMENT.
4. REFER TO DRAWINGS FOR SHOTCRETE COLD JOINT DETAIL.
5. THE MINIMUM SLUMP SHALL BE 1½" AND THE MAXIMUM SLUMP SHALL BE 2½". SLUMP SHALL BE MEASURED AT THE POINT OF DISCHARGE FROM THE MIXER, EXCEPT THE BUILDING INSPECTOR MAY REQUIRE SLUMP TESTS AT THE DISCHARGE POINT WHERE WATER MAY HAVE BEEN ADDED.
6. A CAPABLE NOZZLEMAN'S HELPER WITH AN AIR BLOW PIPE SHALL BE PROVIDED TO ASSIST THE NOZZLEMAN IN KEEPING ALL REBOUND BUILD-UP OUT OF THE WORK.
7. ADDITIONAL WORKERS MAY BE REQUIRED TO TAKE THE REBOUND FROM THE WORK IF THE REBOUND CANNOT BE REMOVED BY THE AIR BLOW PIPE.
8. NO KEYWAYS OR EMBEDMENTS SHALL BE PLACED IN FRONT FACE THAT WILL INTERFACE WITH THE STREAM FROM THE NOZZLE.
9. THE CONTRACTOR AGREES TO PROVIDE A DESIGNATED LIAISON BETWEEN HIS CREW, THE DEPUTY INSPECTOR AND THE BUILDING INSPECTOR.
10. THE DEPUTY INSPECTOR SHALL BE INTERVIEWED AND APPROVED BY DEPARTMENT REPRESENTATIVES PRIOR TO INSPECTING THE WORK AT THE JOB SITE AND ONE DEPUTY SHALL BE ASSIGNED TO EACH NOZZLE.
11. RIGID OR OTHER APPROVED BACKING SHALL BE PLACED AGAINST THE EARTH WHERE THERE IS ANY LIKELIHOOD OF SOIL BEING DISLODGED IN SUFFICIENT QUANTITY TO DAMAGE THE CONCRETE DURING THE APPLICATION OF WET MIX SHOTCRETE. RIGID OR OTHER APPROVED BACKING SHALL BE USED WHERE A VOID IN THE EMBANKMENT IS TO BE BRIDGED.
12. IN THE EVENT THAT A PREVIOUSLY PRESUMED SOLID EMBANKMENT SHOULD SLOUGH OR SHED DIRT IN SUFFICIENT QUANTITY TO DAMAGE THE CONCRETE, THE WET MIX SHOTCRETE PLACEMENT WORK IN THAT AREA SHALL CEASE UNTIL A RIGID BACKING IS INSTALLED AND ANY CONTAMINATED SHOTCRETE IS REMOVED.

GENERAL NOTES FOR STRUCTURAL OBSERVATION:

1. STRUCTURAL OBSERVATION IS REQUIRED FOR THE STRUCTURAL SYSTEM IN ACCORDANCE WITH 2019 CBC CHAPTER 17. STRUCTURAL OBSERVATION IS THE VISUAL OBSERVATION OF THE ELEMENTS AND CONNECTIONS OF THE STRUCTURAL SYSTEMS AT SIGNIFICANT CONSTRUCTION STAGES AND THE COMPLETED STRUCTURE FOR GENERAL CONFORMANCE TO THE APPROVED PLANS AND SPECIFICATIONS. STRUCTURAL OBSERVATION DOES NOT WAIVE THE RESPONSIBILITY FOR THE INSPECTIONS REQUIRED OF THE BUILDING INSPECTOR OR THE DEPUTY INSPECTOR.
2. THE OWNER SHALL EMPLOY A CIVIL OR STRUCTURAL ENGINEER OR ARCHITECT TO PERFORM THE STRUCTURAL OBSERVATION. THE ENGINEER OR ARCHITECT SHALL BE REGISTERED OR LICENSED IN THE STATE OF CALIFORNIA. THE DEPARTMENT OF BUILDING AND SAFETY RECOMMENDS THE USE OF THE ENGINEER OR ARCHITECT RESPONSIBLE FOR THE STRUCTURAL DESIGN WHEN THEY ARE INDEPENDENT OF THE CONTRACTOR.
3. THE STRUCTURAL OBSERVER SHALL PROVIDE EVIDENCE OF EMPLOYMENT BY THE OWNER. A LETTER FROM THE OWNER OR A COPY OF THE AGREEMENT FOR SERVICES SHALL BE SENT TO THE BUILDING INSPECTOR BEFORE THE FIRST SITE VISIT. THE STRUCTURAL OBSERVER SHALL ALSO INFORM THE OWNER OF THE REQUIREMENTS FOR A PRECONSTRUCTION MEETING AND SHALL PRESIDE OVER THIS MEETING.
4. THE OWNER OR OWNER'S REPRESENTATIVE SHALL COORDINATE AND CALL FOR A MEETING BETWEEN THE ENGINEER OR ARCHITECT RESPONSIBLE FOR THE STRUCTURAL DESIGN, STRUCTURAL OBSERVER, CONTRACTOR, AFFECTED SUBCONTRACTORS AND DEPUTY INSPECTORS. THE PURPOSE OF THE MEETING SHALL BE IDENTIFY THE MAJOR STRUCTURAL ELEMENTS AND CONNECTIONS THAT AFFECT THE VERTICAL AND LATERAL LOAD SYSTEMS OF THE STRUCTURE AND TO REVIEW SCHEDULING OF THE REQUIRED OBSERVATIONS. A RECORD OF THE MEETING SHALL BE INCLUDED IN THE FIRST OBSERVATION REPORT SUBMITTED TO THE BUILDING INSPECTOR.
5. THE STRUCTURAL OBSERVER SHALL PERFORM SITE VISITS AT THOSE STEPS IN THE PROGRESS OF THE WORK THAT ALLOW FOR CORRECTION OF DEFICIENCIES WITHOUT SUBSTANTIAL EFFORT OR UNCOVERING OF THE WORK INVOLVED. AT A MINIMUM, THE FOLLOWING SIGNIFICANT CONSTRUCTION STAGES REQUIRE A SITE VISIT AND AN OBSERVATION REPORT FROM THE STRUCTURAL OBSERVER.

   CONSTRUCTION STAGES ELEMENTS/CONNECTIONS TO BE OBSERVED

   a) PRIOR TO CONCRETE PLACEMENT/FOUNDATION REINFORCEMENT AND ANCHOR BOLTS (IF ANY)
   b) STRUCTURAL SLAB REINFORCEMENT
6. THE STRUCTURAL OBSERVER SHALL PREPARE A REPORT ON THE DEPARTMENT FOR EACH SIGNIFICANT STAGE OF CONSTRUCTION OBSERVED. THE ORIGINAL OF THE OBSERVATION REPORT SHALL BE SENT TO THE BUILDING INSPECTOR'S OFFICE AND SHALL BE SIGNED AND SEALED (WET STAMP) BY THE RESPONSIBLE STRUCTURAL OBSERVER. ONE COPY OF THE OBSERVATION REPORT SHALL BE ATTACHED TO THE APPROVED PLANS. THE COPY ATTACHED TO THE PLANS NEED NOT BE SEALED BUT SHALL BE SIGNED BY THE RESPONSIBLE STRUCTURAL OBSERVER OR THEIR DESIGNEE. COPIES OF THE REPORT SHALL ALSO BE GIVEN TO THE OWNER, CONTRACTOR, AND DEPUTY INSPECTOR.
7. A FINAL OBSERVATION REPORT MUST BE SUBMITTED WHICH SHOWS THAT ALL OBSERVED DEFICIENCIES WERE RESOLVED AND THE STRUCTURAL SYSTEM GENERALLY CONFORMS WITH THE APPROVED PLANS AND SPECIFICATIONS. THE DEPARTMENT OF BUILDING AND SAFETY WILL NOT ACCEPT THE STRUCTURAL WORK WITHOUT THIS FINAL OBSERVATION REPORT AND THE CORRECTION OF SPECIFIC DEFICIENCIES NOTED DURING NORMAL BUILDING AND DEPUTY INSPECTION.
8. THE STRUCTURAL OBSERVER SHALL SEND THE ORIGINAL OBSERVATION REPORT TO THE FOLLOWING INSPECTION OFFICE:

   INSPECTION GROUP NAME:
   STREET ADDRESS:

   CA, ZIP CODE:
9. WHEN THE OWNER ELECTS TO CHANGE THE STRUCTURAL OBSERVER OF RECORD, THE OWNER SHALL:

   A. NOTIFY THE BUILDING INSPECTOR IN WRITING BEFORE THE NEXT INSPECTION.
   B. CALL AN ADDITIONAL PRECONSTRUCTION MEETING, AND.
   C. FURNISH THE REPLACEMENT STRUCTURAL OBSERVER WITH A COPY OF ALL PREVIOUS OBSERVATION REPORT.

   THE REPLACEMENT STRUCTURAL OBSERVER SHALL APPROVE THE CORRECTION OF THE ORIGINAL OBSERVED DEFICIENCIES UNLESS OTHERWISE APPROVED BY PLAN CHECK SUPERVISION. THE POLICY OF THE DEPARTMENT SHALL BE TO CORRECT ANY PROPERLY NOTED DEFICIENCIES WITHOUT CONSIDERATION OF THEIR SOURCE
10. THE ENGINEER OR ARCHITECT OF RECORD SHALL DEVELOP ALL CHANGES RELATING TO THE STRUCTURAL SYSTEMS. THE BUILDING DEPARTMENT SHALL REVIEW AND APPROVE ALL CHANGES TO THE APPROVED PLANS AND SPECIFICATIONS.

SPECIAL INSPECTIONS:

CONTINUOUS DEPUTY INSPECTION IS REQUIRED PER CHAPTER 17, 2019 CBC, FOR THE FOLLOWING:

1) FOOTING EXCAVATIONS SHALL BE INSPECTED & APPROVED BY GEOTECHNICAL ENGINEER PRIOR TO PLACING ANY FORMWORK, REINF., OR CONCRETE.
2) ALL CONCRETE PLACEMENT & VERIFICATION OF CONCRETE REINFORCEMENT.

ALL SPECIAL INSPECTORS SHALL REPORT TO THE CITY OR AND SHALL BE APPROVED BY GARDENA CITY BUILDING DEPARTMENT.

SUBMITTAL REQUIREMENTS

CATEGORY	REQUIRED DOCUMENTATION
CONCRETE REINF.	SHOP DRAWINGS & MILL CERT.
CONCRETE	MIX DESIGNS

EXPANSION ANCHOR BOLTS - CONCRETE:

ALL NEW EXPANSION BOLTS NOTED IN DRAWINGS ARE TO BE DEWALT POWER-STUD+SD2 AND SHALL BE DESIGNED AND INSTALLED PER ESR-2502 U.N.O.

ALL FIELD INSTALLED CONCRETE EXPANSION ANCHORS SHALL BE APPROVED FOR THE TYPE AND INSTALLATION FOR SPECIFIED APPLICATION AND MATERIALS. ALL BOLTS SHALL HAVE AN APPROVED ICC-ES REPORT NUMBER.

WHEN INSTALLING DRILLED-IN ANCHORS IN EXISTING NON-PRESTRESSED REINFORCED CONCRETE, USE CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE EXISTING REINFORCING BARS. WHEN INSTALLING ANCHORS INTO EXISTING PRESTRESSED CONCRETE (PRE- OR POST-TENSIONED) LOCATE THE PRESTRESSED TENDONS BY USING A NON-DESTRUCTIVE METHOD PRIOR TO INSTALLATION. EXERCISE EXTREME CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE TENDONS DURING INSTALLATION. MAINTAIN A MINIMUM CLEARANCE OF ONE INCH BETWEEN THE REINFORCEMENT AND THE DRILLED-IN ANCHOR.

ALL DRILLED HOLES SHALL BE BLOWN OUT WITH COMPRESSED AIR COMPLETELY BEFORE BOLT INSTALLATION.

EXPANSION BOLTS SHALL NOT BE INSTALLED INTO CONCRETE PATCHES, GROUT POCKETS, OR OTHERWISE INADEQUATE CONCRETE SUBSTRATE. WHERE AN ANCHOR IS SHOWN INTO SUCH MATERIALS THE SEOR SHALL BE NOTIFIED AND CONSTRUCTION SHALL WAIT FOR FURTHER INSTRUCTION.

ALL WALL ANCHOR TIES USING EXPANSION BOLT ANCHORS SHALL BE INSTALLED TIGHT TO THE WALL OR LEDGER. THERE SHALL BE NO GAP BETWEEN THE NUT AND STRAP OR STRAP AND WALL/LEDGER.

ALL WALL ANCHORS SHALL BE PROTECTED FROM WEATHER EXPOSURE. ANY EXPOSED EXTERIOR ANCHOR BOLTS SHALL BE STAINLESS STEEL.

PERIODIC SPECIAL INSPECTION IS REQUIRED DURING ANCHOR INSTALLATION TO VERIFY ANCHOR TYPE, ANCHOR DIMENSIONS, CONCRETE TYPE, CONCRETE COMPRESSIVE STRENGTH, ANCHOR SPACING, EDGE DISTANCE, CONCRETE MEMBER THICKNESS, TIGHTENING TORQUE, HOLE DIMENSIONS, ANCHOR EMBEDMENT, AND ADHERENCE TO THE MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS.

ANY PANEL JOINTS, COLD JOINTS, OR WALL ENDS THAT OCCUR WITHIN 1.5 X EMBEDMENT OF THE ANCHOR SHALL BE REPORTED TO THE SEOR UNLESS THE MINIMUM EDGE DISTANCE IS SPECIFICALLY DETAILED AND SHOWN IN A DETAIL.

ALL ANCHORS SHALL BE TORQUED AS FOLLOWS FOR PROPER INSTALLATION: (HARDROCK OR LIGHTWEIGHT CONCRETE)

BOLT DIAMETER (IN) -POWER-STUD+SD2	3/8"	1/2"	5/8"	3/4"	-
TORQUE (FT-LBS)	20	40	80	110	-

APPLY PROOF TEST LOADS TO ANCHORS WITHOUT REMOVING THE NUT IF POSSIBLE. IF NOT, REMOVE THE NUT AND INSTALL A THREADED COUPLER NUT TO THE SAME TIGHTNESS OF THE ORIGINAL NUT USING A TORQUE WRENCH AND APPLY LOAD.

MINIMUM ANCHOR EMBEDMENT AND EDGE DISTANCE ARE AS FOLLOWS:

BOLT DIAMETER (IN) -POWER-STUD+SD2	3/8"	1/2"	5/8"	3/4"	-
MIN. EMBEDMENT	2"	2"	3 1/4"	3 3/4"	-
MIN. EDGE DISTANCE	2 1/2"	2 3/4"	4 1/4"	5"	-

TENSION TEST NOTES WHEN APPLICABLE:

REACTION LOADS FROM TEST FIXTURES MAY BE APPLIED CLOSE TO THE ANCHOR BEING TESTED, PROVIDED THE ANCHOR IS NOT RESTRAINED FROM WITHDRAWING BY THE FIXTURE(S).

TEST EQUIPMENT SHALL BE CALIBRATED BY AN APPROVED TESTING LABORATORY IN ACCORDANCE WITH STANDARD RECOGNIZED PROCEDURES.

THE FOLLOWING TEST LOADS SHALL BE USED: FOR 3000 PSI CONCRETE

BOLT DIAMETER (IN) -POWER-STUD+SD2	3/8"	1/2"	5/8"	3/4"	-
TENSION LOAD (LBS)	1401	1605	3325	4120	-

THE FOLLOWING CRITERIA APPLY FOR THE ACCEPTANCE OF INSTALLED ANCHORS: HYDRAULIC RAM METHOD: THE ANCHOR SHOULD HAVE NO OBSERVABLE MOVEMENT AT THE APPLICABLE TEST LOAD. A PRACTICAL WAY TO DETERMINE OBSERVABLE MOVEMENT IS THAT THE WASHER UNDER THE NUT BECOMES LOOSE. TORQUE WRENCH METHOD: THE APPLICABLE TEST TORQUE MUST BE REACHED WITHIN ONE-QUARTER (1/4) TURN FOR 3/8" AND ONE-HALF (1/2) TURN FOR 1/2" EXPANSION ANCHOR AND UP.

TESTING BASED ON THE ICC-ESR SHOULD OCCUR 24 HOURS MINIMUM AFTER INSTALLATION OF THE SUBJECT ANCHORS.

IF ANY ANCHOR FAILS TESTING, NOTIFY THE SEOR FOR FURTHER TESTING FREQUENCY.

STRUCTURAL OBSERVATION REPORT FORM

STRUCTURAL OBSERVATION *means the visual observation of the structural system, for general conformance to the approved plans and specifications, at significant construction stages and at completion of the structural system. Structural observation does not include or waive the responsibility for the inspections required by Section 108, 1704 or other sections of the code.*

Report No. _____

This report includes all construction work through ___day of _____, 20___Page No. ____of _____

Project Address:		Structural Observer of Record (SOR):	Phone No. of SOR:
1654 West 160th St., Gardena, CA 90247		Paul Van Benschoten	818.285.2650
Building Permit No.:	Structural Observation performed by:	Professional Lic./Reg. No. of Observer:	Phone No. of Observer:
	Paul Van Benschoten	S-4715	818.285.2650

OBSERVED STRUCTURAL ELEMENTS AND THEIR CONNECTIONS

FOUNDATION	WALL	FRAME	FLOOR	ELEMENT/ CONNECTION OBSERVATION LOCATION
☐ Footing, Stem Walls, Piers	☐ Concrete	☐ Steel Moment Frame	☐ Concrete	
☐ Mat Foundation	☐ Modulus of Elasticity* Concrete Shear Wall	☐ Steel Braced Frame	☐ Steel Deck	
☐ Caisson, Piles, Grade Beams	☐ Masonry	☐ Concrete Moment Frame	☐ Wood	
☐ Retaining Foundation ☐ Hillside Special Anchors	☐ Wood	☐ Modulus of Elasticity* Seismic Moment Frames	☐ Others:	
☐ Others:	☐ Others:	☐ Others:		

* For concrete buildings more than 160 feet in Structural Height: Concrete mix meets the modulus of elasticity requirements in design for seismic force resisting systems.

NOTED DEFICIENCIES with the proposed corresponding corrective actions with respect to general conformance with the approved plans or in the load path: *(A final report by the structural observer which states that all observed deficiencies have been resolved is required before acceptance of the work by the building officials.)*

I DECLARE THAT THE FOLLOWING STATEMENTS ARE TRUE TO THE BEST OF MY KNOWLEDGE:

1. I AM THE ENGINEER OR ARCHITECT RETAINED BY THE OWNER TO BE IN RESPONSIBLE CHARGE FOR THE STRUCTURAL OBSERVATION IN ACCORDANCE WITH THE REQUIREMENTS OF THE **CITY OF GARDEN GROVE**.
2. I, OR ANOTHER ENGINEER OR ARCHITECT WHO I HAVE DESIGNATED ABOVE AND IS UNDER MY RESPONSIBLE CHARGE, HAS PERFORMED THE REQUIRED SITE VISITS AT EACH SIGNIFICANT CONSTRUCTION STATE TO VERIFY IF THE STRUCTURE IS IN GENERAL CONFORMANCE WITH APPROVED PLANS AND SPECIFICATIONS;
3. ALL NOTED DEFICIENCES WHICH REMAIN TO BE CORRECTED HAVE BEEN INDICATED ABOVE;
4. I RECOMMEND THAT ACCEPTANCE OF THE STRUCTURAL SYSTEMS BY THE **CITY OF GARDEN GROVE** BE WITHHELD UNTIL ALL OBSERVED DEFICIENCIES ARE CORRECTED.

SIGNATURE OF STRUCTURAL OBSERVER **DATE** **STAMP OF STRUCTURAL**

Special Requirements for Seismic & Wind Resistance

Quality Assurance for Seismic Resistance

Seismic Design Category	*D*
Seismic Requirements Necessary (Y/N)	*N*
Structural Observation Required (Y/N)	*Y*

Description of seismic force resisting system and designated seismic systems:

N/A

Quality Assurance for Wind Requirements

Basic Wind Speed (3 second gust)	*110 MPH*
Wind Exposure Category	*C*
Wind Requirements Necessary (Y/N)	*N*
Structural Observation Required (Y/N)	*N*

Description of wind force resisting system and designated wind resisting components:

N/A

Statement of Responsibility

Each contractor responsible for the construction or fabrication of a system or component designated above must submit a Statement of Responsibility.

Project: *Community Aquatic and Senior Center*
Location: *1654 West 160th Street, Gardena, CA 90247*

Construction Observation

Structural Observation

3.1.1 Structural Observation of construction for Seismic and/or Wind Resistance is required when indicated in the Special Requirements for Seismic and Wind Section above. The structural Observer shall, as a minimum, perform Structural Observation at the following Scheduled Intervals or Stages of Construction, and at the completion of the structural system.

Structural Observer *Paul Van Benschoten, SE (S-4715) Coffman Engineers (818) 285-2650*

Item	Scheduled Interval or Stage of Construction
1	*Footings: excavations, reinforcement, formwork, bolts and embeds*
2	*Structural Slab On Grade reinforcing*
3	*Pool Wall reinforcing*

CONCRETE INSPECTIONS & VERIFICATION

IBC Table 1704.4

	VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	STRUCT OBSERV
1.	Inspection of reinforcing steel, including prestressing tendons, and placement.	---	X	
2.	Inspection of reinforcing steel welding in accordance with Table 1704.3, Item 5b.	X	---	
3.	Inspect bolts to be installed in concrete prior to and during placement of concrete where allowable loads have been increased.	X	---	
4.	Verifying use of required design mix.	---	X	
5.	At the time fresh concrete is sampled to fabricate specimens for strength tests, perform slump and air content tests, and determine the temperature of the concrete.	X	---	
6.	Inspection of concrete and shotcrete placement for proper application techniques.	X	---	
7.	Inspection for maintenance of specified curing temperature and techniques.	---	X	
8.	Inspection of prestressed concrete:	---	---	
	a. Application of prestressing forces.	X	---	
	b. Grouting of bonded prestressing tendons in the seismic-force-resisting system.	X	---	
9.	Erection of precast concrete members.	---	X	
10.	Verification of in-situ concrete strength, prior to stressing of tendons in posttensioned concrete and prior to removal of shores and forms from beams and structural slabs.	---	X	
11.	Inspect formwork for shape, location and dimensions of the concrete member being formed.	---	X	
12.		---	---	---
13.		---	---	---
14.				
15.				
16.				
17.				

FOUNDATION INSPECTIONS & VERIFICATION

	VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	ENGR OBSERV
	SOILS - IBC Table 1704.7			
1.	Verify subgrade materials below the footing for design bearing capacity.	---	X	
2.	Verify depth of excavation and type of subgrade materials reached.	---	X	
3.	Perform classification and compaction testing of controlled backfill materials.		X	
4.	Verify materials used, layered thicknesses and compaction of back fills.	X		
5.	Verify the subgrade and site preparations for controlled fill.	---	X	
	PILE FOUNDATONS - IBC Table 1704.8			
6.	Piling pile sizes, lengths and material specifications for each location.	X	---	
7.	Determine capacities of test piles and conduct additional load tests, as required.	X	---	
8.	Observe driving operations and maintain complete and accurate records for each pile.	X	---	
9.	Verify placement locations and plumbness, confirm type and size of hammer, record number of blows per foot of penetration, determine required penetrations to achieve design capacity, record tip and butt elevations and document any pile damage.		---	
10.	For steel piles, perform additional inspections in accordance with Section 1704.3.	---	---	
11.	For concrete piles and concrete-filled piles, perform additional inspections in accordance with Section 1704.4.	---	---	
12.	For specialty piles, perform additional inspections as determined by the registered design professional in responsible charge.	---	---	
13.	For augered uncased piles and caisson piles, perform inspections in accordance with Section 1704.9.	---	---	
	PIER FOUNDATIONS - IBC Table 1704.9			
14.	Observe drilling operations to monitor and record drilled lengths, diameters and bell size (if applicable) for each pier.	X	---	
15.	Verify placement locations and plumbness, confirm pier diameters, bell diameters (if applicable), lengths, embedment into bedrock (if applicable) and adequate end bearing strata capacity.	X	---	
16.	For concrete piers, perform additional inspections in accordance with Section 1704.4.	---	---	
17.	For masonry piers, perform additional inspections in accordance with Section 1704.5.	---	---	
18.

NOTE:
1. T=TOP BAR, L=LAP SPLICE LENGTH
2. "d" INDICATES BAR DIAMETER.
3. ALL DIMENSIONS SHOWN IN TABLE ABOVE ARE IN INCHES.

NOTES:
1. TABULATED VALUES AND NOTES ARE PER ACI318-14.
2. SPLICES SHALL BE CONTACT TENSION LAP SPLICES U.N.O.
3. LENGTHS SHOWN ARE FOR GRADE 60 UNCOATED BARS.
4. ALL LAP SPLICES SHALL BE CLASS B, UNLESS CLASS A IS SPECIFICALLY APPROVED BY THE ENGINEER.
5. THE SCHEDULES SHOWN ON THIS DETAIL APPLY TO NORMAL WEIGHT CONCRETE.
6. FOR LIGHTWEIGHT CONCRETE, INCREASE LAP SPLICE LENGTH BY 33%.
7. ALL HORIZONTAL AND VERITICAL SPLICES SHALL BE STAGGERED AS SHOWN BELOW WHERE POSSIBLE U.N.O. WHERE SPLICES ARE NOT STAGGERED THE LAP SPLICE LENGTH SHALL BE INCREASED BY 30%.
8. THE SMALLER BAR LAP LENGTH SHALL BE USED WHEN SPLICING BARS OF DIFFERENT SIZES.
9. TOP BARS ARE HORIZONTAL BARS PLACED SO THAT MORE THAN 12" OF CONCRETE IS CAST IN THE MEMBER BELOW THE BAR.
10. LAP LENGTHS SPECIFICALLY DETAILED ON DRAWINGS SHALL GOVERN IN LIEU OF THE LAP LENGTHS SCHEDULED. OTHERWISE, ALL DETAILING AND PLACEMENT OF REINFORCING SHALL COMPLY WITH THE LAP SPLICE SCHEDULES AND DETAILS.
11. BUNDLED BAR SPLICES:
    a) INDIVIDUAL BAR SPLICES WITHIN THE BUNDLE SHALL NOT OVERLAP EACH OTHER.
    b) INCREASE LAP LENGTH 20% AT THREE BAR BUNDLES.
    c) INCREASE LAP LENGTH 33% AT FOUR BAR BUNDLES.
12. FOR #14 AND #18 BARS, USE MECHANICAL SPLICE IN ACCORDANCE WITH ACI-318 REQUIREMENTS.
13. EPOXY COATED BAR DEVELOPMENT & SPLICES:
    HOOKS: INCREASE DEVELOPMENT & LAP LENGTH 20%.
13. CONT.
    STRAIGHT BARS:
    a) WHEN CONCRETE COVER IS LESS THAN 3d OR CLEAR SPACING IS LESS THAN 6d, INCREASE DEVELOPMENT & LAP LENGTH 50%.
    b) FOR OTHER CASES, INCREASE LAP LENGTH 20%.
14. HOOK PORTION OF SCHEDULE ASSUMES A STANDARD 90° HOOK.
15. SEISMIC CONDITIONS:
    a) SEISMIC DIAPHRAGM AND COLLECTOR BARS REQUIRE NO INCREASE TO HOOK OR LAP SPLICE LENGTHS.
    b) VERTICAL BARS OF SPECIAL REINFORCED CONCRETE WALLS SHALL HAVE A BOTTOM BAR LAP SPLICE INCREASED BY 25%.
    c) DEVELOPMENT LENGTHS AND LAP SPLICES FOR CONCRETE SPECIAL MOMENT RESISTING FRAMES ARE NOT COVERED BY THIS DETAIL AND MUST MEET ALL ACI 318 CHAPTER 18 REQUIREMENTS.

5. ANCHOR 10" SURGE CHAMBER SUCTION PIPE @ FLOOR, SEE 5/SP4.3
6. MOUNT REQ'D POOL SAFETY SIGNS ON WALL INCLUDING POOL CAPACITY, DIARRHEA, ARTIFICIAL RESPIRATION W/ CPR & EMERGENCY PHONE NUMBER SIGN W/ FACILITY ADDRESS
7. MOUNT RING BUOY W/ THROW LINE & 16' RESCUE POLE W/ BODY HOOK ON WALL (TYP 2 LOCATIONS)
8. MOUNT KEEP CLOSED SIGN ON EXTERIOR SIDE OF ALL GATES

GENERAL NOTES

1. ALL POOL PIPING SHALL BE SCH 80 PVC W/ SOLVENT WELDED JOINTS UNO.
2. LOCATE BURIED PIPING IN TRENCHES W/ SAND BEDDING PER DETAIL 6/SP4.3
3. HYDROSTATICALLY PRESSURE TEST ALL BURIED PIPING @ 80 PSI PRIOR TO BACKFILLING & MAINTAIN 40 PSI PRESSURE THROUGHOUT CONSTRUCTION.
4. USE 45° ELBOWS & WYES IN GUTTER DRAIN LINES AS INDICATED & SLOPE PIPING 2% MIN TO SURGE CHAMBER.

23. PLASTIC LABEL W/ 1 1/2" HIGH LETTERS ON EA TANK
24. ANCHOR 10" SURGE CHAMBER SUCTION PIPE @ FLOOR, SEE 5/SP4.3

GENERAL NOTES

1. ALL POOL PIPING SHALL BE SCH 80 PVC W/ SOLVENT WELDED JOINTS UNO.
2. ALL PVC FITTINGS IN EQUIPMENT ROOM SHALL BE MOLDED TO MEET DIMENSIONAL REQUIREMENTS.
3. ALL PIPING SHALL BE RESTRAINED PER SMACNA SEISMIC GUIDELINES W/ LATERAL SEISMIC BRACING. PROVIDE PIPE HANGERS OR SUPPORTS ADJACENT TO MECHANICAL EQUIPMENT & @ 8' MAX INTERVALS, SEE 8/SP4.3
4. PROVIDE 6'-8" MIN CLEARANCE UNDER OVERHEAD PIPING.
5. BOND PUMP, HEATERS & UV SYSTEM TO POOL SHELL REINFORCING GRID, SEE 15/SP2.1
6. PROVIDE 15 DIA MIN OF STRAIGHT PIPE BEFORE FLOW SENSORS & 5 DIA AFTER.
7. PLUMB EA POOL HEATER W/ BYPASS LOOP & ISOLATION VALVES AS SHOWN.
8. INSTALL SHUT-OFF VALVE, SERVICE UNION & DRIP LEG ON GAS LINE @ HEATERS.
9. INSTALL EQUIPMENT LABELS, PIPE FLOW ARROWS, PIPE LABELS, VALVE TAGS & VALVE CHART.
10. RESTRICT MAIN DRAIN BUTTERFLY VALVE TO PROVIDE 80% FLOW OVER GUTTER.
11. RESTRICT POOL RETURN VALVE TO APPLY BACK PRESSURE ON MECHANICAL SYSTEMS.
12. CIRCULATION PUMP VFD SHALL MAINTAIN CONSTANT FLOW RATE BASED ON 4-20 MILLIAMP SIGNAL FROM FLOW SENSOR W/ INTERLOCK TO FILTER CONTROL PANEL FOR BUMPING OPERATION.
13. THE REQUIRED TURNOVER RATE OF 850 GPM SHALL BE PERMANENTLY LABELED ON VFD CONTROL PANEL.
14. CHEMICAL CONTROLLER SHALL CONTROL CHLORINE & ACID PUMPS W/ SAFETY FLOW SWITCH TO DISABLE FEED PUMPS UPON LOSS OF FLOW. UNIT SHALL ALSO CONTROL POOL WATER LEVEL.
15. INTERLOCK HEATERS W/ CIRCULATION PUMP TO ONLY FIRE WHEN PUMP IS RUNNING.
16. INTERLOCK UV SYSTEM TO OPERATE CONTINUOUSLY W/ CIRCULATION PUMP.
17. TIME CLOCK IN FILTER CONTROL PANEL SHALL OPERATE CIRCULATION PUMP W/ FIREMAN SWITCH FOR HEATER COOL DOWN.
18. RUN 1 1/2" FILTER TANK VENT & 3/4" SYSTEM VENT LINES TO BACKWASH PIT PER MFR'S INSTRUCTIONS.
19. INSTALL POLYETHYLENE TUBING FROM FILTER CONTROLLER TO PNEUMATIC VALVES PER MFR'S INSTRUCTIONS.
20. SEE STRUCTURAL DWGS FOR EQUIPMENT ANCHORING DETAILS.

EQUIPMENT SCHEDULE

1. CIRCULATION PUMP - 20 HP, 480V, 3Ø, 1,760 RPM W/ 850 GPM @ 65', 5"x4", PACO #40457 LC
2. FILTER SYSTEM - 700 SQ FT, PERLITE MEDIA, FIBERGLASS TANK, 120V CONTROLLER, AQUIFY #PMF-42-700-FRP
3. HEATER - 1,500,000 BTU W/ 120V, 1Ø PUMPS, 360 GPM, RAYPAK XTHERM INDIRECT #1505A (TYP 2)
4. CHEMICAL CONTROLLER & SENSOR CELL - 120V, 1Ø, CHEMTROL #PC3000
5. CHLORINE PUMP - 120 GPD, 120V, 1Ø, STENNER #170DM4
6. CHLORINE STORAGE TANK - 500 GALLON DOUBLE WALL W/ 16" NON-VENTED MANWAY, CHEM-TAINER #TC597IDC
7. ACID PUMP - 85 GPD, 120V, 1Ø, STENNER #85M5
8. ACID STORAGE TANK - 350 GALLON DOUBLE WALL W/ 16" NON-VENTED MANWAY, CHEM-TAINER #TC5256DC
9. VARIABLE FREQUENCY DRIVE - 480V, 20 HP W/ FUSED DISCONNECT, PENTAIR ACU DRIVE X5
10. UV SYSTEM - 566 GPM CAPACITY, 1.28 KW, 240V, 1Ø, PENTAIR #CLP64AB-XN
11. STRAINER - 10"x10" FIBERGLASS W/ SST BASKET, AQUIFY #STR-1010-FRP
12. PRECOAT TEE - 10"x5"x4" ECCENTRIC FIBERGLASS TEE W/ 10" CHECK VALVE, AQUIFY #TEE-100504-FRP
13. CONCENTRIC REDUCER - 8"x4" FIBERGLASS, AQUIFY #RDC-0804-FRP
14. FLOW SENSOR - 8" MAGNETIC SENSOR, 24V W/ DISPLAY & 4 TO 20 mA OUTPUT, SIGNET #2551
15. HEATER FLOW METER - 6" DIGITAL PIPE MOUNT METER & SENSOR FOR 360 GPM, SIGNET #8150 & 515 (TYP 2)
16. CHEMICAL BYPASS FLOW METER - 3" DIGITAL WALL MOUNT METER & SENSOR FOR 100 GPM, SIGNET #8150 & 515
17. UV FLOW METER - 6" DIGITAL PIPE MOUNT METER & SENSOR FOR 550 GPM, SIGNET #8150 & 515
18. AIR COMPRESSOR - 2 HP, 120V, 1Ø, 20 GAL TANK, INGERSOLL RAND #P1.5IU-A9

FIRE DEPARTMENT PREVENTION REQUIEMENTS

FIRE DEPARTMENT PREVENTION REQUIREMENTS

PHOTOVOLTAIC SYSTEMS (SOLAR POWER) REQUIREMENTS

MAIN SERVICE DISCONNECT:
MARKING SHALL BE PLACED ADJACENT TO THE MAIN SERVICE DISCONNECT IN A LOCATION CLEARLY VISIBLE FROM THE LOCATION WHERE THE LEVEL IS OPERATED.

MARKING CONTENT AND FORMAT: (REFER TO PV-0.03 FOR ADDITIONAL REQUIREMENTS)
- CAUTION: SOLAR ELECTRIC SYSTEM CONNECTED
- RED BACKGROUND
- WHITE LETTERING
- MINIMUM ¾" LETTER HEIGHT
- ALL CAPITAL LETTERS
- ARIAL OR SIMILAR FONT, NON-BOLD
- REFLECTIVE, WEATHER RESISTANT MATERIAL SUITABLE FOR THE ENVIRONMENT

CAUTION: SOLAR ELECTRIC SYSTEM

PV SYSTEM MUST BE MARKED. ALL ELECTRICAL PANELS SHUT-OFFS SHALL BE DESIGNED TO SHUT OFF ALL POWER (SOLAR AND DOMESTIC) AFTER THE PANEL. MARKING IS REQUIRED ON ALL INTERIOR AND EXTERIOR DC CONDUIT, RACEWAYS, ENCLOSURES, CABLE ASSEMBLIES, AND JUNCTION BOXES TO ALERT THE FIRE SERVICES TO AVOID CUTTING THEM. THESE MARKINGS SHALL BE PLACED EVERY 10', AT TURNS AND ABOVE AND/OR BELOW PENETRATIONS AND ALL DC COMBINER AND JUNCTION BOXES. NO MARKINGS ARE REQUIRED FOR AN INVERTER.

- CAUTION: SOLAR ELECTRIC SYSTEM CONNECTED
- RED BACKGROUND
- WHITE LETTERING
- MINIMUM ¾" LETTER HEIGHT
- ALL CAPITAL LETTERS
- ARIAL OR SIMILAR FONT, NON-BOLD
- REFLECTIVE, WEATHER RESISTANT MATERIAL SUITABLE FOR THE ENVIRONMENT

CAUTION: SOLAR CIRCUIT

ACCESS PATHWAYS AND SMOKE VENTILATION.
ACCESS AND SPACING REQUIREMENTS SHOULD BE OBSERVED IN ORDER TO:
- ENSURE ACCESS TO ROOF
- PROVIDE PATHWAYS TO SPECIFIC AREAS OF THE ROOF
- PROVIDE FOR SMOKE VENTILATION OPPORTUNITIES AREA
- PROVIDE EMERGENCY EGRESS FROM THE ROOF

EXCEPTIONS TO THESE REQUIREMENTS MAY BE ALLOWED ON CASE-BY-CASE BASIS.
COMMERCIAL BUILDINGS AND RESIDENTIAL HOUSING COMPRISED OF THREE (3) OR MORE UNITS.

ACCESS:
THERE SHOULD BE A MINIMUM 6-FOOT-WIDE CLEAR PERIMETER AROUND THE EDGES OF THE ROOF.
EXCEPTION: IF EITHER AXIS OF THE BUILDING IS 250' OR LESS, THERE SHOULD BE A MINIMUM OF 4-FEET WIDE CLEAR PERIMETER AROUND THE EDGES OF THE ROOF.

PATHWAYS:
PATHWAYS SHOULD BE ESTABLISHED IN THE DESIGN OF THE SOLAR INSTALLATION. PATHWAYS SHOULD MEET THE FOLLOWING REQUIREMENTS:
- A. SHALL BE OVER STRUCTURAL MEMBER.
- B. CENTERLINE AXIS PATHWAYS SHALL BE PROVIDED IN BOTH AXIS OF THE ROOF. CENTERLINE AXIS PATHWAYS SHOULD RUN ON STRUCTURAL MEMBERS OR OVER THE NEXT CLOSEST STRUCTURALLY MEMBER NEAREST TO THE CENTERLINES OF THE ROOF.
- C. SHALL BE STRAIGHT-LINE NOT LESS THAN 4-FEET CLEAR TO SKYLIGHTS AND/OR VENTILATION HATCHES.
- D. SHALL BE STRAIGHT-LINE NOT LESS THAN 4-FEET CLEAR TO ROOF STANDPIPES.
- E. SHOULD PROVIDE NOT LESS THAN 4-FEET CLEAR PATHWAY TO PARAPET OR ROOF EDGE.

SMOKE VENTILATION:
- A. ARRAYS SHOULD BE NO GREATER THAN 150 FEET BY 150 FEET IN DISTANCE IN EITHER AXIS.
- B. VENTILATION OPTIONS BETWEEN ARRAY SECTIONS SHOULD BE EITHER:
  1. A PATHWAY 8-FEET OR GREATER IN WIDTH.
  2. 4-FEET OR GREATER IN WIDTH PATHWAY AND BORDERING ON THE EXISTING ROOF SKYLIGHTS OR VENTILATION HATCHES.
  3. 4-FEET OR GREATER IN WIDTH PATHWAY AND BORDERING 4-FEET X 8-FEET "VENTING HATCHES" EVERY 20 FEET ON ALTERNATING SIDES OF THE PATHWAY.

LOCATION OF DIRECT CURRENT (DC) CONDUCTORS:
CONDUIT, WIRING SYSTEMS, AND RACEWAYS FOR PHOTOVOLTAIC CIRCUITS SHOULD BE LOCATED AS CLOSE AS POSSIBLE TO THE RIDGE OR HIP OR VALLEY AND FROM THE HIP OR VALLEY AS DIRECTED AS POSSIBLE TO AN OUTSIDE WALL TO REDUCE TRIP HAZARDS AND MAXIMIZE VENTILATION OPPORTUNITIES.

CONDUIT RUNS BETWEEN SUB ARRAYS AND TO DC COMBINER BOXES SHOULD USE DESIGN GUIDELINES THAT MAXIMIZE TOTAL AMOUNT OF CONDUIT ON THE ROOF BY TAKING THE SHORTEST PATH FROM THE ARRAY TO THE DC COMBINER BOX. THE DC COMBINER BOXES ARE TO BE LOCATED SUCH THAT CONDUIT RUNS ARE MINIMIZED IN THE PATHWAYS BETWEEN ARRAYS.

TO LIMIT THE HAZARD OF CUTTING LIVE CONDUIT IN VENTING OPERATIONS, DC WIRING SHALL BE RUN IN METALLIC CONDUIT OR RACEWAYS WHEN LOCATED WITHIN ENCLOSED SPECS IN A BUILDING AND SHOULD BE RUN, TO THE MAXIMUM EXTENT POSSIBLE, ALONG THE BOTTOM OF LOAD BEARING MEMBERS.

PV SYSTEM GENERAL NOTES

1. THESES DRAWINGS AND SPECIFICATIONS ARE INTENDED TO COVER A COMPLETE INSTALLATION OF THE PV SYSTEM. THE OMISSION OR EXPRESSED REFERENCE TO ANY ITEM OF LABOR OR MATERIALS REQUIRED FOR THE PROPER EXECUTION OF THE WORK IN ACCORDANCE WITH PRESENT PRACTICE OF THE TRADE SHALL NOT RELIEVE THE CONTRACTOR FROM PROVIDING SUCH ADDITIONAL LABOR AND MATERIALS.
2. THE PV CONTRACTOR SHALL PROVIDE AND INSTALL ALL EQUIPMENT SHOWN THESE DRAWINGS UNLESS NOTED ON THESE PLANS AND SPECIFICATIONS THAT SUCH WORK IS TO BE PROVIDED BY OTHERS.
3. THE PV CONTRACTOR SHALL BE A LICENSED (C-46) SOLAR CONTRACTOR OR A LICENSED (C-10) ELECTRICAL CONTRACTOR.
4. THESE PLANS AND SPECIFICATIONS AND ALL WORK AND MATERIALS SHALL BE IN FULL ACCORDANCE WITH ALL LEGAL AND INDUSTRY REQUIREMENTS AND STANDARDS INCLUDING WITHOUT LIMITATION THE FOLLOWING:
   a. CALIFORNIA CODE OF REGULATIONS TITLE 24, PARTS 1 AND 2 (CALIFORNIA BUILDING CODE), 2019 EDITION.
   b. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 3 (CALIFORNIA ELECTRICAL CODE), 2019 EDITION.
   c. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 6 (CALIFORNIA ENERGY CODE), 2019 EDITION.
   d. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 9 (CALIFORNIA FIRE CODE), 2019 EDITION.
   e. OTHER REGULATING AGENCIES WHICH MAY HAVE AUTHORITY OVER ANY PORTION OF THE WORK, INCLUDING THE STATE OF CALIFORNIA DIVISION OF INDUSTRIAL SAFETY, AND THOSE CODES AND STANDARDS LISTED IN THESE NOTES AND SPECIFICATIONS.
   f. THE ELECTRICAL SYSTEMS FUNCTIONALITY STANDARDS SET FORTH IN TITLE 7 OF THE CALIFORNIA CIVIL CODE (THE "RIGHT TO REPAIR ACT").
   g. THE MANUFACTURER'S REQUIREMENTS OR RECOMMENDATIONS FOR ANY INCORPORATED PRODUCTS.
   h. THE MOST CURRENT APPROVED ISSUES OF ANY NOTED SPECIFICATIONS, CODES AND STANDARDS, INCLUDING SUPPLEMENTS, UNLESS NOTED OTHERWISE.
   i. FOR PROJECTS WITHIN THE CITY OF LOS ANGELES ALL ELECTRICAL EQUIPMENT SHALL BE LISTED BY A CITY OF LOS ANGELES RECOGNIZED ELECTRICAL TESTING LABORATORY.
9. CEC ART. 690.9 (A). ALL CIRCUITS CONNECTED TO MORE THAN ONE SOURCE SHALL HAVE OVERCURRENT DEVICES LOCATED SO AS TO PROVIDE OVERCURRENT PROTECTION FROM ALL SOURCES.
10. CEC ART. 690.14. EACH DC DISCONNECT SHALL BE LABELED "SOLAR PHOTOVOLTAIC POWER SYSTEM EMERGENCY DC CONNECT". LABEL SHALL BE 2" X 4" MINIMUM WITH UV RESISTANT RED LETTERS ON WHITE BACKGROUND.
11. CEC ART. 690.14. EACH AC DISCONNECT SHALL BE LABELED "SOLAR PHOTOVOLTAIC POWER SYSTEM AC DISCONNECT". LABEL SHALL BE 2" X 4" MINIMUM WITH UV RESISTANT RED LETTERS ON WHITE BACKGROUND.
12. CEC ART. 690.17. EACH AC DISCONNECT SHALL ALSO BE LABELED WITH: "WARNING! - ELECTRIC SHOCK HAZARD - DO NOT TOUCH TERMINALS. TERMINALS ON BOTH LINE AND LOAD SIDES MAY BE ENERGIZED IN OPEN POSITION". LABEL SHALL BE 2" X 4" MINIMUM WITH UV RESISTANT RED LETTERS ON WHITE BACKGROUND.
13. CEC ART. 690.18. DUE TO THE FACT THAT PV MODULES ARE ENERGIZED WHENEVER THEY ARE EXPOSED TO LIGHT, PV CONTRACTOR SHALL DISABLE THE ARRAY DURING INSTALLATION AND SERVICE BY SHORT CIRCUITING, OPEN CIRCUITING OR COVERING THE ARRAY WITH AN OPAQUE COVERING.
14. CEC ART. 690.35(F). THE PHOTOVOLTAIC POWER SOURCE SHALL BE LABELED WITH THE FOLLOWING WARNING AT EACH JUNCTION BOX, COMBINER BOX, DISCONNECT, AND DEVICE WHERE THE UNGROUNDED CIRCUITS MAY BE EXPOSED DURING SERVICE: "WARNING: ELECTRIC SHOCK HAZARD. THE DC CONDUCTORS OF THIS PHOTOVOLTAIC SYSTEM ARE UNGROUNDED AND MAY BE ENERGIZED".
15. CEC ART. 690.49 REMOVAL OF UTILITY-INTERACTIVE INVERTER OR OTHER EQUIPMENT SHALL NOT DISCONNECT THE BONDING CONNECTION GROUNDING ELECTRODE CONDUCTOR AND THE PHOTOVOLTAIC SOURCE AND/OR OUTPUT CIRCUIT GROUNDING CONDUCTOR.
16. CEC ART. 690.56(B). BUILDING OR STRUCTURES WITH BOTH UTILITY SERVICE AND A PHOTOVOLTAIC SYSTEM SHALL HAVE A PERMANENT PLAQUE OR DIRECTORY PROVIDING THE LOCATION OF THIS SERVICE DISCONNECTING MEANS AND THE PHOTOVOLTAIC SYSTEM DISCONNECTING MEANS, IF NOT LOCATED AT THE SAME LOCATION.
17. PHOTOVOLTAIC SYSTEM SHALL BACKFEED THE DISTRIBUTION SYSTEM ON SITE PER THE REQUIREMENTS OF CEC ART. 690.64 (B). ALL BACKFEED BREAKERS SHALL BE IDENTIFIED AS SUCH AND SHALL BE SECURED IN PLACE BY AN ADDITIONAL FASTENER PER THE REQUIREMENTS OF CEC 408.36.
18. CEC ART. 690.53. A PLACARD, MINIMUM 3" X 6", UV RESISTANT AND INCLUDING RED LETTERS, WHITE BACKGROUND SHALL BE PROVIDED BESIDE THE DC DISCONNECT WITH THE FOLLOWING "CAUTION SOLAR CIRCUIT DISCONNECT".
19. CIRCUIT BREAKERS THAT ARE MARKED "LINE" AND "LOAD" ARE NOT PERMITTED TO BE BACK-FED (690.10(E)).
20. PV CONTRACTOR SHALL PROVIDE A PERMANENT PLAQUE OR DIRECTORY DENOTING ALL ELECTRIC POWER SOURCES ON OR IN THE PREMISES SHALL BE INSTALLED AT EACH SERVICE EQUIPMENT LOCATION AND AT LOCATIONS OF ALL ELECTRIC POWER PRODUCTION SOURCES CAPABLE OF BEING INTERCONNECTED.
21. ALL PV SYSTEM CONDUITS SHALL BE PERMANENTLY LABELED WITH FADE RESISTANT MATERIAL AS FOLLOWS: "CAUTION: SOLAR PV WIRING MAY REMAIN ENERGIZED AFTER DISCONNECTION DURING DAYLIGHT HOURS". INSTALL LABELS EVERY 20' AND ONE AT EYE LEVEL FOR VERTICAL CONDUIT.
22. ALL CONDUCTORS AND TERMINATIONS SHALL BE RATED FOR 75°C MINIMUM. EXPOSED CONDUCTORS SHALL BE SUNLIGHT RESISTANT.
23. ALL NEW WIRING FROM COMBINER BOXES TO SE SHALL BE COPPER 600-VOLT INSULATION TYPE "THWN-2" - U.O.N.
24. ALL NEW WIRING FROM ARRAY TO COMBINER BOXES SHALL BE COPPER USE-2. EXPOSED CONDUCTORS SHALL BE SUNLIGHT RESISTANT.
25. MOUNTING HEIGHTS OF ALL CONDUCTORS IS A MINIMUM 2 INCHES OFF THE ROOF.
26. UNLESS OTHERWISE NOTED ALL EQUIPMENT IS EXTERIOR.
27. ALL ELECTRICAL WORK AND EQUIPMENT SHALL BE GUARANTEED IN WRITING FOR A PERIOD OF TEN (10) YEARS AFTER FINAL ACCEPTANCE OF WORK.
28. THE PLANS REPRESENT ONLY THE FINISHED PHOTOVOLTAIC (PV) SYSTEMS, AND THEY ARE NOT INTENDED TO INDICATE OR REQUIRE ANY CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES OR PROCEDURES.
29. IN USING THE PLANS FOR BIDDING OR CONSTRUCTION PURPOSES, THE CONTRACTOR IS REQUIRED TO REVIEW ALL OF THE PROJECTS CONSTRUCTION DOCUMENTS AS A WHOLE IN ORDER TO IDENTIFY ALL REQUIREMENTS THAT DIRECTLY OR INDIRECTLY AFFECT ITS PORTION OF THE PHOTOVOLTAIC WORK, EVEN REQUIREMENTS LOCATED IN SECTIONS DESIGNATED AS APPLICABLE TO OTHER TRADES. IN CASE OF CONFLICTS, THE CONTRACTOR SHALL EITHER OBTAIN DIRECTION FROM AN APPROPRIATE OWNER REPRESENTATIVE OR OTHERWISE APPLY THE MORE STRINGENT REQUIREMENT.
30. PRIOR TO BID, CONTRACTOR SHALL VISIT THE SITE TO VERIFY ALL EXISTING CONDITIONS TO BE ENCOUNTERED IN THE INSTALLATION OF THE ELECTRICAL WORK. INSTALLATION METHOD OF ALL ELECTRICAL WORK SHALL BE VERIFIED AND DETERMINED PRIOR TO BID DATE. CONTRACTOR SHALL NOTIFY THIS ENGINEER OF ANY REQUIRED MODIFICATIONS WHICH ARE NOT SHOWN ON THESE DRAWINGS. SUBMITTAL OF BID INDICATES CONTRACTOR IS AWARE OF ALL JOB SITE CONDITIONS AND THE WORK TO BE PERFORMED.
31. PV CONTRACTOR SHALL CHECK AND VERIFY ALL DIMENSIONS AND CONDITIONS AT JOB SITE AND REPORT ANY DISCREPANCIES BEFORE COMMENCING WORK.
32. IN INTERPRETING THE PLANS, THE FOLLOWING GENERAL RULES APPLY:
   a. WRITTEN DIMENSIONS SHALL TAKE PRECEDENCE OVER SCALED DRAWINGS.
   b. SCALED DIMENSIONS AND GRAPHICALLY SHOWN LOCATIONS ARE TO BE CONSIDERED ONLY APPROXIMATE, FIELD VERIFY DIMENSIONS PRIOR TO BID.
   c. BECAUSE THE PLANS ARE INTENDED TO SET FORTH THE REQUIREMENTS FOR CONSTRUCTION IN ONLY AN INDUSTRY-STANDARD LEVEL OF QUALITY AND DETAIL, AND THEREFORE ARE INTENDED TO BE SUPPLEMENTED BY APPROPRIATE REQUESTS FOR CLARIFICATION AND INFORMATION, ERRORS AND OMISSIONS AND TO BRING THESE ERRORS AND OMISSIONS TO THE ATTENTION OF AN APPROPRIATE OWNER REPRESENTATIVE IN A TIMELY MANNER AND ASSUMES THE RISK OF THE CONSEQUENCES OF FAILING TO DO SO BEFORE BIDDING OR OTHERWISE PROCEEDING.
   d. THE CONTRACTOR SHALL REVIEW AND VERIFY ALL DIMENSIONS PRIOR TO STARTING CONSTRUCTION, AND NOTIFY THE ELECTRICAL ENGINEER IMMEDIATELY OF ANY DISCREPANCIES OR INCONSISTENCIES.
33. SUBMITTALS WILL BE REVIEWED BY THE ELECTRICAL ENGINEER, IF AT ALL, ONLY PURSUANT TO THE INDUSTRY-STANDARD PROTOCOL SET FORTH IN AIA DOCUMENT A201, AND IN NO EVENT WILL THE THE SUBMITTAL REVIEW PROCESS RELIEVE OR LESSEN THE SUBMITTING CONTRACTOR'S RESPONSIBILITY FOR AN INAPPROPRIATE SUBMITTAL.
34. IN NO EVENT WILL ANY SITE VISITS BY THE ELECTRICAL ENGINEER CONCERN CONSTRUCTION MEANS AND METHODS OR CONSTRUCTION SAFETY, AND ALL SUCH MATTERS SHALL REMAIN THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
35. COPIES OF THE THE PLANS PROVIDED IN ANY ELECTRONIC FORM ARE SUBJECT TO THE SAME PROVISIONS AS THE OTHER INSTRUMENTS OF SERVICE PREPARED BY OR ON BEHALF OF THE ELECTRICAL ENGINEER FOR THE PROJECT, INCLUDING WITHOUT LIMITATION THE ENGINEER'S COMMON LAW, STATUTORY OR OTHER RESERVED RIGHTS, INCLUDING COPYRIGHTS. A RECIPIENT IS GRANTED AT MOST A TRANSFERABLE NONEXCLUSIVE LICENSE TO REUSE THE PLANS SOLELY FOR PROJECT PURPOSES; AND NO RECIPIENT IS AUTHORIZED TO USE OR TO ALLOW THE USE OF ALL OR ANY PORTION OF THESE PLANS FOR ANY OTHER PURPOSE, AND ANY USE FOR ANY OTHER PURPOSE WOULD CONSTITUTE ACTIONABLE PLAGIARISM. ELECTRICAL ENGINEER PROVIDES DOCUMENTS IN AN ELECTRONIC FORM ONLY IN ITS STANDARD FORMATS AND CONVENTIONS AND WITH NO GUARANTEE OF COMPATIBILITY WITH ANY RECIPIENT'S SOFTWARE OR HARDWARE AND ANY USE WITH OR CONVERSION TO OTHER FORMATS OR CONVENTIONS, OR THE USE WITH ANY PARTICULAR SOFTWARE OR HARDWARE, IS AT THE RECIPIENT'S SOLE RISK.
36. THE DRAWINGS INDICATE, IN A DIAGRAMMATIC MANNER, THE DESIRED LOCATIONS AND ARRANGEMENT OF THE COMPONENTS OF PHOTOVOLTAIC WORK. DETERMINE EXACT PV EQUIPMENT, CONDUIT AND WIRING ROUTING, CONDUIT BENDS, AUXILIARY JUNCTION BOXES, SUPPORTS AND UNDEFINED CONSTRUCTION DETAILS AS A JOB CONDITION TO BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE CODE REQUIREMENTS. PROPER JUDGEMENT MUST BE EXERCISED IN EXECUTING THE WORK SO AS TO SECURE THE BEST POSSIBLE INSTALLATION IN THE AVAILABLE SPACE AND TO OVERCOME LOCAL DIFFICULTIES DUE TO SPACE LIMITATIONS OR INTERFERENCE OF CONDITIONS ENCOUNTERED.
37. IN THE EVENT CHANGES IN THE INDICATED LOCATIONS OR ARRANGEMENTS ARE NECESSARY, DUE TO DEVELOPED CONDITIONS IN THE BUILDING CONSTRUCTION OR REARRANGEMENT OF EQUIPMENT, SUCH CHANGES SHALL BE MADE WITHOUT COST PROVIDING THE CHANGE IS ORDERED BEFORE THE CONDUIT RUNS, ETC;, AND WORK DIRECTLY CONNECTED TO SAME IS INSTALLED AND NO EXTRA MATERIALS ARE REQUIRED.
38. PROVIDE ALL EQUIPMENT WITH ENCLOSURES LISTED OR LABELED FOR USE AND LOCATION WHERE SUCH EQUIPMENT IS INSTALLED.
39. PROVIDE UL LISTED FIRE STOP FOR ALL PENETRATIONS THROUGH FIRE RATED WALLS, PARTITIONS, FLOORS, CEILINGS AND ROOF TO MAINTAIN ALL FIRE RATINGS PER CEC 300.21.
40. GROUNDING SHALL BE EXECUTED IN ACCORDANCE WITH ALL APPLICABLE CODES AND REGULATIONS, BOTH OF THE STATE OF CALIFORNIA AND LOCAL AUTHORITIES HAVING JURISDICTION.
41. CONDUIT FOR ROOF MOUNTED EQUIPMENT SHALL BE ROUTED BELOW ROOF AND WITHIN BUILDING.
42. ALL ELECTRICAL EQUIPMENT SHALL BE NEW AND BE U.L. LISTED AND LABELED.

SYMBOL LIST

(ALL SYMBOLS NOT NECESSARILY USED ON THESE DRAWINGS)
ALL SYMBOL DESCRIPTIONS ARE SUBJECT TO MODIFICATION AS NOTED ON THE DRAWINGS. VERIFY EXACT LOCATIONS AND HEIGHTS OF OUTLETS WITH ARCHITECTURAL INTERIOR ELEVATIONS PRIOR TO ROUGH-IN.

- S1M1 — SOLAR MODULE. MODULE IDENTIFIER S1M1. S1 = STRING 1, M1 = MODULE 1.
- FUSED SAFETY SWITCH (DISCONNECT), HORSE POWER RATED. MOUNT ON WALL +45", OR ON EQUIPMENT +36".PROVIDE SWITCH AND FUSES SIZED PER EQUIPMENT MANUFACTURER REQUIREMENTS.
- CONDUIT, INSTALLED CONCEALED IN OR UNDER FLOOR OR BELOW GRADE, 3/4" CONDUIT MINIMUM.
- CONDUIT, INSTALLED EXPOSED.
- B-5,7,9 — HOMERUN TO PANEL "B" FOR CIRCUITS 5, 7, 9 WITH SEPERATE NEUTRALS.
- UNDERGROUND CONDUIT STUBOUT, STUB 5'-0" FROM BUILDING OR WALKWAY, CAP, MARK AND RECORD.
- CONNECTED TO SOLID GROUND REFERENCE POINT
- A / E-1 — PANELBOARD, ADJACENT LINE INDICATES PANEL FRONT. ADJACENT BALLOON INDICATES PANEL DESIGNATION "A", SEE DRAWING E-1 FOR PANEL SCHEDULE.
- 1 — PLAN NOTE CALLOUT. REFER TO CORRESPONDING NOTE ON DRAWING WHERE CALLOUT OCCURS.

PERMITTING/PLANNING NOTES

1. THIS PV SYSTEM INSTRUCTION IS SUBJECT TO INSPECTION BY THE AUTHORITY HAVING JURISDICTION
2. THIS PROJECT SHALL CONFORM TO THE FOLLOWING CODE VERSIONS
   - 2.1. 2019 CALIFORNIA BUILDING CODE
   - 2.2. 2019 ELECTRIC CODE
   - 2.3. 2019 CALIFORNIA FIRE CODE
   - 2.4. 2019 CALIFORNIA ENERGY CODE
   - 2.5. 2019 CALIFORNIA GREEN BUILDING STANDARDS CODE
   - 2.6. 2019 CALIFORNIA PLUMBING CODE
   - 2.7. 2019 CALIFORNIA MECHANICAL CODE
   - 2.8. AUTHORITY HAVING JURISDICTION
3. ROOFTOP MOUNTED PV SYSTEM MEETS FIRE CLASSIFICATION PER CBC 1505.9 CLASS 'A'. PV SYSTEM AND ASSOCIATED RACKING SYSTEM ARE LISTED AND IDENTIFIED WITH FIRE CLASSIFICATION IN ACCORDANCE WITH UL 1703
4. SYSTEM UTILIZES SOLAREDGE INVERTERS AND OPTIMIZERS WHICH MEET 690.12 RAPID SHUTDOWN REQUIREMENTS.
5. 110.2 APPROVAL: ALL ELECTRICAL EQUIPMENT SHALL BE LABELED, LISTED OR CERTIFIED BY A NATIONALLY RECOGNIZED TESTING LABORATORY ACCREDITED BY THE UNITED STATES OCCUPATIONAL SAFETY HEALTH ADMINISTRATION

SCOPE OF WORK

GENERAL

PROVIDE UTILITY INTERACTIVE ROOF MOUNTED PHOTOVOLTAIC SYSTEM CONSISTING OF PV MODULES, MOUNTING RAILS AND HARDWARE, INVERTERS, UTILITY GRADE METER ASSEMBLY, DISCONNECT GROUNDING , AC SERVICE CONNECTION CONDUIT, WIRING (AC AND DC) FOR COMPLETE AND OPERABLE SYSTEM.

ONLY THE PHOTOVOLTAIC SYSTEM IS INCLUDED IN THIS SCOPE OF WORK. ALL OTHER ELECTRICAL WORK IS UNDER SEPARATE PERMITS AS INDICATED BELOW.

- ENERGY STORAGE SYSTEM CONFORMS TO AND IS LISTED UNDER UL 9540.
- RAPID SHUTDOWN REQUIREMENTS MET WHEN INVERTERS AND ALL CONDUCTORS ARE WITHIN ARRAY BOUNDARIES PER NEC690.71(B)(1)
- ADDITIONAL DISCONNECTING MEANS SHALL BE INSTALLED WHERE ENERGY STORAGE DEVICE INPUT AND OUTPUT TERMINALS ARE MORE THAN 5FT FROM CONNECTED EQUIPMENT, OR WHERE THE CIRCUITS FROM THESE TERMINALS PASS THROUGH A WALL OR PARTITION PER NEC 6690.71(H).
- LISTED, COMBINATION TYPE AFCI SHALL BE INSTALLED WHERE BACKED UP CIRCUIT WIRING IS EXTENDED MORE THAN 6FT AND DOES NOT INCLUDE ANY ADDITIONAL OUTLETS OR DEVICES PER NEC 201.12(B)

- **SYSTEM SIZE**: 19.36KW DC
- **MODULES**: (44) LG NeON 2 #LG440QAC
- **INVERTERS**: (1) 27.0KW DC IN / 20.0 KW AC OUTPUT SOLAR EDGE SE20KUS
- **COMBINER BOX**: SOLAREDGE ACSW-DCJB-V2
- **RACKING**: UNIRAC SOLARMOUNT
- **BATTERY**: NONE

PV SYSTEM SUMMARY

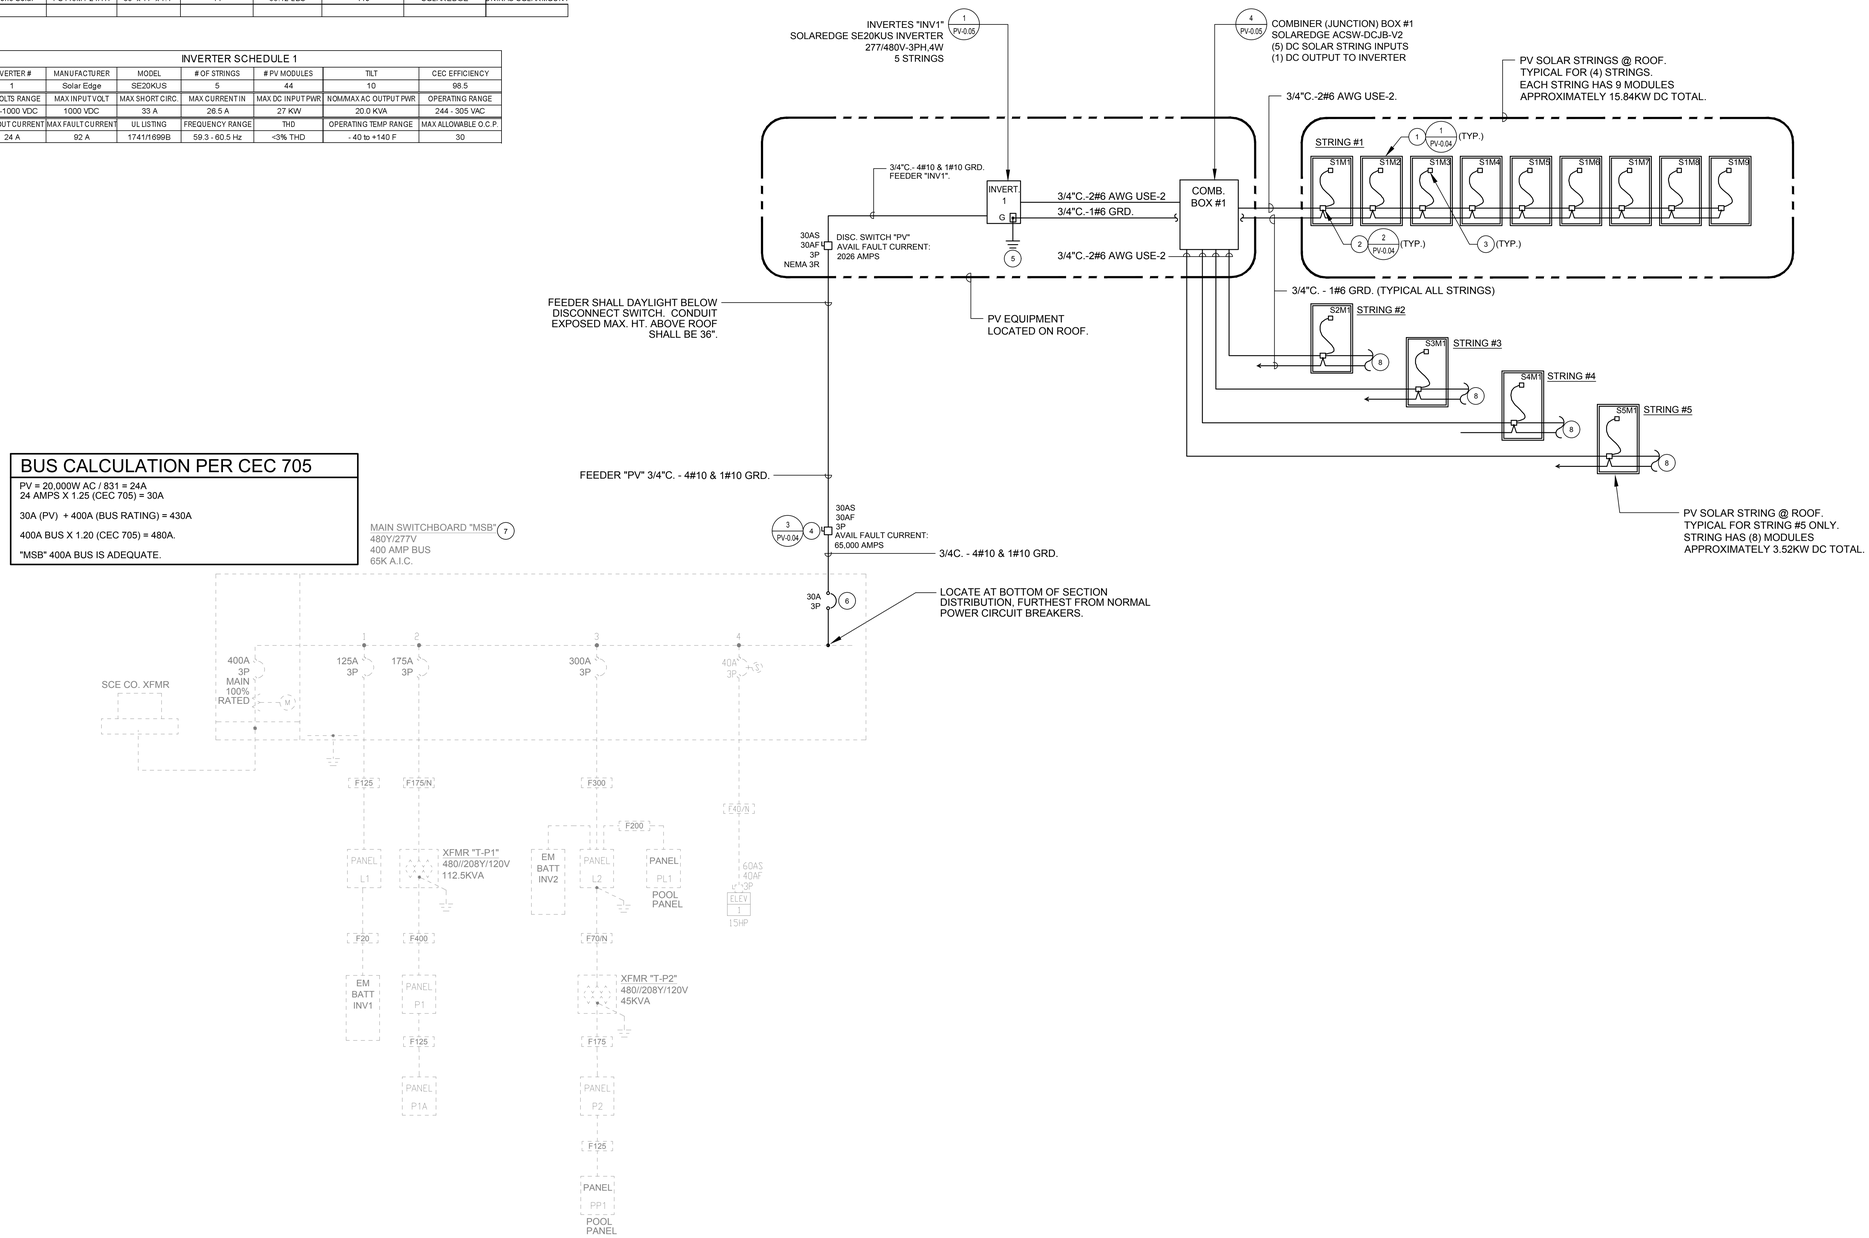
TOTAL # OF PANELS	44
WATTAGE OF PANELS	445
TOTAL DC RATING OF SYSTEM	19,580 W DC
TOTAL # OF INVERTERS	1
INVERTER EFFICIENCY	98.5%

SINGLE LINE DIAGRAM NOTES

1. ROOF MOUNTED PHOTOVOLTAIC MODULE, LG NeON 2 #LG440QAC, 440W, MONOCRYSTALLINE/N-TYPE, 66 CELLS.
2. SOLAR EDGE POWER OPTIMIZER (#P401) 1x1 DISTRIBUTION MOUNTED TO RACKING SYSTEM, BONDED TO MODULE AND RACKING SYSTEM WITH 1#6 AWG SOLID CU GROUND CONDUCTOR.
3. PHOTOVOLTAIC MODULE LEAD CONNECTION TO POWER OPTIMIZER (+/-)
4. "PV" AC DISCONNECT 30A, 3P WITH VIEWING WINDOW. PROVIDE REJECTION TYPE FUSE HOLDERS.
5. 3/4"C - 1#6 G TO UFER GROUND BUS IN MAIN ELECTRICAL ROOM.
6. CIRCUIT BREAKER SHALL BE RATED FOR BACK FEED APPLICATION.
7. ELECTRICAL DISTRIBUTION SYSTEM IS FULLY RATED FOR 65K AIC. SERIES RATING IS NOT ALLOWED.
8. TO PV PANEL MODULES 2-9. SEE STRING 1 ABOVE FOR EXAMPLE.

PV MODULE SCHEDULE							
MANUFACTURER	MODEL	DIMENSIONS	QUANTITY	WEIGHT	POWER (in Wp)	POWER OPTIMIZER	SUPPORTING MEANS
Phone Solar	PS445M4-24/TH	83" x 41" x 1.4"	44	55.12 LBS	440	SOLAREDGE	UNIRAC SOLARMOUNT

INVERTER SCHEDULE 1						
INVERTER #	MANUFACTURER	MODEL	# OF STRINGS	# PV MODULES	TILT	CEC EFFICIENCY
1	Solar Edge	SE20KUS	5	44	10	98.5
DC VOLTS RANGE	MAX INPUT VOLT	MAX SHORT CIRC.	MAX CURRENT IN	MAX DC INPUT PWR	NOM/MAX AC OUTPUT PWR	OPERATING RANGE
840-1000 VDC	1000 VDC	33 A	26.5 A	27 KW	20.0 KVA	244 - 305 VAC
MAX OUT CURRENT	MAX FAULT CURRENT	UL LISTING	FREQUENCY RANGE	THD	OPERATING TEMP RANGE	MAX ALLOWABLE O.C.P.
24 A	92 A	1741/1699B	59.3 - 60.5 Hz	<3% THD	- 40 to +140 F	30



BUS CALCULATION PER CEC 705

PV = 20,000W AC / 831 = 24A
24 AMPS X 1.25 (CEC 705) = 30A

30A (PV) + 400A (BUS RATING) = 430A

400A BUS X 1.20 (CEC 705) = 480A.

"MSB" 400A BUS IS ADEQUATE.

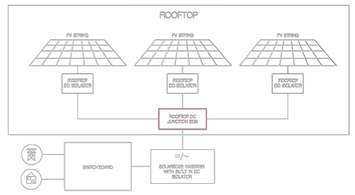
Rooftop DC Junction Box for SolarEdge Systems

SPECIFICATION SHEET

For commercial & residential SolarEdge systems
SKU: ACSW-DCJB-V2
ID: 1416

Commercial & residential solar systems made easy



The Rooftop DC Junction box for SolarEdge systems is a pre-assembled weather-proof enclosure used to combine DC circuits on the roof. The Rooftop DC junction box allows a single DC circuit to be run to the inverter from the roof, reducing DC cabling and the need for additional DC isolators at the inverter.

- Slim design to allow clearance above the roof
- Ability to rotate enclosure on the bracket to position cable entry points where required
- Inbuilt pressure equalisation valve
- Combine up to 5 strings without any additional glands
- Reduces DC cabling, additional DC isolators adjacent to the inverter and multiple HD conduits through roof spaces
- Suitable for all SolarEdge inverters
- IP 66 rated, suitable for mounting outdoors in various weather conditions
- Includes stainless steel universal bracket, conduits glands and labels and pre-assembled for ease of installation

To be installed in compliance with AS/NZS5033

acsolarwarehouse.com — ACSolar Warehouse

Typical system installation

Mechanical specifications

Enclosure dimensions	185 x 185 x 58mm
Conduit gland	1 x 25mm
5 Hole gland - *Suitable for 4–6mm² DC cable	2 x 25mm with 6 blanking plugs
IP rating	IP 66
Weight	1kg

Electrical specifications

Dual entry negative terminals	3 x 10mm² (MAX)
Dual entry positive terminals	3 x 10mm² (MAX)
Terminal max current	57A (10mm² cable rated at 54A)
Terminal max voltage with suitable separation	1000V
Max cable size	10mm² with bootlace or 16mm² bare

This product comes with glands suitable for 5x string inputs and1x output. There are enough gland entries and terminals to accomodate 5x inputs and 1x output.

*Some uncommon insulation thicknesses may not be suitable - if larger hole glands are required, contact AC Solar Warehouse to purchase.

SIEMENS

Product Guide

Type VBII Heavy Duty Switches with Viewing Window

- More visibility, less exposure
- Available in NEMA Type 3R, 12 and 4X stainless steel enclosures
- 30-400 Amp (amperages vary depending on enclosure) switches allow viewing of both visible blade position and of indication type fuses
- Rugged installer-friendly enclosure design features a gasket flange with continuously welded seams
- Tool-free cover latches
- Two, three and four point mounting
- Metal handle with large insulating grip features a positive stop in both ON and OFF position
- Ground lugs provided as standard
- Type 12 enclosures are fabricated from galvanized steel and are also rated for 3R/3S outdoor applications
- Type 4X stainless steel switches (30-400 Amp) are provided with stainless steel interior parts
- The widest range of accessories available including 200% neutrals, gold plated PLC auxiliary contacts and isolated ground kits
- Viewing window kit available as a replacement

[1] 200A switches are also rated 600V DC.
[2] Maximum HP ratings listed apply only when time delay fuses are used.
[3] Also rated 3R3R for outdoor use.
[4] All switches are suitable for use as service entrance equipment. Use outside poles of 3-pole switch for 2-pole application.
[5] 600V DC and 600V DC horsepower rating shown requires (2) poles to be connected in series.
[6] 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, see page 4-16.

Lugs
30-100A switches are suitable for use with 60° or 75°C wire.
200-600 are suitable for use with 75°C wire.
Wire ranges (Line, load and standard neutral)

Output Wire Type / Connector			Double Insulated / MC4			
Output Wire Length			1.2 / 3.9			m / ft
Operating Temperature Range[5]			-40 to +85 / -40 to +185			°C / °F
Protection Rating			IP68 / Type6B			
Relative Humidity			0 - 100			%

[1] Rated power of the module at STC will not exceed the optimizer "Rated Input DC Power". Modules with up to +5% power tolerance are allowed
[2] For 277VAC grid: 83V for P505, 105V for P485, 125V for P401
[3] For other connector types please contact SolarEdge
[4] Longer inputs wire lengths are available for use. For 0.9m input wire length order P485-xxxL4xx
[5] For ambient temperature above +85°C / +185°F, power de-rating is applied. Refer to Power Optimizers Temperature De-Rating Technical Note for more details: https://www.solaredge.com/sites/default/files/se-temperature-derating-note-eu.pdf

PV System Design Using a SolarEdge Inverter[6,7,8]	Single Phase HD-Wave	Single phase	Three Phase for 208V grid	Three Phase for 277/480V grid	
Minimum String Length (Power Optimizers)	(P370, P400, P401 / P485, P505) 8 / 5		10 / 8	18 / 14	
Maximum String Length (Power Optimizers)	25		25	50	
Maximum Power per String	5250[9] (6000 with SE7600-US - SE7600A-US)	5250[9]	6000[9]	12750[10]	W
Parallel Strings of Different Lengths or Orientations	Yes				

[6] For detailed string sizing information refer to: https://www.solaredge.com/sites/default/files/string_sizing_na.pdf
[7] It is not allowed to mix P485 with P370/P400/P401 in one string.
[8] A string with more than 30 optimizers does not meet NEC rapid shutdown requirements; arc fault protection may trigger at module power lower than 95W
[9] For 208V grid it is allowed to install up to 6,000W per string when the maximum power difference between each string is 1,000W
[10] For 277/480V grid it is allowed to install up to 15,000W per string when the maximum power difference between each string is 2,000W

Power Optimizer
For North America
P370 / P400 / P401 / P485 / P505

POWER OPTIMIZER

PV power optimization at the module-level

- Specifically designed to work with SolarEdge inverters
- Up to 25% more energy
- Superior efficiency (99.5%)
- Mitigates all types of module mismatch losses, from manufacturing tolerance to partial shading
- Flexible system design for maximum space utilization
- Fast installation with a single bolt
- Next generation maintenance with module-level monitoring
- Meets NEC requirements for arc fault protection (AFCI) and Photovoltaic Rapid Shutdown System (PVRSS)
- Module-level voltage shutdown for installer and firefighter safety

POWER OPTIMIZER | SCALE: NO SCALE | 2

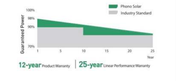
Phono Solar

TWINPLUS MODULE SERIES

HIGH EFFICIENCY MONO-PERC M4-9B-R

445-465W

OUTSTANDING PRODUCT PERFORMANCE



- Competitive high-temperature performance with ameliorated temperature coefficient
- Minimized power loss in cell connection
- Better performance under shading effect
- Decreased nominal operating cell temperature to 45 ± 2°C
- Higher power generation with multi-busbar and half-cut technology

TRUSTWORTHY QUALITY AND RELIABILITY

- Guaranteed 0~+5W positive tolerance secures reliable power output
- 5400Pa maximum snow load, 2400Pa maximum wind load
- Optimized electrical design lowers hot spot risk and operating current

PID RESISTANT

- Industry-leading cell processing technology and electrical design ensure solid PID resistance

12-year Product Warranty | 25-year Linear Performance Warranty

MANAGEMENT SYSTEM CERTIFICATES

IEC 61215, IEC 61730
ISO 9001:2015 / Quality management system
ISO 14001:2015 / Standards for environmental management system
ISO 45001:2018 / International standards for occupational health & safety

Three Phase Inverters for the 277/480V Grid(1)
For North America

SE20KUS / SE30KUS / SE33.3KUS / SE40KUS

MODEL NUMBER	SE20KUS	SE30KUS	SE33.3KUS	SE40KUS	UNITS
APPLICABLE TO INVERTERS WITH PART NUMBER	SE[XXX]-USXX[XXXXX]	SE[XXX]-USX[XXXXX]			
OUTPUT					
Rated AC Power Output	20000	30000	33300	40000	W
Maximum apparent AC output power	20000	30000	33300	40000	VA
AC Output Line Connections	4W + PE	3W + PE, 4W + PE			
AC Output Voltage Minimum-Nominal-Maximum(2) (L-N)	244 - 277 - 305				Vac
AC Output Voltage Minimum-Nominal-Maximum(2) (L-L)	423.3 - 480 - 529				Vac
AC Frequency Min-Nom-Max(2)	59.3 - 60 - 60.5				Hz
Maximum Continuous Output Current (per Phase)	24	36.25	40	48.25	Aac
GFDI Threshold	1				A
Utility Monitoring, Islanding Protection, Country Configurable Set Points	Yes				
Total Harmonic Distortion	≤ 3				%
Power Factor Range	+/- 0.85 to 1				
INPUT					
Maximum DC Power (Module STC)	27000	40000	50000	60000	W
Transformer-less, Ungrounded	Yes				
Maximum Input Voltage DC+ to DC-	1000				Vdc
Operating Voltage Range	840 - 1000				Vdc
Maximum Input Current	26.5	36.25	40	48.25	Adc
Maximum Input Short Circuit Current	33		55		Adc
Reverse-Polarity Protection	Yes				
Ground-Fault Isolation Detection	1MΩ Sensitivity		167kΩ Sensitivity(3)		
CEC Weighted Efficiency	98		99.5		%
Night-time Power Consumption	<3		<4		W
ADDITIONAL FEATURES					
Supported Communication Interfaces	2 x RS485, Ethernet, Cellular (optional)				
Inverter Commissioning	With the SetApp mobile application using built-in access point for local connection				
Arc Fault Protection	Integrated, User Configurable (according to UL1699B)				
Rapid Shutdown	NEC2014, NEC2017 and NEC2020 compliant/certified				
RS485 Surge Protection Plug-in	Supplied with the Inverter, Built-in				
DC Surge Protection	Type II, field replaceable, Built-in				
AC Surge Protection	Type II, field replaceable, Built-in				
DC Fuses (Single Pole)	30A, Built-in				
Smart Energy Management	Export Limitation				
DC SAFETY SWITCH					
DC Disconnect	Integrated				
STANDARD COMPLIANCE					
Safety	UL1741, UL1741 SA, UL1699B, CSA C22.2, Canadian AFCI according to T.I.L. M-07				
Grid Connection Standards	IEEE1547, Rule 21, Rule 14 (HI)				
Emissions	FCC part15 class A				
INSTALLATION SPECIFICATIONS					
AC output conduit size / AWG range	3/4" minimum / 12-6 AWG	3/4" or 1" / 6 - 10 AWG			
DC input conduit size / AWG range	3/4" or 1" / 6 - 12 AWG				
Number of DC inputs pairs	3	4			
Dimensions with Safety Switch (H x W x D)	30.5 x 12.5 x 10.5 / 775 x 315 x 260	31.0 x 12.5 x 11.8 / 808 x 317 x 300			in / mm
Weight with Safety Switch	74.2 / 33.7	78.2 / 35.5			lb / kg
Cooling	Fans (user replaceable)				
Noise	< 50	< 60			dBA
Operating Temperature Range	-40 to +140 / -40 to +60(4)				°F / °C
Protection Rating	NEMA 3R				
Mounting	Bracket provided

Three Phase Inverters for the 277/480V Grid
For North America

SE20KUS / SE30KUS / SE33.3KUS / SE40KUS

INVERTERS

12-20 YEAR WARRANTY

The best choice for SolarEdge enabled systems

- Specifically designed to work with power optimizers
- Quick and easy inverter commissioning directly from a smartphone using the SolarEdge SetApp
- Fixed voltage inverter for superior efficiency (98.5%) and longer strings
- Built-in type 2 DC and AC Surge Protection, to better withstand lightning events
- Small, lightest in its class, and easy to install outdoors or indoors on provided bracket
- Integrated arc fault protection and rapid shutdown for NEC 2014 and 2017, per article 690.11 and 690.12
- Built-in module-level monitoring with Ethernet, wireless or cellular communication for full system visibility
- Integrated Safety Switch
- UL1741 SA certified, for CPUC Rule 21 grid compliance

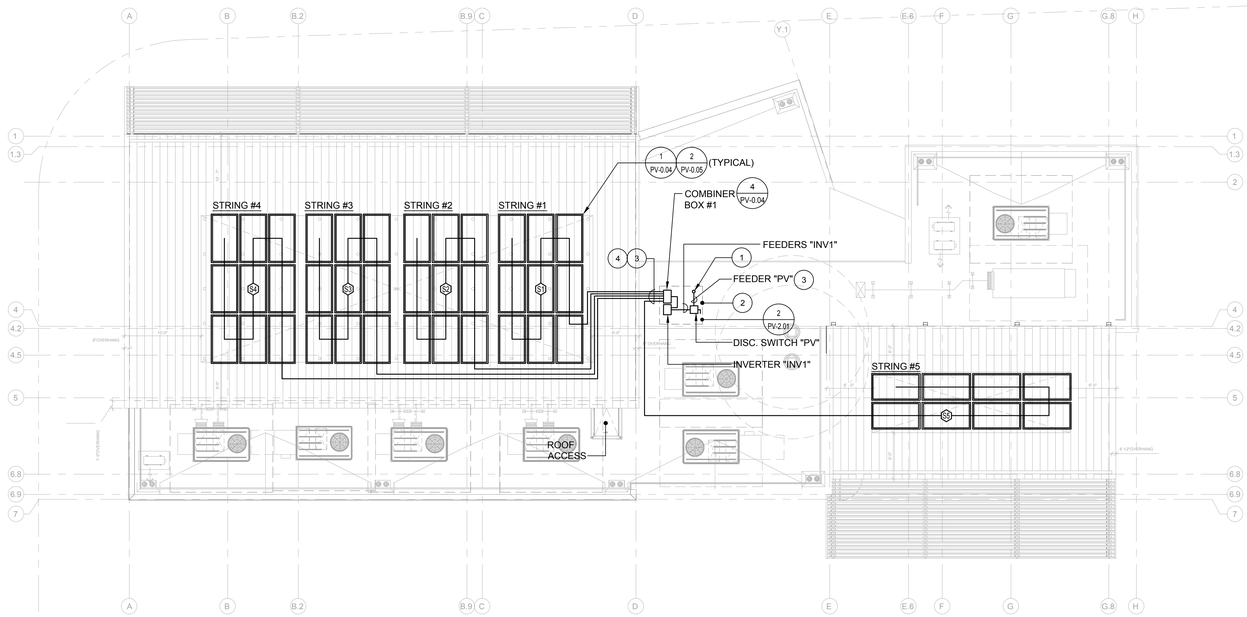
GENERAL NOTES:

1. SOLAR PHOTOVOLTAIC POWER SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH SECTIONS 1204.2 THROUGH 1204.5, THE CALIFORNIA BUILDING CODE OR CALIFORNIA RESIDENTIAL CODE, AND CALIFORNIA ELECTRICAL CODE. FIRE CODE 1204.1.



2. CONDUIT, WIRING SYSTEMS, AND REACEWAYS FOR PHOTOVOLTAIC CIRCUITS SHALL BE LOCATED AS CLOSE AS POSSIBLE TO THE RIDGE OR HIP OR VALLEY AND FROM THE HIP OR VALLEY AS DIRECTLY AS POSSIBLE TO AN OUTSIDE WALL TO REDUCE TRIP HAZARDS AND MAXIMIZE VENTILATION OPPORTUNITIES. CONDUIT RUNS BETWEEN SUB ARRAYS AND TO DC COMBINER BOXES SHALL BE INSTALLED IN A MANNER THAT MINIMIZES THE TOTAL AMOUNT OF CONDUIT ON THE ROOF BY TAKING THE SHORTEST PATH FROM THE ARRAY TO THE DC COMBINER BOX. THE DC COMBINER BOX SHALL BE LOCATED SUCH THAT CONDUIT RUNS ARE MINIMIZED IN THE PATHWAY BETWEEN ARRAYS. DC WIRING SHALL BE INSTALLED IN METALLIC CONDUIT OR RACEWAYS WHEN LOCATED WITHIN ENCLOSED SPACES IN A BUILDING. CONDUIT SHALL RUN ALONG THE BOTTOM OF LOAD BEARING MEMBERS. FIRE CODE 1204.3.4.

SECURITY SYSTEM GENERAL NOTES

1. THESE DRAWINGS AND SPECIFICATIONS ARE INTENDED TO COVER A COMPLETE INSTALLATION OF THE SECURITY SYSTEM (ACCESS CONTROL, BUILDING INTRUSION & CONDUIT ONLY & OUTLET BOXES FOR FUTURE CLOSED CIRCUIT TELEVISION). THE OMISSION OR EXPRESSED REFERENCE TO ANY ITEM OF LABOR OR MATERIALS REQUIRED FOR THE PROPER EXECUTION OF THE WORK IN ACCORDANCE WITH PRESENT PRACTICE OF THE TRADE SHALL NOT RELIEVE THE CONTRACTOR FROM PROVIDING SUCH ADDITIONAL LABOR AND MATERIALS.
2. THE DESIGN-BUILD SECURITY SYSTEMS CONTRACTOR IS RESPONSIBLE FOR THE DESIGN AND CONSTRUCTION OF A COMPLETE SECURITY SYSTEM BASED ON THESE CONCEPTUAL PLANS AND SPECIFICATIONS.
3. THE SECURITY SYSTEMS CONTRACTOR IS REQUIRED TO REVIEW ALL OF THE PROJECT'S CONSTRUCTION DOCUMENTS AS A WHOLE IN ORDER TO IDENTIFY ALL REQUIREMENTS THAT DIRECTLY OR INDIRECTLY AFFECT ITS PORTION OF THE SECURITY SYSTEMS WORK, EVEN REQUIREMENTS LOCATED IN SECTIONS DESIGNATED AS APPLICABLE TO OTHER TRADES. IN CASE OF CONFLICTS, THE CONTRACTOR SHALL EITHER OBTAIN DIRECTION FROM THE OWNER'S REPRESENTATIVE OR OTHERWISE APPLY THE MORE STRINGENT REQUIREMENT
4. REFER TO THE ELECTRICAL PLANS AND SPECIFICATIONS FOR ADDITIONAL INFORMATION AND REQUIREMENTS. ALL APPLICABLE PORTIONS SHALL APPLY TO THE SECURITY SYSTEMS SCOPE OF WORK.
5. THE SECURITY SYSTEMS AS SHOWN ON THESE PLANS IS CONCEPTUAL ONLY AND IS BASED ON INITIAL OWNER AND DESIGN TEAM INPUT RECEIVED. THE SECURITY SYSTEMS CONTRACTOR IS RESPONSIBLE FOR MODIFYING THE SECURITY SYSTEMS AND DESIGN INTENT TO THE ACTUAL CONDITIONS OF THIS PROJECT AND THE OWNER'S FINAL NEEDS. COORDINATE, CONFIRM AND FINALIZE THE SYSTEMS EQUIPMENT, FEATURES, COVERAGE AND PROGRAMMING WITH THE OWNER'S REPRESENTATIVE. VERIFY WITH THE OWNER'S REPRESENTATIVE THE LEVEL OF INTEGRATION WITH OTHER SYSTEMS.
6. THE SECURITY SYSTEMS CONTRACTOR SHALL DEVELOP A COMPLETE SET OF CONSTRUCTION DOCUMENTS, PLANS AND SPECIFICATIONS AND SUBMIT TO THE OWNER'S REPRESENTATIVE FOR APPROVAL BEFORE THE START OF CONSTRUCTION.
7. PROVIDE ALL REQUIRED MATERIALS INCLUDING BUT NOT LIMITED TO EQUIPMENT, HARDWARE, DEVICES, RACKS, TERMINAL CABINETS, CONTROLLERS, POWER SUPPLIES, WIRING AND CABLING, WIRE/CABLING MANAGEMENTS SYSTEMS AND SUPPORTS, CONDUITS AND RACEWAYS, ETC. FOR A COMPLETE AND OPERABLE SECURITY SYSTEMS.
8. WIRELESS DEVICES AND/OR COMPONENTS ARE NOT ALLOWED AS PART OF THE BASE BID UNLESS OTHERWISE NOTED. APPROVAL OF WIRELESS SYSTEMS SHALL BE AT THE DISCRETION OF THE OWNER'S REPRESENTATIVE.
9. ALL SYSTEM SOFTWARE PLATFORMS AND QUANTITY OF LICENSES SHALL BE PROVIDED FOR ALL FURNISHED EQUIPMENT AS PART OF THE SECURITY SYSTEMS CONTRACTORS COMPLETE AND OPERABLE SYSTEMS. ALL SOFTWARE PLATFORMS INSTALLED SHALL BE THE FULL AND COMPLETE VERSION OF THE MOST RECENT SOFTWARE PACKAGES AVAILABLE AT THE TIME OF THE INSTALLATION. THE OWNER'S REPRESENTATIVE SHALL BE PROVIDED WITH THE FORMAL COPIES OF ALL LICENSES AND FURNISHED WITH ALL USERNAMES AND PASSWORDS FOR THE SYSTEM AS PART OF THE CLOSE-OUT DOCUMENTATION.
10. THE SECURITY SYSTEMS CONTRACTOR SHALL BE A LICENSED (C-7) LOW VOLTAGE SYSTEMS CONTRACTOR AND A LICENSED (C-10) ELECTRICAL CONTRACTOR AND SHALL HAVE BEEN IN BUSINESS FURNISHING AND INSTALLING SIMILAR SYSTEMS IN SCOPE AND SIZE FOR A MINIMUM OF FIVE (5) YEARS.
11. THE SECURITY SYSTEMS CONTRACTOR SHALL BE A FACTORY AUTHORIZED DISTRIBUTOR, INSTALLER AND WARRANTY PROVIDER FOR THE MANUFACTURER OF THE EQUIPMENT TO BE INSTALLED. PROVIDE LETTER FROM THE SYSTEMS MANUFACTURERS CERTIFYING THAT THE CONTRACTOR IS AN AUTHORIZED DISTRIBUTOR AND INSTALLER OF THE EQUIPMENT. PROVIDE CERTIFICATES OF TRAINING FOR PERSONNEL PERFORMING THE WORK.
12. THE SECURITY SYSTEMS CONTRACTOR SHALL MAINTAIN A FULLY EQUIPPED SERVICE DEPARTMENT CAPABLE OF FURNISHING ADEQUATE REPAIR SERVICES FOR THE WARRANTED EQUIPMENT WITH RESPONSE TIMES TO THE PROJECT SITE WITHIN 4-HOURS.
13. ALL WORK AND EQUIPMENT SHALL BE GUARANTEED IN WRITING FOR A PERIOD OF 1-YEAR AFTER FINAL ACCEPTANCE OF WORK. PROVIDE AN EXTENDED 1-YEAR WARRANTY FOR A TOTAL OF 2-YEARS FROM FINAL ACCEPTANCE OF WORK.
14. THE CONSTRUCTION DOCUMENTS, PLANS AND SPECIFICATIONS AND ALL WORK AND MATERIALS SHALL BE IN FULL ACCORDANCE WITH ALL LEGAL AND INDUSTRY REQUIREMENTS AND STANDARDS INCLUDING WITHOUT LIMITATION THE FOLLOWING:
    - A. CALIFORNIA CODE OF REGULATIONS TITLE 24, PARTS 1 AND 2 (CALIFORNIA BUILDING CODE), 2022 EDITION.
    - B. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 3 (CALIFORNIA ELECTRICAL CODE), 2022 EDITION.
    - C. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 9 (CALIFORNIA FIRE CODE), 2022 EDITION.
    - D. OTHER REGULATING AGENCIES WHICH MAY HAVE AUTHORITY OVER ANY PORTION OF THE WORK, INCLUDING THE STATE OF CALIFORNIA DIVISION OF INDUSTRIAL SAFETY, AND THOSE CODES AND STANDARDS LISTED IN THESE NOTES AND SPECIFICATIONS.
    - E. THE ELECTRICAL SYSTEMS FUNCTIONALITY STANDARDS SET FORTH IN TITLE 7 OF THE CALIFORNIA CIVIL CODE (THE "RIGHT TO REPAIR ACT").
    - F. THE MANUFACTURER'S REQUIREMENTS OR RECOMMENDATIONS FOR ANY INCORPORATED PRODUCTS.
    - G. THE MOST CURRENT APPROVED ISSUES OF ANY NOTED SPECIFICATIONS, CODES AND STANDARDS, INCLUDING SUPPLEMENTS, UNLESS NOTED OTHERWISE.
15. IN INTERPRETING THESE PLANS, THE FOLLOWING GENERAL RULES APPLY:
    - A. WRITTEN DIMENSIONS SHALL TAKE PRECEDENCE OVER SCALED DRAWINGS.
    - B. SCALED DIMENSIONS AND GRAPHICALLY SHOWN LOCATIONS ARE TO BE CONSIDERED ONLY APPROXIMATE. FIELD VERIFY DIMENSIONS PRIOR TO BID.
    - C. BECAUSE THE PLANS ARE INTENDED TO SET FORTH THE REQUIREMENTS FOR CONSTRUCTION IN ONLY AN INDUSTRY-STANDARD LEVEL OF QUALITY AND DETAIL, AND THEREFORE ARE INTENDED TO BE SUPPLEMENTED BY APPROPRIATE REQUESTS FOR CLARIFICATION AND INFORMATION, ERRORS AND OMISSIONS AND TO BRING THESE ERRORS AND OMISSIONS TO THE ATTENTION OF AN APPROPRIATE OWNER REPRESENTATIVE IN A TIMELY MANNER AND ASSUMES THE RISK OF THE CONSEQUENCES OF FAILING TO DO SO BEFORE BIDDING OR OTHERWISE PROCEEDING.
    - D. THE CONTRACTOR SHALL REVIEW AND VERIFY ALL DIMENSIONS PRIOR TO STARTING CONSTRUCTION AND NOTIFY THE ELECTRICAL ENGINEER IMMEDIATELY OF ANY DISCREPANCIES OR INCONSISTENCIES.
16. SUBMIT COMPLETE CONSTRUCTION DOCUMENTS, PLANS, SPECIFICATIONS AND CATALOG DATA SHEETS FOR THE SECURITY SYSTEMS TO THE OWNER'S REPRESENTATIVE FOR APPROVAL. SUBMITTALS SHALL AT THE MINIMUM INCLUDE THE FOLLOWING:
    - A. COPIES OF CONTRACTORS CURRENT C-7 LOW VOLTAGE CONTRACTOR LICENSE AND C-10 ELECTRICAL CONTRACTORS LICENSE.
    - B. COPY OF THE EQUIPMENT MANUFACTURERS AUTHORIZATION LETTERS CERTIFYING THE CONTRACTOR AS AN AUTHORIZED DISTRIBUTOR AND INSTALLER.
    - C. COPIES OF CERTIFICATES OF TRAINING FOR THE INSTALLING PERSONNEL AND PROOF THAT THEY ARE LOCATED AT THE CONTRACTOR'S LOCAL FACILITY.
    - D. LIST OF PROJECTS SIMILAR IN SCOPE AND SIZE THAT HAVE BEEN COMPLETED IN THE LAST FIVE (5) YEARS.
    - E. MANUFACTURERS AND CONTRACTORS' WARRANTIES.
    - F. PLANS FOR THE SITE AND BUILDING AT THE SAME SCALE AS THE CONTRACT DRAWINGS. PLANS SHALL SHOW WALLS, DOORS, WINDOWS, ROOM NUMBERS, ROOM NAMES. THE PLANS SHALL INCLUDE THE TYPE AND LOCATION OF ALL EQUIPMENT, HARDWARE, DEVICES, RACKS, TERMINAL CABINETS, CONTROLLERS, WIRING AND CABLING, CONDUIT AND RACEWAYS, ETC.
    - G. PLANS SHALL INCLUDE LEGENDS, DEVICE AND BACKBOX MOUNTING REQUIREMENTS AND HEIGHTS. THE MOUNTING HEIGHTS SHALL BE SYMMETRICAL FOR ALL TYPES OF DEVICES.
    - H. PLANS SHALL INCLUDE RISER DIAGRAMS, SINGLE LINE DIAGRAMS, WIRING DIAGRAMS CALCULATIONS FOR THE COMPLETE SYSTEM.
    - I. PLANS SHALL SHOW INTERFACE WITH OTHER SYSTEMS THAT ARE REQUIRED TO BE INTEGRATED.
    - J. MANUFACTURERS CATALOG DATA AND CUT SHEETS FOR ALL EQUIPMENT.
    - K. TESTING AND COMMISSIONING PROCEDURES COORDINATED WITH THE OWNER'S REQUIREMENTS AND MANUFACTURE'S STANDARDS INCLUDING ANSI/TIS-568-C.0, C.1, C.2 AND C.3.
17. SUBMITTALS WILL BE REVIEWED BY THE ELECTRICAL ENGINEER, IF AT ALL, ONLY PURSUANT TO THE INDUSTRY-STANDARD PROTOCOL SET FORTH IN AIA DOCUMENT A201, AND IN NO EVENT WILL THE SUBMITTAL REVIEW PROCESS RELIEVE OR LESSEN THE SUBMITTING CONTRACTOR'S RESPONSIBILITY FOR AN INAPPROPRIATE SUBMITTAL.
18. TRAINING - PROVIDE OWNER TRAINING FOR UP TO (2) 4 HOUR TRAINING SESSIONS. TRAINING SHALL BE SCHEDULED WITH THE OWNER'S REPRESENTATIVE AND SHALL BE AT TIMES CONVENIENT TO THE OWNER.
19. IN THE EVENT CONFLICTS BETWEEN THE CONSTRUCTION BID DOCUMENTS, CRITERIA AND SPECIFICATIONS THE MOST STRINGENT OF REQUIREMENTS SHALL APPLY.
20. IN NO EVENT WILL ANY SITE VISITS BY THE ELECTRICAL ENGINEER CONCERN CONSTRUCTION MEANS AND METHODS OR CONSTRUCTION SAFETY, AND ALL SUCH MATTERS SHALL REMAIN THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
21. COPIES OF THE PLANS PROVIDED IN ANY ELECTRONIC FORM ARE SUBJECT TO THE SAME PROVISIONS AS THE OTHER INSTRUMENTS OF SERVICE PREPARED BY OR ON BEHALF OF THE ELECTRICAL ENGINEER FOR THE PROJECT, INCLUDING WITHOUT LIMITATION THE ENGINEER'S COMMON LAW, STATUTORY OR OTHER RESERVED RIGHTS, INCLUDING COPYRIGHTS. A RECIPIENT IS GRANTED AT MOST A TRANSFERABLE NONEXCLUSIVE LICENSE TO REUSE THE PLANS SOLELY FOR PROJECT PURPOSES, AND NO RECIPIENT IS AUTHORIZED TO USE OR TO ALLOW THE USE OF ALL OR ANY PORTION OF THESE PLANS FOR ANY OTHER PURPOSE, AND ANY USE FOR ANY OTHER PURPOSE WOULD CONSTITUTE ACTIONABLE PLAGIARISM. ELECTRICAL ENGINEER PROVIDES DOCUMENTS IN AN ELECTRONIC FORM ONLY IN ITS STANDARD FORMATS AND CONVENTIONS AND WITH NO GUARANTEE OF COMPATIBILITY WITH ANY RECIPIENT'S SOFTWARE OR HARDWARE AND ANY USE WITH OR CONVERSION TO OTHER FORMATS OR CONVENTIONS, OR THE USE WITH ANY PARTICULAR SOFTWARE OR HARDWARE, IS AT THE RECIPIENT'S SOLE RISK.
22. THE DRAWINGS INDICATE, IN A DIAGRAMMATIC MANNER, THE DESIRED LOCATIONS AND ARRANGEMENT OF THE COMPONENTS OF SECURITY SYSTEMS WORK. DETERMINE EXACT SECURITY SYSTEMS EQUIPMENT, CONDUIT AND WIRING ROUTING, CONDUIT BENDS, AUXILIARY JUNCTION BOXES, SUPPORTS AND UNDEFINED CONSTRUCTION DETAILS AS A JOB CONDITION TO BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE CODE REQUIREMENTS. PROPER JUDGEMENT MUST BE EXERCISED IN EXECUTING THE WORK SO AS TO SECURE THE BEST POSSIBLE INSTALLATION IN THE AVAILABLE SPACE AND TO OVERCOME LOCAL DIFFICULTIES DUE TO SPACE LIMITATIONS OR INTERFERENCE OF CONDITIONS ENCOUNTERED.
23. IN THE EVENT CHANGES IN THE INDICATED LOCATIONS OR ARRANGEMENTS ARE NECESSARY, DUE TO DEVELOPED CONDITIONS IN THE BUILDING CONSTRUCTION OR REARRANGEMENT OF EQUIPMENT, SUCH CHANGES SHALL BE MADE WITHOUT COST PROVIDING THE CHANGE IS ORDERED BEFORE THE CONDUIT RUNS, ETC., AND WORK DIRECTLY CONNECTED TO SAME IS INSTALLED AND NO EXTRA MATERIALS ARE REQUIRED.
24. PROVIDE ALL EQUIPMENT WITH ENCLOSURES LISTED OR LABELED FOR USE AND LOCATION WHERE SUCH EQUIPMENT IS INSTALLED.
25. PROVIDE UL LISTED FIRE STOP FOR ALL PENETRATIONS THROUGH FIRE RATED FLOORS, WALLS, AND CEILINGS TO MAINTAIN ALL FIRE RATINGS.
26. GROUNDING SHALL BE EXECUTED IN ACCORDANCE WITH ALL APPLICABLE CODES AND REGULATIONS, BOTH OF THE STATE OF CALIFORNIA AND LOCAL AUTHORITIES HAVING JURISDICTION.
27. CONDUIT FOR ROOF MOUNTED EQUIPMENT SHALL BE ROUTED BELOW ROOF AND WITHIN BUILDING.
28. ALL SECURITY SYSTEMS EQUIPMENT SHALL BE NEW AND BE U.L. OR ETL LISTED AND LABELED.

INTRUSION DETECTION SYSTEM SYMBOLS

- IDKP — INTRUSION DETECTION KEY PAD.
- PB — INTRUSION DETECTION PANIC BUTTON.
- ID — INTRUSION DETECTION SYSTEM MOTION SENSOR, WALL MOUNTED.
- ID — INTRUSION DETECTION SYSTEM MOTION SENSOR, CEILING MOUNTED.
- BG — INTRUSION DETECTION SYSTEM BREAK GLASS SENSOR, WALL MOUNTED.
- DC — INTRUSION DETECTION SYSTEM DOOR CONTACT - (COORDINATE DOOR CONTACT TYPE PER DOOR).
- —ID— INTRUSION DETECTION SYSTEM CONDUIT WITH CONDUCTORS PER MANUFACTURER'S REQUIREMENTS. REFERENCE RISER DIAGRAM AND SPECIFICATIONS FOR ADDITIONAL INFORMATION. MINIMUM 3/4"C.

CLOSED CIRCUIT TV (CCTV) SYSTEM SYMBOLS

NOTE: PROVIDE CONDUIT ONLY AND OUTLET BOXES FOR ALL CCTV SYSTEM DEVICES DEPICTED BELOW. ACTUAL EQUIPMENT IS TO PROVIDED IN THE FUTURE BY OTHERS.

- C C — SURFACE MOUNTED (CEILING OR WALL), CLOSED CIRCUIT TELEVISION DOME TYPE CAMERA. PROVIDE WITH FLUSH 4S BACKBOX AND 3/4" CONDUIT HOMERUN TO NEAREST TEL. BACKBOARD. WALL MOUNTED LOCATIONS SHALL BE @+8'-0", OR AS DIRECTED BY ARCHITECT. "WP" INDICATES OUTDOOR MOUNTED CAMERA. PROVIDE WITH OUTDOOR RATED BACKBOX. PROVIDE BLANK COVER PLATE ON ALL BACKBOXES.
- WS — CLOSED CIRCUIT TELEVISION WORKSTATION LOCATION. PROVIDE FLUSH 4S JUNCTION BOX @+16" WITH BLANK COVER PLATE & 3/4" CONDUIT HOMERUN CONTROL NEAREST TEL. BACKBOARD. WORKSTATION LOCATION TO BE VERIFIED WITH OWNER.
- M — CLOSED CIRCUIT TELEVISION REMOTE MONITOR LOCATION. PROVIDE FLUSH 4S JUNCTION BOX @+16" WITH BLANK COVER PLATE & 3/4" CONDUIT HOMERUN TO NEAREST TEL. BACKBOARD. REMOTE MONITOR LOCATION TO BE VERIFIED WITH OWNER.

ACCESS CONTROL SYSTEM SYMBOLS

- ACKP — ACCESS CONTROL SYSTEM KEY PAD
- CR — ACCESS CONTROL SYSTEM CARD READER
- PR — ACCESS CONTROL SYSTEM PROXIMITY READER - (KEY TAG OR CARD TYPE PROXY CARD)
- RE — ACCESS CONTROL SYSTEM REQUEST EXIT
- EL — ACCESS CONTROL SYSTEM ELECTRIFIED LOCK = (LOCK HARDWARE, SYSTEMS AND CONNECTIONS TO BE COORDINATED PER DOOR TYPE WITH ARCHITECT AND CONTRACTOR.)
- MH — ACCESS CONTROL SYSTEM MAGNETIC DOOR HOLD - (HOLD TYPE, SYSTEMS AND CONNECTIONS TO BE COORDINATED PER DOOR TYPE WITH ARCHITECT AND CONTRACTOR.)
- DC — ACCESS CONTROL SYSTEM DOOR CONTACT - (COORDINATE TYPE PER DOOR)
- AC — ACCESS CONTROL SYSTEM AUDIBLE SOUNDER, WALL MOUNTED
- AC — ACCESS CONTROL SYSTEM AUDIBLE SOUNDER, CEILING MOUNTED
- CR — "CLICK TO ENTER" SYSTEM DEVICE. PROVIDE BACKBOX & 3/4"C. HOMERUN TO IT ROOM.
- —AC— ACCESS CONTROL SYSTEM CONDUIT WITCH CONDUCTORS PER MANUFACTURER'S REQUIREMENTS. REFERENCE RISER DIAGRAM AND SPECIFICATIONS FOR ADDITIONAL INFORMATION. MINIMUM 3/4"C.

GENERAL SYMBOLS LIST

NOTE: REFERENCE ELECTRICAL SHEETS FOR ADDITIONAL GENERAL ELECTRICAL SYMBOLS. ALL APPLICABLE PORTIONS SHALL APPLY TO THIS SCOPE OF WORK AS THOUGH WRITTEN HEREIN.

- J — JUNCTION BOX, FLUSH WALL MOUNTED, +18".
- J — JUNCTION BOX CONCEALED ABOVE ACCESSIBLE CEILING.
- J — INDICATES CONNECTION TO EQUIPMENT AS REQUIRED, TYPICAL.
- CONTROL PANEL OR TERMINAL CABINET AS INDICATED ON PLANS.
- INDICATES CONDUIT DROP WITHIN BUILDING WALL.
- INDICATES CONDUIT RISER WITHIN BUILDING WALL.
- C / E-2 — DETAIL CALLOUT, "C" INDICATES DETAIL, "E-2" INDICATES DRAWING WHERE DETAIL OCCURS.
- 1 — PLAN NOTE CALLOUT. REFER TO CORRESPONDING NOTE ON DRAWING WHERE CALLOUT OCCURS.

ACCESS CONTROL SYSTEM GENERAL NOTES

1.1 GENERAL

1. **SECURITY CONTRACTOR SHALL PROVIDE, PROGRAM, AND INSTALL A FULLY FUNCTIONAL, COMPLETE AND OPERATIONAL ACCESS CONTROL SYSTEM. PROVIDE ALL ENGINEERING, DESIGN, TESTING, EQUIPMENT, MATERIALS, COMPONENTS AND INSTALLATION NECESSARY AS PART OF THIS WORK.**

2. **ACCESS CONTROL SYSTEM, AT A MINIMUM, SHALL INCLUDE A DIGITAL ALARM COMMUNICATOR, BUILT-IN TELEPHONE LINE MONITOR, MEMORY LOGGER (500 EVENT MINIMUM), REAL TIME CLOCK, CALENDAR, TEST TIMER, BATTERY CHARGING/VOLTAGE SUPERVISION CIRCUITRY, BATTERY LEAD SUPERVISION, DIAGNOSTICS, TIME/EVENT BASED SCHEDULING AND ALL MODULES AND COMPONENTS FOR A COMPLETE AND OPERABLE SYSTEM.**

3. **SYSTEM SHALL:**

   A. **BE SCALABLE TO SUPPORT INDEPENDENT DEVICE ZONES (SINGLE DEVICE OR GROUP OF DEVICES GROUPED TOGETHER), EACH WITH INTERIOR AND PERIMETER PARTITIONING. QUANTITY OF ZONES AND DEVICES DEPENDENT ON PROJECT AND TO BE COORDINATED WITH OWNER.**

   B. **PROVIDE IDENTIFICATION, ANNUNCIATION AND COMMUNICATION OF ALL DEVICES ON A POINT-BY-POINT BASIS, INCLUDING EACH ACCESS CONTROL BY USER NUMBER.**

   C. **BE CAPABLE OF LOCALLY OR REMOTE PROGRAMMING.**

   D. **BE PROVIDED WITH SECONDARY POWER BACK-UP**

      1) **VIA BATTERIES. BATTERIES TO BE SIZED FOR MINIMUM 60-HOUR SUPERVISION AND 15-MINUTES OF ALARM. BATTERY CHARGER TO BE SIZED BASED ON BATTERY CAPACITIES.**
      2) **VIA EMERGENCY GENERATOR OR BUILDING BATTERY INVERTER.**

   E. **ALLOW REAL-TIME STATUS MONITORING/VIEWING OF DEVICES AND UNIT AND AREA EVENTS (AC FAIL, BATTERY FAIL, UNIT CONNECTED/LOST, AREA ARM/DISARM, INPUT TROUBLE, ETC.)**

4. **ALL FIELD DEVICES SHALL BE INDIVIDUALLY HOMERUN TO ACCP OR ACTC. DAISY CHAINING OF DEVICES IS NOT ACCEPTABLE UNLESS WRITTEN APPROVAL IS PROVIDED PRIOR TO SYSTEM SHOP DRAWINGS AND INSTALLATION OF ANY DEVICES.**

1.2 ACCESS CONTROL SYSTEM BASIS OF DESIGN

1. **THE INTENT AND PURPOSE OF THE ACCESS CONTROL SYSTEM IS TO PROVIDE ACCESS TO SECURED AREAS OF THE BUILDING AS INDICATED ON PLANS AND DEFINED BY THE OWNER, THROUGH THE ACCESS CONTROL SYSTEM. THE SYSTEM WILL ENABLE THE OWNER TO CONTROL ACCESS FOR DOORS AND/OR AREAS THROUGH THE PROGRAMMING OF THE RESTRICTED DATABASE ON SYSTEM SOFTWARE, AND TO PROVIDE THE CAPABILITY OF REMOTE ACCESS DATABASE MANAGEMENT. GRAPHICAL AND CONTROL INTEGRATION SOFTWARE SHALL BE PROVIDED FOR REMOTE ACCESS AND MANAGEMENT, INCLUDING REQUIRED SERVER COMPUTER AND DISPLAY.**

2. **THE ACCESS CONTROL SYSTEM SHALL INTEGRATE WITH THE INTRUSION DETECTION SYSTEM AND FUTURE CCTV SYSTEM. INTEGRATION WITH THE INTRUSION DETECTION SYSTEM SHALL PROVIDE A MOMENTARY CONTACT CLOSURE SIGNAL FOR THE PROGRAMMED DISARMING OF THE INTRUSION DETECTION ZONES AS MAY BE REQUIRED.**

3. **ACCESS TO SECURED AREAS SHALL BE PROVIDED THROUGH THE INSTALLATION OF DEDICATED AND SPECIFIC DEVICES, CONSISTING OF, BUT NOT LIMITED TO, PROXIMITY CARD READERS (WITH PROXIMITY CARDS), MAGNETIC DOOR CONTACTS, ELECTRIFIED HINGES, MORTISED LOCKS, ELECTRIFIED DOOR STRIKES, PANIC BARS, POWER SUPPLIES, REQUEST TO EXIT DEVICES, ETC. ALL DOOR HARDWARE REQUIREMENTS TO BE PART OF AND COORDINATED WITH PROJECT DOOR SCHEDULES AND DOOR INSTALLING CONTRACTOR.**

4. **ACCESS TO INDIVIDUAL UNITS SHALL BE CENTRALLY MANAGED THROUGH WIRELESS SMART CONTROL LOCKSETS AND CEILING MOUNTED GATEWAYS, THROUGHOUT PROPERTY BUILDINGS.**

5. **THE INTENT OF THE PLAN DRAWINGS IS TO GUIDE THE SECURITY CONTRACTOR IN THE BASIC INTENT OF THE SYSTEM DESIGN AND SHALL NOT BE CONSIDERED A FINAL OR COMPLETE SET OF PLANS. THE SECURITY CONTRACTOR SHALL INCLUDE AS PART OF HIS BID, AND SUBSEQUENT INSTALLATION, ALL REQUIRED MATERIALS AND LABOR, INCLUDING BUT NOT LIMITED TO ALL DEVICES, CABLING, CONNECTIONS, PATHWAYS, FIRESTOPPING, HARDWARE, SOFTWARE, UPS/BATTERY BACKUP, INTERFACES, WARRANTIES, ETC. FOR A COMPLETE AND OPERABLE SYSTEM.**

6. **THE FOLLOWING SHALL BE UTILIZED AS AN ACCESS CONTROL SYSTEM EQUIPMENT BASIS OF DESIGN. THE LIST DOES NOT CONSTITUTE COMPLETE PARTS OR MATERIALS, BUT A GUIDE OF EQUIPMENT FROM OWNER'S ACCESS CONTROL STANDARDS OF ACCEPTABLE MANUFACTURER FOR COMPONENTS. CONTRACTOR SHALL AUGMENT AND PROVIDE ALL COMPONENTS NECESSARY FOR A COMPLETE AND OPERABLE SYSTEM. THE FOLLOWING LIST OF ITEMS ARE IDENTIFIED FROM RS2 TECHNOLOGIES, AND ALLEGION, UNLESS OTHERWISE NOTED:**

   A. **RS2 TECHNOLOGIES SYSTEM CONTROLLER WITH ENTERPRISE-WIDE "ACCESS IT!" SOFTWARE AND WEB LICENSE "ACCESS IT!" UNIVERSAL BROWSER INTERFACE**

      PROXIMITY CARD - HID PROX 13.56mHz CARD OR 125kHz CARD (CONFIRM FREQUENCY WITH OWNER'S IT)
      PROXIMITY READER - HID MULTICLASS SE READER (13.56mHz AND 125kHz). HID RP10, RP15, RP40. PROVIDE WITH OPTIONAL IP65GSKT GASKET FOR EXTERIOR DEVICE LOCATIONS.
      ACCESS KEYPAD - HID RPK40
      ALTRONIX AL600 SERIES POWER SUPPLIES
      APC SMART UPS FOR SYSTEM BACK UP (4-HOURS MINIMUM)
      VON DUPRIN PANIC HARDWARE WITH ELECTRIFIED TRIM - SERIES #99 OR #33
      MAGNETIC DOOR CONTACTS - SENTROL 1078CT

      T-REX REQUEST TO EXIT MOTION DETECTORS - BOSCH DS160
      ACCESS CONTROL COMPOSITE CABLE:
      1) **ONE (1) 14-2C - LOCK POWER**
      2) **ONE (1) 18-2C AND ONE (1) 18-4C - CARD READER**
      3) **ONE (1) 18-4C - DOOR SWITCH**
      4) **ONE (1) 18-4C - REX/PIR**

      ADDITIONAL ACCESS CONTROL CABLE - 18-2C AND 18-4C SHIELDED CMP CALE AS REQUIRED. ALLEGION DOOR SECURITY SYSTEM:

      1) **KASTLE SYSTEMS V6 PANEL & MANAGEMENT**
      2) **NETWORK POE SWITCHES: 12 PORT CISCO CATALYST 3560CX (WS-C3560CX-12PD-S), 24 PORT CISCO CATALYST 3650 (WS-C3650-24PD-S), 48 PORT CISCO CATALYST 3650 (WS-C3560CX-12PD-S)**
      3) **WIRELESS GATEWAY WITH CAT6 HOMERUN TO IDF/POE SWITCH**
      4) **NDE SERIES WIRELESS LOCKS**
      5) **SCHLAGE CONTROL SMART LOCKS**

KEY NOTES

1. ACCESS CONTROL SYSTEM CONTROL PANEL COMPLETE WITH KEYED LOCKABLE ENCLOSURE, DIGITAL ALARM COMMUNICATOR, 120 VOLT CONNECTION, POWER SUPPLY AND TRANSFORMER, SECONDARY BATTERIES (OR CONNECTION TO SUPPLEMENTAL EMERGENCY POWER) AND CHARGER, OWNERS MANUAL, WARRANTY CARD, AND ALL MODULES AND ACCESSORIES AS REQUIRED FOR A COMPLETE AND OPERABLE SYSTEM.
2. TELEPHONE SYSTEM BACKUP INTERFACE. PROVIDE 1" CONDUIT WITH TELEPHONE CABLE FROM CONTROL PANEL DIGITAL ALARM COMMUNICATOR TO TELEPHONE SYSTEM/BACKBOARD LOCATION. COORDINATE PHONE LINE REQUIREMENTS WITH OWNER.
3. PRIMARY ETHERNET SYSTEM INTERFACE CONNECTION WITH REQUIRED MODULES AND CABLING HOMERUN TO NEAREST BUILDING DATA CABINET/ENCLOSURE. COORDINATE WITH OWNER FOR ALL REQUIRED CABLING STANDARDS IN PLACE.
4. ACCESS CONTROL SYSTEM TOUCH SCREEN TYPE KEYPAD. PROVIDE MANUFACTURER'S RECOMMENDED BACKBOX AND 3/4" CONDUIT HOMERUN WITH CABLE PER MANUFACTURERS RECOMMENDATIONS TO ACCESS CONTROL SYSTEM PANEL.
5. REQUEST TO EXIT BUTTON. PUSH BUTTON SHALL SIGNAL THROUGH ACCESS CONTROL PANEL NORMALLY OCCUPIED SPACE FOR MANUAL OPERATION OF DOOR ACCESS. SURFACE MOUNT OVER FLUSH BACKBOX LOCATED WITHIN 6" OF DOOR EDGE ON LATCH SIDE ADJACENT TO WALL SWITCHES UNLESS OTHERWISE NOTED. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB/HEADER AND 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANEL.
6. ACCESS CONTROL TERMINAL CABINET COMPLETE WITH LOCKABLE ENCLOSURE (KEYED TO MATCH CONTROL PANEL), 120 VOLT POWER SUPPLY AND TRANSFORMER, SECONDARY BATTERIES (OR CONNECTION TO SUPPLEMENTAL EMERGENCY POWER) AND ALL MODULES TERMINAL BLOCKS AND ACCESSORIES FOR A COMPLETE AND OPERABLE SYSTEM.
7. ACCESS CONTROL SYSTEM CARD READER. CARD READER SHALL BE UNIVERSAL TYPE WITH HID OR TOKEN CARDS PER OWNER'S SELECTION. SURFACE MOUNT OVER FLUSH BACKBOX LOCATED WITHIN 6" OF DOOR EDGE ON LATCH SIDE ADJACENT TO WALL SWITCHES UNLESS OTHERWISE NOTED. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB / HEADER AND 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANEL.
8. ACCESS CONTROL SYSTEM PROXIMITY READER. READER SHALL BE UNIVERSAL TYPE WITH HID OR TOKEN CARDS PER OWNER 'S SELECTION. SURFACE MOUNT OVER FLUSH BACKBOX LOCATED WITHIN 6" OF DOOR EDGE ON LATCH SIDE ADJACENT TO WALL SWITCHES UNLESS OTHERWISE NOTED. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB/HEADER AND 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANEL.
9. ELECTRIFIED DOOR HARDWARE. PROVIDE CONDUIT AND CABLING/CONDUCTORS TO DOOR HARDWARE INCLUDING CONNECTIONS TO ALL ELECTRIFIED EQUIPMENT AS IDENTIFIED ON PLAN AND COORDINATED WITH ARCHITECTURAL DOOR SCHEDULES. COORDINATE ROUTING OF CONDUIT AND CABLIN/CONDUCTORS FOR CONNECTIONS WITH DOOR INSTALLER CONTRACTOR PRIOR TO INSTALLATION. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB / HEADER AND 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANEL.
10. ACCESS CONTROL SYSTEM MAGNETIC DOOR HOLD. PROVIDE CONDUIT AND CONDUCTORS TO DOOR HOLD DEVICES, INCLUDING CONNECTIONS TO EQUIPMENT AS IDENTIFIED ON PLAN AND COORDINATED WITH ARCHITECTURAL DOOR SCHEDULES. COORDINATE ROUTING OF CONDUIT AND CONDUCTORS FOR CONNECTIONS WITH DOOR INSTALLER CONTRACTOR PRIOR TO INSTALLATION. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB / HEADER AND 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANLEL.
11. ACCESS CONTROL SYSTEM DOOR CONTACT/POSITION SWITCH. CONTACTS TO BE FLUSH MOUNTED IN NEW DOOR FRAMES / CONSTRUCTION LOCATED WITHIN 6" OF DOOR EDGE ON LATCH SIDE. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB/HEADER AND 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANEL.
12. PROVIDE 2" CONDUIT RISER WITH SYSTEM CONDUCTORS PER MANUFACTURER'S RECOMMENDATIONS FROM ACCESS CONTROL PANEL TO ACCESS CONTROL CABINETS ON FLOORS ABOVE.
13. UNDERGROUND ACCESS CONTROL SYSTEM CONDUIT AND SYSTEM CONDUCTORS PER MANUFACTURER'S RECOMMENDATIONS FROM ACCESS CONTROL PANEL LOCATION TO OTHER SITE BUILDING STRUCTURES. CONDUIT SIZE, ROUTING PER SITE PLAN DRAWINGS. CABLING TO BE PROVIDED IN A "STAR TOPOLOGY" CONFIGURATION. ROUTING OF SYSTEM CONDUCTORS' DAISY CHAINED THROUGH BUILDINGS IS NOT ACCEPTABLE.
14. PROVIDE CONDUIT SLEEVES BETWEEN FLOORS FOR ACCESS CONTROL SYSTEM CONDUCTOR PATHWAYS. WHERE FLOOR IS RATED, PROVIDE FIRESTOP SYSTEM ASSEMBLY WITH RATING EQUAL TO OR GREATER THAN PENETRATED STRUCTURE FOR A UL LISTED PENETRATION SYSTEM. (STI EZ-PATH OR APPROVED EQUAL).
15. FLUSH CEILING OR WALL MOUNTED ACCESS CONTROL SYSTEM AUDIBLE SOUNDER. PROVIDE 3/4" CONDUIT WITH HOMERUN CABLE PER MANUFACTURER'S RECOMMENDATION TO ACCESS CONTROL PANEL.
16. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #8 ON E-3.01 FOR SIZES AND QUANTITIES.
17. TYPICAL PULLBOX, IF REQUIRED. PROVIDE SERVICE LOOP IN ALL CABLES.
18. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #5 ON E-1.01 FOR SIZES AND QUANTITIES.

INTRUSION DETECTION SYSTEM GENERAL NOTES

1.1 GENERAL

1. **SECURITY CONTRACTOR SHALL PROVIDE, PROGRAM AND INSTALL A FULLY FUNCTIONAL, COMPLETE AND OPERATIONAL INTRUSION DETECTION SYSTEM. PROVIDE ALL ENGINEERING, DESIGN, TESTING, EQUIPMENT, MATERIALS, COMPONENTS AND INSTALLATION NECESSARY AS PART OF THIS WORK.**

2. **INTRUSION DETECTION SYSTEM, AT A MINIMUM, SHALL INCLUDE A DIGITAL ALARM COMMUNICATOR, BUILT-IN TELEPHONE LINE MONITOR, MEMORY LOGGER (500 EVENT MINIMUM), REAL TIME CLOCK, CALENDAR, TEST TIMER, BATTERY CHARGING/VOLTAGE SUPERVISION CIRCUITRY, BATTERY LEAD SUPERVISION, DIAGNOSTICS, TIME/EVENT BASED SCHEDULING AND ALL MODULES AND COMPONENTS FOR A COMPLETE AND OPERABLE SYSTEM.**

3. **SYSTEM SHALL:**

   A. **BE SCALABLE TO SUPPORT INDEPENDENT DEVICE ZONES (SINGLE DEVICE OR GROUP OF DEVICES GROUPED TOGETHER), EACH WITH INTERIOR AND PERIMETER PARTITIONING. QUANTITY OF ZONES DEPENDENT ON PROJECT AND TO BE COORDINATED WITH OWNER.**

   B. **PROVIDE IDENTIFICATION, ANNUNCIATION AND COMMUNICATION OF ALARMED DETECTORS ON A POINT-BY-POINT BASIS, INCLUDING EACH ACCESS CONTROL BY USER NUMBER.**

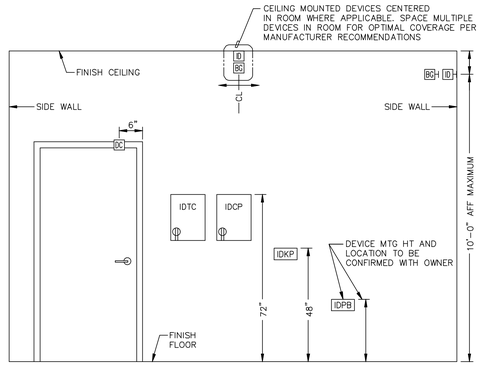
   C. **BE CAPABLE OF LOCALLY OR REMOTE PROGRAMMING. BE CAPABLE OF LOCALLY OR REMOTE PROGRAMMING.**

   D. **BE PROVIDED WITH SECONDARY POWER BACK-UP:**

      1) **VIA BATTERIES. BATTERIES TO BE SIZED FOR MINIMUM 60-HOUR SUPERVISION AND 15-MINUTES OF ALARM. BATTERY CHARGER TO BE SIZED BASED ON BATTERY CAPACITIES.**

   E. **ALLOW REAL-TIME STATUS MONITORING/VIEWING OF DEVICES AND UNIT AND AREA EVENTS (AC FAIL, BATTERY FAIL, UNIT CONNECTED/LOST, AREA ARM/DISARM, INPUT TROUBLE, ETC.)**

4. **ALL FIELD DEVICES SHALL BE INDIVIDUALLY HOMERUN TO IDCP OR IDTC. DAISY CHAINING OF DEVICES IS NOT ACCEPTABLE UNLESS WRITTEN APPROVAL IS PROVIDED PRIOR TO SYSTEM SHOP DRAWINGS AND INSTALLATION OF ANY DEVICES.**



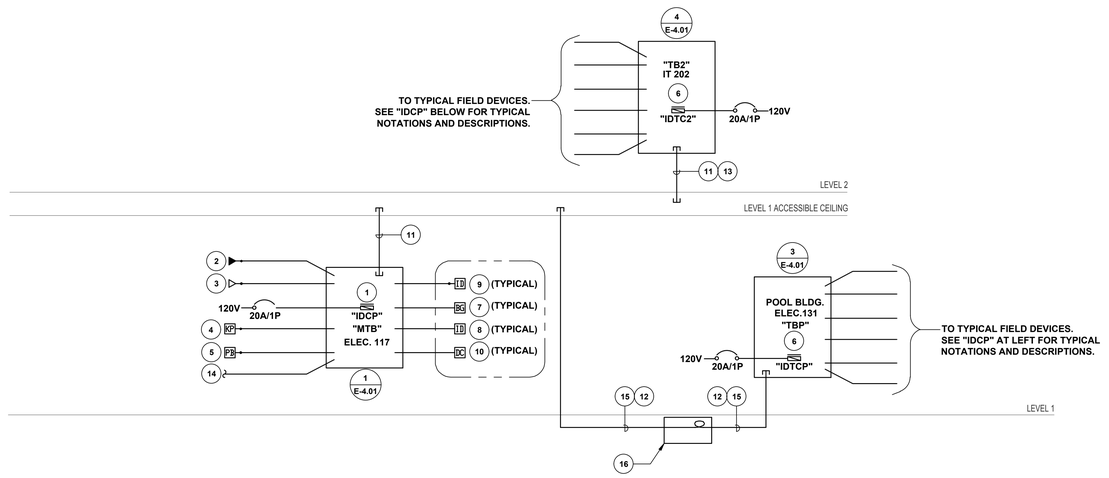
1.2 INTRUSION DETECTION AND ALARM SYSTEM BASIS OF DESIGN

1. **THE INTENT AND PURPOSE OF THE INTRUSION DETECTION AND ALARM SYSTEM IS TO PROVIDE SECURITY/INTRUSION DETECTION TO THE AREAS INDICATED ON PLAN, BY THE INSTALLATION OF DEDICATED AND SPECIFIC DEVICES TO COVER SUCH AREAS. PERIMETER DOORS, ROOF HATCHES, OR OTHER POTENTIAL ENTRY POINTS SHALL BE EQUIPPED WITH DEDICATED, CONCEALED MAGNETIC CONTACT SWITCHES AND INTERIOR AREA PROTECTION SHALL BE PROVIDED VIA A COMBINATION OF PASSIVE INFRARED / MICROWAVE TYPE, WALL OR CEILING MOUNTED DETECTORS, AND/OR GLASS BREAK SENSORS AS LOCATED PER PLANS. THE ARMING AND DISARMING OR THE INTRUSION DETECTION AND ALARM SYSTEM SHALL BE ACHIEVED LOCALLY WITH A DEDICATED KEYPAD OR REMOTELY ACCESSED VIA WEB/ETHERNET CONNECTION FROM A REMOTE LOCATION.**

2. **THE INTENT OF THE SECURITY PLAN DRAWINGS IS TO GUIDE THE SECURITY CONTRACTOR IN THE BASIC INTENT OF THE SYSTEM DESIGN AND SHALL NOT BE CONSIDERED A FINAL A COMPLETE SET OF PLANS. THE SECURITY CONTRACTOR SHALL INCLUDE AS PART OF HIS BID, AND SUBSEQUENT INSTALLATION, ALL REQUIRED MATERIALS AND LABOR, INCLUDING BUT NOT LIMITED TO ALL DEVICES, CABLING, CONNECTIONS, PATHWAYS, FIRESTOPPING, HARDWARE, SOFTWARE, UPS/BATTERY BACKUP, INTERFACES, WARRANTIES, ETC. FOR A COMPLETE AND OPERABLE SYSTEM.**

3. **THE FOLLOWING SHALL BE UTILIZED AS AN INTRUSION DETECTION AND ALARM SYSTEM EQUIPMENT BASIS OF DESIGN. THE LIST DOES NOT CONSTITUTE COMPLETE PARTS OR MATERIALS, BUT A GUIDE OF EQUIPMENT FROM AN ACCEPTABLE MANUFACTURER FOR COMPONENTS. CONTRACTOR SHALL AUGMENT AND PROVIDE ALL COMPONENTS NECESSARY FOR A COMPLETE AND OPERABLE SYSTEM. THE FOLLOWING LIST OF ITEMS ARE IDENTIFIED FROM BOSCH SECURITY SYSTEMS UNLESS OTHERWISE NOTED:**

   A. **ALARM PANEL - BOSCH D9412 GV4**
   B. **DIGITAL KEYPAD - BOSCH D1260**
   C. **PASSIVE INFRARED/MICROWAVE DETECTORS**
      BOSCH DS970 (LONG RANGE, SURFACE MTD.)
      BOSCH DS950 (MEDIUM RANGE, SURFACE MTD.)
      BOSCH DS9360 (360 DEGREE, SURFACE MTD.)
      HONEYWELL 995 (LONG/WIDE RANGE, FLUSH MTD.)
      HONEYWELL IS-280CM (360 DEGREE, FLUSH/SURFACE MTD.)
      HONEYWELL DT6360STC (360 DEGREE, HIGH CEILING OF 8 FEET TO 16 FEET)
   D. **GLASS BREAK SENSOR - HONEYWELL FG1625F**
   E. **SIREN/SPEAKER - SENTROL MPI36**
   F. **MAGNETIC DOOR CONTACTS**
      SENTROL 1078CT (FLUSH)
      SENTROL 1042TW (SURFACE)
      SENTROL 2505 (SURFACE, EXPOSED WIRE)
      SENTROL 2707A (HEAVY DUTY)
      GE 2202 (OVERHEAD DOOR)
   G. **OCTOPOPIT 8-ZONE EXPANDER - D8128D**
   H. **OCTORELAY - D8129**
   I. **POWER SUPPLY - ALTRONIX AL300ULX**
   J. **ALARM CABLE - PLENUM RATED (UON), STRANDED, PVC, 18GA MIN, 2PR TWISTED**



TYPICAL DEVICE MOUNTING DETAIL

SCALE: NONE | 2

KEY NOTES

1. INTRUSION DETECTION SYSTEM CONTROL PANEL COMPLETE WITH KEYED LOCKABLE ENCLOSURE, DIGITAL ALARM COMMUNICATOR, 120 VOLT CONNECTION, POWER SUPPLY AND TRANSFORMER, SECONDARY BATTERIES (OR CONNECTION TO SUPPLEMENTAL EMERGENCY POWER) AND CHARGER, OWNER'S MANUAL, WARRANTY CARD, AND ALL MODULES AND ACCESSORIES AS REQUIRED FOR A COMPLETE AND OPERABLE SYSTEM.
2. TELEPHONE SYSTEM BACKUP INTERFACE. PROVIDE 1"CONDUIT WITH TELEPHONE CABLE FROM CONTROL PANEL DIGITAL ALARM COMMUNICATOR TO TELEPHONE SYSTEM/BACKBOARD LOCATION. COORDINATE PHONE LINE REQUIREMENTS WITH OWNER.
3. PRIMARY ETHERNET SYSTEM INTERFACE CONNECTION WITH REQUIRED MODULES AND CABLING HOMERUN TO NEAREST BUILDING DATA CABINET/ENCLOSURE. COORDINATE WITH OWNER FOR ALL REQUIRED CABLING STANDARDS IN PLACE.
4. INTRUSION DETECTION SYSTEM TOUCH SCREEN TYPE KEYPAD. PROVIDE MANUFACTURER'S RECOMMENDED BACKBOX AND 3/4" CONDUIT HOMERUN WITH CABLE PER MANUFACTURERS RECOMMENDATIONS TO IDCP (OR IDTC).
5. INTRUSION DETECTION SYSTEM PANIC BUTTON. EXACT LOCATIONS AND FINAL QUANTITIES AS COORDINATED WITH OWNER. PROVIDE BACKBOX TO MATCH DEVICE FACEPLATE AND 3/4"C HOMERUN WITH CABLE PER MANUFACTURER'S RECOMMENDATIONS TO IDCP (OR IDTC).
6. INTRUSION DETECTION TERMINAL CABINET COMPLETE WITH LOCKABLE ENCLOSURE (KEYED TO MATCH CONTROL PANEL), 120 VOLT POWER SUPPLY AND TRANSFORMER, SECONDARY BATTERIES (OR CONNECTION TO SUPPLEMENTAL EMERGENCY POWER) AND ALL MODULES TERMINAL BLOCKS AND ACCESSORIES FOR A COMPLETE AND OPERABLE SYSTEM.
7. INTRUSION DETECTION BREAK GLASS SENSOR (CEILING OR WALL MOUNTED PER PLAN) WITH SPECIFIC FREQUENCY MICROPROCESSOR BASED SOUND ANALYSIS TECHNOLOGY. EXACT MOUNTING LOCATIONS (RELATIVE TO ROOM CONSTRUCTION AND ACOUSTICS, MOUNTING HEIGHTS, QUANTITY OF DEVICES PER SPACE, WINDOW SIZE COVERAGE, ETC.) SHALL BE PER MANUFACTURER'S RECOMMENDATIONS. PROVIDE MANUFACTURER'S RECOMMENDED BACKBOX WITH 3/4" CONDUIT HOMERUN WITH CABLE PER MANUFACTURER'S RECOMMENDATIONS TO IDCP (OR IDTC).
8. INTRUSION DETECTION MOTION SENSOR, CEILING MOUNTED, PANORAMIC 360 DEGREE COVERAGE, MULTI-TECHNOLOGY TYPE (PIR & MICROWAVE TYPE) WITH SELF TEST SUPERVISION. DETECTORS, QUANTITIES AND LOCATIONS SHALL BE LISTED FOR ENVIRONMENT AND MOUNTING HEIGHTS FOR WHICH THEY ARE BEING INSTALLED. PROVIDE MANUFACTURER'S RECOMMENDED BACKBOX WITH 3/4" CONDUIT HOMERUN WITH CABLE PER MANUFACTURER'S RECOMMENDATION TO IDCP (OR IDTC).
9. INTRUSION DETECTION MOTION SENSOR, WALL MOUNTED, MULTI-TECHNOLOGY TYPE (PIR & MICROWAVE TYPE) WITH SELF TEST SUPERVISION. DETECTORS, QUANTITIES AND LOCATIONS SHALL BE LISTED FOR ENVIRONMENT AND MOUNTING HEIGHTS FOR WHICH THEY ARE BEING INSTALLED. PROVIDE MANUFACTURER'S RECOMMENDED BACKBOX WITH 3/4" CONDUIT HOMERUN WITH CABLE PER MANUFACTURER'S RECOMMENDATION TO IDCP (OR IDTC).
10. INTRUSION DETECTION SYSTEM DOOR CONTACT/POSITION SWITCH. CONTACTS TO BE FLUSH MOUNTED IN NEW DOOR FRAMES/CONSTRUCTION LOCATED WITHIN 6" OF DOOR EDGE ON LATCH SIDE. SEE DOOR DETAILS FOR ADDITIONAL INFORMATION. PROVIDE J-BOX ABOVE DOOR JAMB/HEADER AND 3/4" CONDUIT HOMERUN WITH CABLE PER MANUFACTURER'S RECOMMENDATION TO IDCP (OR IDTC).
11. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #8 ON E-3.01 FOR SIZES AND QUANTITIES.
12. UNDERGROUND INTRUSION SYSTEM CONDUIT AND SYSTEM CONDUCTORS PER MANUFACTURER'S RECOMMENDATIONS FROM IDCP LOCATION TO OTHER SITE BUILDING STRUCTURES. CONDUIT SIZE, ROUTING AND PULL BOXES PER SITE PLAN DRAWINGS. SITE CONDUIT SYSTEM DISTRIBUTION AND IDTC TERMINAL CABINET CABLING TO BE PROVIDED IN A "STAR TOPOLOGY" CONFIGURATION. ROUTING OF SYSTEM CONDUCTORS' DAISY CHAINED THROUGH BUILDINGS IS NOT ACCEPTABLE.
13. PROVIDE CONDUIT SLEEVES BETWEEN FLOORS FOR ACCESS CONTROL SYSTEM CONDUCTOR PATHWAYS. WHERE FLOOR IS RATED, PROVIDE FIRESTOP SYSTEM ASSEMBLY WITH RATING EQUAL TO OR GREATER THAN PENETRATED STRUCTURE FOR A UL LISTED PENETRATION SYSTEM. (STI EZ-PATH OR APPROVED EQUAL).
14. TO OTHER INTEGRATED SECURITY SYSTEM HEAD END EQUIPMENT FOR ACCESS CONTROL AND/OR CCTV. CONTRACTOR SHALL PROVIDE ALL COMPONENTS NECESSARY FOR COMPLETE INTEGRATION, INCLUDING ALL PATHWAYS, CABLES, MODULES, HARDWARE, PROGRAMMING, ETC. FOR A COMPLETE AND OPERABLE SYSTEM.
15. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #5 ON E-1.01 FOR SIZES AND QUANTITIES.
16. TYPICAL PULLBOX, IF REQUIRED. PROVIDE SERVICE LOOP IN ALL CABLES.

KEY NOTES

1. FUTURE CLOSED CIRCUIT TELEVISION CONTROL PANEL (CTVCP) HEAD END EQUIPMENT LOCATION.
2. FUTURE CLOSED CIRCUIT TELEVISIONS POWER SUPPLY FOR CAMERA/COMPONENT EQUIPMENT.
3. FUTURE PRIMARY ETHERNET SYSTEM INTERFACE CONNECTION WITH REQUIRED MODULES.
4. FUTURE CLOSED CIRCUIT TELEVISION WORKSTATION LOCATION. PROVIDE FLUSH 4S JUNCTION BOX @+18" WITH BLANK COVER PLATE & 3/4" CONDUIT HOMERUN CONTROL PANEL (CTVCP) LOCATION. WORKSTATION LOCATION TO BE VERIFIED WITH OWNER.
5. FUTURE CLOSED CIRCUIT TELEVISION REMOTE MONITOR LOCATION. PROVIDE FLUSH 4S JUNCTION BOX @+18" WITH BLANK COVER PLATE & 3/4" CONDUIT HOMERUN CONTROL PANEL (CTVCP) LOCATION. REMOTE MONITOR LOCATION TO BE VERIFIED WITH OWNER.
6. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #5 ON E-1.01 FOR SIZES AND QUANTITIES.
7. SURFACE MOUNTED (CEILING OR WALL); FUTURE CLOSED CIRCUIT TELEVISION DOME TYPE CAMERA. PROVIDE WITH FLUSH 4S BACKBOX AND 3/4" CONDUIT HOMERUN TO NEAREST CTVCP (OR TERMINAL CABINET). WALL MOUNTED LOCATIONS SHALL BE @+8'-0", OR AS DIRECTED BY ARCHITECT. "WP" INDICATES OUTDOOR MOUNTED CAMERA. PROVIDE WITH OUTDOOR RATED BACKBOX. PROVIDE BLANK COVER PLATE ON ALL BACKBOXES.
8. PROVIDE CONDUIT SLEEVES BETWEEN FLOORS FOR CCTV SYSTEM CONDUCTOR PATHWAYS. WHERE FLOOR IS RATED, PROVIDE FIRESTOP SYSTEM ASSEMBLY WITH RATING EQUAL TO OR GREATER THAN PENETRATED STRUCTURE FOR A UL LISTED PENETRATION SYSTEM. (STI EZ-PATH OR APPROVED EQUAL).
9. TYPICAL PULLBOX, IF REQUIRED. PROVIDE SERVICE LOOP IN ALL CABLES.
10. FOR FUTURE INTEGRATION WITH ACCESS CONTROL AND INTRUSION DETECTION SYSTEMS.
11. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #8 ON E-3.01 FOR SIZES AND QUANTITIES.
12. UNDERGROUND CLOSED-CIRCUIT TELEVISION SYSTEM CONDUIT ONLY FROM CTVCP HEAD END LOCATION TO OTHER SITE BUILDING STRUCTURES. CONDUIT SIZE, ROUTING AND PULL BOXES PER SITE PLAN DRAWINGS.

KEY NOTES

(1) CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #5 ON E-1.01 FOR SIZES AND QUANTITIES.

SECURITY GENERAL NOTES:

1. ALL WALL MOUNTED DEVICE HEIGHTS SHALL BE VERIFIED WITH ARCHITECTURAL ROOM ELEVATIONS PRIOR TO ROUGH-IN.
2. PENETRATIONS THROUGH FIRE RATED WALLS SHALL BE PROTECTED WITH AN APPROVED FIRE STOP SYSTEM EQUAL TO OR GREATER THAN THE RATING OF THE WALL BEING PENETRATED.
3. ALL DEVICES MOUNTED BACK-TO-BACK ON COMMON WALLS SHALL BE INSTALLED IN SEPARATE BOXES OFFSET 24-INCHES MINIMUM OR PROVIDED WITH PUTTY OR ANOTHER APPROVED SOUNDPROOF BACKING.
4. WHEN EXPOSED CEILING OR OPEN GRID CONDITIONS EXIST, CONTRACTOR SHALL PROVIDE:
   - A. ALL CONDUITS SHALL BE ROUTED PARALLEL TO BUILDING STRUCTURES AND RACKED NEATLY IN GROUPS OF MULTIPLE PATHWAYS.
   - B. ALL SECURITY CABLING SHALL BE:
     1) INSTALLED IN EMT CONDUIT PATHWAYS.
5. COORDINATE LOCATION OF ALL SECURITY DEVICES WITH ARCHITECT PRIOR TO ROUGH-IN.

SITE PLAN GENERAL NOTES:

1. LOCATIONS OF EXISTING UTILITIES ARE NOT SHOWN AND CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN EXCAVATING AND TRENCHING ON THIS SITE TO AVOID EXISTING DUCTS, PIPING, OR CONDUITS, ETC., AND TO PREVENT HAZARDS TO PERSONNEL AND/OR DAMAGE TO EXISTING UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN AND INSTALLED BY ANY OTHER CONTRACTS. THE ENGINEER IS NOT RESPONSIBLE FOR THE LOCATION OF UNDERGROUND UTILITIES OR STRUCTURES, WHETHER OR NOT SHOWN OR DETAILED AND INSTALLED BY ANY OTHER CONTRACTS. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER, THE ENGINEER SHOULD SEARCH UNIDENTIFIED CONDITIONS BE DISCOVERED. THESE DRAWINGS AND SPECIFICATIONS DO NOT INCLUDE THE NECESSARY ELEMENTS FOR CONSTRUCTION SAFETY.
2. CONTRACTOR SHALL VERIFY THE LOCATION OF ANY EXISTING UNDERGROUND UTILITIES AND STRUCTURES PRIOR TO COMMENCEMENT OF WORK BY CONTACTING UNDERGROUND SERVICE ALERT (U.S.A.) AT 1(800) 422-4133, OR OTHER LOCAL APPLICABLE UNDERGROUND SERVICE ALERT AGENCIES.
3. THE DRAWINGS ILLUSTRATE LOCATIONS OF EQUIPMENT AND ASSEMBLIES, PULLBOXES, MANHOLES, HANDHOLES, AND VAULTS, INCLUDING OTHER ELECTRICAL UNDERGROUND STRUCTURES AND PATHWAYS. CONTRACTOR SHALL CLOSELY COORDINATE EXACT LOCATIONS AND MOUNTING DEPTHS OF ALL DEVICES, STRUCTURES AND PATHWAYS WITH OTHER TRADES PRIOR TO PLACEMENT, TO ENSURE FINAL LOCATIONS ARE OUTSIDE FEATURE LANDSCAPE AND ARCHITECTURAL AREAS AND ARE NOT IN CONFLICT WITH THE INSTALLATION OF MATERIALS BY OTHER TRADES.
4. SEE ARCHITECTURAL, CIVIL AND LANDSCAPE PLANS FOR EXACT LOCATION OF FIXTURES, PULLBOXES, MANHOLES, OTHER ELECTRICAL EQUIPMENT AND DEVICES, ETC. COORDINATE ALL UNDERGROUND STRUCTURES AND CONDUIT ROUTING WITH ARCHITECT OR OWNERS' REPRESENTATIVE PRIOR TO ROUGH-IN, TO ENSURE SUCH ITEMS ARE NOT PLACED IN PLANTING / HARDSCAPE AREAS.
5. ALL EQUIPMENT LOCATED OUTDOORS SHALL BE WEATHERPROOF, NEMA 3R RATED.
6. PROVIDE PULL STRING IN ALL EMPTY CONDUITS.

SCALE: 1 inch = 4 ft.

POOL BUILDING SECURITY PLAN | SCALE: 1/4"=1'-0" | 1

SECURITY GENERAL NOTES:

1. ALL WALL MOUNTED DEVICE HEIGHTS SHALL BE VERIFIED WITH ARCHITECTURAL ROOM ELEVATIONS PRIOR TO ROUGH-IN.
2. PENETRATIONS THROUGH FIRE RATED WALLS SHALL BE PROTECTED WITH AN APPROVED FIRE STOP SYSTEM EQUAL TO OR GREATER THAN THE RATING OF THE WALL BEING PENETRATED.
3. ALL DEVICES MOUNTED BACK-TO-BACK ON COMMON WALLS SHALL BE INSTALLED IN SEPARATE BOXES OFFSET 24-INCHES MINIMUM OR PROVIDED WITH PUTTY OR ANOTHER APPROVED SOUNDPROOF BACKING.
4. WHEN EXPOSED CEILING OR OPEN GRID CONDITIONS EXIST, CONTRACTOR SHALL PROVIDE:
   - A. ALL CONDUITS SHALL BE ROUTED PARALLEL TO BUILDING STRUCTURES AND RACKED NEATLY IN GROUPS OF MULTIPLE PATHWAYS.
   - B. ALL SECURITY CABLING SHALL BE:
     1) INSTALLED IN EMT CONDUIT PATHWAYS.
5. COORDINATE LOCATION OF ALL SECURITY DEVICES WITH ARCHITECT PRIOR TO ROUGH-IN.

TELECOMMUNICATIONS SYSTEM GENERAL NOTES

1. THESE DRAWINGS AND SPECIFICATIONS ARE INTENDED TO COVER A COMPLETE INSTALLATION OF THE TELECOMMUNICATIONS (VOICE/DATA/VIDEO) SYSTEM. THE OMISSION OR EXPRESSED REFERENCE TO ANY ITEM OF LABOR OR MATERIALS REQUIRED FOR THE PROPER EXECUTION OF THE WORK IN ACCORDANCE WITH PRESENT PRACTICE OF THE TRADE SHALL NOT RELIEVE THE CONTRACTOR FROM PROVIDING SUCH ADDITIONAL LABOR AND MATERIALS.

2. THE DESIGN-BUILD TELECOMMUNICATION CONTRACTOR IS RESPONSIBLE FOR THE DESIGN AND CONSTRUCTION OF A COMPLETE TELECOMMUNICATION SYSTEM BASED ON THESE CONCEPTUAL PLANS AND SPECIFICATIONS.

3. THE TELECOMMUNICATION CONTRACTOR IS REQUIRED TO REVIEW ALL OF THE PROJECT'S CONSTRUCTION DOCUMENTS AS A WHOLE IN ORDER TO IDENTIFY ALL REQUIREMENTS THAT DIRECTLY OR INDIRECTLY AFFECT ITS PORTION OF THE TELECOMMUNICATION WORK, EVEN REQUIREMENTS LOCATED IN SECTIONS DESIGNATED AS APPLICABLE TO OTHER TRADES. IN CASE OF CONFLICTS, THE CONTRACTOR SHALL EITHER OBTAIN DIRECTION FROM THE OWNER'S REPRESENTATIVE OR OTHERWISE APPLY THE MORE STRINGENT REQUIREMENT

4. REFER TO THE ELECTRICAL PLANS AND SPECIFICATIONS FOR ADDITIONAL INFORMATION AND REQUIREMENTS. ALL APPLICABLE PORTIONS SHALL APPLY TO THE TELECOMMUNICATIONS SCOPE OF WORK.

5. THE TELECOMMUNICATION SYSTEM AS SHOWN ON THESE PLANS IS CONCEPTUAL ONLY AND IS BASED ON INITIAL OWNER AND DESIGN TEAM INPUT RECEIVED. THE TELECOMMUNICATION CONTRACTOR IS RESPONSIBLE FOR MODIFYING THE TELECOMMUNICATION SYSTEM AND DESIGN INTENT TO THE ACTUAL CONDITIONS OF THIS PROJECT AND THE OWNER'S FINAL NEEDS. COORDINATE, CONFIRM AND FINALIZE THE SYSTEMS EQUIPMENT, FEATURES, COVERAGE AND PROGRAMMING WITH THE OWNER'S REPRESENTATIVE. VERIFY WITH THE OWNER'S REPRESENTATIVE THE LEVEL OF INTEGRATION WITH OTHER SYSTEMS SUCH AS AV, SECURITY/CCTV, LIGHTING CONTROL, ENERGY MANAGEMENT, ETC.

6. THE TELECOMMUNICATION CONTRACTOR SHALL DEVELOP A COMPLETE SET OF CONSTRUCTION DOCUMENTS, PLANS AND SPECIFICATIONS AND SUBMIT TO THE OWNER'S REPRESENTATIVE FOR APPROVAL BEFORE THE START OF CONSTRUCTION.

7. PROVIDE ALL REQUIRED MATERIALS INCLUDING BUT NOT LIMITED TO EQUIPMENT, HARDWARE, DEVICES, RACKS, TERMINAL CABINETS, CONTROLLERS, POWER SUPPLIES, WIRING AND CABLING, WIRE/CABLING MANAGEMENTS SYSTEMS AND SUPPORTS, CONDUITS AND RACEWAYS, ETC. FOR A COMPLETE AND OPERABLE TELECOMMUNICATION SYSTEMS.

8. WIRELESS DEVICES AND/OR COMPONENTS ARE NOT ALLOWED AS PART OF THE BASE BID UNLESS OTHERWISE NOTED. APPROVAL OF WIRELESS SYSTEMS SHALL BE AT THE DISCRETION OF THE OWNER'S REPRESENTATIVE.

9. ALL SYSTEM SOFTWARE PLATFORMS AND QUANTITY OF LICENSES SHALL BE PROVIDED FOR ALL FURNISHED EQUIPMENT AS PART OF THE TELECOMMUNICATION CONTRACTORS COMPLETE AND OPERABLE SYSTEMS. ALL SOFTWARE PLATFORMS INSTALLED SHALL BE THE FULL AND COMPLETE VERSION OF THE MOST RECENT SOFTWARE PACKAGES AVAILABLE AT THE TIME OF THE INSTALLATION. THE OWNER'S REPRESENTATIVE SHALL BE PROVIDED WITH THE FORMAL COPIES OF ALL LICENSES AND FURNISHED WITH ALL USERNAMES AND PASSWORDS FOR THE SYSTEM AS PART OF THE CLOSE-OUT DOCUMENTATION.

10. THE TELECOMMUNICATIONS CONTRACTOR SHALL BE A LICENSED (C-7) LOW VOLTAGE SYSTEMS CONTRACTOR AND A LICENSED (C-10) ELECTRICAL CONTRACTOR AND SHALL HAVE BEEN IN BUSINESS FURNISHING AND INSTALLING SIMILAR SYSTEMS IN SCOPE AND SIZE FOR A MINIMUM OF FIVE (5) YEARS.

11. THE TELECOMMUNICATION CONTRACTOR SHALL BE A FACTORY AUTHORIZED DISTRIBUTOR, INSTALLER AND WARRANTY PROVIDER FOR THE MANUFACTURER OF THE EQUIPMENT TO BE INSTALLED. PROVIDE LETTER FROM THE SYSTEMS MANUFACTURERS CERTIFYING THAT THE CONTRACTOR IS AN AUTHORIZED DISTRIBUTOR AND INSTALLER OF THE EQUIPMENT. PROVIDE CERTIFICATES OF TRAINING FOR PERSONNEL PERFORMING THE WORK.

12. THE TELECOMMUNICATION CONTRACTOR SHALL MAINTAIN A FULLY EQUIPPED SERVICE DEPARTMENT CAPABLE OF FURNISHING ADEQUATE REPAIR SERVICES FOR THE WARRANTED EQUIPMENT WITH RESPONSE TIMES TO THE PROJECT SITE WITHIN 4-HOURS.

13. ALL WORK AND EQUIPMENT SHALL BE GUARANTEED IN WRITING FOR A PERIOD OF 1-YEAR AFTER FINAL ACCEPTANCE OF WORK. PROVIDE AN EXTENDED 1-YEAR WARRANTY FOR A TOTAL OF 2-YEARS FROM FINAL ACCEPTANCE OF WORK.

14. THE CONSTRUCTION DOCUMENTS, PLANS AND SPECIFICATIONS AND ALL WORK AND MATERIALS SHALL BE IN FULL ACCORDANCE WITH ALL LEGAL AND INDUSTRY REQUIREMENTS AND STANDARDS INCLUDING WITHOUT LIMITATION THE FOLLOWING:

   A. CALIFORNIA CODE OF REGULATIONS TITLE 24, PARTS 1 AND 2 (CALIFORNIA BUILDING CODE), 2022 EDITION.
   B. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 3 (CALIFORNIA ELECTRICAL CODE), 2022 EDITION.
   C. CALIFORNIA CODE OF REGULATIONS TITLE 24, PART 9 (CALIFORNIA FIRE CODE), 2022 EDITION.
   D. OTHER REGULATING AGENCIES WHICH MAY HAVE AUTHORITY OVER ANY PORTION OF THE WORK, INCLUDING THE STATE OF CALIFORNIA DIVISION OF INDUSTRIAL SAFETY, AND THOSE CODES AND STANDARDS LISTED IN THESE NOTES AND SPECIFICATIONS.
   E. THE ELECTRICAL SYSTEMS FUNCTIONALITY STANDARDS SET FORTH IN TITLE 7 OF THE CALIFORNIA CIVIL CODE (THE "RIGHT TO REPAIR ACT").
   F. THE MANUFACTURER'S REQUIREMENTS OR RECOMMENDATIONS FOR ANY INCORPORATED PRODUCTS.
   G. THE MOST CURRENT APPROVED ISSUES OF ANY NOTED SPECIFICATIONS, CODES AND STANDARDS, INCLUDING SUPPLEMENTS, UNLESS NOTED OTHERWISE.

15. IN INTERPRETING THESE PLANS, THE FOLLOWING GENERAL RULES APPLY:

   A. WRITTEN DIMENSIONS SHALL TAKE PRECEDENCE OVER SCALED DRAWINGS.
   B. SCALED DIMENSIONS AND GRAPHICALLY SHOWN LOCATIONS ARE TO BE CONSIDERED ONLY APPROXIMATE, FIELD VERIFY DIMENSIONS PRIOR TO BID.
   C. BECAUSE THE PLANS ARE INTENDED TO SET FORTH THE REQUIREMENTS FOR CONSTRUCTION IN ONLY AN INDUSTRY-STANDARD LEVEL OF QUALITY AND DETAIL, AND THEREFORE ARE INTENDED TO BE SUPPLEMENTED BY APPROPRIATE REQUESTS FOR CLARIFICATION AND INFORMATION, ERRORS AND OMISSIONS AND TO BRING THESE ERRORS AND OMISSIONS TO THE ATTENTION OF AN APPROPRIATE OWNER REPRESENTATIVE IN A TIMELY MANNER AND ASSUMES THE RISK OF THE CONSEQUENCES OF FAILING TO DO SO BEFORE BIDDING OR OTHERWISE PROCEEDING.
   D. THE CONTRACTOR SHALL REVIEW AND VERIFY ALL DIMENSIONS PRIOR TO STARTING CONSTRUCTION AND NOTIFY THE ELECTRICAL ENGINEER IMMEDIATELY OF ANY DISCREPANCIES OR INCONSISTENCIES.

16. SUBMIT COMPLETE CONSTRUCTION DOCUMENTS, PLANS, SPECIFICATIONS AND CATALOG DATA SHEETS FOR THE TELECOMMUNICATION SYSTEMS TO THE OWNER'S REPRESENTATIVE FOR APPROVAL. SUBMITTALS SHALL AT THE MINIMUM INCLUDE THE FOLLOWING:

   A. COPIES OF CONTRACTORS CURRENT C-7 LOW VOLTAGE CONTRACTOR LICENSE AND C-10 ELECTRICAL CONTRACTORS LICENSE.
   B. COPY OF THE EQUIPMENT MANUFACTURERS AUTHORIZATION LETTERS CERTIFYING THE CONTRACTOR AS AN AUTHORIZED DISTRIBUTOR AND INSTALLER.
   C. COPIES OF CERTIFICATES OF TRAINING FOR THE INSTALLING PERSONNEL AND PROOF THAT THEY ARE LOCATED AT THE CONTRACTOR'S LOCAL FACILITY.
   D. LIST OF PROJECTS SIMILAR IN SCOPE AND SIZE THAT HAVE BEEN COMPLETED IN THE LAST FIVE (5) YEARS.
   E. MANUFACTURERS AND CONTRACTORS' WARRANTIES.
   F. PLANS FOR THE SITE AND BUILDING AT THE SAME SCALE AS THE CONTRACT DRAWINGS. PLANS SHALL SHOW WALLS, DOORS, WINDOWS, ROOM NUMBERS, ROOM NAMES. THE PLANS SHALL INCLUDE THE TYPE AND LOCATION OF ALL EQUIPMENT, HARDWARE, DEVICES, RACKS, TERMINAL CABINETS, CONTROLLERS, WIRING AND CABLING, CONDUIT AND RACEWAYS, ETC.
   G. PLANS SHALL INCLUDE LEGENDS, DEVICE AND BACKBOX MOUNTING REQUIREMENTS AND HEIGHTS. THE MOUNTING HEIGHTS SHALL BE SYMMETRICAL FOR ALL TYPES OF DEVICES.
   H. PLANS SHALL INCLUDE RISER DIAGRAMS, SINGLE LINE DIAGRAMS, WIRING DIAGRAMS CALCULATIONS FOR THE COMPLETE SYSTEM.
   I. PLANS SHALL SHOW INTERFACE WITH OTHER SYSTEMS THAT ARE REQUIRED TO BE INTEGRATED.
   J. MANUFACTURERS CATALOG DATA AND CUT SHEETS FOR ALL EQUIPMENT.
   K. TESTING AND COMMISSIONING PROCEDURES COORDINATED WITH THE OWNER'S REQUIREMENTS AND MANUFACTURE'S STANDARDS INCLUDING ANSI/TIS-568-C.0, C.1, C.2 AND C.3.

17. SUBMITTALS WILL BE REVIEWED BY THE ELECTRICAL ENGINEER, IF AT ALL, ONLY PURSUANT TO THE INDUSTRY-STANDARD PROTOCOL SET FORTH IN AIA DOCUMENT A201, AND IN NO EVENT WILL THE SUBMITTAL REVIEW PROCESS RELIEVE OR LESSEN THE SUBMITTING CONTRACTOR'S RESPONSIBILITY FOR AN INAPPROPRIATE SUBMITTAL.

18. IN NO EVENT WILL ANY SITE VISITS BY THE ELECTRICAL ENGINEER CONCERN CONSTRUCTION MEANS AND METHODS OR CONSTRUCTION SAFETY, AND ALL SUCH MATTERS SHALL REMAIN THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

19. COPIES OF THE PLANS PROVIDED IN ANY ELECTRONIC FORM ARE SUBJECT TO THE SAME PROVISIONS AS THE OTHER INSTRUMENTS OF SERVICE PREPARED BY OR ON BEHALF OF THE ELECTRICAL ENGINEER FOR THE PROJECT, INCLUDING WITHOUT LIMITATION THE ENGINEER'S COMMON LAW, STATUTORY OR OTHER RESERVED RIGHTS, INCLUDING COPYRIGHTS. A RECIPIENT IS GRANTED AT MOST A TRANSFERABLE NONEXCLUSIVE LICENSE TO REUSE THE PLANS SOLELY FOR PROJECT PURPOSES, AND NO RECIPIENT IS AUTHORIZED TO USE OR TO ALLOW THE USE OF ALL OR ANY PORTION OF THESE PLANS FOR ANY OTHER PURPOSE, AND ANY USE FOR ANY OTHER PURPOSE WOULD CONSTITUTE ACTIONABLE PLAGIARISM. ELECTRICAL ENGINEER PROVIDES DOCUMENTS IN AN ELECTRONIC FORM ONLY IN ITS STANDARD FORMATS AND CONVENTIONS AND WITH NO GUARANTEE OF COMPATIBILITY WITH ANY RECIPIENT'S SOFTWARE OR HARDWARE AND ANY USE WITH OR CONVERSION TO OTHER FORMATS OR CONVENTIONS, OR THE USE WITH ANY PARTICULAR SOFTWARE OR HARDWARE, IS AT THE RECIPIENT'S SOLE RISK.

20. THE DRAWINGS INDICATE, IN A DIAGRAMMATIC MANNER, THE DESIRED LOCATIONS AND ARRANGEMENT OF THE COMPONENTS OF TELECOMMUNICATIONS WORK. DETERMINE EXACT TELECOMMUNICATION EQUIPMENT, CONDUIT AND WIRING ROUTING, CONDUIT BENDS, AUXILIARY JUNCTION BOXES, SUPPORTS AND UNDEFINED CONSTRUCTION DETAILS AS A JOB CONDITION TO BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE CODE REQUIREMENTS. PROPER JUDGEMENT MUST BE EXERCISED IN EXECUTING THE WORK SO AS TO SECURE THE BEST POSSIBLE INSTALLATION IN THE AVAILABLE SPACE AND TO OVERCOME LOCAL DIFFICULTIES DUE TO SPACE LIMITATIONS OR INTERFERENCE OF CONDITIONS ENCOUNTERED.

21. IN THE EVENT CHANGES IN THE INDICATED LOCATIONS OR ARRANGEMENTS ARE NECESSARY, DUE TO DEVELOPED CONDITIONS IN THE BUILDING CONSTRUCTION OR REARRANGEMENT OF EQUIPMENT, SUCH CHANGES SHALL BE MADE WITHOUT COST PROVIDING THE CHANGE IS ORDERED BEFORE THE CONDUIT RUNS, ETC., AND WORK DIRECTLY CONNECTED TO SAME IS INSTALLED AND NO EXTRA MATERIALS ARE REQUIRED.

22. PROVIDE ALL EQUIPMENT WITH ENCLOSURES LISTED OR LABELED FOR USE AND LOCATION WHERE SUCH EQUIPMENT IS INSTALLED.

23. PROVIDE UL LISTED FIRE STOP FOR ALL PENETRATIONS THROUGH FIRE RATED FLOORS, WALLS, AND CEILINGS TO MAINTAIN ALL FIRE RATINGS.

24. GROUNDING SHALL BE EXECUTED IN ACCORDANCE WITH ALL APPLICABLE CODES AND REGULATIONS, BOTH OF THE STATE OF CALIFORNIA AND LOCAL AUTHORITIES HAVING JURISDICTION.

25. CONDUIT FOR ROOF MOUNTED EQUIPMENT SHALL BE ROUTED BELOW ROOF AND WITHIN BUILDING.

26. ALL TELECOMMUNICATION EQUIPMENT SHALL BE NEW AND BE U.L. OR ETL LISTED AND LABELED.

TELECOMMUNICATIONS SYMBOLS LIST

NOTE: REFERENCE ELECTRICAL SHEETS FOR ADDITIONAL GENERAL ELECTRICAL SYMBOLS. ALL APPLICABLE PORTIONS SHALL APPLY TO THIS SCOPE OF WORK AS THOUGH WRITTEN HEREIN.

- JUNCTION BOX, FLUSH WALL MOUNTED, +18".
- JUNCTION BOX CONCEALED ABOVE ACCESSIBLE CEILING.
- INDICATES CONNECTION TO EQUIPMENT AS REQUIRED, TYPICAL.
- CONTROL PANEL OR TERMINAL CABINET AS INDICATED ON PLANS.
- INDICATES CONDUIT DROP WITHIN BUILDING WALL.
- INDICATES CONDUIT RISER WITHIN BUILDING WALL.
- TELEPHONE BACKBOARD PROVIDED & INSTALLED BY ELECTRICAL CONTRACTOR, SEE E-4.01.
- TELEPHONE OUTLET MOUNTED AT +18" AFF - UON. PROVIDE 3/4"C. TO POINT ABOVE ACCESSIBLE CEILING SPACE OR AS OTHERWISE INDICATED. CONDUIT & OUTLET BOX PROVIDED & INSTALLED BY ELECTRICAL CONTRACTOR, SEE E-3.01.
  W - DENOTES WALL MOUNTED AT +45" AFF - UON
- DATA OUTLET MOUNTED AT +18" AFF - UON. PROVIDE 3/4"C. TO POINT ABOVE ACCESSIBLE CEILING SPACE OR AS OTHERWISE INDICATED. CONDUIT & OUTLET BOX PROVIDED & INSTALLED BY ELECTRICAL CONTRACTOR, SEE E-3.01.
  W - DENOTES WALL MOUNTED AT +45" AFF - UON
- COMBINATION TELEPHONE/DATA OUTLET MOUNTED AT +18" AFF - UON. PROVIDE 3/4"C. TO POINT ABOVE ACCESSIBLE CEILING SPACE OR AS OTHERWISE INDICATED. CONDUIT & OUTLET BOX PROVIDED & INSTALLED BY ELECTRICAL CONTRACTOR, SEE E-3.01.
  W - DENOTES WALL MOUNTED AT +45" AFF - UON
- WAP — WIRELESS ACCESS POINT ON FLUSH CEILING MOUNTED OUTLET BOX.
- WA — EXTERIOR WIRELESS ACCESS POINT ON FLUSH WALL MOUNTED WEATHERPROOF OUTLET BOX. PROVIDE 3/4"C. TO NEAREST TELEPHONE BACKBOARD IN IDF CLOSET.
- TV — RECESSED FLAT PANEL TV/DISPLAY WALL BOX PROVIDED AND INSTALLED BY ELECTRICAL CONTRACTOR, REFER TO E-0.01 & E-3.01.
- C / E-2 — DETAIL CALLOUT, "C" INDICATES DETAIL, "E-2" INDICATES DRAWING WHERE DETAIL OCCURS.
- 1 — PLAN OR KEY NOTE CALLOUT. REFER TO CORRESPONDING NOTE ON DRAWING WHERE CALLOUT OCCURS.
- S — FLUSH CEILING MOUNTED PA SPEAKER WITH 3/4"C. TO NEAREST ACCESSIBLE CEILING SPACE.
- WP S — WEATHERPROOF PA SPEAKER WITH 3/4"C. TO NEAREST ACCESSIBLE CEILING SPACE.

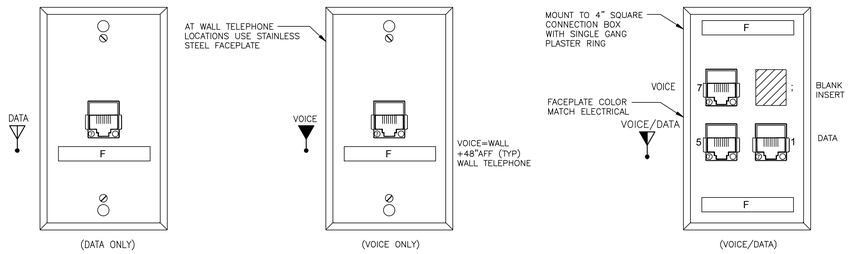
NOTES:



1. SUPPORT CLIPS MUST SPECIFICALLY BE DESIGNED AND RATED FOR USE IN CATEGORY 7 CABLE INSTALLATION.
2. INSTALL APPROPRIATE SIZE AND QUANTITY SUPPORT CLIPS FOR CABLES TO BE SUPPORTED +30% EXPANSION.
3. USE MANUFACTURERS RECOMMENDED MOUNTING HARDWARE, APPROPRIATE FOR ATTACHING TO WALL OR CEILING STRUCTURES.
4. CEILING TILE TEE GRID, DROP WIRES AND HVAC EQUIPMENT SHALL NOT BE USED AS MOUNTING POINTS.
5. SECURE CABLE IN SUPPORT CLIPS AS PER MANUFACTURERS RECOMMENDATION FOR CAT 7 CABLE. DO NOT EXCEED INDICATED FILL RATIOS.
6. CABLE SUPPORT CLIPS SHALL BE SPACED A MAXIMUM OF 5' APART.
7. CABLE TRAY TO BE PROVIDED. SUPPORT CLIPS TO BE PROVIDED IN AREAS WHERE QUANTITIES OF CABLES ARE INSUFFICIENT TO REQUIRE CABLE TRAY.
8. INSTALL TRIANGULAR METAL BRACKETS (NOT SHOWN) FOR HIGH STATION CABLE CAPACITY REQUIREMENTS.

KEY NOTES:

1. UNDERGROUND SERVICE CONDUITS FROM PROPERTY LINE FOR SERVICE PROVIDER CABLING PER UTILITY COMPANY REQUIREMENTS, REFER TO E-1.01.
2. 3/4" CONDUIT WITH TELEPHONE CABLING AND TWO (2) RJ-31X-CONFIGURED JACKS AS REQUIRED, TO THE MAIN FIRE ALARM CONTROL PANEL.
3. 3/4" CONDUIT WITH TELEPHONE CABLING, STUBBED UP INTO THE ELEVATOR MACHINE ROOM FOR REQUIRED DEDICATED TELEPHONE SERVICE. COORDINATE WITH ELEVATOR INSTALLER FOR EXACT LOCATION OF STUB UP.
4. 3/4" CONDUIT WITH TELEPHONE CABLING AND JACK AS REQUIRED, TO THE TELEPHONE ENTRY/ACCESS CONTROL SYSTEM AT THE MAIN ENTRANCE TO THE FACILITY. COORDINATE WITH ARCHITECT/OWNER FOR EXACT LOCATION. TELEPHONE CONNECTION TO MAIN TELEPHONE BACKBOARD 'TB1'.
5. 3/4" CONDUIT WITH TELEPHONE CABLE AND JACK AS REQUIRED TO THE AREA OF REFUGE 2-WAY COMMUNICATION BASE SYSTEM STATION COORDINATE WITH ARCHITECT FOR EXACT LOCATIONS WHERE APPLICABLE.
6. MAIN TELECOM TERMINAL BACKBOARD 'TB1' LOCATED AT GROUND LEVEL. 'TB1' PROVIDES FOR LOW VOLTAGE UTILITY SERVICES MINIMUM POINT OF ENTRY (MPOE) AND PROVIDES DEDICATED TERMINATIONS/CABLING FOR SOURCING OF TELEPHONE AND CABLE TV DISTRIBUTION CABLE.
7. TELECOM TERMINAL BACKBOARD. SEE FLOOR PLAN 'TE' SHEETS. THE BACKBOARD LOCATIONS ARE DEDICATED UTILITY EQUIPMENT SPACES PROVIDING THE DESIGNATED FLOOR, OR AREA SERVING FACILITY FOR TERMINATION/CROSS-CONNECTION OF BACKBONE/TRUNK CABLING ROUTED FROM THE MAIN TELECOM ROOM TO THE FEEDER AND STATION CABLES FOR VOICE, DATA, AND CABLE TV SERVICES.
8. PROVIDE GROUND CONDUCTOR CONNECTIONS, AND EQUIPMENT GROUND BONDING CONNECTIONS TO SUPPORT THE INSTALLATION OF SIGNAL PROCESSING/DATA COM EQUIPMENT, TYPICAL FOR MPOE ROOM AND ALL TELECOM CLOSET BACKBOARDS.
9. PROVIDE ALL CABLING, CONNECTORS, AND CONNECTING HARDWARE FOR TELEPHONE / VOICE COMMUNICATIONS PER OWNER REQUIREMENTS.
10. PROVIDE ALL CABLING, CONNECTORS, AND CONNECTING HARDWARE FOR DATA COMMUNICATIONS AND NETWORKING PER OWNER REQUIREMENTS.
11. PROVIDE ALL CABLING, CONNECTORS, AND CONNECTING HARDWARE FOR BROADBAND CABLE TELEVISION PER OWNER AND ACCESS PROVIDER REQUIREMENTS. ALLOW SPACE ON BACKBOARD FOR FUTURE CONNECTIONS AT BACKBOARD EQUIPMENT FOR SATELLITE TELEVISION EQUIPMENT.
12. ALL ACTIVE EQUIPMENT, INCLUDING POWER SUPPLIES, SIGNAL PROCESSING DEVICES, BROADBAND/RF/AUDIO AMPLIFIERS, COMPUTERS AND DATA NETWORKING DEVICES, TELEPHONE SWITCHING DEVICES, ETC., SHALL BE PROVIDED BY OTHERS.
13. 3/4" CONDUIT WITH TELEPHONE CABLING, ROUTED TO SECURITY SYSTEM CONTROL PANEL FOR REQUIRED DEDICATED TELECOM/BUILDING SYSTEMS CONNECTIVITY.
14. "MDF" SHALL BE A FLOOR-STANDING DATA EQUIPMENT RACK: CHATSWORTH STANDARD RACK 55053 OR APPROVED EQUAL, 19"W X 84"H X 3'D, WITH ALL ACCESSORIES PROVIDED FOR A COMPLETE AND OPERABLE SYSTEM. PROVIDE FIBER OPTIC TERMINAL PANELS, CAT6A PATCH PANELS, HORIZONTAL AND VERTICAL CABLE MANAGEMENT, SURGE SUPPRESSOR/PLUG STRIPS, GROUNDING/BONDING ACCESSORIES, AND LABELING AS REQUIRED BY OWNER. ALL ACTIVE EQUIPMENT, INCLUDING POWER SUPPLIES, SIGNAL PROCESSING DEVICES, BROADBAND/RF/AUDIO AMPLIFIERS, COMPUTERS AND DATA NETWORKING DEVICES, TELEPHONE SWITCHING DEVICES, ETC., SHALL BE PROVIDED BY OTHERS.
15. OUTLETS FOR VOICE AND DATA INCLUDING CAT6A MODULAR JACKS/FACEPLATE ON A RECESSED OUTLET BOX WITH STAR-CONFIGURED 4-PAIR CAT7 STATION COPPER CABLING TO THE BUILDING'S TELECOM TERMINAL BACKBOARD. SEE FLOOR PLANS FOR LOCATIONS/QUANTITIES.
16. OUTLETS FOR CABLE TV AND SATELLITE TV INCLUDING DOUBLE-RG-6 MODULAR JACKS/FACEPLATE ON A RECESSED OUTLET BOX WITH TWO (2) STAR-CONFIGURED 75-OHM RG-6 PVC-JACKETED COAXIAL STATION CABLES PER CATV AND SATELLITE/DTV SERVICE PROVIDER SPECIFICATIONS (TO THE BUILDING'S TELECOM TERMINAL BACKBOARD) AND UNDERGROUND RG-11 TRUNK COAXIAL CABLE PER SERVICE PROVIDER REQUIREMENTS. SEE FLOOR PLANS FOR LOCATIONS/QUANTITIES.
17. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #5 ON E-1.01 FOR SIZES AND QUANTITIES.
18. (1) 2"C.O.(FUTURE DISH CABLING) AND 3/4"C.O. FOR DISH GROUND CONDUCTORS. PROVIDE CONDUITS WITH PULL ROPES.
19. 12" x 12" X 6"D. WEATHERPROOF PULL BOX WITH 2" SERVICE HEAD STUBBED OUT OF WALL FOR FUTURE DISH ANTENNA.
20. PROVIDE CONDUIT SLEEVES BETWEEN FLOORS FOR ACCESS CONTROL SYSTEM CONDUCTOR PATHWAYS. WHERE FLOOR IS RATED, PROVIDE FIRESTOP SYSTEM ASSEMBLY WITH RATING EQUAL TO OR GREATER THAN PENETRATED STRUCTURE FOR A UL LISTED PENETRATION SYSTEM. (STI EZ-PATH OR APPROVED EQUAL).
21. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #8 ON E-3.01 FOR SIZES AND QUANTITIES.
22. UNDERGROUND ACCESS CONTROL SYSTEM CONDUIT AND SYSTEM CONDUCTORS PER MANUFACTURER'S RECOMMENDATIONS FROM ACCESS CONTROL PANEL LOCATION TO OTHER SITE BUILDING STRUCTURES. CONDUIT SIZE, ROUTING PER SITE PLAN DRAWINGS. CABLING TO BE PROVIDED IN A "STAR TOPOLOGY" CONFIGURATION. ROUTING OF SYSTEM CONDUCTORS' DAISY CHAINED THROUGH BUILDINGS IS NOT ACCEPTABLE.
23. TYPICAL PULLBOX, IF REQUIRED. PROVIDE SERVICE LOOP IN ALL CABLES.

PLAN NOTES

1. 4S WEATHERPROOF J-BOX AT BASE OF TREE FOR SPEAKER CABLING. SEE DETAIL 3/E-4.01. J-BOX PROVIDED AND INSTALLED BY ELECTRICAL CONTRACTOR, REFER TO E-1.01.
2. 1"C. (SPEAKER CABLING) TO TEL. BACKBOARD "TBP" IN POOL BUILDING. CONDUIT PROVIDED AND INSTALLED BY ELECTRICAL CONTRACTOR, REFER TO E-1.01.
3. 3/4"C. (SPEAKER CABLING). CONDUIT PROVIDED AND INSTALLED BY ELECTRICAL CONTRACTOR, REFER TO E-1.01.
4. CONDUIT PROVIDED BY ELECTRICAL CONTRACTOR, REFER TO NOTE #5 ON E-1.01 FOR SIZES AND QUANTITIES.

SITE PLAN GENERAL NOTES:

1. LOCATIONS OF EXISTING UTILITIES ARE NOT SHOWN AND CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN EXCAVATING AND TRENCHING ON THIS SITE TO AVOID EXISTING DUCTS, PIPING, OR CONDUITS, ETC., AND TO PREVENT HAZARDS TO PERSONNEL AND/OR DAMAGE TO EXISTING UNDERGROUND UTILITIES OR STRUCTURES WHETHER OR NOT SHOWN AND INSTALLED BY ANY OTHER CONTRACTS. THE ENGINEER IS NOT RESPONSIBLE FOR THE LOCATION OF UNDERGROUND UTILITIES OR STRUCTURES, WHETHER OR NOT SHOWN OR DETAILED AND INSTALLED BY ANY OTHER CONTRACTS. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER, THE ENGINEER SHOULD SEARCH UNIDENTIFIED CONDITIONS BE DISCOVERED. THESE DRAWINGS AND SPECIFICATIONS DO NOT INCLUDE THE NECESSARY ELEMENTS FOR CONSTRUCTION SAFETY.
2. CONTRACTOR SHALL VERIFY THE LOCATION OF ANY EXISTING UNDERGROUND UTILITIES AND STRUCTURES PRIOR TO COMMENCEMENT OF WORK BY CONTACTING UNDERGROUND SERVICE ALERT (U.S.A.) AT 1(800) 422-4133, OR OTHER LOCAL APPLICABLE UNDERGROUND SERVICE ALERT AGENCIES.
3. THE DRAWINGS ILLUSTRATE LOCATIONS OF EQUIPMENT AND ASSEMBLIES, PULLBOXES, MANHOLES, HANDHOLES, AND VAULTS, INCLUDING OTHER ELECTRICAL UNDERGROUND STRUCTURES AND PATHWAYS. CONTRACTOR SHALL CLOSELY COORDINATE EXACT LOCATIONS AND MOUNTING DEPTHS OF ALL DEVICES, STRUCTURES AND PATHWAYS WITH OTHER TRADES PRIOR TO PLACEMENT, TO ENSURE FINAL LOCATIONS ARE OUTSIDE FEATURE LANDSCAPE AND ARCHITECTURAL AREAS AND ARE NOT IN CONFLICT WITH THE INSTALLATION OF MATERIALS BY OTHER TRADES.
4. SEE ARCHITECTURAL, CIVIL AND LANDSCAPE PLANS FOR EXACT LOCATION OF FIXTURES, PULLBOXES, MANHOLES, OTHER ELECTRICAL EQUIPMENT AND DEVICES, ETC. COORDINATE ALL UNDERGROUND STRUCTURES AND CONDUIT ROUTING WITH ARCHITECT OR OWNERS' REPRESENTATIVE PRIOR TO ROUGH-IN, TO ENSURE SUCH ITEMS ARE NOT PLACED IN PLANTING / HARDSCAPE AREAS.
5. ALL EQUIPMENT LOCATED OUTDOORS SHALL BE WEATHERPROOF, NEMA 3R RATED.
6. PROVIDE PULL STRING IN ALL EMPTY CONDUITS.

CITY OF GARDENA
NOTICE INVITING BIDS
for
GARDENA COMMUNITY AQUATIC AND SENIOR CENTER
PROJECT NO. 978

Plans and Specifications are available through ARC Document Solutions. Please be advised that there is an additional charge for delivery. Upon payment of the purchase price, they become the property of the purchaser and may not be returned for refund.

You may access the plans through the following website under Public Planroom:

https://www.e-arc.com/location/costa-mesa/
(Scroll down to "Planrooms"/"Order From PlanWell"/"Public Planroom")

For help accessing and ordering, please contact a Planwell Administrator at 562.436.9761.

Notice is hereby given that the City of Gardena will receive sealed bids at the office of the City Clerk, City Hall, 1700 W. 162nd Street, Gardena, California, until **10:00 a.m.** on **November 21, 2023,** and shortly thereafter on this same day, they will be publicly opened and read in the City Clerk's Office in-person and via ZOOM.

The information to join the bid opening via ZOOM is the following:

Topic: Bid Opening
Time: 10:00 AM on November 21, 2023 (Shortly thereafter the deadline)
Join ZOOM Meeting

[https://us02web.zoom.us/j/86855775579]
Meeting ID: 868 5577 5579
Dial by phone: [+1 669 444 9171]US

Should you have any questions or concern in delivering a bid or joining the ZOOM Meeting, please contact City Clerk's office at (310) 217-9565 or via email at cityclerk@cityofgardena.org.

All bids must be in writing, must be sealed, and must be plainly marked on the outside: **"BID ON PROJECT NO. 978.** Any bid received after the hour stated above for any reason whatsoever, will not be considered for any purpose but will be returned unopened to the bidder.

Bids are required for the entire work as described below:

Contractor shall provide all labor, materials, equipment and incidentals as specified and required for the construction of a new aquatics and senior center building that includes a lobby and reception area, staff offices, conference room, break room, senior program room, kitchen and pantry, storage, electrical room, lifeguard room, men and women's restrooms with showers and lockers, custodial rooms, program rooms, lounge, balcony, elevator, and pool equipment/storage/trash building, telecommunication/AV & security system and photovoltaic system as shown on plans. Construction of a new recreation swimming pool, pool deck, piping, equipment and finishes as shown on plans. New shade structures, bleacher seating, perimeter walls, low walls, barbeque grill, site hardscape paving, ADA parking lot, fencing, gates, outdoor fitness equipment, site furnishings, site lighting, tree and shrub plantings, irrigation, and all other items as required to provide a completely operational facility.

The Request for Information (RFI) deadline is 12:00 p.m. on Monday, November 6, 2023

ENGINEER'S ESTIMATE: $14,500,000

The time of completion of contract shall be **260 working days** as defined in the latest Standard Specifications for Public Works ("Greenbook"). Liquidated Damages, as defined in Section 6-9, shall be **$3,000 per each consecutive calendar day.**

The City intends to issue a Notice to Proceed on or before February 5, 2024. Below is the project tentative schedule for your reference, however they are subject to change:

December 12, 2023	City Council award of Contract to Lowest Responsible Bidder
By December 14, 2023	City to email Contract Document to Awarded Contractor
By January 12, 2024	Contractor to Execute and Return Contract Documents to the City
By January 19, 2024	To Schedule Preconstruction Meeting
TBD	Preconstruction Meeting
By February 5, 2024	Notice to Proceed/Start Construction

Each bidder must submit a proposal to the City, c/o City Clerk in accordance with the Plans and Specifications. Said proposal is to be accompanied by a cash deposit, a certified or cashier's check, or a bidder's bond, made payable to the City of Gardena, in an amount not less than 10 percent of the total bid submitted.

The envelope enclosing the proposal shall be sealed and addressed to the City of Gardena c/o City Clerk, and delivered or mailed to the City at 1700 W. 162nd Street, Gardena, California 90247-3778. The envelope shall be plainly marked in the upper left-hand corner as follows:

ATTENTION: CITY, c/o CITY CLERK
(Bidder's Name and Address) _____

(Number and title of this project) _____

The successful bidder will be required to furnish a faithful performance bond in the amount of 100 percent of the contract price, and a payment bond in the amount of 100 percent of the contract price, both in a form satisfactory to the City Attorney.

The contractor shall have an active Class 'A or B' license from the Contractor's State License Board at the time of submitting bid. The self-performance requirement for the prime/general contractor has been eliminated, therefore there is no minimum requirement.

Pursuant to Public Contract Code Section 22300, the Contractor may, at Contractor's sole cost and expense, substitute securities equivalent to any monies withheld by the City to insured performance under the contract unless applicable federal regulations or policies do not allow such substitution. Such security shall be deposited with the City, or a state or federally chartered bank as escrow agent, who shall pay such monies to the Contractor upon satisfactory completion of the Contract. The Contractor shall be the beneficial owner of any security substituted for monies withheld and shall receive any accrued interest thereon. Securities eligible for investment shall include those listed in Government Code Section 16430 or bank or

savings and loan certificates of deposit. No such substitution shall be accepted until the escrow agreement, letter of credit, form of security and any other document related to said substitution is reviewed and found acceptable by the City Attorney.

The City reserves the right to reject any or all bids and to waive any informality or irregularity in any bid received and to be the sole judge of the merits of the respective bids received. The award, if made, will be made to the lowest responsive responsible bidder.

Bidders are advised that this Project is a public work for purposes of the California Labor Code, which requires payment of prevailing wages. Accordingly, the bidder awarded the Contract and all subcontractors shall be required to pay not less than the prevailing rate of per diem wages, as determined by the Director of the California Department of Industrial Relations, and otherwise comply with the provisions of Section 1770 et seq. of the California Labor Code, California Code of Regulations, Title 8, Section 16000 et seq., and any other applicable laws, rules and regulations adopted with respect thereto ("California Prevailing Wage Laws").

Attention is directed to the provisions of Sections 1777.5 and 1777.6 of the Labor Code concerning the employment of apprentices by Contractor or any Subcontractor under it. Contractor and any Subcontractor under if shall comply with the requirements of said sections in the employment of apprentices.

The Contractor is prohibited from performing work on this project with a subcontractor who is ineligible to perform work on the project pursuant to Section 1777.1 or 1777.7 of the Labor Code.
This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations. All contractors and subcontractors must furnish electronic certified payroll records directly to the Labor Commissioner (aka Division of Labor Standards Enforcement) in a format prescribed by the Labor Commissioner no less than monthly.

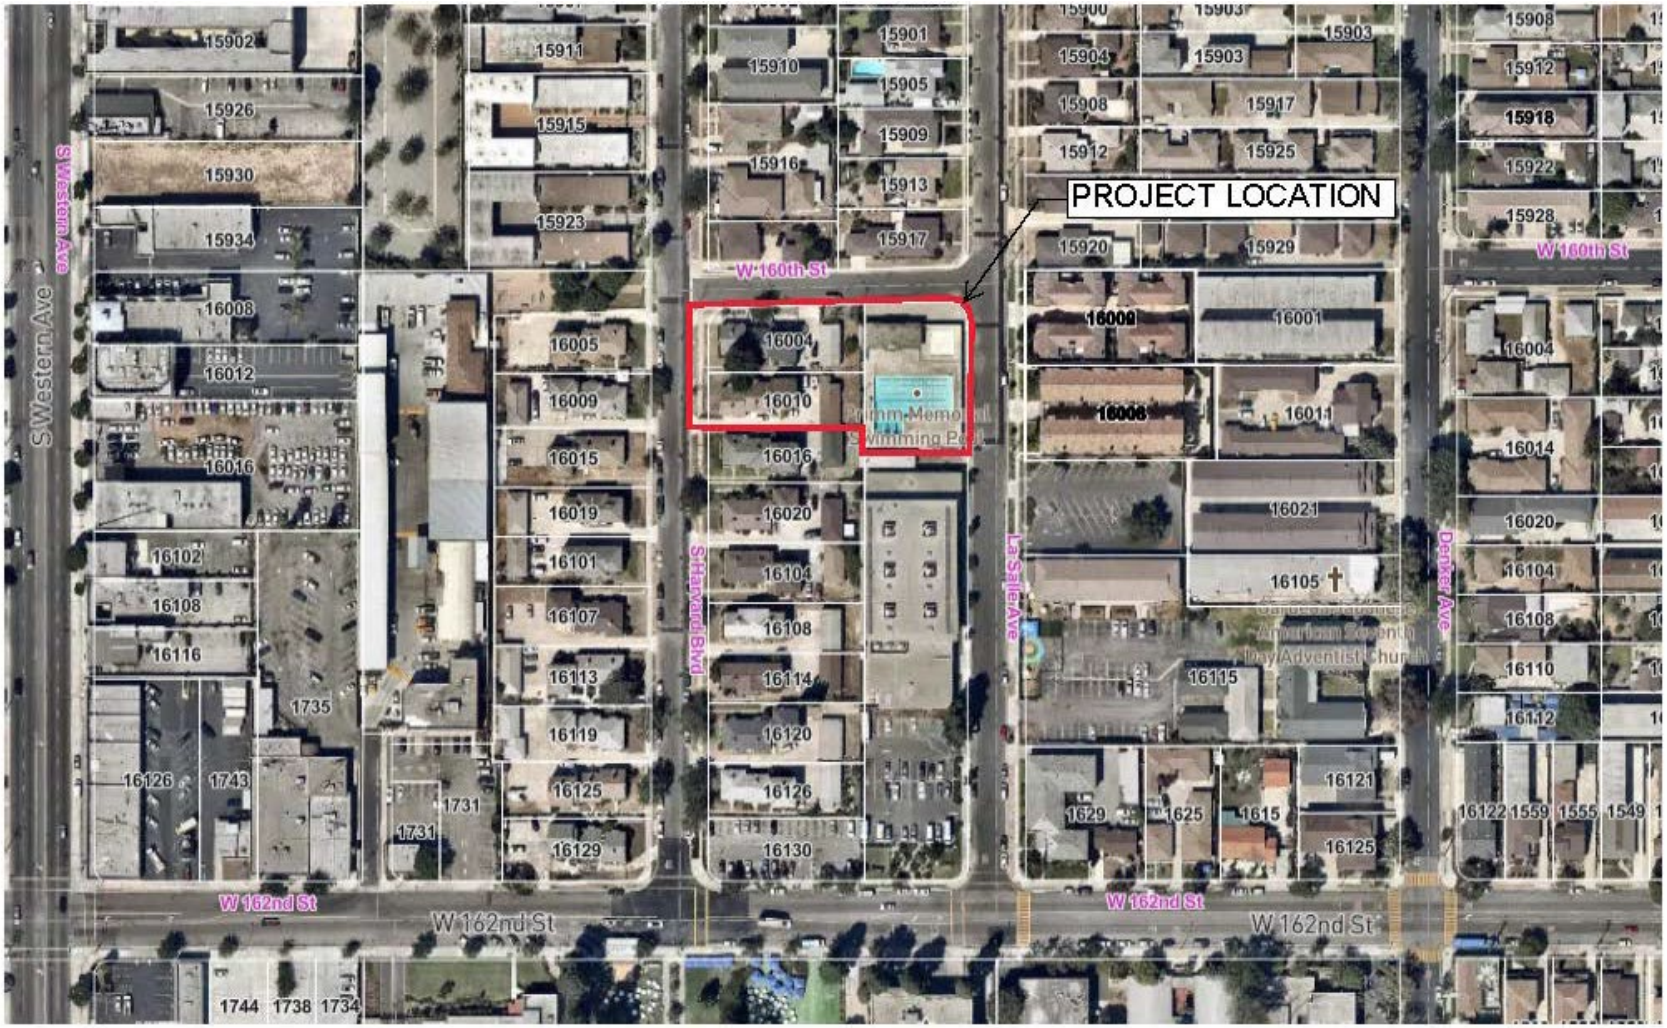
As of **January 1, 2016**, the requirement to furnish electronic certified payroll records to the Labor Commissioner will apply to all public works projects, whether new or ongoing. City may require a copy of the electronic certified payroll records submitted to the DIR at anytime.

Exceptions: The Labor Commissioner may (but is not required to) excuse contractors and subcontractors from furnishing electronic certified payroll records to the Labor Commissioner on a project that is under the jurisdiction of one of the four legacy DIR-approved labor compliance programs (Caltrans, City of Los Angeles, Los Angeles Unified School District, and County of Sacramento) or that is covered by a qualifying project labor agreement.

These requirements will apply to all public works projects that are subject to the prevailing wage requirements of the Labor Code without regard to funding source.

The State General Prevailing Wage Determination is as established by the California Department of Industrial Relations (available at http://www.dir.ca.gov/DLSR/PWD/index.htm).

Skilled and Trained Workforce: This project is subject to Skilled and Trained Workforce Requirements per Sections 2600 through 2603 of the Public Contract Code.



Award of Contract: The following are conditions to the award of the contract:

I. Each contractor and subcontractor listed on the bid must be registered with the Department of Industrial Relations pursuant to Labor Code Section 1725.5. subject to the limited exceptions set forth in Labor Code Section 1771.1(a) (regarding the

submission of a bid as authorized by Business & Professions Code Section 7029.1 or Public Contract Code Section 10164 or 20103.5 provided the contractor is registered to perform public work pursuant to Section 1725.5 at the time the contract was awarded): and

II. No contractor or subcontractor may be awarded this contract unless the contractor and each subcontractor listed on the bid is registered with the Department of Industrial Relations pursuant to Section 17265.5.

Any questions regarding this bid package may be referred to Kevin Kwak, Public Works Engineering Division at 310.217.9643 (kkwak@cityofgardena.org).

INSTRUCTIONS TO BIDDERS

FORM OF PROPOSAL

The Proposal shall be fully executed and submitted on the forms in the project specifications and shall be enclosed in a sealed envelope marked and addressed as directed in the Notice Inviting Bids.

PRPOSAL / BID DOCUMENTS

All Proposals shall include the following executed documents to be submitted with each bid:

Bidding Schedule

Acknowledgement of Addenda Received

Bidder's Declaration

Non-Collusion Affidavit

Declaration of Eligibility of Contract

Bid Bond

Designation of Subcontractors

Construction Project Reference

Certificate of Non-Discrimination by Contractors

Certification of Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – Primary Covered Transitions

DELIVERY OF PROPOSAL

The Proposal shall be delivered by the time and to the place stipulated in the Notice Inviting Bids. It is the bidder's sole responsibility to see that its Proposal is received as stipulated. Any Proposal received after the scheduled closing time for receipt of proposals will be returned to the bidder unopened.

WITHDRAWAL OF PROPOSAL

The Proposal may be withdrawn by the bidder by means of a written request, signed by the bidder or its properly authorized representative. Such written request must be delivered to the place stipulated in the Notice Inviting Bids for receipt of proposals prior to the scheduled closing time for receipt of proposals. No Proposal may be withdrawn after the hour fixed for opening bids.

MODIFICATIONS AND ALTERNATIVE PROPOSALS

Unauthorized conditions, limitations, or provisions attached to the Proposal will render it informal and may be grounds for its rejection as non-responsive. The completed Proposal forms shall be without interlineations, alterations, or erasures. Alternative proposals will not be considered unless specifically requested. Oral, telegraphic, or telephonic proposals or modifications will not be considered.

DISCREPANCIES IN PROPOSALS

In the event there is more than one bid item in a Bidding Schedule, the bidder shall furnish a price for all bid items in the Schedule, and failure to do so will render the Proposal informal and may be grounds for its rejection as non-responsive. The bidder shall state in words and figures the unit prices or the specific sums as the case may be, for which it proposes to supply the labor, materials, supplies, or machinery, and completely perform the Contract. The total amount of each item bid and the total amount of the bid shall be stated in words and figures.

In case of any discrepancy between the words and the figures, the words shall prevail. If the unit price and the total amount named by a bidder for any items are not in agreement, the unit price alone will be considered as representing the bidder's intention and the total will be corrected to conform thereto.

PROPOSAL GUARANTEE – BIDDER'S SECURITY

Each bidder shall submit with his Proposal cash, an unconditional certified or cashier's check, or a bidder's bond, in the sum of the percentage of the bid stated in the Notice Inviting Bids, payable to the City as a guarantee that the bidder will, if its Proposal is accepted, execute the Contract and furnish a satisfactory Faithful Performance Bond, a satisfactory Payment Bond and insurance certificates as specified herein.

If a bidder to whom an award is made, fails or refuses to sign the Contract or furnish the required bonds and certificates, all within the time stated in Section 2-1.5 of the Special Provisions herein, the funds represented by said cash, check or bidder's bond shall be forfeited and become and remain the property of the City; the amount thereof being agreed to by the bidder and the surety as a bid bond forfeiture due to the City because of the delay in the execution of the Contract and in the performance of work thereunder, resulting from such failure or refusal, except that if the City awards the contract to the next lowest responsive responsible bidder, only that portion of the bidder's security equal to the difference between the two bids will be forfeited.

A Bid Bond must be obtained from a corporate surety authorized to do business as such in the State of California as an "admitted surety insurer" and shall be on the form furnished by the City or one substantially in conformance with it. Certified or cashier's checks must be drawn on a solvent state or nationally chartered bank or branch thereof in the State of California. The liability of the City in connection with the checks shall be limited to the return of the checks (without interest) as provided in Section 2-1.6 of the Special Provisions bound herein.

DISQUALIFICATION OF BIDDERS

A person, firm, or corporation shall NOT be allowed to make or file, or to be interested in, more than one bid, except an alternative bid when specifically requested; provided, however, a person, firm, or corporation who has submitted a sub-proposal to a bidder submitting a Proposal, or who has quoted prices on materials to such bidders, is not thereby disqualified from submitting a sub-proposal or from quoting prices to other bidders submitting proposals, or from submitting a Proposal as a prime contractor. Similarly, failure to comply with the registration requirements of Labor Code Section 1725.5, as further described in the Notice Inviting Bids, will disqualify a bidder.

ADDITIONAL REQUIREMENTS

The bidder's attention is directed to the Special Provisions and Technical Provisions bound herein for additional requirements of the Proposal and Contract Documents.

CONTRACT DOCUMENTS

Contract Documents are to be submitted within twenty-one (21) calendar days AFTER award of contract unless extended by agreement of the City. Failure to timely submit executed Contract Documents may be grounds for rejecting the bid award and forfeiture of the bid security. See enclosed documents commencing on page CD-1.

BID PROPOSAL

PROJECT NO. JN 978

BID SCHEDULE

The undersigned, having examined the proposed Contract Documents titled:

GARDENA COMMUNITY AQUATIC AND SENIOR CENTER

and having visited the site and examined the conditions affecting the work, hereby proposes and agrees to furnish all labor, materials, equipment, and appliances, and to perform operations necessary to complete the work as required by said proposed Contract Documents and itemized bid schedule below. All work shall be completed within **two hundred sixty (260) Working Days** from the date the Notice of Proceed is issued by the Engineer. The maintenance period, City Holidays, and unforeseen weather conditions or other "Acts of God" are not counted towards working days. The City will also consider waiving delayed workings days, potentially caused by long lead items, contingent on the submission of supporting documents.

Item No.	Item Description	Unit	Approx. Quantity	Unit Price in Figures	Item Total
1	**Mobilization (Maximum 2%)**	L.S.	1	$	$
2	**General Conditions (Maximum 2%)**	L.S.	1	$	$
3	**Site Improvements:** complete and in place, per the plans and specs, including deferred submittals	L.S.	1	$	$
4	**Aquatics Building & Pool Equipment /Trash Enclosure Building:** in place and complete per the plans and specs, including deferred submittals	L.S.	1	$	$
5	**Pool and Pool Equipment**: in place and complete per the plans and specs, including deferred submittals	L.S.	1	$	$
6	**Utilities:** (Electrical, Phone & Fiber/Data Services; Sewer, Domestic Water, Fire Service Water, and Gas Services, per the plans and specs, including any deferred submittals	L.S.	1	$	$
7	**Photovoltaic System:** in place and complete, per the plans and specs, including any deferred submittals	L.S.	1	$	$
8	**Telecommunication/AV, Security**: in place and complete per the plans and specs, including deferred submittals	L.S.	1	$	$
9	**90-Day Landscape Maintenance Period**	L.S.		$	$

TOTAL CONTRACT BID:

(Figures) $ _____

(Words) _____

*** In case of error in extension of price into the total price column, the unit price will govern.**

PAYEMNT: All work required and shown on the construction plans and this specification for which no price or item is listed on this proposal, it shall be understood that such work, equipment, labor, tools and materials shall be provided without extra charge, allowance or direct payment of any kind. Payment for performing such work or furnishing such equipment, labor, tools and materials shall be included in the above lump sum or unit bid prices and no additional compensation will be paid, therefore. The Contractor is required to submit a detailed schedule of values within twenty-one (21) calendar days after award of contract.

If the City determines that any of the unit bid prices are significantly unbalanced to the potential detriment of the City, the bid will be replaced as non-responsive.

In case of any discrepancy between the words and the figures, the words shall prevail. If the unit price and the total amount for any item are not in agreement, the unit price alone shall be considered to represent the bidder's intention and all totals will be corrected to conform thereto.

Attached hereto is cash, a certified check, a cashier's check, or a bidder's bond in the amount of _____Dollar s, said amount being not less than 10 percent of the amount bid. Pursuant to Public Contract Code Sections 20172 and 20174, it is agreed a portion equal to the difference between the low bid and second low bid shall be retained as a bid bond forfeiture by the City if the undersigned fails or refuses to execute the Contract and furnish the required bonds and certificates of insurance within the time provided.

BID PROPOSAL

PROJECT NO. JN 978

BIDDER'S DECLARATION

It is understood and agreed that:

1. The undersigned has carefully examined all documents which will form a part of the Contract; namely, the Notice Inviting Bids, the Instructions to Bidders, this Proposal, the Bid Bond, the Contract, the Faithful Performance Bond, the Payment Bond, the federal requirements, if any, the Plans and Specifications, the Special Provisions, and the Technical Provisions.

2. The undersigned has, by investigation at the site of the work and otherwise, satisfied himself as to the nature and location of the work and fully informed himself as to all conditions and matters, which can in any way affect the work or the cost thereof.

3. The undersigned fully understands the scope of work and has checked carefully all words and figures inserted in this Proposal and he further understands that the City will not be responsible for any errors or omissions in the preparation of the Proposal.

4. The undersigned agrees and acknowledges that he is aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that Code, and that the undersigned will comply with such provisions before commencing the performance of the Contract if it is awarded to the undersigned.

The undersigned will execute the Contract and furnish the required statutory bonds and certificates of insurance within the period of time specified in the Contract Documents.

The undersigned will begin work after award of Contract and a Notice to Proceed has been given as herein specified and will complete said work within the time specified in the Bidding Schedule.

5. The undersigned certifies that this Proposal is genuine and not sham or collusive, or made in the interest or on behalf of a person not herein named, and the undersigned has not directly or indirectly induced or solicited any other bidder to put in a sham bid nor induced any other person, firm, or corporation to refrain from bidding. The undersigned has not in any manner sought by collusion to secure for himself any advantage over any other bidder.

6. The undersigned will accept an award and enter into a Contract for all work scheduled herein on which he puts in a bid. The awards for such work are to be entirely at the discretion of the City after evaluation of the bids as submitted. The undersigned agrees that the City shall recover or retain as a bid bond forfeiture an amount equal to the difference between the low bid and amount of the bid of the bidder with whom the City enters into a Contract, and the surplus, if any, shall be returned to the lowest bidder in accordance with the provisions of the Public Contract Code Sections 20172 and 20174 in the event of his failure to execute a Contract and furnish required bonds and insurance therefor within the time provided.

BIDDER'S DECLARATION (Continued)

7. The undersigned bidder stated under penalty of perjury that the representations made in submitting this bid are, to the best of his/her knowledge, true, accurate, and complete.

Respectfully submitted,

PROJECT NO. JN 978

DECLARATION OF ELIGIBILITY TO CONTRACT

[Labor Code Section 1777.1; Public Contract Code Section 6109]

The undersigned, a duly authorized representative of the contractor, certifies and declares that:

1. The undersigned contractor is aware of Sections 1777.1 and 1777.7 of the California Labor Code, which prohibit a contractor or subcontractor who has been found by the Labor Commissioner or the Director of Industrial Relations to be in violation of certain provisions of the Labor Code, from bidding on, being awarded, or performing work as a subcontractor on a public works project for specified periods of time.

2. The undersigned contractor is not ineligible to bid on, be awarded or perform work as a subcontractor on a public works project by virtue of Sections 1771.1 or 1777.7 of the California Labor Code or any other provision of law.

3. The undersigned contractor is aware of California Public Contract Code Section 6109, which states:

> "(a) A public entity, as defined in Section 1100 [of the Public Contract Code], may not permit a contractor or subcontractor who is ineligible to bid or work on, or be awarded, a public works project pursuant to Section 1777.1 or 1777.7 of the Labor Code to bid on, be awarded, or perform work as a subcontractor on, a public works project. Every public works project shall contain a provision prohibiting a contractor from performing work on a public works project with a subcontractor who is ineligible to perform work on the public works project pursuant to Section 1771.1 or 1777.7 of the Labor Code."
>
> "(b) Any contract on a public works project entered into between a contractor and a debarred subcontractor is void as a matter of law. A debarred subcontractor may not receive any public money for performing work as a subcontractor on a public works contract, and any public money that may have been paid to a debarred subcontractor by a contractor on the project shall be returned to the awarding body. The contractor shall be responsible for the payment of wages to workers of a debarred subcontractor who has been allowed to work on the project."

4. The undersigned contractor has investigated the eligibility of each and every subcontractor the undersigned contractor intends to use on this public works project, and has determined that none of them are ineligible to perform work as a subcontractor on a public works project by virtue of the foregoing provisions of the Public Contract Code, Sections 1771.1 or 1777.7 of the Labor Code, or any other provision of law.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct. Executed this _____ day of _____, 20___, at _____ _____ *(place of execution)*, California_____.

BID BOND

KNOW ALL MEN BY THESE PRESENTS:

THAT _____, as Principal,
and _____, as Surety,
are held firmly bound unto the City of Gardena in the sum of $_____;
_____DOLLARS,
(not less than ten percent of total amount of bid)
for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, said Principal has submitted a bid to the City to perform all work required under the following:

PROJECT: **GARDENA COMMUNITY AQUATIC AND SENIOR CENTER**

NOW, THEREFORE, if said Principal is awarded a Contract by the City and, within the time and in the manner required in the Specifications for said project, enters into the written form of Contract bound with said Specifications and furnishes the required bonds, one to guarantee faithful performance and the other to guarantee payment for labor and materials, then this obligation shall be null and void, otherwise it shall remain in full force and effect. In the event suit is brought upon this bond by the City and judgment is recovered, said Surety shall pay all costs incurred by the City in such suit, including a reasonable attorneys' fee to be fixed by the court. Surety hereby waives the provisions of California Civil Code §2845.

DESIGNATION OF SUBCONTRACTORS

In compliance with the "Subletting and Subcontracting Fair Practices Act" being Sections 4100-4113 of the Public Contract Code of the State of California, and any amendments thereto, each bidder shall set forth below the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime contractor in or about the construction of the work or improvement in an amount in excess of one-half (1/2) of one percent (1%) of the prime contractor's total bid, and shall further set forth the portion of the work which will be done by each subcontractor. Only one subcontractor for each such portion shall be listed.

If the contractor fails to specify a subcontractor for any portion of the work to be performed under the contract, he shall be deemed to have agreed to perform such portion himself, and he shall not be permitted to subcontract that portion of the work except under the conditions hereinafter set forth.

Subletting or subcontracting of any portion of the work to which subcontractor was designated in the original bid shall only be permitted in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the legislative body of the City.

CERTIFICATE OF NON-DISCRIMINATION BY CONTRACTORS

As suppliers of goods or services to the City, the firm listed below certifies that it does not discriminate in its employment with regard to race, color, religion, sex, or national origin; that it is in compliance with all applicable federal, state, and local directives, and executive orders regarding non-discrimination in employment; and that it agrees to pursue positively and aggressively the principle of equal opportunity in employment.

We agree specifically:

1. To establish or observe employment policies which affirmatively promote opportunities for minority persons at all job levels.

2. To communicate this policy to all persons concerned, including all company employees, outside recruiting services, especially those serving minority communities, and to the minority communities at large.

3. To take affirmative steps to hire minority employees within the company.

PROJECT NO. JN 978

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS

(BEFORE COMPLETING CERTIFICATION, READ INSTRUCTIONS ON NEXT PAGE)

The Contractor shall not perform Work with any Subcontractor that has been debarred or suspended pursuant to California Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. The Contractor and Subcontractors shall not be debarred or suspended throughout the duration of the Contract pursuant to Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. If the Contractor or any Subcontractor becomes debarred or suspended during the duration of the Project, the Contractor shall immediately notify the City.

1. The prospective primary participant certifies to the best of its knowledge and belief, that it and its principals:

    a. Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

    b. Have not within a 5-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statement, or receiving stolen property;

    c. Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph 1b of this certification; and

    d. Have not within a 5-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

2. Where the prospective primary participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Signature: _____ Name: _____

Title: _____ Company: _____

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS (Continued)

INSTRUCTIONS FOR CERTIFICATION

1. By signing and submitting this proposal, the prospective primary participant is providing the certification set out below.
2. The inability of a person to provide the certification required below will not necessarily result in denial of participation in this covered transaction. The prospective participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective primary participant to furnish a certification or an explanation shall disqualify such person from participation in this transaction.
3. The certification in this clause is a material representation of fact upon which reliance was placed when the department or agency determined to enter into this transaction. If it is later determined that the prospective primary participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.
4. The prospective primary participant shall provide immediate written notice to the department or agency to which this proposal is submitted if at any time the prospective primary participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
5. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower tier covered transaction," "participant," "person," "primary covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of the rules implementing Executive Order 12549. You may contact the department or agency to which this proposal is submitted for assistance in obtaining a copy of those regulations (13 CFR Part 145).
6. The prospective primary participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
7. The prospective primary participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Covered Transactions," provided by the department or agency entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions.
8. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the ineligibility of its principals. Each participant may, but is not required to, check the Nonprocurement List.
9. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
10. Except for transactions authorized under paragraph 6 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

Award of Contract

CONTRACT DOCUMENT

PROJECT NO. JN 978

AGREEMENT

THIS AGREEMENT, made and entered into this _____ day of _____, 20_____, by and between CITY OF GARDENA in the State of California, hereinafter referred to as "CITY" and_____, hereinafter referred to as "CONTRACTOR."

The City and the Contractor mutually agree as follows:

ARTICLE I.

THE PROJECT

For and in consideration of the mutual promises set forth herein, Contractor agrees to perform and complete in a good and workmanlike manner all work required by the Contract Documents for City Project No. JN 978 , which is described as follows:

Title: GARDENA COMMUNITY AQUATIC AND SENIOR CENTER

Said work shall be performed in accordance with the Plans, Specifications and other Contract Documents, all of which are referenced in Article III hereof and incorporated herein as though fully set forth. Contractor shall furnish at its own expense all labor, materials, equipment and services necessary therefor, except such labor, materials, equipment and services as are provided in the Contract Documents to be furnished by City.

This project is subject to Skilled and Trained Workforce Requirements per Sections 2600 through 2603 of the Public Contract Code.

ARTICLE II.

CONTRACT SUM AND PAYMENT

For performing and completing the work in accordance with the Contract Documents, City shall pay Contractor, in full compensation therefor, the contract sum set forth in the Bidding Schedule. Said sum shall constitute payment in full for all work performed hereunder, including, without limitation, all labor, materials, equipment, tools and services used or incorporated in the work, supervision, administration, overhead, expenses and any and all other things required, furnished or incurred for completion of the work as specified in the Contract Documents. City shall make payments to Contractor on account of the contract sum at the time, in the manner, and upon the conditions specified in the Contract Documents.

ARTICLE III.

CONTRACT DOCUMENTS

The Contract Documents, which constitute the entire agreement between the City and the Contractor, are enumerated as follows: Proposal Documents, including the Notice Inviting Bids, Instructions to Bidders, Bidding Schedule, Bidder's Declaration, Designation of Subcontractors, Bidder's Assurance, and Fair Employment Practices documents; this Agreement; Standard Specifications; Special Provisions; Technical Provisions; Drawings; Plans; and all addenda issued prior to and all modifications issued after the execution of this Agreement. These form the Contract, and all are as fully a part of the Contract as if attached to this Agreement or repeated herein.

ARTICLE IV.

EFFECTIVE DATE

This Agreement shall become effective and commence as of the date set forth below on which the last of the parties, whether City or Contractor, executes said Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed and attested by their proper officers thereunto duly authorized.

PROJECT NO. JN 978

FAITHFUL PERFORMANCE BOND

WHEREAS, the City of Gardena has awarded to _____, hereinafter designated as the "Principal", a Contract for:

PROJECT: GARDENA COMMUNITY AQUATIC AND SENIOR CENTER

WHEREAS, said Principal is required under the terms of said Contract to furnish a bond for the faithful performance of said Contract;

NOW, THEREFORE, we,_____
as Principal, and_____
as Surety, are held and firmly bound unto the City in the sum of_____
_____
Dollars ($_____), this amount being not less than one hundred percent (100%) of the total Contract price, lawful money of the United States of America, for payment of which sum well and truly to be made we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally, firmly by these presents. In case suit is brought upon this bond, the Surety will pay all court costs and reasonable attorneys' fees to the City of Gardena in an amount to be fixed by the court.

THE CONDITION OF THIS OBLIGATION IS SUCH THAT, if the hereby bounded Principal, his or its heirs, executors, administrators, successors, or assigns, shall in all things stand to and abide by, well and truly keep and perform all the undertakings, terms, covenants, conditions and agreements in the said Contract and any alteration thereof, made as therein provided, all within the time and in the manner therein designated and in all respects according to their true intent and meaning, then this obligation shall become null and void; otherwise, it shall be and remain in full force and effect.

FURTHER, the Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, addition, or modification to the terms of the Contract, or of the work to be performed thereunder, or the specifications for the same, shall in any way affect its obligations under this bond, and it does hereby waive notice of any such change, extension of time, alteration, addition, or modification to the terms of the Contract or to the work or to the specifications thereunder. Surety hereby waives the provisions of California Civil Code §§ 2845 and 2849. The City is the principal beneficiary of this bond and has all rights of a party hereto.

This bond shall remain in full force and effect for a warranty period of one full year after acceptance of the job by the City.

IN WITNESS WHEREOF, three (3) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and

Surety named herein, on the_____ day of_____, 20___, the name and corporate seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representative pursuant to authority of its governing body.

CONTRACT DOCUMENT

PROJECT NO. JN 978

PAYMENT BOND

WHEREAS, the City of Gardena has awarded to _____, as Contractor, a contract for the work described as follows:

PROJECT: GARDENA COMMUNITY AQUATIC AND SENIOR CENTER

AND WHEREAS, said Contractor is required to furnish a bond in connection with said contract, to secure the payment of claims of laborers, mechanics, materialmen and other persons, as provided by law;

NOW, THEREFORE, we, the undersigned Contractor and Surety, are held firmly bound unto the City in the sum of _____, Dollars ($_____) this amount being not less than one hundred percent (100%) of the total Contract price, for which payment well and truly to be made we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH THAT, if said Contractor, its heirs, executors, administrators, successors, assigns, or subcontractors shall fail to pay any of the persons named in Civil Code Section 3181, or amounts due under the Unemployment Insurance Code with respect to work or labor performed under the contract, or any amounts required to be deducted, withheld, and paid over to the Employment Development Department from the wages of employees of the Contractor and its subcontractors pursuant to Section 13020 of the Unemployment Insurance Code, or any other amounts due to persons under any applicable project contract or law, with respect to such work and labor, then the Surety or Sureties herein will pay for the same in an amount not exceeding the sum specified in this bond, otherwise the above obligation shall be void. In case suit is brought upon this bond, the said Surety will pay all court costs and reasonable attorneys' fees to the plaintiff(s) and City in an amount to be fixed by the court.

This bond shall inure to the benefit of any of the persons named in Civil Code Section 3181 as to give a right of action to such persons or their assigns in any suit brought upon this bond.

Further, the Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, addition, or modification to the terms of the Contract, or of the work to be performed thereunder, or the specifications for the same, shall in any way affect its obligations under this bond, and it does hereby waive notice of such change, extension of time, alteration, addition, or modification to the terms of the Contract or to the work or to the specifications thereunder. Surety hereby waives the provisions of California Civil Code §§ 2845 and 2849.

This bond shall remain in full force and effect for six full months after the period in which verified claims may be filed as provided for in Section 3184 of the California Civil Code.

IN WITNESS WHEREOF, we have hereunto set our hands and seals on this_____day of _____20_____.

PROJECT NO. JN 978

INDEMNIFICATION AND HOLD HARMLESS AGREEMENT AND WAIVER OF SUBROGATION AND CONTRIBUTION

GARDENA COMMUNITY AQUATIC AND SENIOR CENTER

To the fullest extent permitted by law, Indemnitor hereby agrees, at its sole cost and expense, to defend, protect, indemnify, and hold harmless the City of Gardena, State of California and its respective elected officials, officers, attorneys, agents, employees, volunteers, successors, and assigns (collectively "Indemnitees") from and against any and all damages, costs, expenses, liabilities, claims, demands, causes of action, proceedings, expenses, judgments, penalties, liens, and losses of any nature whatsoever, including fees of accountants, attorneys, or other professionals and all costs associated therewith (collectively "Liabilities"), arising or claimed to arise, directly or indirectly, out of, in connection with, resulting from, or related to any act, failure to act, error, or omission of Indemnitor or any of its officers, agents, servants, employees, subcontractors, materialmen, suppliers or their officers, agents, servants or employees, arising or claimed to arise, directly or indirectly, out of, in connection with, resulting from, or related to the above-referenced contract, agreement, license, or permit (the "Agreement") or the performance or failure to perform any term, provision, covenant, or condition of the Agreement, including this indemnity provision. This indemnity provision is effective regardless of any prior, concurrent, or subsequent active or passive negligence by Indemnitees and shall operate to fully indemnify Indemnitees against any such negligence. This indemnity provision shall survive the termination of the Agreement and is in addition to any other rights or remedies which Indemnitees may have under the law. Payment is not required as a condition precedent to an Indemnitee's right to recover under this indemnity provision, and an entry of judgment against an Indemnitee shall be conclusive in favor of the Indemnitee's right to recover under this indemnity provision. Indemnitor shall pay Indemnitees for any attorney fees and costs incurred in enforcing this indemnification provision. Notwithstanding the foregoing, nothing in this instrument shall be construed to encompass (a) Indemnitees' sole negligence or willful misconduct to the limited extent that the underlying Agreement is subject to Civil Code 2782(a), or (b) the contracting public agency's active negligence to the limited extent that the underlying Agreement is subject to Civil Code 2782(b). This indemnity is effective without reference to the existence or applicability of any insurance coverages which may have been required under the Agreement or any additional insured endorsements which may extend to Indemnitees.

Indemnitor, on behalf of itself and all parties claiming under or through it, hereby waives all rights of subrogation and contribution against the Indemnitees, while acting within the scope of their duties, from all claims, losses and liabilities arising out of or incident to activities or operations performed by or on behalf of the Indemnitor regardless of any prior, concurrent, or subsequent active or passive negligence by the Indemnitees. Accountants, attorneys, or other professionals employed by Indemnitor to defend Indemnitees shall be selected by Indemnitees.

In the event there is more than one person or entity named in the Agreement as an Indemnitor, then all obligations, liabilities, covenants and conditions under this instrument shall be joint and several.

PROJECT NO. JN 978

INSURANCE

CERTIFICATION OF INSURANCE (COI) SHALL BE SUBMITTED BY THE CONTRACTOR

1. **COMMENCEMENT OF WORK**. Contractor shall not be authorized to commence Work under this Contract until it has obtained approved insurance. Before beginning Work hereunder, during the entire period of this Contract, for any extensions hereto, and for periods after the end of this Contract as may be indicated below, Contractor must have and maintain in place not less than the insurance coverages required in this Section at his sole cost and expense. Contractor's insurance shall comply with all items specified by this Contract. Any subcontractors shall be subject to all of the requirements of this Section and Contractor shall be responsible to obtain evidence of insurance from each subcontractor and provide it to City before the subcontractor commences work. Alternatively, Contractor's insurance may cover all subcontractors. The insurance requirements are not intended to and shall not in any manner limit or qualify the liabilities and obligations assumed by Contractor under this Contract.

2. **INSURANCE COMPANY REQUIREMENTS.** All insurance policies used to satisfy the requirements imposed hereunder shall be issued by insurers admitted to do business in the State of California. Insurers shall have a current Best's rating of not less than A-:VII, unless otherwise approved by City.

3. **COVERAGES, LIMITS AND POLICY REQUIREMENTS**. Contractor shall maintain the types of coverages indicated below:

4. **COMPREHENSIVE GENERAL LIABILITY INSURANCE.** A policy of comprehensive general liability insurance written on a per occurrence basis in an amount not less than either one million dollars ($1,000,000) per occurrence or two million dollars ($2,000,000) aggregate.

5. **COMMERCIAL AUTO LIABILITY INSURANCE**. A policy including all coverages provided by and to the extent afforded by Insurance Services Office form CA 0001, ed. 12/93, including Symbol 1 (any auto) with no special limitations affecting City. The minimum auto insurance coverage shall be one million dollars ($1,000,000) combined single limit per accident.

6. **WORKER'S COMPENSATION AND EMPLOYER'S LIABILITY INSURANCE**. A policy which meets all statutory benefit requirements of the Labor Code, or other applicable law, of the State of California. The minimum coverage limits for said insurance shall be no less than one million dollars ($1,000,000) per claim. The policy shall be issued by an insurance company which is admitted to do business in the State of California and shall contain a clause that the policy may not be canceled without thirty (30) days prior written notice, return receipt requested, is mailed to City.

   In accordance with the provisions of section 1860 of the California Labor Code, Contractor's attention is directed to the requirement that in accordance with the provisions of section 3700 of the California Labor Code, Contractor and every subcontractor will be required to secure the payment of compensation of his or her employees, or obtain a certificate of

consent to self-insurance by the Director of Industrial Relations in accordance with the requirements of Section 3700 of the California Labor Code.

In accordance with the provisions of section 1861 of the California Labor Code, Contractor shall sign and file with the awarding body the following certification prior to performing any work on the Project:

> "I am aware of the provisions of section 3700 of the Labor Code which require every employer to be insured against liability for worker's compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this contract."

7. **POLICY REQUIREMENTS.** The policies set forth above shall comply with the following, as evidenced by the policies or endorsements to the policies:

   (i) City, State and its appointed and elected officers, employees, agents and volunteers shall be added as additional insured to the policy as respects liabilities arising out of the performance of any work done under the Contract.

   (ii) The insurer shall agree to provide City with thirty (30) days prior written notice, return receipt requested, of any cancellation, non-renewal or material change in coverage.

   (iii) For any claims with respect to the Project covered by this Contract, Contractor's insurance coverage shall be primary insurance as respects City, State and its elected and appointed officers, employees, agents and volunteers. Any insurance or self-insurance maintained by City, State and its elected and appointed officers, employees, agents and volunteers shall be excess of Contractor's insurance and shall not contribute with it.

   (iv) The policy shall apply separately to each insured against whom claim is made or suit is brought except with respect to the limits of the company's liability.

8. **COURSE OF CONSTRUCTION INSURANCE.** Contractor shall provide course of construction insurance covering for "all risks" of loss in the amount of the completed value of the Work. The City shall be named as a loss payee and the insurer shall waive all rights of subrogation against the City. This policy shall be issued by an insurance company which is admitted to do business in the State of California and shall contain a clause that the policy may not be canceled until thirty (30) days written notice, return receipt requested, is mailed to the City. Course of Construction Insurance may be provided for each separate Phase.

9. **ADDITIONAL REQUIREMENTS.** The procuring of required insurance shall not be construed to limit Contractor's liability hereunder nor to fulfill the indemnification provisions and requirements of this Contract. City shall notify Contractor in writing of changes in the insurance requirements. If Contractor does not deposit copies of acceptable insurance policies or endorsements with City incorporating such changes within sixty (60) days of receipt of such notice, Contractor shall be deemed in default hereunder.

10. **DEDUCTIBLES.** Any deductible or self-insured retentions must be declared to and approved by City. Contractor shall guarantee that, at the option of the City, either: the insurer shall eliminate or reduce such deductibles or self-insured retentions with respect to City, its officers, employees, agents and volunteers (with additional premium, if any, to be paid by Contractor); or Contractor shall provide satisfactory financial guarantee for payment

of losses and related investigations, claim administration and defense expenses in the amount of any deductibles or self-insured retentions.

11. **VERIFICATION OF COMPLIANCE.** Contractor shall furnish City with the required endorsements attached hereto. All documents are to be received and approved by City before Work commences. Not less than fifteen (15) days prior to the expiration date of any policy of insurance required by this Contract, Contractor shall deliver to City a binder or certificate of insurance with respect to each renewal policy, bearing a notation evidencing payment of the premium therefore, or accompanied by other proof of payment satisfactory to City. Contractor shall provide full copies of any requested policies to City within three (3) days of any such request by City.

12. **TERMINATION FOR LACK OF REQUIRED COVERAGE.** If Contractor, for any reason, fails to have in place, at all times during the term of this Contract, including any extension hereto, all required insurance and coverage, City may immediately obtain such coverage at Contractor's expense and/or terminate this Contract. Contractor shall indemnify, defend and hold harmless City and its elected and appointed officers, employees, agents and volunteers from any claim resulting from failure of either Contractor or any subcontractor to take out or maintain any insurance required by this Contract.

13. **EQUIPMENT COVERAGE**. Any policy or policies of insurance Contractor or his subcontractors elect to carry as insurance against loss or damage to construction equipment and tools or other personal property shall include a provision waiving the insurer's right of subrogation against City.

GENERAL PROVISIONS

GARDENA COMMUNITY AQUATIC AND SENIOR CENTER
PROJECT NO. JN 978

PART 1 – GENERAL PROVISIONS

SECTION 1 – GENERAL

1-1 GENERAL. The Standard Specifications for Public Works Construction ("Greenbook") written and promulgated by the Southern California Chapter of the American Public Works Association and the Southern California Districts of the Associated General Contractors of California shall be the Standard/General Specifications (GP) of the City. All work shall conform to the 2021 edition, including supplements of the Standard Specifications, the Special Provisions which supplement or modify the Standard/Technical Specifications (TP), and the Standard Drawings as issued by the City (defined herein as "Agency") available at the time bids are opened unless otherwise specified in the Contract Documents.

The above referenced Standard Specifications, Special Provisions and Standard Drawings are hereby made a part of the Contract Documents.

For the convenience of the Contractor, the section and subsection numbering system used in these Special Provisions corresponds to that used in the Standard Specifications.

1-2 TERMS AND DEFINITIONS. Whenever in the Standard Specification the following terms are used, they shall be understood to mean and refer to the following:

(a)	AGENCY	The City of Gardena, a California municipal corporation.
(b)	BOARD	The City Council of the City of Gardena
(c)	CONTRACT DOCUMENTS	Documents including but not limited to the proposal forms, Standard "Greenbook" Specifications, Special Provisions, Technical Provisions, Notice Inviting Bids, Instructions to Bidders, Bonds, Insurance, Contract and all Addenda setting forth any modifications of the documents.
(d)	ENGINEER	The City of Gardena Director of Public Works/City Engineer or his authorized representative.
(e)	BIDDER	An individual, co-partnership, association or corporation submitting a proposal for the work contemplated, acting directly or through a duly authorized representative.
(f)	LEGAL ADDRESS OF CONTRACTOR	The legal address of the Contractor to be the address given on the Contractor's bid and is hereby designated as the place to which all notices, letters or other communications to the Contractor shall be mailed or delivered.
(g)	LABORATORY	An established laboratory approved and authorized by the Engineer for testing materials and work involved in the contract.

1-7 AWARD AND EXECUTION OF THE CONTRACT.

1-7.1 General. The proposal shall be fully executed and submitted on the forms provided by the Agency and shall be enclosed in a sealed envelope marked and addressed as directed in the "Notice Inviting Bids".

If the proposal is made by an individual, it shall be signed and his or her full name and address shall be given; if it is made by a firm it shall be signed with co-partnership name by a general partner thereof, who shall also sign his or her known name, and the name and address of each member of such co-partnership shall be given; if made by a corporation, the name of the corporation shall be signed by its duly authorized officers and attested by the corporate seal.

Bidders are warned against making erasures or alterations of any kind on their Proposal. Proposals which contain omissions, erasures, alterations, conditions or additions not called for may be rejected.

At the time the Contract is awarded by the Agency, the Contractor shall be licensed under the provisions of Chapter 9, Division 3, of the Business and Professions Code of the State of California to do the type of work contemplated in the Contract and shall be skilled and regularly engaged in the general class or type of work required by this Contract.

1-7.2 Contract Bonds. The "Performance Bond" is equivalent to City's "Faithful Performance Bond".

1-7.3 Examination of Plans, Specifications and Project Site. Bidders shall read the specifications, review the drawings and examine the existing facilities to fully understand the project in order to plan for the improvements as shown in the contract, including local condition, uncertainty of weather and all other contingencies.

Bidders shall satisfy themselves by personal examination of the proposed work sites, and by such other means as they may choose as to actual conditions and requirements and as to the accuracy of the quantities stated in the Proposal forms. Information derived from the maps, plans, specifications, profiles, drawings, or from the Engineer/Architect of the record, shall not relieve the bidder of this responsibility, and the interpretation of the data disclosed by borings or other preliminary investigations is not guaranteed nor is any liability assumed by the Agency.

1-7.4 Interpretation of Drawings and Documents. If a prospective bidder is in doubt as to the true meaning or intent of any part of the Contract Documents including the Specifications, or discovers discrepancies in, or omissions from, the Specifications or Drawings, he may submit to the Engineer a written request for an interpretation or a correction thereof. Interpretations or corrections of the Contract Documents including the Specifications and Drawings, shall be made only by addendum duly issued by the Engineer, and a copy of such addendum will be sent by certified mail, postage prepaid, or delivered to each person receiving a set of the Contract Documents whose address is known to the Engineer and such addendum shall be considered a part of and incorporated in the Contract Documents.

1-7.5 Award of Contract. After the Proposals have been publicly opened and read aloud, they will be checked for accuracy and compliance with all provisions as specified herein.

The Agency reserves the right to reject any or all bids and to waive any informality or irregularity in any bid received and to be the sole judge of the merits of the respective bids received.

Bids subsequently shown to be mathematically unbalanced would be rejected as nonresponsive.

A mathematically unbalanced bid is one containing lump sum or unit bid items which do not reflect reasonable actual costs plus a reasonable proportionate share of the bidder's anticipated profit, overhead costs, and other indirect costs, which he/she anticipates for the performance of the items in question.

"A bid is mathematically unbalanced if the bid is structured on the basis of nominal prices for some work and inflated prices for other work; that is, each element of the bid must carry its proportionate share of the total cost of the work plus profits."

"A bid is materially unbalanced if there is a reasonable doubt that award to the bidder submitting the mathematically unbalanced bid will result in the lowest ultimate cost to the Government. Consequently, a materially unbalanced bid may not be accepted."

Award of the Contract, if it be awarded, will ordinarily be made by the Agency within 30 days after opening of the bids. Award will be made to the lowest responsive responsible bidder.

In selecting the lowest responsive responsible bidder, consideration will be given to the general competency of the bidder for the performance of the work covered by the proposal. To receive favorable consideration, a bidder may be required to present evidence that he has successfully performed similar work of comparable magnitude or submit other evidence satisfactory to the Agency that he or his associates are competent to manage the proposed undertaking and to carry it forward to a successful conclusion. Professional integrity and honesty of purpose shall be essential requirements. A showing of adequate financial resources may be required but will not alone determine whether a bidder is competent to undertake the proposed work.

Only manufacturers or contractors of established reputation, or their duly authorized dealers or agency, having proper facilities for the manufacture of the materials or equipment and for servicing same, or for proper execution of the work called for in the contract, will be considered in making the award.

1-7.6 Execution of Contract. A bidder whose proposal is accepted shall properly sign a written contract with the Agency on the form attached hereto and return said contract together with good and approved bonds and insurance certificates as required by the Contract Documents **within twenty-one (21) calendar days** from the date of the mailing of a notice from the Agency to the bidder, according to the address given by him, of acceptance of his proposal.

Contract bonds and certificates of insurance, if required, shall be filed in all instances before delivering any equipment, materials, or performing any work under the contract; also before any purchase order shall be issued. An executed Power of Attorney form shall be submitted with all contract bonds herein specified.

If a bidder whose proposal is accepted fails or refuses to enter into a contract as herein provided, or to conform to any stipulated requirement in connection therewith, the money represented by his check or bidder's bond shall be refunded less the difference between the low bid and the bid of the bidder with whom the Agency enters into an agreement in accordance with the provisions of the Public Contracts Code Section 20174. At the discretion of the Agency, an award may be made to the bidder whose proposal is next most acceptable to the Agency, and such bidder and his surety shall fulfill every stipulation embraced herein as if he were the party to whom the first award was made.

A corporation to which an award is made may be required before the contract is finally signed to furnish evidence of its corporate existence, of its right to do business in California and of the authority of the officer signing the contract and bonds for the corporation to so sign.

1-7.7 Return of Proposal and Guarantee. The check or bond of a bidder to whom the contract has been awarded will be returned to him after all of the acts, for the performance of which said security is required, have been fully performed. The checks or bid bonds of the second and third lowest bidders will be returned when the bidder to whom the contract has been awarded has properly executed all of the required Contract Documents. Check or bid bonds of other bidders will be returned when their proposals are rejected or in any event at the expiration of forty-five (45) days from the date of opening bids.

1-7.8 Precedence of Contract Documents. The order of precedence of contract document shall be:

FIRST	Requirements of law, including the Code and Ordinances of the City of Gardena.
SECOND	Permits from other agencies as may be required by law.
THIRD	Permits from City of Gardena Departments as may be required by law or ordinance.
FOURTH	The Contract.
FIFTH	The Bid Proposal.
SIXTH	Addenda.
SEVENTH	Notice Inviting Bids.
EIGHTH	Instructions to Bidders.
NINTH	Technical Provisions.
TENTH	Plans.
ELEVENTH	General Provisions of the Standard Specifications.
TWELFTH	Standard Plans.
THIRTEENTH	Standard Specifications for Public Works Construction (current edition).
FOURTEENTH	Caltrans Standard Plans and Specifications.
FIFTEENTH	Reference Specifications.

Change orders, supplemental agreements and approved revisions to Plans and Specifications will take precedence over documents listed above, except those listed as FIRST, SECOND and THIRD. Detailed plans shall have precedence over general plans.

SECTION 2 – SCOPE OF THE WORK

2-2 PERMITS. The Contractor will obtain, at no cost to the Agency, all permits necessary to perform the work on streets, highways, railways, on-site or other rights-of-ways, with the exception that the City's Community Development and Public Works fees are waived. The Contractor shall obtain and pay for all costs incurred for permits necessitated by its operations

such as, but not limited to those permits required for night work, overload, blasting and demolition. For private contracts, the Contractor shall obtain all permits incidental to the work or made necessary by its operations, and pay all costs incurred by the permit requirements.

The Contractor and each subcontractor employed upon the work must have or obtain a valid City of Gardena Business License in accordance with the provisions of the Gardena Municipal Code and the fees are not waived.

The project is subject to permits from the Gardena Community Development Department, Gardena Public Works, LA County of Health, LA County of Fire and LA County of Public Works (Industrial Waste). The Contractor is to acquire all applicable project construction permits and deferred submittals & approvals. The permit costs will be borne by the Contractor with the exception of City required construction permits.

All jurisdictional plan checks have been completed and approved except for deferred submittals.

2-5 THE CONTRACTOR'S EQUIPMENT AND FACILITIES.

2-5.2 Temporary Utility Services. The Contractor shall, at its own expense, make all arrangements necessary for the provision of temporary utility services necessary for its own use during performance of the work. This includes temporary power services to facilitate the field office (Section 8-2).

The existing pool and its facility building have already been demolished by others. However, there is one existing water lateral with valve that has not been abandoned (See demo plans for more details). Therefore, if the Contractor wishes to utilize the existing/active water service on the construction site (Lot 12) prior to the required demolition/abandonment, the City will continue to cover the existing water bills until it is disconnected.

2.10 DISPUTED WORK.

2.10.1 Retention of Imperfect Work. If any portion of the work done or materials furnished under the contract proves defective or not in accordance with the specifications and contract drawings, and if the imperfection in the same is not of sufficient magnitude or importance to make the work dangerous or undesirable, or if the removal of such work is impracticable or will create conditions which are dangerous or undesirable in the opinion of the Engineer, the Engineer shall have the right and authority to retain the work instead of requiring it to be removed and reconstructed, but he shall make deductions therefor in the payment of the contract item due Contractor as may be just and reasonable.

2-11. DISPUTE RESOLUTION.

2-11.1 Requests for Contract Adjustments and Relief. If either Contractor or the Agency believes that it is entitled to relief against the other for any event arising out of or related to the work or Project, such party shall provide written notice to the other party of the basis for its claim for relief. Such notice shall, if possible, be made prior to incurring any cost or expense and in accordance with any specific notice requirements contained in the applicable sections of this Contract.

In the absence of any specific notice requirement, written notice shall be given within a reasonable time, not to exceed fourteen (14) days, after the occurrence giving rise to the claim for relief or after the claiming party reasonably should have recognized the event or condition giving rise to the request, whichever is later. Such notice shall include sufficient information to advise the other party of the circumstances giving rise to the claim for relief, the specific contractual adjustment or relief requested and the basis of such request.

2-11.2 Dispute Avoidance and Resolution. The parties are fully committed to working with each other throughout the Project and agree to communicate regularly with each other at all times so as to avoid or minimize disputes or disagreements. If disputes or disagreements do arise, Contractor and the Agency each commit to resolving such disputes or disagreements in an amicable, professional and expeditious manner so as to avoid unnecessary losses, delays and disruptions to the work under the Contract.

Contractor and the Agency will first attempt to resolve disputes or disagreements at the field level through discussions between Contractor's Representative and the Engineer.

If a dispute or disagreement cannot be resolved through the Contractor's Representative and the Engineer, Contractor's Chief Executive Officer or similar senior representative and the Gardena City Manager, or designee, upon the request of the other party, shall meet as soon as conveniently possible, but in no case later than twenty (20) days after such a request is made, to attempt to resolve such dispute or disagreement. Prior to any meeting between the parties' senior representatives, the parties will exchange relevant information that will assist the parties in resolving their dispute or disagreement.

If, after meeting, the senior representatives determine that the dispute or disagreement cannot be resolved on terms satisfactory to both parties, the parties may submit the dispute to binding or non-binding mediation. The mediation shall be conducted in any manner and by any person or mediation association mutually acceptable to the parties.

2-11.3 Arbitration. Any claims, disputes or controversies between the parties arising out of or relating to the Contract, or the breach thereof, which have not been resolved in accordance with the procedures set forth in Section 9-4.2 above may be decided by binding or non-binding arbitration. The arbitration shall be conducted in any manner and by any person or arbitration association mutually acceptable to the parties.

2-11.4 Claims Disputes. Any claims of Contractor, as "claims" are defined in California Public Contract Code Section 9204 shall be processed in accordance with that section. Section 9204 provides in relevant part that upon receiving a claim from a contractor, together with reasonable documentation to support the claim, a contracting public entity shall conduct a reasonable review of the claim and, within a period not to exceed 45 days [except as otherwise provided in Section 9204], shall provide the claimant a written statement identifying what portion of the claim is disputed and what portion is undisputed.

Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. If the public entity fails to issue a written statement, Section 9-4.3 shall apply. If the contractor disputes the public entity's written response, or if the public entity fails to respond to a claim within the time prescribed, the contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute.

Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the public entity shall schedule a meet and confer conference within 30 days for settlement of the dispute. Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the public entity shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed.

Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with

the public entity and the contractor sharing the associated costs equally. The public entity and contractor shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to other applicable procedures.

2-13 DRAWINGS AND SPECIFICATIONS ("RECORD" DRAWINGS). At all times, the Contractor shall maintain at the project a "Record" set of Drawings and Specifications to include all executed addenda, change orders, and field orders.

Prior to each progress payment the Contractor shall deliver to the Engineer, a set of contract drawings with all applicable "as constructed" notes placed/recorded thereon. Failure to provide "as constructed" plans will cause progress payment to be withheld until information is provided to City.

After completion of the work and before final payment, the Contractor shall deliver to the Engineer a complete set of contract drawings with all applicable "as constructed" noted placed/record thereon. The final form and detail of these as constructed plans are subject to the acceptance of the Engineer.

2-14 MARKING REMOVAL. All markings placed by the Contractor, City, and Underground Service Alert (USA) during construction shall be removed at the completion of the work. These markings shall include, but not limited to, paint, stakes, and metal tags.

All cost associated with removal of markings shall be included in the bid prices for the applicable bid items. Failure of the Contractor to remove these markings shall be cause for the City to do the work and withhold the costs from the Contractor's final payment.

SECTION 3 – CONTROL OF THE WORK

3-2 SELF-PERFORMANCE. The requirement of the prime/general Contractor to self-performance at least 50% of the contract price shall be eliminated; therefore, there is no minimum requirement.

3-5 INSPECTION. Inspection shall be made once a day for areas ready for inspection. Areas or items that fail inspection or that are not ready for inspection shall be rescheduled by the contractor.

Inspection of the work shall not relieve the contractor of the obligation to fulfill all conditions and requirements of the contract.

3-6 THE CONTRACTOR'S REPRESENTATIVE. The Contractor shall furnish the Engineer with the name, address and cell/ business/home telephone numbers of the person responsible for the maintenance of barricades, traffic control signs, lights and other safety devices.

3-10 SURVEYING.

3-10.3 Line and Grade. Unless otherwise provided in the Technical Provisions, establishing lines and grades for construction shall be the responsibility of the Contractor, with the following provisions:

All work under this contract shall be built in accordance with the lines and grades shown on the plans. Field survey for establishing these, and for the control of construction, shall be the responsibility of the Contractor. All such surveys, including construction staking, shall be performed on all items ordinarily requiring grade and alignment, at intervals normally accepted by the agencies and trade involved.

The Contractor shall provide a copy of the office calculations and grade sheets to the Agency's Inspector. The Contractor shall be responsible for any error in the finished work, and shall notify the Engineer within 24 hours of any discrepancies or design errors discovered during staking.

Unless a separate bid item is provided, the payment for surveying, construction staking, professional services, office calculations, furnishing all labor, materials, equipment, tools and incidentals, and for doing all work involved shall be considered as included in the various items of work, and no additional compensation will be allowed therefor.

3-10.4 Permanent Survey Markers. The Contractor is required to locate and tie out survey monuments in the project area prior to construction involving street and highways, or City public right of way and to file with the County Surveyor a Corner Record of any such work. Prior to final payment and the issuance of a completion certificate, the Contractor is required to file a Corner Record for survey monumentation that is replaced. All such survey work shall be performed under the supervision of a California licensed Land Surveyor or a Civil Engineer authorized to perform such work.

The Contractor shall provide the Agency a copy of the office calculations and documents submitted to the County for filing in connection with the aforementioned work.

The payment for surveying, related professional services, office calculation, furnishing all labor, materials, equipment, tools and incidentals, and for doing all work involved shall be considered as included in the various items of work, and no additional compensation will be allowed therefor.

3-12 WORK SITE MAINTENANCE.

3-12.1 General. The Contractor shall keep the work site clean and free from rubbish and debris. The Contractor shall abate dust nuisance by cleaning, sweeping and sprinkling with water in keeping with the AQMD and NPDES requirements. Debris, soil or other matter shall not be washed into storm drains but shall be collected and disposed of in a legal, responsible manner. The construction area shall be cleaned with a power sweeper at the end of every workday and when deemed necessary by the Engineer.

The Contractor shall maintain drainage within and through the work areas. Earth dams will not be permitted in paved areas. Use temporary sandbags to control the site perimeter. At the completion of the project sandbags shall become the property of the City of Gardena and shall be remain in place.

The Contractor shall not spill on haul routes. Any such spillage shall be removed immediately, and the area cleaned.

Stockpiling of construction materials or debris on City right-of-way shall be in accordance with the NPDES permit and shall be approved by the inspector. At the completion of work, the Contractor shall thoroughly clean all work areas.

3-12.2 Air Pollution and Surface Maintenance Control. The Contractor shall obtain a construction water meter from Golden State Water including required deposit and fees. The Contractor shall pay for the water used, at the current water rates. All arrangements for

construction water shall be made by contractor with Golden State Water at Contractor expense.

3-12.4. Storage of Equipment and Material.

3-12.4.1 General. All costs associated with the disposal of all excavated or demolition materials, including any gate fees, shall be paid by the Contractor. These costs shall be included in the bid price for the applicable bid items.

Prior to any excavated or demolition material being removed from the construction site the Contractor shall notify the City as to the hauling route and destination for disposal. If the location for disposal is other than a county landfill then the Contractor shall provide the City with written permission and release of liability for the City from the owner of the property where the material will be deposited.

The City has an exclusive agreement with Waste Resources, Inc. and no other firm may provide bulk trash bins in the event the work requires this service.

3-12.4.2 Storage in Public Streets. Construction equipment shall not be stored at the construction site, any public street or publicly owned facilities without approval of the City. Contractor shall store equipment at a contractor's rental yard.

All excavated material that is to be hauled to and disposed of at a County landfill site by the Contractor is subject to a County gate fee based on tonnage.

3-12.5.4 Protection and Restoration of Existing Improvements. Any facilities, structures, water lines, landscaping, surfaces, signs, pavement markings, painted curbs, house numbers, etc., which are damaged during construction shall be restored to the satisfaction of the City. Damaged water lines shall be repaired immediately at no additional cost to the city.

3-12.5.5 Access to Private Property. The Contractor shall be aware that business and residential access must be maintained at all times. The Contractor shall schedule operations to minimize interference with access to private property.

The main access way to any business or home shall not be completely blocked for more than one four-hour period a day except blockage shall be limited to one twenty-four (24) hour period when concrete is poured.

Temporary access ways shall be provided from the street to the main access way of all businesses and homes by use of traffic rated steel plates or any other method approved by the city.

Payment for this item shall be included in the applicable contract work item.

3-13 COMPLETION, ACCEPTANCE, AND WARRANTY.

3-13.3 Warranty. In addition to the guarantees as required in Section 1-7.2 and 3-13.3 of the Standard Specifications, the Faithful Performance Bond shall remain in full force and effect for a period of one year after acceptance of the work by the Agency to insure that defects, which may appear within said period, will be repaired, replaced, or corrected by the Contractor, at his own cost and expense, to the satisfaction of the Engineer within thirty (30) days after written notice thereof by the Agency.

SECTION 4 – CONTROL OF MATERIAL

4-1 GENERAL.

4-1.1 Warranty of Title. No materials, supplies or equipment for the work under this Contract shall be purchased subject to any chattel mortgage or under a conditional sale contract or other agreement by which an interest therein or any part thereof is retained by the seller or supplier.

The Contractor warrants clear and good title to all materials, supplies and equipment installed and incorporated in the work, and agrees upon completion of all work to deliver the premises, together with all improvements and appurtenances constructed or placed thereon by him to the Agency free from any claims, liens, encumbrances or charges, and further agrees that neither he nor any person, firm or corporation furnishing any material or labor for work covered by the Contract shall have any right to a lien upon the premises or any improvement or appurtenance thereon; provided, that this shall not preclude the Contractor from installing metering devices or other equipment of utility companies the title of which is commonly retained by the utility company. Nothing contained in this section, however, shall defeat or impair the right of such persons furnishing materials or labor under any bond given by the Contractor for their protection, or any right under any law permitting such persons to look to funds due the Contractor, which are in the hands of the Agency.

The provisions of this section shall be inserted in all subcontractor's and material contracts, and notice of its provisions shall be given to all persons furnishing materials for the work when no formal contract is entered into regarding such materials.

SECTION 5 – LEGAL RELATIONS AND RESPONSIBLITIES

5-4 INSURANCE. In lieu of Section 5-4 of the Standard Specifications, refer to the City Contract Documents Section, CD-10, for detail requirements.

5-5 ANTITRUST CLAIMS. By entry into this Contract, Contractor hereby acknowledges the terms of Section 7103.5 of the Public Contract Code and hereby offers and agrees to assign to the Agency all rights, title and interest in all causes of action it may have as outlined above.

5-7 SAFETY.

5-7.4 Hazardous Substances. As required by Public Contract Code Section 7104, if this Contract involves digging trenches or other excavations that extend deeper than four (4) feet below the surface, Contractor shall promptly, and prior to disturbance of any conditions, notify the Agency of: (1) any material discovered in excavation that Contractor believes to be a hazardous waste that is required to be removed to a Class I, Class II or Class III disposal site; (2) subsurface or latent physical conditions at the site differing from those indicated by the Agency; and (3) unknown physical conditions of an unusual nature at the site, significantly different from those ordinarily encountered in such contract work. Upon notification, the Agency shall promptly investigate the conditions to determine whether a change order is appropriate. In the event of a dispute, Contractor shall not be excused from any scheduled completion date and shall proceed with all work to be performed under the Contract but shall retain all rights provided by the Contract and by law for making protests and resolving the dispute.

5-7.4.1 Edison Energized Conductors. Contractor hereby promises and agrees that in the performance of the work specified in this Contract, it will employ and utilized only qualified persons, as hereinafter defined, to work in proximity to Edison's secondary, primary and transmission facilities. The term "qualified person" is defined in Title 8, California Administrative Code, Section 2700, as follows:

"Qualified Person: A person who by reason of experience or instruction is familiar with

the operation to be performed and the hazards involved."

Contractor further promises and agrees that the provisions of this section shall be and are binding upon any subcontractor or subcontractors that may be retained by it, and that Contractor shall take such steps as are necessary to assure compliance by said subcontractor or subcontractors with the requirements of this section.

5-7.4.2 Emergency Provisions. Unusual conditions may arise on the work which will require that immediate and unusual provision be made to protect the public from danger or loss or damage to life and property, due directly or indirectly to the prosecution of the work, and it is part of the service required of the Contractor to make such provisions and to furnish such protection.

Whenever, in the opinion of the Agency, an emergency exists of which the Agency is aware and against which the Contractor has not taken sufficient precaution for the safety of the public or the protection of utilities or of adjacent structures or property which may be injured by the progress of construction; and whenever, in the opinion of the Agency, immediate action shall be considered necessary in order to protect public or private personnel or property interests, or prevent likely loss of human life or damage on account of the operations under the Contract, then in that event the Agency may provide suitable protection to said interests by causing such work to be done and material to be furnished, as in the opinion of the Agency may seem reasonable and necessary, all at the expense of the Contractor.

SECTION 6 – PROSECUTION AND PROGRESS OF THE WORK

6-1 CONSTRUCTION SCHEDULE AND COMMENCEMENT OF THE WORK

6-1.1 Construction Schedule. The Contractor's proposed construction schedule shall be submitted to the Engineer prior to the preconstruction meeting. Any schedule for long lead items shall be accompanied by written statements from each supplier or equipment indicating an anticipated schedule of delivery.

The Contractor shall include in his bid all costs to perform the work under this contract in stages. The Contractor shall begin and complete work in each stage prior to starting work in subsequent stages unless previous permission is obtained from the Engineer. The contractor shall stage the work to allow parking on the next adjacent streets. Restricting parking on multiple adjoining streets shall require approval of the engineer.

6-1.2 Commencement of the Work. City may establish a Notice to Proceed (NTP) date no later than thirty (30) calendar days after the date of the contract execution. Prior to issuing the Notice to Proceed, the Engineer will schedule a preconstruction meeting with the Contractor to review the proposed construction schedule and delivery dates, arrange utility coordination, discuss construction methods and clarify inspection procedures.

The names, addresses and telephone numbers of the Contractor and subcontractors, or their representatives, shall be filed with the Public Works Manager and the County Sheriff's Department or the City Police Department prior to beginning work.

The Contractor shall also notify the City of Gardena and the owners of all utilities and substructures within the Project area not less than 48 hours prior to starting construction. The following utility companies list of names and telephone numbers is intended for the convenience of the contractor and is not guaranteed to be complete or correct:

COMPANY	***CONTACT***	***TELEPHONE NO.***

Southern California Edison	Joshua Remlio (Planner) Ron Whitaker (Inspector)	562.756.3241 310.710.9606

Underground Service Alert		800.422.4133

The Contractor shall submit periodic Progress reports to the Engineer by the tenth day of each month. The report shall include an updated Construction Schedule. Any deviations from the original schedule shall be explained. Progress payments will be withheld pending receipt of any outstanding reports.

6-1.3 Working Day. The Contractor's working hours shall be limited to the hours between 7:30 A.M. and 4:30 P.M., Monday through Friday except holidays. No work which will cause loud or disruptive noise to adjacent residents and "No Parking" enforcement shall begin prior to 8:00 a.m. nor terminate later than 4:30 p.m. Deviation from normal working hours will not be allowed unless written permission has been duly obtained beforehand from the office of the City Engineer. The Contractor shall provide adequate light for proper prosecution of the work, for the safety of the workmen and the public, and for proper inspection.

If the Contractor works beyond the allowed working hours without prior written approval from the Engineer, the Contractor may be charged Five Hundred ($500) for each occurrence as required by the Engineer. The amount will be deducted from a progress payment or bond.

Contractor hereby acknowledges and shall be required to comply with the provisions of California Labor Code Section 1810 et seq. According to those sections, eight (8) hours of labor shall constitute a legal day's work. Contractor shall pay to the Agency a penalty of Twenty-Five Dollars ($25.00) for each worker employed in the execution of this Contract by Contractor, or by any Subcontractor, for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any calendar day or forty (40) hours in any one (1) calendar week, except when payment for overtime is made at not less than one and one-half (1-1/2) times the basic rate for that worker.

In the event of either a requested or emergency deviation, inspection service fees will be charged against the Contractor. The service fees will be calculated at overtime rates including benefits, overhead and travel time. The service fees will be deducted from any amounts due to the Contractor.

6-1.4 Notice and Service Thereof. Any notice required or given by one party to the other under the contract shall be in writing and shall be dated and signed by the party giving such notice or by a duly authorized representative of such party. Any such notice shall not be effective for any purpose whatever unless served in the following manner:

Notice shall be given to the Agency by personal delivery thereof to the City of Gardena Engineer or by depositing the same in the United States mail enclosed in a sealed envelope, registered and with postage prepaid, addressed to:

Public Works Department
City of Gardena
1717 W. 162nd Street
Gardena, CA 90247-3778

Notice shall be given to the Contractor by personal delivery thereof to said Contractor or to his authorized representative at the site of the project, or by depositing the same in the United States mail, enclosed in a sealed envelope addressed to said Contractor at the address established for the conduct of the work under this Contract, postage prepaid and registered.

Notice shall be given to the Surety, or any other person, by personal delivery to said Surety or other person, or by depositing the same in the United States Mail, enclosed in a sealed envelope addressed to such Surety or persons at the address of said Surety or persons last communicated to the party giving the notice, postage prepaid and registered.

Notification of Property Owners and Tenants - The Contractor shall notify each property owner and/or tenant in the project area (See Appendix C) in writing five (10) working days prior to the start of construction. If pedestrian or vehicular access to private property is to be blocked, the Contractor shall again notify each property owner and/or tenant in writing five (5) working days prior to construction activities. The Contractor shall provide additional notices when a lapse time occurs during each phase/segment work.

The written notice shall be submitted to the Engineer for approval prior to being delivered.

6-2 PROSECUTION OF THE WORK.

6-2.1 Contractor's Responsibility for Work. Until the formal acceptance of the work by the Agency, the Contractor shall have the charge and care thereof and shall, subject to the insurance protection furnished in accordance with the Section 1-7.6 and 5-4 hereof, bear the risk of accident, loss or damage to any part thereof by action of the elements or from any other cause, whether arising from the execution or from the non-execution of the work. The Contractor shall rebuild, repair, restore and otherwise correct damages to any portion of the work occasioned by any of the above causes before its acceptance.

In case of suspension of work from any cause whatsoever, the Contractor shall be responsible for all materials and the proper temporary storage thereof.

6-3 TIME OF COMPLETION.

6-3.1 General. The contract time shall begin per the City's written notification. Work must be completed within working days specified for the project. In addition, the Contractor shall notify the City 24 hours in advance of the actual commencement of work.

No work shall be undertaken during the City's holiday closures. It is the Contractor's

responsibility to determine the City's closure dates.

6-9 LIQUDATED DAMAGES. The amount of liquidated damages is hereby amended to **$5,000** for each consecutive calendar day.

SECTION 7 – MEASUREMENT AND PAYMENT

7-1 MEASUREMENT OF QUANTITIES FOR UNIT PRICE WORK.

7-1.2 Method of Measure. The quantities shown on the Bid Schedule are approximate only. The Contractor will be paid for the actual quantities of work based on approved field measurements as provided for in these Specifications. The City reserves the right to increase or decrease the amount of any item or portion of work to be performed or materials furnished, or to delete any item, in accordance with the Specifications. Additional bid item work shall be completed within the total working days in these specifications. Additional working days may be allowed with the approval of the engineer.

The Contractor shall provide Schedule of Value prior to pre-construction meeting for lump sum bid items.

Any conflict between the listed bid schedule and/or schedule of values versus actual quantities will be addressed during construction by either increasing or decreasing the payment per bid unit price/schedule of values and the GREENBOOK Section 2-7.

7-3 PAYMENT.

7-3.2 Partial and Final Payment. The Engineer will authorize monthly partial/progress payments per Section 7-3.2 of the Standard Specifications. Contractor's monthly invoice shall be submitted on company letterhead. Each invoice submitted shall include: project name, date of invoice, progress payment number, and purchase order number. All bid items shall be included on each invoice and include unit, unit price bid, original quantity, amount, previous payment quantity and amount, current invoice payment quantity and amount, total project payment quantity and amount. In addition, any approved change orders shall be listed on invoice. Payment to Contractor typically takes 30 days from submittal of approved invoice. However, payments will be withheld pending receipt of any outstanding reports required by the Contract Documents.

7-3.3 Delivered Materials. The City will NOT honor or make any progress payments for materials ordered and delivered to the job site by the Contractor unless prior approval is obtained from the Engineer.

7-4 PAYMENT FOR EXTRA WORK.

7-4.3 EXTRA WORK. When work is performed on a "time and materials" basis, the following percentages shall be added to the Contractor's cost and shall constitute the markup for all overhead and profits:

1) Labor 20
2) Materials 15
3) Equipment Rental 15
4) Other Items and Expenditures 15

To the sum of the costs and markups provided for in this section, 1 percent shall be added as compensation for bonding.

When all or any part of the extra work is performed by a Subcontractor, the markup established above shall be applied to the Subcontractor's actual cost of such work. A markup of 10 percent on the first $5,000 of the subcontracted portion of the extra work and a markup of 5 percent on work added in excess of $5,000 of the subcontracted portion of the extra work may be added by the Contractor.

SECTION 8 – FACILITIES FOR AGENCY PERSONNEL

8-2 FIELD OFFICE FACILITIES. The Contractor shall provide the class of field office indicated below:

☐ Class "A" ☐ Class "B" ☒ Class "C"

In the event none of the boxes are marked above, no specific field office will be required, and the use therefore of any field office will be at the Contractor's discretion. The location of any field office shall be as provided on the plans, in these Specifications or as designated by the Engineer.

TECHNICAL PROVISIONS (GREENBOOK)

PREFACE: All work and materials shall conform to the "Standard Specification for Public Works Construction", 2021 edition, except as modified by the contract and these Technical Provisions.

Incidental Work - All work and materials required by the plans and specifications, and not specifically listed in the bid schedule items of work, shall be considered incidental and no additional payment shall be made therefore. Incidental items shall include, but not be limited to, mobilization; implementation of the SWPPP and Best Management Practices for the protection of storm drain structures; adjusting utility access covers to grade; saw cutting; excavation and disposal of materials; survey; traffic control and coordination of utilities.

PART 2 - CONSTRUCTION MATERIALS

SECTION 200 - ROCK PRODUCTS

200-1 ROCK PRODUCTS

200-1.1 General

Aggregate base material for all asphaltic concrete and concrete paving shall be per *Geotechnical Investigation Proposed Community Aquatic and Senior Center* by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

200-1.4 Coarse Aggregate for Portland Cement Concrete

1. Non-Slip Aggregate: Fused aluminum oxide grits or crushed emery, factory graded, packaged rust proof.

200-2 UNTREATED BASE MATERIALS

200-2.1 General

Crushed Miscellaneous Base (CMB) shall be used as the untreated base material.

SECTION 201 - CONCRETE, MORTAR, AND RELATED MATERIALS

201-1 PORTLAND CEMENT CONCRETE

201-1.1 Requirements

201-1.1.1 General. Add the following below paragraph 7:

The cement utilized shall be Type II/V, per the project Geotech report. No substitution of materials shall be permitted. The Contractor shall furnish the Owner's Representative with a copy of the mix design to be used and with a legible certified weight-master's certificate for each load of P.C.C. delivered to the project. Portland Cement Concrete delivered to the project site having a water content and/or slump greater than that specified in the mix design shall be rejected and removed from the project site.

Contractor shall retain the services of a qualified State of California licensed civil engineer to provide a concrete mix design for each class of concrete in accordance with UBC Section 1905. Concrete mix design submittals shall bear the stamp and signature of the engineer approving the mix design as being consistent with project specifications and geotechnical report.

201-1.1.2 Concrete specified by class: The strength of concrete shall be **3,250 psi** for all concrete not otherwise specified with a maximum slump of four inches (4") for all concrete flatwork, walls, curb, gutter, walks, aprons, footings, foundations, sidewalks, access ramps, curbs and gutters, and cross gutters, mow curbs, columns, thrust blocks, seating, monument signs, etc. Portland cement concrete shall be Class 560-C-3250 unless shown otherwise on the plans.

201-1.1.3 **The Water Cement Ratio (W/C) shall be 0.50 maximum, per the project Geotech report.**

201-1.1. Concrete Specified by Compressive Strength

1. All material shall comply with the latest editions of the American Concrete Institute (ACI) and Uniform Building Code. Testing of Portland cement concrete shall apply to all site concrete including but not limited to: concrete paving, walls, footing, etc.

2. Product Data:

   a) Submit complete materials list of items proposed for the work. Identify material source.
   b) Submit admixture, curing compound, retarder, and accessory item product data.
   c) Submit material certificates for aggregates, reinforcing, and join fillers.

3. Submit concrete delivery tickets to Quality Control Manager. Show the following:

   a) Batch number
   b) Mix by class or sack content with maximum size aggregate
   c) Admixture
   d) Air content
   e) Slump
   f) Time of loading

4. Submit concrete test reports.

5. Owner will provide field quality control testing and inspection during concrete operations.

6. Contractor shall provide adequate notice, cooperate with, provide access to the work, obtain samples, and assist test agency and their representatives in execution of their function.

7. Strength Verification

Contractor should present mix design to Owner Inspector for approval prior to pour. Contractor shall provide copies of concrete tickets verifying the strength requirements for every truck load of concrete (see also item 3 above).

201-1.1.5 Test for Portland Cement Concrete
Concrete Installer

Contractor shall provide evidence to indicate successful experience in concrete placement and finishing work similar to that specified herein and who can demonstrate such successful experience through past project documentation and references.

1. Experience Period: Minimum five (5) years' experience.

2 Demonstration of Experience: **Ten (10) projects which have been completed within the past twenty-four (24) months utilizing similar products, scope, and complexity.**

3. Supervision: Placement and finishing of concrete work shall be performed under the supervision of a person having a minimum of five (5) years' experience in the placement and finishing of products specified herein.

4. **Previous projects shall be located in Los Angeles, Orange, Riverside, Ventura or San Bernardino Counties**. A listing of projects and addresses shall be provided with the bid and shall be reviewed and approved by the City prior to award of the bid. Installer qualifications shall be submitted to construction manager with copies to the Architect for information purposes. Three (3) copies of previous experience shall be provided.

5. **The above prequalifications refer to any and all site / exterior concrete work identified on plans.**

201-1.2 Materials

201-1.2.1 Portland Cement

1. Lime: ASTM C207, Type S, containing 85% by weight of calcium oxide.

2. Lime Putty: Make from hydrated lime conforming to ASTM C207, pulverized to such fineness that 100% will pass a 50 mesh sieve. Mix lime in water, run through screen into box and age 48 hours.

3. Cement shall be Type II/V Portland Cement.

201-1.4 Mixing

201-1.4.3 Transit Mixer

Mixes

a. Provide ASTM C94 ready-mixed concrete. Batch mixing at site not acceptable.

1. Strength**: 3,250 psi** minimum at 28 days for all concrete flatwork, curbs, seating, ramps, plaza area, etc.

2. Slump Range: 2" to 4" maximum

b. Coarse aggregate shall consist of 3/4" aggregate - 3/8" aggregate for pump mix.

c. Provide an approved water-reducing admixture in all concrete.

d. Provide an air-entraining admixture in all concrete. Air content 5% to 7%.

e. Indicate water added to mix at job site on each delivery ticket. Show quantity of water added. Site water tempered mixes exceeding specified slump range will be rejected as not complying with specifications requirements.

201-2 STEEL REINFORCEMENT FOR CONCRETE

201-2.2 Reinforcing Steel. [Add the following paragraph immediately after the first paragraph]:

Reinforcing steel shall be Grade 60 steel conforming to ASTM A 615 with 2-inch minimum cover unless shown otherwise on the plans.

Payment.

Payment for steel reinforcement shall be included in the lump sum contract price for all related items, i.e., concrete ramps, walks, walls, structures, footings.

201-3.1 Expansion Joint Filler and Joint Sealants

201-3.2 Premolded Joint Filler

Expansion joint material shall be **Deck-O-Foam by W.R. Meadows Corporation or approved equal – 1/4″ in dimension. Install per manufacturers specifications (909) 469-2606.**

201-4 CONCRETE CURING MATERIALS

Curing compound shall be ASTM 309 or better. Concrete cure and seal shall be “clear” by Davis Colors, or approved equal.

201-4.4 Concrete Sealer

Concrete sealer shall be **Siloxane WB Concentrate sealer or approved equal. Dilution to be 1:9 minimum to 1:7 maximum. Provided by Mike Davis of Innovative Concrete Products and Marketing, Inc. Phone: (949) 498-7077.** Concrete sealer to be applied to all sidewalks and the Monument Sign.

SECTION 202 - MASONRY MATERIALS

202-2.1 Materials: [Add the followings]:

1. Codes: Materials and work shall conform to the governing building code. In case of conflict between the codes, the more stringent shall govern.

2. Samples: Submit samples of all block to be used in the work.
3. Protection: Safeguard all materials against injury in transit, delivery, storage, sorting, installation, cleaning, and until final acceptance of the completed work. Store cement and lime in rainproof sheds with elevated floors. Store sand on tightly floored space, protected against mixing with ground or other materials.

4. Quality of construction is the responsibility of the Contractor.

202-2.1.1 Masonry Materials [Add the following]:

1. Concrete Block:

The concrete blocks shall conform to the requirements shown on the plans and shall be nominal size and of uniform color.

202.2.2 Mortar, Grout, and Water

1. Mortar [Add the following]:

Mortar. Mortar for laying masonry units shall consist, by volume, of 1 part Portland cement, ½ part lime putty, 3 parts sand, and shall conform to ASTM C270. If plastic type cement is used, the lime putty shall be omitted. Each batch of mortar shall be freshly prepared and uniformly mixed. Mortar for split face concrete block construction shall be integral color, color to be selected. Mortar for rock cobble construction shall be natural grey.

Mortar shall be colored to match integral color masonry block units. Coloring shall be chemically inert, fade resistant mineral oxide, or synthetic type.

2. Grout. [Replace with the following]:

   Grout for filling masonry units shall consist, by volume, of 1 part Portland cement and 3 parts sand. Sufficient water shall be added to create grout of fluid consistency. Grout shall be natural in color.

3. Pea Gravel. Clean, hard, containing not more than 5% by weight of flat, thin, elongated, friable, or laminated pieces; uniformly graded with not over 5% passing a no. 8 sieve to 100% passing a 3/8" sieve.

4. Lime. ASTM C207, Type S, containing 85% by weight of calcium oxide.

5. Lime Putty. Make from hydrated lime conforming to ASTM C207, pulverized to such fineness that 100% will pass a 50 mesh sieve. Mix lime in water, run through screen in to box, and age 48 hours.

Mortar and grout not used within 30 minutes after leaving mixer will not be permitted on the work. Retempering of mix will not be allowed.

202-2.2.2 Masonry, Sealants, and Waterproofing

1. Sealants [Add the following]:

   a. Masonry: "All guard" concrete masonry sealer as manufactured by Dow Corning, or approved equal.

2. Waterproofing [Add the following]:

   a. Waterproofing membrane (Miradri 860) and protective membrane (Miradri Protection Course 200V) as manufactured by Nicolon Mirafi, or approved equal. Contact James Heidt and Assoc. 818-248-9677. Apply per manufacturer's specifications.

   b. All drainage incorporated into waterproofing system, as indicated on drawings, shall be tied into storm drain lines indicated on civil engineer's drawings. Drainlines shall be Sch. 40 PVC and slope at 1% min.

   c. Contractor shall identify and provide for drainline and drainline rock alignment in field. Alignment shall consider and avoid conflict with all other site work. Drainline alignment shall be reviewed and approved by Quality Control Manager prior to installation and be indicated on as-builts as prepared by Contractor. Installation of drainline shall be included in cost of construction.

SECTION 203 - BITUMINOUS MATERIALS

203-5 SLURRY SEAL

203-5.1 General

Slurry seal shall be emulsion-aggregate slurry (EAS) conforming to 203-5.4.

203-5.2 Emulsion-Aggregate Slurry (EAS)

203-5.2.1 General

Emulsion-aggregate slurring (EAS) shall be Type I-CQS-1h conforming to 203-3

203-5.2 Materials

203-5.2.2 Emulsified Asphalt

Emulsified asphalt shall be of quick set type.

203-5.2.5 Latex

Latex shall be Ultrapave 65K produced by the Textile Rubber and Cement Company, Inc., or equal approved by the Engineer in advance of ordering the latex additive. It shall be added to the emulsified asphalt by the co-mill method at the emulsion plant at the rate of 2½ percent of weight of the emulsified asphalt. Latex-added emulsified asphalt shall be kept in a suspended state by an agitating mixer and mixed every three days.

(Use Section 203-6 for conventional AC.)

203-6 ASPHALT CONCRETE

203-6.1 General.

Asphalt concrete shall conform to the provisions of Subsection 400-1, “Rock Product,” and Subsection 400-4, "Asphalt Concrete".

The viscosity grade of paving asphalt shall be AR 4000. The mix designs and asphalt content shall be as follows:

3/4″ (III-B-3) Base Course	5.6%
1/2″ (III-C-3) Surface Course	5.8%
3/8″ (III-D) Leveling Course, Asphalt Concrete Dike, or Miscellaneous A.C. Placement (sidewalks and driveways)	6.8%

203-6.5 Type III Asphalt Concrete Mixtures

Asphalt concrete finish course and leveling course shall be Type III-C3-PG 64-10 (20% max RAP). Asphalt concrete base course shall be Type III-B2-PG 64-10 (20% max RAP).

(Use Section 203-11 for rubberized AC.)

203-11 ASPHALT RUBBER HOT MIX (ARHM)

203-11.3 Composition and Grading

Asphalt rubber hot mix finish course shall be ARHM-GG-C.

SECTION 207 – GRAVITY PIPE

207-17 PVC PLASTIC PIPE

207.17.1 General

A. PVC PLASTIC PIPE

1. PVC plastic pipe (SDR-35) shall conform to the requirements of Section 207-17 of the Standard Specifications. Pipe class to be referenced in table 207-17.1.

   PVC plastic pipe shall be constructed to the lines and grads shown on the plans for designated sizes and shall comply with the construction methods set forth in Section 306of the Standard Specifications.

2. PVC plastic pipe shall be measured and paid for at the contract unit bid price per linear foot for each designated size in accordance with Sections 306of the Standard Specifications and shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in reinforced PVC plastic pipe, complete in place, as shown on the plans, and as specified in the Standard Specifications and these Special Provisions, and as directed by the Engineer.

B. SANITARY SEWER PIPELINE (4” AND 6” PVC)

1. Sanitary Sewer (4” And 6” PVC) “C” installation shall conform to the following standards and specifications.

   1. PVC Pipe ASTM D-2321

   Pipe bedding for PVC sewer pipe shall be ½-inch crushed rock per Section 200-1.2 of the SSPWC.

   The material used for construction of gravity sewer collection system shall be new and unused PVC pipe and shall conform to the specifications as set forth in SSPWC Subsection 207-17. All pipe shall conform to ASTM D-3034 and shall have a minimum SDR of 35.

   Testing shall conform to SSPWC Sections 306-7.8.2.2 (Water Exfiltration) and 306-7.8.2.4 (Air Pressure). Should any section of pipeline fail to pass these tests, the pipe shall be removed and repaired or replaced, and re-tested, until it satisfactorily passes the test.

2. Payment for Sanitary Sewer pipe will be in accordance with Subsection 306-15 of the SSPWC and additionally shall include fittings, permanent and temporary resurfacing and replacing striping in kind.

C. PRIVATE PVC WATERLINES (1/2" to 3")

1. Methods and Materials: Installation of PVC (C-900) waterline shall conform to SSPWC subsection 207-17.1 and 306. PVC pipe shall be constructed to the lines and grades shown on the plans for designated sizes.

2. Testing shall conform to SSPWC Sections 306-7.8.2.2 (Water Exfiltration) and 306-7.8.2.4 (Air Pressure). Should any section of pipeline fail to pass these tests, the pipe shall be removed and repaired or replaced, and re-tested, until it satisfactorily passes the test.

D. TRENCHES FOR PRIVATE WATER AND SEWER

1. This section covers trenching for water and sewer pipes and trenching for any other utility (i.e. drainage pipe) not covered by another Section of the specifications.

   Contractor shall locate all known utilities prior to trenching for new pipelines. The Contractor at the Contractor's expense shall repair any damage to existing or new electrical, telephone or communication, gas, sewer, water, and storm drain, and irrigation facilities.

2. Trench Safety: Before beginning excavation for a trench five feet or more in depth, the Contractor shall submit to and shall receive the acceptance (approval) of the Engineer of a detailed plan showing the design of shoring, bracing, sloping, or other provisions to be made for worker protection from the hazard of caving ground. Such plan shall be submitted at least five days before the Contractor intends to begin work on the trench. If such plan varies from the shoring system standards established by the Construction Safety Orders, the plan shall be prepared by a registered civil or structural engineer. Nothing herein shall be deemed to allow the use of shoring, sloping, or protective system less effective than that required by the Constriction Safety Orders of the Division of Industrial Safety. No excavation shall start until the Engineer has accepted the Contractor's shoring plans and Contractor has obtained a permit from State Division of Industrial Safety and given a copy of the permit to engineer.

   The Contractor shall provide and install adequate sheeting, shoring, and bracing, or equivalent method for the protection of life or limb, which shall conform to the applicable safety orders, when applicable. Nothing in these specifications shall be construed as imposing tort liability on the Owner or any of its employees.

E. TRENCH BACKFILL

1. Imported Trench Backfill

Imported trench backfill shall be required when native trench material has a moisture content greater than 4% above the optimum moisture content as measured in accordance with ASTM 1557, or does not meet the gradation requirements for imported trench backfill given below.

Imported trench backfill shall include material one foot above the pipe up to the existing pavement structural section.

All imported trench backfill material shall be a quarry waste or similar material with 100% passing a 3" screen, no more than 15% passing a #200 sieve and a sand equivalent of 20 minimum using California Test Method No. 217.

F. SANITARY SEPARATION

1. Sanitary separation shall be maintained as required in the Owner and/or State Standard details. The Engineer shall be notified immediately upon discovery of conflicting sewer laterals. A field determination will then be made by the Engineer as to which method of sanitary separation shall be used.

SECTION 209 – PRESSURE PIPE

209-1 IRON PIPE AND FITTINGS

209-1.1 Ductile Iron Pipe

209-1.1.2 Materials

All flanged pipe joints shall be joined utilizing Type 316 Stainless Steel nuts, washers and hex-head bolts. Gasket shall be full-faced, cloth reinforced Buna-N rubber.

Flex and transition couplings used to join pipes in water main construction shall have all threaded parts and joining hardware fabricated from Type 316 Stainless Steel.

Pipe harness assemblies, valve and fitting restraints and shackle-clamp assemblies shall be joined utilizing Type 316 Stainless Steel all-thread rod, nuts, bolts and washers. Clamps, shackles and other hardware may be carbon steel or ductile iron where appropriate, but must be coated liberally with corrosion protective mastic compound.

Bolted connectors fabricated from stainless steel shall have threaded parts coated liberally with an approved anti-seize compound.

All bolted and threaded fasteners shall be manufactured in the United States of America and shall conform to the minimum requirements for strength, material construction and dimension as established by the ASTM and the ANSI Specifications. All fasteners shall be accompanied by written certification from the manufacturer stating compliance with the appropriate specification.

All mechanical joints shall be restrained joints.

Water main fittings shall be manufactured in accord with AWWA C110 (ANSI A21-10) and shall be ductile iron. Cast Iron fittings shall not be accepted. Compact body fittings (AWWA C153) will not be permitted unless otherwise specified. Mechanical joint fittings shall be manufactured in accord with AWWA C110 and shall have retainer glands. All flanged pipe and fitting shall be shop fabricated, not field fabricated. Adapter flanges shall be ANSI B16.5 pattern, Class 150 flanges. Bolts and nuts for all installations shall be Type 316 Stainless Steel. Threads shall be coated with a liberal amount of anti-seize compound. Flange gaskets shall be full-faced Buna-N, nylon impregnated rubber.

Ductile iron pipe fittings and valves buried underground shall be protected with a polyethylene encasement (plastic film wrap) in accord with AWWA C105 (ANSI A 21.5). Wrap shall be loose 8-mil thick polyethylene.

SECTION 210 PAINT AND PROTECTIVE COATINGS

210-1 PAINT

210-1.4 Paint Materials.

Submittals:

1. Materials List:

    a. The Contractor shall furnish the articles, equipment, materials, or processes specified by name in the Contract Drawings and specifications. No substitutions will be allowed without prior written approval of the Owner.

    b. Complete material list shall be submitted prior to performing any work. Material list shall include the manufacturer, model number, and description of all materials and equipment to be used.

    c. Equipment or materials installed or furnished without prior approval of the Owner may be rejected and the Contractor required to remove such materials from the site at his own expense.

    d. Approval of any item, alternate, or substitute, indicates only that the products or products apparently meet the requirements of the Contract Drawings and specifications on the basis of the information or sample submitted.

        210-1.5.1 Metal fabrications: Priming and painting of all metal fabrications shall be as per Section 304-2.3.2.

210-1.6.1 General. [Replace the following]:

The paint for traffic striping and marking shall be as specified in Section 310.

The paint for concrete curbs shall be the following, or an approved equal:

A. J.E. Bauer Company #2133 A-9 Red.

B. J.E. Bauer Company #2134 A-9 Green.

C. J.E. Bauer Company #1864 A-9 Blue.

Thinner shall not be mixed with paint. Paint shall dry "tack-free" within thirty (30) minutes. Paint used for pavement legends and striping shall be a compound of paint and glass beads.

210-1.6.5 Reflective Material. Shall be as specified in Section 310.

210-3 General [Replace with the following]:

All metal fabrications shall be metalized per Section 304.

SECTION 211 – MATERIAL TESTS

211-2 COMPACTION TESTS

211-2.1 Laboratory Maximum Density [Replace with the following]:

Suitable excavated materials removed to accommodate new construction may be used as fill material subject to Soils Engineer's inspection and approval.

211-2.2 Field Density

Field density tests will be made by the Owner’s Geotechnical Engineer during the course of construction at the expense of the Owner. If field density tests indicate that any portion of the compacted subgrade has density lower than that specified, the Contractor shall rework that portion until the specified density is obtained.

Retest of areas which have failed compaction will be performed by the Owner’s Soils Engineer at the Contractor’s expense. All fill material and subgrade compaction shall be as noted in project soils report as prepared by **Southern California Geotechnical dated November 18, 2021**. **See Appendix A**.

SECTION 212 – WATER AND SEWER SYSTEM VALVES AND APPURTENANCES

212-5 VALVES

212-5.2 Butterfly Valves

212-5.2.1 General

All butterfly valves shall be of the tight-closing, rubber-seat type, conforming to the design standards of ANSI/AWWA C504 latest revision, except where noted herein. Valves shall be bubble-tight at the rated pressure in either direction and shall be

suitable for throttling service and/or operation after longs periods of inactivity. Manufacturer shall be ISO 9001 Certified or have similar certification up and above AWWA. All butterfly valves shall be from the same manufacturer. Valves shall be manufactured by the Henry Pratt Co. or approved equal.

All valve bodies shall be constructed of cast iron ASTM A126, Class B with ANSI B16.1 flange drilling. All valves shall have 316 stainless steel exterior body bolts. Discs shall be of the concentric design. Valve discs shall be constructed of ductile iron ASTM A536, Grade 65-45-12 with a 316 stainless steel edge. Valves shall have a one piece through shaft of 18-8 stainless steel, corresponding to the requirements of AWWA C504, latest revision. The shafts shall fasten to the disc by means of a threaded disc pin or through pin providing a positive leak proof connection of the shaft to the disc.

Seats shall be simultaneously bonded and vulcanized to the body of the valve. All interior surfaces in contact with water, excluding stainless steel and disc shall be rubber lined or epoxy coated. Valves with the rubber seat located on the valve disc will not be permitted. Seats shall be designed so that no adjustments or maintenance is required.

All shaft bearings shall be of the self-lubricating, corrosion-resistant, sleeve type. Bearings shall be designed for horizontal and/or vertical shaft loading. Shaft packing shall be self-adjusting and suitable for pressure or vacuum service. The flow path for valves shall be fully rubber lined. The valve disc shall be Fusion Bonded Epoxy Coated with an AWWA NSF-61 coating system or liquid epoxy on wetted interior surfaces 16 mils, holiday free. Exterior coating shall have 16 mils of liquid epoxy. All valves to be painted at the factory by the valve manufacture.

All valves shall be hydrostatic and leak tested in accordance with ANSI/AWWA C504, latest revision with the following modification: Valves shall be tested and rated at 200 PSI to facilitate field system hydro-test. All valves to be tested with the actuator installed as a complete unit by the valve manufacture. Provide certified test reports with all valve shipments. Manufacturer furnishing valves shall present proof of compliance with ANSI/AWWA C504, latest revision. The valve actuators are to be installed and tested at the factory by the valve manufacture. All actuators shall be provided with 316 stainless steel exterior body bolts.

SECTION 214 – TRAFFIC STRIPING, CURB AND PAVEMENT MARKINGS AND PAVEMENT MARKERS

214-4 PAINT FOR STRIPING AND MARKINGS

214-4.1 General

Temporary striping shall be Rapid Dry paint. Final striping shall be reflectorized thermoplastic.

For blue paint for ADA Parking Stalls, paint shall be Waterborne Traffic Line paint.

214-6 PAVEMENT MARKERS

All pavement markers shall comply with Section 85 of the State of California Standard Specifications.

214-6.3 Non-Reflective Pavement Markers

214-6.3.1 General

All new non-reflective pavement markers Types A and AY shall be ceramic.

214-6.4 Retroreflective Pavement Markers

214-6.4.1 General

All retroreflective pavement markers shall be 3M Series 290 with glass-covered faces, or approved equal.

PART 3 - CONSTRUCTION METHODS

SECTION 300- EARTHWORK

SECTION 300.1 CLEARING AND GRUBBING.

300-1.1 General:

1. All site grading, earthwork preparation, presaturation, compaction, etc. shall be as outlined in these specifications and the plan documents, and per project soils report prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**
2. All clearing and grubbing, grading and earthwork shall be performed per plans, technical specifications and in accordance with the Geotechnical Report.
3. Following Owner approval of Contractor, herbicide (Roundup or approved equal), and prior to the pulverization process (See Section 301) Contractor shall apply herbicide to all existing turf areas designated for removal within all proposed synthetic turf areas and not within 5' of the dripline of the adjacent existing trees. Any and all turf within 5' of existing trees shall be manually surface-scalped down to the beginning of the root zone and removed.

   Contractor shall have a Licensed Pest Control Advisor submit to the Owner a Pest Control Recommendation for the application of any pesticide/herbicide on Owner property. It must be applied by a Qualified Applicator. Both of these licensees are regulated by the California State Department of Pesticide Regulation. All chemicals shall be applied in accordance with registered label instruction and manufacturer's recommendations.

   The turf kill process shall last for a period of not less than 15 days to kill all living plant material (except existing trees). During the turf kill process, the area shall be allowed to dry out.

Following complete turf kill (to be approved by Engineer) scalp turf areas down to the beginning of root zone. Any and all turf within 5' of drip line of trees shall be manually scalped down to the beginning of the root zone. Remove all scalped turf from the project site per Section 300-1.3.

Following turf kill and removal, process exposed subgrade per Section 301.

4. Any and all earthwork/demolition within 5' of dripline of existing trees shall be conducted with the oversight/supervision of the City Arborist to verify no damage shall be imparted to existing trees.

5. Perform grading within contract limits, grading around trees, including adjacent transition areas to new elevations, levels, profiles, and contours indicated.

6. Any existing tree roots encountered which are 2" or greater in dimension shall be hand dug/excavated. Cutting of any roots 2" or larger in dimension will be performed under the supervision and approval of the City Arborist. No ripping of existing roots 2" or larger in dimension shall be permitted.

7. Removal of existing trees as noted on demolition plan shall include stump grinding of existing roots to a depth of 24". Contractor shall provide Owner approved backfill of stump ground holes. Resultant grade shall be compacted to 85% unless otherwise noted on plans or Geotech Report. Finish grade shall be smoothly feathered and transitioned to adjacent grade.

Site Grading

1. Perform grading within contract limits, including adjacent transition areas to new elevations, levels, profiles, and contours indicated. Check subgrade surfaces parallel to finished surface grades. Provide uniform levels and slopes between new elevations and existing grades.

2. Grade surfaces to assure areas drain away from structures and to prevent ponding and pockets of surface drainage. Check subgrade surfaces. Subgrade shall be free from irregular surface changes and as follows:

    a. The subgrade at any point shall not vary more than 0.10 foot above or below the grade established by the Improvement Plans if the structural section indicates placing surfacing on native material.

    b. The subgrade at any point shall not vary more than 0.10 feet above the grade established by the Improvement Plans if the structural section indicates placing an aggregate base or sub-base material on native materials.

    c. Precise Grading: Fine grades shall be set to the grades/elevations established by the improvement plans.

    d. Paved Areas: Shape surface of fine grade areas to line, grade, and cross-section indicated. Check compacted subgrade. Subgrade shall be suitable to

receive paving base materials, per Standard Specifications. Subgrade tolerance plus 0, minus 1/2".

e. Granular Base: Check subgrade surface. Subgrade surface shall be smooth and even, free of voids, to the required subgrade elevation. Compacted subgrade shall be suitable to receive granular base materials per Standard Specifications. Tolerance 1/2" in 10'.

3. Uniformly distribute and spread soil. Provide additional imported topsoil, if required, per **Southern California Geotechnical dated November 18, 2021** in the Appendix to complete the work. Use loose, dry weed-free topsoil. Do not use muddy topsoil. Place during dry weather.

4. Fine grade topsoil eliminating rough and low areas to ensure positive drainage. Maintain levels, profiles, and contours of fine grades.

5. Remove stones, roots, weeds, and debris while spreading topsoil materials. Rake surface clean of stones 1" or larger in any dimension and all debris. Provide surfaces suitable for soil preparation provided under lawn and planting work. Contractor shall be responsible for 'rock picking' and removal of all rocks, stones, and boulders one (1) inch in diameter and greater in all areas not requiring concrete paving. Removal of rocks from site shall be in compliance with state and local codes.

6. Perform grading within contract limits, including adjacent transition areas to new elevations, levels, profiles, and contours indicated. Grading and earthwork for the new construction shall include excavation of the existing grade as necessary to "key" in to existing grade the proposed surface. Spoils from such operations shall be relocated and stock piled by the contractor. Provide subgrade surfaces parallel to finished surface grades. Provide uniform levels and slopes between new elevations and existing grades.

300-1.2 Preservation of Property

Consult the records and Contract Drawings of adjacent work and of existing services and utilities which may affect site work operations.

300-1.3 Removal and Disposal of Materials

Removal and disposal of material shall be done by Owner approved licensed and Franchised Commercial Solid Waste Haulers. A current list of approved haulers can be found on the Owner's website at: http://newportbeachca.gov/index.aspx?page=157 and then selecting the link for Franchised Haulers List.

300-1.1 General

The work shall be done in accordance with Section 300-1.1 of the Standard Specifications for Public Works Construction except as modified and supplemented herein.

The Contractor shall dispose of all excess or waste material and shall include all fees for such disposal in the appropriate bid items.

The Contractor shall maintain the job site in a clean and safe condition. The Contractor shall remove any broken concrete, debris or other deleterious material from the job site at the end of each workday or as directed by the Engineer. All areas of roadway removal and replacement shall have a minimum trench width of 3-feet to facilitate maximum compaction. Contractor shall meet with the Engineer to mark out the areas of roadway removal and replacement.

Non reinforced concrete and asphalt wastes generated from the job site shall be disposed of at a facility that crushes such materials for reuse. Excess soil and other recyclable solid wastes shall not be disposed of at a sanitary landfill.

The Contractor shall maintain monthly tonnage records of total solid wastes generated and solid wastes disposed of at a sanitary landfill. The Contractor shall report said tonnage monthly to the Engineer and provide appropriate confirmation documentation from the recycling facility. All material disposal manifests shall be provided to the Engineer prior to release of final retention.

The Contractor shall dispose of all excess or waste material and shall include all fees for such disposal in the appropriate bid items

Concrete Curb, Walk, Gutters, Cross Gutters, Driveway, and Alley Intersections.

Concrete shall be removed to neatly sawed edges with saw cuts made to a minimum depth of two (2) inches. Joins to existing pavement lines shall be full depth sawcuts. Final removal between the sawcut lines may be accomplished by the use of jackhammers or sledgehammers. Pavement breakers or stompers will not be permitted on the job. The Engineer must approve final removal accomplished by other means.

Miscellaneous:

In addition to the work outlined in Subsection 300-1 of the Standard Specifications, the following items of work are included under Clearing and Grubbing unless otherwise covered by a specific bid item.

1. Maintain dust control at all times by watering; including developing water supply and furnishing and placing all water required for work done in the contract, including water used for extra work.

2. Provide for traffic control and all signs, barricades, striping and flashers necessary to maintain proper control, per approved Traffic Control Plans (as provided by contractor)

3. Protection and maintenance of utilities, trees. fences, walls, and other facilities within the construction zone, except those specifically directed by the Owner Representative to be removed or relocated.

4. Other items of work as directed in these Special Provisions.

5. Remove asphalt concrete paving and base material.

6. Remove PCC concrete.

300-1.5 Solid Waste Diversion

Non-reinforced clean concrete and asphalt wastes generated from the job site shall be disposed of at a facility that crushes such materials for reuse. Excess soil and other recyclable solid wastes shall not be disposed of at a sanitary landfill.

The Contractor shall maintain monthly tonnage records of total solid wastes generated and solid wastes disposed of at a sanitary landfill. The Contractor shall report said tonnage monthly to the Engineer and provide appropriate confirmation documentation from the recycling facility. All material disposal manifests shall be provided to the Engineer prior to release of final retention.

Miscellaneous:

In addition to the work outlined in Subsection 300-1 of the Standard Specifications, the following items of work are included under Clearing and Grubbing unless otherwise covered by a specific bid item.

1. Maintain dust control at all times by watering; including developing water supply and furnishing and placing all water required for work done in the contract, including water used for extra work.

2. Provide for traffic control and all signs, barricades, striping and flashers necessary to maintain proper control, per approved Traffic Control Plans (as provided by contractor)

3. Protection and maintenance of utilities, trees. fences, walls, and other facilities within the construction zone, except those specifically directed by the Owner Representative to be removed or relocated.

4. Other items of work as directed in these Special Provisions.

5. Remove asphalt concrete paving and base material.

6. Remove PCC concrete.

300-2 UNCLASSIFIED EXCAVATION

Trenching/grading Adjacent to Existing Trees.

“The Contractor is responsible for clearing and grubbing, pruning and selectively removing tree roots that interfere with the work. The Contractor shall submit recommendations by its sub-contracting arborist to the Owner for review for safely pruning and removing tree roots. No roots shall be pruned or removed unless this submittal is returned to the Contractor as satisfactory. Prior to the submittal, the Contractor shall arrange to meet with the Owner’s Arborist at the site to discuss Owner standards and requirements.

If required, the submittal shall adhere to the following guidelines.

1. Root Pruning

    a. Whenever possible, root pruning shall only be done on one side of the tree unless specifically authorized by the Owner's Arborist.

    b. Roots shall be cleanly severed using a root-pruning machine, axe or comparable tool.

2. Arbitrary Root Cut

    a. A straight cut with a root-cutting machine shall be made.

    b. The cut shall be a maximum 14" below grade for sidewalks and 26" for curbs, and shall be made as far away from the tree base as possible.

3. Selective Root Pruning

    a. This process involves selectively removing offending roots when a tree trunk or root flare is less than 3 (three) feet from the sidewalk and/or the size, species or condition of the tree warrants a root cut to be hazardous to the tree or when there is only one minor offending root to be removed and/or the damage is minimal (i.e., only one panel uplifted, etc.)

    b. Selective root pruning shall be performed with an ax or stump-grinding machine instead of a root-pruning machine.

    c. All tree roots that are within the sidewalk construction area shall be removed or shaved down.

    d. Roots greater than two inches in diameter that must be removed, must be pre-approved by the Owner's Arborist.

    e. Roots shall be selected for removal on the basis that will have the least impact on the health and stability for the tree.

Where it is necessary to excavate/grade adjacent to existing trees, the Contractor shall use all possible care to avoid injury to trees and tree roots. Excavation in areas where two (2) inch and larger roots occur shall be done by hand. All roots two (2) inches and larger in diameter, except directly in the path of pipe or conduit, shall be tunneled under and shall be heavily wrapped with burlap, to prevent scarring or excessive drying. Where a ditching machine is run close to trees having roots smaller than two (2) inches in diameter, the wall of the trench adjacent to the tree shall be hand trimmed, making clean cuts through. Trenches adjacent to trees should be closed within twenty-four (24) hours; and where this is not possible, the side of the trench adjacent to the tree shall be kept shaded with burlap or canvas.

Any and all grading within 5' of dripline of existing trees shall be performed under the supervision of the Owner.

300-2.6 Surplus Material

All surplus material including excavation, asphalt, concrete, etc. shall be disposed of in a legal manner, in compliance with the **City of Gardena Recycling Program** and at the expense of the Contractor.

300-3 STRUCTURE EXCAVATION AND BACKFILL

300-3.1 General

Footings shall bear on approved undisturbed bearing soil.

300-3.4 Inspection [Add the following after the first paragraph]:

1. Contractor shall provide adequate notice, cooperate with, provide access to their work, obtain samples, and assist testing agency and their representatives in execution of their function.

2. Fill Materials: Contractor shall provide testing of proposed import materials to verify suitability for use, gradation of material, moisture-density relation by ASTM D1557 and percent of organic materials.

3. When, during progress of work, field tests indicate that installed compacted materials do not meet specified requirements, provide additional compaction until specified density is achieved or remove and replace defective materials with new materials as directed by the Owner Representative. Cost of additional labor, materials, and testing to attain specified density shall be at Contractor's expense.

4. Do not cover or enclose work of this section before obtaining required inspections, tests, approvals, and location recording.

5. Submit reports for testing and inspection of the following, as directed by the Owner Representative.

    a. Subgrade surfaces
    b. Footing subgrade

300-3.5 Structure Backfill

1. All fill material is subject to testing and inspection.

2. Fill materials: shall be per project soils report as prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

3. Granular base: per project soils report as prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

4. Granular fill: per project soils report as prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

5. Obtain inspection and approval of subgrade surfaces from the Project Geotechnical Engineer prior to filling operations. Scarify, dry, and compact soft and wet areas; remove and replace unsuitable subgrade materials with an approved compacted fill material. Take corrective measures before placing fill materials.

6. Soil stabilization: When exposed subgrade surfaces become spongy during construction operations and soil stabilization is required, stabilize subgrade materials, as directed by the Owner Representative.

7. Spread approved fill material per Section 800.

8. Compaction:

   a. Compact subgrade and fill material of all areas shall be as noted on project soils report as prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

   b. Water settling, puddling, and jetting of fill and backfill materials as a compaction method are not acceptable.

   c. Maintain moisture content of materials, during compaction operations within required moisture range noted on project soils report as prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A** and to the satisfaction of the Project Geotechnical Engineer to obtain indicated compaction density.

   d. Provide adequate equipment to achieve consistent and uniform compaction of fill and backfill materials.

300-5.2 Imported Borrow

QUALITY ASSURANCE: The Soils Report shall control all aspects of this Work. If a discrepancy occurs between this specification and the Soils Report, the Soils Report shall take presidency.

A. Professional Observation: Perform Work of this Section under the inspection and approval of the Geotechnical Engineer. Give Geotechnical Engineer not less than 48 hours advance notice of readiness for inspection.

B. Source Quality Control: Obtain approval by Geotechnical Engineer of imported fill material before material is brought to site, and same approval of excavated material for use in fills or backfills prior to placing.

C. Requirements of Regulatory Agencies: Conform off-site excavation, backfill, and compaction to requirements of public authorities having jurisdiction. Obtain and pay for required permits and inspections.

SECTION 301- SUBGRADE PREPARATION, TREATED MATERIALS AND PLACEMENT OF BASE MATERIALS

301-1 SUBGRADE PREPARATION

301-1.2 PREPARATION OF SUBGRADE

A. Below any and all improvements with the exception of synthetic turf.

1. All subgrade preparation shall be performed in accordance with the Geotechnical Report, See Appendix A.

2. The upper 12 inches of the exposed subgrade should be pulverized, moisture conditioned, and recompacted to a minimum 90 percent relative compaction, in accordance with ASTM D 698.

3. Subgrade pulverization should be performed utilizing a pulverization machine (such as a Caterpillar RR-250 Road Reclaimer, or equivalent) that is capable of thoroughly pulverizing the subgrade to the satisfaction of the project geotechnical engineer.

4. Project Geotechnical Engineer shall review and approve pulverized soil to verify existing organics have been sufficiently pulverized prior to grading. Contractor shall be responsible for continued pulverization to the satisfaction of the project geotechnical engineer prior to commencing with grading operations.

B. Below any and all improvements with the exception of synthetic turf.

1. All subgrade preparation shall be performed in accordance with the Geotechnical Report, See Appendix A.

3011.6 SOIL STERILANT

301-1.6 General

All areas indicated on the plans to receive asphalt concrete pavement over native material shall be prepared in accordance with Section 300 of the Standard Specifications concerning subgrade preparation. In addition, after the compaction is completed, the Contractor shall apply a soil sterilant to the subgrade. Application shall be by spray equipment which provides good mechanical agitation and even coverage of the area to be treated. Spray equipment shall be calibrated before material is applied, and the Owner’s decision as to effectiveness of the spray equipment shall be final. Great care shall be taken to apply soil sterilant to the designated asphalt concrete areas only. Concrete or asphalt may be placed immediately after placement of soil sterilant. Soil Sterilant shall be Casaron 50W. or approved equal, as supplied by Target Specialty Products, Santa Fe Springs, CA., (800) 352-3870.

301-1.6.1 Operator's License

The Contractor's operator applying the soil sterilant shall be licensed by the State of California, Department of Food and Agriculture and registered with the Office of the Agricultural Commissioner of Los Angeles County as a pest control applicator.

301-1.6.2 Application

Any soil sterilant which is approved in writing by a licensed pest control advisor (for the purpose to which it will apply) may be used upon acceptance by the Owner Representative. The dye shall not stain concrete or masonry. Certification shall be furnished to the Owner Representative showing the purchase receipt and manufacturer's recommended rate of application of the material.

301-2 UNTREATED BASE

301-2.1 General - Crushed Aggregate Base (CAB)

A. Crushed Aggregate Base shall be placed to the lines and grades shown on the plans and in accordance with the methods of Section 301-2 of the Standard Specifications.

Crushed Aggregate Base shall be placed to the lines and grades shown on the plans and in accordance with the methods of Section 301-2 of the Standard Specifications.

Prior to placement of Crushed Aggregate Base, the subgrade soils shall be processed, moisture-conditioned, per Project Geotechnical Report prepared by **Southern California Geotechnical dated November 18, 2021. See Appendix A** and recompacted to a minimum depth of 90 percent relative compaction.

SECTION 302 - ROADWAY SURFACING

302-4 SLURRY SEAL SURFACING

302-4.8 Spreading and Application

Slurry seal shall be sufficiently cured for vehicle traffic without tracking or damage to the surface by 3:00 p.m. on the same day. In case of damage done by vehicles and/or pedestrians upon slurry that has not been sufficiently cured, the Contractor shall replace all of the damaged work at the Contractor's expense and no additional compensation shall be made by the Owner. Upon the completion of the day's slurry seal or seal coating, streets and parking lots shall be temporarily striped within 24 hours. Final striping shall be installed no more than ten (10) working days after placement of slurry seal.

Prior to applying slurry seal, the Contractor shall clean all work surfaces and remove all loose materials, vegetation, oil, and other foreign material. Additionally, all locations with weeds shall be treated by an approved weed-killer before any slurry seal is applied.

302-4.9 Field Sampling and Testing

Upon the Engineer's direction, the Contractor shall slurry seal test sections within the construction limits for each batch of slurry seal mix. The Contractor shall apply the slurry seal

test sections as directed by the Engineer. No slurry seal shall be applied until the test slurry seal sections have been approved the Engineer. The costs of these slurry seal tests shall be included in the contract price paid for slurry seal and no additional compensation shall be made by the Owner to the Contractor. Field samples that do not meet the requirements of Table 302-4.9.1 shall be re-tested. The Contractor shall be responsible for all cost associated with the re-testing.

302-5 ASPHALT CONCRETE PAVEMENT

302-5.1 General [Replace the last paragraph with the following]:

Asphalt Concrete shall conform to the requirements of Subsection 203-6.1 as modified by these Special Provisions.

All cracks ¼-inch or greater in width shall be cleaned, have weed kill applied and sealed with a hot-applied crack sealant approved by the Engineer. In residential areas, no highway rated equipment or trucks are to be used (eg. no super trucks). Use truck and trailers or transfers. Use of heavier rated trucks must be approved by Engineer. The top layer of asphalt concrete (finish course) shall be placed in a separate lift. Longitudinal joints between two passes of asphalt concrete shall be along a lane line. Holes, spalls, and cracks greater than 1/4-inch in width shall be filled and compacted to 95% minimum. The pavement shall then be cleaned with a power broom.

302-5.2 SEAL COAT

A. Prepare the surfaces, mix the sanded emulsified asphalt slurry seal coat material and apply 1 coat over all new paving and 2 coats over existing areas in accordance with the manufacturer's recommendations and referenced standards. Adjust type of slurry mixture used and application procedures based on actual project conditions and direction of placement so that a uniform distribution is obtained at all points.

1. SPECIFICATIONS FOR THE APPLICATION OF ASPHALT EMULSION SEALCOAT

a. The work covered by this specification includes the design, testing, and quality control required for the proper production of an Asphalt Sealcoat product and all materials, equipment and workmanship required for the application of an Asphalt Sealcoat to an existing asphalt concrete pavement where shown on the plans, as specified in these specifications and the special provisions, and as directed by the City.

b. Asphalt sealcoats under this specification shall be manufactured by uniformly blending asphalt cement, water, aggregates and various admixtures in a central plant capable of producing a minimum of 2,400 gallons per hour of finished product. Components shall be measured and recorded by weight controls that consistently incorporate all additives as required by these specifications. Blending the admixtures with the base asphalt emulsion shall be accomplished through the use of a high shear mechanical mixer to provide a uniform mixture.

c. Asphalt Sealcoat shall be stored in a tank equipped with power driven mixing or agitation equipment capable of keeping the Asphalt Sealcoat thoroughly and uniformly mixed. The stored material shall be protected from freezing in cold weather conditions.

2. MATERIALS

a. The materials for Asphalt Sealcoat immediately prior to mixing shall conform to the following requirements:

   i. The asphaltic cement shall have a penetration rating of 15 to 35 pen and an SHRP rating of PG-70-10. The asphaltic cement shall be modified to contain a minimum of 8% recycled crumb tire rubber incorporated into the asphalt cement by use of a high shear Siefer mill. The modified asphalt cement shall be combined with slate, clay, water, and admixtures to form a stable emulsion, with a pH not greater than 7.0 and solids content not less than 49%.

   ii. Water shall be potable and of such quality that the water will not separate from the emulsion before the sealcoat is applied.

   iii. Mineral Aggregate components shall be 100% passing the #50 mesh sieve. These components shall be natural or manufactured, consisting of clean, hard, durable, uncoated particles that are clean and free from decomposed materials, organic materials and other deleterious substances. The sieve analysis of the Mineral Aggregate components shall be determined in accordance with A.S.T.M. test method c136.

3. MIX CERTIFICATION

a. At least 7 days before asphalt sealcoat placement commences, the Contractor shall submit to the City for approval a laboratory report of tests and Manufacturer's certificate of compliance covering the specific materials to be used on the project.

b. The tests shall be performed by a laboratory capable of performing the applicable Asphalt Sealcoat Manufacturers Association (ASMA) recommended tests.

4. SURFACE PREPARATION

a. The surface to receive Asphalt Sealcoat must be free of all foreign material and dry immediately prior to sealcoat application. Cleaning may be by air blowing, vacuum, mechanical sweeper, washing, or other techniques as approved by the City. If washing the existing surface is used, the surface shall not have any standing water prior to application of the sealcoat. Salt, deicing agents, fertilizers, hard water deposits and other such chemicals will promote lack of bonding of the sealcoat to the existing surface and may require extraordinary cleaning measures.

b. Cracks in the asphalt surface shall be treated in accordance with City approved methods. Prior to application of sealcoat, deposits of grease or oil shall be cleaned by

scraping, burning and/or the use of approved detergents in order to promote adhesion of the sealcoat. After cleaning the areas described above, the areas shall be sealed with an oil seal. Oil seal shall be a quick drying latex emulsion with suitable admixtures manufactured specifically for the purpose of isolating the Asphalt Sealcoat from any residual oils, petroleum, grease or gas stained pavement.

c. The properties of the oil seal shall be such as to be compatible with the Asphalt Sealcoat.

d. In areas where the foreign oil or grease has penetrated the asphalt concrete such that cleaning as described above is not effective, the affected areas shall be removed to the depth necessary but not less than 3/4 inch. On excessively weathered surfaces, areas such that cleaning operations leave a film of dust, or on areas previously sealed with coal tar, a tack coat of SS1h (CSS1h) asphalt emulsion conforming to ASHTO T56, shall be applied. The tack coat shall consist of One (1) part SS1h (CSS1h) with Four (4) parts water applied at a rate of 0.05 to 0.10 gal/sq yd. The tack coat must be dry prior to application of the Asphalt Sealcoat.

e. Areas of structurally unsound asphalt concrete such as alligator cracking, low spots (bird baths) or rutting must be properly repaired as required by the City, prior to placement of the Asphalt Sealcoat.

f. Asphalt Sealcoat shall not be placed on new asphalt concrete until after a 30 day minimum cure period or as directed by the Project Manager.

5. APPLICATION

a. Application of the Asphalt Sealcoat shall be by mechanical means using rubber faced squeegees, brooms, distributor bar/wand or combinations of these or other techniques approved by the manufacturer and by the City.

b. The Asphalt Sealcoat being applied shall be uniform and free flowing, free of lumps and other inconsistencies. Potable water may be added for dilution as necessary as per manufacturer's recommendation for consistency and spread-ability but shall not exceed 20% by volume or as directed by City. If, after the addition of the maximum allowable water volume the seal coat is unsuitable, the materials shall be rejected and removed from the site.

c. The Asphalt Sealcoat shall consist of two application coats of material. Additional applications may be required as directed by the City. The sealcoat must be thoroughly dry prior to application of the second or subsequent coats.

d. Application of Asphalt Sealcoat in ambient temperatures in excess of 100 degrees F shall require pre-treatment of the asphalt concrete surface with a water mist. The water

must not be standing, but the surface should be damp prior to sealcoat application. This treatment is also recommended for application on porous surfaces where the water within the sealcoat may be absorbed too quickly by the existing pavement surface.

e. Care will be taken to ensure that the sealcoat material is kept off of all structures and appurtenances (concrete pads or curbs, light standards, wheel stops, buildings, etc.) on or surrounding the asphalt surface. Any material that is sprayed or splashed onto these structures shall be immediately removed by whatever means necessary, without damaging the structure, at the contractor's expense.

f. Asphalt Sealcoat shall be applied uniformly over the prescribed area in continuous parallel lines in a manner so that no ridges or uncoated areas shall exist, application rates will vary depending on the texture of the existing asphalt surfaces, with rough surfaces requiring more material than smooth surfaces.

g. The following application rates are guidelines only:

   i. Smooth, dense surfaces 20 gals/1,000 square feet (.18 gaUyd2)

   ii. Medium surfaces 30 gals/1,000 square feet (.27 gal/yd2)

   iii. Rough surfaces 40 gals/1,000 square feet (:36 gal/yd2)

h. When the Asphalt Seal coat is to be placed on a severely weathered pavement surface with a very rough texture, the inclusion of ground copper slag additive is recommended for the first coat. The ground copper slag additive shall be 100% passing the #50 mesh sieve. The addition of the ground copper slag additive shall not exceed 4 pounds per gallon without approval of the City. The inclusion of the ground copper slag additive may require the addition of 1-3% Liquid Latex binder (Micro-lock) per gallon of undiluted Asphalt Sealcoat or as directed by City.

i. The properties of the ground copper slag additive shall be determined in accordance with Cal Test 202 testing methods.

j. The properties of the Liquid Latex shall be such as to be compatible with sealcoat product, and approved by the manufacturer

6. WEATHER

a. Asphalt Sealcoat shall only be applied when the ambient temperature is at least 50 degrees F and rising. Sealcoat shall not be applied when there is an imminent threat of rain, freezing temperatures, during rain, or when the surface contains standing water.

7. MISCELLANEOUS

a. All patching will be with a 3" asphalt lift

b. Contractor is responsible to field measure for their final bid price.

c. Traffic shall not be allowed on the Asphalt Sealcoat until the sealcoat is thoroughly cured, which in warm weather conditions, is approximately 24 hours. Minor scuffing or power steering marks may occur on a newly applied surface in warm weather.

d. Notifications placed throughout the park shall state the time and date that the surfacing will take place. Suitable tow-away signs may be posted prior to the surfacing. Should work not occur on the specified day, a new notification shall be distributed.

e. Irrigation watering shall be kept off for at least 24 hours prior to and 48 hours after the application of Asphalt Sealcoat.

f. Upon request, the contractor shall supply the City with scale tags for the project containing the following information: product name, project name or location, gallons/tons supplied for the project. Striping for parking and traffic flow should be done only after the sealcoat has thoroughly dried.

g. Finished dry and thoroughly set surface seal is to be smooth, tough, resilient, uniform color and free from coarse textured areas, lap marks, ridges and other surface irregularity.

h. Seal coat shall be allowed to cure before allowing traffic on the pavement. Light dusting of the area with fine sand may be used to remedy excess seal coat application.

302-5.4 Tack Coat

Tack coat material shall be Grade SS-1h emulsified asphalt

302-5.5 Distribution and Spreading. [Delete the sixth paragraph and add the following]:

The depositing, distributing, and spreading of the asphalt concrete shall be accomplished in a single, continuous operation by means of a self-propelled mechanical spreading and finishing strike-off assembly capable of being accurately regulated and adjusted to distribute a layer of the material to a definite predetermined thickness. The machine shall be equipped with automatic screed controls. The automatic screed controls require a reference system for the automatic system to follow. This reference can be the base on which asphalt concrete is being placed, the lane next to the material being placed, or a string line. The automatic screed control can also follow a traveling reference system. A traveling reference system may be a ski attached to a control arm, which notes changes in base contours and adjust the screed automatically to compensate. A string line or traveling reference system shall be used to allow the automatic control to adjust screed height as necessary to maintain proper longitudinal (length-wise) grade of the pavement. To maintain proper transverse (width-wise) grade, the automatic screed control shall use a pendulum system attached to a beam running between the two screed pull arms.

When paving is of a size of in a location that use of a self-propelled machine is impractical, the Owner Representative may waive the self-propelled requirement.

At those location where new asphalt concrete pavement overlay joins existing asphalt pavement, the Contractor shall rake out all aggregate 3/8 inch or larger and feather the new paving to form a smooth transition to join the existing pavement.

302-5.8 Manholes (and Other Structures)

All manholes, water valve boxes, and utility boxes shall be temporarily lowered prior to pavement cold milling. Upon completion of asphalt concrete finish course, the top of manholes, water valve boxes, and utility boxes shall be adjusted to grade to meet the smoothness requirement as specified in 302-5.6.2.

302-6 PORTLAND CEMENT CONCRETE PAVEMENT

302-6.4 Concrete Finishes

1. General. Unless otherwise specified in this Subsection, retardant finish, broom, and steel trowel finish concrete used in the hardscape areas shall be constructed of concrete prepared as prescribed in Subsection 201-1. Portland Cement Concrete Pavement shall be constructed in accordance with Section 302-6 “Portland Cement Concrete Pavement’” except as modified herein.

2. **Job Sample. Contractor shall pour and finish a 6' X 6' square sample of each concrete finish and color using the specified materials and construction techniques.** Each sample shall include final finish color as specified, sawcut joints with crack chaser, expansion joints, and shall meet with the Owner's approval prior to placing any production concrete. Production pours are not acceptable as field samples. Sample 6’ X 6’ concrete panels shall be prepared by Contractor for Owner’s review three weeks prior to scheduled production pours. Samples not meeting with Owner’s satisfaction shall be repoured and finished at no cost to Owner. Preparation of ‘Top Cast’ no. 5 finish samples (see Section 201-1.2.4) shall be prepared per supplier’s specifications. After approval of Job Sample

3. Subgrade Preparation: All soil material used as compacted fill or material processed in place or used to backfill trenches should be moistened, dried, or blended as necessary to achieve the optimum moisture content for compaction, and densified with relative compaction as determined by ASTM Test Method D 1557 per project Geotechnical Report, by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

   The subgrade under any sidewalks and flatwork shall be scarified to a depth of at least eight (8) inches or as recommended by the Project Soils Report (See Appendix A), and moisture shall be applied to maintain free water on the surface for at least 24 hours prior to placing concrete and the subgrade shall then be prepared without compactive effort.

Preparation. Subgrade shall be compacted and prepared in accordance with project soils report as prepared by by **Southern California Geotechnical dated November 18, 2021. See Appendix A.**

302-6.7 Traffic and Use Provisions

The Contractor shall not allow vehicular traffic on new concrete until the concrete has attained a minimum compressive strength of 3000 psi. High early strength concrete may be attained to meet the time constraints by the use of additional portland cement or chemical admixtures in accordance with Section 201-1 and with prior approval of the Engineer. The cost of high early strength concrete shall be included in the unit prices for all concrete bid items.

SECTION 303 - CONCRETE AND MASONRY CONSTRUCTION

303-1 CONCRETE STRUCTURES

303-1.1 General

Concrete structures shall conform to the provisions of the Standard Specifications and herein.

Reinforcing steel shall be Grade 60 billet steel conforming to ASTM A615.

The surfaces of all concrete structures shall receive a smooth trowel finish, unless otherwise specified on plans.

The Contractor shall furnish all labor, tools and materials to construct reinforced Portland Cement Concrete structures and appurtenant work to grades and dimensions shown on the Plans or staked in the field. The Contractor shall submit method and sequencing for placement of P.C.C. for the Owner's Representative approval at least ten (10) working days prior to commencement of work.

Unless otherwise specified, transverse construction joints shall be placed in all reinforced sections at intervals of not less than ten (10) feet or more than fifty (50) feet. The joints shall be in the same plane for the entire structure and, for concrete thickness greater than 6-inches, shall be keyed as directed by the Owner’s Representative.

303-1.3 Forms

Forms shall be braced to withstand the pressures developed and shall be tight to prevent the loss of mortar. Formed wall surface shall be free of any unevenness greater than 1/4-inch when checked with a 10-foot straight edge.

Concrete in walls with side slopes flatter than 3/4:1 shall be placed on suitable material which has been overfilled, compacted, and trimmed to true grade. Backforms shall be used where the side slope is 3/4:1 or steeper.

A clear non-staining form release agent which will not discolor nor affect the surface texture of the concrete and does not react with any ingredients of the concrete shall be used. The cost of

Furnishing and Placing Form Release agent shall be included in the cost of Portland Cement Concrete.

All form work for concrete construction (mow curbs, paving, concrete curbs, gutters, walls, etc) shall be reviewed and approved by Owner prior to pouring of concrete.

303-1.7 Placing Reinforcement.

303-1.7.1 General

Aluminum and plastic supports for reinforcement shall not be used.

Bars shall be accurately spaced as shown on the Plans and spacing of first bar immediately adjacent to transverse construction joint shall be one-half the required spacing shown on the Plans. In no case shall the clear distance between parallel bars be less than 2-1/2 diameters of the bar, or a minimum of 2-inches. Unless otherwise shown on Plans, embedment of reinforcing steel (other than stirrups and spacers) shall be 1-1/2 inches clear depth for #8 bars or smaller, and shall be 2-inches clear for #9 bars and larger. Where placement of reinforcing steel requires alternate bars of different size embedment, requirements shall be governed by the larger bar. Stirrups and spacers shall be embedded not less than 1-inch clear depth.

Measurement of embedment shall be from the outside of the bar to the nearest concrete face. Tack welding or butt welding of reinforcing bars will not be permitted.

303-1.7.2 Splicing

Reinforcing bars may be continuous at locations where splices are shown on the plans, at the option of the Contractor. The location of splices, except where shown on the Plans, shall be determined by the Contractor, based upon using available commercial lengths where applicable.

Splices shall consist of placing the reinforcing bars in contact and wiring them together in such a manner as to maintain the alignment of the bars and to provide minimum clearances.

No lapped splices will be permitted at locations where the concrete section is not sufficient to provide a minimum clear distance of 2-inches between the splice and the nearest adjacent bar. The clearances to the surface of the concrete shall not be reduced. Length of lapped splices shall be as noted on Contract Drawings.

Splices of tensile reinforcement at points of maximum stress shall be avoided; however, any deviation from splices shown on the Plans shall be approved by the Owner’s Representative.

303-1.8 Placing Concrete

303-1.8.1 General

The Contractor shall exercise caution in placement of concrete in walls and congested areas to ensure proper consolidation and that there are no voids, and protection of waterstops in position. Adequate provisions shall be made for visual inspection of concrete placement, consolidation and waterstop protection. Pouring of walls in lifts, use of smaller maximum

aggregate sizes, or other methods as necessary may be proposed by the Contractor and will be permitted only after evaluation by the Owner Representative.

303-1.9.2 Ordinary Surface Finish

Ordinary Surface Finish shall not apply to rock pockets which, in the opinion of the Owner Representative, are of such extent or character as to affect the strength of the structure materially or to endanger the life of the steel reinforcement. In such cases, the Owner Representative may declare the concrete defective and require the removal and replacement of the structure affected.

303-1.10 Curing. [Amend first paragraph with the following]:

Exposed concrete surfaces shall be sprayed with Type 2 curing compound at a uniform rate of one gallon per 150 square feet.

Surface retardant: Surface retarder shall be “Top Cast” No. 5 surface retarder or approved equal, provided by Dayton Superior. “Top Cast” retardant to be applied at specific paving conditions noted on plans and shall utilize Top Cast release agent, as noted on plans. Contractor shall contact Chuck Poole of Dayton Superior Corporation (714) 287-6342 to meet on site to discuss application procedures prior to preparation of concrete samples.

Concrete sealer shall be Siloxane WB Concentrate sealer. Dilution to be 1:9 minimum to 1:7 maximum. Provided by Mike Davis of Innovative Concrete Products and Marketing, Inc. Phone: (949) 498-7077. See manufacturer recommendations.

303-1.11 Payment [Replace paragraph one with the following]:

Portland Cement Concrete structures shall be included in the contract price and shall include full compensation for furnishing all labor, materials, tools and equipment and doing all work required to construct the structure in conformity with the plans and specifications.

Should the Contractor request and obtain permission to use admixtures for his own benefit, he shall furnish such admixtures and incorporate them in the concrete mixture at his expense, and no additional compensation will be allowed therefore.

Should the Owner Representative direct the Contractor to incorporate any admixtures in the concrete when their use is not required by these specifications, furnishing the admixtures and adding them to the concrete will be paid for as Extra Work a provided in Subsection 3-3, as amended by these Special Provisions.

303-4.1.1 General

Graffiti Coating

1. Graffiti Coating

All exposed concrete block at shall receive GSS-10 Graffiti Coating System (GSS-100 and GSS-200 Finish Coat), or Owner approved equal. Application shall be per

manufacturer specifications. Provide 4′ x 4′ sample mock-up of sealed material for review and approval prior to production applications.

303-5 CONCRETE CURBS, CONCRETE PAVING, CONCRETE SEATING, WALKS, GUTTERS, ACCESS RAMPS, AND DRIVEWAYS.

303-5.1 Requirements

303-5.1.1 General

1. Concrete curbs, ramps, and walks shall conform to the Standard Specifications and supplied herein in conjunction with Construction Document Plans and Details.

2. Sidewalks and curb access ramps shall be opened to pedestrian access on the day following concrete placement. In addition, all forms shall be removed, irrigation systems shall be repaired, and backfill or asphalt concrete patchback shall be placed within 72 hours following concrete placement.

303-5.2 Forms

303-5.2.1 Standard Form

1. Use flexible metal, 1" lumber or plywood forms to form radius bends.

2. Install, align and level forms, stake, and brace forms in place. Maintain following grade and alignment tolerances except where accessibility concerns would bring non-compliance if tolerances were allowed.

   a. Top of Form: Maximum 1/8” in 10’0”.

   b. Vertical Face: Maximum 1/8” in 10’0”.

3. The Contractor shall include all fine grading and compaction with regard to setting forms during concrete placement.

4. The Contractor shall notify Owner a minimum of 36 hours in advance of scheduled form board review. All form work for hardscape construction (mow curbs, concrete paving, curbs, gutters, walls, etc.) shall be reviewed and approved by Owner prior to pouring of concrete. All formwork shall be constructed utilized the projects digital base plan. Modifications in formwork necessary for alignments to be straight, true to line with well transitioned radial, curved sections shall be provided by the contractor at no additional cost to the contractor.

303-5.4 Joints

303-5.4.1 General

1. Provide expansion joints using pre-molded joint filler at concrete work abutting curbs, walks, and other fixed objects.

   a. Locate joints as indicated. When not indicated, provide joints at maximum 24'-0" on center for curbs and walks. Align joints in abutting curbs and walks. Contractor shall provide a joint layout play for review and approval by the Owner prior to construction of joints.

   b. Install expansion joint fillers full-width and depth of joint. Recess top edge below finish to receive sealants as indicated on the details.

   c. Provide joint fillers in single lengths for the full slab width, whenever possible. Fasten joint filler sections together when multiple lengths are required.

   d. Where intersecting joints occur join top edge and continue any spliced joints without deviation of form line or direction.

   e. Protect the top edge of the joint filler during concrete placement.

   f. Control joints shall be provided to a depth equal to 1/3 the thickness of the concrete pour.

303-5.5 Finishing

303-5.5.2 Curb

The Contractor shall install or replace curb markings that indicate sewer laterals on the face of the curb. The Contractor shall mark the curb with a chiseled "S" for sewer. A two (2) day notice to the Engineer is required for requests to the Owner to determine the location of sewer laterals.

303-5.5.4 Gutter

The Contractor shall hold the flow line tolerances to within 0.01 feet of those elevations shown on the plan.

SECTION 304 - METAL FABRICATION AND CONSTRUCTION FOR ALL METAL FENCING, MISCELLANEOUS METAL ITEMS, ETC.

304-2.3 Ornamental Metal

304-2.3.1 General. The materials for ornamental metal items. 63510

304-2.3.2

1. Fabrication: Miscellaneous metal work which will be exposed to view shall only be fabricated with materials that are smooth and free of surface blemishes, including, but not limited to, pitting, seam marks, trade names, and roughness. Remove such blemishes by grinding or by welding and grinding prior to cleaning, treating or applying surface finishes.

2. Shop Assembly: Work shall be fitted, shop assembled, and ready for erection when identified on construction schedule.

3. Workmanship: Form metals to shape and size with sharp lines and angles, and with smooth surfaces and faces free from distortion. Mill fastening to a close fit. Do all fitting true to line. Bend or form all tubing, pipe, and other members to continuous and true curves with all joints flush and neatly fastened together. All fabrications shall be square, plumb, straight, and true.

4. Jointing and Connections: Jointing and intersections shall be accurately made in true planes and tightly fitted to hairline joints. Connections shall be welded. Do not use screws unless specifically shown or required - if used, screws shall be countersunk with a metal compatible with the members being joined.

5. Welding: Welding shall conform to the requirements of the "Structural Welding Code" ASW D1.l. Where welds are exposed to views, bevel members prior to welding and weld full. Grind welds flush, smooth, level with the adjacent surfaces. Grind welds at intersecting members to sharp lines.

6. Holes: Accurately space to centers such that boles are not poorly or carelessly seamed.

7. Anchorage: Fabricate and space anchoring devices to provide adequate support for intended use.

8. Insulation of metals from contact with masonry and different metals from contact with each other shall be provided where necessary to prevent corrosion.

9. Debur and grind smooth all welds and rough spots.

10. All ornamental metal fabrications shall receive a sandblast finish to remove all oil, grease, lint, and rust.

11. All ornamental metal fabrications shall receive 2 mil. zinc thermal sprayed metalized finish per ANSI/AWS C218.93, ASTM C633, ASTM B833-93, and SSPC-CS Guide 23.00, June 1, 1991. Contact: Zinc Nation, Inc. Contact: Whitney Blakeslee. Phone: 949-837-1839. Contractor shall submit sample of metalizing for review and approval prior to metalizing ornamental metal items. Contractor shall submit receipt of all metalized items and proof that all metal items were metalized per these specifications prior to painting.

12. Coating System Type

a. System Type: Epoxy/urethane, as provided by Tnemec Company Incorporated, or approved equal, 417 East Weber Street, Compton, CA 90222. Phone 310-637-2363. Fax 310-637-4161. Web Site www.tnemec.com.

Equivalent materials of other manufacturers may be substituted only by approval of the architect. Requests for substitution shall include manufacturer's literature for each product giving the name, generic type, descriptive information solids by volume, recommended film thicknesses and a list of five projects where each product has been used and rendered satisfactory service. No request for substitution shall be considered that would decrease the film thickness of offer a change in the generic type of coating.

b. Surface Preparation: Zinc thermal sprayed metalized finish.

c. Prime Coat: One coat Tnemec Intermediate, 115, 3 to 5 mils. DFT.[4]

d. Finish coat: One coat Tnemec Urethane, 1028 or 1029, 2 to 3 mils.

e. Color: 'Dove Gray' (38GR), to be approved by City.

f. Contractor shall submit proof that Tnemec paint was the material used on all metal items.

13. Provide a minimum of 2 gallons of field touch up paint to City for their on-going use.

304-2.3.3

1. Installation: Ornamental metal items and fencing shall be erected in accordance with the plans. All work shall be erected square, plumb, straight, and true. Perform all required cutting, drilling, and filling. Accurately set and properly secure. Attach work in true planes, in alignment, properly reinforced and stiffened.

2. Embedded Items: Provide miscellaneous metal items to be embedded or installed in concrete.

3. Coordination with Related Work: Provide all anchors, sleeves, bolts, and connecting members necessary for securing metal work to other adjacent or adjoining work. Provide and install angles and other reinforcement. Do all cutting, puncturing, drilling, tapping, or modifying of adjacent or adjoining work where necessary for proper installation. Furnish all sockets, bolts, anchors, and other portions of this work to the various trades where needed that are to be built into the structure and be responsible for their accurate spacing and setting.

4. Expansion and Contraction: Assemble and install work with adequate provisions to prevent objectionable distortion and overstressing from expansion and contraction. Construct to be weather-tight where exposed to the weather.

5. Touch-up Painting: Immediately after erection of miscellaneous metal items, all rusted areas, abraded areas, bolts and nuts, and all welds shall be thoroughly cleaned and spot primed with same material used for shop painting.

6. Miscellaneous Steel Items: Provide all necessary steel items required which are not specified elsewhere. All necessary supports, guides, brackets, etc., shown or required shall be provided.

304-2.3.4 Measurement and Payment. Payment for ornamental metal items and their painting shall be made as part of the lump sum contract price and no additional compensation will be allowed.

SECTION 306 – OPEN TRENCH CONDUIT CONSTRUCTION

306-1 OPEN TRENCH OPERATIONS

306-1. General [Delete the first paragraph and substitute the following]:

For the purpose of shoring or bracing, a trench is defined as an excavation in which the depth is greater than five feet.

[Add the following subsections:]

Removal of ground water shall be performed to a level sufficiently below the structure subgrade to ensure a firm and stable subgrade for the construction of structures. All costs for such dewatering shall be included in the prices bid for the various items of work except as may be otherwise specified in the General Specifications.

306-1.1.6 Bracing Excavations

Trench safety and shoring of excavations shall comply with the requirements of the General Specifications. The Contractor shall be required to supply a copy of any permit required by the Division of Industrial Safety at the time of the pre-construction meeting.

The cost of furnishing and installing bracing or other provisions required for worker protection shall be borne by the Contractor. All material used for protection shall be removed from the project unless it has been approved to remain in place by the Owner Representative.

306-1.1.7 Dewatering

The Contractor shall provide and maintain at all times during construction, ample means and devices to promptly remove and properly dispose of all water entering the excavations or other parts of the work. No concrete footing or floor shall be laid in water, nor shall water be allowed

to rise over them until the concrete or mortar has set at least eight (8) hours. Water shall not be allowed to rise unequally against a wall for a period of twenty-eight (28) days.

Dewatering for the structures and pipelines shall commence when ground water is first encountered and shall be continuous until such time as water can be allowed to rise in accordance with the above paragraph. Dewatering shall be accomplished by well points or some other method which will ensure a dry hold and preservation of final lines and grade of the bottoms of excavation, all subject to the approval of the Owner Representative.

Disposal of water from dewatering operations shall be the sole responsibility of the Contractor.

Payment for removal of water shall be included in the items of work which require the dewatering, and no additional compensation will be allowed therefore.

306-1.3.4 Compaction Requirements. [Replace with the following]:

All trench backfill shall be densified to 90% minimum relative compaction. Jetting will not be permitted unless specifically approved in advance by the Owner Representative.

306-1.5.2 Permanent Resurfacing

All testing of underground installation at any given point shall be completed before the surface course is placed at that point.

306-2 DELIVERY, STORAGE, HANDLING, AND PROTECTION OF PIPELINE MATERIALS, FITTINGS, VALVES, AND APPURTENANCES

306-2.7 Shutdowns of Existing Pipelines

306-2.7.3 Temporary Bypasses

The Contractor will be responsible for the installation of a temporary by-pass system as described in these special provisions and the plans.

The Contractor can commence installation of new mains once the temporary by-pass system is in place and has passed a disinfection test. The Contractor shall have the by-pass line inspected by Owner personnel prior to commencing the project.

If at any time, the temporary by-pass water system is damaged, it will be the Contractor’s responsibility to repair and replace any damaged or destroyed section to the satisfaction of the Owner.

The Contractor shall adhere to the following special provisions when installing temporary by-pass systems:

1. Water service shall be maintained to all customers at all times except as necessary to install the temporary by-pass system. The Contractor’s method of providing such continuous service shall be approved by the Owner prior to construction.

2. It is recommended that 2-inch steel by-pass lines shall be installed. All temporary piping crossing streets shall be buried and paved flush with the existing surface.

3. The Contractor shall make arrangements with the Owner's Utilities Division for disinfection, bacteriological testing and certification of the by-pass systems. The Contractor shall be responsible for disinfection and flushing the by-pass systems as well as pulling the bacteriological samples and running the incubations tests for coliform bacteria.

4. The Contractor will then remove meters and connect services to temporary by-pass systems. Upon acceptance by the Owner of new water mains, after the water services have been reinstalled by the Contractor, the Contractor will disconnect the temporary by-pass system at each service connection and reinstall meters.

The temporary water main by-pass system installed at any given time shall not exceed the water services between any single alley section (from local street intersection to local street intersection) unless approved in writing by the Owner in advance of the work, including specific limits of the proposed by-pass.

306-8 PREFABRICATED PRESSURE PIPE

306-8.9 Pipeline Pressure Testing, Disinfection, and Commissioning

The Contractor will be responsible for pressure testing, disinfection and flushing of the new water mains. The Contractor shall adhere to the following special provisions for pressure testing, disinfection and flushing of new water mains and services.

1. Water service shall be maintained to all customers at all times except as necessary to transfer service from the old main to the new main. The Contractor's method of providing such continuous service shall be approved by the Owner prior to construction.

2. Contractor shall pressure test new main lines including any services prior to disinfection.

3. The Contractor shall make arrangements with the Owner's Utilities Division for disinfection, bacteriological testing and certification of the new main and services. The Contractor shall be responsible for disinfection and flushing the main and services as well as pulling the bacteriological samples and running the incubation tests for coliform bacteria.

4. Upon successful completion of the pressure testing and disinfection, the Contractor shall thoroughly flush all mains and services prior to connection to customers. Flushing of services shall be done at the new angle stop and fittings shall be utilized such that the meter box is not flooded by the flushing operation

SECTION 310 - PAINTING

310-5 PAINTING VARIOUS SURFACES

310-5.4 Painting Metal Guard Rails

a. All exposed metal railings shall receive a protective coating as manufactured by International Protective Coatings, available from Dunn Edwards Paints, or approved equal. Apply per manufacturer's specifications. Submit colors to Owner for review.

b. First coat Interseal 670 HS primer (color to match top coat).

b. Second coat Interthane 990 HS top coat (color per plan).

310-5.6 Painting Traffic [and Parking Lot] Striping, Pavement Markings, and Curb Markings.

310-5.6.1 General. The third paragraph shall be deleted and replaced with the following paragraphs:

Unless otherwise shown on the plans, transitional traffic lane striping for detours shall conform to Owner Standard Plans. No lane shall encroach within five feet of an open excavation or within two feet of a longitudinal curb.

310-5.6.4 Geometry, Stripes and Traffic Lanes; and 310-5.6.5 Traffic Stripes and Markings.

The following paragraph shall preface these Subsections:

TRAFFIC SIGNING, STRIPING, MARKINGS, AND MARKERS

Description - This work consists of placing traffic signs, raised pavement markers, traffic striping, pavement legends, and markings as shown on the plans in conjunction with traffic signal work.

All work shall conform to these specifications, Owner Standard Plans and Specifications, and to any supplementary standards or specifications which may be referred to herein.

Materials - Traffic paint shall be fast dry solvent borne conforming to Section 84-3, Painted Traffic Stripes and Pavement Markings, of the Caltrans Standard Specifications. All paint shall be reflective and shall conform to requirements of the South Coast Air Quality Management District.

Reflective raise pavement markers shall conform to Section 85, Pavement Markers, of the Caltrans specifications and to the applicable provisions of the Caltrans Standard Plans.

Sign face reflective sheeting shall be high intensity grade with protective overlay.

Construction - Application of traffic striping shall conform to applicable provisions of Section 310-5.6 of the "Standard Specifications" and Caltrans Standard Specifications. All traffic striping shall consist of two coats of paint. A minimum of seven days shall be provided between coats and/or as directed by the Engineer.

Installation of traffic signs shall conform to applicable provisions of Section 56-2, Roadside Signs, of Caltrans specifications.

Installation of reflective pavement markers shall conform to Section 85, Pavement Markers, of the Caltrans Standard Specifications and to the applicable provisions of the Caltrans Standard Plans. Old raised pavement markers shall be removed as directed by the Engineer.

Stencils shall conform to the Caltrans Standard Plans.

No striping work will start until the Engineer has approved the spotted or “cat-tracked” markings. No section of any street shall be left without the proper striping for more than 24 hours, or over weekends or holidays.

Traffic striping and markings shall conform to Owner Standard Plans, the Caltrans Traffic Manual, the Caltrans Maintenance Manual, American Disabilities Act and Title 24 unless otherwise shown on the plans.

310.5.6.7 Layout, Alignment, and Spotting.
The first sentence of the first paragraph shall be deleted and replaced with the following:

The Contractor shall perform all layout, alignment and spotting. The Contractor shall furnish the necessary control points for all striping and markings and shall be responsible for the completeness and accuracy thereof to the satisfaction of the Owner Representative. Traffic striping shall not vary more than H-inch in 50 feet from the alignment shown on the plans.

The following paragraph shall be added following paragraph two:

Spotting shall be completed prior to the removal of any existing stripes. Existing striping and markings shall be removed prior to painting, but in no case shall any section of street be left without the proper striping for more than 24 hours, or over weekends or holidays.

310-5.6.8 Application of Paint. Delete the third and fourth paragraphs and replace with the following:

Traffic and parking lot stall stripes and pavement markings on new surfacing shall be applied in two (2) coats, except where otherwise shown on the plans. The first coat of paint shall have dried for two (2) weeks before application of the second coat on existing surfacing, traffic stripes and pavement markings may be applied in one coat.

Add the following paragraphs:

> The completed pavement markings shall have clean and well-defined edges and shall conform to the dimensions shown on the plans, except that minor variations may be accepted by the Owner Representative.
>
> Drips, overspray, improper markings, and paint tracked by traffic shall be immediately removed from the pavement surface by blast cleaning or other methods approved by the Owner Representative. All such removal work shall be at the Contractor's expense.

310-5.6.11 Pavement Markers
All pavement markers shall comply with Section 85 of the State of California Standard Specifications. Non-reflective markers shall be ceramic. All new markers shall have glass faces of be 3M Series 290.

SECTION 314 – TRAFFIC STRIPING, CURB AND PAVEMENT MARKINGS, AND PAVEMENT MARKERS

314-2 REMOVAL OF TRAFFIC STRIPING AND CURB AND PAVEMENT MARKINGS

314-2.1 General

The Contractor shall remove all existing thermoplastic traffic striping and pavement markings prior to application of slurry seal by a method approved by the Engineer.

314-4.3.5 Application
Each coat of paint for any traffic stripe, including glass beads, shall be applied in one pass of the striping machine, regardless of the number, widths and patterns of individual stripes involved.

One 2-lane streets, when the first coat of the centerline stripe is applied in the same direction as the stationing increases, the right-hand spray gun of the 3 spray guns used to apply a double yellow stripe shall be used to apply a single yellow stripe. When the first coat of the centerline stripe is applied in the direction as the stationing decreases, the left-hand gun of the 3 spray gun used to apply double yellow stripe shall be used to apply a single yellow stripe. The second coat of centerline striping shall be applied in the opposite direction that the first coat was applied.

A 1-coat, 3-inch (75 mm) wide black stripe shall be painted between the 2, 4-inch (100mm) wide yellow stripes of a double traffic stripe. If the 2, 4-inch (100 mm) wide yellow stripes are to be applied in 2 coast, the black stripe shall be applied concurrently with the second yellow stripe.

On existing pavement surfaces, traffic striping and pavement markings shall be applied in 1 coat. Paint to be applied in 1 coat shall be applied at an initial rate of 1 gallon per 107 square feet, unless otherwise specified in the Special Provisions. The final rate shall be approved by the Engineer.

On new pavement surfaces, traffic striping (except the black stripe between the yellow stripes of the double traffic stripes_ and pavement markings shall be applied in 2 coats unless otherwise shown on the plans or specified in the Special Provisions. If the paint is applied in 2 coats, the first coat shall be thoroughly dry before the second coat is applied.

Paint is to be applied in 2 coast shall be applied at the initial trails as shown;

Paint Type	First Coat (sq ft per gallon)	Second Coat (sq ft per gallon)
Waterbone Paint	215	215
Acetone-Based Paint	360	150

The final application rates shall be approved by the Engineer. The volume of paint applied shall be measured by inserting a calibrated rod into the paint tank. At the option of the Engineer, if the striping machine is equipped with paint gauges, the volume of paint may be determined by using the paint gauges.

Glass beads shall be mechanically applied to the surface of each coat of paint, except black paint, prior to the paint setting. Glass beads shall be embedded to a depth of one-half of their diameter. Glass beads shall be applied at a rate of 5 pounds per gallon of paint unless

otherwise specified in the special provisions or directed by the Engineer. The amount of glass beads applied shall be measured by inserting a calibrated rod into the glass bead tank of the striping machine.

PART 6 – TEMPORARY TRAFFIC CONTROL

SECTION 600 – ACCESS

600-1 GENERAL

Ten (10) working days prior to starting work, the Contractor shall distribute construction notices to residents within 500 feet of the project, describing the project and indicating the limits of construction. The Owner will provide the notices.

Forty-eight (48) hours prior to the start of construction, the Contractor shall distribute to the residents a second written notice prepared by the Owner clearly indicating specific dates in the space provided on the notices when construction operations will start for each block or street. An interruption of work at any location in excess of 14 calendar days shall require re-notification. The Contractor shall insert the applicable dates and times at the time the notices are distributed.

The written notices will be prepared by the Owner, but shall be completed and distributed by the Contractor. Errors in distribution, false starts, acts of God, strikes or other alterations of the schedule will require Contractor re-notification using an explanatory letter furnished by the Owner.

600-2 VEHICULAR ACCESS

The Contractor shall install and maintain in place “NO PARKING-TOW AWAY” signs (even if streets have posted “NO PARKING” signs) which shall be posted at least forty-eight hours in advance of the need for enforcement. The signs will be provided by the Owner at no cost to the Contractor. However, the Owner reserves the right to charge $2.00 per sign following any excessive abuse or wastage of the signs by the Contractor. In addition, it shall be the Contractor’s responsibility to notify the Owner’s Police Department at (949) 644-3717 for verification of posting at least forty-eight hours in advance of the need for enforcement. Owner “Temporary Tow-Away, No Parking” signs are available at the Public Works Department public counter.

The Contractor shall print the hours and dates of parking restriction on the “NO PARKING - TOW AWAY” sign in 2-inch high non-erase letters and numbers. A sample of the completed sign shall be reviewed and approved by the Engineer prior to posting.

(Following paragraph is optional for covering street sweeping signs and parking meters and posting temporary permit parking signs.)

After posting temporary ”NO-PARKING-TOW AWAY” signs, the Contractor shall cover street sweeping signs and parking meters, on those streets adjacent to the construction with a “PERMIT PARKING ONLY” sign, in a manner approved by the Engineer. The contractor shall also cover all street sweeping signs on the opposite side of the street from where he has posted the “PERMIT PARKING ONLY” signs, in a manner approved by the Engineer. Immediately after construction is complete and the alley is opened to traffic, the Contractor shall remove all signs and uncover the street sweeping signs. Owner “PERMIT PARKING ONLY” signs are available from the Engineer.

600-3 PEDESTRIAN ACCESS

Pedestrian access to all storefronts, offices, residences, etc., within the limits of work must be maintained at all times. The Contractor shall cooperate with the Engineer to provide advance notice to any and all establishments whose access will be impacted by construction operations, particularly sidewalk construction.

SECTION 601 – TEMPORARY TRAFFIC CONTROL FOR CONSTRUCTION AND MAINTENANCE WORK ZONES

601-1 GENERAL

The Contractor shall furnish and install signage, barricades, delineators, yellow safety ribbons, up to four (4) changeable message signs (CMS), and any other measures deemed necessary by the Engineer to safely direct the public around areas of construction, and into and out of the affected establishments. Messages for the CMS shall be updated by the Contractor as directed by the Engineer.

Project Identification Signage
Contractor shall provide the following:

A. Provide 8’ x 4’ foot long project sign of exterior grade plywood and wood frame construction, painted, with exhibit lettering by professional sign painter to Architect’s design and colors.
B. List title of Project, names of Owner, Architect and Contractor.
C. Erect on site at Location determined by Owner.
D. Sign shall remain in place through construction period and shall be removed only after dedication of the project, or at a time determined by the Owner.
E. Provide temporary directional signs for construction personnel and visitors.
F. No other signs shall be allowed except those required by law and those indicated within these Special Provisions.

601-2 TRAFFIC CONTROL PLAN (TCP)

Typical TC Plans

The Contractor shall submit to the Engineer, at least five working days prior to the pre-construction meeting, a traffic control plan showing typical closures and detour plan(s). The Contractor shall be responsible for processing and obtaining approval of a traffic control plans from the Engineer. The Contractor shall adhere to the conditions of the traffic control plan. Typical closures shall conform to the provisions of the WORK AREA TRAFFIC CONTROL HANDBOOK (W.A.T.C.H), Latest Edition. Traffic control and detours shall incorporate the following items:

1. Emergency vehicle access shall be maintained at all times.

2. The locations and wordings of all barricades, signs, delineators, lights, warning devices, parking restrictions, and any other required details shall ensure that all pedestrian and vehicular traffic will be handled in a safe manner with a minimum of inconvenience to the public.

3. All advanced warning sign installations shall be reflectorized and/or lighted.

4. The Contractor shall accommodate the Owner’s trash collection. If the Contractor elects to work on a street or alley during its trash collection day, it shall be the Contractor’s responsibility to make alternative trash collection arrangements by

contacting the Owner's Refuse Superintendent, at (949) 718-3466 and all affected property Owners.

5. At a minimum, the Contractor shall maintain one lane of traffic in each direction at all times when completing the work. Temporary striping may be required and shall be shown on the TCP.

6. The Contractor will not be allowed to close alleys or streets. Lane closures may be approved by the Owner Engineer, if necessary to complete the work if it does not cause any other impacts to residents, such as loss of street parking. The Contractor shall make special accommodations to provide access for residents with disabilities where any lane closures may exist.

7. Sidewalk closures in non-residential areas, or as determined by the Owner, shall be set with barricades and SIDEWALK CLOSED signs on barricades at the closure and SIDEWALK CLOSED USE OTHER SIDE signs on barricades at the closest crosswalk or controlled intersection.

8. Sidewalk closures in residential areas, or as determined by the Owner, shall be set with barricades and SIDEWALK CLOSED signs on barricades at the closure.

9. Bike lane closures shall have BIKE LANE CLOSED AHEAD, BIKE LANE CLOSED, and SHARE THE ROAD/BICYCLE WARNING (combination) signs mounted on barricades in order on the approach and at the closure.

10. Operation of the CYC allowing pedestrian and vehicular traffic and access to the parking lot and facility during construction.

PART 8 - LANDSCAPING AND IRRIGATION

SECTION 800 – MATERIALS

800-1 LANDSCAPE MATERIALS

800-1.1 Topsoil

800-1.1.1 General

Topsoil shall be Class A (imported).

800-1.2 Soil Fertilizing and Conditioning Materials

800-1.2.3 Commercial Fertilizer

Commercial Fertilizers shall be delivered in sacks with the manufacturer's label showing weight and analysis attached to each sack.

The following commercial fertilizer and soil preparation shall be for bid purposes only. Exact quantities and recommendations may be determined by the soil fertility and agricultural suitability test to be prepared by **Waypoint Analytical** or approved equal testing facility**. Contact: Joe Kiefer 714-282-8777** Tests shall be provided by the Contractor at no additional cost to the Owner and shall be included in the base bid. Test shall be performed after final

grading has been completed and approved by the Owner. All areas to be landscaped with a slope of 3:1 or less shall be cross-ripped or otherwise tilled to a depth of 18 to 24 inches. Uniformly spread and cultivate amendments thoroughly by means of mechanical tiller into top 6" of soil in all planting areas. Application rate per 1,000 square feet:

Commercial Fertilizer 6-24-24XB	25 pounds
Soil Sulphur	20 pounds
Granular Gypsum	100 pounds
Nitrogen stabilized sawdust ("Greenbook" – Type I Organic Amendment)	6 cu yds

Planting Tablets: Provide slow-release type with potential acidity of not more than 5 percent by weight containing the following percent's by weight of nutrients listed; 20-nitrogen, 10-phosphoric acid, 5-potash, 2.6 combined calcium, 1.6-combined Sulphur 0.35-iron (elemental) from ferrous sulfate. Provide in 21 gram tablets manufactured by Agriform, or other approved.

Landscape areas with gradients greater than 3:1 shall receive a uniformity broadcast application of the following:

300 lbs./Acre Nitroform (38-0-0, WIN 27%)
600 lbs./Acre 6-24-24XB

1. For amending of turf and general landscape areas on slopes greater than 3:1 scratch the surface of the soil, if safe and feasible to do so, prior to broadcasting fertilizers. Fertilizers can then be broadcast at the rates indicated in the Soils Fertility and Agricultural Suitability Report per section 800-1.2.3, followed with one or two thorough irrigations to move fertilizers into the rootzone.

800-1.2.4 Organic Soil Amendment.

Paragraph 1 shall be deleted and replaced with the following: **Organic Soil amendment material shall conform to Type 1 plus Redwood Shavings, as supplied by Aguinaga Company, (949) 786-9558 or equal,** unless otherwise designated. Delete paragraph references to Type 2 and Type 3 soil amendments.

800-1.2.5 Mulch.

Sentence one of paragraph one shall be deleted and replaced with the following:

Mulch: **Provide 'forest floor' (0″- 4″) as supplied by Aguinaga Company, (949) 786-9558, or approved equal.** Submit sample for review and approval by Owner Inspector prior to material delivery on-site.

800-1.2.6 Soil Herbicide.
Landscape areas:

A commercially manufactured non-selective herbicide ("Round-up" or approved equal) for total control of vegetation products shall meet all federal and state regulations pertaining to the use of such substances. Application and rate of application shall follow manufacturer's recommendation. Application shall not be made until obtaining written approval from the

Owner. Following Owner approval of Contractor herbicide, Contractor shall apply herbicide to all landscape areas. Such application shall be performed in consideration of overall construction schedule and operation so as not to disrupt or interfere with the project schedule and time line.

800-1.4 Plants

800-1.4.1 General. Subsection 800-1.4.1 shall be deleted and replaced with the following:

A representative number of plants may be inspected and approved at the nursery by the Owner Representative prior to shipment to the planting site. Prior to such visit, Contractor shall submit 3" x 5" color photographs of all proposed tree and shrub material for Owner's review. Photos shall indicate proposed material and picture shall indicate material separated from the surrounding nursery stock to size and condition of proposed material to be evaluated. Photographs of all trees shall include a person, with a height of at least 5'-6". Photos shall be submitted seven (7) calendar days prior to specified plant material review at nursery site. Plants shall be inspected for size and condition of root growth, insects, injuries and latent defects. Label at least one tree and one shrub of each variety with a securely attached waterproof tag bearing legible designation of botanical and common name. The Owner reserves the right to reject entire lots for plants represented by defective samples. Plant condition shall be in accordance with the American Standard for Nursery Stock (ANSI Z60.1-1996). All plants shall have a growth habit normal to the species and shall be sound, healthy, vigorous, and free from insect pest, plant diseases, sun scalds, fresh bark abrasions, excessive abrasions, or other objectionable disfigurements. Tree trunks shall be sturdy and well hardened off. All plants shall have normal well-developed branch systems, and vigorous and fibrous root systems which are neither root nor pot-bound and are free of kinked or girdling roots. Other than the normal side pruning during the growth period, no pruning shall be done prior to inspection at the nursery. The size of the plants will correspond with that normally expected for species and variety of commercially available nursery stock, or as specified in the Contract Drawings. The minimum acceptable size of all plants, measured before pruning with the branches in normal position, shall conform with the measurements, if any, specified on the Contract Drawings in the list of plants to be furnished. Plants larger in size than specified may be used with the approval of the Owner, but the use of larger plants will make no change in contract price. Bare root plantings in publicly maintained areas shall be done only with special approval of Owner.

Quantities and Types. Plant materials shall be furnished in the quantities and/or spacing as shown or noted for each location, and shall be of the species, kinds, sizes, etc., as symbolized, and/or described in the Plant Legend, as indicated on the Contract Documents. The landscape Contractor is to verify all sizes and quantities on plans. Installation and use of substitute items shall not be made until the Contractor is in receipt of written approval from the Owner. **Substitution Proposals for plant material must be accompanied by substantive written proof of non-availability of material originally specified prior to bid opening.**

800-1.4.2.1.9 Fertilizer.

A. **Root Growth Stimulant: Stimulant shall be Tri-C Michimichi Kelp Vitamin B-I or equal, as manufactured by Cal-Liquid, Cooke, Chican, Ortho, or other approved equal.**

B. Fertilizer will not be used at time of planting. After four months, use a light application of 20:10:5 approximately 1/2 lb. nitrogen per tree cultivated into soil.

800-1.4.5 Sod (turf grass)

Turf Sod shall be Bandera Bermuda Grass (42" wide rolls), provided by West Coast Turf. Contact: John Marman (951) 272-7720.

Product Delivery, Storage and Handling

A. Protection and Delivery of Sod:

1. Sod for site planning shall be delivered to planting site within twenty four (24) hours of harvest. Sod shall be refrigerated immediately after harvest prior to transportation. Sod shall remain moist at all times prior to planting.

2. Deliver materials to site in original unopened containers bearing manufacturer's guarantee chemical analysis, name, trademark, purety, germination, and conformance to State law.

3. Deliver materials with legible waterproof identification labels.

4. Protect material during delivery to prevent damage.

5. The Contractor shall notify the Owner's Representative seven days prior to delivery of all materials and shall submit an itemized list for each delivery.

B. Storage:

1. Store plant material in shade and protect from weather.

2. Protect material from damage and theft.

JOB CONDITIONS

A. Planting:

Perform actual planting only when weather and soil conditions are suitable according to locally accepted practices.

B. Scheduling:

Install trees and container stock plant material before Sodded Lawn and Grass installation.

REPLACEMENTS

A. Replacement

Any materials found to be dead, missing, or in poor condition during the maintenance period shall be replaced immediately. The Owner's Representative shall be the sole judge as to the condition of materials. Materials to be replaced within the guarantee period shall be replaced by the Contractor within 15 days of written notification by the Owner.

Execution

A. Laying Sod:

1. Soil moisture. all areas to receive planting shall be irrigated prior to planting. Soil shall be maintained in a constant moist condition but well below field capacity. Extreme care must be exercised to prevent over-watering to prevent soil-compaction or creating grade irregularities by heavy equipment.

2. The Contractor shall provide and install the type and quantity of turf grass sod as shown on the Contract Drawings and specified herein. Only long roll sod of the variety specified shall be utilized.

1. Lay sod to form a solid mass with tightly fitted joints. Butt ends and sides of sod strips; do not overlap. Stagger strips to offset joints in adjacent courses. Work from boards to avoid damage to subgrade or sod. Tamp or lightly roll to ensure contact with subgrade. Work sifted soil into minor cracks between pieces of sod; remove excess material from sodded areas to prevent smothering.

   NOTE: Mesh backing material shall be removed from sod at the time that sod is laid. The Contractor shall clean up and dispose, off-site, all mesh material and surplus sod.

4. Thoroughly water soil with a fine spray immediately after planting to saturate the sodded area to a depth of four inches.

5. After two days of thorough watering, the Contractor shall curtail watering to permit re-rolling of the sodded area to ensure proper contact with subgrade.

6. After the second rolling of the sod, the Contractor shall routinely water, fertilize and maintain sodded area until the termination of the specified maintenance period and until acceptance by the Owner.

H. Maintenance and Observation:

1. Turf type Bermuda shall be no more than 3/4 to 1 inches height at time of the first mowing. All turf areas shall be mowed, removing no more than 1/3 of the turf grass blade, and all bare spots shall be resodded prior to beginning of the maintenance period.

2. Conduct a complete review of all landscape construction items at the end of the landscape construction period to establish the time for beginning of the

maintenance period. Notify the Owner's representative at least seven days in advance of review.

3. Maintain lawns to watering, fertilizing, weeding, mowing, trimming, and other operations such as rolling, regarding and replanting as required to establish a smooth, acceptable lawn, free of eroded or bare areas.

CLEAN-UP

A. After all planting operations are complete, remove all trash, excess soil, and rubbish from the property. Repair scars, ruts, or other marks in the ground caused by this work and leave the ground in a neat and orderly condition.
B. Leave the site in broom-clean condition, and wash down all paved areas within the project site. Leave walks in clean and safe condition.
C. Protect landscape work and materials from damage due to landscape operations, operations by other contractors, and trades and trespassers. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged landscape work as directed.

800-1.5.3 Tree Stakes. The first paragraph shall be replaced with the following;

Tree stakes shall be sharpened 2" diameter, 12′ long lodgepole pine, treated in accordance with Section 204-2.2. Stake shall be one piece and free from splits. Trees installed as 36" box and larger shall be installed with guy anchors (3/tree).

The third paragraph shall be replaced with the following:

Deadman stakes shall be duckbills or 2 x 4 inch redwood 18 inches long. Covers for wire shall be 3/4-inch Class 200 PVC pipe - 3 feet long.

The following paragraph shall be added at the end of the subsection:
A minimum of two (2) supporting tree ties or three (3) guy anchors shall be used for each tree. Tree ties shall be V.I.T. twist brace Model TB24.

800-1.5.5 Root Barriers

Root barriers shall be 24″ deep and as provided by DeepRoot Corp. (800) 458-7668, or approved equal. Installation shall be per manufacturer's specifications.

800-1.5.6 Arbor Guards

All trees planted in turf areas shall be planted with continuous, secured **Arborgard+ protective sheath at base of trunk, or approved equal. Install per manufacturers specifications. Available from: Gemplers (800) 382-8473.**

800-2 IRRIGATION SYSTEM MATERIALS

800-2.1.1 General

The manufacturer's directions and detail Contract Drawings shall be followed unless directed by the Owner Representative or shown differently in the plans and specifications.

800-2.1.3 Plastic Pipe for Use With Solvent Weld Socket or Threaded Fillings. Add the following before the first paragraph:

General. Use only new materials of brands and types noted on Contract Drawings specified herein, or approved equals.

Paragraph 2 shall be deleted and replaced with the following:

PVC Pressure Main Line Pipe shall be Class 315 PVC solvent weld pipe with Schedule 80 fittings for pressure main pipes 2 inches and larger.

PVC Schedule 40 with solvent welded joints for pressure main piping of lesser diameter. PVC Schedule 40 solvent welded piping shall be used for all non-pressure lateral line piping.

All PVC pipe must bear the following markings:

1. Manufacturer's name
2. Nominal pipe size
3. Schedule or class
4. Pressure rating in P.S.I.
5. NSF (National Sanitation Foundation) approval
6. Date extrusion
7. U.P.C. shield logo (IAPMO approval)

All fittings shall bear the manufacturer's name or trademark, material designation, size, applicable I.P.S. schedule and NSF seal of approval

Solvent cement and primer for PVC solvent-weld pipe and fittings shall be of type recommended by the manufacturer and shall follow installation methods prescribed by the pipe manufacturer.

All irrigation pipe using domestic water shall be white in color.

800-2.2.2 Gate Valves. The text of this subsection shall be deleted and replaced with the following:

All valves shall be as identified on the Construction Documents and per Owner review and approval.

800-2.2.4 Remote Control Valves

Remote control valve manufacturer and sizes shall be as indicated in plans and legend.

800-2.2.6 Quick-Coupling Valves and Assemblies. The text of this subsection shall be deleted and replaced with the following paragraph:

Quick-coupling valves shall have a brass two-piece body designed for working pressure of 150 PSI. The quick-coupling valve shall have a built-in flow control and self-closing valve and shall be supplied in 1-inch size unless otherwise required. The valve shall be equipped with a locking yellow vinyl cover.

800-2.2.7 Valve Boxes. Delete the first paragraph and replace with the following:

Valve boxes and lids shall be black in color when using domestic water and as detailed on the Plans. The boxes shall be covered with an etched polyethylene face with an ultraviolet inhibitor. The lid shall be plastic, lockable, and embossed with the valve station number on its topside. Sizes and manufacturer of the valve boxes and lids shall be as indicated on the Standard Contract Drawings.

800-2.2.8 Master Control Valves.

The master control valve manufacturer and size shall be as indicated on plan and legend.

800-2.3 Backflow Preventer Assembly

Unless otherwise instructed by the Owner Inspector, backflow assemblies shall consist of a brass reduced pressure/backflow prevention device with “Wye” strainer and 60 mesh screen as detailed and called out on the Project Plans.

800-2.4 Sprinkler Equipment

The text of this subsection shall be deleted and replaced with the following:

Irrigation bodies and nozzles shall be as indicated on plan and legend. Substitutions shall not be allowed unless by written authorization from the City of Gardena.

Irrigation bodies and nozzles shall feature low head drainage, pressure regulating, and pressure compensating features. Unless otherwise approved, all pop-ups and fixed riser assemblies shall consist of plastic and stainless-steel materials.

Smaller radii turf irrigation equipment shall consist of 6-inch pop-ups. All smaller radii shrub and groundcover irrigation equipment shall consist of 6” pop-up bubbler or micro spray, unless otherwise approved by the Owner.

800-3 ELECTRICAL MATERIALS

800-3.2.1 Conduit. [Replace paragraph with the following]:

Conduit shall be Schedule 40 PVC pipe as called out on the plans. Install per plans. Conduit shall conform to the applicable provisions of subsection 800-2.1.3.

800-3.2.2 Conductors

The electrical system shall be installed in accordance with the National Electrical Code most recently adopted by the Owner. Connections between the automatic controllers and the

electric control valves shall be made with direct burial copper wire AWG-U.F. 600 volt. Pilot wires shall be a different color wire for each automatic controller. Common wires shall be white with a different color stripe for each automatic controller. Install in accordance with valve manufacture's specifications and wire chart. In no case shall wire size be less than #14.

Wiring shall occupy the same trench and shall be installed along the same route as pressure supply or lateral lines wherever possible. Install wires inside Schedule 40 Conduit anywhere it is not possible to place in pipe trench, or where wires must go under pavement. Conduit size shall be large enough to contain all necessary wires. Minimum conduit size shall be 2".
Where more than one (1) wire is placed in a trench, the wiring shall be taped together at intervals of ten (10) feet.

An expansion curl should be provided within three (3) feet of each wire connection and at least every one hundred (100) feet of wire length on runs more than one hundred (100) feet in length and also at each change of direction. Expansion curls shall be formed by wrapping at least five (5) ruins of wire around a one-inch diameter pipe, then withdrawing the pipe.

All splices shall be made with 3M - DBY wire connector, or approved equal.
Use one splice per connector sealing pack.

Field splices between the automatic controller and electrical control valves will not be allowed without prior approval of the Owner.

SECTION 801 - INSTALLATION

801-1 GENERAL

Inspection will be required for the following parts of the work:

a. At completion of rough grade prior to incorporation of soil amendments.

b. Irrigation coverage test prior to initiating planting operations.

c. At completion of incorporation of soil amendments and fine grading.

d. Prior to digging plant pits for trees and shrubs.

e. During backfilling of plant pits with amended backfill.

f. Maintenance period shall not begin until final installation inspection is made, and establishment is verified. Owner inspector shall approve commencement date of maintenance prior to the commencement of said maintenance.

g. Final review and acceptance at the end of the maintenance period.

The landscape contractor or subcontractor shall provide a licensed Pest Control Advisor (PCA) prior to applying herbicide. The PCA will be responsible for preparing and approving a Pest

Control Recommendation and providing Safety Data Sheets (SDS). These items shall be included with the herbicide submittal.

The Contractor is responsible for clearing and grubbing, pruning and removing tree roots that interfere with the work. The Contractor shall submit recommendations by its arborist to the Owner for review for safely pruning and removing tree roots. No roots shall be pruned or removed unless this submittal is returned to the Contract as satisfactory. Prior to the submittal, the Contractor shall arrange to meet with the City Arborist at the site to discuss Owner standards and requirements.

If required, the submittal shall adhere to the following guidelines.

1. Root Pruning

   a. Whenever possible, root pruning shall only be done on one side of the tree unless specifically authorized by the City Arborist.

   b. Roots shall be cleanly severed using a root-pruning machine, ax or comparable tool.

2. Arbitrary Root Cut

   a. A straight cut with a root-cutting machine shall be made.

   b. The cut shall be a maximum 14” below grade for sidewalks and 26” for curbs, and shall be made as far away from the tree base as possible.

3. Selective Root Pruning

   a. This process involves selectively removing offending roots when a tree trunk or root flare is less than 2 feet from the sidewalk and/or the size, species or condition of the tree warrants a root cut to be hazardous to the tree or when there is only one minor offending root to be removed and/or the damage is minimal (i.e., only one panel uplifted, etc.)

   b. Selective root pruning shall be performed with an ax or stump-grinding machine instead of a root-pruning machine.

   c. All tree roots that are within the sidewalk construction area shall be removed or shaved down.

   d. Roots greater than two inches in diameter that must be removed, must be pre-approved by the City Arborist.

   e. Roots shall be selected for removal on the basis that will have the least impact on the health and stability for the tree.

801-2 EARTHWORK AND TOPSOIL PLACEMENT

801-2.1 General

The Contractor shall apply water as necessary to provide ideal moisture content for tilling and for planting as, herein specified.

801-2.2 Topsoil Preparation and Conditioning

801-2.2.2 Fertilizing and Conditioning Procedures. The first paragraph of the subsection shall be deleted and replaced with the following:

> The planting areas shall be brought to rough grade whereupon Fertilizer and Soil Conditioning required for the native soils for the intended landscape planting shall be added based upon the recommendations of Soils Fertility and Agricultural Suitability Report. (See Section 800) The Contractor, at no additional cost to the Owner, shall make two additional soils tests for agricultural fertility and suitability and fertilizer and amendment recommendations of all planting areas upon completion of excavation, topsoil backfilling, and grading. The Contractor shall amend it as necessary to comply with the soils test report at no additional cost to the Owner.

801-2.2.3 Weed Control, Grow and Kill Protocol: The following subsection shall be added:

> Kill and remove all existing weeds from site areas utilizing post-emergent herbicide.
>
> Upon completion of the irrigation system and after all designated shrub and ground covers, existing weeds and growth have been removed from the planting areas. All areas shall be watered four (4) times daily until weed seeds have germinated for approximately 21 days or unless otherwise directed by the Engineer. Thereafter, watering shall cease for three (3) days to be followed by the spraying of a systemic herbicide containing the active ingredient glyphosate (Roundup-Pro, or approved equal). Spraying shall be at the labeled rate compatible with the eradication rate for the target weed species and shall be performed under the direction of a registered **Pest Control Advisor**. After allowing sufficient time for the herbicide to kill all remaining weeds (2 weeks minimum), the areas to be landscaped shall be raked or hoed as directed by the Engineer to remove any remaining weed stubble. All areas shall be watered for an additional 14 (fourteen) day period and then receive an additional application of the systemic herbicide per manufacturer's recommendation.

801-2.3 Finish Grading. The following shall be added to the last sentence of the second paragraph.
…except where water is designed to flow over the same.

The following paragraphs shall be added following paragraph two:

Finish grades shall be those indicated on the Contract Drawings or as may be controlled by existing installations. Grades not otherwise indicated shall be uniform, and straight graded between points where elevations are noted. Minor modeling of the ground surface may be required. Landscape areas to receive turf shall be rolled with a water drum in a north/south and then east/west direction. Low spots and high spots in the terrain shall be backfilled and tamped or bladed and spread. The resultant grade shall be smoothly, evenly contoured and compacted to 85%. The gradient shall be as noted on plans.

Grading shall provide for the natural run-off of water without low spots or pockets. Flow lines shall be set by instrument and shall be the maximum gradient possible.

801-4 Planting

801-4.3 Layout and Plant Location

Quantities for shrubs and groundcovers shown on the legend are for estimate purposes only. Final quantities for plant materials installed shall be governed by the indicated plant spacing. Quantities for trees shall be verified in bid documents and discrepancies between the planting plans and the bid schedule shall be noted on bid schedule by Contractor at the time of bid submittal.

In the event that designated plant location is found in conflict with underground utility or structure during the planting operation an alternate location will be selected by the Owner. The Contractor shall be responsible to notify utility companies for the spotting of underground facilities prior to plant acquisition and to make precautionary potholes where conflicts would be indicated on the plans or by field notations by utility representatives. The cost for utility notification and potholing shall be included in the other work items and no additional compensation will be allowed therefore.

Proposed tree locations, as indicated on plans shall be staked by contractor for review and approval by Owner prior to digging of plant pits for planting. Stakes shall minimum of 6’ in length and color coded to indicate variety of proposed tree planting at each of the staked locations. Review and approval of provided color-coded stake locations, with modifications/adjustments as necessary shall be provided by Owner prior to commencement of tree planting operations.

Container shrubs and groundcovers shall be placed on finish grade at locations indicated on planting plans for review and approval prior to planting. Contractor shall notify Owner 48 hours prior to scheduled review of containerized shrubs and groundcovers on grade

801-4.4 Specimen Planting [Insert before first paragraph]:

The planting pits for trees shall be excavated twice the diameter and the depth of the rootball.

Set the Tri-C or Grow-Power or equal tablets to be used with each plant on the top of the root ball while the plants are still in their containers so the required number of tablets to be used in each hole can be easily verified.

3 tablets per 15 gallon
4 tablets per 24 inch box

5 tablets per 30 inch box
6 tablets per 36 inch box
7 tablets per 42 inch box
8 tablets per 48 inch and larger boxes

Planting shall be governed by the following requirements:

801-4.5 Tree and Shrub Planting

The Contractor shall amend backfill as necessary per the soils test report at no additional cost to the Owner. (Refer to Sections 800 and 801-2.3.2). **The following soil amendments and fertilizer guidelines shall be used for bid purposes only.** Fill holes with backfill mixtures as specified below:

1. The following material shall be thoroughly blended and used as a backfill mix in the surface 12” around trees and shrubs, and the backfill soil, 12” below finish grade should be amended if specified by the soil test report with only gypsum and / or iron sulfate. No mixing for individual planting holes will be permitted. Mix planting soil prior to backfilling and stockpile at the site. The iron sulfate should not contact cement surfaces since severe staining could occur.

   8 parts by volume screened on-site soil
   2 parts by volume Nitrogen Stabilized Organic Amendment
   1 ½ lbs. Iron Sulfate per cu. yd. of mix
   1 lb. 12-12-12 per cu. yd. of mix
   5 lb. gypsum per cu. yd. of mix
   1 lb. of soil sulfar per cu. yd. of mix

2. Place plants near respective pits. Set the tablets to be used with each plant on the top of the root ball while the plants are still in their containers so the required number of tablets to be used in each hole can be easily verified.

   1 tablet per 1-gallon container
   2 tablets per 5-gallon container
   3 tablets per 15-gallon container

3. Remove all plants from their containers and set in plant pits.

4. Fill to proper height with amended backfill to receive the plant and thoroughly tamp the mixture before setting the plant.

5. Set plant in upright position in the center of the hole and compact the backfill mixture around the ball or roots.

6. Thoroughly water each plant when the hole is one-half filled. After water has completely drained, place planting tablets per detail. The remainder of the hole shall then be backfilled.

7. After watering, tamp the soil in place until the surface of the backfill is level with the surrounding area and the crown of the plant is at the finished grade of the surrounding area. Do not backfill around trunks or stems.

8. After backfilling, an earthen basin shall be constructed around each plant. Each basin shall be of a depth sufficient to hold at least six inches of water. Basins shall be the same size as the container size of each individual plant. The basins shall be constructed of amended backfill material. This berm shall be leveled to finished grade alter the 60th day of the maintenance period, and prior to the ground cover hydroseeding.

9. Immediately after planting, apply water to each tree and shrub by means of a hose. Apply water in a moderate stream in the planting hole until the material about the roots is completely saturated from the bottom of the hole to the top of the ground.

10. Apply water in sufficient quantities and as often as seasonal conditions require to keep the planted areas moist at all times, wet below the root system of grass and plants. Generally, water once each day for 7 days in cool seasons, for 14 days in hot weather. Berms around shrubs and trees in slopes shall be maintained for 60 days following tree planting and then removed.

11. Pruning - Pruning shall be limited to the minimum necessary to remove injured twigs and branches and to compensate for loss of roots during transplanting, but never to exceed one-third of the branching structure. Upon approval of the Owner Representative, pruning may be done before delivery of plants but not before plants have been inspected and approved by the Owner.
12. No trees shall be planted within 6 feet of paved surfaces, unless specifically indicated on plans. Those trees noted on plans to occur within 6’ of curbs and/or paving shall receive continuous root barriers per Section 800-1.5.5.

801-4.6 Planting Staking and Guying.

The text of the entire subsection shall be deleted and replaced with the following paragraph:

All staking and guying shall be in accordance with the Plans, Details, and Specifications.

801-4.7 Ground Cover and Vine Planting.

The second paragraph shall be deleted and replaced with the following:

Ground cover shall be planted in moist soil and spaced as indicated on the plant legend.

801-4.8 Lawn Planting

See section 800-1.4.5 Sod (turf grass).

801-4.8.1 General. This section includes the following, as noted on plans:

801-4.9.3 Seeding and Mulching

Mulch installation shall consist of placing **3″ thick layer 'forest floor' (0-4") material equal to or supplied by Aquinaga Company (949) 786-9558** over designated planter areas. See plans for areas of installation. Submit sample prior to purchase and/or placement for approval.

801-5 IRRIGATION SYSTEM INSTALLATION

801-5.1 General

Contractor shall be responsible to notify the Owner prior to start of construction to coordinate on-site inspections. Contractor is responsible for any utility company fees and permit fees and are not reimbursable by the Owner/City.

Due to the scale of Contract Drawings, it is not possible to indicate all offsets, fittings, sleeves, etc., which maybe required. The Contractor shall carefully investigate the structural and finished conditions affecting all of his work and plan his work accordingly, furnishing such fittings, etc., as may be required to meet such conditions.

The work shall be installed in such a manner as to avoid conflicts between planting and architectural features, etc.

All work called for in the Contract Drawings by notes or details shall be furnished and installed whether or not specifically mentioned in the specifications.

The Contractor shall not willfully install the irrigation system as shown on the Contract Drawings when it is obvious in the field that unknown obstructions, grade differences, or discrepancies in area dimensions exist that might not have been considered in engineering. Such obstructions or differences should be brought to the attention of the Owner Representative. In the event this notification is not performed, the Irrigation Contractor shall assume full responsibility for any revisions necessary and shall perform such at \his own expense.

The fourth paragraph shall be deleted and replaced with the following paragraphs:

The location of connection points shown is approximate. The Contractor shall contact the utility companies and coordinate the installation of the required electrical and water services. Following coordination with the utility companies, the Contractor shall make all necessary provisions to make the service connections called for on the plans at the places indicated or to the nearest acceptable point thereto as approved by the utility companies and the Owner Representative. Verification of the point of connections with the utility companies and the Owner Representative shall be obtained by the Contractor prior to the start of work.

All costs for making the service connections shall be paid for by the Contractor, with the exception of any utility company fees and permit fees which are reimbursable by the Owner, as per Section 7-5 "Permits" of the General Provisions.

801-5.1.1 Temporary Repairs

The Owner reserves the right to make temporary repairs as necessary to keep the irrigation system in operating condition. The exercise of this right by the Owner shall not relieve the Contractor of his responsibilities under the terms of the guarantee as herein specified.

801-5.2 Trench Excavation and Backfill.

The second and last paragraph shall be deleted and the following added:

The depth of cover over pipelines and conduits shall be per Contract Documents.

The trenches shall not be backfilled until all required tests are performed. A fine granular material used for bedding and backfill will be placed on all lines. Trenches shall be carefully backfilled with the excavated materials approved for backfilling, consisting of earth, loam, sandy clay, sand, or other approved materials, free from large clods of earth or stones.

The finished surface shall be restored to the grade established prior to excavation. All mounding and divots shall be graded smooth to the satisfaction of the Owner Representative.

If settlement occurs, and subsequent adjustments in pipe, valves, valve/utility boxes, sprinkler heads, lawn or planting, or other construction are necessary, the Contractor shall make all required adjustments.

801-5.2.1 Trenching and Backfilling Under Paving.

Where irrigation lines are called for on the plans to be placed within a sleeve the PVC sleeve to be provided for such work shall be Schedule 40 PVC sleeve.

801-5.2.2 Trenching Adjacent to Existing Trees.

Where it is necessary to excavate adjacent to existing trees, the Contractor shall use all possible care to avoid injury to trees and tree roots. Excavation in areas where two (2) inch and larger roots occur shall be done by hand. All roots two (2) inches and larger in diameter, except directly in the path of pipe or conduit, shall be tunneled under and shall be heavily wrapped with burlap, to prevent scarring or excessive drying. Where a ditching machine is run close to trees having roots smaller than two (2) inches in diameter the wall of the trench adjacent to the tree shall be hand trimmed, making clean cuts through. Trenches adjacent to trees should be closed within twenty-four (24) hours; and where this is not possible, the side of the trench adjacent to the tree shall be kept shaded with burlap or canvas.

801-5.3 Irrigation Pipeline Installation

A minimum of twelve (12) inches clearance shall be maintained between “recycled” irrigation pipelines and non-irrigation pipelines/conduits.

The following paragraphs shall be added at the end of the subsection:

PVC Sleeves shall be required under areas where all hardscape materials shall be installed. Sleeving shall be done per detail on Project Plans (Minimum sleeve dimension shall be twice the diameter of pipe size.

801-5.3.3 Plastic Pipeline.
The following shall be added to the end of paragraph one:

PVC to metal connections shall only be accomplished by PVC male adapters screwed into metal fittings. Teflon tape shall be used on all threaded PVC to PVC, and on all threaded PVC to metal joints.

The following paragraph shall be added following paragraph four:

Handling of PVC Pipe and Fittings. The Contractor is cautioned to exercise care in handling, loading, unloading, and storing of PVC pipe and fittings. All PVC pipe are to lie flat and not to be subjected to undue bending or concentrated external load at any point. Any section of pipe that has been dented or damaged will be discarded and, if installed, shall be replaced with new piping. Pipe and fittings shall not be stored in direct sunlight.

801-5.4 Installation of Valves, Valve Boxes, and Special Equipment

Paragraphs three, four, five, and six shall be deleted.

801-5.5 Sprinkler Head Installation and Adjustment.

801-5.5.2 Location, Elevation, and Spacing.

The third paragraph shall be amended to read as follows:

Sprinkler heads shall be installed 6 inches from the adjacent vertical elements projecting above wade such as walls, planter boxes, curbs, and fences in shrub areas. Sprinkler heads shall be installed 4 inches from adjacent vertical elements projecting above grade such as walkways, walls, planter boxes, curbs, and fences in turf areas.

801-5.7 Flushing and Testing.

801-5.7.1 General. The following paragraph shall preface the subsection:

Flushing of the lines shall be done before quick coupling valves and remote control valves are in place. All open ends shall be piped (temporarily to exhaust flushing water up and out of the trenches.)

No water will be permitted to fall into the trench. Flushing procedure will be to first open the ports nearest the source, then recap, and move progressively towards the end of the line, with only one open port flushing at anyone time.

Amend the last sentence of the first paragraph by adding “and approved in writing” by the Senior Landscape Planner at the end of the sentence.

Add the following paragraph to the end of the subsection:

When the irrigation system is completed, a coverage test shall be performed by Owner Staff to determine if the water coverage for planting areas is complete, adequate, and avoids overspray onto walks, roadways, and buildings as much as possible. The Contractor shall furnish all materials and perform all work required to correct any inadequacies of coverage due

to deviations from the Contract Drawings, or where the system has been willfully installed as indicated on the Contract Drawings when it is obviously inadequate, without bringing this to the attention of the Owner inspector. This test shall be accomplished before any ground cover is planted.

The Contractor shall request the presence of the Owner in writing at least forty-eight (48) hours in advance of testing. The Contractor shall flush and adjust all sprinkler heads for optimum performance and to prevent overspray onto walks, roadways, and buildings as much as possible.

801-5.7.2 Mainline and Lateral Pipeline Pressure Test. Pressure test at the end of the first paragraph shall be amended to read: Mains 6 hrs. at 150 PSI. Laterals 2 hours at 100 PSI.

801-6 MAINTENANCE AND PLANT ESTABLISHMENT

The Contractor shall be responsible for detecting diseases and pests (including rabbits, gophers, groundhogs, rodents) as soon as they are present and shall take immediate action to identify, control, and remove the disease or pest. Pest control programs of all mammals shall be done without extermination and as approved by the Owner's Authorized Representative. Plants shall be maintained in a disease and pest free condition. A licensed **Pest Control Operator** shall be maintained to recommend and apply pesticide, herbicides, and fungicides. Contractor shall be responsible for removal of gophers and moles from site and repair any and all damage attributed to their presence. Damaged plant material due to vertebrate pests (rabbits, gophers, groundhogs, etc.) shall be replaced immediately by Contractor at no cost to Owner. Dead dying and damaged plant material shall be removed at no cost to the Owner.

The maintenance and plant establishment period shall be for a period of **(90)** calendar days. Trees shall have a 1-year warranty beginning after the plant establishment period, after all planting is complete and approved by the Owner in writing. The maintenance period will not commence until all planting has been approved in writing by the Owner.

Maintenance shall include, but not be limited to, all watering, irrigation repair, weeding, mowing, edging, cultivating, spraying, and pruning necessary to keep the plant materials in a healthy growing condition and to keep the planted areas neat and attractive throughout the maintenance period.

The lump sum price paid for the maintenance period shall include all costs for water (from the new water meter installed only), watering, irrigation repair, weeding, mowing, edging, cultivating, spraying, and pruning necessary to keep the plant materials in a healthy growing condition and to keep the plant areas neat and attractive throughout the maintenance period. Upon the 60th day or thereafter, dirt berms around trees and shrubs shall be leveled.

Provide all equipment and means for proper application of water to those planted areas not equipped with an irrigation system.

Protect all planted areas against damage, including erosion and trespassing, by providing and maintaining proper safeguards.

During the maintenance period, all plants and planted areas shall be kept properly watered and weed-free at all times. Irrigation schedule shall comply with AB325 and Certified Irrigation Auditor's parameters.

In order to expedite the plant establishment work, the Contractor shall maintain a sufficient number of men and adequate equipment to perform the work herein specified from the time any planting is done until the end of the final maintenance period.

The Contractor will be relieved from maintenance work when the plant establishment and maintenance work has been completed to the satisfaction of the Owner.

Damage to planting areas shall be replaced immediately when seen by Contractor. Damage observed by the Owner shall be replaced within 24 hours of notification to the Contractor.

Depressions caused by vehicles, bicycles, or foot traffic, are to be filled and leveled. Replant damaged areas.

Apply a pelletized fertilizer blend of 15-15-15 at the beginning and at every 30-day maintenance interval at the rate 350 lbs. per acre until the designated end of the maintenance period. **A 90day maintenance program shall consist of 3 (six) fertilizer periods.**

Apply 25 lbs. Gro-Power Plus per 1,000 square feet at 25th and 55th day of **90 day maintenance period.**

Contractor shall be responsible for removal of rodents, slugs, snails, and cutworms from site as required and repair damage as above.

All paved areas will be broom cleaned and/or washed and maintained in a neat and clean condition at all times, as directed by the Owner. AQMD and WQMP practices shall be observed. Air blowers shall not be allowed.

Replacements. At the end of the maintenance period, all plant material shall be in a healthy growing condition.

During the maintenance period, should the appearance of any plant indicate weakness and probability of dying, immediately replace that plant with a new and healthy plant of the same type and size without additional cost to the Owner.

All trees shall be guaranteed by the Contractor to live and grow in an acceptable upright position for a period of one year after completion and final acceptance by the Owner.

The Contractor, within ten (10) days of notification by the Owner, shall remove and replace all guaranteed plant materials which for any reason fail to meet the requirements of the guarantee. Replacement shall be made with plant materials as indicated or specified for the original planting, and all such replacement materials shall be guaranteed as specified for the original guaranteed materials.

Clean-Up. Upon completion of the work in this section, the Contractor shall clean-up and remove from the area all unused materials and debris resulting from the performance of the work as directed by the Owner.

801-9 GUARANTEE

The text of the subsection shall be deleted and replaced with the following:

The guarantee period shall begin upon written notice by Owner of substantial compliance with plans and specifications has been achieved by Contractor.

Upon acceptance, all construction shall be guaranteed by the Contractor for a period of one year against defects in materials and workmanship.

Any settling of backfill trenches which may occur during the one year guarantee period shall be backfilled, compacted, and transitioned smoothly with adjacent gradients to the Owner's satisfaction by the Contractor without expense to the Owner, including the complete restoration of damaged planting, paving, or other improvements of any kind.

The Contractor, within ten (10) days of notification by the Owner Representative, shall remove and replace all guaranteed plant materials which, for any reason, fail to meet the requirements of the guarantee. Replacement shall be made with plant materials as indicated or specified for the original planting and all such replacement materials shall be guaranteed as specified for the original guaranteed materials.

GUARANTEE FOR IRRIGATION SYSTEM

We hereby guarantee that the irrigation system we have furnished and installed is free from defects in materials and workmanship, and the work has been completed in accordance with the Contract Drawings and specifications, ordinary wear and tear, and unusual abuse, or neglect accepted. We agree to repair or replace any defects in material or workmanship, including settling of backfilled areas below grade which may develop during the period of one year from date of acceptance and also to repair or replace any damage resulting from the repairing or replacing of such defects at no additional cost to the Owner. We shall make such repairs or replacements within 72 hours after receipt of written notice. In the event of our failure to make such repairs upon written notice from the Owner, we authorize the Owner to proceed to have said repairs or replacements made at our expense and we will pay the costs and charge therefore upon demand.

PROJECT:

LOCATION:

AGENCY:

SIGNED:
(Contractor)

ADDRESS:

PHONE:

DATE OF ACCEPTANCE:

801-10 CHARTS, MANUALS, AND CONTRACT DRAWINGS

801-10.1 As-Built Contract Drawings

Contractor shall provide Owner Representative with Landscape Architect signed “as-built” heavy weight drafting film originals of all project construction document plans, reflecting all “as-built” conditions for all project elements and two (2) sets of edge bound plots at the completion of the project at no additional cost to the Owner.

Contractor shall provide two (2) sets of surveyed electronic files in CAD and PDF format. One (1) set shall be delivered to the Owner for permanent recordkeeping purposes.

Contractor shall dimension from two (2) permanent points of reference, building corners, sidewalk or road intersections, etc., the location of the following items:

1. Gate valves
2. Sprinkler control valves
3. Routing of control wiring
4. Rain gauge
5. Quick coupling valves
6. Point of connection components (meters, backflow preventors, etc.)
7. Other related equipment as directed by the Owner
8. Significant changes in routing of lateral lines from those indicated on the plans

Delivery. On or before the date of the final inspection, the Contractor shall deliver the corrected and completed design documents to the Owner. Delivery of the final heavy weight drafting film will not relieve the Contractor of the responsibility of furnishing required information that maybe omitted from the prints.

801-10.2 Controller Charts

As-built Contract Drawings shall be approved by the Owner before the Contractor prepares the controller charts.

Provide two (2) controller charts for each controller supplied.

The chart shall show the area controlled by the automatic controller and shall be the maximum size which the controller door will allow.

The chart is to be a reduced drawing of the actual “as-built” system. However, in the event the controlled sequence is not legible when the drawing is reduced, it shall be enlarged to a size that will be readable when reduced.

The chart shall be a blackline or blueline print and a different color shall be used to indicate the area of coverage for each station.
When completed and approved, the Contractor shall hermetically seal the chart between two pieces of plastic, each piece being a minimum of 10 mils thick.

These charts shall be completed and approved prior to final inspection of the irrigation system.

801-10.3 Manuals of all Equipment and Certificate of Substantial Completion

Operation and Maintenance Manuals. Prepare and deliver to the Owner within ten calendar days after substantial completion of the project, three hard cover binders with three rings containing the following information:

1. Index sheet stating Contractor's and subcontractor’s license numbers, address, and telephone number and list of equipment with name and address of al local supplier’s and manufacturer's representatives.

2. Catalog and specification ‘cut’ sheets materials for all hardscape and softscape and equipment installed under this contract.

3. Guarantee statement. The guarantee for the sprinkler irrigation system shall be made in accordance with the enclosed form. The Contractor shall file a complete copy of all substantial completion forms and irrigation guarantee prior to the acceptance of project by the Owner.

   The guarantee shall be included in the operations and maintenance manual of all equipment throughout the park.

   The guarantee shall be typed onto the Contractor’s letterhead.

4. Complete operating and maintenance instructions on all major equipment.

In addition to the above mentioned maintenance manuals, provide the Owner's maintenance personnel with instructions for major equipment and show evidence in writing to the Owner at the conclusion of the project that this service has been rendered.

801-11 EQUIPMENT

801-11.1 Loose Equipment to be Furnished.

The following subsection shall be added (confirm each item with the Owner Inspector prior to actual turn-over):

The Contractor shall supply as a part of this contract the following tools:

1. Two (2) sets of special tools required for removing, disassembling and adjusting each type of sprinkler and valve supplied on this project.

2. Two (2) five foot valve keys for operation of gate valves.

3. One (1) quick coupler key and matching hose swivel for every five (5) of each type of quick coupling valve installed.

4. Six (6) spray nozzles of each type specified on the legend.

5. One case of spray bodies of each manufacturer specified on the legend.

6. One case of rotors of each manufacturer specified on the legend.

7. Two (2) gate valves - line sized - as specified on the legend.

8. Two (2) keys each for controller and controller enclosure doors.

    a. One RainMaster remote for each controller

The above-mentioned equipment shall be turned over to the Owner at the conclusion of the project. Before final inspection can occur, evidence that the Owner has received material must be shown to the Owner Representative.

801-12 PAYMENT

The payment for the irrigation system and all appurtenant installations indicated on the Contract Drawings and described in these specifications shall be included as part of the Lump Sum Contract Price in the Proposal Bid Form.

The payment for the installation of turf shall be made as part of the Sum Contract Price.

The payment for maintenance of the work per the Contract Drawings and the specifications shall be made as part of the lump sum **Contract Price 90-day Maintenance**.

The payment for the planting and installation of trees, shrubs, and ground cover shall be included in the Contract Lump Sum Contract Price. The cost of soil amendments, fertilizing and soil conditioning, weed control, and finish grading shall be included in the Lump Sum Contract Price.

Consultant Technical Specifications in C.S.I. format for items not identified in Technical Specifications Consultant “Greenbook” Amendments

GENERAL CONDITIONS

1 GENERAL CONDITIONS

A. The General Conditions of the Contract for Construction, AIA Document A201, 2017 Edition, Articles 1 through 15 inclusive, is a part of this Contract, and is incorporated herein as fully as if here set forth.

1. A copy of the General Conditions may be obtained at www.aia.org under “Contract Documents”, bottom of page “Store”; by calling 800-242-3837 (option 4); or at www.aiasf.org under “Publications”.

END OF SECTION

SECTION 01 11 00

SUMMARY OF WORK

PART 1 - GENERAL

1.1 SUMMARY

A. Project consists of construction of ***New senior center and aquatics building with new pool and pool equipment building located at 1654 W 166th street, Gardena, CA 90247*** as indicated in Contract Documents.

1. Owner reserves right to remove and retain possession of existing items prior to start of Contract.

2. Removal of hazardous material shall be per separately provided hazardous material abatement report prepared by others. Architect shall not be involved in determination, removal or disposal of hazardous materials.

1.2 REQUIREMENTS INCLUDED

A. This section includes administrative provisions:

1. Work sequence.
2. Contractors use of premises.
3. Field engineering.
4. Regulatory requirements and reference standards.
5. Owner furnished Contractor installed products (OFCI).
6. Owner pre-ordered products.

1.3 WORK SEQUENCE

A. Coordinate construction schedule and operations with Owner and Architect.

B. Perform construction in phases as indicated.

1.4 CONTRACTORS USE OF PREMISES

A. Limit use of premises for Work and construction operations and to allow for work by other contractors.

B. Coordinate use of premises and access to site under direction of Owner and Architect.

1.5 FIELD ENGINEERING

A. Provide field engineering services; establish lines and levels by use of recognized engineering survey practices. See General Provision, 3-10, Survey for more details.

B. Locate and protect control and reference points.

1.6 REGULATORY REQUIREMENTS AND REFERENCE STANDARDS

A. Regulatory Requirements:

1. Architect has contacted governing authorities and reviewed design requirements of local, state and federal agencies for applicability to Project.

2. Contractor shall be responsible for contacting governing authorities directly for necessary information and decisions bearing upon performance of Work.

B. Reference Standards:

1. For Products specified by association or trade standards, comply with requirements of referenced standard, except when more rigid requirements are specified or are required by applicable codes.

2. Applicable date of each standard is that in effect as of date on proposal or date on Contract where no proposal is available, except when a specific date is specified.

1.7 OWNER FURNISHED CONTRACTOR INSTALLED PRODUCTS (OFCI

A. Select products are to be furnished and paid for by Owner and installed by Contractor:

1. Refer to Drawings and Specifications.

B. Owner's Responsibilities:

1. Arrange for and deliver shop drawings, product data, and samples to Contractor.
2. Arrange and pay for product delivery to site.
3. Inspect products jointly with Contractor on delivery.
4. Submit claims for transportation damage.
5. Arrange for replacement of damaged, defective, or missing items.
6. Arrange for manufacturer's warranties, inspections, and service.

C. Contractor's Responsibilities:

1. Review shop drawings, product data, and samples.
2. Receive and unload products at site.
3. Inspect jointly with Owner for completeness and damage.
4. Handle, store, and install products.
5. Finish products as required after installation.
6. Repair or replace items damaged by Work of this Contract.

1.8 OWNER PRE-ORDERED PRODUCTS

A. Select products have been pre-ordered by Owner:

1. Refer to Drawings.

B. Owner has negotiated purchase orders for these products for incorporation into Project.

1. Purchase orders are assigned to Contractor; costs shall be included into base bid.

2. Contractor's responsibilities are same as if Contractor negotiated purchase orders.

END OF SECTION

SECTION 01 20 00

PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Special administrative and procedural requirements necessary to prepare and process Application for Payment. General Provisions, Section 7- Measurement and Payment to prevail over this section if any conflict.

1.2 SCHEDULE OF VALUE

A. Coordination: Coordinate preparation of Schedule of Values with preparation of Contractor's Construction Schedule.

1. Correlate line items in Schedule of Values with other required administrative forms and schedules, including application for Payment forms with Continuation Sheets, Submittals Schedule, and Contractor's Construction Schedule.

2. Submit Schedule of Values to Architect at earliest possible date but no later than seven days before date scheduled for submittal of initial Application for Payment.

B. Format and Content: Use Project Manual table of contents as guide to establish line items for Schedule of Values. Provide at least one line item for each Specification Section.

1. Identification: Include following Project identification on Schedule of Values.

a. Project name and location.
b. Name of Architect.
c. Architect's Project number.
d. Contractor's name and address.
e. Date of submittal.

2. Submit draft of AIA Document G703 Continuation Sheets.

3. Provide breakdown of Contract Sum in enough detail to facilitate continued evaluation of Application for Payment and progress reports. Coordinate with Project Manual table of contents.

a. Provide several line items for principal subcontract amounts where appropriate.

4. Round amounts to nearest whole dollar; total shall equal Contract Sum.

5. Provide separate line item in Schedule of Values for each part of Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

6. Provide separate line items in Schedule of Value for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of Work.

7. Each item in Schedule of Values and Application for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.

    a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in Schedule of Values or distributed as general overhead expense at Contractor's option.

8. Schedule Updating: Update and resubmit Schedule of Values before next application for Payment when Change Orders or Construction Change Directives result in a change in Contract Sum.

1.3 APPLICATIONS FOR PAYMENT

A. Each Application for Payment shall be consistent with previous applications and payments as certified by Architect and paid for by Owner.

    1. Initial Application for Payment: Application for Payment at time of Completion, and final Application for Payment involve additional requirements.

B. Payment Application Times: Date for each progress payment is indicated in Agreement between Owner and Contractor. Period of construction Work covered by each Application for Payment is period indicated in Agreement.

C. Partial and Final Payment: See section 7-3.2 of the General Provisions.

D. Delivered Materials: See section 7-3.3 of the General Provisions.

E. Payment Application Forms: AIA Document G702 and AIA Document G703 Continuation Sheets as form for Application for Payment.

F. Application Preparation: Complete every entry on form. Execute by person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.

    1. Entries shall match data on Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions were made.

    2. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.

G. Transmittal:

    1. Contractor shall provide e-transmittal of Application for Payment one week prior to Payment Request ("Draw") Meeting, for review of team members.

2. Contractor shall provide DocuSign signed copies of Application for Payment at Payment Request ("Draw") Meeting.

    a. Provide each copy with transmittal form listing attachments and recording appropriate information about application.

    b. Copies shall include waivers of lien and similar attachments if required.

H. Waivers of Mechanic's Lien: With each Application for Payment submit waivers of mechanic's lien from every entity who is lawfully entitled to file a mechanic's lien arising out of Contract and related to Work covered by payment.

1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.

2. When an application shows completion of an item, submit final or full waivers.

3. Owner reserves right to designate which entities involved in Work must submit waivers.

4. Waiver Forms: Submit waivers of lien on forms executed in manner acceptable to Owner.

I. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following.

1. List of subcontractors.

2. Schedule of Values.

3. Contractor's Construction Schedule (preliminary if not final).

4. Schedule of unit prices.

5. Submittals Schedule (preliminary if not final).

6. List of Contractor's staff assignments.

7. List of Contractor's principal consultants.

8. Copies of building permits.

9. Copies of authorizations and licenses from authorities having jurisdiction for performance of Work.

10. Initial progress report.

11. Report of preconstruction conference.

12. Certificates of insurance and insurance policies.

J. Final Payment Application: Submit final Application for Payment with releases and supporting documentation not previously submitted and accepted including but not necessarily limited to following.

1. Evidence of completion of Project closeout requirements.

2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.

3. Updated final statement accounting for final changes to Contract Sum.

4. AIA Document G706, Contractor's Affidavit of Payment of Debts and Claims.

5. AIA Document G706A, Contractor's Affidavit of Release of Liens.

6. AIA Document G707, Consent of Surety to Final Payment.

7. Evidence that claims have been settled.

8. Final meter readings for utilities, a measured record of stored fuel, and simliar data as of date of Completion.

9. Final liquidated damages settlement statement.

END OF SECTION

SECTION 01 23 00

ALTERNATES

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes a description of alternate work.

B. Related Requirements:

1. Pricing Documents: Quotation of cost of each alternate.

2. Owner-Contractor Agreement: Alternates accepted by Owner for incorporation into the Work.

3. Sections of Specifications identified in each Alternate.

1.2 PROCEDURES

A. Alternates will be exercised at Owner's option.

B. Coordinate Related Work: and modify surrounding work as required to complete Work, including changes under each alternate, when acceptance is designated in Owner-Contractor Agreement.

1.3 ALTERNATES

A. Alternates: To be determined.

B. Alternate No. 1: Delete Custom Colors.

1. Work Included in Alternate: Include deduct cost for each line item requiring custom color where color is not indicated on Drawings or Finish Schedule.

2. Work Included in Contract Amount: Include custom color as directed by Architect where color is not indicated on Drawings or Finish Schedule.

3. Sections: List each Technical Section in Project Manual that indicates custom color where color is not indicated on Drawings or Finish Schedule. List to indicate amount in dollars to be saved if Architect selects manufacturer’s standard color.

C. Alternate No. 2:

1. Work Included in Alternate:

2. Work Included in Contract Price:

3. Refer to Section

4. Refer to Drawing No.

END OF SECTION

SECTION 01 25 00

SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. General: Procedures are described for requesting substitution of unlisted materials in lieu of materials named in Specifications or approved for use in addenda.

1. Provide products listed in Contract Documents, products by manufacturers listed in Contract Documents, and products meeting specified requirements.

a. Contract Amount: Base on materials and products included in Contract Documents.

b. Where materials and products are listed in Contract Documents, materials and products by manufacturers not listed shall not be used without Owner's and Architect's approval of Contractor's written request for substitution.

2. Purpose: After bidding, substitutions will only be considered where Owner will receive benefit or because specified materials are no longer available due to no fault of Contractor.

3. Purpose: Substitutions will only be considered where Owner will receive benefit or because specified materials are no longer available due to conditions beyond Contractor control.

a. Owner benefits either from a Contractor proposed reduction of the Contract amount or from a reduction in Contract time based on acceptance of proposed substitution.

b. List proposed cost or time reductions on request for substitution.

c. Requests not including a proposed cost or time reduction will not be considered unless Contractor submits supporting information indicating specified materials are not available.

B. Related Sections:

1. Section 01 60 00: Product requirements.

1.2 SUBSTITUTIONS

A. Within a period of 35 days after award of Contract, Owner and Architect will consider formal requests for substitutions only from Contractor as specified in 1.1 Summary.

1. Owner and Architect will consider only one request for substitution for each material; where requests are denied Contractor shall be required to provide specified materials.

2. After initial 35-day period, requests will be considered only when a product becomes unavailable through no fault of Contractor; more than one request for substitution will be considered if necessary.

B. Prior to submittal of second Request for Payment Owner and Architect will consider formal requests for substitutions from Contractor as specified in 1.1 Summary.

1. Owner and Architect will consider only one request for substitution for each material; where requests are denied Contractor shall be required to provide specified materials.

2. After payments begin, requests will be considered only when a product becomes unavailable through no fault of Contractor; more than one request for substitution will be considered if necessary.

C. Submit each request with sequentially numbered “Substitution Request Transmittal” acceptable to Owner and Architect; submit separate request for each product and support each request with:

1. Product identification with manufacturer's literature and samples where applicable.

2. Name and address of similar projects on which product has been used, and date of installation.

D. Submit itemized comparison of proposed substitution with product specified and list significant variations.

E. Submit data relating to changes in construction schedule.

F. Note effect of substitution on other work, products, or separate contracts.

1. Note if acceptance of substitution could require revision of Contract Documents, Drawings, details or Specifications.

G. Include accurate cost data comparing proposed substitution with product and amount of net change in Contract price.

1. Include costs to other contractors and costs for revisions to Drawings, details or Specifications.

H. Substitutions will not be considered for acceptance when:

1. They are indicated or implied on submittals without a formal request from Contractor.

2. They are requested directly by a subcontractor or supplier.

3. Acceptance will require substantial revision of Contract Documents.

I. Substitute products shall not be ordered without written acceptance of Owner and Architect.

J. Owner and Architect will determine acceptability of proposed substitutions and reserves right to reject proposals due to insufficient information.

1.3 CONTRACTOR'S REPRESENTATION

A. Requests constitute a representation that Contractor:

1. Has investigated proposed product and determined it meets or exceeds, in all respects, specified product.

2. Will provide same warranty or longer warranty for substitution as for specified product.

3. Will coordinate installation and make other changes that may be required for Work to be complete in all respects.

4. Waives claims for additional costs that subsequently become apparent.

5. Will pay costs of changes to Contract Documents, Drawings, details and Specifications required by accepted substitutions.

1.4 ARCHITECT'S DUTIES

A. Review Contractor's requests for substitutions with reasonable promptness.

1. Architect will recommend that Owner accept or reject substitution request.

2. Upon request, Architect will provide cost for changes to Contract Documents, Drawings, details and Specifications required for substitutions.

B. Notify Contractor in writing of decision to accept or reject requested substitution.

CONTRACTOR'S SUBSTITUTION REQUEST

(Use separate form for each request)

Date: _____ Request No.: _____

TO: Architect _____ Date: _____

PROJECT: _____ Project No.: _____
CONTRACTOR _____

SPECIFIED ITEM: _____
Section: _____ Page: _____ Paragraph: _____ Description: _____
Drawing Number(s): _____ Detail Number(s): _____
The undersigned request consideration of the following:
PROPOSED SUBSTITUTION: _____

REASON FOR NOT GIVING PRIORITY TO SPECIFIED ITEMS: _____

SAVINGS or CREDIT to OWNER for ACCEPTING SUBSTITUTE: $ _____
PROJECT COMPLETION CHANGE for ACCEPTING SUBSTITUTE Days _____

Attached data includes description, specifications, drawings, photographs, performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.

Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The undersigned certifies that the following paragraphs, unless modified by attachments, are correct:

1. Proposed substitution has been fully checked and coordinated with the Contract Documents.
2. The proposed substitution does not affect dimensions shown on Drawings.
3. The proposed substitution does not require revisions to mechanical or electrical work.
4. The undersigned will pay for changes to the building design, including architectural and engineering design, detailing, and construction costs caused by the requested substitution.
5. The proposed substitution will have no adverse effect on other trades, construction schedule, or warranty.
6. Maintenance and service parts will be locally available for the proposed substitution.
7. The proposed substitution will have no adverse effect on LEED credits (applies to LEED Projects ONLY)
8. The proposed substitution will have no adverse effect on Green Building Requirements where applicable.

The undersigned further states that the function, appearance, and quality of the proposed substitution are equivalent or superior to the specified item.

Attachments: The attached data is furnished herewith for evaluation of the proposed substitution.

END OF SECTION

SECTION 01 26 00

CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: This section specifies administrative and procedural requirements governing Contract modification procedures.

1. Requests for Information (RFI).
2. Change Order.
3. Construction Change Directive.

B. Related Requirements:

1. Section 01 25 00: Substitution procedures.
2. Section 01 30 00: Administrative requirements.

1.2 MINOR CHANGES IN WORK

A. Architect will issue supplemental instructions authorizing minor changes in Work, not involving adjustment to Contract Sum or Contract Time, on AIA Form G710, Architect’s Supplemental Instructions or similar form.

1.3 REQUESTS FOR INFORMATION

A. Contractor may submit a written Request for Information (RFI) in format approved by Architect relating to perceived inconsistencies and omissions in Contract Documents.

1. A record of RFI's is to be maintained by Contractor along with information regarding origin of request, date of request, and date request was received from Architect. Number RFI's sequentially based on date of request.

B. Requests for Information shall be used only as a means of obtaining clarification of information not included in Contract Documents and shall not be used to assist Contractor in preparation of shop drawings or other information required by Contract.

1. Contract Documents are intended to contain enough information to show aesthetic and design intent and to provide information such that construction procedures (means and methods) may be reasonably inferred.

2. Contract Documents are not intended to provide specific information related to means and methods of construction nor are they intended to be exhaustive in content.

C. Contractor shall carefully review requests for information by subcontractors and suppliers to ascertain if information is in Contract Documents prior to submitting a Request for Information to Architect based on requests by others.

1. Contractor may suggest possible solutions to fit Project conditions where appropriate.

D. Architect reserves right to return RFI's that do not reasonably relate to necessary clarification of intent of Contract Documents and to charge Contractor for time and materials involved in answering RFI's where information is in Contract Documents.

1. RFI's shall not be used as a request for substitutions; refer to Section 01 25 00 – Substitution Procedures.

1.4 CHANGE ORDERS

A. Owner-Initiated Proposal Requests: Architect will issue detailed description of proposed changes in Work that require adjustment to Contract Sum or Contract Time. If necessary, description will include supplemental or revised Drawings and Specifications.

1. Proposal requests issued by Architect are for information only. Do not consider changer order proposal requests as instruction either to stop work in progress or to execute proposed change.

2. Within 10 days of receipt of a proposal request, submit estimate of cost necessary to execute change to Architect for Owner's review.

a. Include list of quantities of products required and unit costs, with total amount of purchases to be made. Where requested, furnish survey data to substantiate quantities.

b. Indicate applicable taxes, delivery charges, equipment rental and amounts of trade discounts.

c. Include a statement indicating effect of proposed change in Work will have on Contract Time.

B. Contractor-Initiated Proposals: When latent or unforeseen conditions require modifications to Contract, Contractor may propose changes by submitting a request for a change to Architect and Owner.

1. Include statement of reasons for change and effect of change on Work. Provide a complete description of proposed change. Indicate effect of proposed change on Contract Sum and Contract Time.

2. Include a list of quantities of products required and unit costs with total amount of purchases to be made. Where requested, furnish survey data to substantiate quantities.

3. Indicate applicable taxes, delivery charges, equipment rental and amounts of trade discounts.

4. Comply with requirements in Section 01 25 00 - Substitution Procedures if proposed change requires substitution of unspecified product or system for specified product or system.

C. Proposal Request Form: Use AIA Document G709 for Change Order Proposal Requests; other substitute formats shall be submitted to Owner and Architect for approval prior to use.

D. Change Order Procedures: Contractor shall be directed to proceed with Work upon Owner's approval of Proposal.

1. Architect will issue Change Order for signatures of Owner and Contractor on AIA Form G701 or similar form, including approved Change Order proposals for that time period.

2. Amounts of each Change Order shall be indicated in each Request for Payment including payment status for each individual Change Order.

1.5 ALLOWANCES

A. Allowance Adjustment: For Contract items bid based on allowance, submit Change Order Proposal on difference between actual purchase amount and allowance, based on work-in-place.

1. Include installation cost in purchase amount only where indicated as part of allowance.

2. When requested, prepare explanations and documentation to substantiate amounts claimed for work done based on allowances.

3. Submit substantiation of a change in Scope of work claimed in Change Orders related to allowances.

4. Owner reserves right to establish actual quantity of work-in-place by independent quantity survey, measure or count.

B. Submit claims for increase costs because of a change in scope or nature of allowance described in Contract Documents, whether for purchase order amount or Contractor's handling, labor, installation, overhead and profit.

1. Submit claims within 21 days of receipt of Change Order or Construction Change Directive authorizing work to proceed. Owner will reject claims submitted later than 21 days.

2. Do not include Contractor's or subcontractor's indirect expense in Change Order cost amount unless it is clearly shown that nature or extent of work has changed from what could have been foreseen from information in Contract Documents.

3. No change to Contractor's indirect expense is permitted for selection of higher or lower-priced materials or systems of same scope and nature as originally indicated.

1.6 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: When Owner and Contractor disagree on terms of Proposal Request, Architect may issue a Construction Change Directive per AIA Form G714 or similar form.

1. Construction Change Directive instructs Contractor to proceed with change in Work, for subsequent inclusion in Change Order.

2. Construction Change Directive contains a complete description of change in Work. It also designates method to be followed to determine change in Contract Sum or Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of Work required by Construction Change Directive. Coordinate scheduling with Construction Manager to allow monitoring by Owner if desired.

1. After completion of change, submit itemized account and supporting data necessary to substantiate cost and time adjustments to Contract.

END OF SECTION

SECTION 01 30 00

ADMINISTRATIVE REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This section describes general procedural requirements for ongoing submittals.

1. Schedule of values.
2. Product data and manufacturer’s literature.
3. Shop drawings.
4. Samples.
5. Manufacturers' certificates.
6. Excess materials and attic stock.
7. Design build (delegated design) procedures.
8. Deferred approval requirements.

B. Related Requirements:

1. Section 01 31 00: Project management and coordination.
2. Section 01 32 00: Construction Schedule – Network Analysis.
3. Section 01 40 00: Test reports, manufacturer's field reports, and mock-ups.
4. Section 01 70 00: Manufacturers’ instructions.
5. Section 01 77 00: Closeout requirements including Project Record Documents.
6. Section 01 78 00: Warranties.

1.2 GENERAL SUBMITTAL PROCEDURES

A. Submittals: Transmit each item using form approved by Architect; submit sample to Architect for approval prior to use.

1. Identify Project, Contractor, subcontractor, major supplier.

a. Attach sequential identification number for each new submittal.

b. Identify each resubmittal using original submittal number and sequential identification clearly indicating item is resubmitted.

2. Identify pertinent Drawing sheet and detail number, and Specification section number as appropriate.

3. Identify deviations from Contract Documents.

4. Provide space for Contractor and Architect review stamps.

5. Contractor: Review and stamp submittals from subcontractors prior to submitting to Architect.

a. Review submittals and indicate where conflicts occur with Contract Documents and with work of other subcontractors.

b. Return submittals that vary significantly from Contract Documents for correction and resubmittal prior to submitting to Architect.

c. Submittals that vary significantly from Contract Documents and that fail to indicate thorough Contractor review prior to submission to Architect will be returned without review.

d. Cursory review and stamping of subcontractor submittal by Contractor shall not be acceptable.

B. Initial Schedules: Submit initial progress schedule and schedule of value in duplicate within 15 working days after award of Contract.

1. After review by Owner and Architect revise and resubmit where required.

C. Comply with progress schedule for submittals related to Work progress. Coordinate submittal of related items.

D. After Architect review of submittal, revise and resubmit as required, identify changes made since previous submittal.

E. Distribute copies of reviewed submittals to concerned persons. Instruct recipients to promptly report any inability to comply.

1.3 TYPES OF SUBMITTALS

A. General: Project requires various types of submittals to maintain communications, minimize misunderstandings, avoid unnecessary conflicts, and to ensure complete documentation for Project Record Documents.

1. Maintain complete set of submittals including required revisions.

B. Construction Schedules: Submit construction progress schedules for Design Team and Owner review and to maintain entire team up-to-date on construction activities.

C. Schedule of Values: Submit Schedule of Values indicating division of Work, subcontractors to perform work, products being used, and values attributed to each to inform Design Team and Owner.

D. Action Submittals: Submittals relating to product data and manufacturer’s literature, shop drawings, and samples for Design Team review and comment; do not begin fabrication, delivery, or installation until Design Team review is complete.

E. Information Submittals: Submittals relating to certifications, qualifications, reports, including test reports, and instructions are for information; Design Team may choose to comment but action is not generally anticipated.

1. Manufacturer installation instructions and recommendations shall be considered information submittals.

F. Design/Build Submittals: Where portion of Work requires design by specialized professionals submit information necessary to ensure work complies with Contract Documents along with certifications signed by qualified professional.

1. Calculations: Do not submit calculations unless specifically required by Contract Documents; submit calculations required by applicable authorities directly to applicable authorities;

a. Submit certification by qualified professional indicating required calculations have been prepared and work conforms to Contract Documents and applicable codes and regulations.

G. Maintenance Materials Submittals: Compile maintenance information and materials during Work to ensure complete set of documents, maintenance manuals, and operation instructions.

H. Closeout Submittals: Compile closeout submittals, organize, and submit to Owner prior to or at time of Substantial Completion. Project will not be considered Substantially Complete until closeout submittals have been received by Owner.

I. Material Safety Data Sheets (MSDS): MSDS will only be reviewed by Architect when submitted to show compliance with LEED certification requirements.

1. Non-LEED submittals that include material safety data sheets will be returned for resubmittal.

1.4 SCHEDULE OF VALUES

A. Submit typed schedule on AIA Form G703 or another Owner and Architect pre-approved 8-1/2" by 11" paper format; Contractor's standard media-driven printout will be considered on request. Submit within 15 days after award of Contract.

B. Format: Table of Contents of this Project Manual, with modifications as pre-approved by Owner and Architect; identify each line item with number and title of major Specification sections.

C. Include in each line item a directly proportional amount of Contractor overhead and profit.

D. Revise schedule to list change orders for each Application for Payment.

1. Submit subschedule for each phase of Work.

1.5 PRODUCT DATA/MANUFACTURERS' LITERATURE

A. Action Submittals: Mark each copy to identify applicable Products, models, options, and other data; supplement manufacturers' standard data to provide information unique to the Work.

B. Information Submittals: Include manufacturers' installation instructions only when required by Specifications or specifically requested by Architect.

1. Maintain copy of manufacturer installation instructions and recommendations in Contractor's field office for review.

C. Product data shall be submitted as electronic PDF files unless otherwise noted or approved by Architect in advance.

1. Where paper copies are permitted submit number of copies Contractor requires, plus one copy to be retained by Architect.

D. Submit number of copies Contractor requires, plus one copy to be retained by Architect.

1.6 SHOP DRAWINGS

A. Shop drawings shall be submitted as electronic PDF files unless otherwise noted or approved by Architect in advance.

1. Where prints are permitted submit one reproducible print; minimum sheet size 8-1/2” by 11”.

B. Shop drawings shall be submitted in reproducible format acceptable to Architect and Owner; computerized PDF files will be acceptable unless otherwise directed.

1. Prints: Submit one reproducible print; minimum sheet size 8-1/2” by 11”.

2. Prints: Submit three reproducible prints; minimum sheet size 8-1/2" by 11".

C. Distribution: After review, reproduce and distribute.

1.7 SAMPLES

A. Submit full range of manufacturers' standard colors, textures, and patterns for Architect's selection.

B. Submit samples to illustrate functional characteristics of Product, with integral parts and attachment devices.

C. Coordinate submittal of different categories for interfacing work.

D. Include identification on each sample, giving full information.

E. Submit number of samples required by Contractor plus one to be retained by Architect.

1. Maintain one set of approved samples at Project Field Office.

F. Sizes: Provide following sizes unless otherwise specified.

1. Flat or Sheet Products: Minimum 6" square, maximum 12" by 12".
2. Linear Products: Minimum 6", maximum 12" long.
3. Bulk Products: Minimum one pint, maximum one gallon.

G. Full size samples may be used in the Work upon approval.

1.8 MANUFACTURERS' CERTIFICATES

A. Submit certificates, in duplicate in accordance with requirements of each Specification section.

1.9 EXCESS MATERIALS AND ATTIC STOCK

A. Excess Materials: Excess materials shall be considered property of Owner; inform Owner of extent of excess materials and methods required for handling and storage; remove from site excess materials not required by Owner for maintenance stock.

B. Attic Stock: Owner may choose to obtain additional attic stock for maintenance purposes where excess materials are not considered adequate.

1. Owner may require as much as 5% extra materials for maintenance purposes. Exact amount of each material shall be determined by Owner based on following meeting and additional costs determined by Contractor.

a. Contractor shall be prepared to order up to 5% extra materials on items that may not be readily available in future such as custom colors, off-shore manufacture, anticipated life span under 5 years, and potential for damage.

1) Do not order extra attic stock until extent is determined and agreed to by Owner including which materials require extra stock and exactly how much those materials will cost including shipping and handling.

b. Excess Materials: Furnish excess materials only for materials that have a shelf-life of more than three years.

2. Meeting: Conduct meeting prior to beginning Work to discuss extent of materials Owner would like to receive at Project Closeout for attic stock for maintenance materials; where available include personnel from Owner’s maintenance crew.

a. Estimate amount of excess materials to be anticipated to be ordered in addition to materials for handling and storage and how those materials will be invoiced and identified regarding material and location in Project.

b. Determine area necessary for adequate storage, handling, and identifying excess materials and attic stock and discuss with Owner.

c. Submit information regarding equipment necessary for handling of excess materials and attic stock due to weight, size, and storage requirements.

d. Assist Owner in determining where on-site or off-site additional attic stock for maintenance purposes will be delivered and stored.

3. Additional Costs: After meeting submit to Owner detailed listing of additional costs for each material Owner may like to receive for attic stock and assist Owner in modifying listing to determine acceptable final costs.

a. Include unit prices for desired attic stock where excess materials are not adequate for Owner maintenance stock.

4. Substantial Completion: Submit Construction Bulletin at Substantial Completion indicating changes to Contract Amount for attic stock including unit price totals for materials where excess materials are not adequate.

5. Final Completion: Ensure attic stock has been received, identified, cataloged, and stored at locations agreed upon with Owner based on Change Order indicating amounts finally agreed to by Owner.

1.10 DESIGN/BUILD PROCEDURES

A. Design as Part of Means and Methods of Construction: Select Project components require construction team design as part of means and methods of construction as described in various sections.

1. Terms commonly used such as Design/Build, Delegated Design, and Design/Assist are applicable to these procedures as determined by law but shall be generally referred to in these documents as Design/Build.

a. In general Design/Build includes design by licensed professionals with expertise beyond that allowed under standard architectural licensure, and outside of scope of work of other design professionals on the design team.

2. Contractor may be required to provide design services as part of construction for specific work defined as design or design-build where special expertise is required that is not available in the Project design team.

3. Subcontractors, fabricators, and manufacturers may be required to provide design services as part of their work due to special expertise in design services for their specific components, refer to technical sections for Design/Build.

4. Contractor, subcontractors, fabricators, manufacturers, and suppliers shall be responsible for attachments, anchors, fasteners, adhesives, and connectors suitable to applications unless specific items are listed in Contract Documents.

a. Where specific items are listed in Contract Documents Contractor, subcontractors, fabricators, manufacturers, and suppliers shall review and submit comments where items listed are not acceptable.

b. Where no comments are received, listed items shall be considered acceptable.

B. Contractor acknowledges and accepts responsibility for specialty design as part of means and methods of construction, as well as coordination of parties involved to achieve architectural design intent indicated in Contract Documents.

1. Design-build work includes sizing, sequencing, and detailing for construction by professional licensed or registered engineer or design professional with special expertise applicable to portion of Work involved.

2. Design-build work shall be constructed in compliance with building codes and regulations in effect and shall be fit and proper for intended use.

3. Design-build work shall include drawings, specifications, and calculations prepared, stamped, and signed by qualified professional licensed or registered engineer licensed in the Project location as appropriate to design-build work.

    a. Plans, specifications, and calculations shall be acceptable to Owner, Owner's Representative, and applicable authorities.

C. Where required by Owner Contractor shall submit copies of current insurance policies covering errors and omissions of persons designing design-build work with deductibles and limits per occurrence as mutually agreed by Owner and Contractor.

1. Provide endorsement to insurance providing for 30-day notice to Owner prior to cancellation or material reduction in coverage.

2. Insurance shall be maintained for not less than applicable statute of limitations for claims of latent defects, if such insurance is not written on an occurrence basis during time design-build work is designed and constructed.

D. Review proposed layouts with Design Team and with various trades prior to commencing work related to design-build work.

1.11 DEFERRED APPROVAL REQUIREMENTS

A. Installation of deferred approval items shall not be started until detailed plans, specifications, and engineering calculations have been accepted and signed by Architect or Engineer of Record responsible for Project design.

B. Deferred Approval Items shall be signed by California registered architect or professional engineer delegated responsibility covering specific work shown requiring approval from the agency having jurisdiction.

1. Deferred approval items for this Project include but may not be limited to following:

    a. **Section 08 44 10 Glazed Window Wall Assemblies**

    b. **Fire Protection system**

    c. **Fire Alarm**

2. Deferred approval drawings and specifications become part of the approved submittal documents for the Project when they are submitted to and approved by Division of the State Architect.

3. Submit four copies of calculations, product data and test reports.

4. Identify and specify supports, fasteners, spacing, penetrations, etc., for each deferred approval items, including calculations for each fastener.

5. Submit documents to Architect of Record for review.

6. Deferred submittal documents shall bear stamp and signature of architect or

engineer licensed in State of California and responsible for work shown on deferred submittal documents.

END OF SECTION

SECTION 01 31 10

INFORMATION AND PROCEDURES INSTRUCTIONS (RFI)

PART 1 – GENERAL

1.1 SUMMARY

A. This Section contains procedures to be followed by Contractor upon discovery of any apparent conflicts, omissions, or errors in Contract Documents or upon having any question concerning interpretation.

B. Alternate: At the Owners option, Utilize the standard forms, procedures, contracts and / or agreements, preferred by the owner, in lieu of the methods described herein.

1.2 PROCEDURES

A. Requests for clarification or additional information shall be submitted in writing to Architect using a Request for Information (RFI) form approved by Architect.

B. RFIs shall be numbered sequentially. RFI number shall be followed by a sequential numerical suffix as necessary for each resubmission. For example, first RFI would be 001. Second RFI would be 002 and first resubmittal of RFI 002 would be 002.1.

C. Each RFI shall be limited to ONE subject.

D. An RFI shall be submitted if one of following conditions occur:

1. Contractor discovers an unforeseen condition or circumstance that is not described in Contract Documents.

2. Contractor discovers an apparent conflict or discrepancy between portions of Contract Documents that appears to be inconsistent or is not reasonably inferred from intent of Contract Documents.

3. Contractor discovers what appears to be an omission from Contract Documents that cannot be reasonably inferred from intent of Contract Documents.

E. Contractor shall not:

1. Submit an RFI as a request for substitution.

2. Submit an RFI as a submittal.

3. Submit an RFI under pretense of a Contract Documents discrepancy or omission without thorough review of documents.

4. Submit an RFI in a manner that suggests specific portions of Contract

Documents are assumed to be excluded or by taking an isolated portion of Contract Documents in part rather than whole.

5. Submit an RFI in an untimely manner without proper coordination and scheduling of Work of related trades.

6. If Contractor submits an RFI contrary to any of above, Contractor shall pay cost of any review, which cost shall be deducted from Contract sum.

F. Submit a request for information or clarification immediately upon discovery. Submit RFI's within a time frame so as not to delay Contract schedule while allowing full response time described below.

1.3 RESPONSE TIME:

A. Architect, whose decision will be final and conclusive, shall resolve such questions and issue instructions to Contractor within a reasonable time frame. In most cases, RFI's will receive a response within 14 days. In some cases this time may need to be lengthened for complex issues, or shortened for emergency situations, as mutually agreed in writing.

B. Should Contractor proceed with Work affected before receipt of a response from Architect, within response time described above, any portion of Work which is not done in accordance with Architect's interpretations, clarifications, instructions, or decisions is subject to removal or replacement and Contractor shall be responsible for all resultant losses.

C. In event of failure to agree as to scope of Contract requirements, Contractor shall follow procedures set forth in General Conditions.

SECTION 01 32 00

CONSTRUCTION SCHEDULE - NETWORK ANALYSIS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. References.

B. Performance requirements.

C. Quality assurance.

D. Qualifications.

E. Project record documents.

F. Submittals.

G. Review and evaluation.

H. Format.

I. Cost and schedule reports.

J. Early work schedule.

K. Construction schedule.

L. Short interval schedule.

M. Requested time adjustment schedule.

N. Recovery schedule.

O. Updating schedules.

P. Distribution.

1.2 REFERENCES

A. Construction Planning and Scheduling Manual - A Manual for General Contractors and the Construction Industry, The Associated General Contractors of America (AGC).

B. CSI - Construction Specifications Institute Master Format 2004 Edition and updates.

C. National Weather Service - Local Climatological Data.

1.3 PERFORMANCE REQUIREMENTS

A. Ensure adequate scheduling during construction activities so work may be prosecuted in

an orderly and expeditious manner within stipulated Contract Time.

B. Ensure coordination of Contractor and subcontractors at all levels.

C. Ensure coordination of submittals, fabrication, delivery, erection, installation, and testing of materials and equipment.

D. Ensure on-time delivery of Owner furnished materials and equipment.

E. Ensure coordination of jurisdictional reviews.

F. Assist in preparation and evaluation of applications for payment.

G. Assist in monitoring progress of work.

H. Assist in evaluation of proposed changes to Contract Time.

I. Assist in evaluation of proposed changes to Construction Schedule.

J. Assist in detection of schedule delays and identification of corrective actions.

1.4 QUALITY ASSURANCE

A. Perform work in accordance with Construction Planning and Scheduling Manual published by the AGC.

B. Maintain one copy of document on site.

C. In the event of discrepancy between the AGC publication and this section, provisions of this section shall govern.

1.5 QUALIFICATIONS

A. Scheduler: Personnel or specialist consultant with 5 years minimum experience in scheduling construction work of a complexity and size comparable to this Project.

B. Administrative Personnel: 5 years minimum experience in using and monitoring schedules on comparable projects.

1.6 PROJECT RECORD DOCUMENTS

A. Submit record documents under provisions of Section 01 77 00.

B. Submit one reproducible and two copies of final Record Construction Schedule which reflects actual construction of this Project.

C. Record schedule shall be certified for compliance with actual way project was constructed.

D. Receipt of Record Construction Schedule shall be a condition precedent to any retainage release or final payment.

1.7 SUBMITTALS

A. Within 7 days from the Notice of Award submit proposed Early Work Schedule and preliminary Cost Report defining activities for first 60 days of Work.

B. Within 45 days from Notice of Award submit proposed Construction Schedule and final Cost Report.

C. Submit updated Construction Schedule at least 10 days prior to each Application for Payment.

D. Submit Short Interval Schedule at each Construction Progress Meeting.

E. Submit Time Adjustment Schedule within 10 days of commencement of a claimed delay.

F. Submit Recovery Schedules as required by completion of work.

G. Submit one reproducible and two copies of each schedule and cost report.

1.8 REVIEW AND EVALUATION

A. Early Work Schedule shall be reviewed during Preconstruction Conference with Owner and Architect.

B. Within 5 days of receipt of Owner and Architect's comments provide satisfactory revision to Early Work Schedule or adequate justification for activities in question.

C. Acceptance by Owner of corrected Early Work Schedule shall be a condition precedent to making any progress payments for first 60 days of Contract.

D. Cost loaded values of Early Work Schedule shall be basis for determining progress payments during first 60 days of Contract.

E. Participate in joint review of Construction Schedule and Reports with Owner and Architect.

F. Within 7 days of receipt of Owner and Architect's comments provide satisfactory revision to Construction Schedule or adequate justification for activities in question.

G. In the event that an activity or element of work is not detected by Owner or Architect review, such omission or error shall be corrected by next scheduled update and shall not affect Contract Time.

H. Acceptance by Owner of corrected Construction Schedule shall be a condition precedent to making any progress payments after first 60 days of Contract.

I. Cost-loaded values of Construction Schedule shall be basis for determining progress payments.

J. Review and acceptance by Owner and Architect of Early Work Schedule or Construction Schedule does not constitute responsibility whatsoever for accuracy or feasibility of schedules nor does such acceptance expressly or impliedly warrant, acknowledge or

admit reasonableness of activities, logic, duration, manpower, cost or equipment loading stated or implied on schedules.

1.9 FORMAT

A. Prepare diagrams and supporting mathematical analyses using Precedence Diagramming Method, under concepts and methods outlined in AGC Construction Planning and Scheduling Manual.

B. Listings: Reading from left to right, in ascending order for each activity.

C. Diagram Size: 42 inches maximum height x width required.

D. Scale and Spacing: To allow for legible notations and revisions.

E. Illustrate order and interdependence of activities and sequence of work.

F. Illustrate complete sequence of construction by activity.

G. Provide legend of symbols and abbreviations used.

1.10 COST AND SCHEDULE REPORTS

A. Activity Analysis: Tabulate each activity of network diagram and identify for each activity:

1. Description.
2. Interface with outside contractors or agencies.
3. Number.
4. Preceding and following number.
5. Duration.
6. Earliest start date.
7. Earliest finish date.
8. Actual start date.
9. Actual finish date.
10. Latest start date.
11. Latest finish date.
12. Total and free float.
13. Identification of critical path activity.
14. Monetary value keyed to Schedule of Values.

15. Manpower requirements.

16. Responsibility.

17. Percentage complete.

18. Variance positive or negative.

B. Cost Report: Tabulate each activity of network diagram and identify for each activity:

1. Description.

2. Number.

3. Total cost.

4. Percentage complete.

5. Value prior to current period.

6. Value this period.

7. Value to date.

C. Required Sorts: List activities in sorts or groups:

1. By activity number.

2. By amount of float time in order of early start.

3. By responsibility in order of earliest start date.

4. In order of latest start dates.

5. In order of latest finish dates.

6. Application for payment sorted by Schedule of Values.

7. Listing of activities on critical path.

8. Listing of basic input data which generates schedule.

1.11 EARLY WORK SCHEDULE

A. Shall establish scope of work to be performed during first 60 days of Contract.

B. Shall designate critical path or paths.

C. Shall contain the following phases and activities:

1. Procurement activities to include mobilization, shop drawings and sample submittals.

2. Identification of key and long-lead elements and realistic delivery dates.

3. Construction activities in units of whole days limited to 14 days for each activity except non-construction activities for procurement and delivery.

4. Approximate cost and duration of each activity.

D. Shall contain seasonal weather considerations. Seasonal rainfall shall be 10 year average for the month as evidenced by Local Climatological Data obtained from U.S. National Weather Service.

E. Activities shall be incorporated into Construction Schedule.

F. No application for payment will be evaluated or processed until Early Work Schedule has been submitted and reviewed.

G. Shall be updated on a monthly basis while Construction Schedule is being developed.

H. Failure to submit an adequate or accurate Early Work Schedule or failure to submit on established dates will be considered a substantial breach of Contract.

1.12 CONSTRUCTION SCHEDULE

A. Include Early Work Schedule as first 60 days of Construction Schedule.

B. Shall be a computer generated time scaled network diagram of activities.

C. Indicate a completion date for project that is no later than required completion date subject to any time extensions processed as part of a change order.

D. Conform to mandatory dates specified in the Contract Documents.

E. Should schedule indicate a completion date earlier than any required completion date, Owner or Architect shall not be liable for any costs should project be unable to be completed by such date.

F. Seasonal weather shall be considered in planning and scheduling of all work. Seasonal rainfall shall be 10 year average for the month as evidenced by Local Climatological Data obtained from U.S. National Weather Service.

G. Level of detail shall correspond to complexity of work involved.

H. Indicate procurement activities, delivery, and installation of Owner furnished material and equipment.

I. Designate critical path or paths.

J. Subcontractor work at all levels shall be included in schedule.

K. As developed shall show sequence and interdependence of activities required for complete performance of Work.

L. Shall be logical and show a coordinated plan of Work.

M. Show order of activities and major points of interface, including specific dates of completion.

N. Duration of activities shall be coordinated with subcontractors and suppliers and shall be best estimate of time required.

O. Shall show description, duration and float for each activity.

P. Failure to include any activity shall not be an excuse for completing all work by required completion date.

Q. No activity shall have a duration longer than 14 days or a value over $20,000.00 except non-construction activities for procurement and delivery.

R. An activity shall meet the following criteria:

1. Any portion or element of work, action, or reaction that is precisely described, readily identifiable, and is a function of a logical sequential process.

2. Descriptions shall be clear and concise. Beginning and end shall be readily verifiable. Starts and finishes shall be scheduled by logical restraints.

3. Responsibility shall be identified with a single performing entity.

4. Additional codes shall identify building, floor, bid item and CSI classification.

5. Assigned dollar value (cost-loading) of each activity shall cumulatively equal total contract amount. Mobilization, bond and insurance costs shall be separate. General requirement costs, overhead, profit, shall be prorated throughout all activities. Activity costs shall correlate with Schedule of Values.

6. Each activity shall have manpower-loading assigned.

7. Major construction equipment shall be assigned to each activity.

8. Activities labeled start, continue or completion are not allowed.

S. For major equipment and materials show a sequence of activities including:

1. Preparation of shop drawings and sample submissions.

2. Review of shop drawings and samples.

3. Finish and color selection.

4. Fabrication and delivery.

5. Erection or installation.

6. Testing.

T. Include a minimum of 15 days prior to completion date for punch lists and clean up. No other activities shall be scheduled during this period.

1.13 SHORT INTERVAL SCHEDULE

A. Shall be fully developed horizontal bar-chart-type schedule directly derived from Construction Schedule.

B. Prepare schedule on sheet of sufficient width to clearly show data.

C. Provide continuous heavy vertical line identifying first day of week.

D. Provide continuous subordinate vertical line identifying each day of week.

E. Identify activities by same activity number and description as Construction Schedule.

F. Show each activity in proper sequence.

G. Indicate graphically sequences necessary for related activities.

H. Indicate activities completed or in progress for previous 2 week period.

I. Indicate activities scheduled for succeeding 2 week period.

J. Further detail may be added if necessary to monitor schedule.

1.14 REQUESTED TIME ADJUSTMENT SCHEDULE

A. Updated Construction Schedule shall not show a completion date later than the Contract Time, subject to any time extensions processed as part of a Change Order.

B. If an extension of time is requested, a separate schedule entitled "Requested Time Adjustment Schedule" shall be submitted to Owner and Architect.

C. Indicate requested adjustments in Contract Time which are due to changes or delays in completion of work.

D. Extension request shall include forecast of project completion date and actual achievement of any dates listed in Agreement.

E. To the extent that any requests are pending at time of any Construction Schedule update, Time Adjustment Schedule shall also be updated.

F. Schedule shall be a time-scaled network analysis.

G. Accompany schedule with formal written time extension request and detailed impact analysis justifying extension.

H. Time impact analysis shall demonstrate time impact based upon date of delay, and status of construction at that time and event time computation of all affected activities. Event times shall be those as shown in latest Construction Schedule.

I. Activity delays shall not automatically constitute an extension of Contract Time.

J. Failure of subcontractors shall not be justification for an extension of time.

K. Float is not for the exclusive use or benefit of any single party. Float time shall be apportioned according to needs of project.

L. Float suppression techniques such as preferential sequencing, special lead/lag logic restraints, extended activity durations, or imposed dates shall be apportioned according to benefit of project.

M. Extensions will be granted only to extent that time adjustments to activities exceed total positive float of the critical path and extends Contract completion date.

N. Owner shall not have an obligation to consider any time extension request unless requirements of Contract Documents, and specifically, but not limited to these requirements are complied with.

O. Owner shall not be responsible or liable for any construction acceleration due to failure of Owner to grant time extensions under Contract Documents should requested adjustments in Contract Time not substantially comply with submission and justification requirements of Contract for time extension requests.

P. In the event a Requested Time Adjustment Schedule and Time Impact Analysis are not submitted within 10 days after commencement of a delay it is mutually agreed that delay does not require a Contract time extension.

1.15 RECOVERY SCHEDULE

A. When activities are behind Construction Schedule a supplementary Recovery Schedule shall be submitted.

B. Form and detail shall be sufficient to explain and display how activities will be rescheduled to regain compliance with Construction Schedule.

C. Maximum duration shall be one month and shall coincide with payment period.

D. Ten days prior to expiration of Recovery Schedule verification to determine if activities have regained compliance with Construction Schedule will be made. Based upon this verification the following will occur:

1. Supplemental Recovery Schedule will be submitted to address subsequent payment period.

2. Construction Schedule will be resumed.

1.16 UPDATING SCHEDULES

A. Review and update schedule at least 10 days prior to submitting an Application for Payment.

B. Maintain schedule to record actual prosecution and progress.

C. Approved change orders which affect schedule shall be identified as separate new activities.

D. Change orders of less than $20,000.00 value or less than 3 days duration need not be shown unless critical path is affected.

E. No other revisions shall be made to schedule unless authorized by Owner.

F. Provide narrative Progress Report at time of schedule update which details the following:

1. Activities or portions of activities completed during previous reporting period.

2. Actual start dates for activities currently in progress.

3. Deviations from critical path in days ahead or behind.

4. List of major construction equipment used during reporting period and any equipment idle.

5. Number of personnel by craft engaged on Work during reporting period.

6. Progress analysis describing problem areas.

7. Current and anticipated delay factors and their impact.

8. Proposed corrective actions and logic revisions for Recovery Schedule.

9. Proposed modifications, additions, deletions and changes in logic of Construction Schedule.

G. Schedule update will form basis upon which progress payments will be made.

H. Owner will not be obligated to review or process Application for Payment until schedule and Progress Report have been submitted.

1.17 DISTRIBUTION

A. Following joint review and acceptance of updated schedules distribute copies to Owner, Architect, and all other concerned parties.

B. Instruct recipients to promptly report in writing any problem anticipated by projections shown in schedule.

END OF SECTION

SECTION 01 35 15

CALGREEN ENVIRONMENTAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Comply with CALGreen environmental requirements related to energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality.

1. Comply with specific CALGreen requirements as adopted by authorities having jurisdiction and applicable to Project.

1.2 ENVIRONMENTAL REQUIREMENTS

A. Mandatory Measures: Comply with CALGreen Mandatory Measures applicable to Project.

1. Design team and construction team are each required to participate to maximum degree possible to achieve CALGreen environmental requirements.

2. Contract Documents are not intended to limit alternative means of achieving environmental requirements.

a. Suggestions from Contractor, subcontractors, suppliers, and manufacturers for achieving environmental requirements are encouraged; team approach is also encouraged.

3. Voluntary Tiers: Verify extent of Voluntary Tiers applicability to Project.

a. Construction team is encouraged to work with Owner and Design Team to incorporate additional measures as defined in CALGreen Appendixes.

b. Contact Owner and Architect regarding extent of intent of Project to reach Voluntary Tiers, additional work necessary to achieve enhanced Voluntary Tiers, and potential costs involved in achieving each Voluntary Tier.

c. Construction team is required to achieve Mandatory Measures and Voluntary Tiers as applicable, and to achieve as much as possible without unacceptable cost impact or schedule impact as determined by Owner.

B. Requirements: Construction team is required to review CALGreen requirements relative to Project related to following.

1. Energy Efficiency: Comply with California Energy Commission requirements.

2. Water Efficiency and Conservation: Comply with requirements for both indoor and outdoor water use.

3. Material Conservation and Resource Efficiency:

a. Nonresidential Projects: Provide weather-resistant exterior wall and foundation envelope including prevention of landscape irrigation spray on structures (if any) and prevent water intrusion at exterior entries.

b. Provide construction waste management plan as defined by CALGreen with demolition and construction waste diverted from landfill by recycling or salvage for reuse.

c. Nonresidential Projects Building Maintenance and Operation: Provide for commissioning requirements as required by CALGreen including but not limited to testing, documentation and training, testing and adjusting.

4. Nonresidential Projects Environmental Quality: Comply with following as adopted by authorities having jurisdiction and as applicable to Project.

a. Fireplaces: Comply with requirement for fireplaces (if any) to be direct-vent sealed-combustion gas type or sealed wood-burning fireplace, woodstove, or pellet stove.

b. Mechanical Equipment Pollution Control: Cover duct and related air distribution component openings to prevent dust and debris accumulation.

c. Finish Material Pollution Control: Comply with CALGreen requirements for volatile organic compound (VOC) emissions including but not necessarily limited to following (as applicable):

1) Adhesives, sealants and caulks.
2) Paints and coatings.
3) Carpet systems including carpet, carpet cushion, and adhesives.
4) Resilient flooring systems.
5) Composite wood products formaldehyde limitations.

d. Filters: Comply with requirements for mechanically ventilated buildings to have air filtration media for outside and return air prior to occupancy.

e. Environmental Tobacco Smoke (ETS) Control: Comply with CALGreen requirements for ETS.

f. Interior Moisture Control: Comply with California Building Code requirements and CALGreen requirements for vapor retarder at concrete slab foundations and capillary break (aggregate base).

g. Building Material Moisture Content: Do not use water damaged building materials, remove and place wet and high moisture content insulation, and do not enclose wall or floor framing when moisture content exceeds 19%.

h. Indoor Air Quality: Comply with CALGreen requirements for outside air delivery and carbon dioxide monitoring.

i. Environmental Comfort: Comply with CALGreen requirements for whole acoustical control and interior sound control.

j. Outdoor Air Quality: Comply with CALGreen requirements for reduction of greenhouse gases and ozone depletion.

C. Planning and Design: Construction team shall coordinate with Design Team regarding Project Planning and Design methods related to CALGreen requirements related to Project design and shall comply with requirements related to construction.

1.3 QUALITY ASSURANCE

A. Project Management and Coordination: Contractor to identify one person on Contractor's staff to be responsible for CALGreen issues compliance and coordination.

1. Experience: Environmental project manager to have experience relating to CALGreen building construction.

2. Responsibilities: Carefully review Contract Documents for CALGreen issues, coordinate work of trades, subcontractors, and suppliers; instruct workers relating to environmental issues; and oversee Project Environmental Goals.

a. Submittals: Collect, compile, verify, and maintain sufficient information for submittals indicating compliance with applicable CALGreen requirements.

3. Meetings: Discuss CALGreen Goals at following meetings.

a. Pre-construction meeting.
b. Pre-installation meetings.
c. Regularly scheduled job-site meetings.

B. CALGreen Issues Criteria: Comply with requirements listed in CALGreen and various Specification sections.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General Issues: Do not use materials with moisture stains or with signs of mold or mildew.

1. Moisture Stains: Materials that have evidence of moisture damage, including stains, are not acceptable, including both stored and installed materials; immediately remove from site.

2. Mold and Mildew: Materials that have evidence of growth of molds or of mildew are not acceptable, including both stored and installed materials; immediately remove from site.

2.2 SUBSTITUTIONS

A. Substitutions Environmental Issues: Requests for substitutions shall comply with requirements specified in Section 01 25 00 – Substitution Procedures, with following additional information required where environmental issues are involved.

1. Indicate each proposed substitution complies with CALGreen requirements.

2. Owner and Architect reserve right to reject proposed substitutions where CALGreen information is not provided and where substitution may impact mandatory requirements or Project voluntary tier requirements.

PART 3 - EXECUTION

3.1 PROTECTION

A. Environmental Issues: Protect interior materials from water damage; where interior products not intended for wet applications are exposed to moisture, immediately remove from site.

1. Protect installed products using methods that do not support growth of molds and mildews. Immediately remove from site materials with mold and materials with mildew.

END OF SECTION

SECTION 01 40 00

QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This section describes general quality control requirements.

1. General quality control.
2. Manufacturers' field services.
3. Mock-ups.
4. Independent testing laboratory services and inspections.

B. Related Requirements:

1. Refer to applicable codes and Specifications sections for test requirements.

1.2 QUALITY CONTROL, GENERAL

A. Maintain quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

1.3 MANUFACTURER'S FIELD SERVICES

A. When specified in respective Specification sections, require manufacturer or supplier to have qualified personnel provide on-site observations and recommendations.

1. Observe field conditions, including conditions of surfaces and installation.
2. Observe quality of workmanship.
3. Provide recommendations to assure acceptable installation and workmanship.
4. Where required, start, test, and adjust equipment as applicable.

B. Representative shall submit written report to Architect or Owner listing observations and recommendations.

1.4 TESTING LABORATORY SERVICES AND INSPECTIONS

A. Testing laboratory services and inspections specified and required by applicable codes and regulations will be performed by firms independent of firms related to construction operations and shall be acceptable to applicable authorities.

1. Notify Owner immediately where potential conflict of interest may be involved with testing laboratories or inspection services for Project.

2. Owner or Architect may also require independent testing of items where doubts exist that product or system does not conform to Contract Documents.

3. Owner will employ and pay for testing laboratory and special inspectors to provide Project specific testing and inspections under applicable codes and Specification sections except where indicated otherwise.

a. Owner employment of testing laboratory and inspectors shall not relieve Contractor of obligation to perform Work in accordance with requirements of applicable codes and Contract Documents.

1) Laboratory and inspectors may not release, revoke, alter, or enlarge on requirements of Contract Documents.

b. Retesting required because of non-conformance to specified requirements shall be performed by Owner's testing laboratory.

1) Payment for retesting shall be charged to Contractor by deducting inspection and testing charges from Contract amount.

c. Owner provided testing shall be limited to Project specific testing and shall not include general tests or approvals of materials, equipment or systems.

d. Owner provided inspections shall be limited to Project design team inspections and special inspectors required by applicable authorities.

B. Services shall be performed in accordance with requirements of governing authorities and with specified standards.

C. Reports will be submitted to Architect in duplicate giving observations and results of tests and inspections, indicating compliance or non-compliance with specified standards and with Contract Documents.

1. Where required, testing laboratory and inspectors will submit copy of tests and inspections directly to enforcing agency.

D. Contractor shall cooperate with testing laboratory and inspection personnel; furnish tools, samples of materials, design mix, equipment, storage and assistance as requested.

1. Notify Owner, Architect, inspectors, and testing laboratory sufficiently in advance of expected time for operations requiring inspection and testing services.

END OF SECTION

SECTION 01 50 00

TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. This section describes temporary construction facilities and temporary controls.

1. Electricity and lighting.
2. Heat and ventilation.
3. Water and sanitary facilities.
4. Construction aids.
5. Temporary enclosures.
6. Barriers.
7. Cleaning during construction.
8. Project identification.
9. Field offices.
10. Cellular telephone service.
11. Storage.

B. Related Requirements:

1. Section 01 70 00: Progress cleaning and final cleaning.
2. Section 01 74 10: Waste management.

C. Provide temporary construction facilities and temporary controls as required to conform to applicable authorities and as required to complete Project in accordance with Contract Documents.

1. Authorities: Contact governing authorities to establish extent of temporary facilities and temporary controls required by authorities.

1.2 ELECTRICITY AND LIGHTING

A. Provide electrical service required for construction operations, with branch wiring and distribution boxes located to allow service and lighting by means of construction-type power cords.

1. Connection to existing electrical service is permitted.

B. Provide lighting for construction operations.

1. Permanent lighting may be used during construction; maintain lighting and make routine repairs.

C. Owner will pay costs of energy used from existing on-site services.

1.3 HEAT AND VENTILATION

A. Provide heat and ventilation as required to maintain specified conditions for construction operation, to protect materials and finishes from damage due to temperature and humidity.

B. Owner will pay costs of energy used from existing on-site services.

1.4 WATER AND SANITARY FACILITIES

A. Provide water service required for construction operations; extend branch piping with outlets located so water is available by use of hoses.

1. Connection to existing facilities is permitted.

2. Owner will pay for water used from existing on-site services.

B. Provide and maintain required sanitary facilities and enclosures.

1.5 CONSTRUCTION AIDS

A. Noise, Dust and Pollution Control: Provide materials and equipment necessary to comply with local requirements for noise, dust and pollution control.

B. Fire Protection: Maintain on-site fire protection facilities as required by applicable authorities and insurance requirements.

C. Security: Protect Site and Work; prevent unauthorized entry, vandalism, and theft.

1. Coordinate with Owner’s security program.

D. Dewatering: Provide and operate drainage and pumping equipment; maintain excavations and site free of standing water.

1.6 ENCLOSURES

A. Temporary Closures: Provide temporary weather-tight closures for exterior openings for acceptable working conditions, for protection for materials, to protect interior materials from dampness, for temporary heating, and to prevent unauthorized entry.

1. Provide doors with self-closing hardware and locks.

B. Temporary Partitions: Provide temporary partitions as required to separate work areas from completed areas, to prevent penetration of dust and moisture into completed areas, and to prevent damage to finished areas and installed equipment.

1. Construction: Framing and sheet materials with closed joints and sealed edges at intersections with existing surfaces; Flame Spread Rating of 25 in accordance with ASTM E84.

1.7 BARRIERS

A. Barriers: Provide barriers as required to prevent public entry to construction areas and to protect adjacent properties from damage from construction operations.

1. Fence: Provide minimum 8-foot high commercial grade chain link or painted solid wood fence around construction site; equip with gates with locks.

2. Covered Walkways: Provide lighted covered painted walkways as required by governing authorities for public rights-of-way and for public access to existing building.

B. Barricades: Provide barricades as required by governing authorities.

C. Tree Protection: Provide barriers around trees and plants designated to remain; protect against vehicular traffic, stored materials, dumping, chemically injurious materials, and puddling or continuous running water.

1.8 CLEANING DURING CONSTRUCTION

A. Control accumulation of waste materials and rubbish; recycle or dispose of off-site.

B. Clean interior areas prior to start of finish work, maintain areas free of dust and other contaminants during finishing operations.

1.9 PROJECT IDENTIFICATION

A. Project Sign: Provide minimum 32-square foot Project identification sign of wood frame and exterior grade plywood construction, painted, with computer generated graphics by professional sign maker.

1. Design: As furnished by Architect.

2. Submit to Owner and Architect additional names or changes proposed to Project sign for prior written approval.

3. Erect on site at location established by Architect.

B. Other Signs: Subject to approval of Architect and Owner.

1.10 FIELD OFFICES

A. Field Office: See section 8-2 of the General Provisions.

1.11 CELLULAR TELEPHONE SERVICE

A. Cellular Telephone Service: Furnish on-site Project Managers with cellular telephone. Ensure Owner and Architect ability to contact site during construction operations.

1. Schedules: Submit schedules of on-site Project Managers with individual cellular telephone numbers to Owner and Architect; maintain schedules and cell phone numbers up to date during Project on-site operations.

1.12 STORAGE

A. Storage for Tools, Materials, and Equipment: Limit on-site storage to Project area; provide weather-tight storage, with heat and ventilation for products requiring controlled conditions.

1. Maintain adequate space for organized storage and access.

2. Provide lighting for inspection of stored materials.

1.13 REMOVAL

A. Remove temporary materials, equipment, services, and construction prior to Substantial Completion Inspection.

B. Clean and repair damage caused by installation or use of temporary facilities.

C. Restore existing facilities used during construction to specified or original condition.

END OF SECTION

SECTION 01 60 00

PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This section describes basic product requirements governing material and equipment.

1. General product requirements.
2. Product list.
3. Quality assurance.
4. Delivery, storage, and handling.

B. Related Requirements:

1. Section 01 25 00: Substitution procedures.
2. Section 01 30 00: Submittal of manufacturers' certificates.
3. Section 01 77 00: Operation and maintenance data.

1.2 GENERAL PRODUCTS REQUIREMENTS

A. Products include material, equipment, and systems.

B. Comply with Specifications, referenced standards, and applicable codes and regulations as minimum requirements.

C. Provide new materials except as specifically allowed by Contract Documents.

D. Materials to be supplied in quantity within a Specification section shall be by one manufacturer, shall be the same, and shall be interchangeable.

E. Provide equipment and systems composed of materials from a single manufacturer except where otherwise recommended by equipment or systems manufacturer or where otherwise indicated in Contract Documents.

F. Contractor’s Options: Comply with following options; requests for substitutions for named manufacturers and products shall comply with requirements specified in Section 01 25 00 – Substitution Procedures.

1. Products Identified by Reference Standards: Select product meeting referenced standard for products specified only by reference standard.

a. Requests for Substitutions to be limited to products not complying with referenced standards.

1) Submit justification for non-compliance with reference standards as part of Request for Substitutions; if product is foreign made submit rationale why foreign standards and basic materials indicates compliance.

2. Named Manufacturers: Where names of manufacturers are specified select any named manufacturer product meeting Specifications for products specified by naming one or more manufacturers.

    a. Submit Request for Substitution for any manufacturer not named.

3. Named Manufacturers and Named Products: Select any named manufacturer named product meeting Specifications for products specified by naming one or more manufacturers and products.

    a. Where only one manufacturer and product is named together with additional manufacturers without specific products, Requests for Substitutions to be limited to products not comparable to that specified.

        1) Contractors, subcontractors, suppliers, and manufacturers shall take special care to ensure comparable products are being supplied based on design, performance, quality, and longevity.

        2) Substitutions: Submit Request for Substitution for any manufacturer not named and for products not comparable to those specified in design, performance, quality, and longevity.

4. Basis of Design: Where manufacturer or manufacturer and product both are indicated as Basis of Design, submit Request for Substitution for other manufacturers and products.

5. “Or Equal” Clauses: Submit request for substitution for manufacturer or product not specifically named in Specifications where terms "or equal", "or approved equal", or similar references are made.

G. Nameplates: Do not attach or imprint manufacturer or producer nameplates on exposed surfaces in occupied spaces except for required labels and operating data.

1. Equipment Nameplates: Provide permanent nameplate on service connected and power operated equipment located on easily accessible surface inconspicuous in occupied spaces.

    a. Provide name of product and manufacturer, model and serial number, capacity, speed, rating, and similar information.

1.3 SUBMITTALS

A. Product List: Within 35 days after award of Contract, submit to Owner and Architect a complete list of major products proposed for installation, with name of manufacturer, trade name, and model.

B. Product List: Prior to submittal of second Request for Payment, submit to Architect complete list of major products which are proposed for installation, with name of manufacturer, trade name, and model.

1. Tabulate products by Specification number and title.

C. Substitutions: Refer to Section 01 25 00 – Substitution Procedures.

1.4 QUALITY ASSURANCE

A. Comply with industry standards and applicable codes except when more restrictive tolerances or requirements indicate more rigid standards or precise workmanship.

B. Perform work by persons qualified to produce workmanship of specified quality.

C. Install products straight, true-to-line, and in correct relationship to adjacent materials, with hairline joints, free of rough, sharp and potentially hazardous edges.

D. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, and racking.

1. Seismic Anchors: Conform to code requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Transport products by methods to avoid product damage, deliver in undamaged condition in manufacturer's unopened containers or packaging.

B. Store products in accordance with manufacturer's instructions, with seals and labels intact and legible.

C. Store sensitive products in weather-tight enclosures; maintain within temperature and humidity ranges required by manufacturer's instructions.

D. For exterior storage of fabricated products, place on sloped supports above ground.

E. Store loose granular materials on solid surfaces in a well-drained area; prevent mixing with foreign matter.

F. Arrange storage to provide access for inspection; periodically inspect to assure products are undamaged and are maintained under required conditions.

G. Provide equipment and personnel to handle products by methods to prevent soiling and prevent damage.

H. Promptly inspect shipments to assure products comply with requirements, quantities are correct, and products are undamaged.

I. Immediately remove from Project products damaged, wet, stained, and products with mold and products with mildew.

1. Take special care to prevent absorbent products such as gypsum board and acoustical ceiling units from becoming wet.

END OF SECTION

SECTION 01 70 00

EXECUTION REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This section describes execution requirements.

1. Installer qualifications.
2. Examination.
3. Manufacturer's instructions.
4. Installation.
5. Cleaning.
6. Protection.

B. Related Requirements:

1. Section 01 50 00: Cleaning during construction.
2. Section 01 77 00: Closeout procedures.
3. Section 01 79 00: Demonstration and training.

1.2 INSTALLER QUALIFICATIONS

A. Experienced Installers: Installers to have minimum five-years successful experience installing items like those required for Project, except for individuals in training under direct supervision of experienced installer.

1.3 EXAMINATION

A. Acceptance of Conditions: Beginning installation of a product signifies installer has examined substrates, areas, and conditions for compliance with manufacturer requirements for tolerances and other conditions affecting performance.

B. Field Measurements: Take field measurements as required to fit Work properly; recheck measurements prior to installing each product.

1. Where portions of Work are to fit to other construction verify dimensions of other construction by field measurements before fabrication; allow for cutting and patching to avoid delaying Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

1.4 MANUFACTURERS' INSTRUCTIONS

A. Manufacturer’s Recommendations: When work is specified to comply with manufacturers' recommendations or instructions, distribute copies to persons involved and maintain one set in field office.

1. Conform to requirements specified in Section 01 30 00 for submittal of recommendations or instructions to Architect; submit to Architect only where specified or where specifically requested; otherwise keep in Field Office.

B. Perform work in accordance with details of recommendations and instructions and specified requirements.

1. Should a conflict exist between Specifications and recommendations or instructions consult with Architect.

C. Where manufacturer's information notes special recommendations in addition to installation instructions, comply with both recommendations and instructions.

1.5 INSTALLATION

A. Pre-Installation Meetings: Installers and suppliers are to attend pre-installation meetings scheduled by Contractor.

B. Comply with manufacturers written recommendations and installation instructions unless more restrictive requirements are specified.

C. Locate Work and components accurately, in correct alignment and elevation.

1. Make vertical work plumb and horizontal work level.

2. Install components to allow space for maintenance and ease of removal for replacement.

D. Install products at time and under conditions to ensure best possible results; maintain conditions required for product performance until Substantial Completion.

E. Conduct operations so no part of Work is subject to damaging operations or excessive loads during normal conditions.

F. Securely anchor permanent construction in place, accurately located and aligned with other portions of Work.

G. Allow for building movement including thermal expansion and contraction.

H. Make joints of uniform width; arrange joints as indicated, for best visual effect where not otherwise indicated; fit exposed connections together to form hairline joints except where otherwise indicated.

1.6 CLEANING

A. Cleaning During Construction: Specified in Section 01 50 00 - Temporary Facilities and Controls.

B. Progress Cleaning: Keep installed areas clean using cleaning materials specifically recommended by manufacturers of product being cleaned; where not otherwise recommended use nontoxic materials that will not damage surfaces.

1. Remove debris from concealed spaces before enclosing space.

2. Supervise construction operations to assure no part of construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during construction period.

C. Final Cleaning: Execute final cleaning at Substantial Completion.

1. Clean interior and exterior surfaces exposed to view; remove temporary labels, stains and foreign substances; polish transparent and glossy surfaces; vacuum carpeted and soft surfaces.

a. Vacuuming Equipment: Type with high efficiency particulate arrestor (HEPA) type filters; properly maintained.

2. Clean equipment and fixtures to a sanitary condition, clean filters of mechanical equipment, replace filters where cleaning is impractical.

a. Clean ducts.

3. Clean site; sweep paved areas.

4. Remove waste, surplus materials and rubbish from Project and site; recycle to maximum extent feasible.

1.7 PROTECTION

A. Protect products subject to deterioration with impervious cover. Provide ventilation to avoid condensation and trapping water.

B. Take care to use protective covering and blocking materials that do not soil, stain, or damage materials being protected.

C. After installation, provide coverings to protect products from damage from traffic and construction operations, remove when no longer needed.

D. Protect interior materials from water damage; immediately remove wet materials from site to prevent growth of mold and mildew on site.

END OF SECTION

SECTION 01 74 10

WASTE MANAGEMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Project requires special Waste Management Program.

1. CALGreen Waste Management: As required in Section 01 35 15.
2. Provide itemization of costs related to Waste Management Program.
3. Effect optimum control of solid wastes.
4. Prevent environmental pollution and damage.

B. Related Work:
1. Section 01 35 15: CALGreen environmental requirements.
2. Section 01 50 00: Temporary facilities and controls.

1.2 DEFINITIONS

A. Inert Fill: A permitted facility that accepts inert waste such as asphalt and concrete exclusively.

B. Class III Landfill: A landfill that accepts non-hazardous waste such as household, commercial, and industrial waste, including construction, remodeling, repair, and demolition operations.

C. Construction and Demolition Waste: Includes solid wastes, such as building materials, packaging, rubbish, debris, and rubble resulting from construction, remodeling, repair, and demolition operations.

1. Rubbish: Includes both combustible and noncombustible wastes, such as paper, boxes, glass, crockery, metal and lumber scrap, tin cans, and bones.

2. Debris: Includes both combustible and noncombustible wastes, such as leaves and tree trimmings that result from construction or maintenance and repair work.

D. Chemical Waste: Includes petroleum products, bituminous materials, salts, acids, alkalis, herbicides, pesticides, organic chemicals and inorganic wastes.

E. Sanitary Wastes:

1. Garbage: Refuse and scraps resulting from preparation, cooking, distribution, or consumption of food.

2. Sewage: Domestic sanitary sewage.

1.3 SUBMITTALS

A. Waste Management Program: Comply with Contract Documents and applicable code requirements for salvaging, recycling, and disposing of nonhazardous waste.

1. Prior to commencement of Work, schedule and conduct meeting with Owner and Architect to discuss proposed Waste Management Program.

2. Develop mutual understanding relative to details of recycling, and rebate programs.

3. Prepare and submit a written and graphic Waste Management Program including, but not limited to, the following:

a. Indicate procedures to be implemented.

b. Estimate total Project waste to be generated, and estimated cost of disposing of Project waste in landfills.

c. Estimate total cubic yards of following waste categories to be diverted from landfill.

1) Clean dimensional wood, palette wood.
2) Plywood, oriented strand board, and medium density fiberboard.
3) Cardboard, paper, packaging.
4) Other items as directed by Owner and Architect.

d. Estimate amounts of following waste categories in appropriate units (weight, feet, square yards, gallons).

1) Metals.
2) Gypsum board.
3) Carpet.
4) Paint.
5) Other items as directed by Owner and Architect.

e. Submit permit or license and location of waste disposal areas.

f. Submit procedures for recycling/re-use program.

g. Submit procedures for rebate programs.

h. Revise and resubmit Waste Management Program as required by Owner and Architect.

1) Review of Contractor's Waste Management Program will not relieve Contractor of responsibility for control of pollutants and other environmental protection measures.

B. Submit summary of solid waste generated by Project with each application for progress payment, on form acceptable to Owner and Architect; include manifests, weight tickets, receipts, and invoices identifying Project and waste delivered to following locations.

1. Recycling Centers.
2. Class III landfills.
3. Inert fills.

C. Prepare rebate information and product documentation as required for Owner to qualify for rebate programs; submit with final closeout submittals.

1. Where feasible submit in electronic format, otherwise in 3-ring binder.

1.4 RECYCLING PROGRAM

A. Recycling: Implement recycling program that includes separate collection of waste materials of following types as applicable to Project requirements; recycling program to be applied by Contractors and subcontractors.

1. Land clearing debris.
2. Asphaltic concrete.
3. Concrete.
4. Masonry materials.
5. Ferrous metal.
6. Non-ferrous metal.
7. Clean dimensional wood and palette wood.
8. Plywood, oriented strand board, and medium density fiberboard.
9. Paper - bond.
10. Paper - newsprint.
11. Cardboard and paper packaging materials.
12. Glass.
13. Plastics.
14. Gypsum board (unpainted).
15. Paint.
16. Rigid foam.
17. Carpet and pad.
18. Beverage containers.
19. Porcelain plumbing fixtures.
20. Insulation.
21. Others as appropriate.

B. Handling: Keep materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to recycling process.

1. Clean materials contaminated prior to placing in collection containers.

2. Arrange for collection by or delivery to appropriate recycling center or transfer station that accepts construction and demolition waste for purpose of recycling.

C. Participate in Re-Use Programs: Rebates, tax credits, and other savings obtained for recycled or re-used materials shall accrue to Contractor.

END OF SECTION

SECTION 01 77 00

CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. This section describes Contract closeout procedures.

1. Substantial Completion.
2. Final Completion.
3. Project record documents.
4. Material and finish data.
5. Operation and maintenance manuals.

B. Related Requirements:

1. Section 01 30 00: Administrative requirements including attic stock.
2. Section 01 78 00: Warranties.
3. Section 01 79 00: Demonstration and training.

1.2 SUBSTANTIAL COMPLETION

A. Immediately prior to Substantial Completion, schedule agency reviews as required for “temporary certificate of occupancy” or for “certificate of occupancy”.

B. When Contractor considers Work, or a designated portion thereof is substantially complete, submit written notice, with list of items to be completed or corrected.

1. List (“Punch List”): Format pre-approved by Owner and Architect; tabular form with each space listed required.

C. Within a reasonable time, Owner and Architect will inspect status of completion and may add to “Punch List”.

1. Contractor shall pay for Architect's time and direct expenses where more than one Substantial Completion inspection is required.

D. Should Owner and Architect determine Work is not substantially complete, Contractor will be promptly notified in writing, giving reasons.

E. Contractor shall remedy deficiencies and send a second written notice of substantial completion; Architect will reinspect Work.

1. Contractor shall pay for Architect's time and direct expenses where more than one Substantial Completion inspection is required.

F. When Work is determined to be substantially complete by Architect, a Certificate of Substantial Completion will be prepared in accordance with General Conditions.

1.3 FINAL COMPLETION

A. When Work is complete, submit written certification indicating:

1. Work has been inspected for compliance with Contract Documents.

2. Work has been completed in accordance with Contract Documents and deficiencies listed (in ‘Punch List”) with Certificate of Substantial Completion have been corrected.

3. Equipment and systems have been tested in presence of Owner's representative and are operational.

4. Work is complete and ready for final inspection.

B. Special Submittals: In addition to submittals required by Contract, submit following.

1. Provide submittals required by governing authorities to governing authorities with copies included in Project Record Documents.

2. Submit final statement of accounting giving total adjusted Contract Sum, previous payments, and sum remaining due.

1.4 PROJECT RECORD DOCUMENTS

A. Keep documents current; do not permanently conceal any work until required information has been recorded.

1. Owner will provide Contractor with a separate set of Drawings to maintain for Project Record Documents.

2. Store reproducible Drawings, one set of Project Manual, and one copy of each Change Order separate from documents used for construction, for use as Project Record Documents.

3. Indicate actual work on Drawings; indicate actual products used in Project Manual, including manufacturer, model number and options.

4. Update Project Record Documents daily and allow for Architect inspection at least once a month.

B. At Contract close-out submit documents with transmittal letter containing date, Project title, Contractor's name and address, list of documents, and signature of Contractor.

C. As-Built Documents: General Contractor shall have electronic “As Built” sets of Contract Documents (Project Drawings and Project Specifications) prepared prior to Final Completion.

1. Contractor shall use one complete electronic set of Contract Documents (Drawings and Specifications) for use for “As-Builts”.

2. As-Built Drawings: Revise Drawings based on Record Documents and field measurements made after installation and indicate actual locations of structural elements, ducts, piping, wiring, and equipment.

    a. Professional draftspersons experienced in electronic media used for Contract Documents shall revise original Project Drawings based on information recorded on Project Record Documents.

3. As-Built Specifications: Revise Specifications to indicate manufacturers who provided materials specified along with specifics indicating accessories, options, and finishes used in Project.

    a. Cross referencing Submittal records is acceptable for accessories only.

4. Review Submittal: Submit two copies of electronic media of “As-Built” Documents to Architect for review.

    a. After Architect review, revise where indicated and submit final electronic media to Owner.

D. Final Completion Submittal: At Project Completion submit both Project Record Documents and As-Built Documents with transmittal letter containing date, Project title, Contractor's name and address, list of documents, and signature of Contractor.

1.5 MATERIAL AND FINISH DATA

A. Provide data for primary materials and finishes.

B. Submit two sets prior to final inspection, bound in 8-1/2" by 11" three-ring binders with durable plastic covers, clearly identified regarding extent of contents.

1. Electronic Format: Where available in electronic format, submit USB 3.0 flash drives with information required for material and finish data.

C. Arrange by Specification division and give names, addresses, and telephone numbers of subcontractors and suppliers. List:

1. Trade names, model or type numbers.
2. Cleaning instructions.
3. Product data.
4. Maintenance recommendations.

1.6 OPERATION AND MAINTENANCE MANUALS

A. Provide manuals for:

1. Electrically operated items.
2. Electrical equipment and controls.
3. Maintenance manuals provided as part of Submittals.

B. Submit two sets prior to final inspection, bound in 8-1/2" by 11" three-ring binders with durable plastic covers, clearly identified regarding extent of contents.

C. Provide a separate volume for each system, with a table of contents and index tabs for each volume.

D. Arrange by Specification division and gives names, addresses, and telephone numbers of Subcontractors and suppliers. List:

1. Appropriate design criteria.
2. List of equipment and parts lists.
3. Operating and maintenance instructions.
4. Shop drawings and product data.

E. Electronic Format: Where available in electronic format, submit two USB 3.0 flash drives with information required for operation and maintenance manuals.

END OF SECTION

SECTION 01 78 00

WARRANTIES

PART 1 - GENERAL

1.1 SUMMARY

This section is in addition to section 4 of the General Provisions.

A. Warranties: Compile required, and incidental warranties required by Contract Documents.

1. Manufacturer Warranties: Provide manufacturer's standard warranties where specified including inspections and services included or required as part of manufacturer's standard warranty.

2. Special Warranties: Provide special warranties as required by Specifications sections.

3. These warranties shall be in addition to and not a limitation of other rights Owner may have against Contractor under Contract Documents and which may be prescribed by law, regardless of wording of warranty.

B. Extended Correction Period: Contractor shall correct failure of materials and systems to perform in a manner consistent with their intended use including but not limited to failure of waterproofing and roofing systems to resist penetration from water.

1. Standard Correction Period: One year after Substantial Completion or Beneficial Occupancy by Owner except where otherwise noted in Contract Documents; coordinate with General Conditions and Supplementary Conditions.

a. Items used by Contractor during construction operations shall not be considered substantially completed.

b. Correction of Work Period begins with Owner occupancy not completion of component.

2. Extended Correction Period: Requirements are same as standard correction period but for an extended period as indicated in Specifications sections.

3. Contractor Responsibilities: Bear cost of correcting failed work and replacing construction damaged by failure of materials and systems to perform in a manner consistent with their intended use during correction period.

a. Requirements for correction period shall apply to Subcontractors, suppliers, installers, and those responsible for failed work.

b. Owner and Design Team shall not be responsible for determining degree of responsibility of those involved.

4. Owner’s Rights under Law: Correction period shall be in addition to and not a limitation of other rights Owner may have against Contractor under Contract Documents and which may be prescribed by law.

1.2 FORM OF SUBMITTAL

A. Special Warranty and Extended Correction Period Forms: Provide duplicate copies, notarized or on Contractor and Manufacturer's letterhead without conditions or exceptions to requirements specified.

1. Assemble documents executed by subcontractors, installers, suppliers, and manufacturers.

2. Provide table of contents and assemble in binder with durable plastic cover, clearly identified regarding extent of contents.

3. Electronic Format: Submit USB 3.0 flash drives of warranties, in Microsoft Word.

B. Manufacturer Warranty Forms: Use manufacturer’s standard forms unless otherwise directed in Contract Documents; completed form shall not detract from or confuse interpretations of Contract Documents.

1. Manufacturer’s authorized representative shall sign manufacturer warranties.

2. Subcontractor and installer shall countersign warranty where specified.

a. Provide required warranties for waterproofing and roofing systems countersigned by subcontractor and installer.

C. Submit final warranties prior to final application for payment.

1. For equipment put into use with Owner's permission during construction, submit within ten days after first operation.

2. For items of Work delayed materially beyond Date of Substantial Completion, provide updated submittal within ten days after acceptance, listing date of acceptance as start of warranty period.

D. Provide information for Owner's personnel regarding proper procedure in case of failure and instances that might affect validity of manufacturer warranty.

E. Size: 8-1/2" by 11" for three-ring binder; fold larger sheets to fit.

1.3 WARRANTIES AND CORRECTION OF WORK DOCUMENTS

A. Warranties and Correction of Work Documents are intended to protect Owner against failure of work and against deficient, defective and faulty materials and workmanship, regardless of sources.

B. Limitations: Warranties and correction of work requirements are not intended to cover failures that result from:

1. Unusual or abnormal phenomena of the elements.

2. Owner's misuse, maltreatment or improper maintenance of work.

3. Vandalism after substantial completion.

4. Insurrection or acts of aggression including war.

C. Related Damages and Losses: Remove and replace work which is damaged as result of failure, or which must be removed and replaced to provide access for correction of work.

D. Reinstatement: After correction of work reinstate warranty or extended correction period for corrected work to date of original expiration, but not less than half original period.

1. Correction of Work Period: The general correction of work period specified shall not be extended by corrective work except to extent required to correct failure and repair or replace materials damaged by failure.

E. Replacement Cost: Replace or restore failing items without regard to anticipated useful service lives where part of correction of work period, extended correction of work period, and special warranty period unless otherwise noted.

F. Rejection of Warranties: Owner reserves right to reject unsolicited and coincidental product warranties that detract from or confuse interpretations of Contract Documents.

END OF SECTION

SECTION 01 79 00

DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide equipment and systems demonstration and instruction in accordance with Contract Documents.

1. Video record seminars and system demonstrations.

B. Related Sections:

1. Section 01 31 00: Project management and coordination.
2. Section 01 77 00: Contract closeout procedures.
3. Refer to Facility Services Subgroups for mechanical and electrical requirements.

1.2 DESCRIPTION

A. Seminar Agenda and Outline:

1. Prepare a seminar agenda and outline in consultation and cooperation with Owner. Include following:

a. Equipment and systems that will be included in seminars.
b. Name of companies and representatives presenting at seminars.
c. Outline of each seminar's content.
d. Time and date allocated to each system and item of equipment.

2. Submit preliminary seminar agenda and outline for review and comment by Owner.

a. Revise and resubmit agenda and outline until all seminar requirements have been satisfied and seminar dates and presenters have been finalized.

3. Submit final seminar agenda and outline no later than eight weeks before date of Acceptance of Work.

B. Seminar Organization:

1. Contractor’s presentation leaders shall chair seminars.

a. Coordinate qualification of training personnel, seminar contents, and presentations with Owner.

2. Coordinate individual presentations and ensure manufacturer’s representatives scheduled to be at training seminars are present.

3. Arrange for presentation leaders familiar with design operation, maintenance and troubleshooting of equipment and systems.

    a. Where one person is not familiar with all aspects of equipment or system; arrange for specialists familiar with each aspect.

4. Coordinate proposed seminar dates with Owner and select mutually agreeable dates.

5. Video Recording: Arrange for video recording (audio and video) of training seminars and system demonstrations, including seminar and demonstration questions and answers.

C. Seminar Content:

1. Architect’s Consultants will explain design philosophy of primary systems.

2. Include following information in presentations dealing with specific systems.

    a. An overview of how system is intended to operate.
    b. Describe design parameters, constrains and operational requirements.
    c. Describe system operation strategies.
    d. Provide information to help in identifying and troubleshooting problems.

3. Include following information in presentations dealing with equipment.

    a. Explanation of how equipment operates.
    b. Recommended preventative and routine maintenance.

D. System Demonstration:

1. Demonstrate operation of equipment and systems when specified in individual technical sections. Include following in demonstration.

    a. Start-up and shut down.
    c. Operation.
    d. Scheduled and preventative maintenance.
    e. Troubleshooting.

2. Demonstration may be conducted at time of original starting with Owner's prior approval.

E. Seminar and Demonstration Questions:

1. Be prepared to answer questions raised by Owner’s personnel at demonstrations and seminars.

2. If unable to satisfactorily answer questions immediately, provide written response within three days.

F. Use manufacturer’s operation and maintenance data as basis of instruction.

1.3 SUBMITTALS

A. Video Recording: Submit three copies of each video recording in DVD format acceptable to Owner; include label on each DVD and on each container identifying Project and Seminar content.

END OF SECTION

SECTION 03 10 00

CONCRETE FORMING AND ACCESSORIES

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. Forms for all cast-in-place concrete indicated on the Drawings and subsequent removal of forms, except those earth forms described in this Section.

1.2 RELATED SECTIONS

A. Section 03 20 00 – Concrete Reinforcing.

B. Section 03 30 00 – Cast-in-Place Concrete.

1.3 QUALITY ASSURANCE

A. Qualifications of workmen: All workmen shall be experienced mechanics. Provide one person who shall be present at all time during execution of this portion of the work who shall be thoroughly familiar with the type of material being installed, the referenced standards and the requirement of this Work and shall direct all Work performed under this Section.

B. Codes and Standards: In addition to complying with all pertinent codes and regulations, comply with all pertinent recommendations contained in "Recommended Practice for Concrete Formwork," publication ACI 347R and ACI 318, Section 6.1.

C. Where provisions of pertinent codes and standards conflict with the requirement of this Section, the more stringent provision shall govern.

D. All Structural Concrete foundations, curbs, floors and any other structural component requiring structural forming or shoring shall be Engineer Designed Systems with calculations and erection drawings provided by the Contractor. Contractor is to secure the services of a California Registered Structural Engineer for the design of Forming Systems.

1.4 PRODUCT HANDLING

A. Protection: Contractor is to protect all formwork materials before, during and after installation.

B. Damaged Forms: In the event of damage or misalignment, immediately make all repairs and replacement necessary at no additional cost to the Owner.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Form lumber: All form lumber shall be new except as allowed for re-use of forms in Part 3 of this Specification, and all form lumber shall be one of the following, a combination thereof, or an equal approved in advance by the Architect.

1. Plywood forms may be Plyform, Plyron, and bearing the label of the Douglas Fir Plywood Association.
2. Form-lumber may be; fir, larch, hemlock, or approved equal seasoned lumber and surfaced on all four sides.
3. Form sealers shall be liquid form oil.

B. Not used.

C. Other form materials and/or forming systems may be used if approved by the Owner, Architect and Structural Engineer. A complete list of materials, manufacturers and methods of application are to be submitted to the Architect, in accordance with Division 01.

2.2 TIES AND SPREADERS

A. Form ties shall be of proven types and shall be a type which does not leave an open hole through the concrete and which permits patching at every hole.

B. When forms are removed, all metal ties shall be removed and shall be flush with the concrete surface. No metal ties shall be exposed on the exterior of the walls.

2.3 ALTERNATE FORMING SYSTEMS

A. Not used.

2.4 OTHER MATERIALS

A. All other form materials, not specifically described herein, but required for proper completion of concrete formwork, shall be as selected by the Contractor subject to approval by the Owner or Architect.

PART 3 - EXECUTION

3.1 INSPECTION

A. Contractor shall verify and be responsible for all-existing dimensions and elevations before any Work is done.

B. Inspect the installed Work of all other trades; verify that all such Work is complete, and that the installation of Formwork may begin.

C. Verify that forms have been constructed in accordance with all pertinent codes and regulations, referenced standards and the design.

D. Discrepancies: Do not proceed with installation in areas of discrepancy. Notify the Architect of all discrepancies. All discrepancies are to be fully resolved before proceeding with installation.

3.2 CONSTRUCTION FORMS

A. Forms are to be constructed sufficiently tight to prevent leakage of concrete, and able to withstand excessive deflection when filled with wet concrete. Forms shall be braced, anchored and properly aligned.

B. Layout and form all required cast-in-place concrete to the required dimensions indicated on the Drawings.

C. Care shall be exercised in the layout of forms to avoid the necessity for cutting, patching, or repair of concrete after it is in place.

D. Make provisions for all openings, offsets, recesses, anchorage, blocking and other requirements of the Work.

E. Perform all forming required for Work of other trades and do all cutting and repairing of forms required to permit such installations.

F. Carefully examine the Drawing and Specifications and verify with other trades for openings, reglets, chases, and other items that are required in the forms.

G. Forms for pre-cast concrete shall be constructed to provide for shrinkage of the concrete, and shall be adequately braced. All edges shall have chamfer strips except as noted on Drawings.

H. Construct all forms true, plumb, and square within a tolerance of 1/8" in 12 feet.

3.3 EMBEDDED ITEMS

A. Provide, install and check all required steel frames, angles, grilles, bolts, inserts and other such items required to be anchored in the forms before the concrete is placed.

3.4 BRACING

A. Properly brace and tie the forms together so as to maintain size, shape, and alignment, and to provide safety to personnel.

B. Construct all bracing and supporting members of ample size and strength to safely support, without excessive deflection, all dead and live loads to which they may be subjected.

3.5 PLYWOOD FORMS

A. Plywood forms shall be designed for loads imposed. Nail the plywood panels directly to studs and apply in a manner to minimize the number of joints.

B. Make all panel joints tight butt joints with all edges true and square, if necessary, use tape to prevent excessive leakage.

3.6 FOOTING FORMS

A. Foundation forms are to be wood forms.

B. Earth forms may be used for footings provided the soil will stand without caving, as determined by the Architect (Structural Engineer) and the sides of the bank are made with a neat cut to the minimum dimensions indicated.

3.7 REUSE OF FORMS

A. Reuse of forms shall be subject to approval of the inspector.

B. Reuse of forms shall not delay or change the schedule for placement of concrete from the schedule if all forms were new.

C. Reuse of forms shall not affect the structural stability of the forms or the appearance of the finished concrete.

3.8 REMOVAL OF FORMS

A. Side forms of foundations may be removed 48 hours after placement of concrete. Where foundations are supporting lateral loads, forms shall not be removed until approved by the inspector.

B. Use care and diligence, and protect workmen, passers-by, and the installed work and materials of other trades. Forms shall not be removed until the concrete can support all loads.

C. Cut nails, tie wires and form ties off flush, leave all surfaces smooth and clean.

D. Remove metal spreader ties and fill in the resulting pockets to match the surrounding areas with grout or dry pack. Sack all exposed faces.

E. Fill all holes resulting from the use of bolts, ties, spreaders and sleeve nuts with cement grout applied under pressure by means of a grouting gun; grout shall be one part Portland cement, to two parts sand; apply grout immediately after removing forms.

3.9 CLEANING

A. Remove all forming material from the site and dispose of in approved dumps.

B. Clean area of all left over debris including stakes, ties, form boards, wires, concrete spills, etc., and leave area in a neat clean condition.

END OF SECTION

SECTION 03 20 00

CONCRETE REINFORCING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concrete steel reinforcement as indicated.

B. Related Sections:

1. Section 03 10 00 - Concrete Forming and Accessories.
2. Section 03 30 00 - Cast-in-Place Concrete.

1.2 SYSTEM DESCRIPTION

A. Regulatory Requirements: Fabrication and placement of reinforcing shall be in accordance with requirements of CBC, Chapter 19A.

1.3 SUBMITTALS

A. Shop Drawings: Submit steel reinforcement Shop Drawings in accordance with ACI 315. Include assembly diagrams, bending charts and slab plans. Indicate lengths and location of splices, size and lengths of reinforcing steel.

B. Closeout Submittals: Record exact locations of reinforcing that vary from Shop Drawings.

1.4 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

1. Concrete Reinforcing Steel Institute (CRSI) Manual of Standard Practice.
2. American Welding Society (AWS).
3. American Concrete Institute (ACI).
4. CBC, Chapter 19A, Concrete.

B. Source Quality Control: Refer to Division 01 Sections for general requirements and to following paragraphs for specific procedures. Testing laboratory retained by the Owner shall perform following conformance testing, select test Samples of bars, ties, and stirrups from the material at the Project site or from the place of distribution, with each Sample consisting of not less than two 18 inch long pieces, and perform the following tests according to ASTM A 615.

1. Identified Bars: If Samples are obtained from bundles as delivered from the mill, identified as to heat number, accompanied by mill analyses and mill test reports, and properly tagged with the identification certificate so as to be readily identified, perform one tensile and one bend test for each 10 tons or fraction thereof of each size of bars. Submit mill reports when Samples are selected.

2. Unidentified Bars: When positive identification of reinforcing bars cannot be performed and when random Samples are obtained, perform tests for each 2.5 tons or fraction thereof, one tensile and one bend test from each size of bars.

C. Certification of Welders: Shop and Project site welding shall be performed by certified welding operators.

1.5 DELIVERY, STORAGE AND HANDLING

A. Avoid exposure to dirt, moisture or conditions harmful to reinforcing.

B. Reinforcing steel bars, wire, and wire fabric shall be stored on the Project site to permit easy access for examination and identification of each shipment. Material of each shipment shall be separated for size and shape.

PART 2 - PRODUCTS

2.1 GENERAL

A. Provide reinforcing of sizes, gages and lengths indicated, bent to indicated shapes.

2.2 MATERIALS

A. Steel Reinforcing Bars: ASTM A 615 and A 706 for welding, grade 60 billet steel unless otherwise specified or indicated.

B. Bars or Rod Mats: ASTM A 184.

C. Wire Fabric for Reinforcement: ASTM A 185.

D. Tie Wire: ASTM A 82, fully annealed, copper-bearing steel wire, 16 gage minimum.

E. Chairs, Spacers, Supports, and Other Accessories: Standard manufacture conforming to ACI-315 fabricated from steel wire of required types and sizes. For reinforcement supported from grade, provide properly sized dense precast blocks of concrete.

2.3 FABRICATION OF REINFORCING BARS

A. Comply with CRSI Manual of Standard Practice for Reinforced Concrete Construction for fabrication of reinforcing steel.

B. Bending and Forming: Fabricate bars of the indicated sizes and bend and form to required shapes and lengths by methods not injurious to materials. Do not heat reinforcement for bending. Bend bars No. 6 size and larger in the shop only. Bars with unscheduled kinks or bends are not permitted. Provide only tested and permitted bar materials.

C. Welding: Provide only ASTM A 706 steel where welding is indicated. Perform welding by the direct electric arc process in accordance with AWS D1.4 and specified low-hydrogen electrodes. Preheat 6 inches each side of joint. Protect joints from drafts during the cooling process; accelerated cooling is not permitted. Do not tack weld bars. Clean metal surfaces to be welded of loose scale and foreign material. Clean welds each time electrode is changed and chip burned edges before placing welds. When wire brushed, the completed welds must exhibit uniform section, smooth welded

metal, feather edges without undercuts or overlays, freedom from porosity and clinkers, and good fusion and penetration into the base metal. Cut out welds or parts of welds deemed defective, using chisel, and replace with proper welding. Prequalification of welds shall be in accordance with CBC requirements.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Bars shall be bent cold. Bars partially embedded in concrete shall not be field bent except as indicated on reviewed Shop Drawings. Before installation, clean reinforcing of loose scale, rust, oil, dirt and any coating that could reduce bond.

B. Accurately position, install, and secure reinforcing to prevent displacement during the placement of concrete.

C. Provide metal chairs to hold reinforcement the required distance above form bottoms. Space chairs so that reinforcement will not be displaced during installation. Provide metal spacers to secure proper spacing. Stirrups shall be accurately and securely wired to bars at both top and bottom. At slabs, footings, and beams in contact with earth, provide concrete blocks to support reinforcement at required distance above grade.

D. Install and secure reinforcement to maintain required clearance between parallel bars and between bars and forms. Lapped splices shall be installed wherever possible in a manner to provide required clearance between sets of bars. Stagger lapped splices. Dowels and bars extending through construction joints shall be secured in position against displacement before concrete is installed and subsequently cleaned of concrete encrustation’s while they are still soft.

E. Do not install reinforcing in supported slabs and beams until walls and columns have been installed to underside of slabs and beams or until construction joints have been thoroughly cleaned. Reinforcing shall be inspected before placement of concrete and cleaned as required.

F. Use deformed bars unless otherwise indicated, except for spiral reinforcement.

3.2 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

3.3 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 03 30 00

CAST-IN-PLACE CONCRETE

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast-in-place concrete placement and finishing.
2. Related Sections:
   a. Section 03 10 00 - Concrete Forming and Accessories.
   b. Section 03 20 00 - Concrete Reinforcing.

1.2 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings indicating locations of cast-in-place concrete Work and accessory items such as vapor barriers. Include details and locations of reinforcing, embedded items, and interfacing with other Work.

B. Product Data:

1. Mix Design: Submit a concrete mix design for each mix that will be provided for the Work. Include water/ cement ratio, size of coarse aggregate and amount of any admixture. Predict minimum compressive strength, maximum slump and air content percentage.
2. Manufacturer of ready-mixed concrete shall deliver to the inspector a certificate with each mixer truck. Certificate shall bear the signature of representative of the testing laboratory, and shall state quantity of cement, water, fine and coarse aggregate and admixtures.

C. Material Samples: Submit Samples illustrating concrete finishes, minimum 12 inches x 12 inches in size.

D. Certificates: Submit a notarized certificate that each of following conforms to standards indicated:

1. Aggregates - ASTM Standards C33
2. Admixtures - ASTM Standards C260
3. Curing materials - ASTM Standards C171

1.3 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement.

B. American Concrete Institute (ACI) Publication:

1. ACI 211 - Recommended Practice for Selecting Proportions of Concrete.
2. ACI 304 - Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete.

3. ACI 305 - Recommended Practice for Hot Weather Concreting.
4. ACI 306 - Recommended Practice for Cold Weather Concreting.
5. ACI 308 - Recommended Practice for Curing Concrete.
6. ACI 309 - Recommended Practice for Consolidation of Concrete.

C. American Society for Testing and Materials (ASTM) Standards:
1. ASTM A 185 - Welded Steel Wire Fabric For Concrete Reinforcement.
2. ASTM C 31 - Making and Curing Concrete Test Specimens in the Field.
3. ASTM C 33 - Concrete Aggregates.
4. ASTM C 39 - Compressive Strength of Cylindrical Concrete Specimens.
5. ASTM C 88 - Soundness of Aggregates by use of Sulphate or Magnesium Sulphate.
6. ASTM C 94 - Ready-Mixed Concrete.
7. ASTM C 143 - Slump of Hydraulic Cement Concrete.
8. ASTM C 150 - Portland Cement.
9. ASTM C 171 - Sheet Materials for Curing Concrete.
10. ASTM C 172 - Sampling Freshly Mixed Concrete.
11. ASTM C 173 - Air Content of Freshly Mixed Concrete by the Volumetric Method.
12. ASTM C 227 - Potential Alkali Reactivity of Cement-Aggregate Combinations (Mortar-Bar Method).
13. ASTM C 231 - Air Content of Freshly Mixed Concrete by the Pressure Method.
14. ASTM C 260 - Air-Entraining Admixtures for Concrete.
15. ASTM C 289 - Potential Reactivity of Aggregates (Chemical Method).
16. ASTM D 1751 - Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types).

D. Continuous inspection shall be provided at the batch plant and for transit-mixed concrete to run check sieve analysis of aggregate, check moisture content of fine aggregate, check design of mix, check cement being used with test reports, check loading of mixer trucks, and certify to quantities of materials placed in each mixer truck.

E. Inspection shall be performed by a representative of a testing laboratory selected by the Owner. Owner will pay for inspection costs. Notify the laboratory 24 hours in advance of time concrete is to be mixed. Notify the laboratory of postponement or cancellation of mixing within at least 24 hours of scheduling time.

F. Continuous batch plant inspection requirement may be waived in accordance with CBC Section 1705A.3.3.1. Waiver shall be in writing, including DSA approval.

G. Strength Test of Concrete: Refer to Section 01 45 33 - Code-Required Special Inspections.

1.4 DELIVERY, STORAGE AND HANDLING

A. Mixing and Placing Concrete: Refer to Section 01 45 33 - Code-Required Special Inspections.

B. Ready-mix concrete shall be mixed and delivered in accordance with ASTM C 94 and CBC Standard 19A-3 and 19A-4. Each batch of concrete delivered to the Project site shall be accompanied by a time slip bearing departure time and signature of batch plant supervisor. Concrete shall be placed within 90 minutes after start of mixing.

C. Store cement and aggregate materials so as to prevent their deterioration or intrusion by foreign matter. Deteriorated or contaminated materials shall not be furnished.

1.5 JOB CONDITIONS

A. Cold Weather Requirements:

1. Adequate equipment shall be provided for heating concrete materials and protecting concrete during freezing or near-freezing weather. Surfaces, in which concrete is to come in contact with, shall be free from frost or ice. No frozen materials or materials containing ice shall be furnished.

2. When placing concrete during freezing or near-freezing weather the mix shall have a temperature of at least 50 degrees F., but not more than 90 degrees F. when cement is added. Concrete shall be maintained at a temperature of at least 50 degrees F. for at least 72 hours after placing or until it has thoroughly hydrated. When necessary, concrete materials shall be heated before mixing. Special precautions shall be provided for protection of transit-mixed concrete.

B. Hot Weather Requirements:

1. During hot weather, proper attention shall be provided for ingredients, production methods, handling, placing, protection and curing, to prevent excessive concrete temperatures or water evaporation which could impair required strength or durability.

PART 2 - PRODUCTS

2.1 GENERAL

A. Ready-Mixed Concrete: Mix and deliver in accordance with requirements of CBC Chapter 1905A.

B. Strength of Concrete: Concrete, unless otherwise indicated or specified, shall be provided with a minimum ultimate 28-day strength of 3000 psi (f'c). For high-early-strength concrete, age for reaching the f'c shall be as indicated on Drawings.

2.2 MATERIALS

A. Cement: ASTM C 150 Type II Portland Cement. Furnished cement shall be as selected and reviewed for concrete proportioning.

B. Aggregates: Aggregates shall conform to ASTM C 33 and C 227 except as modified herein. Any suitable individual grading of coarse aggregate may be furnished,

provided Grading of Combined Aggregate indicated in following table is obtained. Refer to Section 01 45 23: Testing and Inspection.

GRADING OF COMBINED AGGREGATE			
Sieve Sumber or Size in inches	1-1/2" Maximum	1" Maximum	3/4" Maximum
Passing a 2"	------	------	------
Passing a 1-1/2"	95-100	------	------
Passing a 1"	70-90	90-100	------
Passing a 3/4"	50-80	70-95	90-100
Passing a 3/8"	40-60	45-70	55-75
Passing a No. 4	35-55	35-55	40-60
Passing a No. 8	25-40	27-45	30-46
Passing a No. 16	16-34	20-38	23-40
Passing a No. 30	12-25	12-27	13-28
Passing a No. 50	2-12	5-15	5-15
Passing a No. 100	0-3	0-5	0-5

C. Water: Water shall be potable and free from deleterious matter.

D. Admixtures: CBC Chapter 19A, Section 1903A.6, Type A or D.

E. Expansion Joint Fillers: Preformed strips, non-extruding and resilient bituminous type, of thickness indicated, conforming to ASTM D 1751.

F. Curing Paper and Liquid Curing Compounds:

1. Curing Paper: A standard brand conforming to ASTM C 171, Type 1 - Regular, Kure-N-Seal.
2. Liquid Curing Compounds: A standard brand, clear liquid conforming to ASTM C 309, Master Builders, Grace, Antihydro.

G. Abrasive Aggregate: Norton Alundum, Union Carbide Carborundum, or equal, graded #12 through #30 sizes, color as selected by Architect.

H. Underlayment: Latex underlayment for filling low spots in concrete shall be Tile-Tex by Flintkote Co., Webtex #60 or Fixallatex by Dowman Products Co.

I. Vapor Retarder: See Section 07 26 16 - Under-Slab Vapor Retarder.

J. Stair Strips and Nosing:

1. Fabricated from 6063-T5 extruded aluminum, mill finish. Anti-slip filler shall contain at least 60 percent virgin grain aluminum oxide abrasive. Binder shall be fully cured resilient type epoxy, with binder-to-filler ratio of 13 percent. The epoxy-abrasive filler shall extend over the curved front edge of the nosing and shall be securely bonded to the extruded aluminum base.
2. Manufactured by Wooster Products Inc. American Safety Tread Co. Inc., or equal.

3. Nosing and strips for concrete casting shall be provided with Sure-Hold anchors, chevron shaped continuous full length of nosing or strip.
4. Nosings and anchors for attachment to hydrated concrete stairs and wood stairs shall be similar to those specified below, except they shall be provided with countersunk holes for screws and fasteners.
5. Colors: As selected by Architect to contrast with stair color. Colors shall extend uniformly through the filler.
6. Strip and Nosing Types:
    a. Nosings for sloped riser steel pan stairs: Type WP4J, 4-1/16 inches wide, 3/8 inch thick.
    b. Nosings for new concrete stairs: Type WP4C, 4-1/16 inches wide, 3/8 inch thick, nose projects down 1/4 inch.
    c. Nosings for square edged steel pan stairs: Type WP4SP, 4-1/16 inches wide, 3/8 inch thick nose.
    d. Strips for recessing into concrete stairs: Type WP1A, except 2-1/4 inches wide, 3/8 inch thick. American Safety Tread Co., Type 24, or equal.
    e. Strips for adhering to existing or hydrated concrete: Flex-Tred anti-safety strips, minimum 2-1/4 inches wide. Cut from rolls and round corners.
    f. Strips for anchoring into wood or stone: American Safety Tread Co., Type 24H, or equal, with holes for fasteners, 2-1/4 inches wide.

PART 3 - EXECUTION

3.1 GENERAL

A. Time of Placing: Do not place concrete until reinforcement, conduits, outlet boxes, anchors, hangers, sleeves, bolts, and other embedded materials are securely fastened in place. Contact the inspector at least 24 hours before placing concrete; do not place concrete until inspected by the inspector.

B. Pouring Record: A record shall be kept on the Project site of time and date of placing concrete in each portion of structure. Such record shall be maintained on the Project site until Substantial Completion and shall be available for examination by the Architect and DSA.

3.2 PREPARATION

A. Vapor Retarder: See Section 07 26 16 - Under-Slab Vapor Retarder.

B. Reglets and Rebates:

1. Form reglets and rebates in concrete to receive flashing, frames and other equipment as detailed and required. Coordinate dimensions and locations required with other related Work.
2. If concrete slabs on grade adjoin a wall or other perpendicular concrete surface, form a reglet in wall to receive and carry horizontal concrete Work. Reglet shall

be full thickness of the slab and shall be 3/4 inch wide, unless otherwise indicated. Requirement does not apply to exterior walks, unless specifically indicated.

C. Not used.

D. Screeds: Install screeds accurately and maintain at required grade or slab elevations after steel reinforcement has been installed, but before starting to place concrete. Install screeds adjacent to walls and in parallel rows not to exceed 8 feet on centers.

3.3 INSTALLATION

A. Conveying and Placing:

1. Concrete shall be placed only under direct observation of the inspector. Do not place concrete outside of regular working hours, unless the inspector has been notified at least 48 hours in advance.
2. Concrete shall be conveyed from mixer to location of final placement by methods, which will prevent separation or loss of materials.
3. Concrete shall be placed as nearly as practicable to its final position to avoid segregation due to re-handling or flowing. No concrete that has partially hydrated or has been contaminated by foreign materials shall be placed, nor shall re-tempered concrete or concrete which has been remixed after initial set be placed.
4. In placing concrete in thin sections, provide openings in forms, elephant trunks, tremies or other recognized devices, to prevent segregation and accumulation of partially hydrated concrete on forms or metal reinforcement above level of concrete being placed. Such devices shall be installed so that concrete will be dropped vertically. Unconfined vertical drop of concrete from end of such devices to final placement surface shall not exceed 6 feet.
5. Concrete shall be placed as a continuous operation until placing of panel or section is completed. Top surfaces of vertically formed lifts shall be level.
6. Concrete shall be thoroughly consolidated during placement, and shall be worked around reinforcement and embedded fixtures with mechanical vibrators.
7. Where conditions make consolidation difficult, or where reinforcement is congested, batches of mortar containing same proportions of cement, sand, and water as provided in the concrete, shall first be deposited in the forms to a depth of at least one inch.

B. Compaction and Screeding:

1. Tamp freshly placed concrete with a heavy tamper until at least 3/8 inch of mortar is brought to surface. Concrete shall then be tamped with a light tamper and screeded with a heavy straightedge until depressions and irregularities are eliminated, and surface is true to finish grades or elevations. Remove excess water and debris.
2. Where slabs are to receive separate cement finish or mortar setting bed, continued tamping to raise mortar to surface is not performed. Laitance shall be

removed by brushing with a stiff brush or by light sandblasting to expose clean top surface of coarse aggregate.

C. Floating and Troweling:

1. When concrete has hydrated sufficiently, it shall be floated to a compact and smooth surface. After floating, wait until concrete has reached proper consistency before troweling. Top surfaces shall receive at least 2 troweling operations with steel hand trowel. Prior to and during final troweling, apply a fine mist of water frequently with an atomizing type fog sprayer. Omit troweling for slabs to receive a separate cement finish.
2. For interior finish slabs, final troweling shall provide a hard, impervious, and non-slip surfaces, free from defects and blemishes. Finished surface shall be within a tolerance of 1/8 inch in 10 feet. Avoid burnishing. Do not add cement or sand to absorb excess moisture.
3. Exterior Paving and Cement Walks: Finish as specified above, except surface shall be given a non-slip broom finish to match Sample reviewed by the Architect.
4. Vertical concrete surfaces shall be finished smooth and free from marks or other surface defects.

D. Curing:

1. Concrete shall be maintained above 50 degrees F., and in a moist condition for 7 days after placing, except that high early strength concrete shall be maintained in a moist condition for 3 days.
2. Before applying curing paper, interior floor treated with colored hardener shall be given a heavy protective coat of colored wax left unpolished, and then immediately covered with paper. If wax is not applied within two hours after final troweling, concrete shall be sprayed with a fine water mist and maintained continuously moist until wax is applied, unless spraying is not recommended by hardener manufacturer. After other Work such as plastering and painting has been completed, curing paper shall be removed and waxed floors cleaned of protective wax coating.
3. Forms containing concrete, top of concrete between forms, and exposed concrete surfaces after removal of forms shall be maintained in a thoroughly wet condition for at least 7 consecutive days after placing.
4. If weather is hot or surface has dried out, spray surface of concrete slabs and paving with fine mist of water, starting not later than 2 hours after final troweling and continuing until sunset. Surface of finish shall be kept continuously wet until curing medium has been installed.
5. Immediately after finishing, roof slabs and monolithic floor finish to receive resilient floor covering shall be uniformly and completely coated with liquid curing compound.

a. Install compound in a manner and quantity sufficient to produce a uniform continuous thin film of water-impervious membrane. Compound shall be installed in accordance with manufacturer's directions.

b. Protect adjoining surfaces from damage during installation. If curing compound is not applied immediately, cover finished concrete with wet burlap or curing paper and keep concrete surface wet for a period not to exceed thirty hours following finishing of concrete. At end of that time, burlap or paper shall be removed and curing compound installed as specified above.

c. Immediately after finishing, monolithic floor slabs not scheduled to receive resilient floor covering shall be covered with curing paper. Paper shall be lapped 3 inches at joints and sealed with waterproof sealer. Edges shall be cemented to finish. Repair or replace paper damaged during construction operations.

d. Within 24 hours after finishing, exterior slabs and paving, and interior slabs to receive cement topping or mortar setting beds, shall be covered with sand to a depth of 2 inches and kept thoroughly wet for 7 days.

1) Instead of sand covering, exterior walks and paving where no other surface treatment is specified, may be cured with clear liquid curing compound immediately installed in accordance with manufacturer's directions.

E. Filling, Leveling and Patching:

1. Concrete slabs exhibiting high or low spots and indicated to receive resilient floor covering or soft floor covering, shall have surfaces repaired. High spots shall be honed, or ground with power-driven machines to required tolerances. Low spots shall be filled with latex underlayment, installed in strict accordance with manufacturer's written recommendations.

2. Holes resulting from form ties or sleeve nuts shall be solidly packed, through exterior walls, by pressure grouting with cement grout, as specified. Grouted holes on exposed surfaces shall be screeded flush and finished to match adjoining surfaces.

F. Cement Base: Cement base shall be of the height, thickness, and shape detailed. Base shall be reinforced with one inch mesh, 18 gage, zinc-coated wire fabric. Base finish mixture shall be one part Portland cement, 2 parts of fine aggregate and one part pea gravel. Colored cement base shall include a chemically inert mineral oxide pigment in the mix.

3.4 FINISHING

A. Soda and Acid Wash: Concrete surfaces to receive plaster, paint or other finish, and which have been formed by oil coated forms, shall be scrubbed with a solution of 1-1/2 pounds of caustic soda to one gallon of water. Surfaces where smooth wood or waste molds have been furnished shall be scrubbed with a solution of 20 percent muriatic acid. Wash with clean water after scrubbing.

B. Sacking: Exposed concrete curbs, walls, and other surfaces shall be sacked by an application of Portland cement grout, floated, and rubbed. Sacking shall not be performed until patching and filling of holes has been completed. Entire sacking operation for any continuous area shall be started and completed within the same day.

1. Mix one part Portland cement and 1-1/2 parts fine sand with sufficient water to produce a grout having consistency of thick paint. Wet surface of concrete sufficiently to prevent absorption of water from grout. Apply grout uniformly with a brush or spray gun, then immediately float surface with a cork or other suitable float, scouring wall vigorously.
2. While grout is still plastic, finish surface with a sponge-rubber float, removing excess grout. Allow surface to dry thoroughly, then rub vigorously with dry burlap to completely remove dried grout. No visible film or grout shall remain after rubbing with burlap.

C. Sandblasting: Exterior concrete surfaces to receive stucco dash coat finish, where plywood or other smooth forms have been furnished, shall be uniformly sand-blasted with sharp quartz sand under sufficient air pressure to remove dirt, form oil and other foreign materials, and roughen surface to provide a proper bond. Such surfaces shall be thoroughly washed with clean water after sandblasting.

D. Abrasive: Concrete stair treads, landings, ramps and steps on interior and exterior of buildings, and interior exposed concrete floors in shop buildings shall receive an abrasive finish. Abrasive grains in amount of 30 pounds per 100 square feet shall be evenly installed by dust-on method and embedded into surface during first troweling operation. Additional abrasive grains, in amount of 30 pounds per 100 square feet, shall then be evenly installed and embedded into surface during final troweling operation.

E. Floor Hardener: Exposed interior concrete floors throughout shall be treated with floor hardener, as specified. Install hardener after surface of concrete has reached the point where no excess moisture is present, but while it is still plastic. Hardener shall be installed as follows:

1. Colored Hardener: Install at rate of 40 pounds per 100 square feet of surface for initial application.
2. Gray (natural) Hardener: Install at rate of 20 pounds per 100 square feet of surface for initial application.
3. Hardener shall be evenly distributed and thoroughly floated into surface mortar with a wood float. An additional 20 pounds of hardener, colored or gray, specified as above, shall be installed over each 100 square feet, and troweled to an even surface having uniform color and texture.

F. Cement Grout and Dry-Pack Concrete: Cement grout shall be mixed at the Project site and shall be composed of one volume of Portland cement and 2-1/2 volumes of fine aggregate. Materials shall be mixed dry with sufficient water added to make mixture flow under its own weight. When grout is used as a dry pack concrete, add sufficient water to provide a stiff mixture, which can be molded into a sphere.

G. Broom Finish: Exterior stair treads and landings shall be provided with a non-slip broom finish in addition to abrasive finish specified.

H. Abrasive Stair Nosing: Nosing shall be installed according to manufacturers written recommendations.

3.5 EXPANSION AND CONSTRUCTION JOINTS

A. Construction Joints: Details and proposed location of construction joints shall be as indicated on the Drawings, located to least impair strength of structure, in accordance with the following:

1. Thoroughly clean contact surface by sand blasting entire surface not earlier than 5 days after initial placement.

2. A mix containing same proportion of sand and cement provided in concrete plus a maximum of 50 percent of coarse aggregate shall be placed to a depth of at least one inch on horizontal joints. Vertical joints shall be wetted and coated with a neat cement grout immediately before placing of new concrete.

3. Should contact surface become coated with earth, sawdust, or deleterious material of any kind after being cleaned, entire surface shall be re-cleaned before applying mix.

B. Expansion Joints: Provide expansion joints where indicated in walks and exterior slabs. Space approximately 20 feet apart, unless otherwise indicated. Joints shall extend entirely through slab with joint filler in one piece for width of walk or slab. Joint filler shall be 3/8 inch thick, unless otherwise indicated.

C. Tooled Joints: Slabs, walks and paving shall be marked into areas as indicated with markings made with a V-grooving tool. Marks shall be round-edged, free from burrs or obstructions, with clean cut angles and shall be straight and true. Walks, if not indicated, shall be marked off into rectangles of not more than 12 square feet and shall have a center marking where more than 5 feet wide.

3.6 TESTING

A. Molded Cylinder Tests:

1. Owner Consultant will prepare cylinders. Each cylinder shall be dated, given a number, point in structure from which sample was obtained, mix design number, mix design strength and result of accompanying slump test noted.

2. Separate tests of molded concrete cylinders obtained at same place and time shall be made at age of 3 days, 7 days, and 28 days. A strength test shall be the average of the compressive strength of 2 cylinders, obtained from the same sample of concrete and tested at 28 days or at test age designated for determination of f'c.

3. Test cylinders shall be prepared at the Project site and stored in testing laboratory in accordance with ASTM C 31, and tested in accordance with ASTM C 39.

B. Core Test: At request of the Architect, cores of hardened concrete shall be cut from portions of hydrated structures for testing, in accordance with CBC and ASTM C 42.

1. Provide 4 inch diameter cores at representative places throughout the structure as designated by the Architect.
2. In general, provide sufficient cores to represent concrete placed with at least one core for each 4,000 square feet of building area, and at least 3 cores total for each Project.
3. Where cores have been removed, fill voids with drypack, and patch the finish to match the adjacent existing surfaces.

C. Concrete Consistency: Measure consistency according to ASTM C 143. Test twice each day or partial day's run of the mixer.

D. Adjustment of Mix: If the strength of any grade of concrete for any portion of Work, as indicated by molded test cylinders, fall below minimum 28 days compressive strength specified or indicated, adjust mix design for remaining portion of construction so that resulting concrete meets minimum strength requirements.

E. Defective Concrete:

1. Should strength of any grade of concrete, for any portion of Work indicated by tests of molded cylinders and core tests, fall below minimum 28 days strength specified or indicated, concrete will be deemed defective Work and shall be replaced or adequately strengthened in a manner acceptable to the Architect and DSA.
2. Concrete Work that is not formed as indicated, is not true within 1/250 of span, not true to intended alignment, not plumb or level where so intended, not true to intended grades and levels, contains sawdust shavings, wood or embedded debris, or does not fully conform to Contract provisions, shall be deemed to be defective Work and shall be removed and replaced.

F. Concrete for Equipment Pads, Mechanical and Electrical Work: Unless otherwise indicated, strength shall be 3,000 psi concrete. Exposed concrete shall be provided with a hand trowel finish with radius corners and edges. Form and place concrete where necessary as described in Section 30 10 00: Concrete Forms and Accessories, and reinforced as described in Section 03 20 00: Concrete Reinforcement. Calcium chloride shall not be furnished in any concrete mix provided for the installation of underground electrical conduits. For concrete encasement of more than one conduit, furnish 3/4 inch to 1 inch aggregate as specified for concrete mix.

3.7 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

3.8 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 03 35 15

SEALED CONCRETE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide applied curing, hardener, sealer type curing compound to concrete flooring including preparation of concrete as required for complete installation.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene not less than one week prior to commencing applying hardener sealer at areas indicated to have a hardener sealed finish.

1. Require attendance of those directly affecting work of this Section.

2. Review concrete installation and coordinate required preparation.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of material involved in curing, hardener, sealer for concrete.

B. Samples: Furnish sample panels of concrete with curing, hardener, sealer applied to half of surface; indicate which half has hardener sealer.

C. Maintenance Instructions: Provide written instructions for recommended periodic maintenance.

1.4 QUALITY ASSURANCE

A. Curing, Hardener, Sealer Installers: Firms with not less than five years successful experience applying specified curing, hardener, sealer and acceptable to system manufacturer.

B. Mock-Up: Erect minimum 100 square feet of concrete flooring with curing, hardener, sealer at location as approved. Approved mock-up may be incorporated into Project.

PART 2 - PRODUCTS

2.1 SYSTEM MANUFACTURERS

A. Nox-Crete Products Group (800.669.2738).

B. W.R. Meadows, Inc. (800.342.5976).

C. PROSOCO, Inc. (800.255.4255).

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide applied curing, hardener, sealer to concrete flooring.

B. Regulatory Requirements, VOC Emissions: Comply with applicable limitations for volatile organic compound (VOC) emissions for concrete sealing materials.

C. Accessibility Regulatory Requirements: Provide for assuring access for persons with disabilities in accordance with state and federal regulations for slip resistance.

1. California Regulations: Comply with California Building Standards Code.

2. Federal Regulations: Comply with Americans with Disabilities Act (ADA) Standards.

3. Slip-Resistant Hard Surfaces: Hard surface finishes to comply with requirements of authorities having jurisdiction for slip-resistant hard surfaces, including general code requirements and requirements for access for persons with disabilities.

D. Hardener, Sealer, Densifier: Provide water borne penetrating lithium silicate system designated by system manufacturer as hardener, sealer, densifier.

1. Basis of Design: Nox-Crete Products Group/Duro-Nox LS.

2. Basis of Design: W. R. Meadows, Inc./Liqui-Hard Ultra.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Ensure surfaces to receive hardener sealer are clean and well cured.

B. Do not commence work until surface conditions are within tolerances required for proper finishing based on manufacturer recommendations.

C. Start of work indicates acceptance of conditions.

3.2 PREPARATION

A. Clean concrete slab free from foreign matter and prepare concrete for sealing in accordance with system manufacturer recommendations.

3.3 INSTALLATION

A. Comply with curing, hardener, sealer manufacturer recommendations and application instructions for application of concrete hardener sealer densifier as required to match approved samples and mock-up.

3.4 PROTECTION

A. Comply with system manufacturer recommendations for protecting floors until ready for use. Keep surface dry for minimum 48 hours after application.

B. Do not permit traffic on floors with curing, hardener, sealer for at least 72 hours.

C. Protect floors with curing, hardener, sealer until Substantial Completion.

END OF SECTION

SECTION 04 22 00

CONCRETE MASONRY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Reinforcing steel.
3. Mortar, grout and grouting.
4. Bolts, anchors, hardware, metal frames, and other insert items.

B. Related Sections:

1. Section 01 45 33 - Code-Required Special Inspections.
2. Section 03 10 00 - Concrete Forming and Accessories.
3. Section 03 20 00 - Concrete Reinforcing.
4. Section 03 30 00 - Cast-in-Place Concrete.

1.2 SUBMITTALS

A. Mix Design: Submit grouting mix design.

B. Product Data: Submit manufacturer's Product Data for assembly components, materials, and accessories.

C. Samples: Submit Samples for each type of required masonry unit, including reinforcement and accessories.

1.3 QUALITY ASSURANCE

A. Perform the Work in accordance with CBC, Chapter 21A. Refer to Section 01 45 33 - Code-Required Special Inspections.

B. Comply with requirements of TMS 602/ACI 530.1/ASCE 6.

C. Concrete Masonry Units: Sample and test in accordance with ASTM C 140.

1. Notify the testing laboratory a minimum of 45 days in advance of installing concrete unit masonry, to allow for testing of the units for compression, shrinkage, and absorption. Absorption test requires 40 days.
2. The retained material testing laboratory shall receive five concrete masonry units per test from masonry unit manufacturer, as designed or specified by the Architect, and shall perform and send required test results to the Architect and inspector.

D. Portland Cement: Obtain sample and test in accordance with ASTM C 150.

E. Mortar: Obtain sample and test in accordance with ASTM C 780.

F. Grout: Obtain sample and test in accordance with ASTM C 404.

G. Compressive Tests: Obtain sample and test to verify compliance with the following minimum values:
   1. Mortar: At least 800 psi at 7 days and 1,800 psi at 28 days.
   2. Grout: At least 1,200 psi at 7 days and 2,000 psi at 28 days.
   3. Do not test 28-day specimen when 7-day tests exceed 28-day requirements.

H. Inspection During Installation: Inspector will continuously observe the installation of reinforced masonry.

I. The Owner will be responsible for the costs of original tests and inspection.

J. If core testing is required by DSA, masonry removed by coring operations shall be replaced to match adjoining Work. Core testing shall conform with CBC, Chapter 21A.

1.4 DELIVERY, STORAGE AND HANDLING

A. Store units above grade on level platforms to allow air circulation under stacked units.

B. Cover and protect against wetting before installation.

C. Handle units on pallets or flatbed barrows. Free discharge from conveyor units or transportation in mortar trays is not permitted.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Concrete Unit Masonry: Modular medium weight conforming to ASTM C 90, hollow load-bearing concrete unit masonry.
   1. Provide open-end units at walls to be grouted.
   2. Provide closed-end units at walls and at openings where ends will be exposed in finish Work; provide bond beam blocks where horizontal reinforcing is indicated.
   3. Provide special shapes and accessory units at locations indicated on Drawings.
   4. Except as otherwise specified, provide units in standard gray color.
   5. Masonry unit shall have been cured for a minimum of 28 days.
   6. Masonry unit shall have maximum linear shrinkage or 0.065 percent from saturated to oven dry.

B. Portland Cement: ASTM C 150, Type II, from one source.

C. Mortar: ASTM C 270.

D. Grout: ASTM C 476.

E. Hydrated Lime: ASTM C 207, Type S.

F. Admixture for Grout: Grout Aid Type 2, complying with DSA requirements; as manufactured by Sika Chemical Corp. Refer to Section 01 45 23: Testing and Inspection.

G. Water: Potable and fresh.

H. Cleaning Materials: Shure Klean No. 600 detergent by ProSoCo.

I. Miscellaneous Materials: As required to complete the Work.

J. Sampling and Testing of Mortar: Refer to Section 01 45 23: Testing and Inspection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Discard units with cracked faces, chipped surfaces, or other defects not complying with requirements of ASTM C 216.

3.2 MORTAR AND GROUT MIXING

A. Mortar: Dry, loose volumes. Mix proportions shall be verified by material testing laboratory.

1. Portland Cement: 1 part.
2. Hydrated lime: 1/4 to 1/2 part.
3. Mortar sand: 2-1/4 to 3 parts.
4. Water: to provide required consistency.
5. Mixing time for Silotec Mortar System shall be in accordance with Silotec Mortar System recommendations instead of those indicated in Section 01 45 23: Testing and Inspection.

B. Grout: Shall provide a minimum strength of 2000 psi unless noted otherwise. Grout strengths in excess of more than 2000 psi shall be verified by a material testing laboratory.

1. Fine Grout: Portland Cement 1 part; sand 2 ¼ to 3 parts; water to attain a slump of 8 to 10 inches.
2. Coarse Grout: Portland Cement 1 part; pea gravel 2 ¼ to 3 parts; water to attain a slump of 8 to 10 inches.

C. Measurements: Proportion by accurate volume measurements. Measure in calibrated devices that can be checked at any time.

1. Add water for workable consistency.
2. Shovel measurements are not permitted.

D. Mixing: Place sand, cement, and water in mixer in that order, while mixer is running; mix for 3 minutes, add lime, and admixture (for grout), and continue mixing until a uniform mass is provided, but in no case less than 10 minutes.

1. Equipment for mixing and handling mortar and grout shall be acceptable to DSA.
2. Batches of less than one sack of cement, and fractional sack batches are not permitted.

E. Re-tempering Time Limit: Re-temper on mortar boards, for at least 3 minutes, but not more than 10 minutes when required, by adding water into a basin formed by mortar, and installing mortar into it. Dashing, or pouring of water over mortar is not permitted.

1. Do not re-temper mortar which has become hard or non-plastic.
2. Discard mortar, which has not been installed within one hour after original mixing.
3. Ready-Mix Grout: Grout batched off the Project site and delivered by mixer truck shall be subject to same procedures and controls as prescribed by DSA building code requirements. Refer to Section 01 45 33 - Code-Required Special Inspections.

3.3 INSTALLATION OF MASONRY UNITS

A. Workmanship: Install masonry plumb and true to line with straight level joints of uniform thickness. Maintain masonry clean during and after installation.

1. Lay-out and incorporate embedded hardware items.
2. Assist other trades with built-in items, which require cutting and fitting of masonry.
3. Cut block units with a diamond saw or carborundum wheel. Trowel or chisel cutting is not permitted.
4. Keep cavities clear of droppings and debris. Remove promptly.

B. Reinforcing Steel: Install as indicated on Drawings. Except as otherwise indicated, install reinforcement in accordance with standards of Concrete Reinforcing Steel Institute and to requirements specified in Section 03 20 00 - Concrete Reinforcing. Do not splice vertical reinforcing except where indicated on the Drawings.

C. Shoring: Provide temporary shoring for lintels with sufficient strength to carry load without deflecting. Remove temporary shoring 28 days after masonry has been installed.

D. Block Installation: Clean dirt and dust from surfaces before installation. Do not wet masonry units except in very dry weather.

1. Foundation preparation: Sandblast tops of concrete starting surfaces, wash-off by high pressure water jet, and slurry coat surfaces with neat cement grout for bond to masonry.
2. Install masonry with mortar to required joint thickness. Install blocks with 3/8-inch mortar bed on entire horizontal surface. Fill head joints solid, install tightly to adjoining units. Provide 3/8-inch joint thickness.
    a. Hold racking to a minimum.
    b. No toothing is permitted.
    c. If it becomes necessary to move a unit after it has been installed, remove the unit, discard the mortar, and install the unit in fresh mortar.
3. Anchor Bolts: Provide one-inch minimum grout space around protruding bolts.
4. Bond: Unless otherwise indicated, install units in common running bond.

5. Finish Joint Treatment: Unless otherwise indicated, cut both interior and exterior joints flush, and tool slightly concave to a dense, uniform surface.
6. Grouting: Unless noted otherwise on Drawings, completely fill cells with grout.

E. Steel Door Frames:

1. Locate doorframes accurately, install plumb, "Ram-set" or "Rawlplug" to floor surface and brace in position before start of masonry installation.
   a. Frames are specified to be furnished with adjustable anchors.
   b. Fill interior of frames solid with mortar or grout as walls are constructed.
2. Provide temporary wood spreaders from jamb to jamb and from head to floor to ensure that jambs do not bow-in, distort from a straight line, or deflect from superimposed loads during construction.

3.4 LOW-LIFT GROUTING FOR HOLLOW MASONRY UNITS

A. After mortar joints have set, cores are cleaned of mortar and debris, and reinforcing is installed and inspected, grout cells in 2 feet maximum lifts, providing specified pea gravel grout mix. Refer to Section 01 45 23: Testing and Inspection.

B. Grouted walls shall be solid and without voids.

C. Grout may be installed by pump, tremie or bucket, using hoppers to avoid spilling on exposed surfaces.

D. Place an initial 2 feet high lift around, thoroughly compact, then place balance of each lift, compacting again through total lift, with hardwood spading sticks or pencil vibrators.

E. Stop grout pours 1-1/2 inches below top of each lift.

F. Remove and discard spilled grout from upper units before grout can harden.

G. Bracing: Adequately brace walls against wind and other forces during and after construction.

H. Re-puddle top of grout after initial set.

3.5 HIGH-LIFT GROUTING OPTION FOR HOLLOW MASONRY UNITS

A. High-lift grouting method is permitted provided following qualifications and requirements are met. High-lift grouting shall apply only to cell sizes available with 8 inch and wider block units. This method is subject to approval of DSA.

B. Provide bond beam units, inverted for start course, and omit alternate blocks or cut openings in alternate face shell on bottom course for cleanouts.

C. Remove projecting mortar fins. Wash out every cell thoroughly using a water jet, which has sufficient force to remove mortar from the interior of the cells, and from reinforcing steel.

D. Plug each cleanout by setting a "soap" in mortar into opening and securely bracing it in place to prevent displacement. If masonry is not exposed in finish Work, cleanouts may be formed.

E. Grouting:

1. Grout masonry cells solid, free from voids.
2. Do not install grout until masonry has set a minimum of 3 days in warm weather (50 degrees to 85 degrees F.) or 5 days in cool, damp weather (35 degrees to 50 degrees F.).
3. Pump grout into grout cell space as rapidly as practical. Discard grout not in place within one hour after water was first added to batch.
4. Install grout with maximum slump without segregation. Place in a continuous pour, in maximum lifts of 4 feet, with approximately 20 minutes elapsed time between any 2 successive lifts.

F. Consolidating:

1. Consolidate and reconsolidate grout using 3/4 inch lightweight flexible cable vibrators.
2. First consolidation shall be performed to bottom of lift immediately after placement, and in case of subsequent lifts, through previously placed lift.
3. Top lift shall be reconsolidated no sooner than 30 minutes after grout has been installed.
4. Vibrating of reinforcing steel is not permitted.

G. Bracing: Adequately brace walls against wind and other forces during and after construction.

3.6 CURING

A. Remove efflorescence, stains, debris, excess grout, and foreign matter.

B. During curing, or for any other purpose, do not saturate masonry with water.

C. For low-humidity conditions, dampen the wall surface with a very light fog spray continuously for 3 days to cure mortar in joints.

3.7 PARGE COAT

A. Apply parge coat to the earth side of surfaces that are to receive waterproofing.

B. A Portland cement and sand mix (1:3.5 by volume), or Type M or S mortar may be used for the parge coat.

C. Parging should be applied to damp (not saturated) concrete masonry in two ¼” (6mm) thick layers. The first coat should be roughened when partially set, hardened for 24 hours, and then moistened before second coat is applied. The second coat should be troweled to a smooth, dense surface.

D. The parge coat should be beveled at the top to form a wash, and thickened at the bottom to form a cove between the base of the wall and the top of footing.

3.8 CLEANING

A. At completion of masonry Work, remove misplaced mortar, grout or other foreign substances, and clean surfaces which will be exposed in finish Work with specified cleaner, or with clean water and stiff fiber brushes.

B. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.9 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 04 22 70

WATERPROOF CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide waterproof concrete masonry unit construction, with integral waterproofing, mortar, reinforcement, anchorage, surface sealer and accessories as required for complete installation.

1. Cut and fit concrete masonry for work of other trades.

2. Integral Waterproofing: Provide integral water-repellent admixtures for both concrete masonry units and mortar at all exterior wall conditions.

3. Sealer: Provide penetrating type surface sealer for exterior exposed surfaces of concrete masonry assemblies; system compatible with integral waterproofing.

B. Work Installed not Furnished: Build in items supplied by other trades and suppliers.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this section. Require attendance of parties directly affecting work of this section.

1. Review installation procedures and coordination required with related work.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's certificate concrete masonry units conform to specified standards.

B. Shop Drawings: Furnish drawings for reinforcing; show bar schedules, diagrams of bent bars, ties and arrangements and assemblies.

C. Samples: Furnish section of exposed concrete masonry face indicating texture and color along with each type of colored mortar.

D. Certificates: Furnish integral waterproofing manufacturer certification indicating materials are appropriate for applications indicated, as compatible with materials involved in Project, and masonry manufacturer is trained in proper use of materials.

1.4 QUALITY ASSURANCE

A. Mock-Up: Provide minimum 4'-0" by 6'-0" sample panel of concrete masonry construction, clearly indicating joints and methods of reinforcing. Erect mock-up at Project Site, in location as approved by Architect.

1. Approved mock-up will be used for quality control as minimum standard of work acceptable for Project.

2. Approved mock-up may be incorporated into Project.

1.5 SITE CONDITIONS

A. Temperature: Maintain materials to minimum 50 degrees F prior to, during and 48 hours after completion of masonry work.

1. Do not place masonry units when air temperature is below 40 degrees F.

2. During colder weather, work may continue where equipment is used to maintain constant temperature above 40 degrees F and masonry work completed and in progress is kept covered.

3. Protect masonry construction from direct wind and sun exposure when temperatures exceed 99 degrees F and relative humidity is less than 50 percent.

B. Bracing: Provide temporary bracing during erection of masonry work, maintain in place until building structure provides permanent bracing.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description Includes: Provide concrete masonry unit construction, with integral waterproofing, mortar, reinforcement, anchorage, surface sealer, and accessories.

B. Regulatory Requirements: Perform concrete unit masonry work in accordance with requirements of California Building Standards Code except where more restrictive requirements are specified.

1. Fire Rated Materials: Provide materials and systems which have passed ASTM E119 tests and are approved for fire ratings indicated on Drawings.

C. Concrete Masonry Units: Hollow loadbearing units conforming to ASTM C90.

1. Concrete Masonry Manufacturers:

a. Angelus Block, Co., Inc.
b. Basalite Concrete Products.
c. Orco Block Co., Inc.
d. RCP Block and Brick, Inc.
e. Substitutions: Refer to Section 01 25 00.

2. Weight: Provide normal, medium, or light weight units unless specific weight classification is indicated.

a. Normal Weight, 125 pcf or more.
b. Medium Weight, 105 to 125 pcf.
c. Light Weight, less than 105 pcf.

3. Compressive Strength: Comply with ASTM C90, with minimum 800 psi per unit and minimum average of 1000 psi for three units, when tested in accordance with ASTM C140.

4. Size: Nominal 8" by 16" face measurement with thickness as indicated on Drawings.

5. Exposed Face Surfaces: Dense with uniform texture and color throughout Project.

6. Exposed Face Surfaces: Dense with finish as approved by Architect prior to manufacturing; uniform texture and color throughout Project.

    a. Texture: precision (smooth) as indicated on Drawings.

    b. Finish: Post installation sandblasting as indicated on drawings.

    c. Colors: Integral color as indicated, as directed on drawings.

7. Special Shapes: Provide proper specially shaped units for bond beams, lintels, corners and jambs.

    a. Exposed Special Shapes: Design bond beams, lintels, corners and jambs and fillers to match and compliment block units; where required perform cutting with masonry saw.

8. Integral Waterproofing Admixture System at Exterior Wall Conditions: System of integral water-repellent admixtures, liquid polymeric admixture mixed with concrete during production.

    a. Manufacturers:

        1) W.R. Grace & Co., Masonry Products Div./Dry-Block System.
        2) Specon, Inc./Hydro System.
        3) Acme-Hardesty/Acme-Shield.
        4) Substitutions: Refer to Section 01 25 00.

    b. Wind Driven Rain Permeance: Class E, ASTM E514.

D. Mortar: Conform to ASTM C270, Type S.

1. Masonry Cement/Premix Mortar: Acceptable only if manufacturer certifies product is made of cement and lime, with no limestone or pulverized material used in lieu of hydrated lime.

E. Grout: Conform to ASTM C476; minimum compressive strength 2,000 psi.

F. Mortar and Grout Materials:

1. Portland Cement: ASTM C150, Type I.

2. Hydrated Lime: ASTM C207, Type S.

3. Aggregates: Standard masonry mortar and grout type; clean, dry and protected against dampness, freezing and foreign matter.

    a. Mortar Aggregates: Conform to ASTM C144.
    b. Grout Aggregates: Conform to ASTM C404.

4. Water: Clean, drinkable, free of injurious amounts of oil, alkali, organic matter or other harmful materials.

5. Integral Waterproofing Mortar Admixture System at Exterior Wall Conditions: System of integral water-repellent admixtures, liquid polymeric admixture mixed with concrete during production.

    a. Manufacturers:

        1) W.R. Grace & Co., Masonry Products Div./Dry-Block System.
        2) Specon, Inc./Hydro System.
        3) Acme-Hardesty/Acme-Shield.
        4) Substitutions: Refer to Section 01630.

    b. Wind Driven Rain Permeance: Class E, ASTM E514.

    c. Mortar Admixture: Materials shall not reduce flexural nor compressive strength of mortar when tested in accordance with ASTM C780 and ASTM C1072.

    d. Mix in integral waterproofing in strict accordance with material manufacturer recommendations to assure specified permeability performance.

6. Exposed Mortar Colors: Integral color as indicated, as directed by Architect where not otherwise indicated.

G. Color Admixtures: Pure mineral oxide colors conforming to ASTM C979 as required for approved colors.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

H. Reinforcement and Anchorages: Provide reinforcing and anchorages as indicated on Drawings.

1. Deformed Bars: ASTM A615, Grade 60 for bars No. 3 and larger, unless otherwise indicated.

2. Plain Bars: ASTM A675, Grade 80 for No. 2 bars, unless otherwise indicated.

3. Joint Reinforcement: ASTM A82, free from mill scale and excess or loose rust deposits.

I. Control Joints: Closed cell neoprene or PVC factory fabricated solid sections, resistant to oils and solvents, flexible at temperatures from 40-degree F after five hours exposure; ASTM D2240 minimum durometer 70.

J. Surface Sealer: Penetrating sealer recommended by integral waterproofing manufacturer for application to concrete masonry systems using integral waterproofing.

1. Apply at exposed face, exterior conditions.

PART 3 - EXECUTION

3.1 PREPARATION

A. Supply metal anchors required for concrete masonry to appropriate trades for placement; provide in quantities required for Project and direct placement.

1. Ensure items built in by other trades are properly located and sized.

B. Establish lines, levels and coursing, protect from disturbance.

C. Clean surfaces to receive masonry free from dirt, debris, and laitance.

3.2 INSTALLATION

A. Do not wet concrete masonry units; lay units in mortar with full bed and head joints, properly jointed with other work.

1. Fully bond corners and intersections.

2. Align cells of units to maintain clear, unobstructed space for reinforcing and grout, keep cells free of mortar and debris.

3. Comply with integral waterproofing system manufacturer for installation of concrete masonry with integral waterproofing and for mortar and grout with integral waterproofing for complete watertight concrete masonry assembly.

B. Do not shift or tap masonry units after mortar has taken initial set, where adjustment must be made, remove mortar and replace.

C. Buttering corners of joints and deep or excessive furrowing of mortar joints is not acceptable.

D. Perform job site cutting with proper power tools to provide straight, true, unchipped edges.

E. Provide structural anchorage or retention in accordance with applicable code requirements.

F. Ensure masonry courses are of uniform height, make vertical and horizontal joints equal and of uniform thickness.

1. Lay concrete unit masonry in running bond.

2. Course one block unit and one mortar joint to equal 8".

G. Remove excess mortar and projections, take care to prevent breaking block corners.

H. Tolerances:

1. Maximum allowable variation from masonry unit to adjacent masonry unit is 1/32" where masonry units are exposed in finished construction and where waterproofing is applied over masonry units.

2. Maximum allowable variation from plane of wall is 1/4" in 10 feet, and maximum 1/2" in 20 feet or more.

3. Maximum allowable variation from plumb is 1/4" per story, non-cumulative, and maximum 1/2" in two or more stories.

4. Maximum allowable variation of level coursing is 1/8" in 3 feet, 1/4" in 10 feet and 1/2" in 30 feet.

I. Mortar Joints: Compress joints with a round or curved metal tool.

1. Compress mortar joints with jointing tool with minimum diameter three times width of mortar joint, to provide a flush surface where resilient base or waterproofing is to be applied over masonry.

J. Reinforcement and Anchorage: Fully reinforce corners and intersections. Lap splices minimum 6". Extend splices minimum 16" each side of openings.

1. Support and secure reinforcing bars to maintain within 1/2" of dimensioned position.

2. Retain vertical reinforcement in position at top and bottom of cells and at intervals not to exceed 192 bar diameters.

K. Lintels: Provide reinforced concrete masonry unit lintels over openings where steel lintels are not scheduled.

1. Use full length reinforcing bars.

L. Grouting: Place grout when concrete masonry units are surface dry; consolidate and reconsolidate by mechanical vibration.

1. Fine Grout: Use for spaces less than 2" in width using low lift grouting techniques.

2. Coarse Grout: Use for spaces 2" or more in width.

3. When grouting is stopped for more than one hour, terminate grout approximately 2" below top of upper masonry unit to form positive key for subsequent grout placement.

4. Low-Lift Grouting: Place first lift of grout at 16" and place subsequent lifts at 8" increments.

5. Hi-Lift Grouting: Use only where specifically approved by Architect and only where grout spaces are 3" or greater in width.

    a. Provide minimum 4" high cleanouts at bottom of each cell to be grouted, clean out cells and inspect prior to grouting.

    b. Pump grout into cells with maximum 48" lifts.

M. Built-In Work: As work progresses, build in frames, lintels, nailing strips, anchor bolts, plates, and other items supplied by other trades.

1. Build in items plumb and true.

2. Do not build in organic materials which will be subject to rot or deterioration.

3. Bed anchors of frames in mortar joints; fill frame voids solid with mortar; fill masonry cores with grout minimum 12" from framed openings.

N. Cutting and Fitting: Cut and fit for chases, pipes, conduit, sleeves, and grounds; coordinate with work of other Specification sections to ensure correct size, shape and location.

3.3 CLEANING

A. Remove excess mortar and smears upon completion of masonry work.

B. Point or replace defective mortar, match adjacent work.

C. Clean soiled surfaces using a non-acidic solution which will not harm masonry or adjacent materials, consult masonry manufacturer for acceptable cleaners.

D. Use non-metallic tools in cleaning operations.

E. Sealer: Apply penetrating surface sealer in accordance with integral waterproofing manufacturer recommendations and application instructions for applications indicated.

3.4 PROTECTION

A. Maintain protective boards at exposed external corners which may be damaged by construction activities; protect without damaging completed work.

1.3 SYSTEM DESCRIPTION

A. Regulatory Requirements:

1. Structural steel shall conform to CBC requirements, except that steel manufactured by acid Bessemer process is not permitted for structural purposes.
2. Sheet and strip steel other than those listed in CBC, if provided for structural purpose, shall comply with DSA requirements.

1.4 SUBMITTALS

A. Shop Drawings:

1. Submit Shop Drawings, including complete details and schedules for fabrication and shop assembly of members, and details, schedules, procedures and diagrams showing the sequence of erection. Fully detail minor connections and fastenings not shown or specified in the Contract Documents to meet required conditions using similar detailing as shown in the Contract Documents. Include a fully detailed, well controlled sequence and technique plan for shop and field welding that minimizes locked in stresses and distortion; submit sequence and technique plan for review by the Architect.
   a. Include details of cuts, connections, camber, and holes in accordance with Figure 4.5 of AWS D1.1-02 or AISC Section J1.8, weld position plan and other pertinent data. Indicate welds by standard AWS symbols, and show size, length and type of each weld.
   b. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed for Work specified in other section.
   c. Erection and Bracing Plan and Erection Procedure: Submit an erection and framing plan, including columns, beams, and girders, prepared, signed and sealed by a structural engineer registered in the State of California in accordance with Title 8 CCR, Section 1710. Maintain a copy at the Project site as required by the California Division of Industrial Safety.
   d. Submit a list of steel items to be galvanized.
2. Product Data:
   a. Submit copies of fabricator’s specifications and installation instructions for the following products. Include laboratory test reports and other data required demonstrating compliance with these Specifications:

1) Structural steel, each type; including certified copies of mill reports covering chemical and physical properties.
2) Welding electrodes.
3) Welding gas.
4) Unfinished bolts and nuts.
5) Structural steel primer paint.
6) High-strength bolts, including nuts and washers.

3. Manufacturer's Mill Certificate:
   a. Submit, certifying that products meet or exceed specified requirements.
4. Mill Test Reports:
   a. Submit manufacturer's certificates, indicating structural yield and tensile strength, destructive and non-destructive test analysis.
5. Charpy-V-Notch (CVN) Impact Test: Submit certified copies of Charpy-V-Notch (CVN) Impact Test by the manufacturer for applicable steel members and components.
   a. Charpy-V-Notch (CVN) Impact Test for Base Metal: hot rolled shapes with flanges 1_1/2 in. thick and thicker and plates 2 in. thick and thicker shall shall subjected to Charpy-V-Notch impact test in accordance with "Seismic Provisions for Structural Steel Buildings", Part A3.3
   b. Not used
   c. Charpy-V-Notch test shall be performed by the manufacturer employing Test Frequency (P) in accordance with ASTM A 673 and utilizing standard specimen sizes shown in Figure 6 of ASTM E 23. The absorbed energy in a CVN impact test shall not be less than that specified in "Seismic Provisions for Structural Steel Buildings", Part A3.3
6. Submit certified copies of tests by manufacturer for fine grain practice. Structural steel base material, as described above, shall be manufactured using fully killed fine grain practice having grain size number 5 or better as determined by ASTM E 112.
7. Weld Procedure Specifications (WPS): Submit weld procedures according to AWS D1.1 for each welded joint on project (whether prequalified or qualified by testing) to Owner's testing laboratory for approval. After approval by testing laboratory, submit to Architect for record. Weld procedures shall indicate joints details and tolerances, preheat and interpass temperature, post-heat treatment, single or multiple stringer passes, peening of stringer passes for groove welds except for the first and the last pass, electrode type and size, welding current, polarity and amperes and root treatment. The welding variables for each stringer pass shall be recorded and averaged, from these averages the weld heat input shall be calculated. Submit the manufacturer's product data sheet for all welding material used.
8. Welder's Certificates: Field welders shall be Project certified in accordance with AWS D1. 1-15. Shop welders shall be Project certified for FCAWS in accordance with AWS D1. 1-15.
9. Test Reports: Submit reports of tests conducted on shop and field welded and bolted connections. Include data on type of test conducted and test results.
10. Welding Material Certification: Comply with AWS D1.8 Section 1.22. Submit to Owner's testing laboratory.

1.5 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement, except as otherwise indicated:
   1. American Institute of Steel Construction (AISC) “Code of Standard Practice for Steel Buildings and Bridges,
   2. Perform welding in accordance with AWS Standards, AWS D1.1, and California Building Code Section 1705A.2.5 and approved weld procedure.

B. Shop fabrication shall be inspected in accordance with CBC.

C. Erect mock-up panel of fabricated structural steel meeting Architecturally Exposed Structural Steel tolerances for exposed areas. Approval by Architect is required. Mock-up to remain for comparison but may not be left as part of the work.

1.6 DELIVERY, STORAGE AND HANDLING

A. Store structural steel above grade on platforms, skids or other supports.

B. Protect steel from corrosion.

C. Store welding electrodes in accordance with AWS D 12.1.

D. Store other materials in a weather-tight and dry place until installed into the Work.

PART 2 - PRODUCTS

2.1 GENERAL

A. Stock Materials: Provide exact materials, sections, shapes, thickness, sizes, weights, and details of construction indicated on Drawings. Changes because of material stock or shop practices will be considered if net area of shape or section is not reduced thereby, if material and structural properties are at least equivalent, and if overall dimensions are not exceeded.

2.2 MATERIALS

A. Structural Steel: All wide flange shapes shall conform to ASTM A992 Grade 50. Brace Frame Base Plate shall be ASTM A572 Grade 50. Other steel shall conform to ASTM A36.

B. Unfinished Threaded Fasteners: ASTM A307, Grade A, regular low carbon bolts and nuts.

C. High-Strength Threaded Fasteners: ASTM A325, ASTM A490 or ASTM F1852 quenched and tempered, steel bolts, nuts and washers.

D. Primer: Lead-free metal primer, Tnemec 10-99, Rust-Oleum X-60, or equal.

E. Steel Pipe: ASTM A53, Type E or S, Grade B.

F. Structural Tubing:
   1. Hot-formed, ASTM A501.
   2. Cold-formed, ASTM A500, Grade B.

G. Galvanizing: ASTM A123.

H. Welding Electrodes: Provide electrodes recommended by manufacturer for seismic connections.
   1. Comply with latest AISC Seismic Provision.

I. Shear stud connectors: ASTM A108, Grade 1015 forged steel, headed, uncoated, granular flux filled shear connector or anchor studs by Nelson Stud Welding Division of TRW, Lorain, OH, or equal.

J. Grout: ASTM C1107, non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing additives, capable of developing a minimum compressive strength of 7,000 psi at 7 days; of consistency suitable for application and a 30 minute working time.

K. Threaded Rods: ASTM F1554, grade as noted per plan.

2.3 FABRICATION

A. Cleaning and Straightening Materials: Materials being fabricated shall be thoroughly cleaned of scale and rust, and straightened before fabrication. Cleaning and straightening methods shall not damage material. After punching or fabrication of component parts of a member, twists or bends shall be removed before parts are assembled.

B. Cutting, Punching, Drilling and Tapping: Unless otherwise indicated or specified, structural steel fabricator shall perform the cutting, punching, drilling and tapping of Work so that Work of other trades will properly connect to steel Work.

C. Milling: Compression joints depending on contact bearing shall be furnished with bearing surfaces prepared to a common plane by milling.

D. Use of Burning Torch: Oxygen cutting of members shall be performed by machine. Gouges greater than 3/16 inch that remain from cutting shall be removed by grinding. Reentrant corners shall be shaped notch free to a radius of at least 1/2 inch. Gas cutting of holes for bolts or rivets is not permitted.

E. Galvanizing: After fabrication, items indicated or specified to be galvanized shall be galvanized in largest practical sizes. Fabrication includes operations of shearing, punching, bending, forming, assembling or welding. Galvanized items shall be free from projections, barbs, or icicles resulting from the galvanizing process.

F. Welding:

1. Type of steel furnished in welded structures shall provide chemical properties suitable for welding as determined by chemical analysis. Welds shall conform to the requirements of CBC Chapter 17A. Conform to AWS D1.1 and D1.8, and CBC Chapter 22A.

2. Materials and workmanship shall conform to the requirements specified herein and to CBC requirements, modified as follows:

   a. No welded splices shall be permitted except those indicated on Drawings unless specifically reviewed by the Architect.

   b. Drawings will designate joints in which it is important that welding sequence and technique be controlled to minimize shrinkage stresses and distortion.

3. Welding shall be performed in accordance with requirements of the AWS Structural Welding Code.

   a. Welded Joint Details: comply with AISC Seismic Provisions.

4. Architecturally Exposed Structural Steel: Verify that weld sizes, fabrication sequence, and equipment used for Architecturally Exposed Structural Steel will limit distortions to allowable tolerances. Prevent surface bleeding of back-side welding on exposed steel surfaces. Grind smooth exposed fillet welds ½ inch (13 mm) and larger. Grind flush butt welds. Dress exposed welds.

5. Remove erection bolts on welded, Architecturally Exposed Structural Steel; fill holes with plug welds; and grind smooth at exposed surfaces.

G. Shop Finish:

1. Notify the inspector when Work is ready to receive shop prime coat. Work shall be inspected by the inspector before installation of primer.
2. Structural steel and fittings, except galvanized items, which will be exposed when building is completed, shall receive a coat of primer.
3. The primer specified shall be spray applied, filling joints and corners and covering surfaces with a smooth unbroken film. The minimum dry film thickness of the primer shall be 2.0 mils.
4. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete or high strength bolted.

H. Comply with fabrication tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for structural steel.

I. Fabricate Architecturally Exposed Structural Steel with exposed surfaces smooth, square, and free of surfaces blemishes, including pitting, rust and scale seam marks, roller marks, rolled trade names, and roughness.

1. Remove blemishes by filling, grinding, or by welding and grinding, prior to cleaning, treating and shop priming.
2. Comply with fabrication requirements, including tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for Architecturally Exposed Structural Steel.

J. Not used.

2.4 SHOP AND FIELD QUALITY CONTROL

A. A special inspector, approved by DSA to inspect the Work of this section, shall inspect high-strength bolted connections. The Owner will provide a DSA approved independent testing laboratory to perform tests and prepare test reports in accordance with CBC 2213A. The inspector shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.

B. An AWS CWI certified special inspector, approved by DSA to inspect the Work of this section, shall inspect welded connections. The Owner will provide a DSA approved independent testing laboratory to perform tests and prepare test reports in accordance with CBC 1704A.2.4. The inspector shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.

C. The independent testing laboratory shall conduct and interpret test and state in each report whether test specimens comply with requirements, and specifically state any deviations there from.

D. Provide access to all places where structural steel Work is being fabricated or produced so required inspection and testing can be performed.

E. The independent testing laboratory may inspect and/or test structural steel at plant before shipment; however, Architect reserves the right at any time before Final Completion to deem materials not in compliance with the specified requirements as defective Work.

F. Correct defects in structural Work when inspections and laboratory test reports indicate noncompliance with specified requirements. Perform additional tests as may be required to reconfirm noncompliance of original Work, and as may be required to show demonstrate compliance of corrected Work.

G. Welding: Inspect and test during fabrication and erection of structural steel assemblies as follows:

1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in the Work. Record Work required and performed to correct deficiencies.
2. Inspect welds. Welds shall be visually inspected before performing any non-destructive testing. Groove weld shall be inspected by ultrasonic or other approved non-destructive test methods. Testing shall be performed to AWS D1.1 Table 6.3 cyclically loaded non-tubular connections.
3. Ultrasonic testing shall be performed by a specially trained and qualified technician who shall operate the equipment, examine welds, and maintain a record of welds examined, defects found, and disposition of each defect. Repair and test defective welds.
4. Rate of Testing: Completed welds contained in joints and splices shall be tested 100 percent either by ultrasonic testing or by radiography.
5. Welds, when installed in column splices, shall be tested by either ultrasonic testing or radiography.
6. Base metal thicker than 1-1/2 inches, when subjected to through-thickness weld shrinkage strains, shall be ultrasonically inspected by shear wave methods for discontinuities directly behind such welds. Tests shall be performed at least 48 hours after completed joint has cooled down to ambient air temperature.
7. Any material discontinuities shall be reviewed based on the defect rating in accordance with the criteria of AWS D1.1 table 6.3 by the Architect and DSA.
8. Other method of non-destructive testing and inspection, for example, liquid dye penetrate testing, magnetic particle inspection or radiographic inspection may be performed on weld if required.
9. Lamellar Tearing: Lamellar-tearing resulting from welding is a crack (with ero tolerance) and shall be repaired in accordance with AWS D1.1.
10. Lamination: The rejection criteria shall be based on ASTM A 435.
11. Where testing reveals lamination or conditions of lamellar tearing in base metal, the steel fabricator shall submit a proposed method of repair for review by the Architect. Test repaired areas as required.
12. Magnetic Particle Testing: Magnetic particle testing when required shall be provided in accordance with AWS D1.1 for procedure and technique. The standards of acceptance shall be in accordance with AWS D1.1 - Qualification.

H. Lamellar Tearing: Prior to welding plates 1 to 1-1/2 inches thick and greater and rolled shapes within the distance from 6 inches above the top of the joint to 6 inches below the bottom of the joint shall be checked by ultrasonic testing for laminations in base metal which may interfere with the inspection of the completed joint. Should these defects occur, members will be reviewed by the Architect and DSA. Welding procedure specifications in sub-section 1.5G specify welding practices to minimize lamellar tearing.

I. Prior Testing of Base Material: Test material before fabrication.

J. Lines and levels of erected steel shall be certified by a State of California licensed surveyor as set forth in related Division 01 section.

K. Welded studs shall be tested and inspected by the special inspector in accordance with requirements of AWS D1.1 - Stud Welding.

L. Record Drawings: After steel has been erected, correct or revise Shop Drawings and erection diagrams to correspond with reviewed changes performed in the field.

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify governing dimensions and conditions of the Work before commencing erection Work.

1. Report discrepancies between drawings and field dimensions to Architect before commencing work.
2. Beginning of installation means erector accepts existing conditions and surfaces underlying or adjacent to work of this section.

B. Provide temporary shoring and bracing, and other support during performance of the Work. Remove after steel is in place and connected, and after cast-in-place concrete has reached its design strength.

3.2 ERECTION

A. Install structural steel accurately in locations, to elevations indicated, and according to AISC specifications and CBC requirements.

B. Clean surfaces of base plates and bearing plates.

1. Install base and bearing plates for structural members on wedges, shims, or setting nuts as required.
2. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims; cut off flush with edge of base or bearing plate before packing with grout.

C. Maintain erection tolerances of structural steel within AISC Code of Standard Practice for Steel Buildings and Bridges.

1. Members and components, plumbed, leveled and aligned to a tolerance not to exceed one-half the amount permitted for structural steel. Contractor to provide adjustable connections between Architecturally Exposed Structural Steel and the structural steel frame or the masonry or concrete supports, in order to provide the erector with means for adjustment.

D. Align and adjust various members forming part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact after assembly. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

E. Do not permit thermal cutting during erection of structural steel.

F. Where indicated for field connections, provide standard bolts complying with ASTM A 307.

G. Install high strength steel bolts at locations indicated. Assembly and installation shall be in accordance with CBC requirements.
   1. Allowable hole sizes: 1/16 inch larger than bolt size.
   2. Use friction type connection with standard hardened steel circular, square or rectangular washer under bolt nut.
   3. Thoroughly clean area under bolt head, nut and washer. Remove all paint, lacquer, oil or other coatings except organic zinc-rich paints in accordance with SSPC, SP-2.
   4. Tighten bolts by power torque wrench or hand wrench until twist-off.

H. Contractor shall be responsible for correcting detailing and fabrication errors and for correct fitting of all members and components.

I. Erect structural steel plumb and level and to proper tolerances as set forth in the AISC Manual. Provide temporary bracing, supports or connections required for complete safety of structure until final permanent connections are installed.

J. Install column bases within a tolerance of 1/8 inch of detailed centerlines, level at proper elevations. Support bases on double nuts and solidly fill spaces under bases with dry-pack cement grout.

K. Provide anchor bolts with templates and diagrams. Contractor shall be responsible for proper location and installation of bolts. Correct deficiencies and errors.

L. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and apply galvanizing repair paint according to ASTM A780.

3.3 FITTING

A. Closely fit members, finished true to line and in precise position required to allow accurate erection and proper joining in the field.

B. Drilling to enlarge unfair holes will not be allowed. Allow only enough drifting during assembly to bring parts into position, but not sufficient enough to enlarge holes or distort the metal. Do not heat rolled sections, unless approved by Architect.

3.4 PUNCHING AND DRILLING

A. Punch material 1/16 inch larger than nominal diameter of bolt, wherever thickness of metal is equal to or less than the diameter of the bolt plus 1/8 inch.

B. Drill or sub-punch and ream where metal is equal to or more than the diameter of the bolt plus 1/8 inch. Make diameter for sub-punched and sub-drilled holes 1/16 inch larger than nominal diameter of bolt.

C. Precisely locate holes to ensure passage of bolt through assembled materials without drifting. Enlarge holes when necessary to receive bolts by reaming; flame cutting to enlarge holes is not acceptable. Structural Steel members with poorly matched holes will be rejected.

3.5 FINISHING

A. After erection, spots or surfaces where paint has been removed, damaged, or burned off and field rivets, bolts, and other field connections not concealed in the work, shall be cleaned of dirt, oil, grease, and burned paint and furnished with a spot coat of the same primer installed during shop priming.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Install paint to exposed areas with the same material installed during shop painting. Install by brush or spray to provide a minimum dry film thickness of 1.5 mils.

3.6 FIELD QUALITY CONTROL

A. Owner will provide a special inspector and independent testing laboratory to perform field inspections and tests and to prepare test reports.

B. Correct deficiencies in or remove and replace structural steel that inspections and test reports indicate do not comply with specified requirements.

3.7 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project Site.

3.8 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.9 HANDLING

A. Both in shop and in the field, transport, handle and erect to prevent damage or overstressing of any component.

END OF SECTION

SECTION 05 30 00

METAL DECKING

PART 1 - GENERAL

1.01 SUMMARY

A. Provisions of Division 01 apply to this section.

B. Section Includes:

1. Metal decking as indicated.
2. Shear connectors.

C. Related Sections:

1. Section 01 40 00: Testing and Inspection.
2. Section 05 12 00: Structural Steel
4. Section 07 60 00: Flashing and Sheet Metal.

D. Referenced Standards

1. Conform to current adopted reference standards by date of issue of the current code cycle and the Date of the Contract Documents.
2. 2019 CBC – California Building Code, (CCR) California Code of Regulations, Title 24, Part 2, Chapters 17A, 22A, and Section 2210A.
3. ASTM A36 - Specification for Structural Steel.
4. ASTM A 108 - Specification for Steel Bars, Carbon, Cold-Finished, Standard Quality.
5. ASTM A572 - Grade 50, Structural Steel.
6. ASTM A653/A653M-98 - Sheet Steel, Zinc-Coated (Galvanized) or Zinc - Iron Alloy Coated by the Hot- Dip Process.
7. ASTM A 1008 - Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
8. AWS D 1.1 - Structural Welding Code.
9. AWS D 1.3 - Structural Welding Code, Sheet Steel.

1.02 SYSTEM DESCRIPTION

A. Performance Requirements: Compute properties of deck sections on basis of effective design width as limited by provisions of the AISI specifications. Provide no less than deck section properties specified, including section modulus and moment of inertia per foot of width.

B. Regulatory Requirements:

1. Requirements of Regulatory Agencies: Underwriters Laboratories Inc. (UL) approval for the decking when installed as a part of an assembly indicated on Drawings in which fire resistive construction ratings are required.

2. Work of this section shall be in accordance with CBC.

1.03 SUBMITTALS

A. Shop Drawings: Drawings, sections and details indicate type of decking, location, finish, gage of metal, arrangement of sheets, necessary fabrication to incorporate decking into the Work, and relationship to openings and flashing.

1.04 QUALITY ASSURANCE

A. General: Metal decking steel shall conform to requirements of strengths and properties of standards specified.

B. Qualifications of Welders: Properly certified for the type of Work involved in compliance with CBC requirements.

C. Continuous inspection of welding will be performed by a special inspector, approved by Structural Engineer to inspect the Work of this section. Refer to Section 01 40 00: Testing and Inspection.

D. Identification of metal decking steel shall conform to the standards specified in Section 01 40 00: Testing and Inspection.

1. Fabricator shall furnish sufficient evidence to the Architect attesting compliance with specified requirements.

2. Conform to CBC requirements. Unclassified or unidentified decking is not permitted. Furnish deck manufacturer's certified mill analyses and test reports for each heat covering decking having Fy of 33 Ksi or less. In addition, for decking having Fy greater than 33 Ksi, testing laboratory shall perform one tension and elongation test and one bend or flattening test for each gage.

E. Unidentifiable Steel: Steel which is not readily identifiable as to grade from markings and test records is not permitted to be provided as part of the Work of this section.

F. Payment For Tests and Inspections:

1. Owner shall pay inspection and testing costs of identifiable steel.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. BHP Steel Building Products, Inc.

B. Verco Manufacturing Co.

C. Epic Deck

D. Members of Steel Deck Institute (SDI).

2.02 MATERIALS

A. Metal Decking: Roll-formed sheets conforming to ASTM A653 Grade 50 minimum, with G90 zinc coating.

1. Section properties shall conform to applicable provisions of latest edition of AISI - Specification for the Design of Cold-Formed Steel Structural Members.

2. **Provide decking as indicated on the architectural and structural drawings.**

B. Flexible Closure Strips for Deck: Vulcanized, closed-cell, expanded chloroprene elastomer, complying with ASTM D 1056, Grade SCE #41.

1. Brittleness Temperature: Minus 40 degrees F, ASTM D 746.

2. Flammability Resistance: Self-extinguishing, ASTM D 1692.

C. Metal Flashing and Closures: 22 gage minimum, with ASTM A653, G90 zinc coating, unless noted otherwise on drawings.

D. Shear Connectors: Headed stud type, ASTM A 108 Grade 105 or 1020, cold-finished carbon steel complying with AISC specifications.

2.03 FABRICATION

A. Corrugated sheets or sections shall be designed to support required live load between supporting members.

B. Wherever practical, provide decking in lengths to span over three or more supports.

C. Except as detailed otherwise, provide decking with interlocking side laps, 2-1/2 inches minimum end bearing, and 1-1/2 inches minimum side bearing.

D. Welding: Provide materials and methods in accordance with recommendations of steel decking manufacturer and reviewed submittals. Hold decking tight to the supporting elements with screws or other means for proper welding or crimping of the decking edges. Conform to AWS D1.3, CBC Standards, and to the patterns and weld types indicated, with welds free from sharp edges and protrusions. Field coat welds and abraded surfaces at completion with a anodic type galvanizing repair paint. Omit the field paint coating where welds or abrasions are covered by concrete fill or sprayed fireproofing.

PART 3 - EXECUTION

3.01 OPENINGS

A. Cut and reinforce units to provide openings which are located and dimensioned on the structural and mechanical Drawings.

B. Provide openings, as approved by the Architect and Structural Engineer, for other Work not indicated on the Drawings.

3.02 INSTALLATION

A. Install metal decking in accordance with decking manufacturers' recommendations, requirements of Drawings, Shop Drawings, and Specifications.

B. Install metal decking on supporting steel framework and adjust to final position before permanently fastening in place.

1. Install each unit to proper bearing on supports.
2. Install units in straight alignment for entire length of run of cells with close registration of cells of one unit with those of abutting unit.

C. Fasten decking to steel framework at ends of units and at intermediate supports. Welding shall be as indicated on Drawings.

D. Fasten side laps between supports as indicated on Drawings.

E. Perform field cutting parallel with cells in area between cells, leaving sufficient horizontal material to permit welding to support steel.

F. Weld shear connectors to supports thru decking units as required by Drawings. Weld only on clean, dry surfaces. Do not weld shear connectors thru two layers of decking units.

3.03 METAL FLASHINGS AND CLOSURES

A. Furnish, install, and weld in position, sheet metal closure flashing, closure angles, closure plates, profile plates, and shear plates.

B. Close open ends of cell runs at columns, openings, walls, similar interruptions and termination.

3.04 FIELD QUALITY CONTROL

A. Inspection: Install steel decking under continuous inspection according to CBC Chapter 22A, Chapter 17A, and Section 01 40 00

3.05 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.06 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 05 31 00

STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal decking.
2. Shear connectors.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 01 45 33 - Code-Required Special Inspections.
3. Section 05 12 00 - Structural Steel Framing.

1.2 REFERENCES

A. AISI - Specifications for the Design of Cold-Formed Steel Structural Members.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

C. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

D. ASTM D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.

E. ASTM D1056 - Standard Specification for Flexible Cellular Materials-Sponge or Expanded Rubber.

F. AWS D1.3 - Structural Welding Code Sheet - Steel.

1.3 PERFORMANCE REQUIREMENTS

A. Compute properties of deck sections on basis of effective design width as limited by provisions of the AISI specifications. Provide no less than deck section properties specified, including section modulus and moment of inertia per foot of width.

B. Regulatory Requirements:

1. Requirements of Regulatory Agencies: DSA and Underwriters Laboratories Inc. (UL) approval for the decking when installed as a part of an assembly indicated on Drawings in which fire resistive construction ratings are required.
2. Work of this section shall be in accordance with CBC.

C. Manufacturers shall be members of Steel Deck Institute (SDI).

1.4 SUBMITTALS

A. Shop Drawings: Drawings, sections and details indicate type of decking, location, finish, gage of metal, arrangement of sheets, necessary fabrication to incorporate decking into the Work, and relationship to openings and flashing.

1.5 QUALITY ASSURANCE

A. General: Metal decking steel shall conform to requirements of strengths and properties of standards specified.

B. Qualifications of Welders: Properly certified for the type of Work involved in compliance with CBC requirements.

C. Continuous inspection of welding will be performed by a special inspector, approved by DSA to inspect the Work of this section. Refer to Section 01 45 33 - Code-Required Special Inspections. The Project Inspector shall be responsible for monitoring the work of the special inspector to ensure that the inspection program is satisfactorily completed.

D. Identification of metal decking steel shall conform to the standards specified in Section 01 45 33 - Code-Required Special Inspections.

1. Fabricator shall furnish sufficient evidence to the Architect attesting compliance with specified requirements.

2. Conform to CBC requirements. Unclassified or unidentified decking is not permitted. Furnish deck manufacturer's certified mill analyses and test reports for each heat covering decking having a minimum Fy of 33 Ksi. In addition, for decking having Fy greater than 33 Ksi, testing laboratory shall perform one tension and elongation test and one bend or flattening test for each gage.

E. Unidentifiable Steel: Steel which is not readily identifiable as to grade from markings and test records is not permitted to be provided as part of the Work of this section.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. ASC Steel Deck. (IAPMO # 0329)

B. OR equal with valid IAPMO or ICC report that meets/exceeds minimum section properties noted on plan.

2.2 MATERIALS

A. Metal Decking: Roll-formed sheets conforming to ASTM A653, with G90 zinc coating.

1. Section properties shall conform to applicable provisions of latest edition of AISI - Specification for the Design of Cold-Formed Steel Structural Members.

B. Flexible Closure Strips for Deck: Vulcanized, closed-cell, expanded chloroprene elastomer, complying with ASTM D1056, Grade SCE #41.

1. Brittleness Temperature: Minus 40 degrees F, ASTM D746.

2. Flammability Resistance: Self-extinguishing,

C. Metal Flashing and Closures: 22 gage minimum, with ASTM A653, G90 zinc coating.

D. Shear Connectors: Headed stud type, ASTM A108 Grade 1015, cold-finished carbon steel complying with AISC specifications.

2.3 FABRICATION

A. Corrugated sheets or sections shall be designed to support required live load between supporting members.

B. Provide decking in lengths to span over three or more supports.

C. Except as detailed otherwise, provide decking with interlocking side laps, 2 ½-inch minimum end bearing, and 1 ½-inch minimum side bearing.

D. Welding: Provide materials and methods in accordance with recommendations of steel decking manufacturer and reviewed submittals. Hold decking tight to the supporting elements with screws or other means for proper welding or crimping of the decking edges. Conform to AWS D1.3, and to the patterns and weld types indicated, with welds free from sharp edges and protrusions. Field coat welds and abraded surfaces at completion with an anodic type galvanizing repair paint. Omit the field paint coating where welds or abrasions are covered by concrete fill or sprayed fireproofing.

PART 3 - EXECUTION

3.1 OPENINGS

A. Cut and reinforce units to provide openings which are located and dimensioned on the structural and mechanical Drawings.

B. Provide openings, or other Work not indicated on the Drawings.

3.2 INSTALLATION

A. Install metal decking in accordance with decking manufacturers' recommendations, requirements of Drawings, Shop Drawings, and Specifications.

B. Install metal decking on supporting steel framework and adjust to final position before permanently fastening in place.

1. Install each unit to proper bearing on supports.

2. Install units in straight alignment for entire length of run of cells with close registration of cells of one unit with those of abutting unit.

C. Fasten decking to steel framework at ends of units and at intermediate supports. Welding shall be as indicated on Drawings.

D. Fasten side laps between supports as indicated on Drawings.

E. Perform field cutting parallel with cells in area between cells, leaving sufficient horizontal material to permit welding to support steel.

F. Weld shear connectors to supports thru decking units as required by Drawings. Weld only on clean, dry surfaces. Do not weld shear connectors thru two layers of decking units.

3.3 METAL FLASHINGS AND CLOSURES

A. Furnish, install, and weld in position, sheet metal closure flashing, closure angles, closure plates, profile plates, and shear plates.

B. Close open ends of cell runs at columns, openings, walls, similar interruptions and termination.

3.4 FIELD QUALITY CONTROL

A. Inspection: Install steel decking under continuous inspection according to CBC Chapter 1705A.2.2.

1. Welding inspection for steel deck diaphragms shall conform to CBC Section 1705A.2.5.

3.5 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.6 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 05 40 00

COLD-FORMED METAL FRAMING

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. Not used.

B. Interior load-bearing wall framing.

C. Exterior non-load-bearing, curtain-wall framing.

D. Not used.

1.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads without deflections greater than the following:

1. Exterior Load-Bearing Wall Framing: Horizontal deflection of L/240 of the wall height.

2. Interior Load-Bearing Wall Framing: Horizontal deflection of L/240 of the wall height.

3. Exterior Non-Load-Bearing, Curtain-Wall Framing: Horizontal deflection of L/360 of the wall height.

1.3 SUBMITTALS

A. Product Data: For each product indicated.

B. Shop Drawings: Include layout, spacings, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners as noted on drawings.

C. Mill certificates.

D. Welder certificates.

E. Research/evaluation reports.

1.4 QUALITY ASSURANCE

A. Not used.

B. Mill certificates signed by steel sheet producer

C. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code--Sheet Steel."

D. Fire-Test-Response Characteristics: Where metal framing is part of a fire-resistance-rated assembly, provide framing identical to that of assemblies tested for fire resistance per ASTM E119 by a testing agency acceptable to authorities having jurisdiction.

1. Fire-Resistance Ratings: Indicated by GA File Numbers in GA-600, "Fire Resistance Design Manual," or by design designations from UL's "Fire Resistance Directory" or from the listings of another testing agency.

E. Comply with HUD's "Prescriptive Method for Residential Cold-Formed Steel Framing."

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers listed in ICC ESR 3064P.

2.2 MATERIALS

A. Steel Sheet: ASTM A 653/A 653M, structural steel, G60 (Z180) zinc coating, Grade 33 for minimum uncoated steel thickness of 0.0428 inch and less; Grade 50 for minimum uncoated steel thickness of 0.0538 inch and greater.

B. Wall Framing: Manufacturer's standard steel studs, of web depths indicated, with stiffened flanges, complying with ASTM C 955.

C. Joist Framing: Manufacturer's standard C-shaped steel joists, of web depths indicated, punched, with stiffened flanges, complying with ASTM C 955.

2.3 ACCESSORIES AND MISCELLANEOUS MATERIALS

A. Fabricate steel-framing accessories of the same material and finish used for framing members, with a minimum yield strength of 33,000 psi, of manufacturer's standard thickness and configuration, unless otherwise indicated.

B. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process according to ASTM A123.

C. Anchor Bolts: ASTM F1554, Grade 55, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A153/A153M, Class C.

D. Expansion Anchors: Fabricated from corrosion-resistant materials, size, spacing, and embedment per plan.

E. Power-Actuated Anchors: Fabricated from corrosion-resistant materials, size, spacing, and embedment per plan.

F. Mechanical Fasteners: Corrosion-resistant-coated, self-drilling, self-threading steel drill screws.

G. Cement Grout: Portland cement, ASTM C150, Type I; and clean, natural sand, ASTM C404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

H. Thermal Insulation: ASTM C665, Type I, unfaced mineral-fiber blankets produced by combining glass or slag fibers with thermosetting resins.

PART 3 EXECUTION

3.1 INSTALLATION

A. Preparation: Grout bearing surfaces uniform and level to ensure full contact of bearing flanges or track webs on supporting concrete or masonry construction. contact of bearing flanges or track webs on supporting concrete or masonry construction.

B. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened, according to ASTM C1007, manufacturer's written recommendations, and requirements in this Section.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed metal framing members by welding or screw fastening, as standard with fabricator. Wire tying of framing members is not permitted.
3. Install framing members in one-piece lengths.
4. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed.
5. Install insulation in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
6. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.

C. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

D. Load-Bearing Wall Installation: Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends. Squarely seat studs against webs of top and bottom tracks. Space studs as indicated, set plumb, align, and fasten both flanges of studs to top and bottom tracks.

1. Align studs vertically where wall-framing continuity is interrupted by floor framing. Where studs cannot be aligned, continuously reinforce track to transfer loads.
2. Align floor and roof framing over studs. Where framing cannot be aligned, continuously reinforce track to transfer loads.
3. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.
4. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated

or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.

5. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings.
6. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
7. Install horizontal bridging in stud system, spaced as indicated on Shop Drawings. Fasten at each stud intersection.
8. Install miscellaneous framing and connections, including supplementary framing, blocking, bracing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

E. Non-Load-Bearing, Curtain-Wall Installation: Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure. Space studs as indicated; set plumb, align, and fasten both flanges of studs to track, unless otherwise indicated.

1. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
2. Install horizontal bridging in curtain-wall studs, spaced in rows indicated on Shop Drawings. Fasten at each stud intersection.
3. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, fasteners, and stud girts, to provide a complete and stable curtain-wall-framing system.

F. Joist Installation: Install, align, and securely anchor perimeter joist track sized to match joists as indicated on Shop Drawings. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten to both flanges of joist track.

1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches. Reinforce ends and bearing points of joists as indicated on Shop Drawings.
2. Space joists not more than 2 inches from abutting walls and at spacings indicated.
3. Frame openings with built-up joist headers consisting of joist and joist track, nesting joists, or another combination of connected joists if indicated.
4. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement, or as indicated. Install web stiffeners to transfer axial loads of walls above.
5. Install bridging at each end of joists and at intervals indicated. Fasten bridging at each joist intersection as indicated.

6. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.
7. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

G. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A780 and manufacturer's written instructions.

3.2 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing agency to perform field quality-control testing.
1. Field and shop welds will be subject to testing and inspection.
2. Remove and replace Work that does not comply with specified requirements.
3. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected Work with specified requirements.

END OF SECTION

SECTION 05 50 00

METAL FABRICATION

PART - 1 GENERAL

1.1 Description:

A. Section Includes:

1. Light structural steel framing members and structural steel support members, with required bracing, welding and fasteners.

2. Steel and aluminum, materials for miscellaneous metal fabrications specified in this section and required but not specified in other sections.

3. Anchors and fasteners for connection to concrete and steel construction.

4. Shrinkage-resistant grout and grouting of structural framing base plates, equipment anchors and miscellaneous metal fabrications.

5. Characteristics, including fabrication and finish requirements for metal fabrications not otherwise specified in other sections.

6. Galvanizing of steel products.

7. Shop priming and painting of steel fabrications.

8. Miscellaneous metal fabrications, such as:

   a. Loose bearing and leveling plates.
   b. Steel angle nosings and thresholds.
   c. Rough hardware.
   d. Sleeves for penetrations through structural members and stud partitions.

B. Related Sections:

1. Section 03 20 00 – Concrete Reinforcing: Placement of embedded products.

2. Section 03 30 00 – Cast-in-Place Concrete: Materials and methods for grouting of structural members.

3. Section 06 10 00 – Rough Carpentry: Metal framing anchors.

4. Section 09 90 00 – Painting and Coating: Field priming; field-applied finish on interior metal fabrications.

G. Steel Structures Painting Council (SSPC): SSPC Painting Manual, Volumes 1 and 2.

1.3 Submittals:

A. Product Data: Submit catalog data for all standard production products.

B. Shop drawings:

1. Indicate fabrication and installation of metal fabrications.

2. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.

3. Include erection drawings, elevations, and details where applicable.

4. Indicate welded connections using standard AWS welding symbols. Indicate net weld lengths.

5. For products indicated to comply with certain design loadings, include structural analysis data sealed and signed by a Professional Structural Engineer registered to practice in the State of California, who was responsible for their preparation.

C. Product Data: Submit catalog data for all standard production products.

D. Coating Submittals:

1. Product Data: Submit manufacturer's product data for each coating, Including generic description, complete technical data, surface preparation, and application instructions.

2. Color Samples: Submit manufacturer’s color samples showing full range of standard colors.

3. Manufacturer’s Quality Assurance: Submit manufacturer’s certification that coatings comply with specified requirements and are suitable for intended application.

4. Applicator’s Quality Assurance: Submit list of a minimum of 5 completed projects of similar size and complexity to this Work. Include for each project:

a. Project name and location.
b. Name of owner.
c. Name of contractor.
d. Name of architect.
e. Name of coating manufacturer.
f. Approximate area of coatings applied.
g. Date of completion.

5. Warranty: Submit manufacturer’s standard warranty.

1.4 Quality Assurance:

A. Regulatory Requirements: Conform to Uniform Building Code (UBC), Chapter 22.

B. Fabricator's Qualifications: Fabricator of light structural steel framing members and other miscellaneous metal fabrications of structural character shall be approved by the Building Official in accordance with applicable code provisions.

C. Welder's Qualifications: Welding shall be performed by certified welders qualified in accordance with procedures specified in applicable referenced AWS standard, using materials, procedures and equipment of the type required for the Work. Certify that

each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone re-certification.

D. Coordination: Provide templates and sleeves for incorporation of embedded items into the work specified elsewhere herein.

E. Coordination: Provide templates and sleeves for incorporation of embedded items into the Work specified in other sections.

F. Field-Verified Dimensions: Prior to fabrication, field verify dimensions and details of construction. Immediately report variances in writing to Engineer.

1.5 Delivery, Storage and Handling:

A. Storage, General: Store products in enclosed, well-ventilated spaces, not in contact with soil or vegetation and not subject to inclement weather.

B. Delivery, Storage and Handling, Galvanized Products:

1. Stack and bundle during transport and store to allow air flow between galvanized surfaces.

2. Load for transport to permit continuous drainage should wetting occur.

3. Do not rest galvanized products on cinders or clinkers.

1.6 Project Conditions:

A. Field Inspection of Fabricated Products: Prior to installation, inspect products for damage and verify markings and dimensions against reviewed submittals.

B. Environmental Conditions: Do not install products intended for interior locations when spaces are uncovered and unprotected from inclement weather.

C. Coordination: Coordinate metal fabrications Work with Work specified in other sections so that related Work shall be accurately and properly joined.

PART - 2 PRODUCTS

2.1 Ferrous Metals:

A. Ferrous Metal Surfaces, General: For metal fabrications exposed to view upon completion of the Work, provide ferrous metals materials selected for their surface flatness, smoothness, and freedom from surface blemishes. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, rolled trade names, roughness, and, for steel sheet, variations in flatness exceeding those permitted by reference standards for stretcher-leveled sheet.

B. Steel Shapes: Steel plates, bars, angles, channels, and H-sections: ASTM A36.

C. Steel Tube:

1. Hot-rolled: ASTM A501.

2. Cold-formed: ASTM A500.

D. Steel Pipe: ASTM A53 (black steel and hot-dip galvanized).

E. Steel Sheet:

1. For structural uses: Hot-rolled, ASTM A570; cold-rolled, ASTM A611.

2. For nonstructural uses: Cold-rolled, ASTM A366; hot-rolled, ASTM A569.

F. Steel for Galvanized Products:

1. Structural shapes, plates and bars: From fully killed or semi-killed steel, ASTM A36 or A572, except silicon content in the range 0 to 0.4 percent or 0.15 to 0.25 percent, as applicable, only.

2. Steel fasteners: ASTM 307, Grade A or B for bolts; ASTM A563, Grade A for nuts.

3. Sheet steel: ASTM A526, with ASTM A525, Coating Designation G90, for precoated sheet; ASTM A569 or A570 for sheet used in fabrications.

4. Steel for pipe and tubing: ASTM A53, A120 or A595 Grade A or B.

5. Galvanizing: See requirements specified below.

2.2 Corrosion-Resistant (Stainless) Steel:

A. Bars, Shapes and Forgings: ASTM A276, Type 302 or 304 as best suited for intended purpose.

B. Plates, Sheets and Strips: ASTM A167 or ASTM A176, Type 302 or 304 as best suited for intended purpose.

C. Finish: No. 4, polished, unless otherwise indicated.

2.3 Aluminum Materials:

A. Aluminum Bars, Rod and Wire and Non-Structural Tubes: ASTM B211 for rolled or cold-finished; ASTM B221 for extruded. Provide alloy and temper best suited for

purpose.

B. Aluminum Sheet and Plate: ASTM B209, temper best suited for purpose.

C. Cast Aluminum: ASTM B103, alloy and temper best suited for purpose.

D. Finishes:

1. Unexposed sheet and plate: Mill finish.

2. Castings: Sandblast finish, medium, equal to NAAMM Metal Finishing Manual, Designation AA-M43.

3. Anodizing: When indicated, AA Class I, except Class II for products in corrosive atmosphere, coating thickness in conformance to AA Designation System for Aluminum Finishes, polished satin finish on aluminum before coating, with clear lacquer overcoating.

2.4 Hardware and Industrial Cloth:

A. Hardware and Industrial Cloth (Wire Mesh): 4 mesh (1-inch square) by 23 gauge steel mesh, as produced by McNichols Co., Tampa, FL or approved equal.

2.5 Anchors, Fasteners and Accessory Materials:

A. Anchors and Fasteners, General: Same material, color and finish as the metal to which applied, unless otherwise indicated.

B. Exterior Exposure: Provide stainless steel.

C. Type, Size and Spacing: Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate.

D. Screw Head, Typical: Unless otherwise noted, exposed screws shall be phillips oval or flat head, countersunk.

E. Standard Bolts and Nuts, Steel: ASTM A307, Grade A, hexagonal head.

F. Lag Screws and Bolts, Steel: ANSI B18.2.1, type and grade best suited for the purpose, hexagonal or square head.

G. Plain Steel Screws: FS FF-S-85, FS FF-S-92 and FS FF-S-111; type and grade best suited for the purpose.

H. Stainless Steel Screws: AISI 300 Series.

I. Self-Drilling Metal Fasteners: TEKS by Buildex Division, Illinois Tool works, Inc.

J. Plain Steel Washers: FS FF-W-92, round, carbon steel.

K. Lock Washers: FS FF-W-84, helical spring, carbon steel.

L. Toggle Bolts: FS FF-W-588, type, class and style as required for substrate.

M. Concrete and Masonry Anchors, Wedge-Type: As indicated on the Plans or, if not indicated, Kwik-Bolt or Red Head, or approved equal; provide type and size as indicated or, if not indicated, as directed by Engineer.

N. Concrete and Masonry Anchors, Self-Threading: TAPCON, as manufactured by Buildex Division, Illinois Tool Works, Inc., or approved equal.

O. Fiber Plugs and Screws: Not permitted.

P. Lead Expansion Shields: Not Permitted.

Q. Power-Driven Fasteners: Use only if approved by Engineer, generally not permitted where not specifically indicated or in load-bearing installations; Fed Spec FF-P-395 or Fed Spec GGG-D-777; Hilti, RamSet or approved equal.

R. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for the metal alloy to be welded.

2.6 Paints and Coatings:

A. Shop Primer Paint:

1. Shop primer, general: Coordinate primer with finish paint and coating, as applicable, to provide sound foundation for field-applied topcoats despite prolonged exposure during construction. Refer to Section 09905 - Field Painting and Section 09970 - Coatings for Exterior Steel.

2. Shop primer for ferrous metal at exposed exterior locations: Series 90-97 Tnemec-Zinc Organic Zinc-Rich Primer, as manufactured by Tnemec Company, Inc., Kansas City, MO, or approved equal.

3. Shop primer for ferrous metal at concealed exterior locations and for interior locations: Tnemec Series 115, modified alkyd rust-inhibitive primer, or manufacturer's or fabricator's standard, fast-curing, lead-free, universal modified alkyd primer, complying with performance requirements of FS TT-P-645.

4. Shop primer for galvanized steel, for exposed exterior locations: Series 66 Epoxoline Two-Part Catalyzed Epoxy Coating, as manufactured by Tnemec

Company, Inc., Kansas City, MO, or approved equal.

B. Field Primer and Finish Paints: As specified in Section 09 90 00 - Field Painting and in Section 09 97 00 - Coatings for Exterior Steel.

C. Bituminous Coating: High-build mineral-filled coal tar pitch coating, 46-450 Heavy Tnemecol, as manufactured by Tnemec Company, Inc., Kansas City, MO, or approved equal; or a cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

2.7 Grouting Compounds:

A. Metallic Shrinkage-Resistant Grout: For filling under equipment and interior miscellaneous metal fabrications; pre-mixed factory-packaged compound, metallic aggregate, minimum 7000 psi 28-day compressive strength. Confirm product selection with manufacturer's recommendations for intended use.

1. Firmix by Euclid Chemical Co., Cleveland, OH

2. Embeco 636 or Embeco 885 by Master Builders Technology, Inc., Cleveland, OH.

3. Kemox G by Sika Corporation, Lyndhurst, NJ

4. Ferrolith G by Sonneborn Building Products, Division of ChemRex, Inc., Minneapolis, MN.

5. Or approved equal.

B. Non-Metallic Shrinkage-Resistant Grout: For filling around anchors for exterior miscellaneous metal fabrications; pre-mixed, non-metallic, non-corrosive, non-staining product containing selected silica sands, portland cement, shrinkage compensating agents, plasticizing and water-reducing agents, complying with CE-CRD-C621, minimum 7000 psi 28-day compressive strength.

1. Euco N.S. by Euclid Chemical Co., Cleveland, OH

2. Masterflow 713 or Masterflow 928 by Master Builders Technology, Inc., Cleveland, OH.

3. Or approved equal.

C. Shrinkage-Resistant Setting Grout: For setting railing posts and similar components in sleeves or blockouts in concrete; pre-mixed, natural aggregate, minimum 7000 psi 28-day compressive strength, Set Grout, as manufactured by Master Builders Technology, Inc., Cleveland, OH, or approved equal.

D. Non-Shrink Polymer (Epoxy) Grout: For setting anchor bolts in concrete.

1. For anchor bolts for structural members: As noted on Plans.

2. For anchor bolts for non-structural components: Polymer (epoxy) grout, Brutem MP or AB, as recommended by manufacturer for intended use, as manufactured by Master Builders Technology, Inc., Cleveland, OH, or approved equal.

2.8 Metal Fabrications, General:

A. Metal Fabrications, General: Provide metal fabrications of shapes and sizes indicated for profiles shown.

1. Where specific sizes are not indicated, provide materials of sufficient size, thickness and type to provide necessary strength and durability.

2. Thickness of metal, details of metal, details of assembly and support shall give ample strength and stiffness for the intended purpose.

3. Provide brackets, flanges and anchors of cast or formed metal of the same type material and finish fabricated product, unless otherwise indicated.

4. For exterior fabrications, allow for thermal movement in the design, fabrication, and installation of metal fabrications, to prevent buckling, opening up of joints, and overstressing of welds and fasteners. Accommodate temperature range of 100 degrees F.

B. Preparation Before Fabrication: Remove loose mill scale and rust and remove twists and bends in manners not injurious to materials and finishes.

C. Fabrication: Fabricate and finish metal items in accordance with the Plans and reviewed shop drawings.

1. Contractor shall verify measurements before fabrication.

2. Hot-dip galvanize fabricated ferrous items after fabrication. Field connections shall be bolted or screwed where possible. Avoid field cutting and welding which damage galvanized coating.

3. Fabricate and shop-assemble in largest practical sections for delivery to site.

4. Prepare and reinforce fabrications as required to receive applied items.

D. Cutting and Fitting: Fabricate with accurate angles and surfaces, true to the required lines and levels and as required to suit installation conditions.

1. Fabricate items with joints tightly fitted and secured.

2. Make exposed joints tight, flush, and hairline.

3. Punch, drill and reaming in manner to leave clean, true lines and surfaces.

   a. Oversize hole 1/16-inch by punching, when material thickness is equal to or less than bolt diameter plus 1/8-inch.

   b. Sub-punch 1/16-inch smaller than bolt and drill or ream to oversize by 1/16-inch, when material thickness is thicker than bolt diameter plus 1/8-inch.

4. Gas cutting of steel will be acceptable where stress will not be transmitted through flame-cut surfaces.

   a. Make cuts clean and to contour.

   b. Deduct 1/8-inch from effective width of members cut by torch.

5. Cut, reinforce, drill and tap miscellaneous metal work as indicated to receive finish hardware, screws, and similar items.

6. Provide cutouts, fittings, and anchorage provisions as required for coordination of assembly and installation with other Work.

E. Edges: Ease exposed edges to a radius of approximately 1/32 inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work. Remove sharp or rough areas on exposed traffic surfaces.

F. Welding: Weld corners and seams continuously to comply with AWS recommendations and the following:

   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

   2. Obtain fusion without undercut or overlap.

   3. Remove welding flux immediately.

   4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.

G. Coordination: Make provisions to connect metal fabrications with or to receive work specified in other sections.

H. Connections, General: Component parts of built-up members shall be well-pinned with closely-fitted contact. Conceal connections where possible. Otherwise, make countersinks for concealment after fabrication, except where noted.

I. Joints, General: Fit or miter to hairline tolerances. Provide lugs, clips, anchors and miscellaneous fastenings necessary for complete assembly and installation. Component parts of built up members shall be well pinned with closely fitted contact.

1. Joints on finished surfaces: Provide welds ground smooth and filled.

2. Joints exposed to weather or water: Form joints to exclude water or provide weep holes where water may accumulate.

3. Sheet metal joints: Hem exposed edges.

4. Bolted and Screwed Connections: Provide holes and connections for Work specified in other sections. Use bolts for field connections only. Provide washers under heads and nuts bearing on wood. Draw all nuts tight and nick threads of permanent connections. Use beveled washers where bearing is on sloped surfaces. Where screws must be used for permanent connections in ferrous metal, use flat head type, countersunk, with screw slots filled and finished smooth and flush.

J. Embedded Fabrications: For embedment in concrete, provide weld on lugs or anchors as detailed or required.

K. Brazing: Brazing shall be of adequate strength and durability with joints tight and flush, smooth and clean. All exposed surfaces shall be ground and finished flush, free of brazing discoloration and other marks. Brazing on finished surfaces shall be indistinguishable from parent metal.

L. Welding: Conform to AWS D1.1. Do not field weld galvanized components to remain unfinished. Grind welds smooth and flush with base material. Re weld to fill holes. Putties and fillers will not be accepted.

M. Light Structural Steel Framing Fabrications: Unless otherwise indicated, fabricate units from structural steel shapes, plates, and steel bars, with continuously welded joints and smooth exposed edges.

1. General: Design of fabrications shall be by licensed Professional Engineer, registered in the State of California. Fabricate structural steel members in accordance with AISC Specifications and the Uniform Building Code (UBC), Chapter 22.

2. Shop Connections: Make welded connections in accordance with AWS D1.1.

3. Welding shall be done in the shop unless otherwise indicated.

4. All shop welding shall be continuously inspected.

5. Field Connections: Provide bolted connections, except where welded connections are indicated.

6. Column Bases: Provide base plates shop welded to columns.

7. Weld Finishing: Grind and dress smooth all welds exposed in finished Work to preserve shape and profile of welded item.

8. Shop Painting: Shop prime all structural steel, except steel to be encased in concrete or to be fireproofed. Apply one-coat shop primer paint system in accordance with SSPC Paint System PS 7.01.

N. Steel Tubing and Piping Fabrications: Close ends with plate stock, no exposed ends; grind edges.

O. Shop Assembly: Pre-assemble items in shop to greatest extent possible to minimize field splicing and assembly.

1. Disassemble units only as necessary for shipping and handling limitations.

2. Use connections that maintain structural value of joined pieces.

3. Clearly mark units for reassembly and coordinated installation.

2.9 Galvanizing:

A. Galvanizing, General:

1. Ferrous metal fabrications shall be galvanized only as specified or noted on the Plans.

2. Where galvanized finish is specified or noted, ferrous fabrications shall be galvanized in accordance with applicable referenced ASTM standards, after fabrication.

3. Galvanizing shall be by hot dip method only, unless otherwise specified.

B. Product Fabrication, General: Fabricate products to be galvanized in accordance with Recommended Details for Galvanized Structures by American Hot Dip Galvanizers Association, Inc.

1. Comply with applicable portions of ASTM A143, A384 and A385, except as otherwise specified herein. Avoid techniques which could cause distortion or embrittlement of steel.

2. Notify Engineer before and during submittals review and before fabrication proceeds, of potential warpage problems which may require design modification.

C. Product Preparation for Galvanizing:

1. Remove welding slag and burrs.

2. Provide holes and lifting lugs as necessary for handling during galvanizing process and only at positions approved by Engineer.

3. Remove grease, oil, paint and other deleterious materials.

4. Do not use unsuitable marking paints on steel prior to galvanizing.

5. Use blast cleaning or other method as necessary if surface contaminants and coatings cannot be removed by normal chemical cleaning process.

D. Surface preparation:

1. Pre-clean using caustic bath, acid pickle and flux.

2. Alternatively, pre-clean by blast cleaning and fluxing.

3. Conform to ASTM A123 and A386, as applicable, for steel members, fabrications and assemblies.

4. Conform to ASTM A153 for bolts, nuts and washers, and steel hardware components.

5. Conform to ASTM A143 for protection against embrittlement.

E. Galvanizing Bath: Use not less than 98.0 percent zinc.

F. Zinc Coating Weight: Conform to Paragraph 6.1 of ASTM A123, Table 1 of ASTM A153 and Table 1 of ASTM A386, as applicable.

G. Zinc Coating Surface Finish: Wipe down surfaces after dip to remove pin holes, scale, drips, runs and points. Finish shall be continuous, adherent, smooth and evenly distributed, free from defects detrimental to intended end use and finishing of coated product.

H. Zinc Coating Adhesion: Adhesion shall be sufficient to withstand normal handling during transport and erection.

I. Cold Galvanizing Compound: High zinc dust content paint for regalvanizing welds in

galvanized steel, with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035 or SSPC-Paint-20; ZRC Zinc Rich Coating, or approved equal.

J. Portions Not to Receive Galvanizing: Protect portions of parts to be embedded in concrete from galvanizing, except galvanize anchors and sleeves built into concrete.

2.10 Metalized Finish

A. Fabrication: Miscellaneous metal work which will be exposed to view shall only be fabricated with materials that are smooth and free of surface blemishes, including pitting, seam marks, trade names and roughness. Remove such blemishes by grinding or by welding and grinding prior to cleaning, treating, or applying surface finishes.

B. Shop Assembly: Work shall be fitted, shop assembled, and ready for erection whenever possible.

C. Workmanship: Form metals to shape and size with sharp lines and angles, and with smooth surfaces and faces free from distortion. Mill fastening to a close fit. Do all fitting true to line. Bend or form all tubing, pipe, and other members to continuous and true curves with all joints flush and neatly fastened together. All fabrications shall be square, plumb, straight, and true.

D. Jointing and Connections: Jointing and intersections shall be accurately made in true planes and tightly fitted to hairline joints. Connections shall be welded. Do not use screws unless specifically shown or required - if used, screws shall be countersunk with a metal compatible with the members being joined.

E. Welding: Welding shall conform to the requirements of the "Structural Welding Code" ASW D1.I. Where welds are exposed to views, bevel members prior to welding and weld full. Grind welds flush, smooth, level with the adjacent surfaces. Grind welds at intersecting members to sharp lines. Galvanized metal welds shall be steel brushed to remove excess residue. Touch up by brushing or spraying galvanized gray primer.

F. Holes: Accurately space to centers such that boles are not poorly or carelessly seamed.

G. Anchorage: Fabricate and space anchoring devices to provide adequate support for intended use.

H. Insulation of metals from contact with masonry and different metals from contact with each other shall be provided where necessary to prevent corrosion.

I. Debur and grind smooth all welds and rough spots.

J. All ornamental metal fabrications shall receive a sandblast finish to remove all oil, grease, lint, and rust.

K. All ornamental metal fabrications shall receive 91-2 mil. zinc thermal sprayed metalized finish per ANSI/AWS C218.93, ASTM C633, ASTM B833-93, and SSPC-CS Guide 23.00, June 1, 1991. Contact: Zinc Nation Inc. (714) 239-6190 www.zincnation.com. Contractor shall submit sample of metalizing for review and approval prior to metalizing ornamental metal items.

L. Coating System

1. Manufacturer

a. Tnemec Company Incorporated, 417 East Weber Street, Compton, CA 90222. Phone 310-637-2363. Fax 310-637-4161. Web Site www.tnemec.com.

b. Equivalent materials of other manufacturers may be substituted only by approval of the architect. Requests for substitution shall include manufacturer's literature for each product giving the name, generic type, descriptive information solids by volume, recommended film thicknesses and a list of five projects where each product has been used and rendered satisfactory service. No request for substitution shall be considered that would decrease the film thickness or offer a change in the generic type of coating.

2. Coating System Type

a. System Type:. Hydrophobic Arcylic / HDP Pure Arcylic
b. Surface Preparation: Zinc thermal sprayed metalized finish
c. Prime Coat: One coat Tnemec Intermediate, 115, 3 to 5 mils. DFT.[4]
d. Finish coat: One coat Tnemec Urethane, 1028 or 1029, 2 to 3 mils.

3. Finish Color: 'Dove Gray' (38GR)

2.11 Shop Painting:

A. Shop Priming and Painting, General: Conform to SSPC Painting Manual.

B. Products to be Primed: Prime paint after fabrication all parts not otherwise shown as galvanized, stainless steel, anodized aluminum, polished brass or embedded in concrete.

C. Preparation for Priming: Prepare all surfaces to be coated, as follows.

1. Solvent-clean in accordance with SSPC-SP 1.

2. Exterior fabrications: Clean in accordance with SSPC-SP 6.

3. Interior fabrications: Clean in accordance with SSPC-SP 6.

D. Shop Priming: Comply with SSPC-PA 1.

1. Apply primer immediately following surface preparation.

2. Do not prime surfaces to be welded.

3. Do not prime surfaces in direct contact bond with concrete or mortar.

4. Spray apply shop prime without holidays, drips, runs.

5. Provide two coats where product will not be finish painted or will be concealed in completed work.

6. Apply an additional coat to corners, welds, edges, and fasteners.

E. Drying: Allow paint to dry before handling.

F. Steel Embedded in Concrete: Coat concealed faces with asphalt paint.

G. Galvanizing Pre-Treatment: Where zinc-coated surfaces are specified to be shop primed, chemically treat surfaces to provide bond for paint before applying primer.

H. Shop Applied Finish Painting: Apply thermosetting enamel paint, gloss or semi gloss, of a type and color as selected and approved by Engineer, if not otherwise specified.

1. Shop applied finish paint shall be baked to set and cure.

2. Allow finish paint to thoroughly dry and cure before handling.

2.12 Rough Hardware:

A. Rough Hardware, General: Provide bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels, and other miscellaneous steel and iron shapes as indicated on Plans.

B. Rough Hardware Fabrication: Fabricate items to sizes, shapes, and dimensions required. Provide malleable-iron washers for heads and nuts which bear on wood structural connections; elsewhere, furnish steel washers.

2.13 Loose Bearing and Leveling Plates:

A. Loose Bearing and Leveling Plates: Provide loose bearing and leveling plates for steel items bearing on concrete construction, made flat, free from warps or twists,

and of required thickness and bearing area. Drill plates to receive anchor bolts and for grouting as required. Galvanize fabrications after fabrication.

2.14 Toilet Room Entrance Gates:

A. Toilet Room Entrance Gates: Metal grill gates, fabricated from stock steel shapes as detailed on Plans, hot-dipped galvanized finish after fabrication, with galvanized sheet steel panel infill at lockset.

B. Gate Hardware: As indicated on Plans, welded-on heavy weight butt hinges, minimum 3-hinges per gate leaf, hot-dipped galvanized finish.

2.15 Other Fabrications:

A. Other Fabrications: Provide fabrications not specifically described but required for a complete and proper installation, as selected by the Contractor, subject to approval of the Engineer.

PART - 3 EXECUTION

3.1 Preparation:

A. Preparation for Cutting and Fitting: Obtain Engineer's review prior to site cutting or making adjustments not indicated.

B. Welding Preparation: Clean and strip site primed steel items to bare metal where site welding is indicated.

C. Blocking and Bracing: Make provision for erection loads with temporary bracing. Keep work in alignment.

D. Coordination with Cast in Place Concrete: Furnish setting templates and place items required to be cast into concrete, as specified in Section 03 21 00 - Reinforcing Steel.

3.2 Installation, Typical:

A. Installation, General: Install items plumb and level, accurately fitted, free from distortion or defects.

B. Field Welding: Perform field welding in accordance with AWS D1.1.

3.3 Cleaning and Touch-Up:

A. Cleaning: Perform initial cleaning immediately after completion of installation. Prepare surfaces for finish painting as specified in Section 09 90 00 – Interior and Exterior Painting.

B. Galvanizing Touch-Up: Touch up galvanizing immediately after installation, including field welding. Prepare surface and apply cold galvanizing compound in compliance with the manufacturer's instructions and recommendations.

C. Primer Paint Touch-Up: Immediately after erection or installation, touch up shop paint. Use products as specified in Section 09 90 00 – Interior and Exterior Painting

1. Clean field welds, bolted joints, and areas where primer is damaged.

2. Clean and primer paint welds and surrounding areas affected by welding.

3. Paint with material used for shop painting, minimum 3 mils dry film thickness.

D. Painting of Metal Fabrications:

1. Exposed interior and exterior ferrous metal fabrications shall be coated (painted) as specified in Section 09 90 00 – Interior and Exterior Painting

3.4 Coatings System Application for Metalized Finish

A. Application

1. Apply coatings in accordance with manufacturer's instructions.

2. Mix and thin coatings, including multi-component materials, in accordance with manufacturer’s instructions.

1. Keep containers closed when not in use to avoid contamination.

4. Do not use mixed coatings beyond pot life limits.

5. Use application equipment, tools, pressure settings, and techniques in accordance with manufacturer’s instructions.

6. Uniformly apply coatings at spreading rate required to achieve specified DFT.

7. Apply coatings to be free of film characteristics or defects that would adversely affect performance or appearance of coating systems.

8. Stripe paint with brush critical locations on steel such as welds, corners, and edges using specified primer.

B. Repair

1. Materials and Surfaces Not Scheduled To Be Coated: Repair or replace damaged materials and surfaces not scheduled to be coated.

2. Damaged Coatings: Touch-up or repair damaged coatings. Touch-up of

minor damage shall be acceptable where result is not visibly different from adjacent surfaces. Recoat entire surface where touch-up result is visibly different, either in sheen, texture, or color.

3. Coating Defects: Repair in accordance with manufacturer's instructions coatings that exhibit film characteristics or defects that would adversely affect performance or appearance of coating systems.

C. Cleaning

1. Remove temporary coverings and protection of surrounding areas and surfaces.

D. Protection of coating systems

1. Protect surfaces of coating systems from damage during construction.

END OF SECTION

SECTION 05 51 00

METAL STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide steel stairs and landings, with stair handrails, and including plates, angles, hangers and struts for securing to building structure.

1. Provide additional steel as required for support of stairs and not otherwise indicated on Architectural or Structural Drawings.

2. Precast Concrete Treads: Metal stair systems include metal support systems with precast concrete stair treads.

B. Related Work:

1. Section 05 50 00: Metal handrails other than steel stair rails.
2. Section 05 73 00: Decorative metal railings.
3. Section 05 73 10: Cantilevered glass railings.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Design/Build: Provide special engineering for stairs and railings to ensure compliance with applicable codes and Contract Documents.

1.3 REFERENCES

A. American Welding Society (AWS): D1.1, Structural Welding Code.

B. National Association of Architectural Metal Manufacturers (NAAMM):

1. Metal Stairs Manual.
2. Pipe Rail Manual.
3. Heavy Duty Metal Bar Grating Manual.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's literature for products used in stair and rail fabrications, including paint, grout, and rail brackets.

B. Shop Drawings: Submit for fabrication and erection of stairs and handrails. Indicate profiles, sizes, connection, reinforcing, and anchorage.

1. Provide templates for anchorage installation by others.

C. Design/Build Certificates: Submit certification signed by California licensed structural engineer indicating compliance with Contract Documents and code requirements.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Firm with not less than five years successful experience fabricating custom stairs for projects of similar size and scope.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Requirements: Provide steel stairs and landings, with stair handrails, and including plates, angles, hangers and struts for securing to building structure.

B. Regulatory Requirements, General: Comply with requirements of applicable codes for stair and railing design, except where more restrictive codes are specified.

C. Regulatory Requirements, Access: Comply with California Building Standards Code and Americans with Disabilities Act (ADA) Standards for access for persons with disabilities.

D. Regulatory Requirements, Slip-Resistance:

1. Slip-Resistant Hard Surfaces: Hard surface finishes to comply with requirements of authorities having jurisdiction for slip-resistant hard surfaces, including general code requirements and requirements for access for persons with disabilities.

a. Refer to Section 01 41 10 – Slip-Resistant Hard Surfaces. Hard surfaces include flooring and paving.

b. Manufacturer Representatives to verify each hard surface material provided for Project complies with Section 01 41 10 for slip-resistance based on each location hard surface materials are indicated in Project.

c. Subcontractor/Installer to verify hard surface material being installed has either manufacturer testing information indicating materials are suitable for locations indicated, or experience indicates such materials are appropriate.

d. Notify Architect where hard surface materials may not be appropriate for applications indicated.

E. Design Requirements: Design stairs and railings to support following minimum loads.

1. Stairs: 100-psf loads, with individual stair treads designed to support a 300-pound concentrated load placed in a position which would cause maximum stress.

2. Railings: Support a lateral force of 50 lbs./lin. ft. uniform load and 200-lbs. at any single point without permanent set or damage; ASTM E935.

a. Top Rails: Design to support minimum 300-lb. concentrated single point load applied at any point vertically or horizontally.

F. Steel Sections, Plates, Shapes and Bars: ASTM A36.

1. Steel Bar Grating: ASTM A36 or ASTM A1011.

G. Structural Steel Sheet: Hot rolled, ASTM A1011; or cold rolled, ASTM A1008, Class 1; or grade required for design loading.

H. Steel Pipe: ASTM A53, Type S seamless, grade as selected by fabricator and as required for design loading; minimum standard weight, STD or Schedule 40.

I. Steel Tubing: Cold formed ASTM A500; or hot rolled, ASTM A501; minimum Grade B; seamless where exposed.

J. Castings: Gray iron, ASTM A48, Class 30; malleable iron, ASTM A47.

K. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron ASTM A47, or cast steel ASTM A27. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A153.

L. Grout: Non-shrink meeting ASTM C1107, non-metallic, pre-mixed, factory-packaged, non-staining, non-corrosive; type specifically recommended by manufacturer as applicable to job condition.

M. Fasteners and Rough Hardware: Type required for specific usage; provide zinc-coated fasteners for exterior use or where built into exterior walls.

N. Welding Materials: AWS D1.1, type required for materials being welded.

O. Paint: Provide primers as recommended by paint manufacturers for substrates and paints specified in Section 09 90 00 – Painting and Coating.

1. Galvanizing Repair Paint: High zinc-dust content paint for repair of welds in galvanized steel.

2.2 FABRICATION

A. Stairs: Comply with requirements of NAAMM "Metal Stair Manual", including components required for proper anchorage of metal stairs.

1. Types of Stairs: Refer to Drawings.

2. Stair Class: NAAMM Architectural Class.

3. Precast Concrete Tread Stairs: Provide minimum 5000 psi precast concrete treads shaped to provide integral tread and riser unit; conform to ACI 318 and Prestressed Concrete Institute MNL 117.

a. Treads: Non-slip finish.

4. Provide with abrasive nosing, 2" wide, contrasting color to tread.

B. Stair Railings: As indicated and as required by applicable codes and standards; comply with NAAMM "Pipe Railing Manual"; welded construction; cap exposed ends.

1. Handrail: Seamless steel tube, 1-1/2" outside diameter, continuous railings conforming to applicable code and design requirements.

2. Wall Rail Brackets: Castings as approved by Architect.

3. Wall Returns: 90° elbow return with 1/4" maximum clearance unless otherwise indicated.

    a. Provide wall plates only where indicated and where required by applicable codes.

C. Fabricate stairs, landings and component connections to support live loads specified.

1. Provide closed riser stairs with nosing joined flush to riser.

2. Maximum Allowable Deflection:

    a. Standard: Maximum L/240.
    b. Where Underside of Stair is Finished: Maximum L/360.

3. Stringers: As indicated on Drawings; Contractor option where not otherwise indicated.

4. Reinforce underside of landings.

D. Fabricate items with joints neatly fitted and properly secured.

E. Grind exposed welds continuous, smooth and flush with adjacent finished surfaces, and ease exposed edges to approximate 1/32" uniform radius.

F. Exposed Mechanical Fastenings: Flush countersunk fasteners unobtrusively located, consistent with design of structure.

G. Fit and shop assemble in largest practical sections for site delivery.

H. Make exposed joints flush butt type, hairline joints where mechanically fastened.

1. Fabricate joints exposed to weather in manner to exclude water or provide weep holes where water could accumulate.

I. Supply components required for proper anchorage of metal stairs.

J. Fabricate anchorage and related components of same material and finish as metal stairs and rails.

K. Thoroughly clean surfaces of rust, scale, grease and foreign matter prior to applying finish.

L. Supply components required for proper anchorage of metal fabrications; fabricate anchorage and related components of same material and finish as metal fabrication.

M. Finishes: Thoroughly clean surfaces of rust, scale, grease and foreign matter prior to applying finish. Do not shop prime surfaces in contact with concrete or requiring field welding; shop prime in one coat.

1. Exterior Stairs and Rails: Hot dip galvanize and prime paint.

a. Provide minimum ASTM A123 or A924 and A653 G90 galvanized coating; iron and steel hardware galvanized conforming to ASTM A153.

2. Prime Painting: Comply with requirements of Section 09 90 00 – Painting and Coating for preparation and priming.

N. Finishes: Prime paint metal surfaces. Thoroughly clean surfaces of rust, scale, grease and foreign matter prior to applying finish. Do not shop prime surfaces in contact with concrete or requiring field welding; shop prime in one coat.

1. Prime Painting: Comply with requirements of Section 09 90 00 – Painting and Coating for preparation and priming.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication, where possible; do not delay job progress; allow for trimming and fitting where necessary.

1. Verify clearances, including code required head height clearances.

3.2 INSTALLATION

A. Obtain Architect's review prior to site cutting and adjusting not part of scheduled work.

1. Perform necessary cutting and altering for installation of work of other sections.

B. Install steel stairs and railings square and level, plumb and free from distortion or defects detrimental to appearance and performance.

C. Make provision for erection stresses by temporary bracing; keep work in alignment.

D. Ensure alignment with adjacent construction; coordinate with related work to ensure no interruption in installation.

E. Field bolt and weld to match standard of shop bolting and welding; hide bolts and screws whenever possible, where not hidden, use flush countersunk fastenings.

1. Perform field welding in accordance with AWS D1.1.

F. After installation, touch-up field welds and scratched and damaged surfaces; use primer consistent with shop coat or recommended for galvanized surfaces, as applicable.

G. Replace items damaged in course of installation and construction.

END OF SECTION

SECTION 05 70 00

DECORATIVE METAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide decorative (ornamental) metal items including attachment devices and accessories, as required for complete, finished installation.

1. Provide custom stainless-steel railings.

B. Related Work:

1. Section 05 50 00: Metal fabrications including steel railings.
2. Division 14: Decorative metal at elevators.
3. Section 32 31 20: Decorative metal fences and gates.

1.2 REFERENCES

A. National Association of Architectural Metal Manufacturers: Metal Finishes Manual.

B. Builders Hardware Manufacturers Association (BHMA): BHMA 1301/ ANSI A156.18 Standard for Materials and Finishes.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Design/Build: Provide special engineering to ensure compliance with applicable codes and Contract Documents.

B. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this Section. Require attendance of those directly affecting work of this Section.

1. Review installation procedures and coordination required with related work.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturer's literature including recommendations for cleaning.

B. Shop Drawings: Show detailing including anchorage, accessories, and supporting members.

C. Samples: Furnish samples of each exposed metal finish.

D. Design/Build Certificates: Submit engineer certification by California licensed structural engineer indicating decorative metal complies with Contract Documents and applicable code requirements.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Firm with minimum five years successful experience fabricating decorative metal items like those required for Project.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide decorative (ornamental) metal items specified including attachment devices and accessories.

B. Rail Regulatory Requirements:

1. Access: Comply with California Building Standards Code and Americans with Disabilities Act (ADA) Standards for railing design to provide access for persons with disabilities.

2. Building Code: Comply with requirements of applicable building codes for railing design, except where more restrictive codes are specified.

C. Design Requirements, General: Drawings indicate decorative metal sizes and shapes; unless otherwise specifically indicated, design components and fabrications of gages and thicknesses to withstand anticipated loads.

1. Cladding: Where permitted, cladding to be minimum 0.025" thick unless otherwise approved in advance.

D. Rail Design Requirements: Design railings to support following minimum loads.

1. Railings: Support a lateral force of 50 lbs./lin. ft. uniform load and 200 lbs. at any single point without permanent set or damage; ASTM E935.

a. Top Rails: Design to support minimum 300 lb. concentrated single point load applied at any point vertically or horizontally.

E. Galvanized Steel

F. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron ASTM A47, or cast steel ASTM A27.

1. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A153.

G. Grout: Non-shrink meeting ASTM C1107, non-metallic, pre-mixed, factory-packaged, non-staining, non-corrosive; type specifically recommended by manufacturer as applicable to job condition.

1. Manufactures:

a. Master Builders/Masterflow 713.
b. Five Star Products, Inc./Five Star Grout.
c. Bostik Construction Products/Upcon Grout.
d. Protex Industries, Inc./Propak.
e. Substitutions: Refer to Section 01 25 00.

H. Brackets and Anchors: Unexposed plates, angles and supports may be steel; exposed items to match decorative metal type and finish.

I. Fasteners: Type required for specific usage; provide concealed fasteners except where specifically approved; where exposed match type and finish of metal being fastened.

1. Concealed Steel Fasteners: Hot-dipped galvanized minimum G90 where built into exterior walls or subject to high humidity.

2.2 FABRICATION

A. Stainless Steel Countertops: Not less than 16-gage, with No. 4 satin directional polish finish.

1. Fabricate to furniture quality construction, assembled and welded in manner consistent with recognized steel furniture standards; grind joints smooth and flush and finish to match adjacent finish on exposed surfaces.

2. Provide maximum sizes available. Locate butt joints at least 2'-0" from cutouts where more than one-piece countertops are required.

a. Make corners and joints hairline; slightly bevel arises.

3. Fabricate corners, joints, and finish such that no gaps, spaces, cavities, crevices, or inaccessible spaces or areas are present in which dirt, dust, debris, or moisture can accumulate.

4. Provide cutouts for inserts, fixtures and fittings; verify locations from on-site dimensions.

5. Sound Deadening: Heavy-bodied resinous coating, filled with granulated cork or other resilient material, compounded for permanent, non-flaking adhesion to metal in 1/8" thick coating.

a. Apply coating of sound deadening material to underside of tops, drainboards, dishtables and sinks.

B. Fabricate component connections to support specified design loads.

C. Select materials for straightness, free of defects and irregularities.

1. Exposed-to-view surfaces exhibiting pitting, seam marks, roller marks, "oil canning," stains, discolorations, and imperfections on finished units are not acceptable.

D. Make exposed joints flush butt type, hairline joints where mechanically fastened; provide concealed connection devices with hidden fasteners.

1. Fabricate continuous items with joints neatly fitted and secured.

2. Ease exposed edges to approximate 1/32" uniform radius.

3. Fabricate joints exposed to weather in manner to exclude water or provide weep holes where water could accumulate.

E. Comply with AWS for recommended practices in welding each type of material; provide welds behind finished surfaces without distortion or discoloration on exposed side; dress exposed and contact surfaces.

F. Exposed Mechanical Fastenings: Flush countersunk fasteners unobtrusively located, consistent with design of structure.

G. Fit and shop assemble in largest practical sections for site delivery.

H. Separate dissimilar materials with bituminous paint where concealed, with preformed separators, or similar method to prevent corrosion.

I. Decorative Steel Field Finishes: Galvanize and prime paint exterior work and prime paint interior work unless otherwise noted in Schedule; comply with requirements of Section 09 90 00 - Painting and Coating for preparation and priming.

1. Thoroughly clean surfaces of rust, scale, grease and foreign matter prior to applying finish.

2. Do not shop prime surfaces in contact with concrete or requiring field welding; shop prime in one coat.

3. Galvanized Coating: Provide coating comparable to ASTM A924 and A653, minimum G90 hot dip galvanized coating.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication, where possible; do not delay job progress; allow for trimming and fitting where necessary.

3.2 INSTALLATION

A. Install decorative metal items in accordance with manufacturer's recommendations, installation instructions, and approved shop drawings.

B. Install plumb, true and in correct relation to adjacent work, free from distortion or defects detrimental to appearance and performance.

C. Prior to securing continuous items, adjust to ensure proper matching at butt joints and correct alignment throughout their length.

D. Tolerances: Accurately align and locate components to column lines and floor levels; adjust work to conform to following tolerances.

1. Plumb: 1/8" in 10'-0"; 1/4" in 40'-0"; non-cumulative.

2. Level: 1/8" in 20'-0"; 1/4" in 40'-0"; non-cumulative.

3. Alignment: Limit offset to 1/16" where surfaces are flush or less than 1/2" out of flush and separated by less than 2" (by reveal or protruding work); otherwise limit offsets to 1/8".

4. Location: 3/8" maximum deviation from measured theoretical location (any member, and location).

E. Install anchorage devices to securely and rigidly fasten system to building.

F. Provide anchors to be installed in other work, and setting details, in time for proper installation by trades concerned; verify correct placement.

3.3 CLEANING

A. Clean decorative metal surfaces promptly after installation of components, exercising care to avoid damage of finish.

B. Remove excess sealant compounds, dirt and other foreign substances.

3.4 PROTECTION

A. Repair or replace items damaged or marred during construction.

END OF SECTION

SECTION 06 10 50

MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide miscellaneous wood blocking and plywood, including blocking for roofing system and related flashing.

1. Provide plywood panel boards.
2. Preservative treat wood members as indicated.

B. Related Sections:

1. Section 06 20 00: Finish carpentry.
2. Section 06 40 00: Architectural woodwork.

1.2 REFERENCES

A. Forest Products Society (FPS): National Design Specification for Stress Grade Lumber and its Fastening.

1.3 SUBMITTALS

A. Product Data: Submit wood treatment certifications and instructions for proper use of each type of treated material.

B. Wood Product Certification: Furnish certification indicating wood products are from “well-managed” forests.

1.4 QUALITY ASSURANCE

A. Lumber Grades: Provide visible grade stamp of an agency certified by FPS.

B. Lumber Standard: Comply with US Product Standard PS20 for each indicated use, including moisture content and actual sizes related to indicated nominal sizes.

C. Plywood Standard: Comply with PS1 (ANSI A199.1).

D. Certified Wood Products: Wood products to be from forests certified “well-managed” by an agency accredited by Forest Stewardship Council (FSC) including SmartWood Program and Forest Conservation Program.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Requirements: Provide miscellaneous wood blocking and plywood, including blocking for roofing system and related flashing.

B. Regulatory Requirements: Comply with applicable code requirements for miscellaneous rough carpentry.

C. Blocking: Provide dimensional lumber graded in accordance with FPS Grading Rules; Construction Grade, Douglas Fir; minimum S-Dry.

D. Plywood: Provide minimum APA C-D exterior (CDX) plywood; stress rated where spanning between supporting members; fire retardant treated; minimum 3/4" thick unless otherwise indicated.

E. Plywood Panel Boards: Provide panel boards for electrical and communication panel boards; APA C-D plugged, interior type plywood with exterior glue, fire retardant treated; minimum 1/2" thick.

F. Nails, Spikes and Staples: Galvanized; size and type to suit application.

G. Bolts, Nuts, Washers, Lags, Pins and Screws: Medium carbon steel; galvanized; size and type to suit application.

H. Fasteners: Provide fasteners as required for complete, secure installation of miscellaneous rough carpentry.

1. Solid Masonry or Concrete: Expansion shield and lag bolt type.

2. Steel: Bolts or powder activated type.

2.2 FABRICATION

A. Wood Preservation: Treat lumber and plywood to comply with applicable requirements of American Wood Preservers Association and applicable codes.

1. Decay Resistance Treatment: Pressure treat wood in accordance with AWPA U1 using preservative chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium.

a. Treat wood members based on AWPA U1 Use Categories as appropriate to Project location and exposure.

b. Kiln-dry wood to a maximum moisture content of 19% after treatment with water-borne preservative.

2. Fire Retardant Treatment: Comply with AWPA standards for pressure impregnation with fire-retardant chemicals to achieve flame-spread rating of not more than 25 in accordance with ASTM E84 or UL Test 723.

a. Treat interior wood and plywood complying with applicable code requirements for Interior FRTW.

1) Exterior Type: Where indicated for exterior applications, provide fire treated wood passing ASTM D2898 rain test.

b. Provide UL label on each piece of fire-retardant wood and plywood.

c. Kiln-dry treated items to maximum moisture content of 19%.

3. Complete fabrication of treated items prior to treatment, wherever possible; if cut after treatment, coat cut surfaces with heavy brush coat of same chemical used for treatment.

4. Inspect each piece after drying and discard damaged and defective pieces.

PART 3 - EXECUTION

3.1 PLACEMENT

A. Place miscellaneous rough carpentry true to lines and levels.

B. Correlate location so attached work will comply with design requirements and be properly located.

C. Construct members of continuous pieces of longest possible lengths.

D. Fit carpentry work to other work; scribe and cope as required for accurate fit.

E. Shim with metal or slate for bearing on concrete and masonry.

F. Securely attach carpentry work to substrates by anchoring and fastening as required by recognized standards.

1. Provide washers under bolt heads and nuts in contact with wood.

G. Wood Blocking: Provide blocking of S4S lumber not less than 1-1/2" wide and of thickness required to provide adequate support or to properly locate attached material.

1. Provide attachment to other work; form to shapes shown.

2. Countersink bolts and nuts flush with surfaces.

3. Remove temporary blocking when no longer needed.

4. Anchor to formwork before concrete placement.

5. Build into masonry as work progresses, cutting to fit masonry unit size involved.

H. Plywood: Comply with recommendations of American Plywood Association (APA) for fabrication and installation of plywood work.

END OF SECTION

SECTION 06 18 00

STRUCTURAL GLUED LAMINATED TIMBER

PART 1 - GENERAL

1.01 SUMMARY

A. Provisions of Division 01 apply to this section.

B. Section Includes:

1. Glued Laminated Wood Beams

C. Referenced Standards

1. ANSI/ AITC Standard A190.1 and ASTM D3737
2. NDS- National Design Specification for Wood Construction.
3. PS-56 Structural Glued Laminated Timber
4. California Code of Regulations, Title 24, Part 2, California Building Code Chapter 23
5. ASTM D3024 – Dry Use Adhesive with Protein Base, Casein Type. ASTM D2559- Wet Use Adhesive. APA Specification AFG-01 – Adhesive for Field Gluing Plywood to Wood Framing.

1.02 DEFINITIONS

A. Structural Glued-Laminated (Glulam) Timber: An engineered, stress-rated timber product assembled from selected and prepared wood laminations bonded together with adhesives and with the grain of the laminations approximately parallel longitudinally.

1.03 SUBMITTALS

A. Shop Drawings: Show layout of structural glued-laminated timber system and full dimensions of each member. Indicate species and laminating combination, adhesive type, and other variables in required work. Including large-scale details of connections.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide factory-glued structural units produced by an AITC- or APA-licensed firm.

B. Factory mark each piece of structural glued-laminated timber with AITC Quality Mark or APA trademark. Place mark on surfaces that will not be exposed in the completed work.

C. Quality Standard: Comply with AITC A190.1, "Structural Glued Laminated Timber."

1.05 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with provisions in AITC 111, "Recommended Practice for Protection of Structural Glued Laminated Timber during Transit, Storage, and Erection."

B. Individually wrap members using plastic-coated paper covering with water-resistant seams.

PART 2 - PRODUCTS

2.01 STRUCTURAL GLUED-LAMINATED TIMBER

A. General: Provide structural glued-laminated timber that complies with AITC 117--MANUFACTURING or research/evaluation reports acceptable to authorities having jurisdiction. Provide structural glued-laminated timber made from a single species.

B. Species and Grades for Structural Glued-Laminated Timber: Provide structural glued-laminated timber made from Douglas fir-larch that complies with combination symbols indicated.

C. Appearance Grade: Architectural appearance grade, complying with AITC 110.

D. Adhesive: Wet-use type complying with ASTM D 2559.

E. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.

F. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.

2.02 FABRICATION

A. Shop fabricate for connections to greatest extent possible, including cutting to length and drilling bolt holes. Dress exposed surfaces to remove planning or surfacing marks and to provide a finish equivalent to that produced by machine sanding with No. 120 grit sandpaper.

B. Camber: Fabricate horizontal and inclined members of less than 1:1 slope with either circular or parabolic camber equal to 1/500 of span.

C. End-Cut Sealing: Immediately after end-cutting each member to final length, apply a saturation coat of end sealer to ends and other cross-cut surfaces, keeping surfaces flood-coated for not less than 10 minutes.

D. Seal Coat: After fabricating, sanding, and end-coat sealing, apply a heavy saturation coat of penetrating sealer on surfaces of each unit.

2.03 COMBINATION AND APPERANCE GRADE:

A. AITC 24F-V4 & 24F-V8 in conformance with AITC 110.

B. Appearance of Members: Industrial Grade where concealed, Architectural Grade surfaced all sides where exposed.

C. Unit shall be fabricated for wet use.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine substrates in areas to receive structural glued-laminated timber, with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance of structural glued-laminated timber. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Erect structural glued-laminated timber true and plumb, with uniform, close-fitting joints. Provide temporary bracing to maintain lines and levels until permanent supporting members are in place.

1. Lift with padded slings and protect corners with wood blocking.

2. Install structural glued-laminated timber to comply with Shop Drawings.

3. Install timber connectors as indicated.

B. Cutting: Avoid extra cutting after fabrication. Where field fitting is unavoidable, comply with requirements for shop fabrication.

3.03 ADJUSTING

A. Repair damaged surfaces and finishes after completing erection. Replace damaged structural glued-laminated timber if repairs are not approved by Architect.

3.04 PROTECTION

A. Do not remove wrappings on individually wrapped members until they no longer serve a useful purpose including protection from weather, sunlight, soiling, and damage from work of other trades. Coordinate wrapping removal with finishing work specified in Division 9. Retain wrapping where it can serve as a painting shield.

END OF SECTION

SECTION 06 20 00

FINISH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide finish carpentry with accessories as required for complete installation.
   1. Provide Janitor closet mop holders.

B. Related Sections:

   1. Section 10 28 00 Toilet Accessories

1.2 REFERENCES

A. North American Architectural Woodwork Standards 3.1 (NAAWS).

1.3 ADMINISTRATIVE REQUIREMENTS

1.4 SUBMITTALS

A. Product Data: Submit literature for manufactured items.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives, sealants, and caulks.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver materials until site conditions are adequate to receive work; protect items from weather while in transit.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Janitor Closet Mop Holders: Spring loaded anti-slip mop holders with rubber cam, with three mop holders on stainless steel.

   1. Manufacturers:

      a. Bobrick Washroom Equipment, Inc./Model B-223.
      b. Bradley Corp./Model 9953.
      c. American Specialties Inc./Model 0796A.
      d. Substitutions: Refer to Section 01 25 00.

B. Anchors: Select the material, type, size and finish required by each substrate for secure anchorage; provide toothed steel or lead expansion bolt screws for drilled-in-place anchors.

2.1 FABRICATION

A. Use exposed fastening devices or nails only when approved and unavoidable; arrange neatly.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify surfaces are ready to receive work and field measurements are as shown on shop drawings.

1. Beginning installation signifies acceptance of conditions.

B. Ensure mechanical and electrical items affecting work are properly placed, complete, and have been inspected by applicable authorities prior to commencement of installation.

3.2 INSTALLATION

A. Secure work to blocking or backing.

B. Acceptable Tolerances:

1. Variation from True Position: Maximum 1/16" at any position and maximum 1/8" in any 10'-0" length.

END OF SECTION

SECTION 06 40 00

ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide mill fabricated architectural woodwork with accessories as required for complete finished installation including cabinetwork hardware.

1. Provide plastic laminate clad cabinetwork.
2. Provide countertops.

B. Related Sections:

1. Section 06 10 50: Miscellaneous rough carpentry.

1.2 REFERENCES

A. North American Architectural Woodwork Standards, 3.1 (NAAWS).

1.3 SUBMITTALS

A. Product Data: Submit manufacturer’s literature for manufactured items.

B. Shop Drawings: Indicate materials and wood species, component profiles, fastening, joining details, finishes, and accessories.

1. Certification: Provide Woodwork Institute Certified Compliance Label on shop drawings.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives, sealants, and caulks, for composite wood products formaldehyde limitations, and for paints and coatings.

B. Fabricator Qualifications: Member of Sponsor of North American Architectural Woodwork Standards with minimum five years successful experience fabricating woodwork like that required for Project.

C. Standards: Perform architectural woodwork in accordance with North American Architectural Woodwork Standards (NAAWS).

1. Certified Compliance Program (CCP): Comply with Woodwork Institute “Certified Compliance Program (CCP) as defined in NAAWS.

2. Monitored Compliance Program (MCP): Comply with Woodwork Institute “Monitored Compliance Program (MCP) as defined in NAAWS.

3. Certified Seismic Installation Program (CSIP): Comply with Woodwork Institute Certified Seismic Installation Program.

    a. Seismic Anchorage: Provide seismic anchorage for wall cabinets as required by California Code of Regulations (CCR), Title 24, Part 2.

D. Certified Wood Products: Wood products to be from forests certified “well-managed” by an agency accredited by Forest Stewardship Council (FSC).

E. Field Sample: Provide one full size field sample of base and wall cabinet and countertop, including drawer, doors and shelves.

F. Seismic Anchorage: Provide seismic anchorage for wall cabinets as required by California Code of Regulations (CCR), Title 24, Part 2.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver architectural woodwork until site conditions are adequate to receive work; protect items from weather while in transit.

1. Allow architectural woodwork shop finish to completely dry prior to delivery to site; allow materials to off-gas volatile organic compound (VOC) emissions off site.

B. Store materials indoors, in ventilated areas with constant but minimum temperature of 60-degrees F and maximum relative humidity of 25% to 55%.

C. Do not begin installation of architectural woodwork until space is fully enclosed and mechanical systems are fully operational.

1. Maintain interior installation areas at 70 degrees F and 50% to 55% relative humidity.

D. Immediately remove from site materials with visible mold and materials with mildew.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide mill fabricated architectural woodwork with accessories as required for complete finished installation including cabinetwork hardware.

B. Plastic Laminate Finished Casework:

1. Quality: NAAWS/Custom Grade frameless, flush overlay, unless otherwise indicated.

    a. Special: Provide each single length section of casework in largest such sections as access and openings allow.

        1) Multiple self-supporting units fastened together to form larger unit allowed only where access and openings do not allow single lengths.

2. Plastic Laminates:

a. Types: NEMA LD-3.1 high pressure laminates.

1) Horizontal Surfaces: General Purpose Type, nominal 0.050".
2) Vertical Surfaces: Vertical Surface Type, nominal 0.032".
3) Unexposed Surfaces: Balanced with 0.030" melamine backing sheet.
4) Formed Surfaces: Postforming Type, nominal 0.042".

b. Manufacturers:

1) Formica Corp.
2) Wilsonart, Wilsonart Engineered Surfaces.
3) Nevamar Corp.
4) Abet Laminati Co.
5) Substitutions: Refer to Section 01 25 00.

c. Solid Color Laminates:

1) Formica Corp./ColorCore2.
2) Wilsonart, Wilsonart Engineered Surfaces/Solicore.
3) Abet Laminati Co/Solid Colors.
4) Substitutions: Refer to Section 01 25 00.

d. Chemical Resistant Laminates:

1) Wilsonart, Wilsonart Engineered Surfaces/Chemsurf.
2) Nevamar/Chemarmor Chemical Resistant Decorative Laminate.
3) Arborite/ArboChem.
4) Substitutions: Refer to Section 01 25 00.

e. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

3. Wood Core: Plywood or medium density fiberboard (MDF) or particleboard, with no added formaldehyde and free of toxic materials.

C. Casework Hardware: Provide casework hardware items as required for complete installation as indicated; provide types as listed in North American Architectural Woodwork Standards for casework, but no less than following types.

1. Plug-In Pin Type Shelf Supports (Transparent Finished Casework): Match BHMA A156.9 B04013 spoon type plug-in supports; provide holes 1" on center.

2. Adjustable Shelf Standards and Supports (Plastic Laminate and Opaque Painted Casework): Match BHMA A156.9 B04073 adjustable standards and B04083 closed shelf rest brackets for mortis mounting; flush mounted in cabinet.

3. Cabinet Hinges: BHMA A156.9 B01602 or B01603 frameless European concealed type, minimum 160 degree opening, with spring closer.

4. Cabinet Hinges: BHMA A156.9 B01602 or B01603 frameless European concealed type, minimum 160 degree opening, without spring closer.

5. Cabinet Hinges: BHMA A156.9 B014xx pivot (knife) type, polished chrome finish.

6. Cabinet Pulls: Back mounted wire type, 4" center to center, clear aluminum; as approved by Architect.

7. Drawer Slides: Full extension, rail mounted type, minimum 100 lb. capacity with ball-bearing rollers; self-closing.

    a. Manufacturers:

        1) Accuride.
        2) Knape & Vogt.
        3) Blum.
        4) Hettich International.
        5) Substitutions: Refer to Section 01 25 00.

8. Cabinet Locks: Pin and tumbler slide bolt lock with five pin tumblers as approved by Architect, two keys each.

9. Magnetic Catches: BHMA 156.9 B03141.

D. Quartz-Based Solid Polymer Countertops: Manufacturer's standard quartz-based polymer system with color throughout thickness; provide manufacturer recommended joint adhesive; exposed surfaces finished to match top.

1. Manufacturers:

    a. CaesarStone USA/CaesarStone.
    b. Silstone USA/Silstone Countertops.
    c. DuPont Co./Zodiaq.
    d. Cambria USA/Cambria Countertops.
    e. Substitutions: Refer to Section 01 25 00.

2. Quality: NAAWS/Premium Grade.

3. Type: Not less than 1/2" thick sheet; coordinate with bowls as indicated and as specified in Division 22.

4. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2.2 FABRICATION

A. General: Fabricate architectural woodwork in accordance with specified North American Architectural Woodwork Standards.

B. Plastic Laminate: Apply plastic laminate finish in full uninterrupted sheets consistent with manufactured sizes. Make corners and joints hairline; slightly bevel arises.

1. Locate butt joints at least 2'-0" from cutouts.

2. Cap exposed edges with plastic laminate of same finish and pattern.

3. Apply laminate backing sheet to reverse side of laminate surfaces.

4. Provide cutouts for inserts, fixtures and fittings; verify locations from on-site dimensions.

5. Prime paint contact surfaces of cutouts.

C. Countertops: Provide maximum sizes available. Locate butt joints at least 2'-0" from cutouts where more than one-piece countertops are required.

1. Make corners and joints hairline; slightly bevel arises.

2. Provide cutouts for inserts, fixtures and fittings; verify locations from on-site dimensions.

3. Splashes and edges as indicated or as directed by Architect where not otherwise indicated.

D. Use exposed fastening devices or nails only when approved and unavoidable; arrange neatly.

E. Assemble woodwork in shop in sizes easily handled and to ensure passage through building openings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication where possible; do not delay job progress, allow for trimming and fitting.

3.2 INSTALLATION

A. Install work consistent with Architectural Woodwork Standards specified quality grade, plumb, level, true and straight with no distortions.

1. Shim as required, using concealed shims.

B. Ensure mechanical and electrical items affecting architectural woodwork are properly placed, complete, and have been inspected by Architect prior to commencement of installation.

C. Secure work to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation.

D. Scribe and cut for accurate fit to other finished work.

E. Install architectural woodwork under supervision of factory-trained mechanics.

F. Attach architectural woodwork securely in place with uniform joints providing for thermal and building movements.

G. Paneling: Provide fire-treated wood stops eight feet on center at paneling where required by applicable codes when paneling is not direct applied to substrate.

H. Acceptable Tolerances:

1. Variation from True Position: Maximum 1/16" at any position and maximum 1/8" in any 10'-0" length.

2. Adjoining Surfaces of Same Material: No variation permitted.

3. Offset with Abutting Materials: Maximum 1/32".

I. Preparation for Field Finishing:

1. Sand work smooth and set exposed nails and screws.

2. Apply wood filler in exposed nail and screw indentations and leave ready to receive site-applied finishes.

3. Seal concealed and semi-concealed surfaces; brush apply only, using primer consistent with finish coats specified under Section 09 90 00 - Painting and Coating.

END OF SECTION

SECTION 07 13 00

SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide self-adhesive sheet membrane waterproofing system, including sealing joints and protrusions through waterproofing, with protective board, drainage composite covering, and accessories for complete watertight installation.

B. Related Sections:

1. Section 07 16 00: Cementitious and reactive waterproofing at elevator pits.
2. Section 07 28 00: Weather barrier/underlayment including sheet membranes.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's literature for waterproofing system and protection board.

B. Shop Drawings: Indicate flashings, joints, sealing at openings, projections, and waterproofing of holes, slots and sleeves.

C. Certificates: Submit manufacturer's representative's certification work has been installed in accordance with manufacturer's recommendations.

1.3 QUALITY ASSURANCE

A. Qualification of Installers: Minimum five years successful experience in projects of similar scope.

1.4 SITE CONDITIONS

A. Do not apply waterproofing during inclement weather or when air temperature is below 40 degrees F, except where specifically authorized by manufacturer's representative for specific materials.

B. Do not apply waterproofing to damp, dirty, dusty, or otherwise unsuitable surfaces.

1. Allow concrete surfaces to cure minimum 28 days.

1.5 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist water penetration except where failure is result of structural failure of building. Repair system and pay for or replace damaged materials and surfaces.

1. Hairline cracking due to temperature or shrinkage is not considered structural failure.

2. Period: Two years.

B. Manufacturer's Warranty: Submit manufacturer's warranty including special manufacturer services as required for manufacturer's warranty.

1. Period: 5 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner's rights under implied and expressed warranties regardless of wording of manufacturer's warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. GCP Applied Technologies (Grace) / Bituthene 4000 Waterproofing System.

B. Carlisle Coatings and Waterproofing / CCW Miradri 860/861 or CCW 701

C. Polyguard Products, Inc./Polyguard No. 650

D. Meadows, W.R. Inc. / Mel-Rol

E. American Hydrotech, Inc. / VW 75

F. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide 60-Mil self-adhering sheet consisting of 56 mils of rubberized asphalt laminated to a 4-mil- thick, polyethylene film with release liner on adhesive side and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction. System including sealing joints and protrusions through waterproofing, protective covering, and accessories.

B. Regulatory Requirements: Provide materials conforming to applicable air quality management district limitations on volatile organic compound (VOC) emissions.

C. Waterproofing System: System consisting of sheet membrane of rubberized asphalt and polyethylene film, total thickness approximately 60 mil, and fluid applied rubberized asphalt for sealing system.

1. Low Temperature Applications: Where temperatures are between 25 degrees F and 40 degrees F, use manufacturer's special membrane and primer for low temperature applications.

D. Primer: Manufacturer's recommended primer of applications involved; primer is required for waterproofing applications.

E. Crack and Expansion Joint Sealants: Types as recommended by waterproofing system manufacturer, compatible with waterproofing system.

F. Protective Covering:

1. Protection Board: Preformed asphalt impregnated board or similar protective cover recommended by waterproofing manufacturer.

a. Vertical Applications: Minimum 1/8" thick protective cover.
b. Horizontal Applications: Minimum 1/4" thick protective cover.

2. Drainage Composite: Formed plastic with filter fabric designed to allow penetration and drainage of water while retaining silts, soils, and similar particulate matter; type recommended by manufacturer for application.

a. Manufacturers:

1) Grace / Hydroduct 660 Drainage Composite.
2) Carlisle / CCW MiraDRAIN 8000.
3) Colbond, Inc. / Enkadrain 3611R.
4) Meadows, W. R., Inc.; Mel-Drain
5) Substitutions: Refer to Section 01 25 00.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare surfaces in accordance with manufacturer's recommendations.

B. Ensure sleeves, curbs and projections which pass through waterproofing are properly and rigidly installed.

C. Ensure surfaces are free of cracks, depressions, waves and projections which may be detrimental to proper installation of waterproofing.

1. Repair surfaces as required by manufacturer's representative.

D. Seal cracks and expansion joints with recommended backup material and sealant; ensure proper depth-width ratio as recommended by sealant manufacturer.

E. Ensure expansion joints are sharply formed, free of broken edges and loose aggregates.

F. Clean surfaces of dust, dirt and foreign matter detrimental to proper installation of waterproofing.

G. Prime surfaces to receive waterproofing in accordance with manufacturer's recommendations.

3.2 INSTALLATION

A. Apply waterproofing in accordance with manufacturer's recommendations and installation instructions as required for watertight installation.

1. Seal joints and items projecting through waterproofing.

B. Seam Overlap: Minimum 2-1/2".

1. Stagger end laps.

C. Reinforce corners with double applications of waterproofing unless otherwise specifically recommended by manufacturer's representative.

D. Allow extra materials at joints with anticipated movement to permit movement without stressing waterproofing.

E. Roll waterproofing membrane smooth, firmly and completely to surfaces indicated, with no fish-mouths or bunches of material.

F. Inspect and repair waterproofing in accordance with manufacturer's instructions prior to application of protection board and backfill.

G. As soon as possible after installation and inspection apply protection boards and drainage composites in accordance with manufacturer's recommendations.

1. Neatly fit around pipes and penetrations.

3.3 FIELD QUALITY CONTROL

A. Site Flood Test: Test horizontal applications of waterproofing before completed membrane is covered by protection course or other work.

1. Test for leaks with 2" depth of water maintained for 24 hours; do not overload structure.

2. Repair leaks revealed by examination of substructure and repeat test until no leakage is observed.

B. Manufacturer’s Field Services: Manufacturer's representative shall inspect work of Project on regular basis and provide certification waterproofing has been installed in accordance with manufacturer's recommendations.

1. Provide unobstructed access to waterproofing work.

2. Correct defects and irregularities as advised by manufacturer's representative.

END OF SECTION

SECTION 07 14 10

COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide cold fluid-applied membrane waterproofing system, with internal corners, and accessories as required for complete watertight installation.

1. Location: Provide fluid-applied waterproofing at planters

B. Related Work:
1. Section 09 30 00: Waterproofing beneath tile.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this Section. Require attendance of those directly affecting work of this Section.

1. Review installation procedures and coordination required with related work.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's literature, recommendations for surface conditioner, flashing, joint cover sheet and crack sealants, and temperature range for application of waterproofing.

B. Certificates: Submit manufacturer's representative's certification indicating work has been installed in accordance with manufacturer's recommendations and installation instructions.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for paints and coatings.

B. Qualification of Installer: Minimum five years successful experience in projects of similar scope.

1.5 SITE CONDITIONS

A. Do not apply waterproofing during inclement weather or when air temperature is below 40 degrees F.

B. Do not apply waterproofing to damp, dirty, dusty or otherwise unsuitable surfaces.

1. Allow concrete surfaces to cure minimum 28 days.

1.6 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist water penetration except where failure is result of structural failure of building. Repair system and pay for or replace damaged materials and surfaces.

1. Hairline cracking due to temperature or shrinkage is not considered structural failure.

2. Period: Two years.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 5 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Tremco Incorporated.

B. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. Section Includes: Provide cold fluid-applied membrane waterproofing system with accessories.

B. Regulatory Requirements: Comply with applicable requirements limiting volatile organic compound (VOC) emissions.

1. Comply with applicable Air Quality Management District limitations for volatile organic compound (VOC) emissions.

C. Fluid-applied Waterproofing: Manufacturer’s standard fluid-applied elastomeric waterproofing membrane system as specified.

1. Horizontal Waterproofing beneath Pavers at Podium: Tremco/250GC fluid-applied waterproofing applied to thickness of 60 mils over non-occupied spaces, 90 mils thickness over occupied spaces.

a. Drainage Board: Tremco/Tremdrain 1000 drainage board over waterproofing.

2. Horizontal and Vertical Waterproofing at Planters: Tremco/250GC fluid-applied waterproofing applied to thickness of 60 mils over non-occupied spaces, 90 mils thickness over occupied spaces.

    a. Drainage Board: Tremco/Tremdrain S drainage board over waterproofing.

D. Surface Conditioners, Primers, and Accessories: Materials compatible with membrane compound; as recommended by waterproofing manufacturer.

1. Joint Cover Sheet: Uncured neoprene or woven uncoated fiberglass mesh designed for and compatible with waterproofing as recommended by system manufacturer.

2. Joint and Crack Sealant: As recommended by waterproofing manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Ensure drains, sleeves, curbs and projections which pass through waterproofing are properly and rigidly installed.

B. Ensure surfaces are free of cracks, depressions, waves or projections which may be detrimental to proper installation of waterproofing; repair surfaces as required by manufacturer's recommendations.

C. Seal cracks and joints with recommended backup material and sealant. Ensure proper depth-width ratio as recommended by sealant manufacturer.

1. Rout or sawcut cracks exceeding 1/16" in width and fill with sealant.

D. Clean surfaces of dust, dirt and foreign matter detrimental to proper installation of waterproofing.

E. Metal Surfaces: Remove contaminants which may adversely affect adhesion or performance of waterproofing; apply metal primer.

F. Use drop cloths or masking to protect adjacent surfaces.

3.2 APPLICATION

A. Apply waterproofing system, including surface conditioner, primers, and accessories in accordance with manufacturer's recommendations and installation instructions.

1. Apply not less than 55-mil coat of waterproofing over cracks and joints not less than 2" on either side.

2. Allow preparatory work to cure minimum 16 hours prior to application of waterproofing membrane.

B. Seal items projecting through waterproofing.

C. Install membrane flashings and seal into membrane.

D. After complete installation, close off area to prevent unauthorized traffic or work over waterproofing.

3.3 SITE QUALITY CONTROL

A. Flood Testing: Flood test fluid-applied waterproofing; if defects are revealed, repair and repeat flood test until no defects are revealed.

1. Allow waterproofing to cure minimum 72 hours prior to flood testing.

2. Do not overload structure with flood test; if necessary, section off areas as approved by Architect.

3. Install protection board over waterproofing membrane system after system passes flood test; comply with manufacturer recommendations for installation of protection board.

B. Manufacturer’s Field Services: Manufacturer's representative shall inspect work of Project on regular basis and provide certification waterproofing has been installed in accordance with manufacturer's recommendations.

END OF SECTION

SECTION 07 16 00

CEMENTITIOUS AND REACTIVE WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide crystalline type reactive waterproofing system applied to interior (negative) side of concrete surfaces.

1. Locations: Apply at pits

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's literature.

B. Certificates: Submit manufacturer's representative's certification work has been installed in accordance with manufacturer's recommendations.

1.3 QUALITY ASSURANCE

A. Qualification of Installers: Minimum five years successful experience in projects of similar scope.

1.4 SITE CONDITIONS

A. Do not apply waterproofing during inclement weather or when air temperature is below 40 degrees F.

B. Do not apply waterproofing to dirty, dusty, or otherwise unsuitable surfaces.

1.5 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist water penetration except where failure is result of structural failure of building. Repair system and pay for or replace damaged materials and surfaces.

1. Hairline cracking due to temperature or shrinkage is not considered structural failure.

2. Period: Two years.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 10 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Xypex/Concentrate, with the "Architectural Finish".

B. Vandex, Inc./Super.

C. Kryton Group of Companies/Krystol T1 and T2.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide crystalline type reactive waterproofing system applied to interior (negative) side of concrete surfaces.

B. Waterproofing: Crystalline type waterproofing designed to resist water penetration when applied to wall or floor negative side (side away from water pressure).

1. Provide system with integral finish or capable of being painted.

2. Floor applications shall be designed for pedestrian traffic.

3. Finish: Manufacturer's standard, white where available.

C. Accessory Materials: Provide accessory materials as required and recommended by waterproofing manufacturer to assure complete, watertight installation.

PART 3 - EXECUTION

3.1 PREPARATION

A. Ensure sleeves, curbs, and projections that penetrate waterproofing are properly and rigidly installed.

B. Ensure surfaces are free of cracks, depressions, waves or projections which may be detrimental to proper installation of waterproofing.

1. Repair surfaces as required by manufacturer's representative.

C. Seal cracks and expansion joints as recommended.

D. Clean surfaces of dust, dirt and foreign matter detrimental to proper installation of waterproofing.

3.2 INSTALLATION

A. Apply waterproofing in accordance with manufacturer's recommendations and installation instructions for watertight installation.

B. Seal items projecting through waterproofing.

3.3 SITE QUALITY CONTROL

A. Manufacturer's Field Services: Manufacturer’s representative to inspect work of Project and provide certification waterproofing has been installed in accordance with manufacturer's recommendations.

1. Provide unobstructed access to waterproofing work for inspection.

2. Correct defects and irregularities as advised by manufacturer's representative.

END OF SECTION

SECTION 07 21 00

THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide insulation and accessories as required for complete installation.

1. Provide thermal batt insulation with integral vapor retarder.
2. Provide poly-scrim faced batt insulation for exposed interior applications.
3. Provide thermal board insulation with integral vapor retarder.
4. Provide nailable surface polyisocyanurate thermal board roof insulation.
5. Provide foil faced polyisocyanurate thermal board insulation.
6. Provide extruded polystyrene thermal insulation.

B. Related Work:
1. Section 07 53 10: Insulation integral with elastomeric PVC membrane roofing.
2. Section 09 21 00: Acoustical insulation concealed in gypsum board systems.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Interior Vapor Retarders: Where specifications require foil faced vapor retarders as part of building thermal insulation system, intent is to prevent migration of spores from mold and mildew into interior building spaces.

1. Intent is to provide air barrier and vapor retarder on interior surface while allowing vapor to move through exterior wall vapor permeable surfaces, while vapor permeable water barriers are maintained at exterior side of wall.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of insulation.

1. Submit Underwriter's Laboratory approval numbers for required fire ratings; approvals of other laboratories contingent upon acceptance of applicable authorities.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to energy efficiency.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide thermal insulation with accessories.

B. Thermal Batt Insulation: Preformed slag mineral or glass fiber with thermosetting resin binders, conforming to ASTM C665; formaldehyde-free.

1. Manufacturers:

a. Johns Manville/FSK-25 Thermal-Shield Insulation.
b. Owens-Corning Fiberglas Corp./Fiberglas FS-25 Insulation.
c. CertainTeed/Thermafiber FS25 Insulation.
d. Substitutions: Refer to Section 01 25 00.

a. Johns Manville/Thermal-Shield Insulation.
b. Owens-Corning Fiberglas Corp./Fiberglas Insulation.
c. CertainTeed/Thermafiber Insulation.
d. Substitutions: Refer to Section 01 25 00.

2. R-Value: Minimum R-19 at walls, R-38 at horizontal surfaces, unless otherwise indicated.

3. Flame Spread/Smoke Developed Rating: Maximum 25/450, ASTM E84.

4. Vapor Retarder: Type III, aluminum vapor retarder on one side.

5. Vapor Retarder: Type I: No vapor retarder.

6. Combustibility: Pass ASTM E136.

C. Thermal Batt Insulation (LEED): Preformed batt insulation.

1. Manufacturers:

a. Bonded Logic (602.812.9114)/Ultratouch cotton insulation.
b. U.S. Greenfiber (Greenstone)/Cocoon Cellulose Insulation.
c. Johns Manville Corp. (800.654.3103)/Grid-Shield Rx fiberglass insulation.
d. Substitutions: Refer to Section 01 25 00.

2. R-Value: Minimum R-19, unless otherwise indicated.

D. Hi Density R-38 Thermal Batt Insulation: Preformed slag mineral or glass fiber with thermosetting resin binders, conforming to ASTM C665; formaldehyde-free.

1. Manufacturers:

a. Knauf Insulation/High Density EcoBatt ECOSE FSK-25Insulation.
b. Substitutions: Refer to Section 01 25 00.

2. R-Value: Minimum R-38.

3. Flame Spread/Smoke Developed Rating: Maximum 25/450, ASTM E84.

4. Vapor Retarder: Type III, aluminum vapor retarder on one side.

E. Thermal Batt Exposed Ceiling Insulation: Preformed batt insulation with white poly-scrim-kraft or similar vapor retarder facing meeting specified fire rating and intended for exposed applications.

1. Manufacturers:

a. CertainTeed/Post Frame Poly-Scrim-Kraft (PSK) Fiber Glass Insulation.
b. Substitutions: Refer to Section 01 25 00.

2. R-Value: Minimum R-38, unless otherwise indicated.

3. Flame Spread/Smoke Developed Rating: Maximum 25/450, ASTM E84.

F. Thermal Board Insulation: Preformed slag mineral or glass fiber with thermosetting resin binders forming rigid board, conforming to ASTM C612.

1. Manufacturers:

a. Johns Manville/Insul-Shield Insulation.
b. Owens-Corning Fiberglas Corp./Fiberglas 700 Series Insulation.
c. CertainTeed/CertaPro Commercial Board Insulation.
d. Substitutions: Refer to Section 01 25 00.

2. Thickness: Minimum 1" unless otherwise indicated; fill furring channel space between wall and gypsum board.

3. Flame Spread/Smoke Developed Rating: Maximum 25/450, ASTM E84.

4. Combustibility: Pass ASTM E136.

5. Vapor Retarder: Type I, unfaced.

6. Vapor Retarder: Type III: Aluminum vapor retarder on one side.

G. Thermal Board Insulation with Nailable Surface: Provide foam insulation intended for use with sloped nailable type roofing systems; with minimum 7/16” oriented strand board (OSB) surface and glass fiber mat facer, conform to ASTM C1289, Type V.

1. Manufacturers:

a. Johns Manville/NailBoard.
b. Dow Chemical Co./Hy-Therm Nail-Line.
c. Atlas Roofing Corp./ACFoam Nail Base.
d. RMAX, Inc./Nailable Base-3.
e. Substitutions: Refer to Section 01 25 00.

2. Thermal Resistance: Not less than R-38 total Long-Term Thermal Resistance (LTTR) unless otherwise indicated.

H. Thermal Board Insulation with Foil Face: Provide foam insulation intended for use with roofing systems; with foil facing, conform to ASTM C1289, Type I, Class I.

1. Manufacturers:

a. Dow Chemical Co./Thermax Metal Building Board or Thermax Sheathing.
b. Atlas Roofing Corp./ACFoam Supreme.
c. RMAX, Inc./Thermaroof Plus-3.
d. Substitutions: Refer to Section 01 25 00.

2. Thickness: As indicated on Drawings.

3. Thermal Resistance: Not less than R-30 total Long-Term Thermal Resistance (LTTR) unless otherwise indicated.

I. Blown-In Insulation: Glass fiber blown-in insulation.

1. Manufacturers:

a. Johns Manville/Climate Pro Loose Fill Blow-In Fiber Glass Insulation.
b. Owens Corning/AttiCat Expanding Blown-In Pink Fiberglas.
c. CertainTeed/InsulSafe or OPTIMA Blow-in Insulation.
d. Substitutions: Refer to Section 01630.

2. R-Value/Thickness: As indicated, maximum possible for spaces indicated to be insulated where not specifically indicated.

J. Accessories: Furnish as recommended by insulation manufacturer for insulation types, substrates, and conditions involved.

1. Fasteners and Attachment Devices: Comply with insulation manufacturer recommendations for attachment of insulation.

2. Fasteners to withstand loads specified for system.

3. Vapor Retarder Tape: Minimum 2" wide self-adhering type designed to maintain vapor retarder integrity and complying with fire resistance ratings as required by applicable codes.

4. Penetration Type Insulation Supports: Galvanized or electroplated steel penetration supports with adhesive attachment to substrate and support disc.

5. Hat Channels for Special Fiberous Continuous Insulation: Types as indicated and as recommended by insulation manufacturer for applications indicated.

6. Thermal Break Insulation Supports for Continuous Insulation: Provide attachment system designed specifically for supporting both continuous insulation and exterior building cladding systems indicated.

a. Manufacturers:

1) Armatherm (844.360.1036)/Armatherm Z Girt Structural Thermal Break.
2) Knight Wall Systems (855.597.9255)/CI or HCI System.
3) Substitutions: Refer to Section 01 25 00.

b. Provide system recommended by manufacturer for applications indicated with accessories as required for complete thermally-broken continuous insulation system in configurations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify substrate and adjacent materials are dry and ready to receive insulation; beginning installation signifies acceptance of conditions.

B. Ensure mechanical and electrical items affecting work are properly placed, complete, and have been inspected by Architect prior to commencement of installation.

3.2 INSTALLATION

A. General: Install insulation in accordance with manufacturer's instructions and applicable code requirements. Cut and trim insulation neatly, to fit spaces.

1. Fit insulation tight within spaces and tight to and behind mechanical and electrical services within insulation plane; leave no gaps or voids; maintain integrity of thermal barrier.

2. Backed Insulation: Use insulation free of ripped backs and edges.

3. Insulations with Vapor Retarder Facing: Install insulation with integral vapor retarder with vapor retarder toward inside of building.

B. Batt Insulation: Friction fit batt insulation in place; use tape or penetration supports as necessary to assure permanent installation.

1. Taping: Tape joints and tears in integral vapor retarder, including joints between insulation and surrounding construction, to ensure vapor-tight installation.

2. Taping: Tape tears in integral vapor retarder.

3. Penetration Supports: Cut or bend pins in locations accessible to maintenance personnel, to eliminate potential hazards from exposed pin points.

C. Nailable Surface Roof Insulation: Secure using fasteners recommended by insulation manufacturer for application indicated and capable of resisting wind loads specified for roofing systems applied over nailable surfaced roof board insulation.

END OF SECTION

SECTION 07 26 00

BELOW-GRADE VAPOR RETARDER

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide vapor retarder system for below grade and slab-on-grade concrete, including sealing joints and protrusions through vapor retarder and sand bed below vapor retarder.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's literature.

1.3 SITE CONDITIONS

A. Do not apply vapor retarder during inclement weather or when air temperature is below 40 degrees F.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Fortifiber Corp./Ultra 15.

B. Raven Industries, Inc./Vapor Block # VB 15 (15 mil Blue).

C. Stego Industries, Inc./Stego Wrap (15 mil).

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description Includes: Provide vapor retarder system for below grade and slab-on-grade concrete, including sealing joints and protrusions through vapor retarder and sand bed below vapor retarder.

B. Vapor Retarder: ASTM E1745, Class A vapor retarder consisting of 15 mil polyolefin film.

1. Permeance: Maximum 0.025 perms, ASTM F1249 and E154 tests.

2. Resistance to Puncture: Minimum 2200 grams, ASTM D1709, Method B.

3. Tear Resistance: Minimum 8.74 lbs., ASTM D1004.

4. Tensile Strength: Minimum 35 lbs/in., ASTM E154, Section 9, Method D-882, in both directions.

C. Joint Sealer: Pressure sensitive tape as recommended by vapor retarder manufacturer and providing comparable permeance to vapor retarder.

D. Sand Bed: Clean natural sand; free from silt, clay, loam, friable or soluble materials, and organic matter.

PART 3 - EXECUTION

3.1 PREPARATION

A. Ensure sleeves, curbs and projections that penetrate vapor retarder are properly and rigidly installed.

B. Ensure substrate is free of projections and irregularities that may be detrimental to proper installation of vapor retarder.

3.2 INSTALLATION

A. Spread and roll sand to provide smooth, even bed for vapor retarder.

B. Apply vapor retarder in accordance with manufacturer's recommendations and installation instructions and in accordance with ASTM E1643; comply with most restrictive where conflicts occur.

1. Seal items projecting through vapor retarder with pressure sensitive tape.

C. Seams: Minimum 12" overlap, sealed with pressure sensitive tape for vapor tight seal.

D. Lay vapor retarder membrane smooth with no fish-mouths or bunches of material.

E. Inspect and repair vapor retarder prior to application of concrete slab; tape tears and repair damage.

END OF SECTION

SECTION 07 28 00

WEATHER BARRIER/UNDERLAYMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide weather barrier/underlayment air and water barrier systems for siding, sloped roofing, flashing and sheet metal, and penetrations with accessories as required for complete watertight installation.

1. Sloped Roofing Underlayment: Provide self-adhering sheet membrane underlayment at sloped roofing systems, with accessories as required for complete watertight installation.

2. Flashings and Sheet Metal Underlayment: Provide self-adhering sheet membrane underlayment at flashings and sheet metal, with accessories as required for complete watertight installation.

3. Self-Adhering Sheet Membrane (SASM) Flashing at Penetrations: Provide SASM flashing for around penetrations through building paper including windows and doors, with accessories as required for complete watertight installation.

B. Related Sections:

1. Section 07 60 00: Exposed metal flashing.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Weather Barriers: Provide weather barrier/underlayment systems which, with other building components, comply with applicable code requirements for air barriers and water barriers.

1. Air Barriers: Air barriers shall be as defined by applicable Energy Code requirements and shall include standard exterior wall components and air seal joint sealants specified in Section 07 90 00 – Joint Sealants.

2. Water Barriers: Water barriers shall be as defined by applicable Building Code requirements and shall include vapor permeable systems with or without rainscreen barriers intended to extend amount of water drained to exterior.

3. Self-Adhering Flexible Flashings: Intent of flexible flashings at window openings, door openings, and other wall penetrations is to ensure water cannot move from exterior surface past water barriers and into building.

B. Pre-Installation Meeting: Convene one week prior to commencing work; require attendance of parties directly affecting underlayment.

1. Review procedures and coordination required with related work.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of underlayment.

B. Samples: Furnish samples of each material.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives.

1.5 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist damage from anticipated sources including damage from water penetration. Repair system and pay for or replace damaged materials and surfaces.

1. Period: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide weather barrier/underlayment air and water barrier systems for, sloped roofing, flashing and sheet metal, and penetrations with accessories.

B. Regulatory Requirements: Provide materials conforming to applicable air quality management district limitations on volatile organic compound (VOC) emissions.

C. Regulatory Requirements: Provide materials with minimum volatile organic compound (VOC) emissions available.

D. High Temperature Metal Roofing Underlayment: Self-adhering sheet membrane with primers and seam sealers as required for complete watertight installation; type as recommended by manufacturer for substrate and for applications indicated.

1. Manufacturers:

a. GCP Applied Technologies (Grace).
b. Henry Company.
c. Substitutions: Refer to Section 01 25 00.

E. Sheet Metal and Flashing Underlayment: Self-adhering rubberized sheet membrane with primers and seam sealers as required for complete watertight installation; type as recommended by manufacturer for substrate and for applications indicated.

1. Manufacturers:

a. GCP Applied Technologies (Grace).
b. Henry Company.
c. Carlisle Corp.

d. Protecto Wrap Company.
e. Substitutions: Refer to Section 01 25 00.

2. Provide specific membrane types as recommended by system manufacturers for each type of application.

F. Self-Adhering Sheet Membrane (SASM) Flashing at Penetrations: SASM with primers and seam sealers as required for complete watertight installation; type as recommended by manufacturer for substrate and for applications indicated.

1. Manufacturers:

a. GCP Applied Techologies (Grace).
b. Henry Company.
c. Carlisle Corp.
d. Protecto Wrap Company.
e. Substitutions: Refer to Section 01 25 00.

2. Provide specific membrane types as recommended by system manufacturers for each type of application.

G. Concealed Metal Flashings Integral with Underlayment: Minimum 26 gage thick steel with minimum 0.90 oz/sf galvanized coating; ASTM A653.

1. Fasteners: Standard round wire type of hot dipped galvanized steel; minimum 19/64" head diameter and 0.104" shank diameter; minimum 7/8" long.

H. Bituminous Paint: Acid and alkali resistant type; black color.

I. Accessories: Provide as recommended by underlayment manufacturers for specific applications.

1. Plastic Cement: Cutback asphaltic type with mineral fiber components, for sealing and coating flashings; free of toxic solvents and free of asbestos. Capable of setting within 24 hours at temperatures of approximately 75 degrees F and 50% R.H.

2.2 FLASHING FABRICATION

A. Fabricate metal flashings as recommended by Sheet Metal and Air Conditioning Contractors National Association (SMACNA) "Sheet Metal Manual".

B. Form flashings to drain water to exterior at roofing and siding construction for penetrations, sill and header flashings.

C. Form sections square, true and accurate to size, in maximum possible lengths and free from distortion and other defects detrimental to appearance or performance.

D. Hem exposed edges of metal flashings minimum 1/4" on underside.

E. Apply bituminous paint on concealed surfaces of metal flashings.

PART 3 - EXECUTION

3.1 PREPARATION

A. Install underlayment over surfaces that are dry, free of ridges, warps and voids that could damage paper.

B. Coordinate installation with installation of components and items projecting through underlayment.

3.2 FLASHINGS INSTALLATION

A. Install flashings as recommended by Sheet Metal and Air Conditioning Contractors National Association (SMACNA) "Sheet Metal Manual".

B. Weatherlap joints minimum 2" and seal with plastic cement; secure in place.

C. Fastenings: Concealed in completed installation.

3.3 UNDERLAYMENT INSTALLATION

A. Install weather barrier/underlayment in accordance with installation instructions and recommendations of each manufacturer and of manufacturers of products to cover weather barrier/underlayment; comply with applicable code requirements.

1. Wall Underlayment: Provide one-layer No. 15 building paper underlayment.

2. Wall Underlayment: Provide two-layers Grade D building paper underlayment.

3. Wall Underlayment: Provide fluid applied underlayment.

4. Wall Underlayment: Provide one-layer sheet membrane underlayment.

5. Sloped Roofing: Provide one-layer sheet membrane underlayment.

6. Flashing and Sheet Metal: Provide one-layer sheet membrane underlayment.

7. Penetrations: Apply one-layer of self-adhering sheet membrane extending minimum 18" from penetrations, including windows and doors; start at bottom of penetration and weatherlap joints.

    a. Apply top layer over metal flashing to direct water to exterior.

8. Weatherlap joints as recommended by system manufacturer.

    a. Weatherlap joints not less than 2” at building paper.

9. Secure underlayment in place, stagger joints between sheet membrane layers; lap ends minimum 6"; stagger end joints.

B. Building Paper Underlayment: Prime substrates and roll sheet membrane underlayment smooth, firmly and completely to surfaces indicated, with no fish-mouths or bunches of material.

1. Apply plastic cement to substrate prior to application of underlayment starter strips to prevent capillary movement of water back up beneath underlayment.

2. Weatherlap items projecting through building paper underlayment and seal with plastic cement.

C. Sheet Membranes: Weatherlap items projecting through sheet membrane underlayment and seal with sealer recommended by sheet membrane underlayment manufacturer.

END OF SECTION

SECTION 07 41 15

MANUFACTURED BATTEN SEAM ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide factory finished manufactured metal batten seam type roofing including integral metal flashings and sealants, and accessories as required for complete weather-tight installation.

B. Related Work:

1. Section 07 21 00: Thermal insulation.
2. Section 07 28 00: Weather barrier/underlayment.
3. Section 07 60 00: Flashing and sheet metal not integral with roofing.
4. Section 07 95 00: Expansion Joint Cover Assemblies

1.2 REFERENCES

A. Sheet Metal and Air Conditioning Contractors National Association (SMACNA): Architectural Sheet Metal Manual.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference: Convene pre-construction conference one week prior to metal roofing work to coordinate roofing with other trades; require attendance of parties directly affecting metal roofing work.

1. Review installation and coordination required with related work.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for prefabricated components, and recommendations for cleaning and protection.

B. Shop Drawings: Indicate dimensioning, panel layout, general construction details including closures, flashings, locations of and types of sealants, and anchorage.

C. Samples: Furnish finished preformed metal roofing and each type of exposed metal flashing.

1.5 QUALITY ASSURANCE

A. Qualification of Installer: Company with minimum five years successful experience in work of comparable scope.

B. Mock-Up: Provide 200 square foot mock-up of metal roofing construction at location approved by Architect; approved mock-up may be incorporated into Project.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Provide protective covering on finished flashing materials to protect them through installation.

1.7 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist damage from anticipated sources including damage from wind and water penetration. Repair system and pay for or replace damaged materials and surfaces.

1. Period: Three years.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 20 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. AEP Span.

B. Berridge Manufacturing Co. (Basis of Design)

1. Color 1: High Roof: Lead Cote

2. Color 2: Low Roof: Charcoal Grey

C. ATAS International, Inc.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description Includes: Provide factory finished manufactured metal batten seam type roofing including integral metal flashings and sealants, and accessories.

B. Regulatory Requirements: Comply with California Building Standards Code requirements for metal roofing systems.

1. Cool Roof System: Comply with California Building Standards Code requirements for “Cool Roof” system including three-year aged solar reflectance value requirements.

a. Label: System to have Cool Roof Rating Council (CRRC) label.

C. Design Criteria: Design system to provide movement of components without buckling, failure of joint seals, undue stress on fasteners or other detrimental effects, when subject to 100-year seasonal temperature ranges.

1. Design system to accommodate tolerances of structure, provided irregularities do not exceed industry recognized standards and clearances are maintained.

2. Provide for positive drainage of water entering or occurring within preformed metal roofing system.

D. Batten Seam Metal Roofing System: Preformed metal roofing system complete with anchoring assembly and accessory components.

1. Type: Basis of Design: Tee-Panel, 12 ¾" coverage.

2. Type: Manufacturer's standard batten seam system specified with pans approximately 12" on center unless otherwise indicated.

3. Sheet Metal: Minimum 24 gage galvanized steel, minimum G90 galvanized coating, ASTM A924 and A653.

4. Finish: Manufacturer's standard kynar/hylar coil coat finish complying with AAMA 605.2.

5. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

E. Sealants and Gaskets: Manufacturer's standard type suitable for use in conjunction with installation of metal roofing.

1. Non-staining; non-corrosive; non-shrinking and non-sagging; ultra-violet and ozone resistant for exterior applications.

2. Color of exposed sealants and gaskets to match roofing.

F. Fasteners: Manufacturer's standard hot dip galvanized fasteners with not less than G90 galvanized coating.

1. Finish exposed fasteners to match roofing.

G. Underlayment: Specified in Section 07 28 00 – Weather Barrier/Underlayment.

2.3 FABRICATION

A. Internal and External Corners: Same materials, material thickness and finish as roofing, profile to suit system, brake formed, shop cut and factory mitered to required angles.

B. Mitered internal corners shall be backed with minimum 22 gage galvanized steel sheet stock to maintain continuity of profile.

C. Expansion Joints: Provide concealed metal expansion control throughout roofing system.

D. Sheet Metal, Flashings, Gutters, Closures, expansion covers, and Other Components: **Custom color to match adjacent roofing**. Brake formed to required profiles; conform to SMACNA Manual.

1. Conform to requirements specified in Section 07 60 00 - Flashing and Sheet Metal

E. Provide for positive drainage to exterior, any water entering or occurring within metal roofing systems.

.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify substrate is free of elements that could be harmful to system.

B. Beginning of work signifies acceptance of conditions.

C. Take special care not to damage underlayment beyond that required to secure system to structure.

3.2 INSTALLATION

A. Install manufactured metal batten seam roofing in accordance with manufacturer's recommendations, installation instructions, and approved shop drawings.

B. Install metal flashing and sheet metal in accordance with SMACNA Architectural Sheet Metal Manual.

1. Comply with installation requirements specified in Section 07 60 00 - Flashing and Sheet Metal.

C. Exercise care when cutting materials on site, to ensure cuttings do not remain on finished surfaces.

D. Protect metal surfaces in contact with cementitious materials and dissimilar metals with bituminous paint; allow protective coating to dry prior to installing members.

E. Permanently fasten roofing system to structural supports, properly aligned, leveled and plumb.

1. Maximum 1/16" offset from true alignment between adjacent members butting or in line.

2. Maximum 1/4" variation from plane or location indicated on Drawings.

F. Locate end laps over supports; end lap panels minimum 2"; ensure side-laps are over firm bearing.

G. Provide expansion joints at regular basis, concealed within system.

H. Use concealed fasteners except where specifically approved by Architect.

I. Install sealants and gaskets where required to prevent direct weather penetration.

J. Completed installation shall be free of rattles, noise due to thermal and air movement, and wind whistles.

K. Remove protective coating when no longer required to protect roofing and flashing from construction.

END OF SECTION

SECTION 07 46 40

FIBER CEMENT SIDING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide fiber reinforced cement siding with accessories for complete weathertight installation.

B. Related Sections:

1. Section 07 28 00: Weather barrier/underlayment.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's literature.

B. Shop Drawings: Indicate fabrication details, connection details, pertinent dimensions, and erection support points.

1. Show precise locations of exposed fasteners, including drawings scaled to indicate exposed fastener patterns.

C. Samples: Submit sample of each type of panel with finish required.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for paints and coatings.

B. Qualification of Installer: Firm with minimum five years successful experience installing architectural fiber cement building panels.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store in manufacturer's wrapping and crating.

1.5 WARRANTY

A. Extended Correction Period: Extend correction period to two years.

1. Repair or replace defective siding that fails through corrosion or finish damage because of manufacturing defects.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. James Hardie Building Products.

B. GAF Materials Corp./GAF-ELK WeatherSide.

C. Plycem USA, Inc./Allura.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description Provide fiber cement siding with accessories.

B. Fiber Cement Panels: Provide systems as indicated on Drawings; not less than ASTM C1186, Type A with label listing an approved quality control agency per code.

1. Plank System: Match Hardie/Hardiplank, fiber-reinforced cement panels, with no asbestos content.

a. Thickness: Preformed 5/16" thick.

b. Finish: Smooth surface.

c. Size: 9-1/2" width (8-1/4" coverage), with planks available in up to 12'-0" lengths.

2. Panel System: Match Hardie/Hardipanel, fiber-reinforced cement panels, with no asbestos content.

a. Thickness: Preformed 5/16" thick.

b. Finish: Smooth surface.

c. Size: 4'-0" width by lengths appropriate for application, including 8', 9', and 10' lengths as required to minimize joints.

3. Panel Soffits and Trim: Match panel system as indicated and as required for complete installation.

4. Factory Prime Finish: Provide factory primed fiber cement panels using primer compatible with paints and coatings specified in Section 09 90 00 – Painting and Coating.

5. Shop Finish: Provide manufacturer’s premium quality shop painted finished materials.

a. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

6. Fasteners: Corrosion resistant non-magnetic stainless-steel siding nails; types as recommended by system manufacturer.

7. Exposed Fastener Heads: Types as approved by Architect.

C. Accessories: Provide as indicated, as recommended by panel manufacturer and as required for complete finished siding installation.

PART 3 - EXECUTION

3.1 PREPARATION

A. Install siding over surfaces which are dry, free of ridges, warps and voids.

B. Coordinate installation of siding with installation of items projecting through; ensure openings are properly sized and located prior to siding installation.

C. Underlayment: Take special care not to damage underlayment beyond that required to secure siding to structure.

3.2 INSTALLATION

A. Provide for installation procedures, temporary bracing and induced loads during erection; maintain temporary bracing in place until final support is provided.

1. Coordinate with building paper installation in Section 07 28 00; take special care not to damage building paper beyond required penetrations for fasteners.

B. Install siding in accordance with manufacturer recommendations and installation instructions, without damage to panel, panel shape or finish.

1. Carefully locate exposed fasteners to conform to Architectural Drawings and approved shop drawings; exposed fasteners to provide uniform pattern as approved.

C. Erect level, plumb, square, and true within allowable tolerances.

D. Align and maintain uniform horizontal and vertical joints, as erection progresses.

E. Securely fasten units in place.

F. Seal exposed fastener heads using materials matching mineral-fiber cement siding and strike flush to match adjacent surfaces.

G. Site Tolerances: Maintain following joint tolerances of erected mineral-fiber units:

1. Face Width of Joint: Maximum plus or minus 1/16" (total 1/8").
2. Jog in Alignment of Edges: Maximum 1/8".

3.3 CLEANING

A. Clean marks, debris, and dirt from exposed surfaces of mineral-fiber units using manufacturer recommended cleaning materials and procedures which do not stain nor damage panels or fasteners.

END OF SECTION

SECTION 07 53 10

ELASTOMERIC PVC MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide reinforced polyvinyl chloride (PVC) type elastomeric sheet membrane roofing system with base flashings, insulation, roof deck board, and accessories for complete, weather-tight installation.

B. Related Sections:

1. Section 06 10 50: Wood blocking and plywood in conjunction with roofing.
2. Section 07 60 00: Flashing and sheet metal.

1.2 REFERENCE STANDARDS

A. National Roofing Contractors Association: The NRCA Roofing and Waterproofing Manual.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this section. Require attendance of parties directly affecting roofing work.

1. Review procedures and coordination required with related work.

1.4 SUBMITTALS

A. Product Data: Submit membrane manufacturer's literature for membrane and base flashing materials; provide specific recommendations of insulation system manufacturer.

1. Submit membrane manufacturer's recommendations for surface conditioning, flashing, joint cover and crack sealants, and temperature range for application of materials.

B. Shop Drawings: Submit for PVC sheet seams and insulation layout; indicate location and insulation type; provide cross section indicating layers of insulation along with R-value calculations.

C. Samples: Submit samples of each exposed material.

D. Certifications:

1. Installer: Submit certification installer is approved for roof system installation.

2. Materials: Submit certification materials and components conform to Specifications and are compatible with each other, roof substrate, and related work.

3. Fire and Wind: Submit manufacturer's certification system conforms to fire and wind requirements.

4. Manufacturer Representative: Submit certification by manufacturer's representative indicating work has been installed in accordance with manufacturer's recommendations and installation instructions.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to energy efficiency.

B. Qualification of Installers: Company with minimum five years successful experienced in PVC membrane roof application on projects of similar scope.

1. Installer: Roofing and insulation manufacturer certified or approved.

C. Supervisor: Installer to maintain full-time supervisor/foreman who is on jobsite during roofing work who is experienced in installation of roofing system specified.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect foam insulation from direct sunlight exposure.

1.7 SITE CONDITIONS

A. Do not apply roofing membrane during inclement weather or when air temperature may fall below 40 degrees F.

1. Do not allow materials to be exposed to moisture during transportation, storage, handling or installation.

2. Mark damp or wet materials, including felts which froth or foam during installation, and remove from site within 24 hours.

B. Do not apply materials to damp, dirty, dusty, or otherwise unsuitable surfaces.

1. Allow concrete surfaces to cure minimum 28 days.

C. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.

1.8 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist damage from anticipated sources including damage from wind and water penetration. Repair system and pay for or replace damaged materials and surfaces.

1. Period: Two years.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 20 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Carlisle SynTec Systems.

B. GenFlex Roofing Systems Div. GenCorp.

C. Sarnafil Inc.

D. HPG International Inc.

E. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide reinforced polyvinyl chloride (PVC) type elastomeric sheet membrane roofing system with base flashings, and accessories.

1. System: Fully adhered exposed membrane.

2. Provide roofing system materials by a single manufacturer, except where materials of other manufacturers are specified or approved by Architect.

3. Provide roof insulation, double layer application where indicated.

4. Provide tapered insulation as required to ensure positive 1/4” per foot slopes to drains.

5. Provide roof deck board to separate insulation from roof membrane.

B. Regulatory Requirements

1. Cool Roof System: Comply with California Building Standards Code requirements for “Cool Roof” system including three-year aged solar reflectance value requirements.

a. Label: System to have Cool Roof Rating Council (CRRC) label.

2. Fire and Wind Resistance: Conform to California Building Standards Code requirements for Underwriters Laboratory (UL) Class A roof system, with UL Class 60 wind resistance classification.

a. Provide materials conforming to code requirements for roof/ceiling 1-hour fire resistive rating for components and materials indicated in Contract Documents.

C. Roof Membrane: ASTM D4434, Polyvinyl Chloride (PVC) Elastomeric membrane, reinforced, thickness as recommended by roof membrane manufacturer for application involved, but no less than 48 mils.

1. Scrim Reinforcing: Manufacturer's standard fleece, fiberglass, or polyester scrim.

2. Corners and Elastomeric Membrane Flashing: Provide products using same base material as roof membrane; corners preformed.

3. Seams: Solvent welded and seam sealant finished.

4. UV Resistance: Provide materials with demonstrated resistance to ultraviolet light with no visible surface cracking or discoloration based on industry accepted accelerated test methods.

5. Provide materials compounded specifically for application methods and substrates indicated on Drawings; comply with requirements for fire rated materials.

6. Color: As indicated, as selected by Architect from manufacturer’s full range of Cool Roof Rated colors where not indicated.

D. Insulation: Provide materials approved for use with specified membrane and suitable for application indicated; provide tapered insulation where insulation is indicated to provide roof slopes.

1. Polyisocyanurate Insulation: ASTM C1289, Type II, Class 1, Grade 2 glass fiber faced isocyanurate, with ASTM C1303 Long Term Thermal Resistance (LTTR).

2. Other Types of Insulation: Acceptable subject to manufacturer's recommendations, application involved, and total thickness required for specified thermal resistance.

3. Thermal Resistance: Minimum total R-38.

E. Roof Deck Board: ASTM C1278 with moisture and mold resistant core. Provide as indicated, as required for uniform surface for membrane adherence, and as required for fire and wind ratings.

1. Manufacturers:

a. Georgia Pacific/DensDeck Prime.
b. Johns Manville/Securock.
c. Substitutions: Refer to Section 01 25 00.

F. Accessories: Provide as recommended by membrane manufacturer and system manufacturer as required for complete weather-tight installation, including, but not limited to:

1. Bonding adhesives, splicing cement, and lap sealants and mastics.
2. Seam plates.
3. Molded pipe flashing.
4. Temporary sealing, for end of day closing of membrane.
5. Mechanical fasteners.

G. Integral Coated Metal Flashings: Provide not less than 24-gage galvanized steel flashings, minimum G90 coating, coated with PVC materials for compatibility with direct bonding to roof membrane, as recommended by system manufacturer.

H. Roof Protection Pads: Provide protection materials as recommended by membrane manufacturer where maintenance traffic is anticipated over membrane.

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify deck is dry, clean and smooth, free of depressions, waves and projections detrimental to roofing membrane, and properly sloped for drainage.

B. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set and that cant strips, nailing strips, and reglets are in place.

C. Beginning installation indicates acceptance of substrate.

D. Metal Surfaces: Remove contaminants which may adversely affect adhesion or performance of roofing system; apply metal primer.

3.2 INSTALLATION

A. Install membrane roofing system in accordance with manufacturer's recommendations and instructions and as required to meet requirements for warranty and applicable codes.

1. Comply with NRCA Specification Guide for Thermoset Roof Membranes as applicable; where conflicts exist comply with manufacturer's recommendations.

B. Insulation: Install insulation in accordance with insulation manufacturer's recommendations and roof membrane manufacturer's recommendations for installation indicated.

1. Place insulation boards butted in close contact; stagger joints between insulation board layers.

2. Bevel insulation to allow snug fit at penetrations; cut neatly around protrusions through roof.

C. Roof Deck Board: Install in accordance with manufacturer recommendations and as required to ensure suitable substrate for membrane roofing over insulation, fire ratings, and wind ratings; secure to roofing deck.

1. Place roof deck boards butted in close contact; stagger joints between roof deck board and insulation board joints.

2. Cut to allow snug fit at penetrations; cut neatly around protrusions through roof.

D. Roof Membrane: Apply membrane in accordance with membrane manufacturer's recommendations and installation instruction. Provide heat welded seams.

1. Apply sheet membrane smooth, free from air pockets, wrinkles, fish-mouths, un-lapped joints, or tears, over first layer insulation.

2. Extend roof membrane up vertical surfaces minimum 8" wherever possible and secure to nailing strips or reglets; reinforce corners with double applications of membrane.

3. Install membrane flashings and seal into membrane.

a. Coordinate installation of roof drains and related flashings.

4. Seal flashings and items projecting through membrane; seal terminations with additional layer of membrane and mastic.

5. Prevent compounds from entering and clogging drains, and from spilling or migrating onto surface of other work.

E. Roof Protection Pads: Secure roof protection pads in place in accordance with membrane manufacturer recommendations and as required to ensure protection of membrane from roof maintenance traffic.

1. Set pads to allow roof drainage; where pads cross drainage path set with not less than 4" and not more than 8" between pads.

3.3 FIELD QUALITY CONTROL

A. Site Tests: Flood test roofing prior to installation of insulation and ballast; if defects are revealed, repair and repeat flood test until no defects are revealed.

1. Do not overload structure with flood test; if necessary, section off areas as necessary.

2. Test for leaks with 2" depth of water maintained for 24 hours.

B. Manufacturer’s Field Services: Manufacturer's representative shall inspect work of Project on regular basis and provide certification roofing system has been installed in accordance with manufacturer's recommendations.

1. Provide unobstructed access to roofing work.

2. Correct defects and irregularities as advised by manufacturer's representative.

3.4 CLEANING

A. Remove roofing membrane markings from finished surfaces.

B. In areas where finished surfaces are soiled by roofing work, consult manufacturer of finished surfaces for recommended cleaning methods.

C. Leave completed roof free from debris and uniform in appearance.

3.5 PROTECTION

A. Where work must continue over finished roofing membrane, protect surface in accordance with manufacturer recommendations.

END OF SECTION

SECTION 07 60 00

FLASHING AND SHEET METAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide metal flashings and sheet metal including accessories as required for complete weathertight installation.

1. Flashing and sheet metal includes copings, fascias, scuppers, gutters, downspouts, rainwater leaders, reglets, and similar fabricated components as applicable to Project.

2. Provide concealed sealants used in conjunction with installation of metal flashing and sheet metal.

3. Provide miscellaneous sheet metal flashing and reglets not provided by other trades or suppliers.

a. Where reglets are to be installed in conjunction with other work, provide in adequate time for installation.

b. Where reglets are to be surface applied, provide continuous gasket between reglet and surface.

4. Provide precast concrete splash blocks.

B. Related Sections:

1. Section 06 10 50: Miscellaneous rough carpentry.
2. Section 07 28 00: Concealed flashing at weather barrier/underlayment.
3. Section 07 41 10: Flashing and sheet metal integral with metal roofing.
4. Section 07 95 00: Expansion joint cover assemblies at roofing.
5. Section 08 91 00: Louvers.

1.2 REFERENCES

A. Sheet Metal and Air Conditioning Contractors National Association (SMACNA): Architectural Sheet Metal Manual.

1.3 SUBMITTALS

A. Product Data: Furnish literature for manufactured products.

B. Shop Drawings: Clearly indicate dimensioning, layout, general construction details including closures, flashings, locations and types of sealants, anchorages, and method of anchorage.

C. Samples: Furnish samples of typical metal flashing fabrication indicating standard soldered joints and edge conditions.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements:

1) two years' successful experience with CAL/Green requirements.

2. *CAL*Green Requirements: Refer to Section 01 35 15 – *CAL*Green Environmental Requirements and comply with applicable *CAL*Green Checklist indicating requirements applicable to Project.

1.5 DELIVERY, STORAGE AND HANDLING

A. Provide strippable film protective covering on shop finished flashing materials to protect materials through shipping, fabrication and installation.

1.6 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist damage from anticipated sources including damage from wind and water penetration. Repair system and pay for or replace damaged materials and surfaces.

1. Period: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide flashing and sheet metal including reglets and accessories as required for complete weathertight installation.

B. Design Criteria: Allow for movement of components without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effects, when subject to 100-year seasonal temperature ranges.

C. Flashing and Sheet Metal:

1. Shop Finished Galvanized Steel Flashing and Sheet Metal: ASTM A924 and A653 G90 galvanized steel; minimum 24-gage; with factory applied fluoropolymer coating based on Kynar 500 or Hylar 5000.

a. Manufacturers:

1) Ryerson Building Products (800.328.7800)/ColorKlad.
2) Metal Sales Manuf. Corp.(800.406.7387)/PVDF (Kynar 500).
3) K&M Sheet Metal (888.567.7778)/Kynar Steel.
4) Substitutions: Refer to Section 01 25 00.

b. Location (Exposed): Where indicated, if not otherwise indicated, provide where flashing will be exposed to view from exterior of building, and where exposed to view from spaces within building.

c. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

d. Touch-up Paint for Prefinished Sheet Metal: Type recommended by fluoropolymer manufacturer for field touch-up.

2. Stainless Steel Flashing and Sheet Metal: Stainless steel, ASTM A666, Type 304, soft annealed, 2B finish, minimum 26-gage.

a. Location (Exposed): Where indicated, if not otherwise indicated, provide where flashing will be exposed to view from exterior of building, and where exposed to view from spaces within building.

3. Prefinished High-Performance Coated Aluminum: Manufacturer's standard two coat thermocured fluoropolymer system containing not less than 70-percent polyvinylidene fluoride resin by weight; AAMA 2605 and AA-C12C42R1x.

a. Manufacturers:

1) Ryerson Building Products (800.328.7800)/AlumaKlad.
2) Merchant & Evans Industries, Inc.(800.257.6215)/Custom.
3) Substitutions: Refer to Section 01 25 00.

b. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

c. Touch-up Paint for Prefinished Sheet Metal: Type recommended by fluoropolymer manufacturer for field touch-up.

4. Lead Flashing: ASTM B749, type L51121, copper-bearing sheet lead, minimum four pound per square foot (1/16" thick) lead with 6% to 7% antimony content.

5. Accessories: Provide strainers, outlet tubes, screens, baffles, hangers and gutter ends as required for a complete system and complying with SMACNA Manual.

6. Provide heavier gage metal where recommended by SMACNA Manual for size of component.

D. Manufactured Reglets: Snap-on type, for two-piece flashing; metal to match flashing and sheet metal.

1. Manufacturers:

a. Fry Reglet Corp./Springlok System.
b. W.P. Hickman Co./The Leading-Edge Drive Lock System.
c. Substitutions: Refer to Section 01 25 00.

E. Solder and Fasteners: As recommended by SMACNA and complying with applicable codes and regulations; hot dipped galvanized minimum coating comparable to G90.

F. Concealed Sealant: Butyl type for use in conjunction with sheet metal; non-staining; non-corrosive; non-shrinking and non-sagging; ultra-violet and ozone resistant for exterior concealed applications.

G. Bituminous Paint: Acid and alkali resistant type; black color; asbestos free.

H. Plastic Cement: Cutback asphaltic type; asbestos free.

I. Sealing Compound: Type recommended by roofing manufacturer; asbestos free.

J. Gaskets: Type suitable for use in conjunction with sheet metal; non-staining, non-corrosive, non-shrinking, non-sagging, ultra-violet resistant, and ozone resistant; for exterior concealed applications.

1. Manufacturers:

a. Emseal USA, Inc./Emseal MST Multi-Use Sealant Tape.
b. Substitutions: Refer to Section 01 25 00.

2.2 FABRICATION

A. Fabricate sheet metal in accordance with SMACNA Architectural Sheet Metal Manual.

B. Form sections square, true and accurate to size, free from distortion and other defects detrimental to appearance or performance.

1. Fabricate corners and intersections in shop with solder joints; watertight fabrication.

C. Form sections in maximum 10'-0" lengths; make allowance for expansion at joints.

D. Hem exposed edges on underside 1/2".

E. Back-paint flashings with heavy bodied bituminous paint where in contact with cementitious materials or dissimilar metals.

F. Form pitch pans watertight, with minimum 4" upstand and 4" flanges; form pans minimum 6" wider than item passing through roof membrane.

G. Form umbrella flashings with minimum 2" overhang, to shed water away from pitch pans.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install metal flashing and sheet metal in accordance with SMACNA Architectural Sheet Metal Manual.

1. Install tight in place, with corners square, surfaces true and straight in planes, and lines accurate to profiles as indicated on Drawings.

2. Lap joints in direction of water flow.

3. Hold downspouts in position, clear of wall, by hangers spaced not more than 10'-0" on center; securely fasten hangers to wall without exposed damage to wall surface.

B. Exercise care when cutting materials on site, to ensure cuttings do not remain on finished surfaces.

C. Provide expansion joints concealed within system.

D. Use concealed fasteners, continuous cleat type, except where specifically approved by Architect.

1. Exposed fasteners may be used, where clearly indicated on shop drawings and approved by Architect, at areas not exposed at exterior walls nor in sight of interior spaces.

E. Apply sealing compound at junction of metal flashing and felt flashing.

F. Lock seams and end joints; fit flashing tight in place; make corners square, surfaces true and straight in planes, and lines accurate to profiles.

G. Counter-flash mechanical and electrical items projecting through roof membrane.

H. Install sealants where required to prevent direct weather penetration.

1. Install continuous gasket behind surface applied reglets.

I. Completed installation shall be free of rattles, noise due to thermal and air movement, and wind whistles.

J. Install pitch pans and fill with plastic cement.

K. Install umbrella flashing with draw band collars with sheet metal sealant between penetrating item and flashing; use wood blocking at angle type penetrations and cover blocking with sealant.

L. Install splash blocks at locations to interrupt fall of water and direct water flow as indicated on Drawings.

3.2 CLEANING

A. Remove protective coating from shop finished sheet metal when no longer required to protect roofing and flashing from construction.

B. Touch-up scratched and damaged finish to match new; remove and replace sheet metal units that cannot be repaired to look identical to adjacent sheet metal when viewed from 15'-0" away.

END OF SECTION

SECTION 07 72 00

ROOF HATCHES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide manufactured roof hatches with integral support curb, operable hardware, counterflashing, and accessories as required for complete, weather-tight installation.

1. Provide fall protection railings where indicated and as required by applicable regulations.

B. Related Sections:

1. Section 05 50 00: Ladder extenders for roof hatch access.
2. Section 07 60 00: Flashing roof hatches to roof system.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer’s literature.

B. Shop Drawings: Clearly indicate general construction, configurations, jointing methods and locations when applicable, fastening methods and general details.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Babcock-Davis Hatchways, Inc.

B. Bilco Company.

C. Dur-Red Products, Red Plastic Co., Inc.

D. Milcor, Inc.

E. Nystrom Building Products.

F. Substitutions: Refer to Section 01 25 00.

2.2 ROOF HATCHES

A. System Description: Provide manufactured roof hatches, with integral support curb, operable hardware, counterflashing, and accessories.

B. Roof Hatches:

1. Type: Single leaf type.

2. Size: 3'-0" by 3'-0" unless otherwise indicated.

C. Construction: Construct with full welded corner joints, insulated hatch lids, and insulated internal support curbs.

1. Provide complete with integral counter-flashings to roof flashing system and flanges on support curb for anchorage to roof deck.

2. Loading: Capable of supporting minimum 40-psf external loading and 20-psf internal loading pressure.

D. Opening Hardware: Manufacturer's standard manually operating type.

1. Capable of ensuring effortless control and smooth operation without causing damage to hatch or to roofing system.

2. Capable of being opened from inside and outside.

3. Complete with hold-open mechanism and inside padlock hasps.

E. Fall Protection Integral Railings: Provide railings fixed to roof hatch curbs (not requiring additional penetration of roof assembly); comply with applicable code requirements; welded construction; cap exposed ends.

1. Railing Design Requirements: Comply with applicable codes and regulations requirements but not less than lateral force of 50 lbs. /lin. ft. uniform load and 200 lbs. at any single point without permanent set or damage; ASTM E935.

2. Rails: Seamless steel tube rails, 42" height above roof surface, 1-1/2" outside diameter, continuous railings conforming to applicable code and design requirements.

3. Chain Closures: Provide welded closed link chain capable of supporting same loads as railing and designed to allow easy removal for access from hatch to roof and roof to hatch.

2.3 FABRICATION

A. Fabricate roof hatches weather-tight, and free of visual distortions and defects.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install roof hatches in accordance with manufacturer's recommendations and instructions for complete, weather-tight installation.

B. Coordinate with installation of roofing system and related flashings.

C. Apply bituminous paint on metal surfaces of roof hatches to be in contact with cementitious materials and dissimilar metals.

END OF SECTION

SECTION 07 90 00

JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide joint sealants, for interior and exterior joints not specified elsewhere, with backing rods and accessories as required for complete installation.

1. Joint sealants include joint sealers and calking as indicated.

B. Related Sections:

1. Section 07 60 00: Flashing and sheet metal concealed sealants.
2. Section 07 84 00: Firestopping type joint sealants.
3. Section 08 80 00: Glazing sealants.
4. Section 09 21 00: Sealants used for acoustical treatment at gypsum board.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's descriptive literature.

B. Samples: Furnish samples of each type of exposed joint sealer in required colors.

C. Certifications:

1. Furnish manufacturer's certification joint sealers comply with Contract Documents and are suitable for Project applications.

2. Furnish certification indicating installers are trained in proper use of specified products, qualified, and familiar with proper installation techniques.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives, sealants, and caulks.

1. Provide joint sealants as required by applicable codes and regulations to fill joints and openings in building envelope separating conditioned space from unconditioned space.

B. Installer Qualifications: Firm with minimum five years successful experience on projects of similar type and size, using specified products.

C. Installers shall be familiar with proper application procedures to ensure maximum joint sealer expansion and contraction capabilities.

D. Mock-Up: Provide exterior joint sealers where required for mock-ups of other systems.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, cure time, and mixing instructions.

1.5 SITE CONDITIONS

A. Do not proceed with installation of joint sealers under unfavorable weather conditions.

B. Install elastomeric sealants when temperature is in lower third of temperature range recommended by manufacturer.

1.6 WARRANTY

A. Extended Correction Period: Extend correction period to two years.

1. Repair or replace joint sealers which fail to perform as intended, because of leaking, crumbling, hardening, shrinkage, bleeding, sagging, staining, loss of adhesion, and loss of cohesion.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide joint sealants with backing rods and accessories.

B. Performance Requirements:

1. Select materials for compatibility with joint surfaces and indicated exposures.

2. Where not indicated, select modulus of elasticity and hardness or grade recommended by manufacturer for each application indicated.

3. Comply with applicable limitations on volatile organic compound (VOC) emissions.

C. Regulatory Requirements: Comply with applicable regulatory requirements regarding limitations on volatile organic compound (VOC) emissions limitations.

D. Elastomeric Sealants:

1. Single Component Low Modulus Silicone Sealant: ASTM C920 Type S, Class 25, Grade NS; minimum 50% expansion and compaction capability.

   a. Provide at exterior locations not exposed to traffic.

   b. Manufacturers:

      1) GE (Momentive Performance Materials)/Silpruf, Silglaz or GESIL.
      2) Dow Corning Corp./790 or 795.
      3) Pecora Corp./864 Architectural Silicone.
      4) Tremco/Spectrem 3.
      5) Substitutions: Refer to Section 01 25 00.

2. Multi-Component Polyurethane Sealant: ASTM C920, Type M, Grade NS, Class 25, non-sag; minimum 25% expansion and compaction capability.

   a. Provide at exterior locations not exposed to traffic.

   b. Manufacturers:

      1) Pecora Corp./Dynatrol II.
      2) Tremco/Dymeric 240.
      3) BASF/MasterSEal NP 2.
      4) Substitutions: Refer to Section 01 25 00.

3. Single Component Low Modulus Sealant: ASTM C920 Type S, Class 35, Grade NS; minimum 50% expansion and compaction capability.

   a. Provide at exterior locations not exposed to traffic.

   b. Manufacturers:

      1) Fortifiber Building Systems Group/Moistop Sealant.
      2) Sika Group/SikaFlex 1A+.
      3) Substitutions: Refer to Section 01 25 00.

4. Multi-Component Polyurethane Sealant: ASTM C920, Type M, Grade P, Class 25, self-leveling; minimum 25% expansion and compaction capability.

   a. Provide at traffic bearing locations.

   b. Manufacturers:

      1) Pecora Corp./Urexpan NR-200, or Dynatrol II-SG.
      2) Tremco/THC 900-901, or Vulkem 445 SSL.
      3) BASF/MasterSeal SL 2
      4) Substitutions: Refer to Section 01 25 00.

5. Mildew-Resistant Silicone Rubber Sealant: ASTM C920, Type S, Grade NS, Class 25, compounded with fungicide, specifically for mildew resistance and recommended for interior joints in wet areas.

    a. Provide at interior joints in wet areas.

    b. Manufacturers:

        1) GE (Momentive Performance Materials)/SCS 1702 Sanitary Sealant.
        2) Dow Corning Corp./786 Bathtub Caulk.
        3) Pecora Corp./898 Sanitary Mildew Resistant Sealant.
        4) Tremco/Tremsil 200.
        5) Substitutions: Refer to Section 01 25 00.

E. Non-Elastomeric Sealants:

1. Acrylic-Emulsion Sealant: ASTM C834 acrylic or latex-rubber-modified acrylic sealant, permanently flexible, non-staining and non-bleeding; recommended for general interior exposure; compatible with paints specified in Section 09 90 00.

    a. Provide at general interior applications.

    b. Manufacturers:

        1) Pecora Corp./AC-20.
        2) Tremco/Tremflex 834.
        3) Substitutions: Refer to Section 01 25 00.

2. Air Seals: Provide non-staining and non-bleeding sealers, calks, or foams appropriate to specific applications for filling openings between conditioned and unconditioned spaces.

    a. Type: As recommended by manufacturer for each specific application; compatible with adjacent materials.

    b. Manufacturers:

        1) Dow/Great Stuff.
        2) Owens Corning/EnergyComplete Air Sealant.
        3) Hilti/Foam Filler CF 812.
        4) Substitutions: Refer to Section 01 25 00.

    c. Pest Control Mesh: Openings subject to pest infiltration to have 304 stainless steel wool, material stuffed in joint before application of air seals using methods to ensure blocking of gap from pests.

    d. Exception: Annular spaces around pipes, electric cables, conduits and other openings in exterior walls shall be protected against passage of rodents by closing with cementitious grout.

1) Cementitious Grout: ASTM C1107 non-shrink, non-metallic, pre-mixed, factory-packaged, non-staining, non-corrosive; type specifically recommended by manufacturer as applicable to job condition.

F. Miscellaneous Materials:

1. Primers/Sealers: Non-staining types recommended by joint sealer manufacturer for joint surfaces to be primed or sealed.

2. Joint Cleaners: Non-corrosive types recommended by joint sealer manufacturer; compatible with joint forming materials.

3. Bond Breaker Tape: Polyethylene tape as recommended by joint sealer manufacturer where bond to substrate or joint filler must be avoided for proper performance of joint sealer.

4. Sealant Backer Rod: Compressible polyethylene foam rod or other flexible, permanent, durable non-absorptive material as recommended by joint sealer manufacturer for compatibility with joint sealer.

a. Oversize backer rod minimum 30% to 50% of joint opening.

G. Colors: As indicated, as selected by Architect from manufacturer's full range of colors where not indicated.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare joint surfaces in accordance with ASTM C1193 and as recommended by joint sealer manufacturer.

B. Clean joint surfaces immediately before installation of joint sealer; remove dirt, insecure materials, moisture and other substances which could interfere with bond of joint sealer.

C. Prime or seal joint surfaces where recommended by joint sealer manufacturer; do not allow primer/sealer to spill or migrate onto adjoining surfaces.

D. Ensure protective coatings on surfaces in contact with joint sealers have been completely stripped.

3.2 INSTALLATION

A. Comply with manufacturer's printed instructions and ASTM C1193, except where more stringent requirements are shown or specified.

B. Pest Control: Install stainless steel wool prior to application of backer rods and bond breakers at air seal and as required to ensure complete pest blockage at joints where pest intrusion is a potential.

C. Set sealant backer rods at proper depth or position in joint to coordinate with other work, including installation of bond breakers and sealant; do not leave voids or gaps between ends of backer rods.

1. Do not stretch, twist, puncture or tear backer rods.

D. Install bond breaker tape as required to avoid three-sided bond of sealant to substrate and where required by manufacturer's recommendations to ensure joint sealers will perform properly.

E. Size materials to achieve required width/depth ratios.

F. Employ installation techniques that will ensure joint sealers are deposited in uniform, continuous ribbons without gaps or air pockets, with complete "wetting" of bond surfaces equally on opposite sides.

G. Joint Configuration: Fill sealant joint to a slightly concave surface, slightly below adjoining surfaces, unless otherwise indicated.

H. Where horizontal joints are between a horizontal surface and vertical surface, fill joint to form a slight cove, so that joint will not trap moisture or dirt.

I. Install joint sealers to depths recommended by joint sealer manufacturer but within the following general limitations, measured at center (thin) section of bead.

1. Horizontal Joints: 75% width with minimum depth of 3/8".
2. Elastomeric Joints: 50% width with minimum depth of 1/4".
3. Non-Elastomeric Joints: 75% to 125% of joint width.

J. Spillage: Do not allow sealants or compounds to overflow or spill onto adjoining surfaces, or to migrate into voids of adjoining surfaces.

1. Clean adjoining surfaces by whatever means may be necessary to eliminate evidence of spillage.

K. Cure joint sealers in compliance with manufacturer's instructions and recommendations to obtain high early bond strength, internal cohesive strength and surface durability.

L. Maintain finished joints free of embedded matter, ridges and sags.

END OF SECTION

SECTION 08 11 10

HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide full flush steel (hollow metal) doors and pressed steel frames, including anchors and silencers.

1. Pressed steel frames include both door and window framing.

B. Related Sections:

1. Section 08 11 25: Interior aluminum doors and frames.
2. Section 08 17 00: Integrated door opening assemblies.
3. Section 08 71 00: Door hardware.
4. Section 08 80 00: Glazing.

1.2 REFERENCES

A. Steel Door Institute (SDI): SDI-100 (ANSI/SDI A250.8) - Recommended Specifications - Standard Steel Doors and Frames.

B. National Association of Architectural Metal Manuf. (NAAMM): Hollow Metal Manual.

C. Underwriters Laboratories: Standards as applicable to fire rated doors and frames.

1. Materials tested, labeled and inspected by Warnock Hersey International are acceptable upon approval of authorities.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate hardware installation with Section 08 71 00 – Door Hardware.

2. Coordinate glass installation with Section 08 80 00 - Glazing.

1.4 SUBMITTALS

A. Product Data: Submit manufacturers' literature.

B. Shop Drawings: Indicate general construction, configuration, jointing methods, reinforcement, anchorage methods, hardware locations, and locations of cut-outs.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Amweld Building Products Inc.

B. Ceco Door Division Assa Abloy Door Group.

C. Curries Division Assa Abloy Door Group.

D. Door Components, Inc.

E. Republic Doors and Frames.

F. Krieger Steel Products Co.

G. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide full flush steel (hollow metal) doors and pressed steel frames, including anchors and silencers.

B. Doors: Hollow metal flush steel door, 1-3/4" thick.

1. Typical: Full flush with steel channel or welded edge; close top with flush end closer treatment, bottom optional flush or recessed channel; steel stiffened core, insulated at exterior doors; continuous welded seam.

2. Interior Doors: Minimum 0.042” (18-gage).

3. Exterior Doors: Minimum 0.053” (16-gage).

4. Glazed and Louver Doors: Provide systems as indicated on Drawings.

C. Frames:

1. Exterior Frames: Welded (pre-assembled) type.

2. Interior Frames: Knockdown (field-assembled) type; provide 3/8” back bend return on frames at gypsum board.

3. Gage: Minimum 0.053” (16-gage) interior frames, 0.067” (14-gage) exterior frames.

4. Door Silencers: Manufacturer's standard resilient type; removable for replacement.

5. Mortar Guard Boxes: Minimum 0.026” (22-gage) mortar guard boxes welded in place; provide where frames may be grouted.

D. Glazing Stops: Full flush type with glass centered in opening, unsecured side integral with unit, secured side fastened with flush, countersunk Allen type fasteners; minimum 0.053” (16-gage).

E. Fire Rated Units: Construct in accordance with requirements for fire rating, NFPA 252 or UL 10C, and NFPA 80.

1. Labels: Place fire rating labels where visible when doors and frames are in installed, opened position.

2. Fire Ratings: Refer to Drawings for fire rating requirements.

3. Temperature Rise Rating: Provide doors with maximum 450°F Temperature Rise Rating in 30-minute fire exposure period at doors into exit enclosures and where otherwise required by applicable codes.

F. Door Louvers:

1. Interior Doors: Stationary, sight-proof hood or Y type blades of 24-gage steel inserted into door panels full door thickness; no exposed trim.

2. Exterior Doors: Weatherproof Z-shaped blades with U-shaped frames; 1-3/8" thick; blades 1-1/2" on center; 0.053” (16 gage) welded construction.

a. Provide removable bird screens on interior faces, 1/2" by 1/2" bronze wire mesh.

2.3 FABRICATION

A. Conform to requirements of SDI (ANSI A250 Series) or NAAMM.

B. Reinforce and prepare doors and frames to receive hardware.

1. Refer to Section 08 71 00 for hardware requirements.

C. Frames:

1. Welded Frames: Accurately form and cut mitered corners of welded type frames; continuously weld on inside surfaces (fully welded); grind welded joints to smooth uniform finish.

2. Knocked Down Frames: Accurately form and miter interlocking joints of knocked down frames to maintain hairline alignment of parts when field assembled.

3. Head Reinforcement: Reinforce frames wider than 4'-0" with minimum 0.093” (12 gage) formed steel channels welded in place, flush with top of frames.

4. Doors at Glazed Panels: Reinforce jambs and heads of frames for doors which occur adjacent to glazed sidelights and partitions.

D. Door Silencers:

1. Place three single bumpers on single door frames; space equally along strike jambs.

2. Place two single bumpers on double door frames; place on frame heads.

3. Place three single bumpers for each door on door frames with removable mullions, spaced equally along strike jambs, and in addition place two single bumpers on frame heads to cushion door when mullion is removed.

E. Provide jamb anchors per SDI-100 (ANSI/SDI 250.8) and NAAMM; weld floor jamb anchors in place.

F. Provide double doors tested and approved without astragals.

1. Provide astragals for double doors when required to meet UL requirements for Class A, 3-hour rated doors only.

G. Edge Clearances:

1. Between Doors and Frames: Maximum 1/8" at head and jambs.
2. Door Sills (No Threshold): Maximum 1/2".
3. Door Sills (Threshold): Maximum 3/8" above finished floor.
4. Between Edges of Pairs of Doors: Maximum 1/8".
5. Fire Rated Doors: As required for fire ratings.

H. Finish: Comply with requirements of Section 09 90 00 – Painting and Coating for primer including application and compatibility with specified finishes.

1. Interior Units: Prime paint.

2. Exterior Exposed Units: Apply minimum A60 non-spangle galvanized coating, ASTM A924 and A653.

a. Surface treat after galvanizing to remove oils and prepare for painting and apply one coat of primer; comply with requirements in Section 09 90 00.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install doors and frames in accordance with SDI-100 (ANSI/SDI A250.8) and ANSI/SDI A250.11 or NAAMM "Hollow Metal Manual" and with manufacturer's recommendations and installation instructions.

1. Install fire rated units in conformance with fire label requirements and NFPA 80.

B. Install doors and frames plumb and square within 1/16”, and with maximum diagonal distortion of 1/32".

C. Remove and replace doors and frames damaged during delivery, storage, installation and construction.

1. Paste filler repair shall not be permitted.

D. After installation, touch-up scratched paint surfaces.

END OF SECTION

SECTION 08 11 20

INTERIOR ALUMINUM FRAMES AND DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide aluminum frames, doors, and glazed partitions, with attachments and accessories as required for complete installation.

1. Prepare frames for door hardware.

B. Related Work:

1. Section 08 41 00: Aluminum-framed entrances and storefronts.
2. Section 08 71 00: Door hardware.
3. Section 08 80 00: Glazing.

1.2 REFERENCES

A. Underwriters Laboratories Inc. (UL): Building Materials Directory.

1. Materials tested, labeled and inspected by Warnock Hersey International are acceptable upon approval of authorities.

B. National Association of Architectural Metal Manuf. (NAAMM): Metal Finishes Manual.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate hardware installation with Section 08 71 00 - Door Hardware.

2. Coordinate glass installation with Section 08 80 00 - Glazing.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's literature.

B. Shop Drawings: Indicate pertinent dimensioning, general construction, component connections and locations, anchor methods and locations.

C. Samples: Submit samples of aluminum finish.

1. Submit frame corner construction.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Wilson Partitions.

B. Western Integrated Materials, Inc.

C. RACO Interior Products.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide aluminum frames for interior doors and glazed partitions, with attachments and accessories.

B. Interior Aluminum Frames: Knock-down (field assembled) door frames; extruded aluminum, ASTM B221, 6063-T5 alloy; profile as indicated.

1. Glazed Partition Frames: Provide extruded aluminum security type snap-in glass stops.

2. Fire Rated Frames: Provide fire rated frames as indicated, approved by California State Fire Marshal and ICBO.

3. Door Stop Gasketing: Provide continuous elastomeric vinyl gasketing at door stop.

C. Fluoropolymer Finish: Fluorocarbon polymer based on Kynar 500 or Hylar 5000.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

D. Anodized Finish: Manufacturer’s standard anodized finish conforming to NAAMM Manual requirements for anodizing, Class I and Class II acceptable.

1. Color: Clear anodized unless otherwise indicated.

2. Color: Bronze anodized as approved by Architect.

2.3 FABRICATION

A. Fabricate aluminum frames to allow for clearances and shim spacing around perimeter; provide for thermal movement.

B. Provide anchorage devices to securely and rigidly fit frames in place.

1. Conceal anchorage devices and fasteners.

C. Accurately fit together joints and corners; match components ensuring continuity of line and design; ensure joints and connections are flush, hairline and weatherproof.

D. Provide required internal reinforcing for door hardware.

1. Refer to Section 08 71 00 for hardware requirements.

E. Apply coat of bituminous paint on concealed aluminum surfaces to be in contact with cementitious or dissimilar materials.

F. Exposed Anodized Surfaces: Apply clear lacquer protective coating, minimum 5 mils dry thickness; conform to AAMA 606.2.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install aluminum frames in accordance with recommendations of manufacturer.

1. Install fire rated units in conformance with fire label requirements and NFPA 80.

B. Ensure assemblies are plumb, level and free of warp or twist; maintain dimensional tolerances and alignment with adjacent work.

C. Use anchorage devices to securely and rigidly fasten frame assemblies to building.

D. After installation, touch-up scratched and damaged surfaces; remove and replace damaged frames where touch-up is noticeable from 5’-0” or more.

END OF SECTION

SECTION 08 14 00

WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide wood doors as indicated.

1. Provide flush face wood doors.
2. Provide panel type (stile and rail) wood doors.
3. Provide interior pressed wood (Masonite) doors.
4. Provide interior bi-fold louvered wood closet doors with hardware.
5. Contractor Option: Provide shop finished wood doors.

B. Related Work

1. Section 06 20 00: Wood door frames.
2. Section 08 11 10: Pressed steel frames.
3. Section 08 11 20: Interior aluminum frames.
4. Section 08 71 00: Door hardware.
5. Section 08 80 00: Glass and glazing for wood doors.

1.2 REFERENCES

A. North American Architectural Woodwork Standards – 3.1, (NAAWS).

B. Window and Door Manufacturer’s Association (WDMA): Guide Specifications.

C. Underwriters Laboratories Inc. (UL): Building Materials Directory.

1. Materials tested, labeled and inspected by Warnock Hersey International are acceptable upon approval of authorities.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Wood Jambs: Coordinate with Section 06 20 00 – Finish Carpentry for prefit wood doors for door jambs.

2. Hardware: Coordinate hardware installation with Section 08 71 00 – Door Hardware.

3. Glazing: Coordinate glazing with Section 08 80 00 – Glazing.

4. Painting: Coordinate with Section 09 90 00 – Painting and Coating whether wood doors are to be shop finished or field painted.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's literature.

B. Shop Drawings: Indicate general construction, jointing methods, hardware locations, and locations of cut-outs.

C. Samples: Submit samples of wood doors indicating construction, veneering, and finish.

1. Submit corner section of each type of door indicated as transparent finished.
2. Submit corner section of wood panel (stile and rail) door.
3. Submit corner section of pressed interior wood door.
4. Submit shop finish for wood doors where doors are furnished shop finished.

D. Certificates: Submit manufacturer certification indicating compliance to applicable requirements of either NAAWS or WDMA Standards; note which standards were followed or if both standards have been met.

1. Wood Product Certification: Furnish certification indicating wood products are from FSC “well-managed” forests.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for composite wood products formaldehyde limitations and paints and coatings.

B. Certified Wood Products: Wood products to be from forests certified “well-managed” by an agency accredited by Forest Stewardship Council (FSC).

1.6 SITE CONDITIONS

A. Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized in accordance with referenced standards requirements applicable to Project location.

1.7 WARRANTY

A. Extended Correction Period: Provide for replacing, rehanging, and refinishing wood doors exhibiting defects in materials or workmanship including warp and delamination.

1. Period: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide wood doors as indicated.

B. Solid Core Flush Wood Doors: NAAWS/Premium Grade, 5-Ply Hot Press, 1-3/4" thick solid wood framed glued block construction or particleboard core five ply construction; Contractor option to use WDMA comparable standards.

1. Manufacturers:

a. Eggers Industries Architectural Door Division.
b. Marshfield Door Systems, Inc.
c. VT Industries.
d. Substitutions: Refer to Section 01 25 00.

2. Transparent/Stained Wood Veneers: NAAWS/Premium Grade veneers for transparent/stained finish; nominal 1/40" thick before sanding, not less than 1/50” after sanding.

a. Wood Veneers: Types as indicated, as directed by Architect where not otherwise indicated.

3. Opaque Painted Wood Veneers: NAAWS/Custom Grade White Birch veneers for opaque finish; nominal 1/40" thick before sanding, not less than 1/50” after sanding.

4. Edges: Stile edges to match face veneer, minimum 1-1/8" thick after trim.

5. Core: Bond stiles and rails to core and sand prior to assembly of face veneers.

6. Bond Type: Provide Type I Bond for exterior doors, Type II Bond for interior doors.

7. Bond Type: Provide Type II Bond for interior doors.

C. Hollow Core Flush Wood Doors: NAAWS/Custom Grade, 5-Ply Hot Press, 1-3/8" thick standard hollow core five-ply construction; Contractor option to use WDMA comparable standards.

1. Manufacturers:

a. Eggers Industries Architectural Door Division.
b. Marshfield Door Systems, Inc.
c. VT Industries.
d. Substitutions: Refer to Section 01 25 00.

2. Transparent/Stained Wood Veneers: NAAWS/Custom Grade White Birch veneers for opaque finish; nominal 1/40" thick before sanding, not less than 1/50” after sanding.

a. Wood Veneers: Types as indicated, as directed by Architect where not otherwise indicated.

3. Opaque Painted Wood Veneers: NAAWS/Custom Grade White Birch veneers for opaque finish; nominal 1/40" thick before sanding, not less than 1/50” after sanding.

4. Edges: Stile edges to match face veneer, minimum 1-1/8" thick after trim.

5. Bond Type: Type II Bond, interior.

D. Panel (Stile and Rail) Doors: NAAWS/Custom Grade, configurations as indicated on Drawings; 1-3/4" thick; Contractor option to use WDMA comparable standards.

1. Manufacturers:

a. Eggers Industries Architectural Door Division.
b. Pinecrest.
c. Simpson Door Co.
d. Sun-Dor-Co.
e. Marshfield Door Systems, Inc.
f. Substitutions: Refer to Section 01 25 00.

2. Transparent/Stained Finished Solid Wood: NAAWS/Premium Grade solid wood.

a. Wood: Types as indicated, as directed by Architect where not otherwise indicated.

3. Transparent/Stained Finished Veneered Wood: NAAWS/Premium Grade veneers for transparent finish; minimum 1/30" (0.033" thick) before sanding.

a. Wood Veneers: Types as indicated, as directed by Architect where not otherwise indicated.

4. Opaque Finished Wood: Manufacturers standard softwood species and cut for stiles and rails; with panels of same species.

5. Design: As indicated and conforming with WDMA Design Group matching indicated configurations.

6. Panel Type: Raised panels unless otherwise indicated.

7. Bond Type: Provide Type I Bond for exterior doors, Type II Bond for interior doors.

8. Bond Type: Provide Type II Bond for interior doors.

E. Fire Rated Doors: 1-3/4" thick, match non-rated door appearance; comply with applicable codes; UL or Warnock Hersey rated.

1. Manufacturers:

a. Eggers Industries Architectural Door Division.
b. Marshfield Door Systems, Inc.
c. VT Industries.
d. Karona, Inc.
e. Sun-Dor-Co.
f. Substitutions: Refer to Section 01 25 00.

2. Labels: Place fire rating labels where visible when doors are installed, in opened position.

3. Fire Ratings: Refer to Drawings for fire rating requirements.

4. Core: Use wood core construction for 20 minute rated flush doors, mineral core permitted for longer ratings.

5. Temperature Rise Rating: Provide doors with maximum 450°F Temperature Rise Rating in 30-minute fire exposure period at doors into exit enclosures, for horizontal exits, and as required by applicable codes.

F. Pressed Hardboard Faced Wood Doors: Provide pressed hardboard faced wood doors in configurations indicated, as directed by Architect where not otherwise indicated, 1-3/8” thick.

1. Manufacturers:

a. Masonite Corp.
b. T.M. Cobb.
c. Lynden Door.
d. Jeld Wen Windows & Doors.
e. Substitutions: Refer to Section 01 25 00.

2. Bond Type: Type II Bond, interior.

3. Core: Manufacturer’s standard core for specified doors.

4. Finish: Manufacturer’s standard prime paint finish.

G. Bi-Fold Louvered Wood Closet Doors: Provide manufacturer’s standard wood louvered bi-folding closet doors; provide standard bi-fold hardware consisting of pulls, tracks, and pivots.

1. Manufacturers:

a. Jeld-Wen, Inc. (800.535.3936).
b. Elizabeth Shutters (888.491.6198).
c. Substitutions: Refer to Section 01 25 00.

2. Basis of Design: Jeld-Wen/Bifold Louver Doors.

H. Metal Louvers for Wood Doors: Roll formed 20 gage galvanized steel; factory primed; inverted ‘V’ type blade; sight-proof.

2.2 FABRICATION

A. Fabricate doors in accordance with requirements of specified standards.

1. Prefit wood doors.

2. Prepare doors to receive hardware in shop, refer to Section 08 71 00 for hardware requirements and templates.

3. Factory machine doors for mortise hardware.

B. Bevel strike edge of single-acting doors, 1/8" in 2".

1. Radius strike edge of double-acting swing doors 2-1/8".

C. Fire Rated Doors: Fabricate fire rated doors in accordance with requirements of Underwriters' Laboratories (UL) or Warnock Hersey International.

1. Provide fire rated doors with maximum allowable edge strips, of wood species to match face veneers.

2. Provide doors with blocking designed for addition of closers, even where doors are not indicated to receive closers.

3. Provide astragals and metal edge trim for double doors, in accordance with requirements for fire rated doors.

D. Make cut-outs and provide matching wood stops for glass; profiles as indicated, type as selected by Architect where not otherwise indicated.

1. Fire Rated Doors: Provide minimum 18 gage metal stops conforming to fire rating requirements.

E. Shop Finished Doors (Contractor Option): Conform to requirements specified in Section 09 90 00 – Painting and Coating.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install wood doors in accordance with manufacturer's recommendations and installation instructions, and reference standards, plumb and square, and with maximum diagonal distortion of 1/16".

1. Install fire rated wood doors in accordance with requirements for specified fire label and requirements of NFPA 80.

a. Field cutting of fire rated doors shall not be acceptable.

B. Rehang or replace doors which do not swing or operate freely.

3.2 PROTECTION

A. Protection: Protect doors as recommended by door manufacturer to ensure doors are without damage at time of substantial completion.

1. Shop Finished Doors: Refinish or replace damaged doors.

END OF SECTION

SECTION 08 31 00

ACCESS DOORS AND PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide access doors set in finished surfaces.

1. Provide access doors and panels as required for access to controls and valves behind finished surfaces.

2. Coordinate with various trades for controls and valves which may be concealed.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's literature.

B. Shop Drawings: Indicate locations of access doors required but not indicated on Architectural Drawings.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Milcor Inc.

B. Karp Associates, Inc.

C. J.L. Industries.

D. Nystrom Building Products.

E. Elmdor Manufacturing Co.

F. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide access doors and panels set in finished surfaces.

B. Regulatory Requirements: Where doors and panels are in fire rated assemblies provide assemblies listed in Underwriters Laboratories, Inc. "Classified Building Materials Index" for rating shown.

1. Provide UL label on each rated access door.

2. Materials tested, labeled and inspected by Warnock Hersey International are acceptable upon approval of authorities.

C. Access Doors and Panels: Provide access door and panel assemblies consisting of an integral unit with flush metal doors and panels, complete and ready for installation.

1. Wall Units: Match Milcor/Style M flush panel style; stainless steel.

2. Units Mounted in Plaster: Match MIlcor/Style K, flush panel style. Stainless Steel

3. Gypsum Board Ceilings: Match Milcor/Style ATR recessed panel style to receive gypsum board insert with edges filled and taped. Stainless Steel.

D. Hinges: Provide continuous piano type hinge.

E. Locking Devices: Provide flush, key-operated cylinder lock for each access door; provide two keys per lock and key locks alike, unless otherwise scheduled.

F. Stainless Steel: Where indicated provide Type 304 corrosion resistant nonmagnetic stainless-steel access doors and frames.

2.3 FABRICATION

A. Size Variations: Obtain Architect's acceptance of manufacturer's standard size units which may vary slightly from sizes shown or scheduled.

B. Fabricate units of continuous welded steel construction; grind welds smooth and flush with adjacent surfaces.

C. Provide attachment devices and fasteners of type required for specific job conditions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions under which access doors are to be installed.

1. Do not proceed with work until unsatisfactory conditions are corrected; installation signifies acceptance of conditions.

B. Obtain specific locations and sizes for required access doors from trades requiring access to concealed equipment; coordinate installation with work of other trades.

3.2 INSTALLATION

A. Comply with manufacturer's installation instructions for access doors.

1. Install fire rated access doors in accordance applicable code requirements and with requirements of NFPA 80.

B. Set frames accurately in position and securely attach to supports with face panels plumb or level in relation to adjacent finish surfaces.

C. Adjust hardware and doors after installation for proper operation.

3.3 PROTECTION

A. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 08 33 00

OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide overhead coiling (roll-up) door systems with curtains, guides, counterbalance, hardware, and accessories as required for complete, operational installation.

B. Related Sections:

1. Section 05 50 00: Steel frames at openings.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's literature.

B. Shop Drawings: Indicate pertinent dimensioning, general construction, component connections and details, anchorage methods, and hardware locations.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Cornell Iron Works.

B. The Cookson Co.

C. Overhead Door Corp.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide overhead coiling (roll-up) door systems with curtains, guides, counterbalance, hardware, and accessories.

B. Regulatory Requirements (Fire Rated Doors): Where indicated provide assemblies that comply with NFPA 80, tested in accordance with ASTM E152, and listed in Underwriters Laboratories (UL) Building Materials Directory, and bearing UL label.

1. Materials tested, labeled and inspected by Warnock Hersey International are acceptable upon approval of authorities.

2. Oversized Doors: Doors exceeding 120-sf or 24-feet in any length, shall have UL "Certificate of Inspection for Oversize Doors", in lieu of label.

C. Overhead Coiling Doors: Fabricate doors of continuous length for width of door without splices.

1. Crank Hoist Manually Operated Doors: Provide crank hoist operator with maximum 5-lbs. effort to turn crank; door to be easily stopped in any position and remain in position until movement is reactivated.

D. Components:

1. Curtain: Flat-faced interlocking slats, ends of alternate slats fitted with end locks; bottom fitted with angles to provide reinforcement and positive contact with floor when curtain is closed.

a. Slats: Aluminum; ASTM B221, alloy 6063.

b. Color selected from manufacturer’s standard paint colors.

2. Curtain Guides: Formed steel angles of required sizes and configurations.

3. Roller Shaft (Counterbalance): Steel pipe and helical steel spring system capable of producing torque to assure easy operation of curtain from any position; adjustable spring tension.

4. Housing: Minimum 24-gage steel, internally reinforced to maintain rigidity and form.

E. Hardware: Manufacturer's standard hardware for door types specified.

1. Locks: Cylindrical.

a. Keying: Keyed in accordance with Section 08 71 00 – Door Hardware.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install overhead coiling doors, complete, in accordance with manufacturer's instructions and recommendations.

1. Install fire rated doors in accordance with requirements for indicated fire label and NFPA Bulletin No. 80.

2. Coordinate installation of electric operators and controls with electrical service.

B. Fit, align, lubricate, and adjust complete door assembly level and plumb. Provide smooth operation.

3.2 FIELD QUALITY CONTROL

A. Test door closing systems operation by smoke detector fire release system.

END OF SECTION

SECTION 08 44 10

GLAZED WINDOW WALL ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide factory finished aluminum framed window wall systems including glass, glazing materials, structural anchors, attachments, shims, and accessories as required for complete weather-tight installation.

1. Window wall systems include storefront systems, curtain wall systems, fixed and operable windows, and aluminum and glass entry door systems, including glazing and hardware.

B. Related Work:

1. Section 07 90 00: Perimeter sealants and back-up materials.
2. Section 08 42 30: Automatic entrances.
3. Section 08 51 10: Aluminum windows.
4. Section 08 71 00: Cylinders for door locks
5. Section 08 71 15: Low energy automatic door operators.

1.2 REFERENCES

A. American Architectural Manufacturers Association (AAMA): Metal Curtain Wall, Window, Store Front and Entrance Guide Specifications Manual.

B. Glass Association of North America (GANA): Glazing Manual and Sealant Manual.

C. National Association of Architectural Metal Manuf. (NAAMM): Metal Finishes Manual.

D. Definitions: National Association of Architectural Metal Manufacturers (NAAMM), Glossary of Architectural Metal Terms.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Design/Build: Provide special engineering for glazed window wall assemblies to ensure they comply with applicable codes and Contract Documents.

B. Coordination: Coordinate methods for making junctures with adjacent surfaces watertight with Section 07 90 00 – Joint Sealants.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's specifications and product data for window wall system, glass, and major manufactured components.

B. Shop Drawings: Indicate pertinent dimensioning, clearances, general construction, anchorage locations, and typical details.

1. Include elevations at 1/4 scale, typical unit elevations at 1" scale and half or full-size detail sections of typical composite members.

2. Indicate joint systems, expansion provisions and glazing details.

C. Test Reports: Submit laboratory reports of tests run on typical section of window wall system.

1. Test for Air Infiltration: ASTM E283 at 6.24-psf pressure difference.

2. Test for Water Penetration under Static Pressure: ASTM E331 using static air pressure difference of minimum 20% of inward acting design wind load pressure, but not less than 6.24-psf.

3. Test for Water Penetration under Dynamic Pressure: AAMA 501.1.

4. Test for Structural Performance: ASTM E330. Minimum test loads shall be those specified.

a. Minimum ultimate loads shall be loads specified multiplied by factors of safety specified in California Building Code.

b. Measure deflections at member center lines and other critical points as deemed appropriate.

c. Safety Factor: Design for specified pressures with no glass breakage, no permanent damage to fasteners, and no permanent deformation of framing exceeding 0.2% of member clear span.

1) Glass safety factor relates to testing procedure, not occurrence of glass breakage in final installation.

D. Design/Build Certificates: Submit certification signed by California licensed structural engineer indicating compliance with Contract Documents and code requirements.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to energy efficiency.

B. Installer Qualifications: Firm acceptable to system manufacturer and with not less than five years successful experience installing systems of comparable type and size.

1.6 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist damage from anticipated sources including damage from wind and water penetration.

1. Repair or replace units which fail in materials or workmanship.

a. Excessive air infiltration.
b. Excessive deflections.
c. Deterioration of finish and deterioration of metal.
d. Defects in weather-stripping.
e. Defects in glass.

2. Period: Two years.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 20 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Arcadia, Inc.

B. Kawneer, an Arconic Company.

C. Oldcastle BuildingEnvelope.

D. EFCO Corporation.

E. TRACO.

F. C.R. Laurence, United States Aluminum Div.

G. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide factory finished aluminum framed window wall systems including glass, glazing materials, structural anchors, attachments, shims, and accessories, and including storefronts, curtain walls, windows, and entry doors.

B. Regulatory Requirements: Comply with requirements of applicable codes.

1. Safety Glass: Comply with applicable building code, CPSC 16 CFR 1201, and pass ANSI Z97.1.

2. Accessibility: Provide for assuring access for persons with disabilities in accordance with state and federal regulations.

a. California Regulations: Comply with California Building Standards Code.

b. Federal Regulations: Comply with Americans with Disabilities Act (ADA) Standards.

3. Energy: Comply with California Energy Commission requirements regarding energy performance of window wall assemblies.

a. Manufacturer shall be responsible for providing information required by authorities necessary to verify conformance.

b. Entire assembly, including glass and glazing, shall be certified by National Fenestration Rating Council (NFRC) and shall bear NFRC Label indicating energy performance technical information.

C. Design Criteria: Provide complete system with joints, gaps, and penetrations made watertight.

D. Performance Criteria:

1. Deflections and Thermal Movements: Size primary members for deflection limitations and temperature variations as follows; fabricate, assemble and erect work to maintain limitations.

a. Normal-to-wall deflection of L/175 of span; except L/250 of span for glass supporting members.

b. Parallel-to-wall deflection of less than 75% of glass edge clearances.

c. Thermal expansion and contraction movements resulting from not less than ambient temperature range of 100 degrees F, which may cause a material temperature range of 160 degrees F.

2. Water and Air Leakage: Installed system shall be free of significant leakage of both water and air.

a. Water leakage is defined as uncontrolled penetration of water (not including condensation) to interior of building.

b. Air leakage is defined as infiltration of air at any area of window wall, at a rate exceeding 0.06 cfm/sf of area, based on measurement of single complete module of system.

3. Condensation: Design system to prevent excessive condensation on indoor faces, with heating and ventilating system in operation, and under following conditions.

a. Outdoor: Ambient temperature 20-degrees F; 15-mph wind.

b. Indoor: Ambient temperature 75-degrees F; relative humidity of 25%.

c. Excessive Condensation: Visible water on more than 10% of interior exposed surface of any section, or accumulation or uncontrolled flow of water from condensation at any location.

E. Glazed Aluminum Framed Window Wall Systems: Systems with profiles as indicated on Drawings, **minimum 2.5”x5”;** provide extruded aluminum security type glass stops of profile to suit frame design.

1. Aluminum Type: As recommended by manufacturer for application indicated, but not less than extruded aluminum, ASTM B221, alloy 6061 or 6063 and temper T5 or T6.

a. Provide thicknesses to comply with loading requirements.

2. Finish: Clear anodized.

F. Doors, Frames, and Hardware: Barrier-free entry doors meeting code requirements for providing access for people with physical disabilities; by entrance manufacturer.

1. Type: Medium stile with 3-1/2” stiles and top rail, and 10" bottom rail.

1. Metal and Finish: Match entrance system.

2. Hardware: Provide complete hardware system except as indicated; match window wall system finish unless otherwise directed by Architect. Coordinate with Section 08 71 00 – Door Hardware.

a. Pivots/Closers: Center-hung pivots with concealed adjustable type closer, maximum 5-pound operating pressure when installed in final application.

b. Hinges: Extra heavy-duty ball bearing full mortise (butt) hinges complying with requirements specified in Section 08 71 00.

c. Closers: Concealed adjustable type closer, maximum 5-pound operating pressure when installed in final application.

d. Push/Pulls: Types as indicated on Drawings; where not otherwise indicated manufacturer's standard types as selected by Architect; match finish of similar hardware as specified in Section 08 71 00.

e. Security Locks: Manufacturer's standard.

1) Cylinders: Provided under Section 08 71 00.

f. Weather-Stripping, Sweep Strips: Manufacturer's recommended standard type, to suit application.

g. Thresholds: Maximum 1/2" height above adjacent surfaces, with maximum 1/4" vertical section and remainder maximum 1:2 slope.

G. Glass: Provide minimum thicknesses specified, but no less than thicknesses required based on window size and configuration and anticipated wind loading.

1. Manufacturers:

a. Vitro Architectural Glass (PPG).

b. Guardian Industries Corp.
c. Oldcastle Glass.
d. Viracon.
e. Substitutions: Refer to Section 01 25 00.

2. Float Glass: Select glazing quality, clear float glass, ASTM C1036; nominal thickness 1/4".

3. Tempered Glass: Select glazing quality, clear float glass, fully tempered, ASTM C1048; nominal thickness 1/4"; safety glass.

4. Tinted Glass: Manufacturer's standard tint as directed by Architect.

   a. Use one thickness of tinted glass throughout unless otherwise indicated or approved in advance by Architect.

5. Insulated Glass: Preassembled units consisting of organically sealed panes of glass enclosing a hermetically sealed dehydrated air space with minus 20-degree F dew point.

   a. Performance: Certified to ASTM E2190 by Insulating Glass Certification Council.

   b. System: Manufacturer's standard dual seal system compatible with glazing system, and including spacers, desiccant, and standard corner construction.

   c. Glass:

      1) Float Glass (Typical): Select glazing quality, clear float glass, ASTM C1036; nominal thickness 1/4".

      2) Tempered Glass (Where Indicated and Where Safety Glazing is Required): Select glazing quality, clear float glass, fully tempered, ASTM C1048; nominal thickness 1/4"; safety glass.

      3) Low Emissivity Coating: Provide high performance Low E coating on Number 2 surface, comparable to Vitro (PPG)/SolarBan 60.

      4) Tinted Glass: Manufacturer's standard tint as directed by Architect.

         a) Use one thickness of tinted glass throughout unless otherwise indicated or approved in advance by Architect.

      5) Spandrel Glass: Double density ceramic frit, heat strengthened spandrel glass; nominal 1/4" thickness.

   d. Total Unit Thickness: 1".

H. Glazing Materials: Of type recommended by system manufacturer to suit security locations and applications for glazing installation; designed to maintain glass in place and prevent movement.

1. Setting Blocks: Neoprene or EPDM, 80-90 Shore A durometer hardness; 4" long by 3/8" thick by 1/4" high; ASTM C864.

2. Spacer Shims: Neoprene or EPDM; 45-55 Shore A durometer hardness; 3" long by 3/32" thick by 1/4" high; ASTM C864.

3. Edge Blocks: Neoprene or EPDM, 60-70 Shore A durometer hardness; 4" long with minimum two per jamb located at top and bottom edges of glass; ASTM C864.

4. Glazing Gaskets: Exterior neoprene or EDPM; interior neoprene, EPDM or vinyl; miter corner joints at exterior applications; conform to ASTM C509 or C864.

5. Glazing Sealants: ASTM C920, Type S, Grade NS, elastomeric one-component silicone glazing sealants as recommended by sealant manufacture for application involved.

    a. Manufacturers:

        1) Dow Corning Corp.
        2) General Electric Co.
        3) Pecora Corp.
        4) Tremco Inc.
        5) Substitutions: Refer to Section 01 25 00.

    b. Structural Glazing: Provide high-modulus structural silicone glazing materials recommended by sealant manufacturer for applications where sealant bonds glass to metal system.

    c. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

I. Miscellaneous Materials:

1. Fasteners: Aluminum or non-magnetic stainless steel of type which will not cause electrolytic action or corrosion.

    a. Do not use exposed fasteners except where unavoidable for assembly or for application of hardware.

    b. Indicate exposed fasteners on shop drawings for specific approval; exposed fasteners shall be Phillips flat-head screws or Allen screws with finish matching item fastened.

    c. Provide concealed fasteners for glazing stops.

2. Steel Reinforcement and Brackets: Manufacturer's standard with minimum 2 oz. hot-dip zinc coating, ASTM A123, applied after fabrication.

3. Bituminous Paint: Cold-applied mastic, SSPC Paint 12, compounded for 30 mil thickness per coat.

4. Flashing: Provide sub-sill flashing members for fixed exterior framing; minimum 22-gage sheet aluminum of sizes and shapes indicated and required to drain water to exterior.

    a. Finish: Match adjacent aluminum primary members.

5. Anchoring Devices: Corrosion resistant type capable of supporting window wall system and superimposed design loads; design to allow adjustments of system prior to being permanently fastened in place.

2.3 FABRICATION

A. Fabricate systems to allow for adequate clearances around perimeter and to enable proper installation; allow for thermal movement within window wall construction.

B. Fabricate components allowing for accurate and rigid fit of joints and corners; match components carefully ensuring continuity of line and color, with joints and connections flush, hairline and weatherproof.

C. Provide structural reinforcing within framing members where required to maintain rigidity and as required to accommodate design loads.

D. Allow moisture entering joints and condensation occurring within framing members to drain to exterior.

1. Design drainage system to hold maximum anticipated moisture for 100-year rain cycle without overflowing.

E. Complete cutting, fitting, forming, drilling and grinding of metal work prior to cleaning, finishing, treatment, and application of coating.

F. Finishing: After fabrication, prepare surfaces for finishing in accordance with recommendations of aluminum producer and finish manufacturer.

1. Finish components of each assembly simultaneously to attain uniformity of color.

2. Sequence finishing and processing of materials in a predetermined bay-by-bay, floor-by-floor, wall-by-wall plan.

G. Weld by methods recommended by metal manufacturer and AWS; grind exposed welds smooth and restore mechanical finish; remove arises from cut edges and corners to a radius of approximately 1/64".

H. Fit and assemble work at shop to greatest extent possible; disassemble only as required for shipment and erection.

I. Reinforce work as necessary for performance requirements and for support.

1. Provide internal reinforcing for hardware.

J. Separate dissimilar materials with bituminous paint or preformed separators which will prevent corrosion.

K. Separate metal surfaces at moving joints with plastic inserts or other non-abrasive concealed inserts which permanently prevent "freeze-up" of joint.

L. Fabricate doors and apply hardware in shop. Disassemble only as required for transportation and installation.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install glazed aluminum window wall assemblies in accordance with manufacturer's recommendations and installation instructions, and to met design criteria and performance criteria indicated, for weather-tight installation.

1. Separate aluminum and other corrodible metal surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

B. Ensure assembly is plumb, level and free of warp or twist; maintain dimensional tolerances and alignment with adjacent work.

C. Tolerances: Accurately align and locate components to column lines and floor levels; adjust work to conform to following tolerances.

1. Plumb: 1/8" in 10'-0"; 1/4" in 40'-0"; non-cumulative.

2. Level: 1/8" in 20'-0"; 1/4" in 40'-0"; non-cumulative.

3. Alignment: Limit offset to 1/16" where surfaces are flush or less than 1/2" out of flush and separated by less than 2" (by reveal or protruding work); otherwise limit offsets to 1/8".

4. Location: 3/8" maximum deviation from measured theoretical location (any member, and location).

D. Install anchorage devices to securely and rigidly fasten system to building.

E. Provide anchors to be installed in other work, and setting details, in time for proper installation by trades concerned; verify correct placement.

F. Set sill members and similar members in bed of compound, joint fillers or gaskets to provide weather-tight construction.

G. Install hardware in accordance with manufacturer's recommendations, using proper templates.

1. Install doors to operate freely and smoothly, with a maximum operating pressure of 5-pounds in accordance with California Building Code, Chapter 11B, Division III, Section 1133B2.5.

2. Coordinate installation of cylinders with Section 08 71 00 - Hardware.

3. Install sill members and thresholds in bed of compound, joint fillers or gaskets to provide weather-tight construction.

H. Install glass in accordance with glass manufacturer's instructions and with GANA "Glazing Manual".

1. Do not allow glass to touch metal surfaces.

3.2 CLEANING

A. Clean aluminum surfaces promptly after installation of components, exercising care to avoid damage of finish.

B. Remove excess sealant compounds, dirt and other foreign substances.

C. Mark glass after installation by crossed streamers attached to framing and held away from glass; do not apply markers to surface of glass.

D. Remove nonpermanent labels immediately after sealant cures; cure sealants for high early strength and durability.

3.3 PROTECTION

A. Remove and replace glass which is broken, chipped, cracked, abraded or damaged during construction period, including natural causes, accidents and vandalism.

3.4 FIELD QUALITY CONTROL

A. Site Tests: Conduct tests for air and water infiltration with window wall manufacturer's representative present; correct units failing tests; independent laboratory subject to Architect approval.

1. Air Infiltration: Conduct in accordance with ASTM E783 with static difference of specified and with maximum infiltration of 1.5 times amount specified.

2. Water Penetration: Conduct in accordance with ASTM E1105 at static pressure as recommended by NAAMM with no uncontrolled water penetration.

3. Water Spray Test: Conduct in accordance with AAMA 501.2 on lower two floors of building with minimum 75 lineal feet of units.

END OF SECTION

SECTION 08 51 10

ALUMINUM WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide aluminum windows with integral flashing, glazing, and accessories as required for complete weather-tight installation.

B. Related Work:

1. Section 07 90 00: Perimeter joint sealers and back-up material.

1.2 REFERENCES

A. American Architectural Manufacturers Association (AAMA) and Window and Door Manufacturers Association (WDMA), AAMA/WDMA 101/I.S. 2, Voluntary Specifications for Aluminum, Vinyl (PVC), and Wood Window and Glass Doors.

B. Glass Association of North America (GANA): Glazing Manual.

C. National Association of Architectural Metal Manuf. (NAAMM): Metal Finishes Manual.

1.3 SUBMITTALS

A. Product Data: Submit manufacturers' literature including test results indicating compliance with design criteria.

B. Shop Drawings: Indicate pertinent dimensioning, general construction, component connections and locations, anchor methods and locations.

C. Samples: Furnish samples of metal finish and glass.

D. Test Reports: Include laboratory test results for STC and OITC rating of units.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to energy efficiency.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Stack units on edge on wood strips above ground.

1.6 WARRANTY

A. Extended Correction Period: Extend correction period to two years.

1. Provide for correcting failure of Sound Transmission Coefficient rating (STC).

2. Provide for correcting failure of insulating glass. Failure includes signs of moisture on interior surfaces of insulated glass units and bond failure of laminated glass.

3. Repair or replace systems and materials which fail to perform as intended.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 20 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Kawneer, an Arconic Company.

B. EFCO Corporation.

C. U.S. Aluminum Division, C.R. Laurence Company, Inc.

D. Arcadia, Inc.

E. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide quality aluminum windows with glazing, hardware, and accessories as indicated.

1. Manufacturer: Provide each type of window by single manufacturer. Provide all windows by single manufacturer where all types are available from approved manufacturer.

2. Standards: Conform to AAMA/WDMA 101/I.S.2, types as indicated.

A. Regulatory Requirements: Comply with California Building Code.

1. Safety Glass Standards: Comply with California Building Code and CPSC 16 CFR 1201, and pass ANSI Z97.1.

2. Energy Requirements: Comply with California Energy Commission requirements regarding energy performance of windows.

a. Manufacturer shall be responsible for providing information required by authorities necessary to verify conformance.

b. Entire assembly, including glass and glazing, shall be certified by National Fenestration Rating Council (NFRC) and shall bear NFRC Label indicating energy performance technical information.

B. Performance Requirements: Comply with applicable codes and AAMA 101 for each type of window specified, but no less than as required for Performance Class listed.

1. Structural: Withstand code required wind loads on exterior and on interior when tested in accordance with ASTM E330, without breakage, failure, or malfunction of operation.

2. Forced Entry: Provide systems conforming to ASTM F588 for windows, Performance Level 10 or AAMA 1302.5 where at ground floor and at areas accessible from decks and accessible rooftops.

3. Acoustical Ratings: Provide windows that have been tested under ASTM E90 with minimum Sound Transmission Class (STC) rating and Outdoor Indoor Transmission Class (OITC) ratings as indicated on Drawings.

4. Label: "AAMA Quality Certified" label is required on each window.

C. Aluminum Windows: Provide units meeting requirements of Architectural Aluminum Manufacturers Association (AAMA) Certification Program.

1. Performance Class: Not less than AAMA -CW (Commercial).

a. Provide windows and doors meeting AAMA/WDMA 101/I.S.2 performance class as required to comply with California Building Code wind loads as listed in Chapter 16.

D. Aluminum: Of sizes, shapes and profiles shown, **minimum 2.5”x5”;** alloys and tempers as recommended by manufacturer and processor to comply with requirements for performance, fabrication, and finish application.

1. Thermal Breaks: Provide units with thermal breaks in metal to prevent transfer of temperature between interior and exterior surfaces; conform to AAMA 1502 with factor of 45.

2. Divided Lites: True divided lites required.

3. False Mullions: Provide metal or plastic removable false mullions as required to provide patterns indicated.

4. Finish: Clear Anodized Aluminum.

5. Protect finishes with manufacturer recommended methods.

E. Glass:

1. Typical: ASTM C1036, select glazing quality clear float glass; thickness nominal 1/4".

2. Insulated Glass: Preassembled units consisting of organically sealed panes of glass enclosing a hermetically sealed dehydrated air space with -20 degree F dew point.

    a. Performance: Certified to ASTM E2190 by Insulating Glass Certification Council.

    b. System: Manufacturer's standard dual seal system compatible with glazing system, and including spacers, desiccant, and standard corner construction.

    c. Glass: ASTM C1036, select glazing quality clear float glass; nominal thickness 1/4”.

        1) Safety Glass: ASTM C1048, Kind FT, fully tempered select glazing quality glass; provide where required by applicable codes and regulations; pass ANSI Z97.1.

    d. Low E Coating: High performance low emissivity coating comparable to Vitro (PPG)/SolarBan 60 on No. 2 surface.

    e. Total Unit Thickness: 1".

F. Glazing Materials: Manufacturer standard type to suit locations and applications.

G. Miscellaneous Materials:

1. Fasteners: Anodized aluminum or non-magnetic stainless steel of type not causing electrolytic action or corrosion; provide flush Phillips flat-head or Allen screws where exposed.

2. Finish exposed aluminum fasteners to match aluminum work.

3. Brackets and Reinforcements: Aluminum wherever possible, where steel units are required for higher strength or other unavoidable necessity, hot-dip galvanize after fabrication; ASTM A123 G-90.

4. Bituminous Paint: Cold applied asphalt mastic complying with SSPC-Paint 12, compounded for 30-mil thickness per coat.

H. Weather-Stripping:

1. Sliding Panels: Double woven pile complying with AAMA 2605.

2. Projecting and Fixed Panels: Neoprene gaskets complying with ASTM D2000, Designations 2BC415 to 3BC620.

I. Hardware: Manufacturer's standard secure hardware as approved by Architect; fabricated from aluminum, stainless steel, or corrosion resistant material compatible with aluminum; conform to AAMA 101.

1. Operable Units: Deadlock latch mechanism, constructed to prevent accidental lockout and accidental damage if closed in locked position;

a. Include feature to permit locking operable windows in 4" open position.

J. Screens: Provide manufacturer's standard screens for windows and conforming to ANSI/SMA 2005; frames finished to match windows.

2.3 FABRICATION

A. Fabricate units to allow for clearances and shim spacing around perimeter to enable installation; provide for thermal movement and slope and weep sills for drainage.

B. Provide anchorage devices to securely and rigidly fit windows in place.

C. Accurately fit together joints and corners; match components ensuring continuity of line and design; ensure joints and connections are flush, hairline and weatherproof.

D. Apply coat of bituminous paint on concealed aluminum surfaces to be in contact with cementitious or dissimilar materials.

E. Glass Installation: Conform to requirements in GANA "Glazing Manual"; glass shall not touch metal.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine surfaces of openings and verify dimensions.

B. Installation of units constitutes acceptance of existing conditions.

3.2 INSTALLATION

A. Assemble and anchor various components to allow for expansion and contraction, maintaining weather-tight condition.

B. Install units in strict compliance with manufacturer's recommendations and installation instructions.

C. Install work plumb, straight, square, level and in their proper elevation, plane and location, and in proper alignment with other work.

D. Anchor securely in place, separate aluminum and other corrodible metal surfaces from corrosion and electrolytic action with other materials.

E. Upon completion of installation, remove protective coatings or coverings and clean aluminum surfaces.

F. Adjust hardware for proper operation.

1. Windows to operate freely and smoothly, with maximum operating pressure of 5-pounds.

3.3 FIELD QUALITY CONTROL

A. Site Tests: Conduct tests for air and water infiltration with window manufacturer's representative present; correct units failing tests.

1. Test: Conduct in accordance with AAMA 502.

2. Air Infiltration: Maximum infiltration of 1.5 times amount specified.

3. Water Penetration: Conduct at pressures recommended by AAMA for specified units.

3.4 CLEANING

A. Clean windows including glazing using methods recommended by window manufacturer; minimum wash down with solution of mild detergent in warm water applied with soft, clean cloths.

1. Take care to remove dirt from corners.
2. Wipe surfaces clean.

3.5 PROTECTION

A. Protect units and glazing from damage from construction operations and from vandalism.

B. Repair or replace damaged metal components. Touch-up damaged finishes.

C. Remove and replace glass that is broken, chipped, cracked, abraded or damaged during construction period, including natural causes, accidents and vandalism.

END OF SECTION

SECTION 08 71 00 – DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Mechanical and electrified door hardware for:

a. Swinging doors.
b. Gates.

B. Exclusions: Unless specifically listed in hardware sets, hardware is not specified in this section for:

1. Windows
2. Cabinets (casework), including locks in cabinets
3. Signage
4. Toilet accessories
5. Overhead doors

C. Related Sections:

1. Division 01 Section “Alternates” for alternates affecting this section.
2. Division 07 Section “Joint Sealants” for sealant requirements applicable to threshold installation specified in this section.
3. Division 26 sections for connections to electrical power system and for low-voltage wiring.
4. Division 28 sections for coordination with other components of electronic access control system.

1.3 REFERENCES

A. UL - Underwriters Laboratories

1. UL 10B - Fire Test of Door Assemblies
2. UL 10C - Positive Pressure Test of Fire Door Assemblies
3. UL 1784 - Air Leakage Tests of Door Assemblies
4. UL 305 - Panic Hardware

B. ANSI - American National Standards Institute

1. ANSI/BHMA A156.1 - A156.29, and ANSI/BHMA A156.31 - Standards for Hardware and Specialties

C. California Code of Regulations

1. Title 24: California Building Standards Code

1.4 SUBMITTALS

A. General:

1. Submit in accordance with Conditions of Contract and Division 01 requirements.
2. Highlight, encircle, or otherwise specifically identify on submittals deviations from Contract Documents, issues of incompatibility or other issues which may detrimentally affect the Work.
3. Prior to forwarding submittal, comply with procedures for verifying existing door and frame compatibility for new hardware, as specified in PART 3, “EXAMINATION” article, herein.

B. Action Submittals:

1. Product Data: Product data including manufacturers’ technical product data for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.
2. Riser and Wiring Diagrams: After final approval of hardware schedule, submit details of electrified door hardware, indicating:

    a. Wiring Diagrams: For power, signal, and control wiring and including:
        1) Details of interface of electrified door hardware and building safety and security systems.
        2) Schematic diagram of systems that interface with electrified door hardware.
        3) Point-to-point wiring.
        4) Risers.

3. Samples for Verification: If requested by Architect, submit production sample or sample installations of each type of exposed hardware unit in finish indicated, and tagged with full description for coordination with schedule.

    a. Samples will be returned to supplier in like-new condition. Units that are acceptable to Architect may, after final check of operations, be incorporated into Work, within limitations of key coordination requirements.

4. Door Hardware Schedule: Submit schedule with hardware sets in vertical format as illustrated by Sequence of Format for the Hardware Schedule as published by the Door and Hardware Institute. Indicate complete designations of each item required for each door or opening, include:

    a. Door Index; include door number, heading number, and Architects hardware set number.
    b. Opening Lock Function Spreadsheet: List locking device and function for each opening.
    c. Type, style, function, size, and finish of each hardware item.
    d. Name and manufacturer of each item.
    e. Fastenings and other pertinent information.
    f. Location of each hardware set cross-referenced to indications on Drawings.
    g. Explanation of all abbreviations, symbols, and codes contained in schedule.
    h. Mounting locations for hardware.
    i. Door and frame sizes and materials.
    j. Name and phone number for local manufacturer's representative for each product.

k. Operational Description of openings with any electrified hardware (locks, exits, electromagnetic locks, electric strikes, automatic operators, door position switches, magnetic holders or closer/holder units, and access control components). Operational description should include how door will operate on egress, ingress, and fire and smoke alarm connection.
   1) Submittal Sequence: Submit door hardware schedule concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate fabrication of other work that is critical in Project construction schedule.

5. Key Schedule:

   a. After Keying Conference, provide keying schedule listing levels of keying as well as explanation of key system's function, key symbols used and door numbers controlled.
   b. Use ANSI/BHMA A156.28 “Recommended Practices for Keying Systems” as guideline for nomenclature, definitions, and approach for selecting optimal keying system.
   c. Provide 3 copies of keying schedule for review prepared and detailed in accordance with referenced DHI publication. Include schematic keying diagram and index each key to unique door designations.
   d. Index keying schedule by door number, keyset, hardware heading number, cross keying instructions, and special key stamping instructions.
   e. Provide one complete bitting list of key cuts and one key system schematic illustrating system usage and expansion.
      1) Forward bitting list, key cuts and key system schematic directly to Owner, by means as directed by Owner.

   f. Prepare key schedule by or under supervision of supplier, detailing Owner’s final keying instructions for locks.

6. Templates: After final approval of hardware schedule, provide templates for doors, frames and other work specified to be factory prepared for door hardware installation.

C. Informational Submittals:

1. Qualification Data: For Supplier and Installer.
2. Product Certificates for electrified door hardware, signed by manufacturer:

   a. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.

3. Certificates of Compliance:

   a. Certificates of compliance for fire-rated hardware and installation instructions if requested by Architect or Authority Having Jurisdiction.
   b. Installer Training Meeting Certification: Letter of compliance, signed by Contractor, attesting to completion of installer training meeting specified in “QUALITY ASSURANCE” article, herein.
   c. Electrified Hardware Coordination Conference Certification: Letter of compliance, signed by Contractor, attesting to completion of electrified hardware coordination conference, specified in “QUALITY ASSURANCE” article, herein.

4. Product Test Reports: For compliance with accessibility requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by qualified testing agency, for door hardware on doors located in accessible routes.
5. Warranty: Special warranty specified in this Section.

D. Closeout Submittals:

1. Operations and Maintenance Data : Provide in accordance with Division 01 and include:

a. Complete information on care, maintenance, and adjustment; data on repair and replacement parts, and information on preservation of finishes.
b. Catalog pages for each product.
c. Name, address, and phone number of local representative for each manufacturer.
d. Parts list for each product.
e. Final approved hardware schedule, edited to reflect conditions as-installed.
f. Final keying schedule
g. Copies of floor plans with keying nomenclature
h. As-installed wiring diagrams for each opening connected to power, both low voltage and 110 volts.
i. Copy of warranties including appropriate reference numbers for manufacturers to identify project.

1.5 QUALITY ASSURANCE

A. Product Substitutions: Comply with product requirements stated in Division 01 and as specified herein.

1. Where specific manufacturer’s product is named and accompanied by “No Substitute,” including make or model number or other designation, provide product specified. (Note: Certain products have been selected for their unique characteristics and particular project suitability.)

a. Where no additional products or manufacturers are listed in product category, requirements for “No Substitute” govern product selection.

2. Where products indicate “acceptable manufacturers” or “acceptable manufacturers and products”, provide product from specified manufacturers, subject to compliance with specified requirements and “Single Source Responsibility” requirements stated herein.

B. Supplier Qualifications and Responsibilities: Recognized architectural hardware supplier with record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this Project.

1. Warehousing Facilities: In Project's vicinity.
2. Scheduling Responsibility: Preparation of door hardware and keying schedules.
3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
4. Coordination Responsibility: Coordinate installation of electronic security hardware with Architect and electrical engineers and provide installation and technical data to Architect and other related subcontractors.

a. Upon completion of electronic security hardware installation, inspect and verify that all components are working properly.

C. Installer Qualifications: Qualified tradesmen, skilled in application of commercial grade hardware with record of successful in-service performance for installing door hardware similar in quantity, type, and quality to that indicated for this Project.

D. Single Source Responsibility: Obtain each type of door hardware from single manufacturer.

1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated.
2. Manufacturers that perform electrical modifications and that are listed by testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.

E. Fire-Rated Door Openings: Provide door hardware for fire-rated openings that complies with NFPA 80 and requirements of authorities having jurisdiction. Provide only items of door hardware that are listed and are identical to products tested by Underwriters Laboratories, Intertek Testing Services, or other testing and inspecting organizations acceptable to authorities having jurisdiction for use on types and sizes of doors indicated, based on testing at positive pressure and according to NFPA 252 or UL 10C and in compliance with requirements of fire-rated door and door frame labels.

F. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meets requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.

1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at tested pressure differential of 0.3-inch wg (75 Pa) of water.

G. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction.

H. Means of Egress Doors: Latches do not require more than 5 lbf (67 N) to release latch. Locks do not require use of key, tool, or special knowledge for operation.

I. Accessibility Requirements: For door hardware on doors in an accessible route, comply with governing accessibility regulations cited in “REFERENCES” article, herein.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of wrist and that operate with force of not more than 5 lbf (22.2 N).
2. Maximum opening-force requirements:

    a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf (22.2 N) applied perpendicular to door.
    b. Sliding or Folding Doors: 5 lbf (22.2 N) applied parallel to door at latch.
    c. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.

3. Bevel raised thresholds with slope of not more than 1:2. Provide thresholds not more than 1/2 inch (13 mm) high.
4. Adjust door closer sweep periods so that, from open position of 70 degrees, door will take at least 3 seconds to move to 3 inches (75 mm) from latch, measured to leading edge of door.

J. Keying Conference: Conduct conference at Project site to comply with requirements in Division 01.

1. Attendees: Owner, Contractor, Architect, Installer, Owner’s Security Consultant, and Supplier.
2. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including:

    a. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
    b. Preliminary key system schematic diagram.
    c. Requirements for key control system.
    d. Requirements for access control.

e. Address for delivery of keys.

K. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Inspect and discuss preparatory work performed by other trades.
3. Inspect and discuss electrical roughing-in for electrified door hardware.
4. Review sequence of operation for each type of electrified door hardware.
5. Review required testing, inspecting, and certifying procedures.

L. Coordination Conferences:

1. Installation Coordination Conference: Prior to hardware installation, schedule and hold meeting to review questions or concerns related to proper installation and adjustment of door hardware.

a. Attendees: Door hardware supplier, door hardware installer, Contractor.
b. After meeting, provide letter of compliance to Architect, indicating when meeting was held and who was in attendance.

2. Electrified Hardware Coordination Conference: Prior to ordering electrified hardware, schedule and hold meeting to coordinate door hardware with security, electrical, doors and frames, and other related suppliers.

a. Attendees: electrified door hardware supplier, doors and frames supplier, electrified door hardware installer, electrical subcontractor, Owner, Owner’s security consultant, Architect and Contractor.
b. After meeting, provide letter of compliance to Architect, indicating when coordination conference was held and who was in attendance.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up for hardware delivered to Project site.

B. Tag each item or package separately with identification coordinated with final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.

1. Deliver each article of hardware in manufacturer’s original packaging.

C. Project Conditions:

1. Maintain manufacturer-recommended environmental conditions throughout storage and installation periods.
2. Provide secure lock-up for door hardware delivered to Project, but not yet installed. Control handling and installation of hardware items so that completion of Work will not be delayed by hardware losses both before and after installation.

D. Protection and Damage:

1. Promptly replace products damaged during shipping.

2. Handle hardware in manner to avoid damage, marring, or scratching. Correct, replace or repair products damaged during Work.
3. Protect products against malfunction due to paint, solvent, cleanser, or any chemical agent.

E. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.

F. Deliver keys and permanent cores to Owner by registered mail or overnight package service.

1.7 COORDINATION

A. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

C. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.

D. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.

E. Direct shipments not permitted, unless approved by Contractor.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Years from date of Substantial Completion, for durations indicated.

a. Closers:
   1) Mechanical: 30 years.

b. Automatic Operators: 2 years
c. Exit Devices:
   1) Mechanical: 3 years.
   2) Electrified: 1 year.

d. Locksets:
   1) Mechanical: 3 years
   2) Electrified: 1 year.

e. Continuous Hinges: Lifetime warranty.
f. Key Blanks: Lifetime

2. Warranty does not cover damage or faulty operation due to improper installation, improper use or abuse.

1.9 MAINTENANCE

A. Maintenance Tools:

1. Furnish complete set of special tools required for maintenance and adjustment of hardware, including changing of cylinders.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Where “No Substitute” is noted, submittals and substitution requests for other products will not be considered.

B. Approval of manufacturers and/or products other than those listed as “Scheduled Manufacturer” or “Acceptable Manufacturer” in the individual article for the product category shall be in accordance with QUALITY ASSURANCE article, herein.

C. Approval of products from manufacturers indicated in “Acceptable Manufacturers” is contingent upon those products providing all functions and features and meeting all requirements of scheduled manufacturer’s product.

D. Hand of Door: Drawings show direction of slide, swing, or hand of each door leaf. Furnish each item of hardware for proper installation and operation of door movement as shown.

E. Where specified hardware is not adaptable to finished shape or size of members requiring hardware, furnish suitable types having same operation and quality as type specified, subject to Architect's approval.

2.2 MATERIALS

A. Fasteners

1. Provide hardware manufactured to conform to published templates, generally prepared for machine screw installation.
2. Furnish screws for installation with each hardware item. Finish exposed (exposed under any condition) screws to match hardware finish, or, if exposed in surfaces of other work, to match finish of this other work including prepared for paint surfaces to receive painted finish.
3. Provide concealed fasteners for hardware units exposed when door is closed except when no standard units of type specified are available with concealed fasteners. Do not use thru-bolts for installation where bolt head or nut on opposite face is exposed in other work unless thru-bolts are required to fasten hardware securely. Review door specification and advise Architect if thru-bolts are required.
4. Install hardware with fasteners provided by hardware manufacturer.

B. Provide screws, bolts, expansion shields, drop plates and other devices necessary for hardware installation.

1. Where fasteners are exposed to view: Finish to match adjacent door hardware material.

C. Cable and Connectors: Hardwired Electronic Access Control Lockset and Exit Device Trim:

1. Data: 24AWG, 4 conductor shielded, Belden 9843, 9841 or comparable.
2. DC Power: 18 AWG, 2 conductor, Belden 8760 or comparable.
3. Provide type of data and DC power cabling required by access control device manufacturer for this installation.
4. Where scheduled in the hardware sets, provide each item of electrified hardware and wire harnesses with sufficient number and wire gauge with standardized Molex plug connectors to accommodate electric function of specified hardware. Provide Molex connectors that plug directly into connectors from harnesses, electric locking and power transfer devices. Provide through-door wire harness for each electrified locking device installed in a door and wire harness for each electrified hinge, electrified continuous hinge, electrified pivot, and electric power transfer for connection to power supplies.

2.3 HINGES

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product: Ives 5BB series
2. Acceptable Manufacturers and Products: Hager BB series, McKinney TA/T4A series, Stanley FBB Series

B. Requirements:

1. Provide five-knuckle ball bearing hinges conforming to ANSI/BHMA A156.1.
2. 1-3/4 inch (44 mm) thick doors, up to and including 36 inches (914 mm) wide:

    a. Exterior: Standard weight, bronze or stainless steel, 4-1/2 inches (114 mm) high
    b. Interior: Standard weight, steel, 4-1/2 inches (114 mm) high

3. 1-3/4 inch (44 mm) thick doors over 36 inches (914 mm) wide:

    a. Exterior: Heavy weight, bronze/stainless steel, 5 inches (127 mm) high
    b. Interior: Heavy weight, steel, 5 inches (127 mm) high

4. 2 inches or thicker doors:

    a. Exterior: Heavy weight, bronze or stainless steel, 5 inches (127 mm) high
    b. Interior: Heavy weight, steel, 5 inches (127 mm) high

5. Provide three hinges per door leaf for doors 90 inches (2286 mm) or less in height, and one additional hinge for each 30 inches (762 mm) of additional door height.
6. Where new hinges are specified for existing doors or existing frames, provide new hinges of identical size to hinge preparation present in existing door or existing frame.
7. Hinge Pins: Except as otherwise indicated, provide hinge pins as follows:

    a. Steel Hinges: Steel pins
    b. Non-Ferrous Hinges: Stainless steel pins
    c. Out-Swinging Exterior Doors: Non-removable pins
    d. Out-Swinging Interior Lockable Doors: Non-removable pins
    e. Interior Non-lockable Doors: Non-rising pins

8. Width of hinges: 4-1/2 inches (114 mm) at 1-3/4 inch (44 mm) thick doors, and 5 inches (127 mm) at 2 inches (51 mm) or thicker doors. Adjust hinge width as required for door, frame, and wall conditions to allow proper degree of opening.
9. Doors 36 inches (914 mm) wide or less furnish hinges 4-1/2 inches (114 mm) high; doors greater than 36 inches (914 mm) wide furnish hinges 5 inches (127 mm) high, heavy weight or standard weight as specified.

10. Provide hinges with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware. Locate electric hinge at second hinge from bottom or nearest to electrified locking component.
11. Provide mortar guard for each electrified hinge specified.
12. Provide spring hinges where specified. Provide two spring hinges and one bearing hinge per door leaf for doors 90 inches (2286 mm) or less in height. Provide one additional bearing hinge for each 30 inches (762 mm) of additional door height.

2.4 CONTINUOUS HINGES

A. Aluminum Geared

1. Manufacturers:

a. Scheduled Manufacturer: Ives.
b. Acceptable Manufacturers: Markar, Stanley.

2. Requirements:

a. Provide aluminum geared continuous hinges conforming to ANSI/BHMA A156.26, Grade 1.
b. Provide aluminum geared continuous hinges, where specified in the hardware sets, fabricated from 6063-T6 aluminum, with 0.25-inch (6 mm) diameter Teflon coated stainless steel hinge pin.
c. Provide split nylon bearings at each hinge knuckle for quiet, smooth, self-lubricating operation.
d. Provide hinges capable of supporting door weights up to 450 pounds, and successfully tested for 1,500,000 cycles.
e. On fire-rated doors, provide aluminum geared continuous hinges that are classified for use on rated doors by testing agency acceptable to authority having jurisdiction.
f. Provide aluminum geared continuous hinges with electrified option scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware.
g. Install hinges with fasteners supplied by manufacturer.
h. Provide hinges 1 inch (25 mm) shorter in length than nominal height of door, unless otherwise noted or door details require shorter length and with symmetrical hole pattern.

2.5 ELECTRIC POWER TRANSFER

A. Manufacturers:

a. Scheduled Manufacturer: Von Duprin EPT-10
b. Acceptable Manufacturers: ABH PT1000, Securitron CEPT-10

B. Provide power transfer with electrified options as scheduled in the hardware sets. Provide with number and gage of wires sufficient to accommodate electric function of specified hardware.

C. Locate electric power transfer per manufacturer’s template and UL requirements, unless interference with operation of door or other hardware items.

2.6 FLUSH BOLTS

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Requirements:

1. Provide automatic, constant latching, and manual flush bolts with forged bronze or stainless steel face plates, extruded brass levers, and with wrought brass guides and strikes. Provide 12 inch (305 mm) steel or brass rods at doors up to 90 inches (2286 mm) in height. For doors over 90 inches (2286 mm) in height increase top rods by 6 inches (152 mm) for each additional 6 inches (152 mm) of door height. Provide dust-proof strikes at each bottom flush bolt.

2.7 SURFACE BOLTS

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Requirements:

1. Surface bolt s to have 1” throw for maximum security with concealed mounting that prevents vandalism. Units to be constructed of heavy duty steel and cUL listed up to three (3) hours when used on the inactive door of a pair up to 8’ in height.

2.8 COORDINATORS

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Requirements:

1. Where pairs of doors are equipped with automatic flush bolts, an astragal, or other hardware that requires synchronized closing of the doors, provide bar-type coordinating device, surface applied to underside of stop at frame head.
2. Provide filler bar of correct length for unit to span entire width of opening, and appropriate brackets for parallel arm door closers and surface vertical rod exit device strikes. Factory-prep coordinators for vertical rod devices if required.

2.9 MORTISE LOCKS

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product: Schlage L9000 series
2. Acceptable Manufacturers and Products: No substitution

B. Requirements:

1. Provide mortise locks conforming to ANSI/BHMA A156.13 Series 1000, Grade 1 Operational, Grade 1 Security, and manufactured from heavy gauge steel, containing components of steel with a zinc dichromate plating for corrosion resistance. Provide lock case that is multi-function and field reversible for handing without opening case. Cylinders: Refer to “KEYING” article, herein.
2. Provide locks with standard 2-3/4 inches (70 mm) backset with full 3/4 inch (19 mm) throw stainless steel mechanical anti-friction latchbolt. Provide deadbolt with full 1 inch (25 mm) throw, constructed of stainless steel.
3. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim.
4. Provide electrified options as scheduled in the hardware sets. Where scheduled, provide a request to exit (RX) switch that is actuated with rotation of inside lever.
5. Provide motor based electrified locksets with electrified options as scheduled in the hardware sets and comply with the following requirements:

    a. Universal input voltage – single chassis accepts 12 or 24V DC to allow for changes in the field without changing lock chassis.
    b. Fail Safe/Fail Secure – changing mode between electrically locked (fail safe) and electrically unlocked (fail secure) is field selectable without opening the lock case
    c. Low maximum current draw – maximum 0.4 amps to allow for multiple locks on a single power supply.
    d. Low holding current – maximum 0.01 amps to produce minimal heat, eliminate “hot levers” in electrically locked applications, and to provide reliable operation in wood doors that provide minimal ventilation and air flow.
    e. Request to Exit Switch (RX) –
        1) Modular Design – provide electrified locks capable of using, adding, or changing a modular RX switch without opening the lock case.
        2) Monitoring – where scheduled, provide a request to exit (RX) switch that detects rotation of the inside lever.

    f. Connections – provide quick-connect Molex system standard.
    g. UL Listed – 3 hour fire door

6. Lever Trim: Solid brass, bronze, or stainless steel, cast or forged in design specified, with wrought roses and external lever spring cages. Provide thru-bolted levers with 2-piece spindles.

    a. Lever Design: Schlage 17A.
    b. Tactile Warning (Knurling): Where required by authority having jurisdiction. Provide on levers on exterior (secure side) of doors serving rooms considered to be hazardous.
    c.

2.10 ALUMINUM DOOR LOCKS – NARROW STYLE

A. Manufacturer and Product:

1. Scheduled Manufacturer and Product: Adams Rite 4900 series X 4568/9 Lever or 4590/1 Paddle
2. Acceptable Manufacturers and Products: No Substitute.

B. Requirements:

1. Provide narrow style aluminum door locks as specified. Cylinders: Refer to “KEYING” article, herein.

2. Provide locks with backset as required for door detail with full 5/8 inch (16 mm) throw latchbolt.
3. Provide manufacturer's standard strikes unless extended lip strikes are necessary to protect trim.

2.11 AUXILIARY LOCKS

A. Deadlocks:

1. Manufacturers and Products:

a. Scheduled Manufacturer and Product: Schlage L400 series
b. Acceptable Manufacturers and Products: No substitution.

2. Requirements:

a. Provide mortise deadlock series conforming to ANSI/BHMA A156 and function as specified. Cylinders: Refer to "KEYING" article, herein.
b. Provide deadlocks with standard 2-3/4 inches (70 mm) backset. Provide deadbolt with full 1 inch (25 mm) throw, constructed of stainless steel.
c. Provide manufacturer's standard strike.

2.12 EXIT DEVICES

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product: Von Duprin 98/35 series
2. Acceptable Manufacturers and Products: No substitutions.

B. Requirements:

1. Provide exit devices tested to ANSI/BHMA A156.3 Grade 1, and UL listed for Panic Exit or Fire Exit Hardware. Cylinders: Refer to "KEYING" article, herein.
2. Provide touchpad type exit devices, fabricated of brass, bronze, stainless steel, or aluminum, plated to standard architectural finishes to match balance of door hardware.
3. Touchpad: Extend minimum of one half of door width. Match exit device finish, stainless steel for US26, US26D, US28, US32, and US32D finishes; and for all other finishes, provide compatible finish to exit device. No plastic inserts are allowed in touchpads.
4. Provide exit devices with dead-latching feature for security and for future addition of alarm kits and/or other electrified requirements.
5. Provide flush end caps for exit devices.
6. Provide exit devices with manufacturer's approved strikes.
7. Provide exit devices cut to door width and height. Install exit devices at height recommended by exit device manufacturer, allowable by governing building codes, and approved by Architect.
8. Mount mechanism case flush on face of doors, or provide spacers to fill gaps behind devices. Where glass trim or molding projects off face of door, provide glass bead kits.
9. Removable Mullions: 2 inches (51 mm) x 3 inches (76 mm) steel tube. Where scheduled as keyed removable mullion, provide type that can be removed by use of a keyed cylinder, which is self-locking when re-installed.
10. Where lever handles are specified as outside trim for exit devices, provide heavy-duty lever trims with forged or cast escutcheon plates. Provide vandal-resistant levers that will travel to 90-degree down position when more than 35 pounds of torque are applied, and which can easily be re-set.

a. Lever Style: Match lever style of locksets.
b. Tactile Warning (Knurling): Where required by authority having jurisdiction. Provide on levers on exterior (secure side) of doors serving rooms considered to be hazardous.

11. Provide UL labeled fire exit hardware for fire rated openings.
12. Provide factory drilled weep holes for exit devices used in full exterior application, highly corrosive areas, and where noted in hardware sets.
13. Provide electrified options as scheduled.

2.13 POWER SUPPLIES

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product: Schlage or Von Duprin PS900 series
2. Acceptable Manufacturers and Products: Precision ELR series, Sargent 3500 series, Dynalock 5000 series, Securitron BPS series, Security Door Controls 600 series

B. Requirements:

1. Provide power supplies, recommended and approved by manufacturer of electrified locking component, for operation of electrified locks, electrified exit devices, magnetic locks, electric strikes, and other components requiring power supply.
2. Provide appropriate quantity of power supplies necessary for proper operation of electrified locking components as recommended by manufacturer of electrified locking components with consideration for each electrified component using power supply, location of power supply, and approved wiring diagrams. Locate power supplies as directed by Architect.
3. Provide regulated and filtered 24 VDC power supply , and UL class 2 listed.
4. Options:

a. Provide power supply, where specified, with internal capability of charging sealed backup batteries 24 VDC, in addition to operating DC load.
b. Provide sealed batteries for battery back-up at each power supply where specified.
c. Provide keyed power supply cabinet.

5. Provide power supply in an enclosure, complete, and requiring 120VAC to fused input.
6. Provide power supply with emergency release terminals, where specified, that allow release of all devices upon activation of fire alarm system complete with fire alarm input for initiating “no delay” exiting mode.

2.14 CYLINDERS

A. Manufacturers:

1. Scheduled Manufacturer: Schlage
2. Acceptable Manufacturers: No substitutions.

B. Requirements:

1. Provide cylinders/cores, from the same manufacturer of locksets, compliant with ANSI/BHMA A156.5; latest revision, Section 12, Grade 1; permanent cylinders; cylinder face finished to match lockset, manufacturer’s series as indicated. Refer to “KEYING” article, herein.

2. Provide cylinders in the below-listed configuration(s), distributed throughout the Project as indicated.

    a. Conventional Patented Open: cylinder with interchangeable core.

3. Patent Protection: Cylinders/cores requiring use of restricted, patented keys, patent-protected until the year 2029.
4. Nickel silver bottom pins.
5. Replaceable Construction Cores.

    a. Provide temporary construction cores replaceable by permanent cores, furnished in accordance with the following requirements.
        1) 3 construction control keys
        2) 12 construction change (day) keys.

    b. Owner or Owner's Representative will replace temporary construction cores with permanent cores.

2.15 KEYING

A. Provide a factory registered keying system, complying with guidelines in ANSI/BHMA A156.28, incorporating decisions made at keying conference.

B. Provide cylinders/cores keyed into Owner's existing factory registered keying system, complying with guidelines in ANSI/BHMA A156.28, incorporating decisions made at keying conference.

C. Requirements:

1. Provide permanent cylinders/cores keyed by the manufacturer according to the following key system.

    a. Master Keying system as directed by the Owner.

2. Forward bitting list and keys separately from cylinders, by means as directed by Owner. Failure to comply with forwarding requirements shall be cause for replacement of cylinders/cores involved at no additional cost to Owner.
3. Provide keys with the following features:

    a. Material: Nickel silver; minimum thickness of .107-inch (2.3mm)
    b. Patent Protection: Keys and blanks protected by one or more utility patent(s) until the year, 2029.

4. Identification:

    a. Mark permanent cylinders/cores and keys with applicable blind code per DHI publication "Keying Systems and Nomenclature" for identification. Blind code marks shall not include actual key cuts.
    b. Identification stamping provisions must be approved by the Architect and Owner.
    c. Stamp cylinders/cores and keys with Owner's unique key system facility code as established by the manufacturer; key symbol and embossed or stamped with "DO NOT DUPLICATE" along with the "PATENTED" or patent number to enforce the patent protection.
    d. Failure to comply with stamping requirements shall be cause for replacement of keys involved at no additional cost to Owner.

e. Forward permanent cylinders/cores to Owner, separately from keys, by means as directed by Owner.

5. Quantity: Furnish in the following quantities.

a. Change (Day) Keys: 3 per cylinder/core.
b. Permanent Control Keys: 3.
c. Master Keys: 6.

2.16 KEY CONTROL SYSTEM

A. Manufacturers:

1. Scheduled Manufacturer: Telkee
2. Acceptable Manufacturers: HPC, Lund

B. Requirements:

1. Provide key control system (Lund 1204-250 or equal), including envelopes, labels, tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet, all as recommended by system manufacturer, with capacity for 150% of number of locks required for Project.

a. Provide complete cross index system set up by hardware supplier, and place keys on markers and hooks in cabinet as determined by final key schedule.
b. Provide hinged-panel type cabinet for wall mounting.

2.17 DOOR CLOSERS

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product: LCN 4040XP series.
2. Acceptable Manufacturers and Products: No Substitute.

B. Requirements:

1. Provide door closers conforming to ANSI/BHMA A156.4 Grade 1 requirements by BHMA certified independent testing laboratory. ISO 9000 certify closers. Stamp units with date of manufacture code.
2. Provide door closers with fully hydraulic, full rack and pinion action with high strength cast iron cylinder, and full complement bearings at shaft.
3. Cylinder Body: 1-1/2 inch (38 mm) diameter with 3/4 inch (19 mm) diameter double heat-treated pinion journal.
4. Hydraulic Fluid: Fireproof, passing requirements of UL10C, and requiring no seasonal closer adjustment for temperatures ranging from 120 degrees F to -30 degrees F.
5. Spring Power: Continuously adjustable over full range of closer sizes, and providing reduced opening force as required by accessibility codes and standards.
6. Hydraulic Regulation: By tamper-proof, non-critical valves, with separate adjustment for latch speed, general speed, and backcheck.
7. Provide closers with solid forged steel main arms and factory assembled heavy-duty forged forearms for parallel arm closers.
8. Pressure Relief Valve (PRV) Technology: Not permitted.

9. Finish for Closer Cylinders, Arms, Adapter Plates, and Metal Covers: Powder coating finish which has been certified to exceed 100 hours salt spray testing as described in ANSI Standard A156.4 and ASTM B117, or has special rust inhibitor (SRI).
10. Provide special templates, drop plates, mounting brackets, or adapters for arms as required for details, overhead stops, and other door hardware items interfering with closer mounting.

2.18 ELECTRO-MECHANICAL AUTOMATIC OPERATORS

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product: LCN Senior Swing
2. Acceptable Manufacturers and Products: Besam SW200i, Horton 4000LE series

B. Requirements:

1. Provide low energy automatic operator units that are electro-mechanical design complying with ANSI/BHMA A156.19.

    a. Opening: Powered by DC motor working through reduction gears.
    b. Closing: Spring force.
    c. Manual, hydraulic, or chain drive closers: Not permitted.
    d. Operation: Motor is off when door is in closing mode. Door can be manually operated with power on or off without damage to operator. Provide variable adjustments, including opening and closing speed adjustment.
    e. Cover: Aluminum.

2. Provide units with manual off/auto/hold-open switch, push and go function to activate power operator, vestibule interface delay, electric lock delay, hold-open delay adjustable from 2 to 30 seconds, and logic terminal to interface with accessories, mats, and sensors.
3. Provide drop plates, brackets, or adapters for arms as required to suit details.
4. Provide hard-wired motion sensors and/or actuator switches for operation as specified. Provide weather-resistant actuators at exterior applications.
5. Provide key switches, with LED’s, recommended and approved by manufacturer of automatic operator as required for function as described in operation description of hardware sets. Cylinders: Refer to “KEYING” article, herein.
6. Provide complete assemblies of controls, switches, power supplies, relays, and parts/material recommended and approved by manufacturer of automatic operator for each individual leaf. Actuators control both doors simultaneously at pairs. Sequence operation of exterior and vestibule doors with automatic operators to allow ingress or egress through both sets of openings as directed by Architect. Locate actuators, key switches, and other controls as directed by Architect.
7. Provide units with inputs for smoke evacuation doors, where specified, which allow doors to power open upon fire alarm activation and hold open indefinitely or until fire alarm is reset, presence detector input, which prevents closed door from opening or door that is fully opened from closing, hold open toggle input, which allows remote activation for indefinite hold open and close second time input is activated, vestibule inputs, which allow sequencing operation of two units, and SPDT relay for interfacing with latching or locking devices.

2.19 DOOR TRIM

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Requirements:

1. Provide push plates 4 inches (102 mm) wide by 16 inches (406 mm) high by 0.050 inch (1 mm) thick and beveled 4 edges. Where width of door stile prevents use of 4 inches (102 mm) wide plate, adjust width to fit.
2. Provide push bars of solid bar stock, diameter and length as scheduled. Provide push bars of sufficient length to span from center to center of each stile. Where required, mount back to back with pull.
3. Provide offset pulls of solid bar stock, diameter and length as scheduled. Where required, mount back to back with push bar.
4. Provide flush pulls as scheduled. Where required, provide back-to-back mounted model.
5. Provide pulls of solid bar stock, diameter and length as scheduled. Where required, mount back to back with push bar.
6. Provide pull plates 4 inches (102 mm) wide by 16 inches (406 mm) high by 0.050 inch (1 mm) thick, beveled 4 edges, and prepped for pull. Where width of door stile prevents use of 4 inches (102 mm) wide plate, adjust width to fit.
7. Provide wire pulls of solid bar stock, diameter and length as scheduled.
8. Provide decorative pulls as scheduled. Where required, mount back to back with pull.

2.20 PROTECTION PLATES

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Requirements:

1. Provide kick plates, mop plates, and armor plates minimum of 0.050 inch (1 mm) thick, beveled four edges as scheduled. Furnish with sheet metal or wood screws, finished to match plates.
2. Sizes of plates:

    a. Kick Plates: 10 inches (254 mm) high by 2 inches (51 mm) less width of door on single doors, 1 inch (25 mm) less width of door on pairs
    b. Mop Plates: 4 inches (102 mm) high by 2 inches (51 mm) less width of door on single doors, 1 inch (25 mm) less width of door on pairs
    c. Armor Plates: 36 inches (914 mm) high by 2 inches (51 mm) less width of door on single doors, 1 inch (25 mm) less width of door on pairs

2.21 OVERHEAD STOPS AND OVERHEAD STOP/HOLDERS

A. Manufacturers:

1. Scheduled Manufacturers: Glynn-Johnson
2. Acceptable Manufacturers: Rixson, Sargent

B. Requirements:

1. Provide heavy duty concealed mounted overhead stop or holder as specified for exterior and interior vestibule single acting doors.

2. Provide heavy duty concealed mounted overhead stop or holder as specified for double acting doors.
3. Provide heavy or medium duty and concealed or surface mounted overhead stop or holder for interior doors as specified. Provide medium duty surface mounted overhead stop for interior doors and at any door that swings more than 140 degrees before striking wall, open against equipment, casework, sidelights, and where conditions do not allow wall stop or floor stop presents tripping hazard.
4. Where overhead holders are specified provide friction type at doors without closer and positive type at doors with closer.

2.22 DOOR STOPS AND HOLDERS

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Provide door stops at each door leaf:

1. Provide wall stops wherever possible. Provide convex type where mortise type locks are used and concave type where cylindrical type locks are used.
2. Where a wall stop cannot be used, provide universal floor stops for low or high rise options.
3. Where wall or floor stop cannot be used, provide medium duty surface mounted overhead stop.

2.23 THRESHOLDS, SEALS, DOOR SWEEPS, AUTOMATIC DOOR BOTTOMS, AND GASKETING

A. Manufacturers:

1. Scheduled Manufacturer: Zero International
2. Acceptable Manufacturers: National Guard, Pemko

B. Requirements:

1. Provide thresholds, weather-stripping (including door sweeps, seals, and astragals) and gasketing systems (including smoke, sound, and light) as specified and per architectural details. Match finish of other items.
2. Size of thresholds:

    a. Saddle Thresholds: 1/2 inch (13 mm) high by jamb width by door width
    b. Bumper Seal Thresholds: 1/2 inch (13 mm) high by 5 inches (127 mm) wide by door width

3. Provide door sweeps, seals, astragals, and auto door bottoms only of type where resilient or flexible seal strip is easily replaceable and readily available.

2.24 SILENCERS

A. Manufacturers:

1. Scheduled Manufacturer: Ives
2. Acceptable Manufacturers: Rockwood, Trimco

B. Requirements:

1. Provide "push-in" type silencers for hollow metal or wood frames.
2. Provide one silencer per 30 inches (762 mm) of height on each single frame, and two for each pair frame.
3. Omit where gasketing is specified.

2.25 FINISHES

A. Finish: BHMA 626/652 (US26D) or BHMA 630 (US32D); except:

1. Hinges at Exterior Doors: BHMA 630 (US32D)
2. Continuous Hinges: BHMA 630 (US32D)
3. Continuous Hinges: BHMA 628 (US28)
4. Push Plates, Pulls, and Push Bars: BHMA 630 (US32D)
5. Protection Plates: BHMA 630 (US32D)
6. Overhead Stops and Holders: BHMA 630 (US32D)
7. Door Closers: Powder Coat to Match
8. Wall Stops: BHMA 630 (US32D)
9. Latch Protectors: BHMA 630 (US32D)
10. Weatherstripping: Clear Anodized Aluminum
11. Thresholds: Mill Finish Aluminum

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to installation of hardware, examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Where on-site modification of doors and frames is required:

1. Carefully remove existing door hardware and components being reused. Clean, protect, tag, and store in accordance with storage and handling requirements specified herein.
2. When modifications are exposed to view, use concealed fasteners, when possible.
3. Prepare hardware locations and reinstall in accordance with installation requirements for new door hardware and with:

a. Steel Doors and Frames: For surface applied door hardware, drill and tap doors and frames according to ANSI/SDI A250.6.
b. Wood Doors: DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."
c. Doors in rated assemblies: NFPA 80 for restrictions on on-site door hardware preparation.

3.3 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights to comply with the following, unless otherwise indicated or required to comply with governing regulations.

1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
2. Custom Steel Doors and Frames: HMMA 831.
3. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

B. Install each hardware item in compliance with manufacturer's instructions and recommendations, using only fasteners provided by manufacturer.

C. Do not install surface mounted items until finishes have been completed on substrate. Protect all installed hardware during painting.

D. Set units level, plumb and true to line and location. Adjust and reinforce attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

F. Install operating parts so they move freely and smoothly without binding, sticking, or excessive clearance.

G. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than quantity recommended by manufacturer for application indicated or one hinge for every 30 inches (750 mm) of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

H. Lock Cylinders: Install construction cores to secure building and areas during construction period.

1. Replace construction cores with permanent cores as indicated in keying section.

I. Wiring: Coordinate with Division 26, ELECTRICAL sections for:

1. Conduit, junction boxes and wire pulls.
2. Connections to and from power supplies to electrified hardware.
3. Connections to fire/smoke alarm system and smoke evacuation system.
4. Connection of wire to door position switches and wire runs to central room or area, as directed by Architect.
5. Testing and labeling wires with Architect's opening number.

J. Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

K. Door Closers: Mount closers on room side of corridor doors, inside of exterior doors, and stair side of stairway doors from corridors. Closers shall not be visible in corridors, lobbies and other public spaces unless approved by Architect.

L. Closer/Holders: Mount closer/holders on room side of corridor doors, inside of exterior doors, and stair side of stairway doors.

M. Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room, or alternate location as directed by Architect.

1. Coordination: Coordinate provision with the security systems provider to mitigate excessive or redundant purchase.
2. Configuration: Provide least number of power supplies required to adequately serve doors with electrified door hardware.

N. Thresholds: Set thresholds in full bed of sealant complying with requirements specified in Division 07 Section "Joint Sealants."

O. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they may impede traffic or present tripping hazard.

P. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.

Q. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

R. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.4 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

1. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.

B. Occupancy Adjustment: Approximately three months after date of Substantial Completion, Installer shall examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors, door hardware, and electrified door hardware.

3.5 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by door hardware installation.

B. Clean operating items as necessary to restore proper function and finish.

C. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Substantial Completion.

3.6 DEMONSTRATION

A. Provide training for Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Refer to Division 01 Section "Demonstration and Training."

3.7 DOOR HARDWARE SCHEDULE

A. Locksets, exit devices, and other hardware items are referenced in the following hardware sets for series, type and function. Refer to the above-specifications for special features, options, cylinders/keying, and other requirements.

B. Hardware Sets:

SECTION 08 71 15

LOW ENERGY DOOR OPERATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide low energy automatic door operators for swinging doors, with accessories as required for complete operational installation; system to open and close door upon receipt of an actuating signal.

B. Related Sections:

1. Section 08 44 10 Glazed Window Wall Assemblies, including standard hardware.
2. Division 26: Final electrical connections.

1.2 REFERENCES

A. ANSI A156.19: Power Assist and Low Energy Power Operated Doors Standard.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate low energy door operators with doors, frames, door hardware, and surrounding construction.

B. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this Section. Require attendance of those directly affecting work of this Section.

1. Review installation procedures and coordination required with related work.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturer's literature and maintenance data.

B. Shop Drawings: Indicate pertinent dimensioning, general construction, materials and finishes, component connections, anchorage methods and locations and hardware; indicate exposed fasteners for specific approval.

1. Templates and Diagrams: Furnish templates, diagrams, and data necessary for proper installation of closers to fabricators of related work and coordinate.

C. Samples: Furnish samples of each exposed finish.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Firm with minimum five years successful experience installing door operator units like type specified and acceptable to operator manufacturer.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Horton Automatics/Series 7000.

B. LCN/4600 Series Electrically Powered Auto-Equalizer.

C. Dor-O-Matic, Inc./Senior-Swing Automatic Operation.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide low energy automatic door operators for swinging doors, with accessories.

B. Regulatory Requirements: Comply with applicable codes.

1. Power Failure: Doors shall not exceed 50-pounds force to set door in motion and shall not exceed 5 pounds force for pushing or pulling doors open when force applied to latch side of door.

C. Performance Criteria: Provide operators complying with applicable portions of ANSI A156.19, designed for doors of types indicated to receive operators.

D. System Description: Provide low energy automatic door operators for swinging doors, with accessories as required for complete operational installation; system to open and close door upon receipt of an actuating signal.

E. Low Energy Door Operators: Complete operator system including door operator, controls, and attachment system designed for type of doors indicated and complying with requirements of ANSI A156.19 for low energy power operated door operators.

F. Control: As indicated, as selected by Architect from manufacturer's full range of flush wall mounted push-button control units where not otherwise indicated.

1. Provide controls on each side of every door with an operator; number, size, type, and location as indicated and as required by California Building Standards Code to ensure access for persons with disabilities.

2.3 FABRICATION

A. Fabrication: Provide each automatic door operator as complete, shop fabricated unit.

1. Complete the fabrication, assembly, finishing, application of hardware and other work before shipment, to greatest extent possible.

2. Disassemble only to extent necessary of shipment and installation.

B. Complete cutting, fitting, forming, drilling and grinding of metal work prior to cleaning and finishing. Remove arises from cut edges and ease edges and corners to radius of approximately 1/64".

C. Conceal fasteners unless otherwise approved by Architect.

D. Reinforce work as necessary for performance requirements, and for support to structure.

E. Separate dissimilar metals with bituminous paint or preformed separators to prevent corrosion; separate metal surfaces at moving joints with non-metallic separators to prevent "freeze-up" of joints.

F. Finish: Match entrance door finish as specified in Section 08 44 10 Glazed Window Wall Assemblies.

G. Special Features:

1. Safety release clutch for obstructed closing and with checking for both opening and closing cycles.

2. Interlocks: Electrical interlocks which prevent operation of doors when locked or latched.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions under which automatic doors are to be installed; do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's recommendations and installation instructions for installation of low energy door operators.

B. Set plumb, level and true to line, without warp or rack of frames or doors; anchor securely in place.

1. Separate aluminum and other corrodible metal surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

C. Install complete door operator system including controls, control wiring and power units.

3.3 ADJUSTING

A. After operation of completed installation equivalent to three days use, readjust door operators and controls for optimum operating condition and safety.

B. Lubricate operating equipment.

END OF SECTION

SECTION 08 80 00

GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Provide miscellaneous glass and glazing not provided elsewhere including accessories as required for complete installation.

a. Provide glazing for metal doors and frames.
b. Provide glazing for interior aluminum frames.
c. Provide glazing for metal railings.
d. Provide polycarbonate mirrors.

B. Related Sections:
1. Section 08 44 10: Glazed window wall assemblies glazing.
2. Section 08 51 10: Aluminum window glazing.
3. Section 08 83 00: Frameless mirrors.
4. Section 10 28 00: Metal framed mirrors.

1.2 REFERENCES

A. Glass Association of North America (GANA): Glazing Manual and Sealant Manual.

1.3 SUBMITTALS

A. Product Data: Furnish for each type of glass and exposed glazing material.

B. Samples: Furnish samples of exposed glazing accessories.

1.4 WARRANTY

A. Extended Correction Period: Extend correction period to two years for following.

1. Replacing laminated glass which exhibits signs of delaminating.

2. Replacing insulated glass which exhibits signs of moisture on sealed glass surfaces.

3. Replacing mirrors which exhibit signs of desilvering or signs of distortion.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Section includes miscellaneous glass and glazing materials for items typically furnished without glazing and where glazing is not an integral part of the assembly.

B. Regulatory Requirements:

1. Safety Glass Standard: Comply with applicable codes, CPSC 16 CFR 1201, and pass ANSI Z97.1.

2. Fire Rated Glass: Provide glass identical to glass tested per ASTM E163, labeled and listed by UL or other testing and inspection agency acceptable to applicable authorities.

C. Float Glass: Select glazing quality, clear annealed glass, ASTM C1036; nominal thickness 1/4".

1. Manufacturers:

a. Vitro Architectural Glass (formerly PPG).
b. Oldcastle Glazing.
c. Guardian Industries Corp.
d. Substitutions: Refer to Section 01 25 00.

2. Locations: Provide where indicated as clear glass.

D. Tempered Glass: Select glazing quality, clear float glass, fully tempered, ASTM C1048, Kind FT; nominal thickness 1/4"; safety glass.

1. Manufacturers:

a. Vitro Architectural Glass (formerly PPG).
b. Oldcastle Glazing.
c. Guardian Industries Corp.
d. Substitutions: Refer to Section 01 25 00.

2. Locations: Provide at doors and at window openings where required by applicable codes and federal requirements.

E. Laminated Glass: ASTM C1172, Kind LA, two sheets of select glazing quality clear float glass laminated with polyvinyl butyral film, safety glass; laminated layers shall be free of air pockets and foreign substances.

1. Manufacturers:

a. Vitro Architectural Glass (formerly PPG).
b. Oldcastle Glazing.
c. Guardian Industries Corp.
d. Global Security Glazing.

e. Pulp Studio, Inc.
f. Substitutions: Refer to Section 01 25 00.

2. Glass Thickness: 1/4", unless otherwise indicated.

3. Polyvinyl Butyral Core Thickness: Minimum 30 mil.

4. Location: Provide where indicated.

F. Insulated Glass: Preassembled units consisting of organically sealed panes of glass enclosing a hermetically sealed dehydrated air space with minus 20-degree F dew point.

1. Manufacturers:

a. Vitro Architectural Glass (formerly PPG).
b. Oldcastle Glazing.
c. Guardian Industries Corp. **Basis of Design**
d. Viracon.
e. Substitutions: Refer to Section 01 25 00.

2. Performance: Certified to ASTM E2190 by Insulating Glass Certification Council.

3. System: Manufacturer's standard dual seal system compatible with glazing system, and including spacers, desiccant, and standard corner construction.

4. Glass: ASTM C1036, select glazing quality clear float glass; nominal 1/4” thick glass.

a. Basis of Design IGU: Guardian Glass SunGuard SNX 62/27 on Green

5. Safety Glass: ASTM C1048, Kind FT, fully tempered select glazing quality clear float glass; nominal 1/4” thick glass; provide at doors and impact areas where safety glass is required by applicable codes and regulations.

6. Total Unit Thickness: 1".

7. Locations: Provide at exterior windows and doors unless otherwise indicated.

1. Glazing Materials: Type approved for use in applications indicated for required fire ratings; refer to fire label requirements.

2. Location: Provide at skylights and fire rated not requiring impact resistance.

G. Polycarbonate Mirror:

1. Manufacturers:

a. Bunker Plastics, Inc.
b. Substitutions: Refer to Section 01 25 00.

2. Glazing Materials: Types as recommended by one-way mirror manufacturer.

H. Spacer Shims: Silicone compatible, 50 durometer hardness; 3" long by 3/32" thick by 1/4" high.

I. Setting Blocks: 70-90 durometer hardness; 4” long by 3/8” thick by 1/4” high standard setting blocks.

J. Glazing Sealant: ASTM C920, Type S, Grade NS, elastomeric one-component silicone glazing sealants as recommended by sealant manufacturer for application involved.

1. Manufacturers:

a. Dow Corning Corp.
b. General Electric Co.
c. Pecora Corp.
d. Substitutions: Refer to Section 01 25 00.

2. Structural and Butt Glazing: Provide high-modulus structural silicone glazing materials recommended by sealant manufacturer for applications where sealant bonds glass to metal system and where sealant bonds glass to glass.

3. Color: As selected by Architect from manufacturer's full range of available colors.

K. Glazing Putty: Linseed oil putty, ASTM C570, Type II; oil and resin base caulking compound for building construction; knife grade.1.

1. Manufacturers:

a. DAP, Inc.
b. Substitutions: Refer to Section 01 25 00.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean glazing channels and framing members to receive glass immediately before glazing; remove coatings not firmly bonded to substrate.

B. Apply primer to joint surfaces where recommended by sealant manufacturer.

3.2 INSTALLATION

A. Comply with GANA Glazing Manual and Sealant Manual and glazing manufacturer recommendations and installation instructions.

1. Do not allow glass to touch metal surfaces.

2. Comply with applicable code requirements and NFPA 80 for glass in fire rated openings.

B. Place setting blocks at quarter points in thin course of sealant.

C. Install removable stops with glass centered in space with spacer shims at 2'-0" intervals on both sides of glass, 1/4" below sightline.

D. Sealant Glazing: Fill gap between glass and stops with sealant to depth equal to bite of frame on glass but not more than 3/8" below sightline.

1. Apply sealant to uniform and level line, flush with sightline; tool or wipe sealant surface for smooth appearance; at exterior locations tool sealant so water is carried away from glass.

3.3 CLEANING

A. At areas subject to potential impact mark glass after installation by crossed streamers attached to framing and held away from glass; do not apply markers to surface of glass.

B. Remove nonpermanent labels immediately after sealant cures; cure sealants for high early strength and durability.

C. Remove and replace glass which is broken, chipped, cracked, abraded or damaged during construction period, including natural causes, accidents and vandalism.

END OF SECTION

SECTION 08 83 00

FRAMELESS MIRRORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Typical: Provide frameless glass mirrors with accessories as required for complete installation.

2. Impact Locations: Provide laminated frameless glass mirrors with accessories as required for complete installation.

B. Related Sections:

1. Section 08 80 00: One-way mirrors and polycarbonate mirrors.

1.2 REFERENCES

A. Glass Association of North America (GANA): Glazing Manual and Sealant Manual.

1.3 SUBMITTALS

A. Product Data: Furnish for mirror glass.

B. Samples: Furnish samples of mirror glass with finished edges and corners.

1.4 WARRANTY

A. Special Warranties: Replace mirrors which exhibit signs of desilvering or signs of distortion.

1. Special Warranty Period: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide frameless mirrors with accessories as required for complete installation.

B. Safety Glass Standard: Comply with applicable codes, CPSC 16 CFR 1201, and pass ANSI Z97.1.

C. Typical Frameless Glass Mirrors: Mirror quality q1 or q2, clear float glass; 1/4" thick; full silver coating, copper coating and organic coating; factory treated and sealed after cutting and finishing.

1. Manufacturers:

a. Guardian Glass.
b. Lenoir Mirror Company, Lenoir, NC.
c. Substitutions: Refer to Section 01 25 00.

2. Edges: Provide edges designed to eliminate cutting potential at edges and corners commonly referred to as arrised edges, as approved by Architect.

D. Laminated Glass Frameless Mirrors: ASTM C1172, Kind LA, two sheets of clear float glass laminated with polyvinyl butyral film, safety glass; laminated layers shall be free of air pockets and foreign substances.

1. Manufacturers:

a. Oldcastle BuildingEnvelope.
b. Guardian Industries Corp.
c. Global Security Glazing.
d. Pulp Studio, Inc.
e. Substitutions: Refer to Section 01 25 00.

2. Glass: Mirror quality q1 or q2, clear float glass; factory treated and sealed after cutting and finishing.

3. Edges: Provide edges designed to eliminate cutting potential at edges and corners commonly referred to as arrised edges, as approved by Architect.

4. Glass Thickness: Nominal 1/4" total thickness unless otherwise indicated.

5. Polyvinyl Butyral Core Thickness: Minimum 30 mil.

6. Reflective Coating: Coating may be standard full silver reflective metallic coating on Number 2 surface or may be mirror reflective surface on polyvinyl butyral core.

E. Mirror Attachment:

1. Bottom Supports: Brite anodized aluminum angles such as Glass Distributors Inc. (301.779.2430)/Brite Anodized Aluminum 3/8” L-Bar Extrusion, provide felt pads for setting mirrors on angles; provide concealed fasteners.

2. Adhesive: Nontoxic type as recommended by mirror manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with GANA Glazing Manual and mirror manufacturer instructions.

1. Do not allow glass to touch metal surfaces.

B. Provide ventilation to coating.

C. Set or trim felt to face of mirror.

D. Install ballet barre in accordance with ballet barre manufacturer recommendations and installation instructions without touching mirror.

3.2 CLEANING

A. Remove nonpermanent labels immediately after installation.

B. Remove and replace mirrors which are broken, chipped, cracked, abraded or damaged during construction period, including natural causes, accidents and vandalism.

END OF SECTION

SECTION 08 91 00

LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide both extruded aluminum and formed metal (aluminum or galvanized steel) louvers and frames, with screens, attachment hardware, and accessories as required for complete finished installation.

B. Related Sections:

1. Section 08 11 10: Steel door louvers.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of louver.

B. Shop Drawings: Indicate profile of frame, details, relation to adjacent construction, flashing, blade configuration, duct work connection, screens, and percentage of free air opening.

C. Samples: Furnish samples of metal finish.

D. Certificates: Where performance requirements are included, provide AMCA Certified Rating Seal indicating louvers comply with requirements.

1.3 SITE CONDITIONS

A. Take site dimensions affecting louvers prior to fabrication.

B. Ensure openings are properly prepared and flashings are correctly located to divert moisture to exterior.

C. Protect adjacent surfaces, finishes and materials from damage during installation of louvers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The Airolite Corporation.

B. Construction Specialties, Inc. (CSI).

C. Airline Products Co.

D. Nystrom Building Products.

E. Ruskin.

F. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide metal louvers and frames, with screens, attachment hardware, and accessories.

B. Performance Criteria: Where indicated, comply with specific performance requirements; unit performance ratings determined in compliance with Air Movement and Control Association (AMCA) Standard 500.

1. Free Area: Minimum 45% based on 48" by 48" louver.

2. Static Pressure Loss: Maximum 0.15" of water gage at airflow of 1000 fpm free air velocity.

3. Water Penetration: Maximum 0.05 oz/sf of free area at intake airflow of 1000 fpm free area velocity.

4. Wind-Driven Rain: Louvers shall achieve a wind-driven rating in conformance with applicable codes and regulations but not less than an A rating on a standard size louver as defined in AMCA 500 - L.

C. Aluminum Extrusions: ASTM B221, 6061 or 6063 alloy, T5 or T6 temper; minimum 0.08" thick.

D. Aluminum Sheet: ASTM B209, manufacturer's standard alloy; minimum 0.08" thick.

E. Steel Sheet: Minimum 16 gage steel, ASTM A924 and A653 with G90 galvanized coating, mill phosphatized.

F. Stainless-Steel Sheet: ASTM A666 Type 304, with No. 4 finish; minimum 18 gage.

2.1 FABRICATION

A. Louvers: Manufacturer's standard fabrication for types specified and configurations indicated on Drawings.

1. Type: Sheet metal louvers formed of shapes as indicated; Contractor option aluminum sheet or galvanized steel sheet unless otherwise indicated.

2. Type: Extruded aluminum wall louvers, continuous blade (mullionless) type.

3. Type: Extruded aluminum wall louvers, fixed blade mullion type.

B. Bird Screen for Exterior Louvers: Minimum 0.063" diameter wire, 1/2" interwoven square mesh.

1. Wire: Stainless-steel.

2. Frame: Match louver.

C. Fabricate louvers to maximum extent possible and disassemble as necessary for shipping and handling limitations; clearly mark units for reassembly and installation.

1. Fabricate frames, including integral sills, to suit adjacent construction with tolerances for installation.

2. Fabricate sill extension, flashings, wall anchors, structural supplementary sub-framing, and accessories as required for complete system; use same materials as provided for louvers.

D. Join frame members and louver blades by welding; maintain equal blade spacing, including separation between blades and frame head and sill; maintain uniform appearance.

1. Shop miter and weld blades into shop fabricated corner units to align with straight sections; include concealed bracing.

E. Shop Finished Louvers: Factory finish with fluoropolymer coating based on Kynar 500 or Hylar 5000 and conforming with AAMA 2605; not less than two coat system.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect including metallic color based on mica.

F. Shop Primed Louvers: Manufacturer's standard thermosetting prime coating compatible with paints specified in Section 09 90 00 - Painting and Coating.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install louvers in accordance with manufacturer recommendations and installation instruction, properly aligned and level.

B. Secure louver rigid with concealed fasteners of non-corrosive metals to suit materials being encountered and to resist anticipated loads.

C. Coordinate installation method with application of adjacent backing and structural elements, and mechanical work.

D. Set and tie into flashings to ensure diversion of moisture to exterior.

E. Hinge screens for access.

END OF SECTION

SECTION 09 21 00

GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide gypsum board systems including gypsum board, light gage metal framing, suspension system for gypsum board systems, joint treatment, acoustical accessories, and general accessories for complete installation.

1. Provide special surface texture finish coat.

B. Related Sections:

1. Section 05 40 00: Cold-formed structural metal framing, 18-gage and heavier.
2. Section 07 21 00: Building thermal insulation.
3. Section 07 84 00: Firestopping.
4. Section 09 30 00: Cementitious backer unit tile substrates.

1.2 REFERENCES

A. ASTM C754: Installation of Steel Framing Members to Receive Screw-Attached Gypsum Wallboard, Backing Board, or Water-Resistant Backing Board.

B. ASTM C840: Application and Finishing of Gypsum Board.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Design/Build: Provide special engineering for metal framing system to ensure framing heights exceeding manufacturer’s published tables comply with applicable codes and Contract Documents.

B. Coordination, Openings: Obtain dimensions and locations from other trades and provide openings and enclosures for accessories, specialties, equipment, and ductwork.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for framing, insulation, gypsum board, and acoustical accessories.

B. Samples: Submit samples of special texture finish.

C. Manufacturer’s Certification: Furnish manufacturer's certification indicating products comply with Contract Documents and applicable codes.

D. Design/Build Certification: Furnish certification by California licensed engineer indicating compliance with Contract Documents and applicable codes.

1. Engineering certification required only where metal framing spans exceed limits included in manufacturer's published tables.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives, sealants, and caulks.

B. Level 4 Finish Mock-Up: Provide Level 4 finish mock-up not less than 100 square feet in location acceptable to Architect. Approved mock-up may be incorporated into Project.

C. Level 5 Finish Mock-Up: Provide Level 5 finish mock-up not less than 100 square feet in location acceptable to Architect. Approved mock-up may be incorporated into Project.

D. Special Textured Finish Mock-Up: Provide special texture finish mock-up not less than 100 square feet in location acceptable to Architect. Approved mock-up may be incorporated into Project.

1.6 PROJECT CONDITIONS

A. Do not begin installation of interior gypsum board until space is enclosed, space is not exposed to other sources of water, and space is free of standing water.

B. Maintain areas to receive gypsum board at minimum 50-degree F for 48 hours prior to application and continuously after application until drying of joint compound is complete; comply with ASTM C840.

C. Immediately remove from site gypsum board for interior use exposed to water, including gypsum board with water stains, with signs of mold, and gypsum board with mildew.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. National Gypsum Co.

B. Georgia-Pacific Corp.

C. United States Gypsum Co., USG Corp.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide gypsum board assemblies including gypsum board, light gage metal framing, suspension system for gypsum board systems, joint treatment, acoustical accessories, and general accessories.

1. Systems Responsibility: Provide products manufactured by or recommended by manufacturer of gypsum board to maintain single-source responsibility for system.

B. Performance Requirements: Perform gypsum board systems work in accordance with recommendations of ASTM C754 and ASTM C840 unless otherwise specified.

1. Loads: Comply with California Building Code requirements for design of metal framing for gypsum board systems.

a. Deflection: Maximum L/240 typical, L/360 where tile is indicated.

b. Deflection: Maximum L/240 typical, L/360 where tile or plaster are indicated.

2. Large Format Tile: Comply with Tile Council of North America (TCNA) requirements for metal framing at maximum 16” on center and for maximum deflection of L/720 where large format tile as defined by TCNA is indicated.

C. Regulatory Requirements:

1. Fire-Rated Assemblies: Provide systems listed in applicable code or by Underwriter's Laboratory, Gypsum Association (GA) File No's in GA-600 Fire Resistance Design Manual or other listing approved by applicable authorities.

2. Seismic Requirements: Comply with code requirements for seismic bracing.

D. Framing: Comply with ASTM C754, 20-gage and lighter unless otherwise indicated; provide gages as recommended by manufacturer for spans and loads indicated and as required by applicable codes.

1. Studs: ASTM C645, screw-type Cee-shaped.

a. Shaft Walls: Cee-T or Cee-H shaped studs.
b. Area Separation Walls: Match ClarkDietrich/H-Stud, Breakway Clips System.

2. Runners: Match studs.

3. Furring Members: ASTM C645, screw-type, hat-shaped.

a. Sound Rated Assemblies: Provide resilient channels where indicated and where required to provide required sound transmission classifications.

1) Acceptable Manufacturers:

a) USG/RC-1.
b) ClarkDietrich/RC-Deluxe.
c) Substitutions: Refer to Section 01 25 00.

4. Channels: ASTM C754.

5. Hangers: ASTM A641, Class 1 wire not less than sizes in Table No. 5 of ASTM C754 and as required by applicable codes; hanger rods, flat hangers, and angle-type hangers as required.

6. Suspension System: ASTM C635, suspension system composed of main beams and cross furring members interlocking to form supporting network; recommended by gypsum board system manufacturer.

7. Fasteners and Anchorages: As recommended by gypsum board system manufacturer.

E. Gypsum Board: Comply with ASTM C840; maximum permissible lengths; ends square cut, tapered edges on boards to be finished.

1. Mold Resistant Gypsum Board: typical interior.

   a. USG/Sheetrock Mold Tough Firecode Core.
   b. Georgia Pacific/ToughRock Mold-Guard Fireguard X.
   c. National Gypsum/Gold Bond XP Fire-Shield Gypsum Board.
   d. Substitutions: Refer to Section 01 25 00.

2. Tile Substrates: Cementitious backer units specified in Section 09 30 00 - Tiling.

   a. Contractor Option Coated Glass Mat Backer Units: Georgia Pacific/DenShield, UL fire rated as required to maintain integrity of fire rated assemblies.

3. Sheathing: Silicone treated glass mat gypsum sheathing, ASTM C1177, Type X, 5/8” thick unless otherwise indicated.

   a. Manufacturers:

      1) Georgia Pacific/DensGlass Gold.
      2) Substitutions: Refer to Section 01 25 00.

4. Veneer Plaster Base: ASTM C1396, Type X, type recommended by gypsum board manufacturer for gypsum veneer plaster base.

   a. Manufacturers:

      1) National Gypsum/Kal-Kore Veneer Plaster Base.
      2) Georgia Pacific/ToughRock Veneer Plaster Base.
      3) USG/Grand Prix Veneer Plaster Base.

5. Exterior Gypsum Soffit Board: ASTM C931, Type X; as recommended by manufacturer for exterior non-exposed applications.

6. Extended Exposure Gypsum Board: Fire rated Type X gypsum board designed specifically for extended exposure to moisture during construction; ASTM C1177; provide with score of 10 when tested using ASTM D3273 for mold resistance.

   a. National Gypsum/eXP Extended Exposure Sheathing.
   b. Georgia Pacific/DensArmor Plus or DensGlass.

c. USG/Sheetrock Fiberock Aqua Tough Sheathing.
d. Substitutions: Refer to Section 01 25 00.

7. Fiberglass Mat Faced Gypsum Roof Board:

a. USG Securock Glass-Mat Roof Board
b. Georgia-Pacific DensDeck Prime Roof Board
c. Substitutions: Refer to Section 01 25 00.

F. Gypsum Board Accessories: Comply with ASTM C840.

1. Provide protective coated steel corner beads and edge trim; type designed to be concealed in finished construction by tape and joint compound.

2. Corner Beads: Manufacturer's standard metal beads.

3. Edge Trim: “J”, "L", "LK", or "LC" casing beads.

4. Reinforcing Tape, Joint Compound, Adhesive, Water, Fasteners: Types recommended by system manufacturer and conforming to ASTM C475.

a. Typical Joint Compound: Chemical hardening type for bedding and filling, ready-mixed or powder vinyl type for topping.

5. Control Joints: Back to back casing beads.

a. Back control joints with 4 mil thick polyethylene air seal.

6. Reveals: Extruded aluminum special trim pieces in manufacturer's standard or custom shapes to conform to configurations and dimensions indicated.

a. Manufactures:

1) Fry Reglet Corp./Drywall Moldings.
2) Gordon Inc./Final Forms I Drywall Trims.
3) Substitutions: Refer to Section 01 25 00.

G. Acoustical Accessories: Provide as indicated and as required to achieve acoustical ratings indicated.

1. Acoustical Insulation: Preformed mineral fiber, ASTM C665, Type I; friction fit type without integral vapor barrier; as required to meet STC ratings indicated, or of thickness indicated.

2. Acoustical Sealant: ASTM C919, type recommended for use in conjunction with gypsum board. Paintable, non-shrinking and non-cracking where exposed, nondrying, nonskinning, nonstaining, and nonbleeding where concealed.

a. Acoustical Sealant Manufacturers:

1) USG/Sheetrock Acoustical Sealant.
2) Tremco/Acoustical Sealant.
3) Pecora/AC-20.

4) Substitutions: Refer to Division 1.

3. Electrical Box Pads: Provide at outlet, switch and telephone boxes in walls with acoustical insulation.

a. Electrical Box Pad Manufacturers for Non-Fire Rated Partitions:

1) Harry A. Lowry & Associates (800.772.2521)/Lowry's Electrical Box Pads.
2) Tremco Sheet Caulking (650.572.1656).
3) Fire rated partition material manufacturers.
4) Substitutions: Refer to Section 01 25 00.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Metal Framing Erection: Erect metal framing in accordance with ASTM C754 and manufacturer's recommendations.

1. Install members true to lines and levels to provide surface flatness with maximum variation of 1/8" in 10'-0" in any direction.

2. Door Opening Framing: Install double studs at door frame jambs; install runners on each side of opening at frame head height between jamb studs and adjacent studs.

3. Install metal framing backing where required for support of fixtures, cabinets, accessories and hardware.

4. Coordinate installation of bucks, anchors, blocking, electrical and mechanical work which is to be placed in or behind partition framing; allow items to be installed after framing is complete.

B. Ceiling Framing Installation: Erect in accordance with ASTM C754 and manufacturer's recommendations.

1. Coordinate location of hangers with other work; provide trapeze supports and steel bracing as required to support ceiling.

2. Install ceiling furring independent of walls, columns, and above-ceiling work.

3. Space main carrying channels at maximum 48" on center, not more than 6" from perimeter walls.

a. Lap splices minimum 12" and secure together 2" from each end of splice.

4. Place furring channels perpendicular to carrying channels at maximum 24" on center and not more than 2" from perimeter walls.

5. Lap splices minimum 8" and secure together 2" from each end of splice.

6. Reinforce openings in ceiling suspension system which interrupt main carrying channels or furring channels, with lateral channel bracing; extend bracing minimum 24" past each end of openings.

7. Laterally brace entire suspension system.

C. Gypsum Board Installation: Install in accordance with ASTM C840 and manufacturer's recommendations.

1. Use screws when fastening gypsum board to furring and to framing.

2. Erect gypsum board with ends and edges occurring over firm bearing.

   a. Ensure joints of second layer do not occur over joints of first layer in double layer applications.

3. For fire rated systems comply with requirements for fire ratings.

4. Place control joints to be consistent with lines of building spaces and as directed by Architect.

   a. Provide where system abuts structural elements.
   b. Provide at dissimilar materials.
   c. Lengths exceeding 30'-0" in partitions.
   d. Ceiling areas exceeding 50'-0" or 2500 square feet.
   e. Wings of "L", "U" and "T" shaped ceilings.

5. Place corner beads at external corners; use longest practical lengths.

6. Place edge trim where gypsum board abuts dissimilar materials.

7. Tape all edges of above ceiling gypsum board walls

8. Tape, fill, and sand exposed joints, edges, corners and openings to produce surface ready to receive finishes; feather coats onto adjoining surfaces.

9. Finishing: Comply with Gypsum Association (GA) “Levels of Gypsum Board Finish”.

   a. GA Level 4 (Typical): Provide three-coat finishing and sanding is required for surfaces indicated to be painted; provide flush, smooth joints and surfaces ready for applied paint finishes.

   b. Special Texture Finish Coat: Apply special texture coating over surface indicated to be textured in accordance with manufacturer's recommendations; three-coat finishing not required.

10. Remove and replace defective work.

D. Acoustical Accessories Installation:

1. Place acoustical insulation tight within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

2. Place acoustical sealant within partitions in accordance with manufacturer's recommendations; install acoustical sealant at gypsum board perimeter at:

    a. Metal Framing: One or two beads.
    b. Base layer and face layer.
    c. Penetrations of partitions.

3. Tolerance: Maximum 1/4" space between gypsum board at floor, ceiling, and penetrations and sealed with acoustical sealant.

4. Install electrical box pads with pads molded and pressed on back and all sides of box, closing openings, in accordance with manufacturer's instructions, for complete acoustical barrier.

    a. Comply with requirements for HVAC system for air pressure requirements.

END OF SECTION

SECTION 09 24 00

PORTLAND CEMENT PLASTER

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Stucco: Provide three-coat Portland cement plaster (stucco) with rainscreen, metal lath, and accessories as required for complete finished system.

2. Base for Surface Bonded Masonry: Provide two-coat Portland cement plaster base for surface bonded thin set veneer systems with metal lath and accessories as required for complete finished system.

B. Related Sections:
1. Section 07 28 00: Weather barrier underlayment.
2. Section 09 01 20: Plaster patching.
3. Section 09 21 00: Metal studs, 20-gage and lighter.
4. Section 09 90 00: Painting of stucco.

1.2 REFERENCES

A. ASTM C926: Application of Portland Cement Based Plaster.

B. ASTM C1063: Installation of Lathing and Furring for Portland Cement Plaster.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's product information for each lathing material and accessory, and for plaster materials.

B. Shop Drawings: Indicate locations of control and expansion joints where not shown on Drawings.

C. Samples: Furnish 24” by 24” stucco samples using materials and methods specified including lath.

1.4 QUALITY ASSURANCE

A. Mock-Ups: Provide not less than 100 sf mock-up of each type of plaster; approved mock-ups may be incorporated into Project.

1.5 SITE CONDITIONS

A. Take precautionary measures to ensure plaster is not subjected to excessive sun and wind which could cause uneven and excessive evaporation, premature dehydration, or cracking.

B. Cold-Weather Requirements: Do not apply plaster unless minimum ambient temperature of 40 degrees F has been and continues to be maintained for minimum 48 hours prior to application and until plaster is cured.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide three coat Portland cement plaster (stucco) and two-coat Portland cement plaster base for bonded masonry, with metal lath and accessories.

B. Regulatory Requirements: Comply with applicable codes.

C. Portland Cement Plaster: Provide either ready-mixed materials unless otherwise approved in writing by Architect, complying with ASTM C926.

1. Scratch and Brown Coat Materials:

a. Cement: Normal Type 1 or 1A Portland cement, ASTM C150.
b. Hydrated Lime: Special finishing hydrated lime, Type S, ASTM C206.
c. Aggregate: Natural sand, conforming to ASTM C897 or C144.

2. Brown Coat Water Acrylic Admix: Acrylic polymer specifically manufactured for use in Portland Cement Plaster (Stucco) applications and which will not detrimentally affect finish.

a. Manufacturers:

1) Larsen Products Corp/Acrylic Admix 101.
2) BASF/Thoro Acryl 60.
3) Chem-Masters Corp/Cretelox.
4) Substitutions: Refer to Section 01 25 00.

3. Finishing Materials: Same as brown coat with acrylic admix with integral color and white cement. Factory premix finish coat is acceptable.

a. Provide white cement from a single manufacturer and clear silica sand at applications indicated to have integral color.

b. Integral Color: Pure, non-fading, mineral oxide color conforming to ASTM C979 and designed and mixed to provide uniform color finish coat.

1) Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

4. Proprietary Finishing Materials: Provide proprietary Portland cement-based factory mixed integral color finishing materials as indicated and as approved by Architect.

a. Manufacturers:

1) La Habra Products, Inc.
2) Merlex Stucco, Inc.
3) Omega Products Corp.: **Basis of Design Akroflex Semi Smooth Finish**

4) Substitutions: Refer to Section 01 25 00.

b. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

5. Proprietary Finishing Materials: Provide proprietary acrylic based factory mixed integral color finishing materials as indicated and as approved by Architect.

a. Manufacturers:

1) Dryvit Systems/Textured Acrylic Finish.
2) Omega Products Corp./Akroflex Semi Smooth Finish (Basis of Design)
3) La Habra Products, Inc./DPR Acrylic Finish.
4) Senergy, Inc./Acrylic Finish.
5) Sto Corp./Stolit.
6) Substitutions: Refer to Section 01 25 00.

b. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

6. Water: Clean, fresh and free from injurious amounts of oil, acid, alkali, organic matter or other deleterious substances.

7. Bonding Agent: Conform to ASTM C932.

a. Manufacturers:

1) Larsen Products Corp./Weld-Crete.
2) BASF/Thorobond.
3) Chem-Masters Corp./Polyweld.
4) Substitutions: Refer to Section 01 25 00.

B. Metal Components: Comply with requirements of ASTM C1063.

1. Manufacturers:

a. Phillips Manufacturing Company
b. Alabama Metal Industries Corp (AMICO).
c. ClarkDietrich Building Systems.
d. Substitutions: Refer to Section 01 25 00.

2. Exterior Components: Hot-dip galvanized finish; ASTM A924 and A653 minimum G90 for 18 gage and lighter formed metal products, ASTM A123 galvanized after fabrication for 16 gage and heavier products.

a. Exposed Exterior Components: Zinc accessories unless fully concealed in plaster.

3. Suspension System: Size to comply with referenced standards.

    a. Main Runners: Hot or cold-rolled steel.

        1) Main Carrying Channels: Minimum 16 gage, 1-1/2" by 1/2".
        2) Furring Channels: Minimum 16 gage, 3/4" by 1/2".

    b. Hangers: Size and type to suit application and to rigidly secure system in place, with maximum deflection of L/360.

        1) Hanger Wire: ASTM A641, Class 1 galvanized.
        2) Hanger Rods and Flats: Mild steel.

    c. Lateral Bracing: Minimum 16 gage cold-rolled steel.

    d. Anchorage and Fastening: Approved devices of type and size to suit application and to rigidly secure suspension system.

4. Exterior Metal Lath: Galvanized expanded diamond mesh; minimum 2.5 psy at vertical applications, 3.4 psy at horizontal applications.

    a. Backing: Weather resistive barrier system specified in Section 07 28 00 – Weather Barrier/Underlayment.

    b. Self-Furring: Where over solid substrate, provide “V” groove type to hold lath approximately 1/4" from supporting base.

    c. Tie Wire: ASTM A641, soft temper, Class 1 zinc coated; minimum 16 gage for tying metal lath to furring channels and metal lath to metal lath.

5. Inside Corner Mesh: Minimum 26-gage steel; perforated or expanded flanges or clips shaped to permit complete embedding in plaster; minimum 2" by 2" size.

C. Accessories: Provide as indicated, as recommended by referenced standards, and as required for complete installation.

1. Manufacturers:

    a. Keene Products from Metalex, a Division of The Koller Group.
    b. Delta Star, Inc., Superior Metal Trim.
    c. Brand X Metals.
    d. Lath manufacturers.
    e. Substitutions: Refer to Section 01 25 00.

2. Casing Beads and Base Screeds: Minimum 26-gage, square edges at casing beads, drip type base screeds; provide with expanded flanges.

3. Expansion Joints: Two-piece slip type joints; commonly referred to as No. 40.

4. Control Joints: One-piece metal joint designed to interlock with plaster similar to Keene/XJ15-3.

5. Aluminum Vent Strips and Channel Screeds: Extruded aluminum alloy 6063 and temper T5 or T6, minimum 0.05" thick; with manufacturer's standard baked-on finish.

    a. Manufacturers:

        1) Fry Reglet Corp./Plaster Moldings.
        2) Gordon Inc./Final Forms II.
        3) Substitutions: Refer to Section 01 25 00.

    b. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

D. Anchorages: Tie wire, nails, screws and other approved metal supports, of type and size to suit application.

    1. Staples not permitted.

2.2 PLASTER MIXES

A. Provide plaster mixes in accordance with ASTM C926 as appropriate to the substrate indicated and the approved samples.

B. Mix only as much plaster as can be used in one hour.

C. Mix materials dry, to uniform color and consistency, before adding water.

D. Protect mixes from frost, dust and evaporation.

E. Do not retemper mixes after initial set has occurred.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate suspended work with structural work to ensure inserts and structural anchorage provisions have been installed to receive hangers.

    1. Coordinate location of hangers with other work.

B. Prior to application ensure mechanical and electrical services behind surfaces to receive cement plaster have been tested and approved.

C. Ensure framing has been properly installed and rigidly secured.

3.2 INSTALLATION

A. Erect furring and lath in accordance with ASTM C1063.

B. Install work true to lines and levels and to provide surface flatness with maximum variation of 1/8" in 10'-0" in any direction.

C. Isolation: Isolate lathing and metal support system where it abuts building structure horizontally, and where partition/wall work abuts overhead structure, to prevent transfer of building loads into plaster.

1. Install slip or cushion type joints to absorb deflections but maintain lateral support.

D. Frame both sides of expansion joints independently unless otherwise indicated, do not bridge joints with furring and lathing or accessories.

E. Fixture Support Framing: Install supplementary framing, blocking and bracing where work is indicated to support fixtures, equipment, services and similar work requiring attachment and support.

F. Coordinate installation of anchors, blocking, electrical and mechanical work which is to be placed in or behind framing; allow such items to be installed after framing is complete.

G. Install expansion and control joints so plaster areas do not exceed 120 ft^2, and with area sides having a maximum one to two and a half (1:2-1/2) ratio, unless otherwise approved by Architect.

H. Suspension System: Install to heights indicated on Drawings.

1. Install independent of walls, columns and overhead work.

2. Use hangers spaced maximum 4'-0" on center.

3. Space main carrying channels maximum 4'-0" on center and not more than 6" from perimeter walls; lap splices minimum 12" and secure together 2" from each end of splice.

4. Securely fix carrying channels to hangers to prevent turning or twisting and to develop full strength of hangers.

5. Place furring channels perpendicular to carrying channels, not more than 2" from perimeter walls; rigidly secure to carrying channels.

6. Lap splices minimum 8" and secure together 1" from each end of splice.

7. Reinforce openings in suspension system which interrupt main carrying channels or furring channels, with lateral channel bracing; extend bracing minimum 24" past openings.

8. Laterally brace suspension system as required to resist seismic loads, including uplift.

I. Metal Lathing: Apply lath taut, with long dimension perpendicular to supports; secure end laps with tie wire where they occur between supports; lap ends minimum 1" and sides 1/2”; secure with tie wires.

1. Continuously reinforce internal angles.

2. Place 6" wide x 12" long strips of metal lath diagonally at corners of openings; secure rigidly in place.

3. Place 6" wide strips of metal lath at junctions of dissimilar materials; place parallel with dissimilar materials; secure rigidly in place.

J. Installation of Metal Accessories:

1. Fasten in place true to line and in correct relation to adjacent materials and as required to prevent dislodging and misalignment by subsequent operations.

2. Fasten at both ends and at maximum 12" on center along sides.

3. Bring grounding edge of accessories to true lines, plumb, level, and straight.

4. Install accessories to provide required depth of plaster and to bring plaster surface to required plane.

5. Install continuous corner reinforcement for full length of external corners.

6. Install sill and drip screeds with paper sheathing and lath installed over attachment flange of screeds.

7. Beads: Use single length of metal beads wherever length of run does not exceed longest standard stock length available; miter or cope corners.

a. Provide casing beads where plaster abuts dissimilar construction and at perimeter of openings where edges of plaster will not be concealed by other work.

K. Portland Cement Plaster: Conform to ASTM C926.

1. Stucco: Apply three coat cement plaster system, scratch, brown, and finish coats.

2. Base for Surface Bonded Masonry: Apply two coat cement plaster system, scratch and brown coats.

3. Apply each base coat (scratch and brown) to minimum thickness of 3/8"; allow each coat to moist cure for minimum period of 48 hours;

a. Moist cure first base coat (scratch coat) during 48-hour period.

4. Allow base coats to cure for minimum 7 days prior to application of finish coat.

5. Evenly dampen base coat, to ensure uniform suction, and apply finish coat; apply thickness sufficient to secure required texture but in no case less than 1/8".

a. Apply pre-mixed finish coat in accordance with manufacturer's recommendations.

6. Maintain surface flatness, with maximum variation of 1/8" in 10'-0".

7. Avoid excessive working of surface, delay troweling to avoid drawing excess fines to surface.

L. Finish: Provide surfaces with finish to match approved sample panel and mock-up.

3.3 CUTTING AND PATCHING

A. Cut, patch, point, and repair plaster as necessary to accommodate other work and to restore cracks, dents, and imperfections.

B. Repair or replace work to eliminate blisters, buckles, crazing, check cracking, dry-outs, efflorescence, sweat-outs, and similar defects.

C. Finish cutting and patching to match undamaged plaster; patching shall not be visible in finished installation.

3.4 CLEANING

A. Promptly remove plaster from surfaces not indicated to be plastered.

B. Repair surfaces stained, marred or otherwise damaged during plastering.

END OF SECTION

SECTION 09 30 00

TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide tile installations with accessories, as required for complete installation.

1. Provide waterproofing membrane integral with tile setting beds.
2. Provide cementitious backer unit tile substrate.

B. Related Sections:

1. Section 09 21 00: Metal framing and gypsum board.
2. Section 09 30 90: Exterior large format tiling.

1.2 REFERENCES

A. ANSI A108.1: Installation of Tile with Portland Cement Mortar.

B. ANSI A108.5: Installation of Tile with Latex-Portland Cement Mortar.

C. ANSI A108.6: Installation of Tile with Chemical Resistant Water Cleanable Tile Setting and Grouting Epoxy.

D. ANSI A108.10: Installation of Grout in Tilework.

E. ANSI A108.11: Interior Installation of Cementitious Backer Units.

F. Tile Council of North America (TCNA): Handbook for Ceramic Tile Installation.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination, Large Format Tile and Framing: Tile Council of North America (TCNA) requires framing at large format tile to be maximum 16” on center and for maximum deflection of L/720 where large format tile as defined by TCNA is indicated.

1. Coordinate with framing installation to ensure proper stud spacing and deflection limits are provided at locations where large format tile is indicated.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturer's literature for each type of material for Project.

B. Samples: Furnish each type of tile clearly indicating pattern, coloration and joints.

1. Color Charts: Submit actual tile sections showing full range of colors, textures and patterns available for each type of tile.

2. Prepare two 12" square sample panels of each selected type of tile and grout.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives, sealants, and caulks.

1.6 SITE CONDITIONS

A. Provide heat and ventilation in areas where ceramic tile work is being performed, to allow tile to properly set.

B. Take precautionary measures necessary to ensure excessive temperature changes do not occur.

1.7 WARRANTY

A. Extended Correction Period: Provide for correcting failure of system to resist water penetration except where failure is result of structural failure of building. Repair system and pay for or replace damaged materials and surfaces.

1. Hairline cracking due to temperature or shrinkage is not considered structural failure.

2. Period: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide tile installations with tile, grout, setting materials, and accessories as indicated.

B. Regulatory Requirements, Slip-Resistance:

1. Slip-Resistant Hard Surfaces: Hard surface finishes to comply with requirements of authorities having jurisdiction for slip-resistant hard surfaces, including general code requirements and requirements for access for persons with disabilities.

C. Tile: Types as indicated which could include ceramic, ceramic mosaic, quarry, paver, porcelain, stone, and glass type tiles.

1. Manufacturers:

a. Dal-Tile Corp. Basis of Design
b. Crossville Tile.
c. Summitville Tiles, Inc.
d. Manufacturers listed on Finish Schedule.
e. Substitutions: Refer to Section 01 25 00.

2. Color, Style and Pattern: As indicated on Finish Schedule, as selected by Architect from manufacturer's full range of types of tiles indicated where not otherwise indicated

    a. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

3. Base and Trim: Provide matching trim pieces, coordinated with sizes and coursing of adjoining flat tile as directed by Architect; types as indicated, as selected by Architect where not indicated.

D. Portland Cement Setting Bed: Portland cement bed conforming to ANSI A108.1 and TCNA recommendations including separator sheet and reinforcing mesh.

1. Separator sheet may be deleted where over waterproof membrane.

2. Separator sheet may be deleted where over waterproof membrane or shower pan.

E. Latex Thin Set: Thinset bond coat, consisting of latex-cementitious mortar conforming to ANSI A118.4.

1. Manufacturers:

    a. Laticrete International Inc.
    b. Bostik Construction Products/Hydroment.
    c. Custom Building Products.
    d. Mapei Corp.
    e. Parex USA/Mer-Krete.
    f. Substitutions: Refer to Section 01 25 00.

F. Latex-Cement Grout: ANSI A118.7, latex-cementitious type, uniform in color, resistant to shrinkage.

1. Manufacturers:

    a. Laticrete International Inc.
    b. Bostik Construction Products/Hydroment.
    c. Custom Building Products.
    d. Mapei Corp.
    e. Parex USA/Mer-Krete.
    f. Substitutions: Refer to Section 01 25 00.

2. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

G. Waterproofing and Crack Isolation Membrane: Manufacturer's standard liquid rubber polymer designed specifically for application under tile in non-immersed applications.

1. Manufacturers:

    a. Laticrete International Inc./9235 Waterproof Membrane.
    b. Bostik Construction Products/Hydroment Ultra-Set.

c. Custom Building Products/RedGard Membrane.
d. Mapei Corp/Mapelastic Aqua Defense.
e. Parex USA/Mer-Krete Hydro-Guard 2000.
f. Substitutions: Refer to Section 01 25 00.

H. Cementitious Backer Units: ANSI A118.9 aggregated Portland cement with woven glass-fiber mesh on both faces; approximately 1/2" thick; UL fire rated as required to maintain integrity of fire rated assemblies.

1. Manufacturers:

a. USG Industries, Durabond Division/Durock.
b. National Gypsum Co./PermaBase Cement Board.
c. Custom Building Products/Wonderboard.
d. Substitutions: Refer to Section 01 25 00.

2. Contractor Option Coated Glass Mat Backer Units: Georgia Pacific/DenShield, UL fire rated as required to maintain integrity of fire rated assemblies.

I. Cleaning and Sealing Materials: As recommended by tile and grout manufacturers, such as Bostik Construction Products/Hydroment CeramaSeal.

J. Floor Sealer (Under Epoxy Set Floors over Concrete): Curing hardener sealer vapor retarder to prevent bond failure of flooring systems, type as recommended by epoxy setting bed material manufacturer for specific applications indicated.

A. Special Tile Trim Pieces: Provide as indicated on Drawings.

1. Manufacturers:

a. Schluter Systems L.P.
b. Substitutions: Refer to Section 01 25 00.

2.2 MIXES

A. Mix and proportion cementitious materials for site-made leveling coats, setting beds and grout as recommended by the TCNA Handbook for Ceramic Tile Installation.

B. Mix and proportion pre-mixed setting beds and grout materials in accordance with manufacturer's recommendations.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prior to installing tile, ensure surfaces are level; comply with TCNA and tile manufacturer recommendations but not greater than following.

1. Bed Set Tile Tolerance: Maximum surface variation of 1/4" in 10'-0".

2. Thin Set Tile Tolerance: Maximum surface variation of 1/8" in 10'-0".

B. Ensure surfaces are clean and well cured.

1. Drains: Where indicated, ensure surfaces are properly sloped to drains.

C. Do not commence work until surface conditions are within tolerances required for proper installation; apply latex leveling material where necessary to meet required tolerances.

D. Waterproof and Crack Isolation Membrane: Install waterproof membrane at tile areas located above grade, in accordance with manufacturer's recommendations; extend membrane minimum 6" up walls.

1. Comply with waterproof membrane manufacturer recommendations for installation of tile over waterproof membrane.

E. Showers: Install shower pan liners and wall waterproofing at showers in accordance with manufacturer's recommendations; extend pan liners minimum 6" up walls, waterproofing full height at showers.

1. Comply with manufacturer recommendations for installation of tile over shower pan liner and waterproof membrane.

F. Backer Units: Install units in accordance with ANSI A108.11, manufacturer's recommendations, and as required to provide fire ratings indicated on Drawings.

G. Floor Sealer: Apply vapor retarding floor sealer on concrete floors indicated to receive epoxy set tile in accordance with manufacturer recommendations and installation instructions.

3.2 INSTALLATION

A. Install tile in accordance with referenced ANSI Standards and TCNA recommendations for type of substrate and indicated setting method.

1. Complexity of TCNA variations in types of tile installation systems and potential for changes to surrounding conditions during design and construction makes exact listing of potential conditions improbable.

2. Contractor, installers, and manufacturer representatives shall inform Architect where actual conditions are not covered and where providing similar materials and systems do not comply with TCNA or manufacturer recommendations.

a. Where specified or similar materials and systems do not comply with TCNA or manufacturer recommendations submit proposed substitutions along with statement substitutions are of comparable quality to specified materials.

B. Following systems shall form the basis of tile installation systems required for Project. Where Project conditions vary from TCNA and manufacturer recommendations, notify Architect immediately. Where different use similar materials and systems as appropriate.

1. Bed Set Floors over Concrete: TCNA F111, with latex cement bond coat.

2. Bed Set Floors over Waterproof and Crack Isolation Membrane over Concrete: TCNA F121, with latex cement bond coat.

3. Bed Set Floors over Waterproof and Crack Isolation Membrane over Wood: TCNA F141, with latex cement bond coat.

4. Latex-Cement Thin Set Floors over Concrete: TCNA F113.

5. Latex-Cement Thin Set Floors over Waterproof and Crack Isolation Membrane: TCNA F122.

6. Latex-Cement Thin Set Wall Tile over Cementitious Backer Units: TCNA W244.

7. Latex-Cement Thin Set Wall Tile over Coated Glass Mat Backer Units: TCNA W245.

8. Showers: TCNA B415 latex bond coat over reinforced mortar bed floor with latex cement thin set over cementitious backer unit walls, with shower pan liners and waterproofing at walls.

C. Place tile in accordance with patterns indicated on Drawings or as directed by Architect; carefully plan tile layouts, ensure pattern is uninterrupted from one surface to the next and through doorways.

1. Apply latex thin set to back of tile where necessary to ensure 100% bond between bond coat and substrate; replace tiles which break due to voids between tile and substrate.

D. Place stone thresholds level and true to line; in correct alignment with tile, doors and partitions.

E. Neatly cut tile around fixtures and drains; accurately form corners, base, intersections and returns.

1. Base, Coves: Flush cove type with base grout joint on wall, cove tile on floor, unless otherwise indicated.

2. Corners and Edges: Bullnose tile unless otherwise indicated.

F. Locate expansion joints, control joints, contraction joints, and isolation joints where indicated; where not indicated, provide as recommended by TCNA Handbook and as approved by Architect.

1. Install special trim pieces as indicated on Drawings and in accordance with manufacturer recommendations and installation instructions, true to lines and levels indicated and in correct relationship with tile and adjacent materials.

G. Ensure tile joints are uniform in width, subject to normal variance in tolerance allowed in tile size; ensure joints are watertight, without voids, cracks, excess mortar or grout.

H. Sound tile after setting, remove and replace hollow sounding units.

I. Allow tile to set for a minimum 48 hours prior to grouting.

J. Grout tile to comply with recommendations of TCNA and as specified.

K. Leave completed installation free of broken, damaged and faulty tile.

3.2 CLEANING AND SEALING

A. Clean tile surfaces free of foreign matter upon completion of grouting.

B. Seal tile and grout surfaces where recommended by manufacturer for materials and applications involved; comply with manufacturer's recommendations.

END OF SECTION

SECTION 09 51 00

ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide suspended acoustical ceiling system with exposed suspended metal grid system, trim, and accessories as required for complete finished installation.

B. Related Sections:

1. Section 09 21 00: Gypsum board suspended ceiling systems.
2. Divisions 21 through 28: Facilities services for ceiling penetrations.

1.2 REFERENCES

A. ASTM C635: Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

B. ASTM C636: Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

C. ASTM E580: Application of Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels in Areas Requiring Seismic Restraint.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate installation of acoustical ceiling systems with items installed above ceilings to ensure work above ceilings is complete, ceiling space allows for concealed items while allowing required ceiling heights, and building is enclosed.

1.4 SUBMITTALS

A. Product Data: Furnish manufacturers' literature.

B. Shop Drawings: Clearly indicate grid layout and related dimensioning, junctions with other work and ceiling finishes, and inter-relation of mechanical and electrical items related to system.

C. Samples: Furnish 3 samples of tile.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Firm with minimum five years successful experience in projects of similar type and scope; acceptable to manufacturer of integrated acoustical ceiling system.

1.6 SITE CONDITIONS

A. Do not install ceilings until building is enclosed, sufficient heat is provided, dust generating activities have terminated and overhead mechanical work is completed, tested and approved.

1. Do not allow acoustical ceiling units to be exposed to moisture; immediately remove acoustical ceiling units with stains, units with signs of mold, and units with mildew.

B. Allow wet work to dry prior to commencement of installation.

C. Maintain uniform temperatures of minimum 60 degrees F and humidity of 20% to 40% prior to, during and after installation.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Armstrong World Industries, Inc.

B. CertainTeed.

C. USG Corporation.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide acoustical ceiling systems with exposed suspended metal grid system, trim, and accessories as required for complete finished installation.

B. Regulatory Requirements:

1. Seismic Design Requirements: Comply with California Building Code requirements for seismic bracing of ceiling suspension system, and with ASTM E580.

a. Ceiling Struts: Provide struts as detailed on Drawings and as required by code, placed maximum 12'-0" on center in both directions and within 6'-0" of each wall.

b. Slack Wires: Provide safety slack wires, two per fluorescent fixture on diagonally opposite corners and a single wire for each recessed down light.

2. Fire Performance Characteristics: Provide products listed by Underwriters Laboratories (UL) or other independent testing laboratory acceptable to applicable authorities.

a. Flame Spread/Smoke Density: Provide products meeting code requirements for maximum 25 flame spread and maximum 450 smoke developed.

C. Suspension Systems: Comply with ASTM C635, as applicable to type of suspension system required for type of ceiling units indicated.

1. Grid System:

a. Exposed Grid System: Narrow 9/16" nominal face width, direct hung, aluminum or steel "T" exposed grid system.

2. Attachment Devices: Size for 5 times design load indicated in ASTM C635, Table 1, Direct Hung.

3. Hanger Wires: Galvanized carbon steel, ASTM A641, soft temper, pre-stretched, yield-stress load of at least three times design load, but not less than 12-gage.

4. Straps, Tubes and Angles: Provide galvanized steel as required to meet state and local requirements for seismic design loads.

5. Structural Class: Minimum intermediate-duty system.

6. Edge Molding: Manufacturer's standard angle molding for edges and penetrations of ceiling, with single flange of molding exposed.

7. Finish of Exposed Items: Manufacturer's standard white baked enamel.

8. Maximum Allowable Deflection: L/360.

D. Acoustical Panels: ASTM E1264 type and form as indicated on Finish Schedule, as selected by Architect from manufacturer’s full range of panels where not otherwise indicated.

1. Panels: Mineral composition lay-in ceiling panels with reveal edge designed to be compatible with specified suspension system.

2. Texture: Light fissured panels unless otherwise indicated on Drawings.

3. Basis of Design: USG MARS Tile Panels, square edge

4. Size: 2'-0" by 2'-0", except where otherwise indicated on Drawings.

5. Colors: white

PART 3 - EXECUTION

3.1 PREPARATION

A. Furnish layouts for inserts, clips and other supports required to be installed by other trades for support of acoustical ceilings.

1. Install inserts, clips, and supports where not previously installed and where additional supports are required for complete installation.

B. Measure ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling; do not use less than half width units at borders.

C. Coordinate with other work supported by or penetrating through ceilings, including integral air handling systems, light fixtures, and other systems.

3.2 INSTALLATION

A. Install acoustical ceiling systems in accordance with manufacturer's recommendations and ASTM C636.

1. Coordinate installation of air handling systems and electrical systems integral with integrated acoustic ceiling systems.

2. Finished Ceilings: True to lines and levels and free from warped, soiled or damaged grid or acoustical units.

B. Install ceiling systems in a manner capable of supporting superimposed loads, with maximum permissible deflection of 1/8" in 10'-0".

C. Install after major above-ceiling work is complete; coordinate location of hangers with other work.

1. Ensure suspension system is located to accommodate fittings and units of equipment which is to be placed after installation of ceiling grid.

D. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest adjacent hangers and related carrying channels as required to span required distance.

E. Install ceiling suspension system to resist seismic loads as required by state and local codes, including extra hanger wires and compression supports for ceilings and light fixtures.

F. Hang system independently of walls, columns, ducts, pipes and conduit. Where suspension system members are spliced, avoid visible displacement of the longitudinal axis or face plane of adjacent members.

G. Do not support lighting fixtures from or on main runners or cross runners if weight of fixture causes total dead load to exceed deflection capability.

1. Support fixture loads independently or provide supplementary hangers located within 6" of each corner.

H. Do not install fixtures so main runners and cross runners are eccentrically loaded; where fixture installation would produce rotation of runners, provide stabilizer bars.

I. Install edge moldings at intersection of ceiling and vertical surfaces, using maximum lengths, straight, true to line and level; miter corners.

1. Provide edge moldings at junctions with other ceiling finishes.

J. Where required form expansion joints to accommodate movement and maintain visual closure without distorting system.

K. Fit acoustic units in place, free from damaged edges or defects detrimental to appearance and function.

1. Lay directionally patterned units one way with pattern as directed.

2. Fit border units neatly against abutting surfaces.

L. Install system level, in uniform plane and free from twist, warp and dents.

M. Install hold-down clips where required by applicable codes and where ceiling is within 20'-0" of an exterior door.

3.3 ADJUSTING

A. Adjustment: Adjust sags or twists which develop in ceiling system and replace any part which is damaged or faulty.

END OF SECTION

SECTION 09 65 10

RESILIENT BASE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide resilient base and accessories as required for complete finished installation.

B. Related Sections:
1. Section 09 65 20: Resilient Plank Flooring

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's product literature.

B. Samples: Furnish samples of each base color and type.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives and resilient flooring.

1.4 SITE CONDITIONS

A. Comply with manufacturer recommendations for site conditions but not less than following; maintain minimum 70-degree F air temperature at installation area for three days prior to, during, and for 24 hours after installation.

B. Store materials in area of application; allow three days for material to reach same temperature as area.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Johnsonite, Inc.

B. Burke Flooring, Division of Burke Industries.

C. Roppe Rubber Corporation.

D. Flexco Co.

E. Allstate Rubber Corp.

F. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide resilient base and accessories as required for complete finished installation.

B. Performance Requirements: Provide materials tested under ASTM E648, Flooring Radiant Panel Test, with results of 0.45 watts/sq. cm or higher.

C. Resilient Base: Conform to ASTM F1861, with premolded end stops and external corners; 1/8" gage; provide coved base at hard floor surfaces.

1. Type: Extruded rubber, in rolls.

2. Type: Vinyl base.

3. Height: 4" unless otherwise indicated.

4. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

D. Primers and Adhesives: Water-resistant nontoxic types recommended by base manufacturer for specified material and application.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Apply to walls, columns, pilasters, casework, and other permanent fixtures in rooms and areas where base is required.

1. Fit base joints tight and vertical.

2. Maintain minimum measurement of 18" between joints.

B. Miter internal corners; use molded sections for external corners and exposed ends.

C. Install base on solid backing, adhere tightly to wall and floor surfaces; fill voids along top edge of base with manufacturer's recommended adhesive filler.

D. Scribe and fit to door frames and other obstructions.

E. Install straight and level to variation of plus or minus 1/8" over 10'-0".

3.2 CLEAN-UP

A. Remove excess adhesive from floor, base and wall surfaces without causing damage.

B. Clean surfaces in accordance with manufacturer's recommendations.

END OF SECTION

SECTION 09 65 20

RESILIENT PLANK FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide resilient tile flooring and accessories as required for complete finished installation.

B. Related Sections:
1. Section 09 65 10: Resilient Base

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's product literature.

B. Samples: Furnish 3 samples of each type of flooring color and pattern.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives and resilient flooring.

1.4 SITE CONDITIONS

A. Ensure floor surfaces are smooth and flat with maximum variation of 1/8" in 10'-0".

B. Ensure concrete floors are dry and exhibit negative alkalinity, carbonizing, and dusting.

C. Maintain minimum 70-degree F air temperature at flooring installation area for three days prior to, during, and for 24 hours after installation.

D. Store flooring materials in area of application; allow three days for material to reach same temperature as area.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Basis of Design: Millikan Fortified Foundations, PIK176 – 121 Bark

1. Installation per manufacturer’s specifications and written recommendations

Note: Location, extent and pattern installation method as indicated.

B. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide resilient plank flooring and accessories.

B. Regulatory Requirements, Flammability: Provide materials tested under ASTM E648, Flooring Radiant Panel Test, with results of 0.45 watts/sq cm or higher.

C. Regulatory Requirements, Slip-Resistance:

1. Slip-Resistant Hard Surfaces: Hard surface finishes to comply with requirements of authorities having jurisdiction for slip-resistant hard surfaces, including general code requirements and requirements for access for persons with disabilities.

2. As indicated in finish schedule.

D. Edge Strips: Homogeneous vinyl or rubber, tapered or bullnose edge, color as selected by Architect.

E. Sub-Floor Filler: White premixed latex-cement paste designed for providing thin solid surface for leveling and minor ramping of subsurface to adjacent floor finishes.

1. Use material capable of being applied and feathered out to adjacent floor without spalling.

F. Primers and Adhesives: Waterproof nontoxic types as recommended by flooring manufacturer for specified material and application.

PART 3 - EXECUTION

3.1 PREPARATION

A. Conform to manufacturer's recommendations for preparation and to ASTM F710.

B. Remove sub-floor ridges and bumps; fill low spots, cracks, joints, holes and defects with sub-floor filler.

C. Clean floor and apply, trowel and float filler to leave smooth, flat hard surface; prohibit traffic until filler is cured.

D. Test substrate for moisture content in accordance with flooring manufacturer recommendations; where moisture content exceeds recommendations take measures recommended by flooring manufacturer.

3.2 INSTALLATION

A. Conform to manufacturer recommendations and installation instructions.

1. Open floor tile cartons, enough to cover each area, and mix tile to ensure shade variations do not occur within any one area.

B. Lay flooring with joints parallel to building lines to produce symmetrical pattern.

C. Install minimum 1/2 plank at room and area perimeter.

D. Terminate resilient flooring at centerline of door openings where adjacent floor finish is dissimilar.

E. Install edge strips at unprotected and exposed edges.

F. Scribe flooring to walls, columns, floor outlets and other appurtenances, to produce tight joints.

G. Consult with Architect for floor pattern desired in each area.

H. Edge Strips: Install where edge of tile would otherwise be exposed; butt to flooring without gaps; set in adhesive.

3.3 CLEAN-UP AND PROTECTION

A. Remove excess adhesive from floor, base and wall surfaces without causing damage.

B. Clean floor surfaces in accordance with manufacturer's recommendations.

C. Prohibit traffic from floor for 48 hours after installation.

END OF SECTION

SECTION 09 65 20

RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide resilient tile flooring and accessories as required for complete finished installation.

B. Related Sections:

1. Section 09 65 10: Resilient base.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's product literature.

B. Samples: Furnish samples of each type of flooring color and pattern.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives and resilient flooring.

1.4 SITE CONDITIONS

A. Ensure floor surfaces are smooth and flat with maximum variation of 1/8" in 10'-0".

B. Ensure concrete floors are dry and exhibit negative alkalinity, carbonizing, and dusting.

C. Maintain minimum 70-degree F air temperature at flooring installation area for three days prior to, during, and for 24 hours after installation.

D. Store flooring materials in area of application; allow three days for material to reach same temperature as area.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Congoleum Corp.

B. Johnsonite

C. Tarkett Inc/Azrock.

D. Armstrong World Industries.

E. Tarkett Inc./Azrock.

F. Flexco Flooring.

G. Burke Mercer.

H. Flexco Flooring.

I. Freudenberg Building Systems, Inc. (NORA).

J. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide resilient tile flooring and accessories.

B. Regulatory Requirements, Flammability: Provide materials tested under ASTM E648, Flooring Radiant Panel Test, with results of 0.45 watts/sq cm or higher.

C. Regulatory Requirements, Slip-Resistance:

1. Slip-Resistant Hard Surfaces: Hard surface finishes to comply with requirements of authorities having jurisdiction for slip-resistant hard surfaces, including general code requirements and requirements for access for persons with disabilities.

D. Vinyl Composition Tile (VCT): 12" by 12" by 1/8" thick; vinyl composition tile conforming to ASTM F1066, Composition 1.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

E. Vinyl Composition Tile VCT: Static Dissipative: Use at computer room.

F. Edge Strips: Homogeneous vinyl or rubber, tapered or bullnose edge, color as selected by Architect.

G. Sub-Floor Filler: White premixed latex-cement paste designed for providing thin solid surface for leveling and minor ramping of subsurface to adjacent floor finishes.

1. Use material capable of being applied and feathered out to adjacent floor without spalling.

H. Primers and Adhesives: Waterproof nontoxic types as recommended by flooring manufacturer for specified material and application.

I. Sealer and Wax: Type recommended by flooring manufacturer for material type and location.

PART 3 - EXECUTION

3.1 PREPARATION

A. Conform to manufacturer's recommendations for preparation and to ASTM F710.

B. Remove sub-floor ridges and bumps; fill low spots, cracks, joints, holes and defects with sub-floor filler.

C. Clean floor and apply, trowel and float filler to leave smooth, flat hard surface; prohibit traffic until filler is cured.

D. Test substrate for moisture content in accordance with flooring manufacturer recommendations; where moisture content exceeds recommendations take measures recommended by flooring manufacturer.

3.2 INSTALLATION

A. Conform to manufacturer recommendations and installation instructions.

1. Open floor tile cartons, enough to cover each area, and mix tile to ensure shade variations do not occur within any one area.

B. Spread cement evenly in quantity recommended by manufacturer to ensure adhesion over entire area of installation; spread only enough adhesive to permit installation of flooring before initial set.

C. Set flooring in place using methods to ensure full adhesion.

D. Lay flooring with joints parallel to building lines to produce symmetrical pattern.

E. Install minimum 1/2 tile at room and area perimeter.

F. Terminate resilient flooring at centerline of door openings where adjacent floor finish is dissimilar.

G. Install edge strips at unprotected and exposed edges.

H. Scribe flooring to walls, columns, floor outlets and other appurtenances, to produce tight joints.

I. Edge Strips: Install where edge of tile would otherwise be exposed; butt to flooring without gaps; set in adhesive.

3.3 CLEAN-UP AND PROTECTION

A. Remove excess adhesive from floor, base and wall surfaces without causing damage.

B. Clean, seal and wax floor surfaces in accordance with manufacturer's recommendations.

C. Prohibit traffic from floor for 48 hours after installation.

END OF SECTION

SECTION 09 67 55

URETHANE FOOD PREPARATION FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide urethane slurry flooring, including integral coved base and accessories as required for complete finished installation acceptable by USDA and applicable health authorities for use in food preparation areas.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this Section. Require attendance of those directly affecting work of this Section.

1. Review installation procedures and coordination required with related work.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's literature and maintenance instructions.

B. Samples: Submit membrane applied to 1/4" plywood, or similar backing.

C. Certifications:

1. Project List: List minimum five projects of similar nature installed by applicator.

2. Installer Acceptance: Submit manufacturer's certification installer is acceptable for this Project.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for coatings.

B. Installer Qualifications: Minimum of five years successful experience in application of flooring systems of type specified and acceptable to manufacturer of flooring system.

C. Supervision: Manufacturer's representative shall supervise installation of system.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original manufacturer's sealed containers, identified with material name, date of manufacture and lot number.

B. Store materials to prevent damage to containers; immediately remove damaged and unsuitable materials.

1.6 SITE CONDITIONS

A. Slab Temperature: Minimum 40 degrees F at time of installation and at least 5 degrees F above dew point during installation.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. The StonHard Group/StonHard.

B. Sherwin-Williams General Polymers/FasTop.

C. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide urethane slurry food preparation flooring, including integral cover base and accessories as required for complete finished installation acceptable by USDA and applicable health authorities for use in food preparation areas.

B. Regulatory Requirements - Volatile Organic Compounds: Provide materials conforming to applicable air quality management district limitations on volatile organic compound (VOC) emissions.

C. Regulatory Requirements - Slip Resistance: Provide non-slip units complying with California Building Code and ADA Standards requirements for slip resistance.

1. Slip-Resistant Hard Surfaces: Hard surface finishes to comply with requirements of authorities having jurisdiction for slip-resistant hard surfaces, including general code requirements and requirements for access for persons with disabilities.

D. Urethane Slurry Flooring: Manufacturer's chemical resistant resin system specified and as recommended by manufacturer for food preparation areas and approved by authorities having jurisdiction for food prep areas.

1. Basis of Design: Sherwin Williams FasTop

a. Specific System: As recommended by system manufacturer for applications indicated; provide special thermal shock resistant and thermal cycling resistance at locations as required by specific food service equipment.

2. Application: Comply with manufacturer recommendations but not less than following:

a. Cove Base: Urethane primer, cover base binder resin, cove base aggregate.
b. Slurry: Binder resin and aggregate.
c. Broadcast: Dry Silica Sand (30 mesh and larger) broadcast into excess.
d. Seal Coat.
e. Thickness: As recommended by manufacturer for application indicated.

3. Colors: provide custom color as indicated.

E. Primer: Manufacturer's recommended primer complying with California limitations on volatile organic compounds as applicable.

F. Subfloor Filler: White premixed latex-cement paste designed for providing thin solid surface for leveling and minor ramping of subsurface to adjacent floor finishes.

1. Use material capable of being applied and feathered out to adjacent floor without spalling.

B. Vapor Retarding Floor Sealer for Concrete Substrates: Type as recommended by decorative epoxy flooring manufacturer.

G. Accessories: Provide as recommended by system manufacturer for applications indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to installing flooring, ensure surfaces are level, with maximum surface variation of 1/4" in 10'-0".

B. Ensure surfaces are clean and well cured.

C. Do not commence work until surface conditions are within tolerances required for proper installation.

D. Start of work indicates acceptance of conditions.

3.2 PREPARATION

A. Clean concrete slab free from foreign matter.

B. Apply vapor retarding floor sealer in accordance with manufacturer recommendations and installation instructions.

3.3 INSTALLATION

A. Comply with manufacturer's recommendations and instructions for application and quantities of materials.

1. Mix and apply flooring materials in accordance with directions, minimum two coat system, two coats plus primer where recommended by manufacturer.

3.4 CLEANING

A. Use clean water and stiff bristle fiber brushes to clean decorative epoxy flooring.

B. Do not use wire brushes, acid type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage.

3.5 PROTECTION

A. Protect completed floor surface as required from stains and damage by covering with reinforced construction paper or covering recommended by flooring manufacturer.

B. Protect walls and surfaces of finished work of others against damage or soiling resulting from flooring work.

C. Repair damage caused by flooring work; clean using methods and materials recommended by manufacturers of damaged surfaces; replace materials that cannot be repaired to match adjacent undamaged materials.

END OF SECTION

SECTION 09 68 10

TILE CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide carpet tile including edge strips where carpeting terminates at other floor finishes and accessories as required for complete finished installation.

B. Related Sections:

1. Section 09 68 00: Broadloom type carpeting.

1.2 SUBMITTALS

A. Product Data: Prior to final acceptance of carpet tile installation, submit manufacturer's detailed maintenance recommendations for care, cleaning and repair of carpet tiles installed.

B. Shop Drawings: Clearly indicate carpet tile layout, direction of carpet tiles, adhesive to be used, method of integrating edge strips with carpet tile, and installation procedures.

C. Samples: Submit samples of each carpet tile type and color, and of each color of edge strip.

D. Certificate of Compliance: Furnish manufacturer's certificate of compliance stating each material delivered conforms to Specifications.

E. Maintenance Recommendations: Prior to final acceptance of carpet tile installation, furnish carpet tile manufacturer's detailed maintenance recommendations for care, cleaning and repair of carpet tiles installed.

F. Maintenance Materials: Submit unused carpet tiles. Box unused carpet tiles and mark boxes indicating color and location installed.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for carpet systems and adhesives.

B. Installer Qualifications: Firm with minimum five years successful experience in carpet tile installation and approved by carpet tile manufacturer.

1. Upon request, submit letter from carpet manufacturer stating installer is acceptable.

C. Mock-Up: Provide minimum 12' by 12' mock-up of carpet tile for approval prior to beginning installation; approved mock-up may be incorporated into finished installation.

1.4 PROJECT CONDITIONS

A. Do not commence carpet tile installation until painting and finishing work is complete and ceiling and other overhead work has been tested, approved and completed, unless specifically approved.

B. Maintain room temperature at minimum 60 degrees F for at least 24 hours prior to installation; relative humidity shall be approximately that at which area is to be maintained.

C. Schedule, receive, and place carpet tile on floors indicated; protect from soiling and damage during transit, storage, and installation.

1.5 WARRANTY

A. Extended Correction Period: Provide for promptly making good or replacing defective materials or workmanship. Repairs shall take place within ten days of written notification.

1. Period: Two years.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Collins and Aikman Corp.

B. Bentley Prince Street.

C. Interface Flooring Systems, Inc.

D. Lees Carpets, Division of Burlington, Inc.

E. Shaw Commercial Carpets.

F. Manufacturers listed on Finish Schedule.

G. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide carpet tile including edge strips where carpeting terminates at other floor finishes and accessories.

B. Regulatory Requirements: Carpet tiles shall have passed following fire and smoke tests.

1. DOC-FF-1-70: Pass.
2. ASTM E662 (Smoke Denveloped): 450 or less.
3. ASTM E648 or NFPA 253 (Flooring Radiant Panel Test): 0.45 or higher.

C. Design Criteria: Provide carpet materials that bear Carpet and Rug Institute “Green Label Plus”.

D. Performance Requirements, Static: Carpet tile shall develop less than 3.0 kilovolts of static at 70 degrees F and 20 percent relative humidity.

E. Carpet Tile: Types as indicated on Finish Schedule; where carpet tile is not indicated provide as directed by Architect based on following criteria.

1. Yarn: 6.6 or later generation continuous filament soil hiding nylon.

2. Face Weight: Minimum 30 oz. per square yard.

3. Tile Size: As indicated, as selected by Architect from manufacturer's full range of carpet tile sizes where not indicated.

4. Pile Height: Maximum 1/2".

5. Backing: Integrated polyurethane cushion; no latex backing permitted.

6. Antimicrobial Treatment: Provide to inhibit growth of bacteria, mold, and mildew.

7. Soil-Resistant Treatment: Manufacturer's standard integral stain resistance.

8. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

F. Adhesive: Nontoxic type recommended by carpet tile manufacturer to suit application and expected service.

G. Leveling and Ramping Material: Latex-cement material designed for providing thin solid surface for leveling and minor ramping of subsurface to adjacent floor finishes.

1. Use material capable of being applied and feathered out to adjacent floor without spalling.

H. Edge Strips: Vinyl or rubber.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

I. Accessories: Provide as required for complete finished installation.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean floors of dust, dirt, solvents, oil, grease, paint, plaster and other substances detrimental to proper performance of adhesive and carpet tile; allow floors to thoroughly dry.

B. Ensure floors are level, with maximum surface variation of 1/4" in 10 feet.

C. Ensure concrete floors are free from scaling and irregularities and exhibit neutrality relative to acidity and alkalinity.

D. Use leveling and ramping material to patch cracks, small holes, leveling and for ramping to provide finished carpet tile within 1/2" of adjacent flooring materials.

E. Test substrate for moisture content in accordance with flooring manufacturer recommendations; where moisture content exceeds recommendations take measures recommended by flooring manufacturer.

3.2 INSTALLATION

A. Install carpet tiles in accordance with manufacturer's recommendations and installation instructions.

1. Adhere tiles to subfloor unless otherwise approved.

B. Prime substrate if required and as recommended by manufacturer. Spread adhesive in quantity recommended by manufacturer to ensure proper adhesion. Apply only enough adhesive to permit proper adhesion of carpet tile before initial set.

C. Lay carpet tile with run of pile in direction of anticipated traffic; do not change run of pile in any one room or from one room to next where continuous through a wall opening.

1. Finished installation to provide monolithic carpet tile appearance as approved by Architect.

D. Cut and fit carpet tile neatly around projections through floor and to walls and other vertical surfaces.

E. Fit carpet tiles snugly to walls or other vertical surfaces, leaving no gaps.

F. Lay installation tight and flat to subfloor well fastened and uniform in appearance; ensure monolithic color, pattern and texture match within any one area.

G. Edging Strips: Install in accordance with manufacturer recommendations and installation instructions.

1. Install edging strips where carpet terminates at other floor coverings.

2. Use full length pieces only, butt tight to vertical surfaces. Where splicing cannot be avoided, butt ends tight and flush.

H. Do not place heavy objects such as furniture on carpet tiled surfaces for not less than 24 hours or until adhesive is set.

3.3 CLEANING

A. Upon completion of carpet tile installation in each area, visually inspect carpet tile installed in that area and immediately remove dirt, soil and foreign substance from exposed face.

B. Clean in accordance with manufacturer's recommendations.

C. Inspect adjacent surfaces and remove marks and stains caused by carpet tile installation.

D. Remove packaging materials, carpet tile scraps, and other debris from carpet tile installation.

END OF SECTION

SECTION 09 90 00

PAINTING AND COATING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide painting and finishing of exposed items and surfaces requiring field painting and finishing including shop primed items.

1. Specified surface preparation, priming and coats of paint are in addition to shop-priming and surface treatment specified under other sections of work.

2. Painting and finishing include field finishing of exterior and interior items not listed as "Surfaces not to be Painted" unless clearly indicated otherwise.

3. Painting and finishing include field finishing of select shop finished items such as mechanical grilles and registers and shop primed items such as access panels and louvers in doors, to match adjacent surfaces.

a. Match adjacent surfaces in color and sheen unless otherwise indicated.

4. Field paint exposed bare and covered pipes, ducts, and hangers, exposed steel and iron work, and primed metal surfaces of equipment installed under mechanical and electrical work in occupied spaces.

B. Surfaces Not to be Painted:

1. Finished items including finished metal surfaces.
2. Walls and ceilings in concealed areas and generally inaccessible areas.
3. Moving parts of operating mechanical and electrical units.
4. Labels: Keep equipment identification and fire rating labels free of paint.
5. Plastic smoke stops and weather-stripping at doors.

C. Related Sections: Shop priming of ferrous metal items is included under various Specification sections.

1. Section 09 96 70: High performance coating for exterior steel.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's technical information, including paint label analysis and application instructions for each material.

B. Samples: Submit samples for review of color and texture; provide list of material and application for each coat of each finish sample.

1. Brush-Outs: Submit samples of each color and material with texture to simulate actual conditions, on hardboard.

a. Submit 8" by 10" samples of wood finishes on actual wood surfaces; label and identify each as to location and application.

b. Submit samples of concrete masonry (maximum 4" square) defining filler, prime and finish coats.

2. Field Samples: Duplicate painted finishes of approved samples on actual wall surfaces and components for approval prior to commencing work.

a. Size: Minimum 100 sf located where approved.
b. Components: One full component as directed.
c. Simulate finished lighting conditions for review.

C. Manufacturer Certificates: Furnish certificates from each manufacturer stating materials are top quality lines and suitable for intended use on this Project.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for paints and coatings.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to job site in original, new and unopened packages and containers bearing manufacturer's name and label, with:

1. Name of material, color and sheen.
2. Manufacturer's name, stock number and date of manufacture.
3. Contents by volume, for major pigment and vehicle constituents.
4. Thinning and application instructions.

1.5 SITE CONDITIONS

A. Apply water-base paints when temperature of surfaces and surrounding air are between 50 and 90-degrees F.

B. Do not apply paint in rain, fog or mist; or when relative humidity exceeds 85 percent; or to damp or wet surfaces.

C. Painting may be continued during inclement weather if areas to be painted are enclosed and heated within temperature limits specified.

D. Provide additional temporary ventilation during interior application of paints to eliminate volatile organic compound (VOC) emissions from interior spaces as quickly as possible.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Benjamin Moore & Co.

B. Sherwin-Williams Co.

C. Pittsburgh Paints, PPG Pittsburgh Paints, including Glidden Professional.

D. Dunn-Edwards Corp.

E. Kelly Moore Paint Co.

F. Vista Paint Co.

G. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide painting and finishing of exposed items and surfaces requiring field painting and finishing including shop primed items.

1. Definition: "Painting" and “coating” as used herein means systems including primers, emulsions, enamels, stains, sealers and fillers, whether used as prime, intermediate or finish coats.

B. Regulatory Requirements:

1. Volatile Organic Compound (VOC) Emissions: Furnish materials approved for use by applicable air quality management district for limitations of volatile organic compounds for architectural or special coatings as applicable.

CALIFORNIA REQUIREMENT BELOW, REVISE IF OTHER METHOD USED AT EXIT STAIRS.

2. California Stair Stripes: Paint 2" stripes at stair nosing not otherwise marked, full tread and landing width, in accordance with California Code of Regulations, Title 24, Access Compliance requirements.

a. Exterior Stairs: Provide at landing and each tread in each stair run.
b. Interior Stairs: Provide at landing and last tread at each stair run.

C. Material Quality: Provide top line quality commercial grade (professional painter) paints; materials not bearing manufacturer's identification as their top line product shall not be acceptable.

1. Primers: Provide premium grade primers recommended by paint manufacturer for substrates indicated and for finish systems specified.

2. Undercoats and Barrier Coats: Provide undercoat paints produced by same manufacturer as finish coats; use only thinners approved by paint manufacturer and use only within recommended limits.

3. Finish Coats: Provide finish coats capable of being washed with mild detergent without loss of color, sheen, or pigments.

a. Color pigments: Pure, non-fading, applicable types to suit substrates and service indicated; no lead content permitted.

4. Finish Coat Coordination: Provide finish coats which are compatible with prime paints, undercoats, and barrier coats used.

    a. Review other Specification sections in which prime paints are provided; ensure compatibility of total coatings systems.

    b. Upon request from other trades furnish information on characteristics of finish materials proposed for use.

    c. Provide barrier coats over incompatible primers or remove and prime as required.

    d. Notify Architect in writing of any anticipated problems in use of specified coating systems with substrates primed by others.

D. Colors and Finishes: Prior to commencement of painting work, Architect will furnish color chips for surfaces to be painted.

1. Use of proprietary names in color selection is not intended to imply exclusion of equivalent products of other manufacturers.

2. Final acceptance of colors will be from samples applied on site.

3. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

PART 3 - EXECUTION

3.1 PREPARATION

A. Inspection: Examine areas and conditions under which painting work is to be applied.

1. Start of painting work indicates acceptance of surfaces and conditions of surfaces and conditions within any area.

2. Where exposed items or surfaces are not specifically mentioned in Schedules, paint same as adjacent similar materials or areas.

3. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to a durable paint film.

B. Perform preparation and cleaning procedures in accordance with paint manufacturer's instructions and as specified for substrate condition.

1. Existing Painted Finishes:

    a. Clean existing painted surfaces and remove oil, grease, dust, stains, scale, efflorescence, mildew, mold, algae, blisters, and non-adhering paint.

    b. Measure adhesion of existing paints using ASTM D3359 tape test; remove existing coatings where poor adhesion is indicated.

c. Feather edges of severely deteriorated paint where several coats are removed as part of cleaning, to provide smooth transition for new paint.

d. Fill holes, cracks, and defects and fill and sand smooth, ready for new paint finish.

C. Remove hardware, accessories, and items in place and not to be painted, or provide protection prior to surface preparation and painting; after painting reinstall removed items.

D. Clean surfaces before applying paint; remove oil and grease prior to mechanical cleaning; program cleaning so contaminants from cleaning process do not fall onto wet, newly painted surfaces.

E. Cementitious Materials: Prepare by removing efflorescence, chalk, dirt, grease, oils, and by roughening as required to remove glaze.

1. Determine alkalinity and moisture content of surfaces to be painted.

2. If surfaces are found to be sufficiently alkaline to cause blistering and burning of finish paint, neutralize before application of paint.

3. Do not paint over surfaces where moisture content exceeds manufacturer's printed directions.

F. Ferrous Metals: Touch up shop-applied prime coats wherever damaged using same type of primer as applied in shop or barrier coat compatible with finish paint.

1. Bare Surfaces: Clean surfaces that are not galvanized or shop-coated, of oil, dirt, loose mill scale and other foreign substances by solvent or mechanical cleaning.

2. Galvanized Surfaces: Clean free of oil and surface contaminants, using non-petroleum-based solvent; primer and touch-up primer to be zinc-rich primer.

G. Mix painting materials in accordance with manufacturer's directions.

H. Store materials in tightly covered containers; maintain containers used in storage, mixing and application of paint in a clean condition, free of foreign materials and residue.

I. Stir materials before application to produce mixture of uniform density and stir as required during application; do not stir surface film into material, if necessary, strain material before using.

3.2 APPLICATION

A. Apply paint in accordance with manufacturer's directions; use applicators and techniques best suited for substrate and type of material being applied.

1. Apply additional coats when stains or blemishes show through final coat, until paint is a uniform finish, color and appearance.

2. Provide extra attention during application to assure dry film thickness at corners and crevices is equivalent to that of flat surfaces.

3. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces; paint surfaces behind permanently fixed equipment and furniture with prime coat only.

4. Finish doors on tops, bottoms and side edges same as faces.

5. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.

6. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, non-specular black paint.

7. Sand lightly between coats when recommended by system manufacturer.

B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated or prepared for painting as soon as practicable after preparation.

1. Allow time between successive coatings to permit proper drying.

2. Do not recoat until paint feels firm and does not deform or feel sticky under moderate thumb pressure.

C. Minimum Coating Thickness: Apply materials at not less than manufacturer's recommended spreading rate, to establish a total dry film thickness as recommended by coating manufacturer.

D. Prime Coats: Apply to items not previously primed; recoat primed and sealed surfaces where there is evidence of suction spots or unsealed areas in first coat.

E. Finish Coats: Provide even texture; leave no laps, irregularity in texture, skid marks, or other surface imperfections.

1. Opaque Finishes: Provide opaque, uniform finish, color and coverage; cloudiness, spotting, holidays, brush marks, runs, sags, ropiness, and other surface imperfections are not acceptable.

2. Transparent and Stained Finishes: Produce glass smooth surface film of even luster; provide with no cloudiness, color irregularity, runs, brush marks, orange peel, nail holes, and other surface imperfections.

F. Completed Work: Match approved samples for color, texture and coverage; remove, refinish or repaint work not accepted.

3.3 PAINTING SCHEDULE

A. Exterior Work: Provide following paint systems and sheens unless otherwise indicated.

1. Metal: Semigloss sheen.

a. 1st Coat: Touch-up primer, prime if none.
b. 2nd and 3rd Coat: Exterior 100% acrylic enamel.

2. Metal: High-performance coating specified in Section 09 96 70.

3. Concrete: Flat sheen.

    a. 1st and 2nd Coat: Exterior acrylic latex emulsion.

4. Concrete, Elastomeric Coating:

    a. Refer to Section 09 96 80 – Elastomeric Coating.

5. Plaster: Flat sheen.

    a. 1st and 2nd Coat: Heavy body vapor permeable waterproof elastomeric acrylic coating.

6. Plaster: Flat sheen.

    a. Refer to Section 09 96 80 – Elastomeric Coating.

7. Concrete Masonry Units: Flat sheen.

    a. 1st Coat: Surface filler.
    b. 2nd and 3rd Coat: Heavy body waterproof acrylic emulsion.
    c. Apply filler at rate to ensure coverage with pores filled.

8. Concrete Masonry Units: Flat sheen.

    a. Refer to Section 09 96 80 – Elastomeric Coating.

9. Fiber Cement Siding: Flat sheen.

    a. 1st Coat: Alkali resistant primer.
    b. 2nd and 3rd Coat: Exterior 100% acrylic enamel.

B. Interior Work: Provide following paint systems and sheens unless otherwise indicated.

1. Gypsum Board Systems: Eggshell (satin) sheen at walls, flat sheen at ceilings, semigloss sheen at toilet rooms.

    a. 1st Coat: Universal primer.
    b. 2nd and 3rd Coat: Interior latex or acrylic latex emulsion.

2. Metal: Semigloss sheen.

    a. 1st Coat: Touch-up primer, prime if none.
    b. 2nd and 3rd Coat: 100% acrylic enamel.

3. Concrete Masonry Units: Flat sheen.

    a. 1st Coat: Surface filler.
    b. 2nd and 3rd Coat: Interior latex emulsion.
    c. Apply filler at rate to ensure coverage with pores filled.

4. Plaster: Eggshell (satin) sheen at walls, flat sheen at ceilings, semigloss sheen at toilet rooms.

    a. 1st Coat: Latex primer-sealer.
    b. 2nd and 3rd Coat: Interior acrylic latex emulsion.

5. Cotton and Canvas Covering Over Insulation: Flat sheen.

    a. 1st (Size) Coat: Interior latex emulsion.
    b. 2nd Coat: Interior latex emulsion.
    c. Add fungicidal agent to render fabric mildew proof.

6. Concrete Floors: Gloss sheen; non-slip finish.

    a. 1st Coat: Concrete conditioner.
    b. 2nd and 3rd Coat: Polyurethane coating.

C. Sheens: Comply with ASTM D523, reflectance of paint.

1. Flat: 1-10.
2. Satin: 15-30.
3. Eggshell: 30-45.
4. Semigloss: 45-75.
5. Gloss: 75-100.

3.2 CLEAN-UP, PROTECTION, AND REPAIR

A. Clean-Up: During progress of work, remove discarded paint materials, rubbish, cans and rags from site at end of each workday.

1. Clean glass and paint-spattered surfaces immediately by proper methods of washing and scraping, using care not to scratch or damage finished surfaces.

B. Protection: Protect work of other trades, whether to be painted or not; correct damage by cleaning, repairing or replacing, and repainting, as acceptable to Architect.

1. Provide "Wet Paint" signs to protect newly painted finishes.

2. Remove temporary protective wrappings provided by others for protection of their work, after completion of painting operations.

C. Repair: At completion of work of other trades, touch-up and restore damaged surfaces or defaced painted surfaces.

END OF SECTION

SECTION 09 96 70

HIGH-PERFORMANCE COATING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide high-performance coating system of urethane over epoxy primer as indicated, including surface preparation, priming and high-performance coating application.

1. Location: Provide high-performance coating at exterior steel unless otherwise indicated. Coordinate priming with exterior steel specifications.

B. Related Work:

1. Section 09 90 00: Standard painting and coating systems.

1.2 SUBMITTALS

A. Product Data: Manufacturer's technical information, including coating label analysis and application instructions for each material.

B. Samples: Submit samples for review of color and texture; provide list of material and application for each coat of each finish sample.

1. Provide samples of each color and material with texture to simulate actual conditions.

C. Certificates: Provide certificate from each manufacturer stating material is top quality line and suitable for intended use on this Project.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for paints and coatings.

B. Installer Qualifications: Minimum of five years successful experience in application of high-performance coating systems of type specified and acceptable to manufacturer of coating system.

C. Mock-Up: Duplicate finish of approved samples in field at location as approved by Architect, one complete component or approximately 100 square feet, for approval prior to commencing work.

1. Approved mock-up may be incorporated into Project.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to job site in original, new and unopened packages and containers bearing manufacturer's name and label, with:

1. Name of material, color and sheen.
2. Manufacturer's name, stock number and date of manufacture.
3. Contents by volume, for major pigment and vehicle constituents.
4. Thinning and application instructions.

1.5 SITE CONDITIONS

A. Apply high performance coating when temperature of surfaces and surrounding air are between manufacturer recommended temperatures.

B. Do not apply high performance coating in rain, fog or mist; or when relative humidity exceeds 85-percent; or to damp or wet surfaces.

1.6 WARRANTY

A. Extended Correction Period: Provide for correcting failure of high-performance coating including peeling, chipping, rusting of substrate, cracking, delamination, chalking, and loss of color and sheen.

1. Period: Two years.

B. Manufacturer’s Warranty: Submit manufacturer’s warranty including special manufacturer services as required for manufacturer’s warranty.

1. Period: 10 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner’s rights under implied and expressed warranties regardless of wording of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. DuPont Co. Maintenance Finishes.

B. Tnemec Company, Inc.

C. PPG Protective & Marine Coatings.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide high performance coating system of urethane over epoxy primer as indicated, including surface preparation, priming and high-performance coating application.

B. Regulatory Requirements, Volatile Organic Compound (VOC) Emissions: Provide materials complying with applicable air quality management requirements for volatile organic compound (VOC) emissions limitations.

C. Special Coating: High build acrylic polyurethane or aliphatic polyurethane over compatible epoxy primer as recommended by coating manufacturer and suitable for applications indicated and based on quality of following products.

1. Systems:

a. DuPont/Imron with 25P primer.
b. Tnemec/Endura-Shield II (Series 1075) with Series V69 epoxy primer.
c. PPG/AmerShield VOC with Amerlock 400 primer.
d. Substitutions: Refer to Section 01 25 00.

2. Special Coating System: Provide specific primer and coating as recommended by manufacturer for applications indicated, conforming to specified requirements.

a. 1st Coat: Epoxy primer.

b. 2nd and 3rd Coat: High-build acrylic polyurethane or high-build polyurethane.

3. System Requirements:

a. Abrasion: ASTM D4060, CS-17 Wheel, 1,000 grams load, no more than 95 mg. loss after 1000 cycles.

b. Adhesion: ASTM D3359 Method B (Crosshatch Adhesion), coating applied to sandblasted steel and cured 30 days at 77° F, minimum rating of 5 on average of three tests.

c. Humidity: ASTM D4585, no blistering, cracking or delamination of film after 1000 hours exposure.

d. Salt Spray (Fog): ASTM B117, no blistering, rusting, cracking, or delamination of film; maximum 1/8" rust creepage at scribe after 1000 hours exposure.

e. UV: ASTM G154, no blistering, cracking or chalking, less than 35% gloss loss and less than 3.5 MacAdam unit color change after 1500 hours exposure.

4. Coordination: Provide special coating system compatible with prime paints, undercoats, and barrier coats used.

a. Review other Specification sections in which prime paints and zinc-rich touch-coatings up are provided; ensure compatibility of total coatings systems.

b. Upon request from other trades furnish information on characteristics of finish materials proposed for use.

c. Provide barrier coats over incompatible primers or remove and reprime as required. Reprime with zinc-rich primer where galvanized.

d. Notify Architect in writing of any anticipated problems in use of specified coating systems with substrates primed by others.

D. Colors and Finishes:

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2. Final acceptance of colors will be from samples applied on site.

3. Color pigments: Pure, non-fading, applicable types to suit substrates and service indicated; no lead content permitted.

4. Sheen: Gloss; comply with ASTM D523, reflectance of coating, 75-100.

E. Material Quality: Provide primers produced by same manufacturer as finish coats; use only thinners approved by coating manufacturer and use only within recommended limits.

PART 3 - EXECUTION

3.1 PREPARATION

A. Inspection: Examine areas and conditions under which high performance coating work is to be applied.

1. Start of high-performance coating work indicates acceptance of surfaces and conditions of surfaces and conditions within any particular area.

2. Do not apply coating over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to a durable coating.

B. Perform preparation and cleaning procedures in accordance with coating manufacturer's instructions and as specified for substrate condition.

C. Remove items in place and not to be coated or provide protection prior to application of high-performance coating; after application of coating reinstall removed items.

D. Clean surfaces before applying high-performance coating; remove oil and grease prior to mechanical cleaning; program cleaning so contaminants from cleaning process do not fall onto wet, newly coated surfaces.

E. Metal Preparation: Comply with coating manufacturer recommendations, but not less than following requirements.

1. Bare Surfaces: Clean surfaces which are not galvanized or shop-coated, of oil, dirt, loose mill scale and other foreign substances by solvent or mechanical cleaning.

2. Galvanized Surfaces: Clean free of oil and surface contaminants, using non-petroleum-based solvent.

3. Painted Surfaces: Clean surfaces of loose paint, dirt, and foreign substances by mechanical cleaning; feather edges of existing paint to provide smooth, even substrate for high performance coating.

F. Mix materials in accordance with manufacturer's directions.

G. Store materials in tightly covered containers; maintain containers used in storage, mixing and application of coating in a clean condition, free of foreign materials and residue.

H. Stir materials before application to produce mixture of uniform density and stir as required during application; do not stir surface film into material, if necessary, strain material before using.

3.2 APPLICATION

A. Apply high performance coating in accordance with manufacturer's directions; use applicators and techniques best suited for substrate and coating material being applied.

1. Apply additional coats when stains or blemishes show through final coat, until coating is a uniform finish, color and appearance.

2. Provide extra attention to assure dry film thickness at corners and crevices is equivalent to that of flat surfaces.

B. Scheduling: Apply first coat to surfaces that have been cleaned, pretreated or prepared for high performance coating as soon as practicable after preparation.

1. Allow time between successive coatings to permit proper drying.

2. Do not recoat until coating feels firm and does not deform or feel sticky under moderate thumb pressure.

C. Minimum Coating Thickness: Apply materials at not less than manufacturer's recommended spreading rate, to establish a total dry film thickness as recommended by coating manufacturer.

D. Prime Coats: Apply to items not previously primed; recoat primed and sealed surfaces where there is evidence of suction spots or unsealed areas in first coat.

E. Finish Coats: Provide even texture; leave no laps, irregularity in texture, skid marks, or other surface imperfections; edges clean and sharp where work joins other materials and colors.

1. Provide opaque, uniform finish, color and coverage; cloudiness, spotting, holidays, brush marks, runs, sags, ropiness and other surface imperfections are not acceptable.

F. Completed Work: Match approved samples and mock-up for color, texture and coverage. Remove, refinish or recoat work not accepted.

3.3 CLEAN-UP, PROTECTION AND REPAIR

A. Clean-Up: During progress of work, remove discarded coating materials, rubbish, cans and rags from site at end of each workday.

1. Clean glass and coating-spattered surfaces immediately by proper methods of washing and scraping, using care not to scratch or damage finished surfaces.

B. Protection: Protect work of other trades, whether to be coated or not; correct damage by cleaning, repairing or replacing, and refinishing, as acceptable to Architect.

1. Provide "Wet Coating" or "Wet Paint" signs to protect newly coated surfaces.

2. Remove temporary protective wrappings provided by others for protection of their work, after completion of coating operations.

C. Repair: At completion of work of other trades, touch-up and restore damaged surfaces and defaced coated surfaces.

END OF SECTION

SECTION 10 11 00

VISUAL DISPLAY BOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide visual display boards including liquid marker type whiteboards and cork tackboards with trim, hardware, and accessories as required for complete installation.

1. Provide horizontal sliding visual display boards where indicated.
2. Provide vertical sliding visual display boards where indicated.

1.2 SUBMITTALS

A. Shop Drawings: Clearly indicate board sizes and layout, method of attachment, accessories, trim profiles, details and finish.

B. Samples: Furnish sample whiteboard and tackboard surfaces with samples of aluminum trim and chalk rail, in selected colors and finish.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver materials to site until areas in which they are to be installed are ready to receive them.

B. Deliver materials to site in protective covering in a manner to protect finishes.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Claridge Products and Equipment, Inc.

B. Greensteel Division of PolyVision Corporation.

C. ADP Lemco Inc.

D. AARCO Products Inc.

E. K-PRO Specialty Products.

F. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide visual display boards including liquid marker type whiteboards and cork tackboards with trim, hardware, and accessories.

B. Steel Sheet for Porcelain Enameling: ASTM A424, minimum 24 gage.

C. Aluminum Extrusions: ASTM B221, minimum 0.062" wall thickness.

D. Aluminum Sheet: ASTM B209, minimum 0.015" thick.

E. Galvanized Steel Sheet: ASTM A1011 or A1008, Class 1; ASTM A924 and A653, G90 coating; minimum 26 gage (0.0179").

F. Tempered Hardboard: Manufacturer's standard material.

G. Plywood: PS 1, manufacturer's standard.

2.3 FABRICATION

A. Whiteboards: Porcelain writing surface manufactured specifically for use with liquid marker systems.

1. Type:

a. Claridge/LCS Liquid Chalk System.
b. Greensteel/Dry Marker Board.
c. ADP Lemco/Markerboards.
d. AARCO/Porcelain Steel Markerboards.
e. K-PRO/Porcelain Steel Markerboards.
f. Substitutions: Refer to Section 01 25 00.

2. Core: Minimum 3/8" thick plywood.

3. Balance porcelain writing surface with aluminum or sheet steel backing, aluminum foil is not acceptable.

4. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

5. Accessories: Provide manufacturer's standard accessories including map hooks and projection screen hooks.

6. Markerboard Face Sheets: Porcelain steel markerboard manufactured specifically for use with liquid marker systems and magnetic surface.

a. Provide markerboard face sheets for sliding panels and back panel.

b. Provide markerboard face sheets and tackboard face sheets for sliding panels and markerboard for back panel.

7. Balance porcelain writing surface with aluminum or sheet steel backing, aluminum foil is not acceptable.

8. Core: Manufacturer’s standard for specified system.

9. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

B. Frames: Extruded aluminum, factory applied, concealed fastening; integral chalk rail with molded end closures; anodized finish, matching Architect-approved sample.

1. Framed Units: Fabricate one-piece units without joints unless sizes indicated are not available as one-piece units.

a. Multiple Units: Provide joints located at whiteboard and tackboard intersection or at areas as approved by Architect; concealed splice joints typical.

b. Factory Fabricate: Factory fabricate except where too large for shipping.

C. Attachment Hardware: Manufacturer's standard fully concealed attachment system for securing units to wall surfaces.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Securely mount whiteboards and tackboards in accordance with manufacturer's recommendations, level and true to line.

1. Multiple Units: Provide flush, butt, hairline joints to ensure a smooth writing surface between whiteboards.

2. Sliding Units: Provide rattle and chatter-free operation; boards to move with maximum 5-pounds pressure and to stop and hold in any position.

B. Cleaning: At completion of work, clean surfaces and trim, leaving ready for use.

END OF SECTION

SECTION 10 14 00

SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide general signage as indicated complete with attachment devices and accessories as required for complete installation.

B. Related Sections:

1. Section 09 90 00: Traffic line paint.
2. Section 10 44 00: Fire extinguisher cabinet graphics.
3. Division 14: Elevator graphics.
4. Division 26: Photoluminescent exit signs.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's literature and indicate each sign type, style, color, and method of attachment.

B. Shop Drawings: Furnish listing of sign types, lettering and locations, along with dimensions of each sign.

1. Computerized Output: Furnish computerized samples of signs and graphics at full scale duplicating final appearance.

2. Dimensional Letter Signs: Furnish complete shop drawings regarding fabrication and method of attachment of dimension letter signs.

3. Photoluminescent Egress Path Signage: Submit complete shop drawings indicating locations of luminous egress path markings and signage.

C. Samples: Furnish full size samples where requested.

D. Certification: Furnish manufacturer certification that photoluminescent egress path markings and signage conform to California Building Code requirements.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Package separately or in like groups of names, labeled as to names enclosed; include installation template, attachment system and installation instructions.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. ASI Modulex, ASI Sign Systems, Inc.

B. Mohawk Sign Systems.

C. Vomar Products, Inc.

D.

E. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide signage as indicated with attachment devices and accessories.

B. Regulatory Requirements: Provide signs for assuring access for persons with disabilities in accordance with state and federal regulations.

1. California Regulations: Comply with California Building Code.

2. Federal Regulations: Comply with Americans with Disabilities Act (ADA) Standards.

C. Dimensional Letter Signage: Provide individual letter signs as indicated.

1. Aluminum: Manufacturer's standard for individual letter signs.

a. Finish: Kynar / Hynar finish – custom color

2. Fabrication: Fabricate dimensional letters as indicated, of minimum 0.25" plate or casting with edges and corners smooth and finished to match adjacent metal finishes.

3. Attachment: Secure letters using connections concealed after installation; method subject to Architect approval.

a. Take care back welding does not damage exposed sign surfaces.

D. Dimensional Super Graphic Signage:

1. Aluminum: Manufacturer's standard for shape / graphic signs.

a. Finish: Kynar / Hynar finish – custom color

2. Fabrication: Fabricate shapes as indicated, of minimum 0.25" plate or casting with edges and corners smooth and finished to match adjacent metal finishes.

3. Attachment: Secure using connections concealed after installation; method subject to Architect approval.

E. Toilet Room Door Signs: Provide door signs conforming to California requirements for signs for toilet rooms; concealed mounting system.

1. Material, Plastic: Manufacturer’s standard colored plastic/photopolymer signs.

a. Texture: Smooth.

b. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2. Material:

a. Aluminum: Manufacturer's standard for individual letter signs.

1) Finish: Clear anodized finish, AA-M12C22A41, Class I, AAMA 607.1.

b. Stainless Steel: ASTM A666, Type 304 nonmagnetic corrosion resistant stainless steel with No. 4 satin directional polish finish.

3. Total Thickness: 0.25".

4. Provide signs required by California Code of Regulations Title 24.

a. Men's Room: 12" equilateral triangle, vertex pointing up.

b. Women’s Room: 12" diameter circle.

c. Unisex Shower / Rest Room: 12" diameter circle with equilateral triangle, vertex pointing up, superimposed on the circle; circle and triangle each 0.25" thick.

1) Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

5. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

6. Symbols: As selected from manufacturer's standard symbols.

7. Adhesive: Type as recommended by sign manufacturer for type of substrate involved.

F. Toilet Room Wall Signs: Provide signs conforming to California Building Code and ADA Standards for signs for permanent rooms, with inset symbols and with raised and Braille characters; concealed mounting system.

1. Material, Plastic: Manufacturer’s standard colored plastic/photopolymer signs.

a. Texture: Smooth.

2. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

3. Material:

   a. Aluminum: Manufacturer's standard for individual letter signs.

      1) Finish: Clear anodized finish, AA-M12C22A41, Class I, AAMA 607.1.

   b. Stainless Steel: ASTM A666, Type 304 nonmagnetic corrosion resistant stainless steel with No. 4 satin directional polish finish.

4. Comply with California Building Code and ADA Standards for raised and Braille characters, pictorial symbols, finish, and contrasts requirements.

G. Entry Decals: Provide minimum 6" square decals with international handicapped symbol white on blue background with white border, applied to glass at accessible entry doors of existing buildings where all entry doors are not accessible.

H. Stairway Signs: Provide colored plastic/photopolymer signs in stairways, conforming to California Building Standards Code, Section 1022.9.

1. Lettering: Type as required by CBC.

2. Colors, Size, and Style: Conform to referenced code requirements and as approved by Architect.

   a. Colors: Where color is not indicated on Drawings or Finish Schedule or specifically required by applicable code, provide custom color as directed by Architect.

3. Information: Identify stairway, indicate whether there is roof access, floor level, and upper and lower terminus of stairway, and story of and direction to exit discharge.

4. Provide raised five-pointed star located to left of identifying floor level at exit discharge level.

5. Provide Floor Identification Signs required by CBC including both tactile and Braille sign.

6. Provide photoluminescent egress path marking and signs as required by California Building Code for high rise buildings and as specified for photoluminescent egress markings and signage.

I. Porcelain Signs at Parking: Provide porcelain enamel on steel sign with beaded text and symbols meeting requirements of California Building Standards Code and with ADA Standards.

1. At entry to parking provide state required sign indicating unauthorized vehicles parking in accessible parking spaces may be towed at owner's expense using exact wording required by CBC.

2. Verify location and telephone number of location vehicle is to be towed with Owner; place this information as permanent part of sign wording.

3. At parking spaces provide California required reflectorized sign, minimum 70 sq. inches, with symbol indicating accessibility.

4. At van accessible parking spaces provide required "VAN PARKING" signs.

J. Tactile Exit Door Signs: Provide colored plastic/photopolymer signs, conforming to California Building Code Section 1011.3 and ADA Standards for signs for permanent rooms, with tactile raised and Braille characters; concealed mounting system.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2. Size and Style: As indicated on Drawings.

K. Room Identification and Direction Signs: Provide signs conforming to California and ADA Standards for permanent signs, total thickness 0.125"; provide raised and Braille characters conforming to California and ADA Standards; concealed mounting.

1. Material, Plastic: Manufacturer’s standard colored plastic/photopolymer signs.

a. Texture: Smooth.

2. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

3. Material:

a. Aluminum: Manufacturer's standard for individual letter signs.

1) Finish: Clear anodized finish, AA-M12C22A41, Class I, AAMA 607.1.

b. Stainless Steel: ASTM A666, Type 304 nonmagnetic corrosion resistant stainless steel with No. 4 satin directional polish finish.

4. Sizes and Styles: As indicated on Drawings, as directed by Architect where not otherwise indicated.

L. Applied Copy Signs and Graphics: Letters and graphics as indicated on Drawings; Contractor option of silk-screen or vinyl applied.

1. Silk-screen Signs and Graphics: Computer design screens for signs and graphics to designs and criteria established by Architect.

a. Silk-screen Lacquer: Match Advanced Screen Products/Industrial Gloss Lacquer Silk-screen Ink; colors as selected by Architect.

2. Vinyl Signs and Graphics: Computer design vinyl signs and graphics to designs and criteria established by Architect.

a. Vinyl: Opaque non-reflective vinyl film, minimum 0.0035" thick, with pressure sensitive adhesive backing suitable for applications indicated; match 3M/Scotchcal Vinyl Film.

3. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

M. Tactile Emergency Evacuation Signs: Silk-screened polycarbonate with screening on back and with tactile and Braille information conforming to California requirements and ADA Standards.

1. Information: Provide sign system with information as required by applicable authorities for emergency egress.

2. Silk-Screen Colors:

a. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

b. Silk-screen Lacquer: Match Advanced Screen Products/Industrial Gloss Lacquer Silk-screen Ink; colors as selected by Architect.

3. Size and Style: As indicated on Drawings and acceptable to applicable authorities.

4. Attachment: Method subject to Architect approval.

N. Photoluminescent Egress Path Markings and Signage: Provide exit path marking and signage required by applicable codes including but not limited to exit path markings, stair nosing, handrails, demarcation and obstruction markings, doors, and hardware.

1. Acceptable Manufacturers:

a. Balco Inc./IllumiTread Exit Path Markings.
b. ZERO International/Exit Marking Systems.
c. American Permalight Inc./Egress Path Markings.
d. Active Safety/Egress Path Markings.
e. Substitutions: Refer to Section 01 25 00.

2. Refer to CBC Title 24, Part 2, Section 1025.

3. System: UL 1994 listed.

4. Photoluminescent exit signs are in Division 26.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install signs in accordance with manufacturer recommendations and installation instructions, free from distortions and defects.

B. Dimensional Letter Signage: Locate dimensional letters with spacing based on full-size computer-generated installation drawings secured to structure as required to resist anticipated loads.

1. Final Location: As approved in field by Architect based on full size drawings.

C. Toilet Room Door Signs: Install signs on doors after doors are painted and finished.

1. Location: Mount signs with centerline of sign between 58" and 60" height as required by applicable code.

2. Install centered and level, in line, in accordance with the manufacturer's recommendations.

3. Clean and polish, remove excess adhesive.

D. Toilet Room Wall Signs: Install signs on walls after surfaces on which they are to be mounted are painted and finished.

1. Location: Mount signs at 48" to 60" height as required by applicable codes on strike side of door.

2. Location: Mount signs with tactile characters 48" minimum (baseline of lowest Braille cells) and 60" maximum (baseline of highest line of raised characters) above finished floor and with on strike side of door for room identification signs as required by applicable codes, at heights indicated on details.

3. Install level, in line, in accordance with California Building Code and ADA Standards to allow a person to approach within 3" of signs without being within a door swing and without encountering protruding objects.

4. Clean and polish, remove excess adhesive.

E. Entry Signs: Install in locations as approved by Architect.

F. Tactile Exit Door Signs: Install at doors with lighted “EXIT” signs; apply after walls are finished.

1. Location: Mount signs at 48" to 60" height as required by applicable codes on strike side of door.

2. Install level, in line, in accordance with the manufacturer's recommendations and ADA Standards to allow a person to approach within 3" of signs without being within a door swing and without encountering protruding objects.

3. Clean and polish, remove excess adhesive.

G. Room Identification and Direction Signs: Install signs after walls are finished.

1. Location: Mount signs at 48" to 60" height as required by applicable codes on strike side of door for room identification signs, where indicated for direction signs.

2. Room Identification Signs Location: Mount signs with tactile characters 48" minimum (baseline of lowest Braille cells) and 60" maximum (baseline of highest line of raised characters) above finished floor and with on strike side of door for room identification signs and where indicated for directional signs.

3. Install signs level, in line, in accordance with the manufacturer's recommendations, California Building Code and ADA Standards.

4. Install room identification signs at doors to allow a person to approach within 3" of signs without being within a door swing and without encountering protruding objects.

5. Clean and polish, remove excess adhesive.

H. Applied Copy Signs and Graphics: Examine surfaces and construction for conditions adversely affecting installation, performance and quality of work.

1. Apply signage and graphics centered and level, in line, in accordance with manufacturer's recommendations.

I. Emergency Evacuation Signs: Install signs after walls are finished.

1. Location: Mount signs at locations indicated, as directed by Architect and applicable authorities if not otherwise indicated.

2. Install signs level and in accordance with the manufacturer's recommendations and requirements of applicable authorities.

3. Clean and polish.

END OF SECTION

SECTION 10 21 20

PHENOLIC TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide phenolic plastic partitions for toilet compartments including hardware, attachment devices, and integral accessories as required for complete installation.

1. Urinal Screens: Provide wall mounted phenolic plastic partitions for urinal screens including attachment hardware for complete finished installation.

B. Related Sections:

1. Section 10 28 00: Toilet accessories.

1.2 REFERENCES

A. Americans with Disabilities Act (ADA) Standards.

B. California Building Code: California Code of Regulations, Title 24, Part 2, requirements for providing accessibility for persons with disabilities.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's literature.

B. Shop Drawings: Clearly indicate partition layouts, swing of doors, elevations, anchorage and mounting details, panel construction, hardware, finishes and relevant dimensions.

C. Samples: Submit samples of metal finish.

1.4 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives, sealants, and caulks.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Global Partitions, an ASI Group Company. (Basis of Design)

B. Flush Metal Partition Corp.

C. Bradley Corporation Mills Partitions.

D. General Partitions Mfg. Corp.

E. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide phenolic plastic partitions including hardware, attachment devices, and integral accessories.

1. Toilet Compartment Type: Floor mounted, overhead braced.

2. Urinal Screens: Provide wall mounted urinal screens.

B. Regulatory Requirements, Access: Comply with California Building Code and Americans with Disabilities Act (ADA) Standards.

1. Door Width: Provide minimum 32" clear door openings when front entry, minimum 34" clear door openings when side entry.

2. Spacing: Provide minimum 60" clear width, and front space as applicable for type of compartment.

3. Reinforcing: Provide reinforcing for grab bars indicated to be partition mounted.

4. Urinal Screens: Provide minimum 30" clear space at urinal.

C. Regulatory Requirements, Fire Rating: Comply with requirements for fire ratings for interior finishes with either ASTM E84 or NFPA 286, Corner Burn Test as applicable.

D. Phenolic Panels: Manufacturer's standard phenolic core with high pressure melamine color surface on faces, with exposed black phenolic edges burnished and slightly rounded. **Basis of Design: ASI Accurate Partitions, Graphite Grafix #3020, black phenolic core.**

E. Pilaster Shoes: 3" high; ASTM A666, Type 304, No. 4 polished finish; stainless steel.

F. Attachments, Screws and Bolts: Stainless steel; tamper proof type; heavy duty extruded aluminum brackets.

G. Hardware: Manufacturer's standard chrome plated or similar finish.

1. Hinges: Cast pivot hinges, gravity self-closing type, adjustable for door close positioning; nylon bearings.

2. Latch: Slide latch; door strike and keeper with rubber bumper.

3. Coat Hook/Bumper: Combination coat hook and bumper unit, maximum 48" above finished floor.

4. Wall Bumper: Wall mounted rubber bumper for out-swinging doors.

5. Pulls: Manufacturer’s standard; provide two "U-shaped" pulls immediately below latch at compartments accessible to persons with disabilities (compartments with grab bars), one inside and one outside.

H. Overhead Braced Partition Headrails: 1" by 1-5/8" tubular metal, with cast socket type wall brackets.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2.3 FABRICATION

A. Fabricate: Manufacturer's standard construction.

B. Doors and Panels: Minimum 3/4" thick doors and 1/2" thick panels, minimum 24" wide by minimum 58" high.

1. Provide wider doors where required for accessibility for persons with disabilities.

C. Pilasters: 1-1/4" thick, constructed same as doors, of sizes required to suit cubicle widths and spacing.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine site conditions to which work is to be applied.

B. Take site dimensions affecting this work.

C. Ensure correct spacing and size of plumbing fixtures; take special note of fixtures in compartments indicated to be designed for persons with disabilities to assure clearances complying with access regulations.

D. Ensure correct location of built-in framing, anchorage, and bracing, where required.

3.2 INSTALLATION

A. Install units in accordance with manufacturer recommendations and installation instructions, secure, plumb, level, and square.

B. Leave 1/2" space between wall, panels and end pilasters.

C. Attach panel brackets securely to walls using anchor devices.

D. Attach panels and pilasters to bracket with through sleeve tamper proof bolts and nuts.

E. Locate headrail joints at pilaster center lines.

F. Provide for adjustment of floor variations with screw jack through steel saddles integral with pilaster; conceal floor fastenings with stainless steel shoes.

G. Equip each door with hinges, latch, and coat hook/bumper combination.

H. Install door strike keeper and door bumper on each pilaster in alignment with door latch.

I. Adjust and align hardware to uniform clearance at vertical edges of doors not exceeding 3/16".

J. Adjust hinges to locate doors in partial open position when unlatched, except adjust hinges to return doors to closed position at stalls designed for use by persons with disabilities.

K. Anchor urinal screen panels to walls with either two panel brackets each or continuous angle brackets on both sides.

3.3 CLEANING

A. Field touch-up of scratches and defaced finishes will not be permitted; replace damaged, scratched and marred defective materials with new, undamaged materials.

B. Remove protective coverings and clean surfaces in accordance with manufacturer recommendations.

END OF SECTION

SECTION 10 22 20

OPERABLE PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide manually operated, top supported, operable partitions with retractable seals, including hardware and accessories as required for complete, operable system.

1. Acoustical Closure: Review Contract Documents to ensure acoustical closure of adjacent construction matches operable partition acoustical performance to prevent flanking sound around partition into adjacent spaces.

a. Provide additional construction as required to ensure acoustical closure.

2. Support System: Provide structural steel support system connected to building structure at points approved by Architect.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Design/Build Requirements: Provide services of registered structural engineer licensed in California with experience designing structural support systems for operable partitions.

1. Distribute loads to locations on building structure capable of supporting system without detrimental effects.

B. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this Section. Require attendance of those directly affecting work of this Section.

1. Review installation procedures and coordination required with related work.

1.3 SUBMITTALS

A. Product Data: Furnish materials description, operation and maintenance instructions.

B. Shop Drawings: Show partition and track layout, details of head, jamb and sill conditions, stacking arrangement, hardware and operating mechanism.

1. Indicate details of acoustical barrier over partitions system.

2. Provide template drawings for items supported or anchored by permanent construction.

3. Indicate details of pass doors.

C. Samples: Furnish samples of panel finish and edge construction.

D. Test Reports: Furnish copies of certificates by independent testing laboratories for following:

1. STC rating.
2. Flame spread classification.
1. Fire resistance ratings.
2. Field STC Tests: Furnish previous project test reports.

E. Certificates:

1. Manufacturer Certification: Furnish manufacturer's certification indicating system complies with Contract Documents.

2. Installer Acceptance: Furnish letter from manufacturer indicating acceptance of installer for this Project.

3. Design/Build Engineer Certification: Furnish certification from California registered engineer indicating structural support system complies with Contract Documents and applicable codes.

1.4 QUALITY ASSURANCE

A. Qualification of Installers: Minimum five years successful experience in installing operable partitions and accessories on comparable projects.

1. Acceptable to manufacturer of operable partition.

1.5 WARRANTY

A. Extended Correction Period: Provide for correcting failure of operable partition system from proper operation, including acoustical characteristics.

1. Special Warranty Period: Two years.

B. Manufacturer's Warranty: Submit manufacturer's warranty including special manufacturer services as required for manufacturer's warranty.

1. Period: Not less than 10 years.

2. Manufacturer's warranty shall not detract from requirements of extended correction period nor from Owner's rights under implied and expressed warranties regardless of wording of manufacturer's warranty.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Modernfold, a DORMA Group Company.

B. Hufcor, Inc.

C. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide electrically operated operable partitions with retractable seals and including hardware and accessories.

1. Partition Type: Top-supported, side-stacking, electrically operated, with flush panels; manufacturer's STC 50 as required to achieve required field performance requirements.

a. Basis of Design: **Hufcor 643E**

2. Acoustical Closure: Provide acoustical closure of adjacent construction as required to match operable partition acoustical performance and as required to prevent flanking sound around partition into adjacent spaces.

3. Structural Support: Provide structural support for operable partitions.

B. Design Requirements: Support system to be designed by registered professional structural engineer licensed in California.

1. Distribute loads to locations on building structure capable of supporting system without detrimental effects.

C. Fire Performance Requirements: Provide products listed by Underwriters Laboratories (UL), or similar independent laboratory acceptable to applicable authorities.

1. Flame Spread/Smoke Generation: Provide products meeting code requirements for maximum 25 flame-spread and 450 smoke developed; Class A, ASTM E84.

D. Field Acoustical Performance Requirements: Provide minimum three field sound transmission rating tests on previous projects of similar size and scope indicating system to be provided has minimum FSTC of NIC 40.

1. Ratings: Determined in accordance with ASTM E413; tests by Architect approved independent testing laboratory.

2. Field Sound Transmission Rating: Minimum FSTC of NIC 40 when tested in accordance with ASTM E336, using reverberant-field procedure and full octave bands rather than one-third octave bands.

E. Partition Type: Top-supported, side-stacking, manually operated, with flush panels.

1. Panel Configuration: Paired panels.

F. Panel Construction: Factory assembled, consisting of minimum 16 gage welded steel channel perimeter frame with intermediate stiles, high density sound retardant insulation.

1. Panel Thickness: Nominal 3" to 4" thick; review Drawings for space provided for panel storage; provide panel system suitable of allowable space.

a. Notify Architect during bidding if Project design requires potential modification for system to comply with Contract Document.

b. Failure to notify Architect during bidding signifies acceptance of conditions indicated.

2. Panel Skins: Minimum 24-gage steel with rust inhibitive prime coat of paint.

3. Panel Support Bolts: Minimum 1/2" diameter; of fail-safe design that prevents loosening or backing out after panels have been installed.

4. Panel Materials: Incombustible, moisture resistant, and dimensionally stable.

5. Construction: All steel construction.

G. Track System: Overhead track designed for extra heavy duty; secured to structural support system by adjustable bolts.

1. Panel Supports: Ball bearing trolley assembly, capable of universal movement, turning on a central bearing and shall not require radius turns or switching mechanisms.

H. Deflection Compensation: Design system to accommodate specified long-term dead load deflection of up to 1/2" at any point in span while maintaining operational and acoustical qualities.

I. Seals: Provide system with single mechanism to activate floor seals; seals shall not contact floor or track during movement of panels.

1. Floor Seals: Durometer rating compatible with floor surfaces.

2. Vertical Seals: Manufacturer's standard as required to achieve acoustical performance specified.

3. Seal Materials: Resistant to fatigue and cleaning compounds and shall not mar floor or ceiling finishes.

4. Floor Guide and Floor Attachments: Not permitted.

J. Fixed and Operable Closure Jambs: Acoustical type designed to maintain acoustical seal at perimeter walls and junctions of operable partition; security affix to building walls.

1. Jamb Seals: Manufacturer's standard acoustic seals at head and side jambs.

2. Floor Seals: Provide flexible compression type; design cam-action of hinges and manual closing of door to compress floor seal and maintain acoustical performance of partition.

a. Raised Sills and Automatic Threshold Closures: Not permitted.

3. Factory Assembly: Factory assemble complete door unit and adjust with hardware and seals prior to shipment.

K. System Supports and Anchors: ASTM A36 steel shapes as required to attach operable partitions to building structural system.

1. Provide bracing at track intersections to resist panel impacts.

L. Finish: Panel and door finish shall be heavy duty vinyl fabric.

1. Apply finish to panels in shop. Return into vertical panel seams and mechanically fasten with removable astragal at panel edge.

2. Colors: Where color is not indicated on Drawings or Finish Schedule, provide standard range of products for architect approval.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine floor and overhead construction for conformance with tolerances; verify dimensions of in place and subsequent construction.

B. Installation of partition shall constitute acceptance of existing conditions.

3.2 INSTALLATION

A. Install operable partition system in accordance with manufacturer's recommendations and installation instructions as required to assure compliance with sound transmission test requirements.

1. Comply with ANSI E557, Standard Recommended Practice for Architectural Application and Installation of Operable Partitions.

2. Lubricate bearings and sliding parts; adjust to ensure smooth, easy operation.

3. Match operable partitions for color and pattern by using partition sections from cartons in same sequence as manufactured and packaged.

4. Broken, cracked, chipped, damaged, and deformed partitions are not acceptable.

B. Upon completion of installation, test operation of partition in presence of Architect.

C. Instruct Owner's personnel in operation and maintenance of partition.

3.3 FIELD QUALITY CONTROL

A. Site Acoustical Tests: Determine field sound transmission class values in accordance with ASTM E336; tests by Architect approved independent testing laboratory.

1. Field Sound Transmission Rating: Minimum FSTC of NIC 40 when tested in accordance with ASTM E336, using reverberant-field procedure and full octave bands rather than one-third octave bands.

2. Failed Tests: Make corrections and re-test.

3.4 CLEANING

A. Clean operable partition surfaces and adjacent surfaces soiled by operable partition work; avoid use of abrasive cleaners and solutions containing corrosive solvents.

1. Remove and replace panels and adjacent construction damaged by installation or cleaning operations.

END OF SECTION

SECTION 10 26 10

STAINLESS STEEL CORNER GUARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide surface mounted stainless-steel corner guards, including mounting adhesive and accessories as required for complete finished installation.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's product literature.

B. Samples: Furnish samples of finish.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Babcock-Davis, Inc.

B. In-Pro Corporation.

C. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide surface mounted stainless-steel corner guards, including mounting adhesive and accessories.

B. Corner Guard: ASTM A666, Type 304 stainless steel with satin finish; not less than 18-gage.

1. Size: 3-1/2" by 3-1/2" by 48" high unless otherwise indicated.

C. Attachment: Manufacturer's recommended adhesive for type of wall.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install stainless-steel corner guards in accordance with manufacturer's recommendations and installation instructions, straight and true to line.

B. Allow for 10 corner guards. Contractor to coordinate locations with client prior to occupancy.

END OF SECTION

SECTION 10 28 00

TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide toilet accessories with attachment hardware and rough-in frames as required for complete, operational installation.

B. Related Sections:

1. Section 08 80 00: Frameless glass mirrors.

2. Section 10 21 10: Hardware for toilet partitions, including coat hook/bumper mounted on partition doors, and wall bumpers for out swinging doors.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's product data illustrating each accessory at large scale.

B. Samples: Provide one sample of each type of fixture specified.

1.3 QUALITY ASSURANCE

A. Sustainability Requirements: Comply with *CAL*Green requirements including those relative to finish material pollution control for adhesives.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver inserts and rough-in frames to jobsite at appropriate time for building in.

B. Do not deliver accessories to site until rooms in which they are to be installed are ready to receive them.

C. Pack accessories individually, protect each item and its finish.

1.5 SITE CONDITIONS

A. Protect adjacent or adjoining finished surfaces from damage during installation of work of this section.

B. Before starting work notify Architect in writing of conditions detrimental to installation or operation of units.

C. Verify with Architect exact location of accessories.

1.6 WARRANTY

A. Extended Correction Period:

1. Replace mirrors which exhibit signs of desilvering or distortion.

2. Period: Two years.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Bobrick Washroom Equipment, Inc.

B. Bradley Corporation.

C. American Specialties, Inc.

D. Manufacturers listed on Toilet Accessories Schedules.

E. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide toilet accessories with attachment hardware and rough-in frames.

1. Provide standard materials and finishes for accessories listed; where more than one material or finish is available and not otherwise indicated provide as selected by Architect from manufacturer’s standard materials and finishes.

B. Regulatory Requirements - Access for Persons with Disabilities: Comply with California Building Standards Code and Americans with Disabilities Act (ADA) Standards.

C. Stainless Steel Sheet: ASTM A666, commercial grade, Type 304, gages as standard with manufacturer of specified items.

D. Stainless Steel Tubing: ASTM A269, commercial grade, seamless welded.

E. Mirror Glass: ASTM C1036, q1 mirror select clear float glass with full silver coating, copper coating and organic coating; minimum 1/4" thick.

F. Sheet Steel: ASTM A1008, cold rolled stretcher leveled; minimum G90 galvanized coating, ASTM A924 and A653.

G. Adhesive: Epoxy type contact cement as recommended by accessory manufacturer; comply with applicable requirements for limitations on volatile organic compound (VOC) emissions.

H. Fasteners, Screws, and Bolts: Hot dip galvanized; as recommended by accessory manufacturer for component and substrate.

I. Keys: Provide universal keys for access to toilet accessory units requiring internal access for servicing and supply.

1. Provide minimum six keys to Owner representative.

2. Coin Operated Units: Provide locked coin box keyed separately from standard units, coin operated units keyed alike.

2.3 FABRICATION

A. Weld and grind smooth joints of fabricated components.

B. Form exposed surfaces from one sheet of stock, free of joints.

C. Fabricate units with tight seams and joints, exposed edges rolled; hang doors and access panels with continuous piano hinges; provide concealed anchorage where possible.

D. Provide steel anchor plates and anchor components for installation on building finishes.

E. Form surfaces flat without distortion; maintain flat surfaces without scratches and without dents; finish exposed edges eased, free of sharp edges where potential exists for physical contact.

F. Back paint components where contact is made with building finishes, to prevent electrolysis.

G. Hot-dip galvanize ferrous metal anchors and fastening devices.

H. Assemble components in shop; package complete with anchors and fittings.

2.4 FINISHES

A. Exposed Finishes: Stainless steel, number 4, satin finish; satin chrome finish acceptable where stainless steel not available for accessory item listed or scheduled.

B. Concealed Surfaces: Treat and clean, spray-apply one coat primer and baked enamel finish.

PART 3 - EXECUTION

3.1 PREPARATION

A. Provide templates and rough-in measurements.

3.2 INSTALLATION

A. Install accessories in accordance with manufacturer's printed instructions using fasteners appropriate to substrate.

B. Install true, plumb and level, securely and rigidly anchored to substrate.

C. Use tamper-proof, security type fasteners.

D. Adjust accessories for proper operation and verify mechanisms function smoothly.

E. Replace damaged and defective items.

F. Clean and polish exposed surfaces after removing temporary labels.

3.3 TOILET ACCESSORIES SCHEDULE

A. Refer to Drawings.

END OF SECTION

SECTION 10 44 00

FIRE EXTINGUISHER CABINETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide fire extinguisher cabinets with accessories as required for complete installation.

1. Fully Recessed: Provide flush mounted trimless fire extinguisher cabinets (no visible trim).

2. Semi-Recessed: Provide semi-recessed mounted fire extinguisher cabinets with exposed frame (trim); maximum 4” projection from finished wall surface.

3. Surface Mounted: Provide surface mounted fire extinguisher cabinets with exposed frame (trim) for garage and areas not in a path of travel.

4. Fire Extinguishers: Owner furnished and installed.

B. Related Sections:

1. Division 21: Fire protection systems.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's literature.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. J.L. Industries.

B. Larsen’s Manufacturing Co.

C. Potter Roemer.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. Systems Description: Provide fire extinguisher cabinets with accessories.

1. Public Areas: Flush trimless fire extinguisher cabinets.
2. Back-of-House Areas: Semi-recessed exposed frame fire extinguisher cabinets.
3. Garage: Surface mounted exposed frame fire extinguisher cabinets.

B. Flush Trimless Fire Extinguisher Cabinets:

1. Type:

    a. J.L. Industries/Embassy Series.
    b. Larsen’s Mfg. Co./Occult Series.
    c. Potter Roemer/Dana Series.
    d. Substitutions: Refer to Section 01 25 00.

2. Cabinet Depth: Provide cabinets designed for space available in walls with fire extinguisher cabinets, and of sufficient depth to house 2A-10BC multi-purpose dry chemical type fire extinguisher.

3. Frame: Trimless with recessed door frame flush with finish wall.

4. Metal Gages: Manufacturer's standard for series specified.

5. Box: Provide manufacturer's standard box with white baked enamel interior finish and baked enamel exterior finish.

6. Doors: Steel, full flush metal panel, with break-glass or manufacturer’s standard similar secure access type panel; provide thermosetting primer compatible with finish specified in Section 09 90 00 – Painting and Coating.

7. Door Hardware: Manufacturer's standard for secured access fire extinguisher cabinets panel with inside latch and lock.

C. Fire Extinguisher Cabinets with Exposed Frame (Trim): Provide semi-recessed mounting unless otherwise indicated, with maximum 4” extension from face of wall, provide trim suitable for installation indicated.

1. Type:

    a. J.L. Industries/Ambassador Series.
    b. Larsen’s Mfg. Co./Architectural Series.
    c. Potter Roemer/Alta Series.
    d. Substitutions: Refer to Section 01 25 00.

2. Cabinet Depth: Provide cabinets designed for space available in walls with fire extinguisher cabinets, and of depth to house 2A-10BC multi-purpose dry chemical type fire extinguisher.

3. Food Preparation Areas: Provide cabinets designed to house K Type fire extinguisher at locations indicated on Drawings or designated as food preparation areas where burning grease could be encountered.

4. Hazardous Areas (Garage): Provide cabinets designed to house 4A-60BC multi-purpose dry chemical type fire extinguisher at locations indicated on Drawings or designated as hazardous.

5. Trim: Manufacturer's standard edge trim for specified models.

6. Metal Gages: Provide manufacturer's standard gages for cabinets specified.

7. Construction: Mitered and welded one-piece tubular door frames; weld joints and grind smooth; manufacturer's standard steel box with white baked enamel interior finish and primed exterior finish.

    a. Steel Doors and Trim: Manufacturer's standard, prime coat finished.
    b. Doors: Break-glass type secured access, with inside latch and lock.
    c. Door Hardware: Continuous hinge permitting door to open 180 degrees.

D. Surface Mounted Fire Extinguisher Cabinets:

1. Types:

    a. J.L. Industries/Ambassador Series.
    b. Larsen’s Mfg. Co./Architectural Series.
    c. Potter Roemer/Alta Series.
    d. Substitutions: Refer to Section 01 62 00.

2. Cabinet Depth (Typical): Provide cabinets designed for space available in walls with fire extinguisher cabinets, and of depth to house 2A-10BC multi-purpose dry chemical type fire extinguisher.

3. Type: Fully exposed, mounted directly to wall, with manufacturer’s standard rolled edge trim based on specified cabinets.

4. Metal Gages: Provide cabinets fabricated of minimum 18-gage throughout, 20-gage permitted for back.

5. Construction: One-piece tubular door frames mitered and welded; weld joints and grind smooth; manufacturer's standard steel box with white baked enamel interior finish and primed exterior finish.

    a. Steel Doors and Trim: Manufacturer's standard, prime coat finished.
    b. Doors: Break-glass or similar secured access panel, with inside latch and lock.
    c. Door Hardware: Continuous type hinge permitting door to open 180 degrees.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions under which fire extinguisher cabinets are to be installed.

B. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install cabinets in locations and at mounting height to comply with requirements of governing authorities; prepare recesses in walls as required.

B. Securely fasten to structure, square and plumb, in accordance with manufacturer's instructions.

1. Wherever exact location of units is not shown, locate as directed by Architect.

3.3 IDENTIFICATION

A. After installation and finishing is completed, silkscreen or apply decal letters spelling "FIRE EXTINGUISHER" as applicable.

B. Letter size, style and location as selected by Architect.

END OF SECTION

SECTION 10 51 00

SOLID PHENOLIC LOCKERS

Part 1 GENERAL

1.1 Summary

A. Section includes:
solid phenolic lockers
solid phenolic benches

B. Related Sections:

1.2 Submittals

A. Submittals: Comply with procedures and quantities as indicated in Division 1 Submittal Procedure Section.

B. Shop Drawings: Submit shop drawings indicating room sizes, layout, locker dimensions, material thickness, trim, hardware, finishes, locks, base, doors, accessories, and installation details.

C. Product Data: Submit manufacturer's technical data for materials, fabrication, finishing, fastenings, hardware, and installation details.

D. Samples: Submit samples of edge details, colors, patterns, finishes, and textures.

E. Closeout Documents: Submit the following:
1. Operation and Maintenance data
2. Warranty

1.3 Quality Assurance

A. Qualifications:
1. Fabricator shall have 10 years or more experience in fabrication of solid phenolic materials and shall be experienced in performing work of similar size and scope.
2. Fabricator shall be capable of providing field service representation.
3. Installer shall be approved by the manufacturer and be experienced in performing work of similar size and scope.

B. Pre Installation Meeting: Conduct pre-installation meeting prior to installation to verify project requirements and conditions.

1.4 Delivery, Storage and Handling

A. **Ordering:** Comply with supplier's ordering and lead-time guidelines to avoid delays.

B. **Delivery:** Deliver materials in the manufacturer's original protective packaging.

C. **Storage and Handling:** Store materials in an enclosed shelter providing protection from damage, temperature, humidity, and exposure to the elements.

1.5 Coordination and Project Conditions

A. **Field Measurements:** Before material fabrication, verify actual field measurements and show actual measurements on shop drawings.

B. **Coordination:** Coordinate field measurements with fabrication schedule construction progress to avoid construction delays.

1.6 Warranty

A. Submit executed copy of 10-year warranty against defects in material and 2 years warranty for system.

Part 2 – PRODUCTS

2.1 Manufacturers

A. **Basis of Design**: Spectrum Lockers; 885 Milner Ave. Toronto, Ontario M1B 5V8
Phone: 1-855-444-0588; spectrumlockers.com.
Locally Represented by**:**
MEGA ARCHITECTURAL**:** Address: 6861 Walker St, La Palma CA 90623, T: (310) 323-5828

a. Model: as indicated in plans, mixed sizes: 1-Tier, 2-Tier, 3-Tier, ,4-Tier, 5-Tier, 6-Tier, Z-Tier

B. Hollman

C. Foreman

D. Substitutions per division 01:

2.2 Materials (Basis of Design)

A. **Panel Material:**

1. Decorative papers impregnated with the melamine resin on faces with a clear protective overcoat and integrally compression molded within a core consisting of solid phenolic impregnated kraft papers.
2. Core or panel material shall meet fire resistance per ASTM E84 **, Class B**

B. Doors:

1. Material: 1/2” (13mm) thick solid phenolic composite material.
2. Corners: Rounded
3. Color: As selected from Trespa TopLab’s full color range, basis of design includes mix of colors: Brittany Blue, Dove Grey, Indigo.
4. Edges: Standard profile is straight edge no profile.
5. Door Fastening: Through Bolted.

C. Locker Bodies

1. Exposed edges: Straight profile; eased edges to remove sharpness; machine polished and free from tooling imperfections.
2. Tops, bottoms, and intermediate shelves: 1/2” (13mm) thick solid phenolic composite material with ventilation holes.
3. Locker backs: +/- 1/4” (6mm) thick solid composite material.
4. Locker Sides: 3/8” (10mm) thick solid phenolic composite material.
5. Made from Trespa Toplab Base, E0-00 White

D. Ancillary Panels: Finished end panels and closures shall be 1/2” (13mm) thick solid phenolic composite material.

E. Hardware

1. Hinges:
a. Material: 304-grade stainless steel.
b. Quantity: Three (3) for full height doors and two (2) for multi-tier units.

2. Interior hooks:
a. Material: Stainless steel.
b. Top Hook: Two prong: one per opening for 1, 2, and “Z” tiers.
c. Side Hook: Single prong: two per opening for 1, 2, and “Z” tiers.

3. Fasteners: Exposed fasteners, where present, shall be 304 stainless steel

4. Fastener Application: Apply directly into or through the material.

5. Other Reinforcement: Aluminum or metal profiles for reinforcements shall not be permitted.

6. Door Identification (identification plates): 1 1/2" stainless steel disk with laser engraved numbering, or visible on integrated hasp handle

F. Ventilation

1. Interior Vent: Provide six 3/8” (10mm) diameter ventilation holes on tops, bottoms, and intermediate shelves. Provide three 3/8” (10mm) diameter ventilation holes on “Z” type intermediary shelves.

G. Base

1. Base not furnished with Locker: (Curb mounted)

2.3 Size

A. **Overall Height:** 71-3/4" or as indicated.

B. **Overall Width:** Mix of widths: 12", 16", or 18" as indicated.

C. **Overall Depth:** 15"

2.4 Accessories and Options

A. **Locking System:** (Stainless Steel Hasp Plate and Bar with Integrated Handle) (Digilock Cue Nextlock) (Ojmar Standard Security Cam Key Lock) (Ojmar Coin Collect or Return).

B. **Locker Top:** Vertical Panel width ¼" (6mm) thick solid phenolic composite material, top of lockers to ceiling as indicted.

C. **Door Identification:**

1. Number Plates: (Identification plates to be stainless steel with laser engraved numbers and mounted into machined door pocket with permanent adhesive) (Identification laser engraved on integrated hasp handle).

2. Fonts to be a minimum 1/2" high and up to four alphanumeric characters

3. Numbering sequence to be provided by architect.

Part 3 – EXECUTION

3.1 **Examination:** Examine site conditions before locker installation. Notify architect of unacceptable areas. Do not install locker until unacceptable conditions have been corrected.

3.2 Installation

A. Install lockers in locations as shown on shop drawings per manufacturer's instructions.

B. Install lockers plumb, level, square, rigid, and flush.

C. Install all required trim, fillers, end panels, and closures per manufacturer's instructions.

D. Use hardware supplied or recommended by the manufacturer.

E. Attach number plates to doors as indicated on shop drawings.

F. Correct and/or replace damaged components as directed by architect.

3.3 Adjustment

A. Adjust doors and locks for smooth operation without binding.
B. Lubricate door hinges and locks per manufacturer's instructions.

3.4 Cleaning

A. Clean all surfaces in accordance with manufacturer's instructions.

B. Do not use abrasive cleaners.

End of Section

SECTION 11 10 00

MISCELLANEOUS EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide miscellaneous equipment with hardware and accessories as required for complete secure and operational installation as applicable.

1. Provide and install (3) microwaves.
2. Provide and install (2) refrigerators. Fridge shall be side by side or freezer on bottom type.
3. Provide and install (2) garbage disposals.
4. Provide and install monitor systems per client direction.
5. Provide and install (1) residential grade dishwasher.
6. Provide and install (1) ice maker.
7. Provide and install (1) dual coffee maker with hot water tap.
8. Provide and install (1) 36” range.
9. Provide and install (1) 42” range hood.
10. Provide and install (3) 48” wide 2-tier stainless steel, mobile, wire shelving units.
11. Provide and install (1) 24” stand up freezer.
12. Provide and install (1) 36” stand up refrigerator.

B. Related Sections:
1. Division 26: Electrical service.

1.2 SUBMITTALS

A. Product Data: Furnish manufacturer's literature.

B. Shop Drawings: Show complete details of equipment including dimensions and field measurements.

1.3 DELIVERY, STORAGE AND HANDLING

A. Deliver inserts and rough-in frames to jobsite at appropriate time for building in.

B. Do not deliver miscellaneous equipment to site until spaces in which they are to be installed are ready to receive them.

C. Pack miscellaneous equipment individually, protect each item and its finish.

1.4 SITE CONDITIONS

A. Protect adjacent or adjoining finished surfaces from damage during installation of work of this section.

B. Before starting work notify Architect in writing of conditions detrimental to installation or operation of units.

C. Verify with Architect exact location of miscellaneous equipment.

1.5 WARRANTY

D. Extended Correction Period: Repair or replace miscellaneous equipment which does not function as intended.

1. Period: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. System Description: Provide miscellaneous equipment with hardware and accessories as applicable.

B. Regulatory Requirements - Access for Persons with Disabilities: Comply with California Building Standards Code and Americans with Disabilities Act (ADA) Standards.

C. General: Provide standard materials and finishes for miscellaneous equipment listed; where more than one material or finish is available and not otherwise indicated provide as selected by Architect from manufacturer’s standard materials and finishes.

D. Attachments and Accessories: Provide for complete secure operational installation.

E. Microwave: Energy Star rated, General Electric, allow $300 each

F. Refrigerator: Energy Star rated, Kitchen Aid, allow $2,400 each

G. Garbage disposal: Energy Star rated, InSinkErator, allow $200 each

H. TV/monitor system: As stated in the bid addendum

I. Dishwasher: Energy star rated, Kitchen Aid, allow $1,700

J. Ice maker: Energy star rated, Manitowoc, allow $5,500

K. Coffee maker: Bunn BrewWIST Dual GPR DBC, allow $3,500

L. Range: Energy star rated, Kitchen Aid, allow $6,000

M. Range hood: Energy star rated, Kitchen Aid, allow $2,500

N. SS wire shelving: allow $200 each

O. 24” freezer: Energy star rated, True, allow $5,000

P. 36” refrigerator: Energy star rated, True, allow $4,500

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install miscellaneous equipment in accordance with manufacturer's recommendations and installation instructions, level, true to line, and in correct relation to adjacent materials and finishes.

B. Coordinate electrical connections with Division 26.

C. Upon completion of installation, instruct Owner's personnel in operation and maintenance of electrical miscellaneous equipment.

END OF SECTION

SECTION 11 66 13

EXERCISE EQUIPMENT

PART 1 -GENERAL

1.1 DESCRIPTION

GENERAL SPECS:

STEEL STRUCTURE AND COMPONENTS

1. **Steel structure**: Carbon steel tubes with thickness of 3mm or 4mm and a standard of 35-8 or 45-8 (ASTM Grade B)

2. **Welding**: MIG welding with hollow coil feed.

3. **Screws**: All from 304 stainless steel. Anti-temper S-TORX head / special signature screws are used when necessary.

COATING SYSTEM

4. **Galvanization**: In accordance with ASTMB633-07 standard, electro galvanization provides surface rust protection and superior color adhesion.

5. **Coating**: DUPONT ALESTA AD Powder coating for architectural use. Made from carboxyl polyester and TIGC. Designed particularly for all the classic requirements of outdoor exposure: rain, fog, UV from sunlight and SO2-containing air. Film thickness: 60 to 70 microns.

COMPOSITES

6. **HDPE**: Backrests, armrests, seats are made with signature molds for HDPE. Raw material includes UV protection which retains its color for at least 2 years and allows easier maintenance with higher durability.

7. **PU-Polyurethane**: Backrests, armrests, seats are made with signature molds for Greenfields Professional Series. Raw material includes UV protection which retains its color for at least 2 years and allows easier maintenance with higher durability and comfort.

GREENFIELDS APP

8. **Greenfields App**: For both Android and Apple phones, offers the following features:
- Park locator within 30 mile radius
- QR Code Scanner – scan view info on each unit
- Instructional Videos - how-to videos for exercises available on each unit
- My Workout Routine – create your own workouts
- Progress – Workout History: keep track of your personal performance over time
- Progress – Weight Progress: keep track of your weight progress towards your goal
- Progress – Personal BMI: keep track of Body Mass Index progress toward your goal
- Coming soon: Exercises not requiring equipment

UNIT SELECTION FOR THIS PROJECT

GR2005-1-19 - 2-Person Incline Sit-Up Bench

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method - eliminates obstacles and trip hazards
- Modular HDPE boards offer low heat conductivity
- HDPE Sit-Up board overall size is 17.5" wide x 43" long (1.75" thick) and offers great support for users of all sizes
- Detailed User Instructions, including a QR Code featuring a "How To" video
- 10 Year Limited Warranty

GR2005-1-22 - 4-Pendulum Abs & Dips Station

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method eliminates obstacles and trip hazards
- Built-in SafeStop range limiter inside pendulum arm to protect user and equipment stops motion at 60 degrees.
- 2RS Sealed ball-bearings are used (not bushings) - with life cycle of 10,000 hours. (Bearings feature a rubber seal on both sides. RS provides a better seal but more rolling friction than 2Z bearings)
- Hand Grips use 3" diameter to prevent protrusion (3" large diameter, 6 inch long, 1.75" thick)
- Two Kick-Steps to allow easier user position of the leg/knee raises station (Abs)
- HDPE backrest offers low heat conductivity.
- HDPE arm rests offer low heat conductivity
- Detailed User Instructions, including a QR Code featuring "How To" video
- 10 Year Limited Warranty

SGR2005-1-42 - 2-Person Back & Arms Combo (unique to Greenfields)

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method eliminates obstacles and trip hazards
- 2RS Sealed ball-bearings are used (not bushings) - with life cycle of 10,000 hours. (Bearings feature a rubber seal on both sides. RS provides a better seal but more rolling friction than 2Z bearings)
- Hand Grips use 3" diameter to prevent protrusion (3" large diameter, 6 inch long, 1.75" thick)
- Ergonomic HDPE Backrest offers low heat conductivity, while providing better support
- HDPE Seats offer low heat conductivity
- Under-seat footrest for optimal leverage and injury prevention
- Detailed User Instructions, including a QR Code featuring "How To" video
- Separate Age Appropriate Sign mounted on the main post
- 10 Year Limited Warranty

SGR2005-1-48-W - 2-Person Wheelchair Accessible Lat Pull Down (unique to Greenfields)

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method eliminates obstacles and trip hazards
- Accessible Side supports a counter weight of 138 lbs.
- 2RS Sealed ball-bearings are used (not bushings) - with life cycle of 10,000 hours. (Bearings feature a rubber seal on both sides. RS provides a better seal but more rolling friction than 2Z bearings)
- Hand Grips use 3" diameter to prevent protrusion (3" large diameter, 6 inch long, 1.75" thick)
- Ergonomic HDPE Backrests offer low heat conductivity, while providing better support
- HDPE Seats offer low heat conductivity
- Under-seat footrest for optimal leverage and injury prevention
- Detailed User Instructions, including a QR Code featuring "How To" video
- Separate Age Appropriate Sign mounted on the main post
- Universal ADA Sign mounted on the main post
- 10 Year Limited Warranty
- **U.S. Patent 9,079,069 B1**

HP2009-5-03 - Single Elliptical Cross Trainer

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method eliminates obstacles and trip hazards
- 2RS Sealed ball-bearings are used (not bushings) - with life cycle of 10,000 hours. (Bearings feature a rubber seal on both sides. RS provides a better seal but more rolling friction than 2Z bearings)

- Hand Grips use 3" diameter to prevent protrusion (3" large diameter, 6 inch long, 1.75" thick)
- Ergonomic HDPE Footrests offer low heat conductivity, while providing better support
- Detailed User Instructions, including a QR Code featuring "How To" video on a standalone sign
- 10 Year Limited Warranty

UBX-292 – Cardio Stepper with Adjustable Resistance (unique to Greenfields)

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method eliminates obstacles and trip hazards
- Handles are made in signature molds from durable and a fire resistant EPDM soft rubber.
- Resistance mechanism consists of a Bi-Directional Hydraulic Piston with resistance of up to 100 lbs.
- Ergonomic HDPE footrests offer low heat conductivity, while providing better support
- Detailed User Instructions, including a QR Code featuring "How To" video
- Separate Age Appropriate Sign mounted on the main post
- 10 Year Limited Warranty

UBX-293 – Bench Press with Adjustable Resistance (unique to Greenfields)

- Pre-Galvanized tubes
- Cold Galvanized after fabrication
- Orange Peel DuPont Powder Coating with UV protection
- Greenfields' installation method eliminates obstacles and trip hazards
- Handles are made in signature molds, from durable and a fire resistant EPDM soft rubber.
- Resistance mechanism consists of a Bi-Directional Hydraulic Piston with resistance of up to 100 lbs.
- Customized PU-Polyurethane backrests offer great comfort while in use.
- Detailed User Instructions, including a QR Code featuring "How To" video.
- Separate Age Appropriate Sign mounted on the main post
- 10 Year Limited Warranty

SECTION 12 24 00

WINDOW SHADES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide manual chain operated window shades with brackets and accessories as required for complete finished operational installation.

1. Solar Shades: Unframed.

1.2 REFERENCES

A. NFPA 701: Standard Methods of Fire Tests for Flame-Resistant Textiles and Films.

B. FS CCC-T-191b: Flame Retardancy of Textiles.

1.3 SUBMITTALS

A. Product Data: Furnish manufacturer's literature.

B. Shop Drawings: Show hardware, clearances and operation of shades with specified system.

1. Layout of openings, partings and pulley positions subject to Architect approval where not clearly indicated.

C. Samples: Submit samples of each fabric indicating finishing of top, bottom and sides, and section of frame indicating finish.

D. Certificate of Flame Proofing or Flame Resistance: Submit certification, recommendations and instructions for laundering of specified fabrics and maintenance of entire installation.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide manual shades as complete units produced by one manufacturer, including hardware, accessory items, mounting brackets and fastenings.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver shades until building is ready for installation.

B. Number and identify shades as to locations in Project.

1.6 SITE CONDITIONS

A. Before installation, physically measure and inspect space after limiting conditions are established.

1. Note floor and ceiling may not be level.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. Mecho Shade Corporation/Mecho Shade System.

B. Lutron Electronics Co./Manual Shading.

C. SKYCO Shading Systems, Inc./Manual Shades.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide manual chain operated window shades with brackets and accessories as required for complete finished operational installation.

B. Regulatory Requirements:

1. Flame Retardant Materials: Approved by California State Fire Marshal's Office.

2. Fire Resistant Fabrics: Required to have passed one of following:

a. NFPA 701.
b. FS CCC-T-191, test 5903.

C. Shade Operating System: Manual type chain operated roller shade system with adjustable slip clutch.

D. Fabric:

1. Solar Shades: Manufacturer's standard fire-resistant glass cloth fabric.

2. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

E. Accessories: Provide accessories, brackets, fittings and fastenings as necessary for proper operation and installation of shades; conceal fasteners or finish flush, painted to match exposed metal finish.

F. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2.3 FABRICATION

A. Center Seams: Use single widths of fabric with no center seams for each shade.

B. Shade Mounting System: Allow for shade removal and replacement without disassembling hardware assembly.

C. Operating System: Provide upper and lower stop limits to prevent over-winding and unrolling.

1. Provide for left or right-hand operation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Inspect site conditions prior to installation for conditions that could affect proper installation and operation of shades.

B. Beginning installation signifies acceptance of substrates and conditions.

3.2 INSTALLATION

A. Install shades in accordance with manufacturer's recommendations and installation instructions.

1. Install shades level, plumb, secure, and at proper height; cooperate with other trades for securing shades to substrate and finished surfaces.

2. Mount solar shades and blackout shades as indicated on Drawings to allow shade cloths to be adjacent.

B. Hang shades to be straight and even, employing hand sewing of seams and hems as necessary for carefully matched installation with even, horizontal top and bottom hems, and quiet, smoothly operating system.

C. Fabricate and install shades so when open, closed or while operating shades will not be abraded by window frame, ceiling or sill.

3.3 ADJUSTING

A. Thirty days after hanging of shades, inspect installation for fabric shrinkage or expansion or other variations and rehang as necessary for conformance to specified tolerances.

END OF SECTION

SECTION 12 93 00

SITE FURNISHINGS

PART 1 -GENERAL

1.1 DESCRIPTION

All labor, materials equipment necessary for and incidental to performing all operations of work for this Section, complete as shown on the Plans or specified herein. Work includes, but is not necessarily limited to, the following:

A. Picnic Tables

B. Accessible Picnic Table

C. Round Tables with Seating

D. Bench Seating

E. Waste / Recycling Receptacles

F. Drinking Fountain

G. Precast Concrete Pots

1.2 RELATED WORK SPECIFIED ELSEWHERE

A. Section 32 13 13 Concrete Paving

1.3 GENERAL REQUIREMENTS

A. General

Examine Plans and Specifications and include all miscellaneous metal, which is specified in other Sections. Provide all connections, anchors, bolts, and other fastenings as required. Perform all cutting, punching, drilling, and tapping required for proper assembly of the work. All installations shall be done in accordance to manufacturer’s specifications.

B. Shop Drawings

Submit shop drawings of all work herein showing layouts, sizes, and methods of construction and installation, including sizes and types of all fastening devices.

C. Codes

Materials and work shall conform to the governing Building Code. In case of conflict between these Specifications and the Building Code, the more stringent shall govern.

D. Delivery

Ensure that items to be set in concrete or in play areas are delivered at the proper time.

E. Measurements

Verify all dimensions by taking field measurements. Proper fit and attachment of all items is required.

F. Coordination

Coordinate with other trades to effect prompt delivery of all materials needed for erection or installation. Identify all bolts or other loose materials.

G. Storage

Store materials in dry, protected areas. Protect from rusting, bleaching, and other damage. Remove any damaged items from site and replace at no cost to the City.

H. Certifications

Furnish to the City's representative copies of all material certifications.

I. Trade Names or Equals

Approval of equipment and materials offered as equivalents to those specified will be as set forth under Section 4, paragraph 4-1.6 of the Standard Specifications.

J. Submit 6″ x 6″ color and finish sample for each site furnishing specified, except where noted under item B.

PART 2 -PRODUCTS

2.1 Tables

A. Picnic tables shall be '525 Table', Model No. 525-60TX; by Dumor. Tel: (818) 735-3838. Surface mount with tamper-resistant fasteners. Picnic tables shall be Antique Mahogany (Wood grain recycled plastic) and Textured Gray (Powder coated metal components) in color.

B. Accessible picnic tables shall be '525 ADA Table', Model No. 525-633TX; by Dumor. Tel: (818) 735-3838. Surface mount with tamper-resistant fasteners.

Picnic tables shall be Antique Mahogany (Wood grain recycled plastic) and Textured Gray (Powder coated metal components) in color.

C. Round tables with seating shall be ‘42” Dia. Steel Table with 3 Seats’, Model No. 296-42-30TX/S2 by Dumor. Tel: (818) 735-3838. Surface mount with tamper-resistant fasteners. Picnic tables shall be Antique Mahogany (Wood grain recycled plastic) and Textured Gray (Powder coated metal components) in color.

2.2 Benches

A. Bench seating shall be ‘6’ Backless Bench’, Model No. 523-60TX by Dumor. Tel: (818) 735-3838. Surface mount with tamper-resistant fasteners. Picnic tables shall be Antique Mahogany (Wood grain recycled plastic) and Textured Gray (Powder coated metal components) in color.

2.3 Waste / Recycling Receptacles

A. Waste receptacle shall be ‘32 Gallon Waste Receptacle with Liner Shield’, Model No. 287-32SH-SO; provide with Textured Gray ‘SO’ lid option, ‘SO’ hole shape option by Dumor. Tel: (818) 735-3838. Surface mount with tamper-resistant fasteners. Receptacles shall be Textured Gray (Powder coated metal components) in color.

B. Recycling receptacle shall be ‘32 Gallon Mixed Recycling Receptacle with Liner Shield’, Model No. 287-32SH-RC0002; provide with Textured Gray ‘RC2’ lid option, ‘RC2’ hole shape option by Dumor. Tel: (818) 735-3838. Surface mount with tamper-resistant fasteners. Receptacles shall be Textured Gray (Powder coated metal components) in color.

2.4 Drinking Fountain

A. Drinking fountain shall be ‘ADA Accessible Hi-Lo Filtered Stainless Steel Drinking Fountain with Bottle Filler, Non-Refrigerated’ Model No. 3612F by Haws. Tel: (909) 594-7088. Surface mount with tamper-resistant fasteners. Drinking fountain shall be Stainless Steel with Silver Powder Coat in color.

2.5 Precast Concrete Pots

A. Drinking fountain shall be ‘30” Square Wedge Pot’, Model No. QS-WE3037P by QCP Corp. Tel: (951) 256-3221. Precast concrete pots shall be French Gray in color with Craftmans Etch finish.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Prior to work of this Section, carefully inspect previously installed work. Verify all such work is complete to the point where this installation may properly commence.

B. Verify that work of this Section may be installed in strict accordance with the original design, all pertinent codes and regulations, and all pertinent portions of the referenced standards.

C. In the event of discrepancy, immediately notify the Engineer.

D. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.2 INSTALLATION

A. Dimensions upon which Work of this Section may be contingent are to be verified by the Contractor at the work site to ensure proper placement and fit of equipment in the allotted areas.

B. Set and install site furnishings plumb, level, and true to line with a neat and finished appearance and in accordance with approved submittal and manufacturer's printed instructions.

END OF SECTION

SECTION 13 10 10

POOL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes formwork, reinforcement, accessories, cast-in place concrete, finishing and curing for swimming pool floor.

B. Concrete work shall conform to ACI 301 except as modified below.

1.3 SUBMITTALS

A. Product Data: Submit for admixtures, reinforcing steel, epoxy, non-shrink grout, and waterstops.

B. Design Data: Submit concrete mix design.

1.4 QUALITY ASSURANCE

A. Construct and erect concrete formwork in accordance with ACI 301 and 347.

B. Perform concrete reinforcing work in accordance with ACI 301, ACI 318, and Manual of Practice.

C. Perform cast-in-place concrete work in accordance with ACI 301.

PART 2 - PRODUCTS

2.1 FORM MATERIALS AND ACCESSORIES

A. Form Materials: At the discretion of the Contractor.

B. Plywood: PS 1, MDO, Douglas Fir species; Structural 1 grade; sound undamaged sheets with clean true edges.

C. Lumber: Douglas Fir species; #1 grade.

D. Form Ties: Snap-off, glass fiber type of fixed length, or cone type.

E. Form Release Agent: Colorless mineral oil which will not stain concrete or impair natural bonding characteristics of coating intended for use on concrete.

F. Formed Construction Joints for Slab-on-Grade as shown on drawings.

2.2 REINFORCEMENT MATERIALS

A. Reinforcing Steel: ASTM A615, 40ksi yield grade for #3 and 60 ksi yield grade for #4 and larger; deformed billet steel bars, plain finish.

B. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for support of reinforcing.

C. Fabricate concrete reinforcing in accordance with ACI 315.

2.3 CONCRETE MATERIALS

A. Cement: ASTM C150, Type II, Normal, Portland type.

B. Fine and Coarse Aggregates: Use 1 inch coarse aggregate conforming to ASTM C-33 Size #5 and comply with Title 24, Section 1903A.3.

C. Water: Clean and not detrimental to concrete.

D. Air Entrainment Admixture: ASTM C260.

2.4 CONCRETE MIX

A. Mix and deliver concrete in accordance with ASTM C94.

B. Provide concrete with 4,000 psi compressive strength with a maximum slump of 4 inches for all flatwork.

C. Select mix design proportions for normal weight concrete in accordance with Title 24, Section 1905.2.

2.5 COMPOUNDS, HARDENERS AND SEALERS

A. Curing Compounds: ASTM C309.

B. Absorptive Mats: ASTM C171.

C. Sealers: Clear, non-yellowing, penetrating sealer; Aqua Mix, Inc., Sealer’s Choice, or approved equal.

2.6 EPOXY

A. Cartridge type two-component 100% solids epoxy based system dispensed and mixed through a static mixing nozzle supplied by the manufacturer and meeting requirements of ASTM C-881 Type I and IV with 14,830 psi minimum compressive strength. The epoxy shall be tested for use in cracked and uncracked concrete per ICC-ES AC308.

B. Model SET-XP manufactured by Simpson Strong -Tie.

2.7 NON-SHRINK GROUT REPAIR MORTAR

A. Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents with minimum compressive strength of 9,000 psi at 28 days and suitable for concrete repair applications from featheredge to 4 inch depth.

B. Model Rapid Set Cement All manufactured by CTS Cement Manufacturing.

PART 3 - EXECUTIONS

3.1 FORMWORK ERECTION

A. Erect formwork, shoring and bracing to achieve design requirements.

B. Provide bracing to ensure stability of formwork.

C. Apply form release agent to formwork prior to placing form accessories and reinforcement.

D. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings which are affected by agent.

E. Clean forms as erection proceeds, to remove foreign matter.

3.2 INSERTS, EMBEDDED COMPONENTS, AND OPENINGS

A. Provide formed openings where required for work to be embedded in and passing through concrete members.

B. Coordinate work of other sections in forming and setting openings, slots, recesses, chases, sleeves, bolts, anchors, and other inserts.

C. Install concrete accessories straight, level, and plumb.

3.3 REINFORCEMENT PLACEMENT

A. Place reinforcement, supported and secured against displacement.

B. Ensure reinforcing is clean, free of loose scale, dirt, or other foreign coatings.

3.4 PLACING CONCRETE

A. Prepare previously placed concrete as indicated.

B. Do not break or interrupt successive pours such that cold joints occur

3.5 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Remove formwork progressively and in accordance with code requirements.

3.6 FLOOR FINISHING

A. Finish concrete floor surfaces in accordance with ACI 301 and ACI 302.

B. Uniformly spread, screed, and float concrete.

C. Provide straight coarse broom finish on pool floor slabs.

D. Maintain surface flatness, with maximum variation of 1/8 inch in 10 feet.

E. In areas with drains, maintain floor level at walls and slope surfaces uniformly to drains.

3.7 CURING

A. Apply curing compounds on floor surfaces.

B. Immediately after placement, protect concrete from premature drying.

C. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete for not less than 7 days.

3.8 FIELD QUALITY CONTROL

A. Three (3) Concrete Test Cylinders: Taken for 50 cubic yards of each class of concrete placed

B. One (1) Slump Test: Taken for each set of test cylinders taken.

3.9 DEFECTIVE CONCRETE

A. Modify or replace concrete not conforming to required lines, details and elevations, as directed by Engineer.

END OF SECTION

SECTION 13 10 11

POOL SHOTCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes supply and installation of wet mix pneumatically applied concrete, formwork, reinforcement, accessories, finishing, and curing for swimming pool wall structure.

B. Concrete work shall conform to ACI 301 except as modified below.

1.3 SUBMITTALS

A. Product Data: Submit for reinforcing steel.

B. Design Data: Submit concrete mix design and provide shotcrete trip tickets.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with Title 24, Section 1908A of the California Building Code and ACI (American Concrete Institute) 506.2 unless specified otherwise in this Section.

B. Construct and erect concrete formwork and concrete reinforcing work in accordance with ACI 301, unless specified otherwise in this Section.

C. Prior to start of work, Owner's Testing Laboratory will verify mix proportions, gradation, and quality of aggregate.

D. Test Panels: Contractor shall provide 1 test panel fabricated by placing shotcrete onto plywood for each mix design being considered, for each shooting position to be encountered, and for each 5000 square feet of placed shotcrete. Panels shall be of identical thickness, reinforcement, and reinforcement placement as required for Work.

E. Core samples shall be tested for strength, water absorption, and drying and shrinkage.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Ensure materials and surrounding air temperature are a minimum 50 degrees Fahrenheit prior to, during, and 7 days after completion of work.

B. During freezing or near freezing weather, provide equipment and cover to maintain minimum 50 degrees Fahrenheit and to protect work completed or work in progress.

C. Suspend shotcrete operations during high winds, rainy weather, or near freezing temperatures when work cannot be protected.

1.6 FIELD MEASUREMENTS

A. Verify that field measurements are as indicated.

PART 2 - PRODUCTS

2.1 EQUIPMENT

A. Mixing Equipment: Capable of thoroughly mixing aggregate, cement, and water in sufficient quantity to maintain continuous placement.

B. Air Supply: Clean, dry air adequate for maintaining sufficient nozzle velocity, uniformly steady for work while simultaneously operating blow pipe for cleaning away rebound.

C. Delivery Equipment: Capable of discharging aggregate-cement-water mixture accurately, uniformly, and continuously.

2.2 FORM MATERIALS AND ACCESSORIES

A. Form Materials: At the discretion of the Contractor.

B. Plywood: PS 1-83, Group I, Exterior Grade B-B, minimum 5 ply, and 5/8 inch thick, grade marked, and not mill oiled.

C. Lumber: Douglas Fir species; #1 grade.

D. Form Ties: Prefabricated rod, flat band, wire, internally threaded disconnected type, and not leaving metal within 1-1/2 inches of shotcrete surface.

E. Form Release Agent: Colorless mineral oil which will not stain shotcrete.

2.3 REINFORCEMENT MATERIALS

A. Reinforcing Steel: ASTM A615, 40ksi yield grade for #3 and 60 ksi yield grade for #4 and larger; deformed billet steel bars, plain finish.

B. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for support of reinforcing.

C. Fabricate concrete reinforcing in accordance with ACI 315.

2.4 SHOTRETE MATERIALS

A. Cement: ASTM C150, Type II, Normal, Portland type.

B. Coarse Aggregates: Conforming to ASTM C-33.

C. Water: Clean and not detrimental to concrete.

2.5 CONCRETE MIX

A. Mix and deliver concrete in accordance with ASTM C94.

B. Provide shotcrete with 4,000 psi compressive strength with a minimum slump of 1 ½ inches maximum slump of 2 ½ inches.

C. Thoroughly mix shotcrete. Place mix within 45 minutes of mixing.

D. Develop mix design to give good compaction and low percentage of rebound, but stiff enough not to sag.

E. Maintain quality control records during production of shotcrete. Make records available to Owner's Testing Laboratory.

PART 3 - EXECUTIONS

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Verify field measurements are as indicated.

C. Verify fabricated forms are true to line and dimension, adequately braced against vibration, and constructed to permit escape of air and rebound during gunning operations.

D. Ensure correct placement of reinforcement. Ensure sufficient clearance around reinforcement to permit complete encasement.

E. Ensure easy access to shotcrete surfaces for screeding and finishing, to permit uninterrupted application.

3.2 ALLIGNMENT CONTROL

A. Provide alignment wires to establish thickness and plane of required surfaces.

B. Install alignment wires at corners and offsets not established by forms.

C. Tighten alignment wires true to line. Position adjustment devices to permit additional tightening.

3.3 FORMWORK ERECTION

A. Erect formwork, shoring and bracing to achieve design requirements.

B. Provide bracing to ensure stability of formwork.

C. Apply form release agent to formwork prior to placing form accessories and reinforcement.

D. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings which are affected by agent.

E. Clean forms as erection proceeds, to remove foreign matter.

3.4 INSERTS, EMBEDDED COMPONENTS, AND OPENINGS

A. Provide formed openings where required for work to be embedded in and passing through concrete members.

B. Coordinate work of other sections in forming and setting openings, slots, recesses, chases, sleeves, bolts, anchors, and other inserts.

C. Install concrete accessories straight, level, and plumb.

3.5 REINFORCEMENT PLACEMENT

A. Place reinforcement, supported and secured against displacement.

B. Ensure reinforcing is clean, free of loose scale, dirt, or other foreign coatings.

3.6 PLACING SHOTCRETE

A. Do not place shotcrete on any surface that is frozen, spongy, or where there is free water.

B. Apply shotcrete not to sag.

C. Direct nozzle perpendicular to surface to ensure maximum compaction with minimum rebound.

D. Build up thickness by layers, in multiple passes of the nozzle over the work area. Cover reinforcement with the first layer.

E. Allow each layer to take initial set before applying succeeding layers.

F. After initial set of final layer, remove excess material outside of forms and alignment lines.

G. Clean with air-water jet to remove laitance.

H. Sound work with hammer for voids. Expose voids and replace with new shotcrete.

I. Remove trapped rebound at construction and expansion joints.

J. Remove rebound material which does not fall clear of work. Discard rebound.

K. Finish surface of final layer with rough finish for mechanical bond at plaster areas and trowel finish in gutter.

L. Maintain surfaces wet for minimum of 7 days.

3.7 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Remove formwork progressively and in accordance with code requirements.

3.8 PROTECTION OF FINISHED WORK

A. Immediately after placement, protect shotcrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Maintain shotcrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of shotcrete.

POOL FINISHES AND WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes pool gutter and surge chamber fluid applied waterproofing, pool plaster, and pool tile.

1.3 SUBMITTALS

A. Product Data: Submit for all products listed in this Section

B. Design Data: Submit plaster mix design.

C. Samples: Submit for each type, size, and color of tile listed.

D. Manufacturer's Installation Instructions: Submit for pool plaster and fluid applied waterproofing.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with TCA (Tile Council of America) Handbook and ANSI (American National Standards Institute) A108 Series/A118 Series.

1.5 EXTENDED WARRANTY

A. Provide 5-year warranty for pool plaster finish.

PART 2 - PRODUCTS

2.1 GUTTER, MAIN DRAIN BASIN AND SURGE CHAMBER FLUID APPLIED WATERPROOFING

A. Cementitious crystalline waterproofing coating designed for concrete substrates with a blend of portland cement, fine treated silica sand and active chemicals. The active chemicals shall generate a non-soluble crystalline formation of dendritic fibers within the concrete to seal against water penetration. Coating shall be resistant to pool chemicals and certified to meet NSF (National Sanitation Foundation) Standard 61 for use with potable water.

B. Xypex Concentrate manufactured by Xypex Chemical Corporation.

2.2 POOL PLASTER

A. Factory blended quartz aggregate with fortified white cement, additives, and field mixed in accordance with manufacturer's instructions.

B. Pebble Sheen Arctic White manufactured by Pebble Technology International.

2.3 POOL TILE

A. Porcelain body, square edges, 0 to 0.5 percent moisture absorption, and conforming to ANSI/TCA A137.1. Surface finish, size, and color as scheduled.

B. Ceramic body, square edges, 0.5 to 3.0 percent moisture absorption, and conforming to ANSI/TCA A137.1. Surface finish, size, and color as scheduled

C. Mortar: ANSI/ACI (American Concrete Institute) A118.1; Portland cement, sand, and water.

D. Grout: Cementitious type, resistant to shrinking.

2.4 POOL TILE SCHEDULE

A. Tile colors listed in this schedule are from the following manufacturers:
   1. Dal-Tile Corporation (DT).
   2. Inlays, Inc. (II).

B. Pool Deck:
   1. Deck Depth Markers - Unglazed porcelain, 6 x 6 inch, white background with black 4-inch-high text and factory skid-resistant surface (II #C6200xx FT and #6205xx IN Series).
   2. No Diving Graphic - Unglazed porcelain, 6 x 6 inch, white background with red international "no diving" graphic, black text and factory skid-resistant surface (II #C621500 Custom MG Series).
   3. Rim Flow Gutter - Unglazed ceramic, 2 x 2 inch, C701 trim, and Waterfall (DT #D169) and Galaxy (DT #D023) color.
   4. Rim Flow Gutter Cap - Unglazed ceramic, 2 x 1 inch, C701 trim, and Galaxy (DT #D023) color.
   5. Rim Flow Gutter Cap Turn Target - Unglazed ceramic, 2 x 1 inch, C701 trim, and Black (DT #D311) color.

C. Pool Interior
   1. Floor Inlet - Unglazed ceramic, 2 x 2 inch, and White (DT #D617) color
   2. Lane Marker - Unglazed ceramic, 2 x 2 inch, and Black (DT #D311) color.
   3. Pool Step - Unglazed ceramic, 2 x 2 inch, and White (DT #D617) color.
   4. Slope Break - Unglazed ceramic, 2 x 2 inch, and Red (DT #D017) color.
   5. Step Edge - Unglazed ceramic, 2 x 2 inch with 2 x 1 inch cap, and Black (DT #D311) color.
   6. Turn Target - Unglazed ceramic, 2 x 2 inch, and Black (DT #D311) color.

7. Waterline - Glazed ceramic, 6 x 6 inch, and Electric Blue (DT #1194) color.
8. Waterline Depth Markers - Glazed porcelain, 6 x 6 inch, white background with black 4-inch-high text and smooth surface (II #C6100xx FT and #6105xx IN Series).

PART 3 - EXECUTIONS

3.1 INSTALLATION OF FLUID APPLIED WATERPROOFING

A. Verify surfaces are solid, free of dirt, paint, loose particles, cracks, pits, rough projections, and foreign matter detrimental to adhesion and application of waterproofing.

B. Do not apply waterproofing to dirty, dusty, or surfaces unacceptable to manufacturer.

C. Verify items which penetrate surfaces to receive waterproofing are securely installed.

D. Beginning of installation means acceptance of substrate.

E. Clean, prepare and dampen surfaces to receive waterproofing, in accordance with manufacturer's instructions.

F. Apply two coats of waterproofing in accordance with manufacturer's instructions.

G. Cure final application in accordance with manufacturer's instructions.

3.2 INSTALLATION OF POOL PLASTER

A. Verify that surfaces and site conditions are ready to receive work.

B. Beginning of installation means acceptance of existing conditions.

C. Protect surfaces near work from damage or disfiguration.

D. Clean concrete/shotcrete surfaces of loose and foreign matter using a 2,500 psi high pressure/velocity water jet spray. Wash surfaces with clean water.

E. Dampen concrete/shotcrete surfaces with clean water immediately prior to plastering.

F. Apply plaster in accordance with manufacturer’s instructions and ANSI/ASTM C926.

G. Apply to surfaces for a total minimum thickness of 1/2 inch.

H. Provide smooth and consistent steel trowel finish.

I. After manufacturer’s specified curing period, plaster shall be washed and detailed with an acid solution to remove excess residue. Fill swimming pool from the deep end and protect plaster from erosion caused by filling with water and marring from hoses.

J. Maximum variation from flatness shall be 1/8 inch in 10 feet.

3.3 INSTALLATION OF POOL TILE

A. Verify that surfaces are ready to receive work.

B. Beginning of installation means installer accepts condition of existing surfaces.

C. Protect surrounding work from damage or disfiguration.

D. Vacuum clean existing surfaces and damp clean.

E. Seal substrate surface cracks with filler.

F. Install mortar bed, tile, and grout in accordance with manufacturer's instructions.

G. Apply mortar bed over concrete surfaces to a minimum thickness of 1/4 inch.

H. Lay tile to pattern indicated.

I. Lay tile so upper surface is flush with adjacent finishes.

J. Use trim finishes as indicated at corners.

K. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make joints watertight without voids, cracks, excess mortar, or excess grout. Smooth all cut edges.

L. Sound tile after setting. Replace hollow sounding units.

M. Allow tile to set for a minimum of 48 hours prior to grouting.

N. Grout tile joints.

END OF SECTION

SECTION 13 11 14

POOL DECK EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes pool deck equipment, safety equipment, and signs.

1.3 SUBMITTALS

A. Product Data: Submit for all products listed in this Section.

B. Operation and Maintenance Instructions: Submit for all competitive equipment, disabled access lift, lifeguard chairs, pool cover, pool vacuum, underwater lights, and water test kit.

PART 2 - PRODUCTS

2.1 3/4-METER DIVING STAND, ANCHOR AND BOARD

A. Stand: Type 304 polished stainless steel support pedestal 8 x 8 x 3/16 inch set at 15 degrees with 1/4 inch top plate and bottom plates. Fulcrum support tubes shall be 1.90 O.D. x 0.145 inch wall thickness 304 stainless steel with rubber pad. Provide 1.90 O.D. x 0.109 inch wall thickness 304 stainless steel handrails and ladder with 19 x 4 inch non-slip cycolac steps.

B. Anchor: 16 x 16 inch stainless steel pedestal cage anchor and two bronze ladder anchors.

C. Board: One piece aluminum springboard with I-beam construction, 12 feet x 18 inches, sealed end construction, and 0.2 inches minimum wall thickness. White latex and sand mixture coating top surface.

D. Model Sportflyte #13517 and #26203 manufactured by Paragon Aquatics. Provide custom pedestal and ladder height for rim flow pool.

2.2 BACKSTROKE PENNANT

A. Assembly consisting of 12 by 18 inch vinyl coated nylon triangular pennants strung on a 3/16 inch diameter vinyl coated stainless steel cable with brass swivel hook at one end and ratchet take-up reel at the other end.

B. Provide 2 in 64 foot length. Colors shall be alternating red and yellow.

C. Provide 2 ratchet wrenches.

D. Model "Champion" manufactured by Champion Aquatics.

2.3 BACKSTROKE STANCHION POST

A. Type 304 polished and buffed stainless steel tubing with 1.9 inch outside diameter by 0.145 inch wall thickness, stainless steel cap with eyebolt on the upper end, and an overall height of 8 feet.

B. Provide 4.

C. Model #38106 manufactured by Paragon Aquatics or model #10168 manufactured by SR Smith.

2.4 DISABLED ACCESS LIFT

A. Lift: Assembly shall have powder coated stainless steel and aluminum construction, 24 volt rechargeable battery pack, plastic seat with seat belt, 344 degrees total rotation, and a 300 pound lifting capacity. Supply with foot rest, 2 rotating arm rests, caddie, stainless steel anchor socket with cover, and spanner key. Lift shall accommodate anchor set back of 33 inches from pool wall and comply with all requirements of CBC 11B-1009.2.

B. Provide 1.

C. Model #390-2000 “Splash Extended Reach” manufactured by SR Smith.

2.5 GRAB RAIL

A. Type 304 polished and buffed stainless steel tubing with 1.9 inch outside diameter by 0.109 inch wall thickness. Tubing shall have smooth wrinkle free bends and have a "figure 4" bend.

B. Model #30212 manufactured by Paragon Aquatics or #10173 manufactured by SR Smith.

2.6 GUTTER GRATE

A. Parallel modular interlocking PVC grating 12 inches wide constructed of molded bars 0.625 inch wide with 1 inch depth spaced with 0.375 inch openings. Grating shall have cross bars spaced 3 inches on center and diamond ridged anti-skid top surface. PVC shall be UV stabilized and white color. Provide recessed stainless steel hold down clips with stainless steel anchor screws for 36 inch maximum anchor spacing on each side of grating.

B. Model “Quiet-flow” manufactured by Lawson Aquatics.

2.7 LIFEGUARD CHAIR - PORTABLE TALL

A. Assembly shall have bolted frame fabricated from 1.9 inch outside diameter by 0.065 inch wall thickness type 304 polished and buffed stainless steel tubing, a fiberglass platform, molded plastic seat mounted 6 feet above deck level and capable of

swiveling 360 degrees, molded cycolac ladder steps, 2 solid rubber wheels, and attachments for life ring and umbrella.

B. Provide 1.

C. Model #20302 manufactured by Paragon Aquatics or model #US48500 manufactured by SR Smith

2.8 LIFEGUARD CHAIR - PORTABLE SHORT

A. Assembly shall have welded frame fabricated from 1.9 inch outside diameter by 0.065 inch wall thickness type 304 polished and buffed stainless steel tubing, a 34 inch square fiberglass platform, fiberglass seat mounted 2.5 feet above deck level and capable of swiveling 360 degrees, and attachments for life ring and umbrella.

B. Provide 1.

C. Model #20350 manufactured by Paragon Aquatics or model #LPLS-330 manufactured by SR Smith.

2.9 POOL COVER AND STORAGE REEL

A. Pool Cover: Laminated cover with center layer of 2 pound per square foot 0.125 inch thick cross-linked polyethylene foam and outer layers of ultra-violet stabilized woven polyethylene with weave density of 12 by 10 per square inch. Edges shall be weighted with wrapped ethylene interpolymer alloy and non-corrosive grommets shall be reinforced with additional PVC plate. Cover shall have double needle lock-stitch seams, burst strength of 500 pounds per square inch, tensile strength of 371 pounds, insulating R value of 0.5 BTU per hour per square foot per degrees Fahrenheit per inch. Cover shall have a 7 year warranty.

B. Panel Configuration: 4 panels of 14.75 x 75 feet and 3 panels of 15 x 55, and 1 panel of 12 x 10 feet to cover entire pool surface. Provide cut-out in panel for stair rail.

C. Storage Reel: Assembly shall have frame fabricated from stainless steel tubing, stainless steel winding tube with sealed ball bearings at each end, polyurethane wheels, and screw jacks. Provide storage reel cover constructed from vinyl laminated fabric.

D. Reel Configuration: Provide 1 reels with (2) 17 foot long tubes and 1 reel with (1) 17 foot long tube.

E. Model EnergySaver XER manufactured by SR Smith.

2.10 POOL VACUUM

A. Submersible automatic pool vacuum consisting of self contained reusable 2 micron filter bags, high speed drive motor, 2 pump motors, 45 meter cord, molded cleaning brushes, foam cleaning brushes, remote control system, and zero depth sensor. Vacuum shall be 810 mm wide and have a water filter capacity of 38 cubic meters per hour. Provide storage cart.

B. Provide 1.

C. Model Ultramax manufactured by Aquabot.

2.11 RACING LANE FLOAT

A. Assembly shall have 4 inch diameter plastic floats and donut floats strung on a minimum 3/16 inch diameter vinyl coated stainless steel cable with tension spring and twisting turnbuckle tensioning device at opposite ends.

B. Provide 9 in 25 yard length. Colors shall be alternating red and yellow with solid red 15 feet from each end wall with a black band marker at 15 meters from each end wall.

C. Manufactured by Competitor Swim Products or Anti Wave.

2.12 RACING LANE FLOAT REEL AND COVER

A. Assembly shall have stainless steel frame, and 4 inch stainless steel swivel wheels with individual brakes and capacity for 650 feet of 4 inch diameter lanes. Provide with vinyl cover designed to fit over reel with lane floats in place.

B. Provide 1 reel and 1 cover.

C. Model #75111SS manufactured by Paragon Aquatics or model #36000 manufactured by SR Smith.

2.13 RECESSED STEPS

A. Molded foam white cycolac body with 16-1/2 by 5-1/2 by 6 inch opening.

B. Model #32102 manufactured by Paragon Aquatics or model #62-209-4001 manufactured by SR Smith.

2.14 ROPE ANCHOR

A. Stainless steel cup anchor body and recessed threaded eyebolt.

B. Model #70316SS manufactured by Paragon Aquatics or model #WA-100 manufactured by SR Smith.

2.15 SAFETY EQUIPMENT

A. Body Hook: 16 foot aluminum pole and hook with wall anchors. Model #42-065 by Lincoln Equipment. Provide 2.

B. Ring Buoy: 24 inch diameter with 20 foot throw line. Model #44-075 by Lincoln Equipment. Provide 2.

C. Slope Break Lane Float: Assembly shall have 3/4 inch polypropylene rope, brass chromed end hooks, 5 by 9 inch blue and white locking polyethylene floats spaced 3 feet on center, and length as required. Model #44-115, #44-125 and #44-190 by Lincoln Equipment.

2.16 SAFETY SIGNS

A. 0.040 inch thick white aluminum with dark contrasting printed text and/or diagrams.

1. Artificial Respiration and CPR Sign: 18 x 24 inches with text 1/4 inch high minimum and illustrations for artificial respiration and CPR procedures. Provide 1.
2. Chemical Hazard Signs: 10 x 10 inches NFPA diamond signs for sodium hypochlorite and muriatic acid with 4 inch high printed number signals for health, flammability and reactivity. Provide 2.
3. Diarrhea Sign: 12 x 18 inches with 1 inch high letters warning people with diarrhea not to enter the pool. provide 1.
4. Emergency Phone Number Sign: 24 x 30 inches with 4 inch high letters for the emergency telephone number 911, and 1 inch high letters for the number of the nearest emergency services, and the name and street address of the pool facility. Provide 1.
5. Keep Closed Sign: 12 x 18 inches with 4 inch high letters mounted on outside of all gates with “KEEP CLOSED”. Provide 5.
6. Pool Capacity Sign: 18 x 24 inches with 4 inch high letters to indicate maximum number of pool users as follows “SWIMMING POOL CAPACITY 351 PERSONS”. Provide 1 each.

B. Manufactured by Zumar Industries, Sign Industries or Seton.

2.17 STAIR HANDRAIL

A. Type 304 polished and buffed stainless steel tubing with 1.9 inch outside diameter by 0.109 inch wall thickness. Tubing shall have smooth wrinkle free bends and be dimensioned as indicated.

B. Manufactured by Paragon Aquatics or SR Smith.

2.18 STANCHION POST SOCKET

A. Minimum 6 inch high cast bronze body to accept 1.9 inch outside diameter pipe tube and internal threading for bronze closure cap or locking cap. Provide one opening device for each socket.

B. Model #38201-TC manufactured by Paragon Aquatics or model #AS-100D manufactured by SR Smith.

2.19 STARTING PLATFORM

A. Assembly shall have a 24 by 32 inch non-skid high density polyethylene track start platform, red color, number plates numbered 1 through 8, mounted 29.5 inches above water level, dual leg stainless steel tubing frame, backstroke bar, and side step.

B. Provide optional Track Start Plus Platform Kit to include adjustable angled back plate and side handles.

C. Provide 8.

D. Model #24604 with Track Start Plus manufactured by Paragon Aquatics.

2.20 STARTING PLATFORM ANCHOR

A. Two dual wedge anchors for each platform welded to a stainless steel angle for proper spacing. Anchor body shall be 10 inch deep welded stainless steel with taper lock fit, bronze locking wedge and stainless steel cover. Anchor spacing must match leg spacing of starting platform.

B. Provide one opening device for each pair of anchors.

C. Model #23140DW manufactured by Paragon Aquatics.

2.21 UNDERWATER LIGHT AND NICHE

A. Stainless steel light, niche, and face ring, 55 watt white LED bulb, 120 volt, with low water cut-off switch, and U.L. listed with encapsulated terminals. Cord length as required to change bulb on deck two feet back from pool edge.

B. Model “IntelliBrite 5G” manufactured by Pentair Pool Products.

2.22 WATER TEST KIT

A. Complete water test kit to include carrying case, 2 ounce reagents, 5 slide comparators, and drop test for free and total chlorine, pH, total alkalinity, calcium hardness, total hardness, cyanuric acid and acid/base demand.

B. Model #K-1741C manufactured by Taylor.

2.23 WEDGE ANCHOR

A. Minimum 4.25 inch long cast bronze body to accept 1.9 inch outside diameter pipe tube with bronze locking wedge and stainless steel set bolt and washer.

B. Model #28102 manufactured by Paragon Aquatics or model #IAS-100 manufactured by SR Smith.

2.24 WEDGE ANCHOR ESCUTCHEON PLATE

A. Stainless steel body with stainless steel set screw and designed to fit over wedge anchor.

B. Model #28301SS manufactured by Paragon Aquatics or SR Smith.

PART 3 - EXECUTIONS

3.1 INSTALLATION OF ANCHORS AND SOCKETS

A. Install anchors and sockets level and plumb.

B. Install anchors and sockets flush with adjacent concrete deck, plaster surface, or tile surface as appropriate.

3.2 INSTALLATION OF COMPETITIVE EQUIPMENT

A. Assemble all components of the following equipment, attach to appropriate anchors and demonstrate operation to Owner:
   1. Backstroke pennant.
   2. Backstroke stanchion post.
   3. Racing lane float.
   4. Racing lane float reel.
   5. Starting platform.

3.3 INSTALLATION OF DECK EQUIPMENT

A. Assemble all components of the following equipment and demonstrate operation to Owner.
   1. Pool covers.
   2. Pool vacuum.

3.4 INSTALLATION OF SAFETY SIGNS

A. Install signs with stainless steel expansion anchors and finishing hardware in locations indicated.

3.5 INSTALLATION OF SAFETY EQUIPMENT

A. Install body hook and ring buoy in locations indicated by Owner.

B. Assemble all components of slope break lane float line and attach to appropriate rope anchors.

C. Assemble all components of disabled access lift and place on pool deck to demonstrate operation to Owner.

D. Assemble all components of lifeguard chair and place on pool deck in location indicated by Owner.

END OF SECTION

SECTION 13 11 15

POOL MECHANICAL EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes pool mechanical equipment, piping, valves, and fittings.

1.3 SUBMITTALS

A. Product Data: Submit for all products listed in this Section.

B. Shop Drawings: Submit equipment room plumbing plan and elevations if proposed filter manifold locations vary from locations shown on drawings.

C. Valve Sequencing Chart: Submit chart for approval after completing pool start-up and adjusting all systems.

D. Operation and Maintenance Instructions: Submit for filters, heaters, circulation pumps, chemical controllers, chemical feed pumps, and make-up water valve.

1.4 QUALITY ASSURANCE

A. All mechanical equipment shall be certified to meet NSF (National Sanitation Foundation) Standard 50 requirements.

B. Install piping in accordance with AWWA (American Water Works Association) Manual 23.

PART 2 - PRODUCTS

2.1 ACID FEED PUMP

A. Pump: Peristaltic action pump capable of producing 25 feet of suction lift with mechanical feed rate control, on-off switch, plastic housing, injection fitting, weighted suction line strainer, and wall mounting bracket.

B. Liquid End: Materials shall be suitable for the delivery of hydrochloric acid with connections for 3/8 inch tubing.

C. Performance: 85 gallons per day maximum output, 25 pounds per square inch minimum injection pressure, and 120 volt power connection.

D. Model #85M5 manufactured by Stenner Pump Company.

2.2 ACID STORAGE TANK

A. Seamless polyethylene double wall construction, 16 inch airtight sealed manway, 52 inch diameter, 56 inch height, and 350 gallon capacity.

B. Bulkhead Fittings: All penetrations shall be on top of tank through PVC compression fittings with viton gaskets. Provide 1-1/2 inch bulkhead fitting with 90 degree female cam action coupler and airtight plug for filling, 2 inch fitting for level gauge, 1 inch fitting for vent pipe, and three 3/8 inch fittings for chemical pump suction lines.

C. Model #TC5256DC with FA and GB Series (Banjo) fittings manufactured by Chem-Tainer Industries.

2.3 CHEMICAL CONTROLLER

A. Integrated microprocessor based controller to continuously monitor pH, ORP, PPM, temperature, flow, surge chamber water level, and control feeders for sodium hypochlorite and muriatic acid. Assembly shall have the following:

1. Controls: Sealed glass pH electrode, sealed platinum ORP electrode, solid state PPM sensor, temperature sensor, sensor cell assembly with rotary flow switch, flow meter, y-strainer and digital readout indicating pH, ORP, PPM, temperature, and flow. Controls shall be accessible by push-button menu keys with set level from 0 to 14 for pH and 0 to 10 PPM for chlorine. Controller shall have RS-232 communication port for remote data downloading, flow sensor input for flow monitoring and water level sensor with automatic fill valve control.
2. Circuitry: 115 volt power connection with 2 outputs of 5 amps each for chemical feeders.
3. Housing: Acrylic or fiberglass enclosure.

B. Model #PC3000 with optional PPM sensor manufactured by Chemtrol.

2.4 CHEMICAL TANK LEVEL GAUGE

A. Double plastic dome and nut assembly, gasket, 2 inch threaded bushing, polyethylene indicator tube with tank level in 1/8 increments, polyethylene float with plastic rod assembly. All internal tank parts shall be suitable for use with muriatic acid and sodium hypochlorite, and manufactured from plastic.

B. Manufactured by Krueger Sentry Gauge.

2.5 CHLORINE FEED PUMP

A. Pump: Peristaltic action pump capable of producing 25 feet of suction lift with mechanical feed rate control, on-off switch, plastic housing, injection fitting, weighted suction line strainer, and wall mounting bracket.

B. Liquid End: Materials shall be suitable for the delivery of sodium hypochlorite with connections for 3/8 inch tubing.

C. Performance: 120 gallons per day maximum output, 25 pounds per square inch minimum injection pressure, and 120 volt power connection.

D. Model #170DM4 manufactured by Stenner Pump Company.

2.6 CHLORINE STORAGE TANK

A. Seamless polyethylene double wall construction, 16 inch airtight non-vented manway, 59 inch diameter, 71 inch height, and 500 gallon capacity.

B. Bulkhead Fittings: All penetrations shall be on top of tank through PVC compression fittings with viton gaskets. Provide 2 inch bulkhead fitting with 90 degree male cam action coupler and airtight cap for filling, 2 inch fitting for level gauge, 1 inch fitting for vent pipe, and 3/8 inch fitting for chemical pump suction line.

C. Model #TC5971DC with FA and GB Series (Banjo) fittings manufactured by Chem-Tainer Industries.

2.7 CIRCULATION PUMP

A. Type: Horizontal, close coupled, end suction centrifugal pump, bronze fitted with cast iron volute, replaceable bronze wear rings, enclosed bronze impeller, leakless mechanical seal, and fuse coated cast iron wetted surfaces. 5 inch suction and 4 inch discharge with 125# ANSI flanges. Pump shall be certified to meet NSF Standard 50 requirements.

B. Motor: Premium efficiency, 93 percent minimum, 1760 rpm, 20 hp, 480 volt, 3 phase, 60 hertz, 1.15 service factor, inverter rated and TEFC enclosure.

C. Performance: 850 gpm @ 65 feet of head with 81 percent efficiency, and13.6 feet NPSHR.

D. Model 40957 LC manufactured by Paco Pumps.

2.8 CIRCULATION PUMP REDUCER COUPLING

A. Stainless steel body with 125# ANSI flanged ends, 50 pounds per square inch operating pressure, eccentric type at pump suction and concentric type at pump discharge.

B. Manufactured by Aquify Systems.

2.9 CIRCULATION PUMP STRAINER

A. Stainless steel body, straight type with 6 inch flanged ends, 1 inch thick transparent acrylic lid, stainless steel toggle bolts with fiberglass hand knobs, bottom drain connection, pressure sensors, and stainless steel strainer basket with 5/32 inch perforations..

B. Provide 1 additional strainer basket.

C. Model #STR-0606-SS4 manufactured by Aquify Systems.

2.10 FILTER

A. Regenerative media type with NSF 50 listing for flow of 1.5 gallons per minute per square foot of filter area. System shall have 1 tank with a total filter area of 700 square feet and the following components:

1. Tank: Fiberglass tank designed for seismic installation, 42 inch diameter, 76.5 inch height with manhole access. Tank shall be designed for a working pressure of 50 pounds per square inch.
2. Components: Flexible tube filter elements with high strength polyester braid outer wall and stainless steel spring supported by a stainless steel tube sheet and lift shaft. System shall include a pneumatically operated bump mechanism to dislodge the media and recoat filter elements, vacuum transfer system to recharge media, all necessary pneumatic butterfly valves for operation, sight glass, drain valve, 10 inch influent check valve, and air compressor.
3. Automatic Controller: System operation including filtration and regeneration cycles shall be automatically controlled with a programmable micro processor capable of the following functions:
    a. Bump cycle either manual or automatic
    b. Precoating of the filter elements.
    c. Stopping and starting of the circulation pump.
    d. Opening and closing of pneumatically operated valves.
    e. Vacuum transfer system.
    f. Heater cool down delay.
    g. Auxiliary contacts to interlock chemical control or other equipment.
    h. Keyed switch to activate bump cycle.
    i. LCD panel display with system operating status and graphics.
    j. Remote monitoring and control.

B. Media: Tank shall have the manufacturer's recommended amount of expanded perlite with a median particle size of 37 microns and 8 to 25 percent retained on a Tyler 150 Mesh. Media shall be Celaperl 1000 by EP Minerals and six additional charges of media shall be provided.

C. Model # PMF-42-700-FRP manufactured by Aquify Systems.

2.11 FLOOR INLET

A. Cycolac body, 5 inch diameter, 2 inch solvent weld connection, and adjustable internal spinner valve disc with stainless steel screw.

B. Model #8417-0000 manufactured by Sta-Rite Industries.

2.12 FLOW METER – CHEMICAL BYPASS

A. Battery powered flow meter with digital display, display averaging, ±0.5 percent accuracy, wall mounted, and paddle wheel flow sensor with PVC pipe saddle.

B. Model #8150 and #515 manufactured by Signet.

2.13 FLOW METER – HEATER BYPASS

A. Battery powered flow meter with digital display, display averaging, ±0.5 percent accuracy, pipe mounted, and paddle wheel flow sensor with PVC pipe saddle.

B. Model #8150 and #515 manufactured by Signet.

2.14 FLOW METER – UV BYPASS

A. Battery powered flow meter with digital display, display averaging, ±0.5 percent accuracy, pipe mounted, and paddle wheel flow sensor with PVC pipe saddle.

B. Model #8150 and #515 manufactured by Signet.

2.15 FLOW SENSOR

A. Magnetic flow sensor with digital display, corrosion resistant enclosure, 4 to 20 mA 4-wire output, 0.15 to 33 feet per second range, ±1 percent accuracy, 24 volt power supply, and PVC pipe saddle or tee.

B. Model #2551 manufactured by Signet.

2.16 GAUGES

A. Pressure Gauge: Pressure Gauge: Polished stainless steel case, aluminum face, 1/4 inch NPT brass bottom connection, bronze tube, 0-60 psi scale range, ±1 percent accuracy, and 2.5 inch diameter acrylic face.

B. Vacuum Gauge: Polished stainless steel case, aluminum face, 1/4 inch NPT brass bottom connection, bronze tube, 0-30 inches of mercury scale range, ±1 percent accuracy, and 2.5 inch diameter acrylic face.

C. Model D80 manufactured by Trerice.

2.17 HEATER

A. General: Indoor heater designed for swimming pool heating applications and natural gas operation. Sealed combustion type using stainless steel burners, cupronickel finned tubing, bronze header, stainless steel condensing heat exchanger, cupronickel indirect heat exchanger, ASME pressure relief valve, slow opening diaphragm gas valve, pressure regulator, blower assembly with pressure switch to control gas/air ration, hot surface ignition, bronze boiler pump, bronze indirect pump, temperature gauges, pressure gauge, flow switch, and enclosed in a galvanized steel outer jacket. AGA design certifications for a minimal thermal efficiency of 96 percent and low NOx rating meeting SCAQMD Rule 1146.2.

B. Controls: Front mounted control panel with plug-in electrical components, LCD display, diagnostic information center with system alerts, built-in circuit breaker, and meet California Code.

C. Performance: Gross input 1,500,000 BTU/hr with gross output 1,455,000 BTU/hr at sea level.

D. Model #XTherm Indirect 1505A manufactured by Raypak.

2.18 HEATER VENT – CATEGORY IV

A. Schedule 40 PVC pipe and fittings, ASTM D1785, designed to exhaust all flue gasses to outside with condensation in the vent, and UL listed for Category IV appliances. Provide with rain cap and necessary supports.

B. Manufactured by Apache, Harvel Plastics or Spears Manufacturing.

2.19 MAIN DRAIN GRATE

A. Fiberglass sump with 10” pipe connection, PVC grate, 18 by 36 inches with stainless steel anchoring screws, white color, 62% open area, 25 year life, and certified flow rate of 2,480 gallons per minute.

B. Model #DalMAX-SG-183628 manufactured by Daldorado.

2.20 PIPE HANGERS AND SUPPORTS

A. Steel pipe hangers, supports, brackets and clamps shall be designed and manufactured in accordance with MSS (Manufacturers Standardization Society) SP58. Hangers shall be hot dip galvanized after fabrication in accordance with ASTM A123. All hanger hardware shall be hot dip galvanized or stainless steel. Provide means of preventing dissimilar metal contact such as plastic coating, isolation tape or felt.

B. Manufactured by Eaton B-Line or Unistrut.

2.21 PIPE SLEEVE – FIRE RATED

A. Fire resistant sleeve system for PVC pipe penetrations, UL listed with 1 hour minimum rating, steel metal support clips, foil faced intumescent wrap strip, and silicone sealant.

B. Model #C-AJ-2002 manufactured by 3M Fire Protection Products.

2.22 POOL PIPING

A. PVC Pipe: ASTM (American Society for Testing and Materials) D1785, Schedule 80.
   1. Fittings: ANSI (American National Standards Institute)/ASTM D2467, PVC.
   2. Joints: ASTM D2855, solvent weld.

B. Manufactured by Apache, Harvel Plastics or Spears Manufacturing.

2.23 POOL PIPING – HEATER BYPASS

A. CPVC Pipe: ASTM F441, Schedule 80.
   1. Fittings: ANSI/ASTM F439, CPVC.
   2. Joints: ASTM D2855, solvent weld.

B. Manufactured by Apache, Harvel Plastics or Spears Manufacturing.

2.24 PVC WATERSTOP

A. Fabricated from Type 1 PVC sheet conforming to ASTM 1784, 1/2 inch thick minimum with a diameter 4 inches larger than outside diameter of pipe. A one-piece Class 150 PVC flange with the pipe stop removed can also be used.

B. Manufactured by Apache, Harvel Plastics or Spears Manufacturing.

2.25 UV SYSTEM

A. HDPE reactor chamber with quartz glass sleeve, 240 volt, single phase, electronic ballasts, four 320 watt UV-C lamps, 6 inch flange connections, and NSF 50 certified for 566 gallon per minute flow.

B. Model #CLP64A8-XN manufactured by Pentair Pool Products.

2.26 VALVE – BALL

A. PVC body and ball, full line size, double lever handle, double union with socket ends, viton seals, teflon seats, pressure rating of 150 pounds per square inch at 70 degrees F.

B. Manufactured by Asahi/America or Spears Manufacturing Company.

2.27 VALVE – BUTTERFLY

A. PVC wafer body, full line size, EPDM liner, stainless steel shaft, PVC disc, gear operators for 8 inch and larger, lever operators for 6 inch and smaller, and pressure rating of 150 pounds per square inch at 70 degrees F.

B. Manufactured by Asahi/America or Spears Manufacturing Company.

2.28 VALVE – CHECK

A. Ductile iron body, fully lined with EPDM liner, dual stainless steel discs, cast iron wafer alignment body, full line size, pressure rating of 150 pounds per square inch at 70 degrees F. Series 800 manufactured by Center Line.

B. Diameter 2 inch and Below: PVC body and ball, full line size, double union with socket ends, viton seals and seats, and pressure rating of 150 pounds per square inch at 70 degrees F. Manufactured by Asahi/America, Hayward Industrial Products or Spears Manufacturing Company.

2.29 VALVE - MAKE UP WATER

A. 2-way slow closing solenoid valve with brass body, normally closed, NEMA 4X coil, voltage as required, PTFE seals, 2 inch threaded end connections, and pressure rating of 125 pounds per square inch at 155 degrees F.

B. Model #8221G013, manufactured by Asco.

2.30 VARIABLE FREQUENCY DRIVE

A. Rating horsepower and voltage as required for circulation pump, variable torque, 14 to 122 degree F ambient operating temperature, alphanumeric backlit display keypad, 4-20 milliamp signal input, sinusoidal PWM output with voltage vector control, internal time clock, oversized NEMA 4 enclosure with temperature controlled cooling fans. Protective functions shall include over current, over voltage, under voltage, motor overload, low overload, drive fault, ground fault, over temperature, and line surge.

B. Provide fused disconnect, built-in motor starter and four position drive/off/bypass/test switch. The VFD shall provide 2 user programmable relays with 75 selectable functions. Two form ‘C’ 230VAC/2A rated dry contact relay outputs shall be provided. Program one relay as Pump Run for other equipment control.

C. Model Acu Drive XS, manufactured by Pentair Pool Products.

2.31 WATER HAMMER ARRESTOR

A. Stainless steel construction, bellows type to PDI WH-201, pre-charged suitable for operation in temperature range - 33 to 300 degrees F and maximum 125 psi working pressure.

B. Model #Z1700-600, manufactured by Zurn Industries.

PART 3 - EXECUTIONS

3.1 PIPING AND FITTING INSTALLATION

A. Install piping in accordance with AWWA Manual 23.

B. Install piping to conserve space, not interfere with use of space and other work. Route piping in orderly manner, and maintain gradient. Group whenever practical at common elevations.

C. Install plastic slip-on labels or tape with pressure-sensitive adhesive and 1 inch high letters. Label "GUTTER DRAIN", "MAIN DRAIN", "BACKWASH", "POOL DRAIN", "CHEMICAL BYPASS", “HEATER BYPASS”, “UV BYPASS” and "POOL RETURN" lines for each pool. Indicate flow direction with 3 inch long arrows at 10 foot maximum intervals.

D. Install hangers or floor supports at 8 foot maximum intervals and as necessary to prohibit pipe vibration. Provide transverse and longitudinal bracing for seismic installation per SMACNA (Sheet Metal Air Conditioning Contractors National Association).

E. Support piping adjacent to pump such that no weight is carried on pump casings. For close coupled or base mounted pumps, provide supports under elbows on pump suction and discharge line sizes 4 inches and over.

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

G. Install valves with easy access to operators and clear line of sight to position indicators. Install check valves with 5 diameters of straight pipe upstream according to manufacturer's instructions.

H. Use fittings of larger pipe size when joining different size pipes.

I. Install pool fittings flush with adjacent finish surfaces.

J. Install PVC waterstop at center of slab or wall thickness and solvent welded in place to pipe.

3.2 MECHANICAL EQUIPMENT INSTALLATION

A. Install equipment in accordance with manufacturer's instructions.

B. Anchor pool mechanical equipment to concrete with stainless steel expansion anchors. Provide size and number as indicated for seismic installation.

C. Install close coupled and base mounted pumps on concrete base with anchor bolts, set level, and grout in place.

D. Bond each heater, filter tank, circulation pump, and UV system to the pool shell reinforcing steel.

E. Pipe heater pressure relief valve line to floor sink.

F. Install flow meter sensor with 15 diameters of straight pipe upstream and 5 diameters downstream according to manufacturer's instructions.

G. Install plastic nameplates or labels with pressure-sensitive adhesive. Label the following:

1. Acid Tank – "350 GALLONS - DILUTED MURIATIC ACID - 7% HCL MAXIMUM" in 1 ½ inch high text.
2. Chlorine Tank – "500 GALLONS – 12.5% SODIUM HYPOCHLORITE" in 1 ½ inch high text.
3. "CHEMICAL CONTROLLER – "850 GPM" in ¼ inch high text.
4. "ACID FEED PUMP" in ½ inch high text.
5. "CHLORINE FEED PUMP" in ½ inch high text.
6. "CHEMICAL BYPASS FLOW METER" in ½ inch high text.
7. "HEATER BYPASS FLOW METER" in ½ inch high text.
8. "UV BYPASS FLOW METER" in ½ inch high text.
9. "ULTRA VIOLET" in ½ inch high text.
10. "VARIABLE FREQUENCY DRIVE" in ½ inch high text.

3.3 FIELD TESTS

A. Pressure Tests: Hydrostatically test all buried water piping systems prior to backfilling from inside of pool shell to inside of equipment room.

B. Buried Piping: Flush piping to clean and remove all air and test at a pressure of 80 psi. Install hose bibb at each end of system and calibrated test gauge to observe any loss of pressure. Close off system and retain required test pressure for one hour minimum and inspect all joints and connections for leakage. Repair all leaks by removing and replacing failed joints with new solvent welded fittings, and repeat test until all leakage has been stopped. Maintain a pressure of 40 psi in all lines throughout the remaining construction period.

3.4 VALVE SEQUENCING CHART

A. Tag and number all manual valves with plastic plates or brass attached to valve body with chain.

B. Provide 8 1/2" x 11" minimum chart with each valve number, description of valve, and valve position required for each of the following:

1. Normal pool operation.
2. Filter backwash.
3. Draining pool.
4. Manual pool water fill.

C. List key pool data on chart including surface area, volume and turnover rate.

D. Laminate chart to rigid backing and mount to wall in equipment room.

E. Include copy of chart with operation and maintenance manual.

END OF SECTION

SECTION 13 11 16

POOL SYSTEMS START-UP

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes start-up procedures for all pool systems and instruction of Owner's personnel on operation and maintenance of all pool systems.

1.3 SUBMITTALS

A. Reports: Submit results of water analysis, manufacturer’s start-up certificates, and swimming pool survey.

1.4 SWIMMING POOL SYSTEMS START-UP

A. Provide seven days notification prior to starting pool systems.

B. Ensure that each piece of equipment and system is ready for operation. Do not plaster and fill pool until all mechanical systems are operational.

C. Execute start-up in accordance with manufacturers' instructions.

D. Fill pool slowly with domestic water and protect finishes from damage. Add sufficient sequestering agent to pool water to reduce reaction of metal ions with chlorine. Follow manufacturer’s instructions for product use.

E. Provide complete domestic water analysis to determine quantities and types of chemicals necessary to maintain pool water within the following levels:

1. pH: 7.2 to 7.6.
2. Alkalinity: 80 to 100 ppm.
3. Calcium hardness: 200 to 400 ppm.
4. Chlorine: 1.5 to 2.0 ppm.
5. Total dissolved solids: 300 to 1,000 ppm.

F. Provide all chemicals and balance water immediately after initial pool filling and until project completion and acceptance by the Owner.

G. Start up the entire pool system and operate all components for 7 consecutive days minimum and until project completion and acceptance by the Owner. Start-up will include all equipment required for proper operation of the pool and the following.

1. Periodically clean pump strainer until no further accumulation of debris occurs.
2. Add chemicals as required for acceptable water quality.

3. Adjust all safety and automatic controls for proper operation and sequence.
4. Immediately repair and correct all deficiencies during the operational test and continue the test until 7 days of satisfactory performance has occurred without any defects.

H. After successful conclusion of operational testing, clean strainers, backwash filter media, and leave the entire pool systems ready for use.

1.5 OPERATING INSTRUCTIONS

A. Provide instruction and demonstrate use and operation of the following equipment by the manufacturer's representative. Provide certificate from manufacturer's representatives that equipment and systems are adjusted and operating properly.
1. Filter system: Set filter controller and pneumatic valves for proper operation. Set variable frequency drive to maintain constant flow rate as indicated based on milliamp signal from flow meter. Set drive for proper flow rates during filter bump and pre-coat operations.
2. Heating system: Heater shall be adjusted for proper operation after pool temperature reaches 82 degrees. Instruct Owner on heater cool down requirements for filter backwash operation.
3. Chemical controller and chemical feed pumps: Set controller bypass loop valves for proper flow rate across probes. Set feed pump output rates for proper operation with controller. Instruct Owner on controller programming, probe maintenance, and demonstrate flow switch feed pump safety interlock.
4. Circulation pump variable frequency drive: Set drive to maintain constant flow rate as indicated based on milliamp signal from flow meter. Set the motor full load amp rating as the limiting factor for pump operation.

B. Provide instruction and demonstrate operation of entire pool mechanical system by Contractor. Review valve sequencing chart and proper valve positioning for normal operation, filter backwash, pool draining, and manual pool water fill. Restrict main drain valve for 80% flow (1/8 inch water depth) over gutter during normal operation. Set pool fill system surge chamber sensor to the level indicated on the drawings.

1.6 POOL SURVEY

A. Provide survey of completed Swimming Pool shell to verify length, depth and gutter lip elevations indicated. Survey to be prepared by a California licensed surveyor and include the following:
1. Competitive swimming length at each lane.
2. Pool water depth at shallow end, slope break and deep end along both sides of pool.
3. Gutter lip elevation at each corner of pool and midpoint of each wall.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTIONS

NOT USED

END OF SECTION

SECTION 13 11 17

POOL ELECTRICAL

GENERAL PROVISIONS

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment, facilities, transportation and services necessary for and incidental to performing all operations in connection with furnishing, delivery and installation of the work of this Section, complete, as shown on the drawings and/or specified herein. Work includes, but is not necessarily limited to, the following:

B. Examine all other sections for work related to those other sections and required to be included as work under this section.

C. General provisions and requirements for electrical work.

1.2 SUBMITTALS

A. General
1. Review of contractor's submittals is for general conformance with the design concept of the project and general compliance with the information given in the contract documents. Any action shown is subject to the requirements of the plans and specifications. Contractor is responsible for quantities; dimensions which shall be confirmed and correlated at the job site; fabrication processes and techniques of construction; coordination of work with that of all other trades and satisfactory performance of their work.
2. The Contractor shall review each submittal in detail for compliance with the requirements of the contract documents prior to submittal to the Architect.
3. Where the construction documents indicate specific manufacturer(s) for any given product, it shall be considered a substitution if the contractor proposes to use any manufacturer other than those specifically named and be subject to engineer approval.

B. The Contractor shall be responsible for incidental, direct and indirect costs resulting from the substitution of specified contract materials or work.

C. Maintenance and Operating Manuals
1. The Contractor shall furnish three copies of typewritten maintenance and operating manuals for all electrical equipment, fire alarm equipment,

sound system equipment, etc., to the City and instruct City's personnel in correct operation of all equipment at completion of project.

2. Where these specifications indicate to provide District personnel with instructional training sessions, the Contractor shall videotape all such instructional sessions. The Contractor shall provide all equipment and personnel required to create a color VHS video and audio recording and shall turn over to the City a total of two (2) copies of each tape prepared.
3. Maintenance and operating manuals shall be bound in three-ring, hard-cover, plastic binders and shall be delivered to the City with letter of transmittal, carbon copy to the Architect.

D. Portable or Detachable Parts: The Contractor shall retain in his possession, and shall be responsible for all portable and detachable parts or portions of the installation such as fuses, keys, locks, adapters, locking clips, and inserts until final completion of contract work. These parts shall then be delivered to the Owner or his authorized representative and an itemized receipt obtained, with copies of receipt sent to the Architect.

E. Record Drawings
1. Provide and maintain in good order at the job site a complete set of electrical contract prints. Changes to the contract to be clearly recorded on this set of prints. At the end of the project, the Contractor shall transfer all changes to one set of plans to be delivered to the Architect.
2. The actual location and elevation of all buried lines, boxes, monuments, vaults, stub-outs and other provisions for future connections shall be referenced to the building lines or other clearly established base lines and to approved bench marks.
3. The Contractor shall keep the "record" prints up to date and current with all work performed.
4. A mandrel shall be pulled through each conduit upon completion of the duct bank.

1.3 GENERAL SUMMARY OF ELECTRICAL WORK

A. The specifications and drawings are intended to cover a complete installation of systems. The omission of expressed reference to any item of labor or material for the proper execution of the work in accordance with present practice of the trade shall not relieve the Contractor from providing such additional labor and materials.

B. Refer to the drawings and shop drawings of other trades for additional details which affect the proper installation of this work. Diagrams and symbols showing electrical connections are diagrammatic only. Wiring diagrams do not necessarily show the exact physical arrangement of the equipment.

C. Before submitting a bid, the Contractor shall familiarize himself with all features of the building drawings and site drawings which may affect the execution of the work. No extra payment will be allowed for failure to obtain this information.

D. If there are omissions or conflicts between the drawings and specifications, clarify these points with the Architect before submitting bid.

1.4 LOCATIONS OF EQUIPMENT

A. The drawings indicate diagrammatically the desired locations or arrangements of conduit runs, outlets, equipment, etc., and are to be followed as closely as possible. Proper judgment must be exercised in executing the work so as to secure the best possible installation in the available space and to overcome local difficulties due to space limitations or interference of structure conditions encountered.

B. Where outlets are placed on a wall, locate symmetrically with respect to each other and other features or finishes on the wall.

C. In the event changes in the indicated locations or arrangements are necessary, due to developed conditions in the building construction or rearrangement of furnishings or equipment, such changes made without cost, providing the change is ordered before the conduit runs, etc., and work directly connected to same is installed and no extra materials are required.

D. Lighting fixtures in mechanical spaces are shown in their approximate location only. Do not install light outlets or fixtures until mechanical piping and duct work is installed, then install lights in a location to provide best lighting.

E. The locations of existing utilities, building, equipment and conduit shown on the drawings is approximate. Verify exact locations and routing of existing systems in the field. Include all costs in contract price for adjustment required to accommodate existing conditions.

F. Coordinate and cooperate in every way with other trades in order to avoid interference and assure a satisfactory job.

1.5 POOL MECHANICAL EQUIPMENT WIRING

A. Provide electrical work, materials, and control components required for proper operation of the pool mechanical systems.

1.6 QUALITY ASSURANCE

A. Work and materials in full accordance with the latest rules and regulations of the California Code of Regulations Title 24, Part 3 "California Electrical Codes", Title 8 "Division of Industrial Safety" the National Life Safety Code, and other applicable Federal and State laws and regulations.

B. All material and equipment shall be new and shall be delivered to the site in unbroken packages. All material and equipment shall be listed and labeled by Underwriters Laboratories or other recognized testing laboratories, where such

listings are available. Comply with all installation requirements and restrictions pertaining to such listings.

C. Work and material shown on the drawings and in the specifications is new and included in the contract unless specifically indicated as existing or N.I.C. (not-in-contract).

D. Keep a copy of all applicable codes available at the job site at all times while performing work under this section. Nothing in plans or specifications shall be construed to permit work not conforming to the most stringent of codes.

1.7 CLEANING EQUIPMENT, MATERIALS, PREMISES

A. All parts of the equipment shall be thoroughly cleaned of dirt, rust, cement, plaster, etc., and all cracks and corners scraped out clean. Surfaces to be painted shall be carefully cleaned of grease and oil spots and left smooth, clean and in proper condition to receive paint finish.

1.8 JOB CONDITIONS - PROTECTION

A. Protect all work, materials and equipment from damage from any cause whatever and provide adequate and proper storage facilities during the progress of the work. All electrical equipment shall be stored in a weather-tight structure. Provide for the safety and good condition of all the work until final acceptance of the work by the Owner and replace all damaged or defective work, materials and equipment before requesting final acceptance.

1.9 CUTTING AND PATCHING

A. Perform cutting and patching of the construction work which may be required for the proper installation of the electrical work. Patching shall be of the same material, thickness, workmanship and finish as existing and accurately match surrounding work to the satisfaction of the Architect. Cutting of structural members shall not be done without notifying the Architect and obtaining their approval.

1.10 IDENTIFICATION

A. Panelboards, terminal cabinets, circuit breakers, disconnect switches, starters, relays, time switches, contactors, pushbutton control stations, and other apparatus used for the operation or control of feeders, circuits, appliances, or equipment shall be properly identified by means of descriptive nameplates or tags permanently attached to the apparatus and wiring.

B. Nameplates shall be engraved laminated phenolic. Attachment to equipment shall be with metal fasteners or adhesive.

C. Plates: All cover and device plates shall be furnished with labels under any one of the following conditions:
1. Three gang or larger gang switches.
2. Keyed and/or locking switches.
3. Pilot light switches.
4. Switches in locations from which the equipment or circuits controlled cannot be readily seen.
5. Manual motor starting switches.
6. Switches which serve other than lighting loads.
7. Where so indicated on the drawings.
8. As required on all control circuit switches, such as heater controls, etc.
9. Where receptacles are other than standard duplex receptacles to indicate voltage and phase.

D. Provide black-on-white laminated plastic nameplates engraved in minimum 1/4" high letters to correspond with the designations on the drawings. Provide other or additional information on nameplates where indicated.

E. Cardholders and cards shall be provided for circuit identification in panelboards. Cardholders shall consist of a metal frame retaining a clear plastic cover permanently attached to the inside of panel door. List of circuits shall be typewritten on card.

F. Junction and pull boxes shall have covers marked with circuit numbers according to panel schedule. Data shall be lettered in a conspicuous manner with a color contrasting to finish.

G. Miscellaneous Electrical Equipment: Identify individually mounted starters, transformers, pullboxes, junction boxes, and related items as required by the use of such equipment with plates as for panelboards. All junction boxes shall be marked to indicate panel of origin and circuit numbers within the box.

1.11 SERIES RATED EQUIPMENT

A. Circuit protective devices identified as "Series Rated" or "Current Limiting" (i.e., CLCB - current limiting circuit breaker; CLF - current limiting fuse; etc.) shall be series rated and tested (UL 489 and CSA5) by the manufacturer with all equipment and circuit protective devices installed down stream of the identified series rated or current limiting devices.

1.12 SPARE FUSES

A. Provide (3) three spare fuses for each size and type to match the installed fuses where the fuses are provided as part of the contract.

1.13 WALL MOUNTED ELECTRICAL EQUIPMENT

A. Provide multiple horizontal sections of metal “C” channels for support and attaching wall mounted equipment to walls. Channels shall provide “turned lips” at longitudinal edges to hold “lock-in” fasteners and shall comply with ANSI-1008 and ASTM-A569 latest revision. The channels shall be steel hot dip zinc galvanized. As manufactured by Unistrut or Kindorf.

B. The “C” channels shall be positioned horizontally within 3 inches of the top and bottom of each, equipment section cabinet and located behind each equipment vertical section. Provide additional intermediate “C” channels at not less than 36 inches on center between the “top” and “bottom” “C” channel positions, located behind each equipment vertical section.

C. The “C” channels shall be of sufficient length to provide connection to not less than two (2) vertical structural wall framing elements separated by not less than 16 inches; but in no case shall the “c” channel length be less than the width of the respective equipment section.

D. Attach the “C” channels to the wall structural elements after the wall, finish surface, installation (including painting) is complete.

E. Attach the “C” channels with fasteners to the building wall framing structural elements as follows: welded to steel framing; bolted to wood framing; cast in place concrete inserts for masonry and concrete construction; drilled “afterset” expansion anchors for existing masonry and concrete construction.

F. Attach the equipment to the “C” channels with threaded and bolted fasteners to “prelocate” and lock into the channel “turned lips” and channel walls.

1.14 ELECTRICAL WORK CLOSEOUT

A. Prepare the following items and submit to the Architect before final acceptance.
   1. Copy of local and/or state code enforcing authorities final inspection certificates.
   2. Copy of as-built record drawings as required under the General Conditions, pertinent Division One Sections and Electrical General Provisions.
   3. Copy of all receipts transferring portable or detachable parts to the Owner when requested.
   4. Notify the Architect in writing when installation is complete and that a final inspection of this work can be performed. In the event any defect or deficiencies are found during this final inspection they shall be corrected to the satisfaction of the Architect before final acceptance can be issued.

B. The Contractor shall complete the following work before any electrical equipment is energized:
   1. All equipment shall be permanently anchored.
   2. All bus connections shall be tightened per manufacturer's instructions.

3. All ground connections shall be completed and identified. Perform and successfully complete all required megger and ground resistance tests.
4. All feeders shall be connected and identified.
5. The interiors of all electrical enclosures including busbars and wiring terminals shall be cleaned of all loose material and debris, paint, plaster, cleaners or other abrasive's overspray removed and equipment vacuumed clean.
6. All dry wall work and painting shall be completed within the electrical rooms.
7. All doors to electrical equipment rooms shall be provided with locks in order to restrict access to energized equipment.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTIONS (NOT USED)

RACEWAY AND WIRING

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. This section includes general requirements for raceways and wiring materials and methods of installation.

1.2 REFERENCES

A. Standards of manufacture: Conductors and raceways shall be UL-listed.

1.3 SEQUENCING AND SCHEDULING

A. Installation of conduit and wiring shall be coordinated with the work of other trades, specifically structural components, piping and duct work.

PART 2 – PRODUCTS

2.1 CONDUIT

A. Rigid Metallic Conduit (RMC): Unless otherwise indicated, all RMC shall be steel of standard iron pipe size with screwed joints for electrical raceway use. Finish shall be zinc-coated (galvanized) applied by hot-dipping or sherardizing.

B. Intermediate Metallic Conduit (IMC): See requirements above for RMC.

C. Electrical Metallic Tubing (EMT): EMT shall be zinc-coated and is approved in sizes through 2" nominal.

D. Rigid Non-Metallic Conduit (RNMC): All RNMC conduit shall be the following:
1. Schedule 40, rigid heavy wall polyvinyl chloride (PVC).

E. Flexible Metallic Conduit (Flex): Flex shall be either galvanized steel in exposed locations or aluminum where concealed and not subjected to damage. Flex is to be used only in dry locations.

F. Liquid-Tight Flexible Metallic Conduit (Liquid-Tight): Liquid-tight conduit shall be made up of interlocking steel spirals with a copper bonding tape and overall jacket of flexible PVC or other non-conducting moisture and oil-resistant jacket.

2.2 CONDUIT FITTINGS

A. General: All metallic conduit connectors shall incorporate an insulated throat bushing.

B. RMC, IMC: Fittings shall be galvanized malleable iron or copper-free cast aluminum (dry locations only). Unless otherwise approved, all fittings shall be threaded using standard NPT threads.

C. EMT: Fittings shall be galvanized malleable iron or stamped steel and made especially for the purpose. In dry locations, cast aluminum fittings may be used. In wet locations, compression fittings shall be used. Neither indenting type nor so-called "competitive" fittings shall be used.

D. Flex: Fittings shall be galvanized malleable iron or stamped steel, squeeze type. No fittings that thread into the cut end of flex will be approved.

E. Liquid-Tight: Fittings shall be galvanized malleable iron or stamped steel. Fittings shall provide positive seal against entrance of liquids by incorporating a nylon sealing ring and compression nut. Grounding and security against pullout shall be assured by a grounding ferrule, which is threaded into the conduit and seats tightly against the connector shoulder when the fitting is tightened.

F. RNMC: Fittings shall be applied by solvent welding, approved adhesive, heat-shrink sleeve or heat fusion as required by the Manufacturer and approval/listing agency. No internal beads or burrs shall remain after joining unless the bead can be shown to be smooth and will not impede installation of conductors.

2.3 WIRES AND CABLES

A. Conductor Material: Unless specifically noted or approved otherwise, all conductors shall be 100% IACS conductivity annealed copper. Conductors smaller than #10 AWG shall be solid. Conductors larger than #8 AWG and all conductors used for control circuit wiring shall be concentric lay stranded.

B. Building Wire and Cable (through 600 V): Building wire shall be used for branch circuit and control wiring. Insulation shall be Type THWN unless approved otherwise. Minimum size for branch circuit wiring shall be #12 AWG.

C. Grounding Conductors: Grounding conductors shall be copper. Annealed solid conductors may be used in sizes to #6 AWG unless indicated otherwise.

D. Connections and Terminations: All connections and terminations shall be made with solderless splicing devices, mechanical lugs or compression connectors.
   1. Power system conductors, #8 AWG and larger shall use properly sized mechanical lugs or compression fittings.
   2. Power system conductors #10 AWG and smaller shall be spliced using solderless splicing connectors utilizing a tension spring to maintain pressure on conductors. Fixed spring type twist-on connectors shall be used only for fixture connections. Terminations shall be made to mechanical lugs or screws and clamps on wiring devices.

PART 3 – EXECUTION

3.1 GENERAL

A. All conductors shall be installed in raceways.

3.2 EXAMINATION

A. Conduits and Fittings: Sections of galvanizing damaged during shipment and handling shall be heavily coated with cold galvanizing spray prior to installation. All RMC conduit threads shall be cut with a die having standard electrical thread taper of 3/4" per foot.

B. Wire and Cable: Conductors and cables shall be checked prior to and during installation to assure that the insulation is intact and not damaged.

3.3 PREPARATION

A. Conduit: All runs of conduit shall be clear of obstructions and adequately secured prior to beginning installation of conductors. All conduits installed underground or in poured concrete shall be swabbed with mandrel, brush and dry cloth before pulling.

3.4 INSTALLATION

A. Conduits:
1. Install RMC or IMC in all areas subject to damage from maintenance activities or vehicles from grade to 54" above finished floor or grade.
2. Install RNMC in areas below grade or in concrete unless otherwise indicated. Conduit shall be installed at least five feet away from the inside wall of a pool.
3. Install all other branch circuit and feeder conductors in EMT unless otherwise indicated.
4. Locate conduits so that the strength of structural members is not compromised. Engineer shall approve all drilling of structural members.
5. In poured concrete, conduit surfaces shall not be located less than 2" from edge of concrete. Conduits installed in or through reinforced beams, columns, or other structural members shall be approved by Engineer.
6. Conduits shall not have diameter greater than one-third the thickness of a pour nor shall spacing of conduits within such a pour be less than three diameters. Conduits shall be securely tied to reinforcing medium prior to concrete pouring.
7. Conduits installed in concrete or underground shall have manufactured raceway closures installed immediately after installation. Closures shall stay in place until conductors are pulled.
8. Conduit ells installed with RMC or RNMC conduit systems shall use factory made RMC bends where the bending radius is less than 5 feet. For runs exceeding 200 feet in length without pulling boxes or vaults, ells shall be long radius.

9. All conduits that penetrate walls or floors shall be sealed internally with an approved putty-like material to prevent the migration of moisture due to temperature differentials. Where penetrations are made through fire-rated walls and floors, such penetrations shall be grouted in or sealed with an approved fire blocking compound.

3.5 WIRES AND CABLES:

A. Installation of conductors and cables within conduits shall be done in accordance with Manufacturer's recommendations for maximum pulling tension and sidewall pressures.

B. Conductors on the load side of a ground-fault circuit interrupter for an underwater light fixture shall not occupy raceway, boxes, or enclosures containing other conductors.

GROUNDING AND BONDING

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. Work Included:
1. Properly ground switchboards, panelboards, conduit systems, cabinets, underwater light fixtures, motors, junction boxes, grounded circuit conductors, and metal fences in accordance with the latest issue of the National Electrical Code.
2. All metallic parts of the pool structure, forming shells and mounting brackets of no-niche light fixtures, metal fittings within or attached to the pool structure, metal parts of pool pump motors, and fixed metal parts within five feet of the pool walls and within 12 feet above the water level of the pool shall be bonded together in accordance with NEC 680-22a. These parts shall be connected together in a common bonding grid with a solid copper #8 conductor and be connected to ground.
3. Route grounding conductors to provide shortest and most direct path to ground electrode system. Install all ground conductors in conduit.

1.2 QUALITY ASSURANCE

A. Standards:
1. Underwriters Laboratories, Inc. (UL) 467-1972 (R 1975) Grounding and Bonding Equipment

PART 2 – PRODUCTS

2.1 CONNECTIONS

A. Shall be made using irreversible compression connectors manufactured by Burndy or exothermic welding manufactured by Cadweld or equal.

PART 3 – EXECUTION

3.1 GROUNDING OF RACEWAYS, STRUCTURES, AND EQUIPMENT

A. Provide a low-impedance ground return path from each piece of electrical equipment back to the building service ground bus.

3.2 RACEWAYS:

A. Boxes: Provide green grounding jumper from the ground screw to a box grounding screw or clip for all grounding type devices, using insulated wire,

unless UL approved self-grounding devices are used. Provide grounding jumper on all surface-mounted devices, regardless of type of device used.

B. Ground Wire: Provide a green bonding/grounding conductor in all conduits sized per the NEC Article 250. The conduit shall not be used as the sole means of grounding.

C. Pipes and Tanks: Connect equipment grounding conductors to pipes or tanks.

D. General Equipment: Make connections to equipment by means of factory installed lugs. If not provided, make connections within enclosures with approved lugs or connectors.

E. Motor Connections:
1. Use flexible conduit for motor connections. Provide an attached bare copper bonding jumper between the rigid steel conduit and the motor frame, using approved grounding fittings.
2. Motor mounting bolts may be used for connecting the equipment ground to the frame of motors smaller than 213 frame. For 213 frame and larger motors, the grounding connector shall be fastened beneath the head of an end shield bolt or by means of a 5/16 inch (minimum) bronze bolt tapped into a suitable place on the motor frame.

SUPPORTS AND FASTENINGS

PART 1 – GENERAL

1.1 DESCRIPTION

A. Work Included: Provision and installation of supports and fastenings for properly mounting and anchoring all raceways, equipment, and fixtures.

PART 2 – PRODUCTS

2.1 STEEL SUPPORTS

A. Provide brackets, frames, and hangers fabricated from standard rolled structural steel shapes or prefabricated structural system manufactured by one of the following:
1. Kindorf Electrical Products Company
2. Powerstrut Division/Van Huffel Tube Corporation
3. Unistrut Corporation

B. Provide threaded steel rods, where required, 3/8 inch diameter. Use hot dip galvanized steel on installations exposed to the weather. Do not use chain except where detailed or specifically required. Do not use perforated strap or wire.

2.2 FASTENINGS: PROVIDE NECESSARY FASTENINGS IN ACCORDANCE WITH THE FOLLOWING:

A. Bolts and nuts: ANSI regular series, semi-finished, hexagon, galvanized.

B. Lock washers: ANSI medium, spring type, galvanized.

C. Beam clamps: Thompson beam and angle clamps.

D. Wall anchors: Use 3/8 inch toggle bolts in hollow tile and concrete block. Use 3/8 inch taper plug drive anchors in solid masonry and concrete. Do not use fiber, lead, or wood plugs; do not use expansion shields and lag bolts.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Steel Supports: Fabricate and install supports so that support installation does not weaken or overload the building structure. Do not impose the weight of electrical equipment, raceways, or fixtures on supports provided for other trades or systems.

CABINETS AND BOXES

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. Work Included: Provision and installation of cabinets and boxes as required by other sections.

1.2 QUALITY ASSURANCE

A. Coordinate locations with work of other trades to avoid conflicts with equipment and structure.

B. Standards:Underwriters Laboratories, Inc. (UL)

PART 2 – PRODUCTS

2.1 CABINETS

A. Construction - Code-gauge sheet steel with hinged and gasketed door for flush or surface mounting as indicated on drawings.

B. Finish - Baked-on gray enamel, ANSI-61

C. Enclosure Rating - as follows:
1. NEMA 1 - Indoor, office/general areas.
2. NEMA 3R or 4 - Damp or outdoor locations.

2.2 JUNCTION AND PULL BOXES

A. Construction - Welded and galvanized sheet steel of sizes required by N.E.C.

B. Sheet steel gage requirements:
1. 14 USS gage.

C. Enclosure ratings:
1. NEMA 1 - Indoor, Office/ general areas.
2. NEMA 3R or 4 - Damp or outdoor areas.

2.3 OUTLET BOXES

A. Size as required by code. Allow extra space when splicing.

B. Full access screwed covers mounted with corrosion resistant machine screws.

C. Stamped steel with appropriate plaster rings for flush mounting.
   1. Size for outlets including gang requirements.
   2. Size for conductors and allowed space fill by code.
   3. Corrosion resistant machine screws for covers and plaster rings.

2.4 UNDERWATER LIGHT JUNCTION BOXES

A. Brass cover and base with three tapped holes per side for conduit entry.

B. Model #1719 manufactured by Hydrel or equal.

C. Cord strain relief provided.

PART 3 – EXECUTION

3.1 CABINETS

A. Mount rigidly and with proper alignment on building structure with top of cabinet not to exceed 6 feet 6 inches above finished floor.

B. Close all unused cabinet openings.

3.2 JUNCTION AND PULL BOXES

A. Locate so that covers are accessible at all times. Mount boxes for concealed conduit so covers are flush with surface of finished ceiling or wall.

B. Contractor shall provide pull boxes as required by codes to facilitate installation of work.

C. Provide rigid mounting per good standard practice using brackets, rod hangers, bolts, and expansion bolts.

D. Support independent of attached conduit unless otherwise indicated.

3.3 OUTLET BOXES

A. Verify location of all outlets prior to rough-in. Unless otherwise noted, mount outlets at the following heights from finished floor to center line of outlet:
   1. Wall switches: 48 inches
   2. General outlets: 20 inches

IDENTIFICATION

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. Provide proper identification of all electrical equipment and wiring installed under this division.

1.2 WORK INCLUDED:

A. Nameplates on all electrical and special systems equipment enclosures.

B. Color coding of all electrical conductors.

C. Labeling of all conductors used for control or instrumentation.

D. Installation of panel schedules for branch circuit panelboards.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. In general, conduit and wire marking tape as manufactured by Brady, Thomas & Betts, 3M, and Panduit will be acceptable.

2.2 NAMEPLATES

A. For all switchboards, panelboards, motor control centers, and major system components provide each with a master nameplate as follows:

B. Nameplates shall be 1/16" thick laminated phenolic plastic with black surface and white base.

C. Equipment identification shall consist of two lines:
1. Equipment designation (e.g., "MDP") in 1/2" high capital letters.
2. Equipment operating voltage (e.g., "208Y/120 VAC") in 3/8 high letters/numbers.

D. For feeder distribution overcurrent devices within switchboards or panelboards, motor starters, individual motor circuit and other disconnects, similar nameplates shall indicate equipment supplied in 1/4" high characters on a single line (e.g., "LP1").

E. For other cabinets and enclosures, similar nameplates shall indicate equipment designation as shown on the drawings with 3/8" high letters on one line.

F. All nameplates shall be of a size dictated by the above requirements with a minimum 1/8" space between lines and 1/4" margin on all sides.

2.3 CONDUCTOR LABELING:

A. Control systems wiring in conjunction with mechanical, lighting, or miscellaneous control equipment shall be identified at each terminal as to the conductor designation indicated on schematic drawings and terminal identification of opposite end (e.g., "101 TB3:18"). Refer to control elementary and wiring diagrams.

B. Wire markers shall be permanent and secure. Acceptable products are Brady "Bradysleeve" and T&B "E-Z Coder."

2.4 PANELBOARD DIRECTORIES

A. Branch circuit panelboard directories shall be neatly typed and inserted behind a clear protective plastic cover behind the panel door. For each circuit, define nature of load and location. Abbreviations must be clear and consistent with drawings.

B. Circuit number for all branch circuit panelboards shall be with odd numbers left and even numbers right. Each pole shall be consecutively numbered and multi-pole breakers shall be given the number of the top-most pole.

PART 3 – EXECUTION

3.1 LABELS

A. Securely attach engraved labels with an approved epoxy adhesive.

WIRING DEVICES

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. Work Included: Provide all required wiring devices as shown on drawings.

1.2 QUALITY ASSURANCE

A. All wiring devices shall be new, approved or listed, and rated for the service for which they are to be used.

B. Standards: Underwriters Laboratories, Inc. (UL)

C. Manufacturers: Leviton, Hubbell, Pass & Seymour

PART 2 – PRODUCTS

2.1 SWITCHES - SIDE AND BACK WIRED

A. Specification grade 20A, 120 VAC, ivory in finished spaces and gray in unfinished spaces.

2.2 RECEPTACLES

A. General Outlets:
1. Specification grade duplex, side or back wired, 20A, 125V, NEMA 5-20R, grounding-type, screw terminals only, ivory in finished spaces and gray in unfinished spaces.

2.3 GROUND-FAULT CIRCUIT INTERRUPTER OUTLETS:
1. Specification grade duplex, back and side wired, 20A, 125V, NEMA 5-20R, grounding-type, weather resistant, automatic testing feature such that device will not reset if the GFCI circuit is malfunctioning, ivory in finished spaces and gray in unfinished spaces.

2.4 DEVICE PLATES

A. Provide cover plates suitable for location and environment and as follows:
1. Finished spaces: High-impact plastic, ivory.
2. Unfinished spaces: Heavy Duty Areas: raised steel or stamped steel for flush wiring.

B. Exterior and Damp Areas: Weatherproof, cast aluminum, self-closing flap to open in upward direction.

C. Lockable Wall Plates: Weatherproof, stainless steel or heavy cast aluminum, flush, cam lock, two keys provided, with mounting plate for GFCI duplex receptacle, Pass & Seymour #4600-8 or equal.

PART 3 – EXECUTION

3.1 WIRING DEVICE INSTALLATION

A. Receptacle Grounding: Connect each receptacle to assure positive connection to ground.

B. Receptacles shall be located at least 10 feet from the inside walls of a pool.

C. Receptacle mounting height shall be 18” above finished floor unless noted otherwise.

D. Switch mounting height shall be 40” above finished floor unless noted otherwise.

MOTOR AND CIRCUIT DISCONNECTS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. Work Included: Provision and installation of safety and disconnect switches, individually enclosed or applied in combination with motor controllers, where shown on electrical drawings.

1.2 QUALITY ASSURANCE

A. Standards:
1. Underwriters Laboratories, Inc. (UL)
a. 98-1980 Switches, enclosed
2. Applicable ANSI, NEMA, and IEEE standards

PART 2 – PRODUCTS

2.1 GENERAL:

A. Provide enclosed heavy duty, fusible/nonfusible safety and disconnect switches where indicated and as specified. Ratings shall be appropriate for the load served. Switches used as service-entrance equipment shall be UL-labeled as such.

2.2 ADDITIONAL REQUIREMENTS: PROVIDE EACH SWITCH WITH THE FOLLOWING:

A. Quick-make, quick-break, interrupter operating mechanism.

B. Handle where the position is easily recognizable and can be multiple padlocked in the "OFF" position.

C. Defeatable door interlocks that prevent the door from opening when the operating handle is in the "ON" position.

D. Factory installed ground lug.

E. Use horsepower rated switches on motor circuits.

2.3 ENCLOSURES: PROVIDE ENCLOSURES IN ACCORDANCE WITH THE FOLLOWING SCHEDULE:

A. NEMA 1 - general indoor and dry areas.

B. NEMA 3R - gasketed for damp or outdoor locations.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Mount switches at locations shown on plans and as follows:
   1. Fasten securely to supporting structure at walls and stands:
      a. Machine bolt to metal framing or plates
      b. Expansion anchors to concrete walls

B. Stands and supports:
   1. Corrosion-resistant materials and finishes.
   2. Unistrut-type materials for fabrication.
   3. Expansion anchors for bolts in concrete floor.
   4. Machine bolt to metal framing or plates.
   5. Backing plate for mounting units.
   6. Fasten stand securely to floor.

C. Mounting height:
   1. Single unit, 4 feet 6 inch centerline above floor.
   2. Multiple units:
      a. (1) In horizontal line uniform top height. Top of highest enclosure not exceeding 6 feet 6 inches.

MOTOR CONTROLLERS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

A. Work Included: Provide under this division where shown on electrical drawings

1.2 QUALITY ASSURANCE

A. Standards:
1. Underwriters Laboratories, Inc. (UL)

PART 2 – PRODUCTS

2.1 MOTOR CONTROLLERS

A. General: Provide each motor with a suitable NEMA size controller or device complete with manual or magnetic control, as required.

B. Provide magnetic motor starters with ambient compensated thermal overload protection set at 115 percent measured full load current in each ungrounded phase, with maintenance-free, double-break, solid silver cadmium oxide alloy contacts.
1. Provide starters designed to prevent freezing of contacts upon coil failure, possible to install auxiliary contacts without removing starter from its enclosure.
2. Arrange control circuits for manual, auto, and other signal inputs from control circuits and arrange control power to de-energize control circuits whenever operating power supply to particular equipment is disconnected.

C. Combination magnetic starter and disconnect switch, unless otherwise specified, with the following features:
1. Across-the-line start
2. Contacts self-cleaning type designed for easy inspection and replacement.

D. Control circuit transformer with 120VAC fused secondary.
1. Pilot devices on controller door:

E. Hand-Off-Auto selector switch.

F. Motor running - red light.

G. Reset button.
1. Two normally-open auxiliary contacts.

H. Safety disconnect handle on cover. (Padlockable)

I. Manual toggle switch type, single-phase, rated for horsepower of motor.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Individually Mounted Units: at locations shown on plans
   1. Fasten securely to supporting structure at walls and stands:
      a. Machine bolt to metal framing or plates.
      b. Expansion anchors to concrete walls.
   2. Stands and Supports:
      a. Corrosion-resistant materials and finishes.
      b. Unistrut-type materials for fabrication.
      c. Expansion anchors for bolts in concrete floor.
      d. Machine bolt to metal framing or plates.
      e. Backing plate for mounting units.
   3. Mounting height:
      a. 4 feet 6 inch centerline above floor.

END OF SECTION

SECTION 13 31 23

PRE-ENGINEERED FABRIC SHADE STRUCTURES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 1 Specification Sections, apply to this section.

1.2 SUMMARY

A. A single, State of California-licensed fabric shade structure contractor shall be responsible for the design, wet-stamped engineering drawings, permitting, fabrication, supply, and erection of the work specified herein, including foundations. The intent of this specification is to have only one shade contractor be responsible for all of the functions listed above.

1.3 SUBMITTALS

1.3.1 With Bid Submittals:

A. Provide proof of existing reference sites with structures of similar project scope and scale, and that are engineered to CBC 2019 specifications.

B. Provide a minimum of 7 fabric samples to demonstrate fabric color range, and a digital (PDF) or paper document showing a minimum of 9 powder coat color choices. Also, provide a letter of authorization from the fabric manufacturer delineating authorized use of the specified fabric.

C. Provide proof of all quality assurance items, including;

1. A list of at least 3 reference projects in California that have been installed a minimum of 12 years.
2. Proof of General Liability, Professional Liability, and Umbrella insurance, as per Section 1.4B.
3. Proof of current State of California Contractor’s License, Class A or Class B.
4. Proof of current City of Los Angeles Approved Fabricator license.
5. Proof of a minimum of $6,000,000 aggregate bonding capacity.
6. Proof of current IAS certification, as per Section 1.4D.
7. Proof of an Annual Maintenance Inspection Program.
8. Proof of a Corporate Safety and/or Injury & Illness Prevention Program.

1.4 QUALITY ASSURANCE

Fabrication and erection are limited to firms with proven experience in the design, fabrication, and erection of fabric shade structures, and such firms shall meet the following minimum requirements. No substitutions shall be allowed for the following:

A. A single shade structure contractor shall design, engineer, manufacture, and erect the fabric shade structures, including the foundations, and shall provide a dedicated Project Manager throughout the entire Scope of Work related to the shade structure(s).

B. All bidders shall have at least 15 years' experience in the design, engineering, manufacture, and erection of fabric shade structures, engineered to California Building Code requirements with similar scope, and a successful construction record of in-service performance.

C. All bidders shall provide proof with bid submittal of a minimum of $1,000,000 General/Public Liability insurance, $3,000,000 Professional Liability (PL) insurance, and additional $5,000,000 Umbrella/Excess Liability insurance.

D. All bidders shall be a currently licensed contractor in the State of California, and shall provide proof of a minimum aggregate bonding capacity of $6,000,000 with bid.

E. Manufacturer shall have a City of Los Angeles Approved Fabricator license and be accredited by the IAS (International Accreditation Service) for Structural Steel Fabrication under CBC 2016, Section 1704.2.5.2.

F. The fabric shade structure contractor shall have a Corporate Quality Control program (manual), which describes their complete quality assurance program.

G. All bidders must be a current Member Contractor with ISNetworld, which confirms the bidder's strict adherence to Safety, Insurance, Quality, and Regulatory standards.

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify layout information for fabric shade structure(s) shown on the drawings in relation to the property survey and existing structures, and verify locations by field measurements prior to erection of the fabric shade structure(s).

1.6 WARRANTY

A. The successful bidder shall provide a 12-month warranty on all labor and materials.

B. A supplemental warranty from the manufacturer shall be provided for a period of 10 years (pro-rated) on fabric and 10 years on the structural integrity of the steel, from date of substantial completion.

C. The warranty shall not deprive the Owner of other rights the Owner may have under the provisions of the Contract Documents, and will be in addition to and run concurrent with other warranties made by the Contractor under requirements of the Contract Documents.

PART 2 – PRODUCTS

2.1 GENERAL

A. The structures shall consist of Joined Full Cantilever Hip structures that measure 65 ft x 16 ft overall with a 15 ft entry height and (5) Full Cantilever Hip structures that measure 18 ft x 14 ft each with a 10 ft entry height.

B. The structures shall be manufactured by Shade Structures, Inc., d/b/a USA SHADE & Fabric Structures, or approved equal that includes the engineering drawings, fabric roof, steel cables, all fasteners, and erection of structure(s), including foundations.

C. Contact: USA SHADE & Fabric Structures
1085 N. Main Street, Suite C

Orange, CA 92867

Phone: 949-929-8173

Attn: Devin Christensen

devin.christensen@usa-shade.com

D. To qualify as an approved equal, please submit product documentation, fabric samples, and all quality assurance criteria, as per Section 1.4, at least 10 days prior to bid in order to be considered. No substitutions will be allowed after the deadline. Any approval of alternate manufacturers shall be by addendum prior to the bid date and shall not be allowed without written notification.

E. The fabric shade structure(s) shall conform to the current adopted version of the California Building Code 2019

F. All fabric shade structures are designed and engineered to meet the minimum of 110mph Wind Load, Risk Category II, Exposure C, and Seismic (earthquake) Load based on Seismic Design Category D, Seismic Risk Category II, and a Live Load of 5psf. All fabric shade structures shall be engineered with a zero wind pass–through factor on the fabric. When ASD Steel Design Method is used based on CBC 2013 Section 1605A.3.1, the load combinations Dead Load + 0.75 Live load + 0.75 Wind Load, and 0.6 Dead Load + Wind Load must be analyzed. NO EXCEPTIONS.

G. Steel:

1. All steel members of the fabric shade structure shall be designed in strict accordance with the requirements of the “American Institute of Steel Construction” (AISC) Specifications and the “American Iron and Steel Institute” (AISI) Specifications for

Cold-Formed Members and manufactured in a IAS- (International Accreditation Service) accredited facility for Structural Steel Fabrication under CBC 2019 Section 1704.2.5.2.

2. All connections shall have a maximum internal sleeving tolerance of .0625” using high-tensile strength steel sections with a minimum sleeve length of 6”.

3. All non-hollow structural steel members shall comply to ASTM A-36. All hollow structural steel members shall be cold-formed, high-strength steel and comply with ASTM A-500, Grade C. All steel plates shall comply with ASTM A-572, Grade 50. All galvanized steel tubing shall be triple-coated for rust protection using an in-line electroplating coat process. All galvanized steel tubing shall be internally coated with zinc and organic coatings to prevent corrosion.

H. Bolts:

1. All structural field connections of the shade structure shall be designed and made with high-strength bolted connections using ASTM A-325, Grade B or SAE J249, Grade 8.

2. Where applicable, all stainless steel bolts shall comply with ASTM F-593, Alloy Group 1 or 2. All bolt fittings shall include rubber washers for water-tight seal at the joints. All nuts shall comply with ASTM F-594, Alloy Group 1 or 2.

I. Welding:

1. All shop-welded connections of the fabric shade structure shall be designed and performed in strict accordance with the requirements of the “American Welding Society” (AWS) Specifications. Structural welds shall be made in compliance with the requirements of the “pre-qualified” welded joints, where applicable and by certified welders. No onsite or field welding shall be permitted.

2. All full penetration welds shall be continuously inspected by an independent inspection agency and shall be tested to the requirement of 2019 CBC.

J. Powder Coating:

1. Galvanized steel tubing preparation prior to powder coating shall be executed in accordance with solvent cleaning SSPC-SP1. Solvents such as water, mineral spirits, xylol, and toluol, which are to be used to remove foreign matter from the surface. A mechanical method prior to solvent cleaning, and prior to surface preparation, shall be executed according to Power Tool Cleaning SSPC-SP3, utilizing wire brushes, abrasive wheels, needle gun, etc.

2. Carbon structural steel tubing preparation prior to powder coating shall be executed in accordance with commercial blast cleaning SSPC-SP6 or NACE #3. A commercial blast cleaned surface, when viewed without magnification, shall be free of all visible oil, grease, dirt, mill scale, rust, coating, oxides, corrosion, and other foreign material.

3. Powder coating shall be sufficiently applied (minimum 3 mils thickness) and cured at the recommended temperature to provide proper adhesion and stability to meet salt spray and adhesion tests, as defined by the American Society of Testing Materials.

4. Raw powder used in the powder coat process shall have the following characteristics:
   a. Specific gravity: 1.68 +/- 0.05
   b. Theoretical coverage: 114 +/- 4ft^2/mil
   c. Mass loss during cure: <1%
   d. Maximum storage temperature: 80^oF
   e. Interpon® 800 is a high-durability TGIC powder coating designed for exterior exposure. Tested against the most severe specifications, Interpon® 800 gives significantly improved gloss retention and resistance to color change.

5. When the fabric shade structure(s) will be located within 15 miles of the ocean or standing body of water, rust protection undercoat primer will be required on all structures. Sherwin-Williams® POWDURA® epoxy powder coating Z.R Primer shall be applied in accordance with the manufacturer's specifications. Primer should be fused only and then top coated with the selected powder coat to ensure proper inter-coat adhesion.

   a. The primer's attributes shall be:

a.	Specific gravity (g/ml):	2.37
b.	Coverage at 1.0 mil (ft^2/lb):	81.6
c.	Adhesion: ASTM D-3359	5B
d.	Flexibility: ASTM D-552	Pass 1/8"
e.	Pencil hardness: ASTM D-3363	H-2H
f.	Impact resistance (in.lb): ASTM D-2794	Dir & Rev, 120 in-lbs
g.	Salt spray resistance: ASTM B-117	2000 hours
h.	Humidity resistance: ASTM D-4585	2000 hours
i.	60° Gloss: ASTM D-523	50 ~ 70
j.	Cure schedule (metal temp):	10min @ 200°C (390°F) 25min @ 135°C (275°F)
k.	Film thickness tange (mils):	2.0 ~ 3.0

K. Tension Cable: Steel cable is determined based on calculated engineering loads.

1. For light and medium loads, 0.25" (nominal) galvanized 7x19 strand cable shall be used.

2. For heavy loads, and depending on structural size, either 0.375" (nominal) or 0.5" (nominal) galvanized 7x19 strand cable shall be used.

L. Fabric Roof Systems:

1. UV Shade Fabric:
   a. Fabric to be Commercial NinetyFive 340 FR manufactured by Gale Pacific.
   b. Fabric Properties:

~ Life Expectancy: minimum 8 years with continuous exposure to the sun

~ Fading: minimum fading after 5 years (3 years for Red)

~ Fabric Mass: 5.31 oz/yd^2 ~ 5.6 oz/yd^2 (180gsm ~ 190gsm)

~ Fabric Width: 9.8425 feet (3m)

~ Roll Length: 164.04 feet (50m)

~ Roll Dimensions: 62.99 inches x 16.5354 inches (160cm x 42cm)

~ Roll Weight +/- 66 lbs (+/- 30kg)

~ Minimum Temp: -13°F (-25°C)

~ Maximum Temp: +176°F (80°C)

c. Fabric shall meet the following flame spread and fire propagation tests:
   1) ASTM E-84
   2) NFPA 701 Test Method 2
   3) California's Office of the State Fire Marshal, Registered Flame Resistant Product

2. Stitching & Thread:
   a. All sewing seams are to be double-stitched.
   b. The thread shall be GORE® TENARA® mildew-resistant sewing thread, manufactured from 100% expanded PTFE (Teflon™). Thread shall meet or exceed the following:
      1) Flexible temperature range
      2) Very low shrinkage factor
      3) Extremely high strength, durable in outdoor climates
      4) Resists flex and abrasion of fabric
      5) Unaffected by cleaning agents, acid rain, mildew, salt water, and is unaffected by most industrial pollutants
      6) Treated for prolonged exposure to the sun
      7) Rot resistant

3. Shade and UV Factors:
   a. Shade protection and UV screen protection factors shall be as follows:

Color	UV Block %	Shade %
Pacific Blue	85%	80%~86%
Rain Forest Green	85%	79%~86%
Red	86%	80%~83%
Silver	81%	80%~85%
Desert Sand	92%	80%~84%
Terracotta	82%	80%~83%
Yellow	89%	80%~82%

PART 3 – EXECUTION

3.1 INSTALLATION

A. The installation of fabric shade structures shall be performed by manufacturer or manufacturer-approved contractor, which shall be bonded and holding a current contractor's license with the State of California's Contractors State License Board. All installation personnel must have experience in the erection of tensioned fabric structures.

B. The installation shall comply with the manufacturer's instructions for assembly, installation and erection, per approved drawings.

C. Concrete:

1. Unless noted otherwise for footings and piers by the Project Engineer, the concrete specification for footings and/or piers shall meet a minimum 3,500psi at 28-day strength.

2. Concrete work shall be executed in accordance with the latest edition of American Concrete Building Code ACI 318-99.

3. Concrete specifications shall comply in accordance with the Section 03300 Cast-in-Place Concrete, detailed as per plans, and shall be as follows:
   a. 28 Days Strength F'c = 3000 psi
   b. Aggregate: HR
   c. Slump: 3 ~ 5 inch
   d. Portland Cement shall conform to C-150
   e. Aggregate shall conform to ASTM C-33

4. All reinforcement shall conform to ASTM A-615 grade 60.

5. Reinforcing steel shall be detailed, fabricated, and placed in accordance with the latest ACI Detailing Manual and Manual of Standard Practice.

6. Whenever daily ambient temperatures are below 80 degrees Fahrenheit, the contractor may have mix accelerators and hot water added at the batch plant (See Table 1).

7. The contractor shall not pour any concrete when the daily ambient temperature is to be below 55 degrees Fahrenheit.

TABLE 1

Temperature Range	% Accelerator	Type Accelerator
75~80 degrees F	1%	High Early (non calcium)
70~75 degrees F	2%	High Early (non calcium)
Below 70 degrees F	3%	High Early (non calcium)

D. Foundations:

1. All anchor bolts set in new concrete shall comply with ASTM F-1554 Grade 55 (Galvanized).

2. All anchor bolts shall be Hot-Dip Galvanized.

3. Footings and full rebar cages shall be drilled, set, and poured as per manufacturer's specifications.

END OF SECTION 13 31 23

SECTION 13 34 16

PERMANENT GRANDSTANDS

PART 1 - GENERAL

1.01 SYSTEM DESCRIPTION

A. Provide labor, material, equipment, and supervision necessary to complete installation of permanent steel grandstand, including the following:

1. Steel Substructure
2. Decking System
3. Concrete Foundation

1.02 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturers must have ten years of experience in the manufacture of bleachers and grandstands; manufacturer must exhibit proof of business existence for the past five years with documentation; welders must be AWS certified.

B. Installer Qualifications: Experienced in the proper installation of grandstands.

C. Source Quality Control: Mill Test Certification.

1.03 SUBMITTALS

A. Manufacturer's Product Data: Submit manufacturer's descriptive product data for project.

B. Shop Drawings: Manufacturer to submit shop drawings sealed by a California registered engineer and shall be of sufficient clarity to indicate the location, nature and extent of the work proposed and show in detail that it will conform to the applicable code and relevant laws.

C. Product Sample: Submit one 18-inch seat sample.

D. Color Sample: If applicable, submit sample.

1.04 SITE CONDITIONS

A. Field Site:

1. Owner to make site accessible.
2. Owner to verify site locations, benchmarks.

B. Underground Utility Line: Owner to clearly mark all underground utilities and obstructions and Owner to relocate all that conflict with grandstand.

C. Soil Test: Furnished by Owner.

1.05 BUILDING CODES

A. Must meet or exceed all State and Local applicable codes and in compliance with the California Building Code, Title 24, and ICC 300.

1.06 WARRANTY

A. Permanent Grandstand shall be under warranty for a period of one (1) year beginning at date of substantial completion of the projects. The warranty will provide for repair or replacement of failed components due to defect in materials and workmanship of installation for the specified period. This warranty excludes any other defects resulting from abnormal use in service, vandalism, weathering, oxidation, accidental or intentional damage or any occurrences beyond Manufacturer's control.

1.07 MAINTENANCE

A. Owner is to conduct annual inspection and required maintenance of grandstand to assure safe conditions. It is also recommended that a professional engineer or registered architect perform inspections biennially.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Southern Bleacher Company (800) 433-0912. Leg-Truss System.

1. Alternate manufacturers seeking to be pre-approved to bid must submit product literature and references (with contact names/numbers/email addresses) to the Owner/Architect, 14 days prior to bid date, for five similar size DSA approved projects completed in the past two years.

2.02 PERMANENT STEEL GRANDSTAND

A. Product Description

1. Leg Truss Permanent Grandstand Design

a. Gross seating capacity of 252, net seating capacity of 196 including 5 wheelchair spaces, 6 rows, and 63’ long.

2. Vertical columns are placed 6’ on center laterally, and as required on center front to back.

3. Stringers: Stringers are wide flange with steel angle rise and depth fabrication and are placed at 6’ on center.

4. Aisles:

   a. Aisles with seating on both sides to have discontinuous mid-aisle handrails. The handrails shall be discontinuous with breaks at intervals not to exceed five rows. These breaks shall have a clear width of at least 22 inches and not greater than 36 inches horizontally.

   b. Anodized aluminum handrails with rounded ends to be provided with an intermediate handrail below the main handrail.

   c. Aluminum tread nosing of contrasting color on aisle steps.

   d. Half-steps shall be provided for riser heights above 8 inches.

   e. Half-steps shall provide equal rise and run throughout aisle. Each shall have aisle nosing with non-skid black powder coated finish or other paint system meeting AAMA 603.8-92 specifications with a hardness rating of 2H and riser closure with clear anodized finish.

   f. Aisles with a riser height of non-uniformity shall be indicated with distinctive markings as required by code.

5. Decking:

   a. Rise/Tread Depth per row: 12” and 24”

   b. Each seat 17 inches above its respective tread.

   c. Mill Aluminum Decking Arrangement
      (1) Tongue-and-Groove System Closed Deck

   d. Seating Selection
      (1) Anodized Aluminum Bench Seat- 2 x 10 (standard), Die #7758 with height of 1 1/2".

   e. Flat anodized riser boards at each vertical row riser and half-step

7. Guard railing: To be at all sides of bleacher, entry stairs and ramps, portals, and landings. Railing to be anodized aluminum with end plugs at ends of straight runs and/or elbows at corner. All guardrails shall be secured to angle rail risers by galvanized fasteners. Railing shall be at heights as required by code for its location on the grandstand. Guard railing shall include intermediate railing, or galvanized chain link fencing fastened in place with galvanized fasteners and aluminum ties. Across rear of entire bleacher, a Dur-kyn finish riser board vision barrier shall be provided to extend 48” above top row seat height.

8. Handicap provision:

   a. Quantity of wheelchair spaces: 5

   b. Riser area adjacent to wheelchair spaces to have closed intermediate construction.

B. Materials/Finishes

1. Substructures:

a. Structural shapes meet one of the following ASTM specifications: A36, A36/A572 grade 50, A572 grade 50, A529-50, or A500 grade B.

b. Shop connections are seal welds.

c. After fabrication, all steel is hot-dipped galvanized to ASTM-A-123 specifications.

e. Painted steel finish is unacceptable.

2. Extruded Aluminum:

a. Seat Planks, Stanchions, and Railing are extruded aluminum alloy, 6063-T6.
(1) Clear anodized 204R1, AA-M10C22A31, Class II finish
b. Tread planks are extruded aluminum alloy 6063-T6 mill finish.
c. Riser boards are flat anodized finish
d. Railing: Extruded aluminum alloy, 6063-T6 clear anodized 204R1, AA-M10C22A31, Class II.

3. Accessories:

a. Channel End Caps: Aluminum alloy 6063-T6, clear anodized 204R1, AA-M10C22A31, Class II.

b. Hardware:

(1) Bolts, Nuts: Hot-dipped galvanized or mechanically galvanized.

(2) Hold-down Clip Assembly: Aluminum alloy 6005A-T6, mill finish.

(3) Structural Hardware: Equal to or greater than hot-dipped galvanized ASTM-A307. No connections utilizing high strength bolts are classed as slip critical.

d. Aisle Nose and Stair Nose: Aluminum alloy, 6063-T6, non-skid black powder coated finish or other paint system meeting AAMA 603.8-92 specifications with a hardness rating of 2H.

C. Fabrication:

1. Design Load:

a. Tread and Seat Area: 100 psf uniform live load.

b. Seat (Vertical): 120 lbs/lf.

c. Seat (Horizontal Sway): 24 lbs/lf parallel and 10 lbs/lf perpendicular to seat.

d. Handrail and Guardrail: 50 lbs/lf in any direction.

e. Handrail and Guardrail: 200 lbs concentrated in any direction.

f. Snow Loads: As per State adopted code.

g. Wind Loads: As per State adopted code.

h. Seismic Loads: As per State adopted code.

2. All manufactured connections to be shop welded.

a. Manufactured by certified welders conforming to AWS Standards.

PART 3 - EXECUTION

3.01 INSTALLATION

A. All work performed by technicians experienced in bleacher seating installation.

B. Project as per approved shop drawings.

3.02 FIELD QUALITY CONTROL

A. Foundation: Footings for the grandstand shall provide sufficient bearing area at bottom to support all loads of the grandstand. Depth and design of footings shall be determined by Owner supplied soil test. Hot-dipped galvanized anchor bolts shall be secured in the concrete footings. Concrete shall attain working strength of 3,000 psi.

3.03 CLEAN-UP

A. Clean up all debris caused by work of this section.

B. The Owner, Architect and Contractor acknowledge and accept that mill finish aluminum as specified will have water stains present from transportation and storage during installation. Removal of these stains is not part of this contract.

C. Stand to be broom cleaned at completion.

SECTION 14 24 00

HYDRAULIC ELEVATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide holeless type hydraulic elevator system including guide rails, brackets, cylinders, hydraulic fluid reservoir, pit buffers, hardware, and accessories as required for complete operational system.

B. Related Sections:

1. Section 05 50 00: Metal fabrications such as elevator pit ladders, pit gratings, elevator shaft screens, sill angle supports, and metal fabrications sized on Architectural Drawings.

2. Section 09 30 00: Tiling for elevator cab floors.

3. Section 09 68 00: Carpeting for elevator cab floors.

4. Division 22: Pit drainage.

5. Division 26: Electrical power to Machine Room, including main switch, breaker and lighting.

1.2 REFERENCES

A. American National Standards Institute, ANSI A17.1: Safety Code for Elevators, Dumbwaiters and Escalators, and Moving Walks.

B. ANSI C1/NFPA 70: National Electrical Code.

C. ANSI A17.2: Practice for the Inspection of Elevators, Escalators and Moving Walks.

D. AWS D1.1: Structural Welding Code.

E. California Code of Regulations Title 24, Part 7, Elevator Safety Regulations, and California Building Standards Code regulations for elevators accessible to persons with disabilities and ambulance gurney access.

F. Americans with Disabilities Act (ADA) Standards.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Design/Build: Provide special elevator design and engineering to ensure compliance with applicable codes and Contract Documents.

B. Coordination: Coordinate elevator work with other work to ensure full compliance with applicable codes and Contract Documents by work performed by others.

1. Review construction documents to assure necessary spaces and materials for legal elevator service are being provided under other sections.

2. Ensure proper fused disconnect switches, hoistway, pits, and machinery room with access, lighting, communications, ventilation and services are being provided under other sections.

3. Inform Architect of any discrepancies and omissions during bid period.

4. Work of this Section includes furnishing items necessary for a complete operational elevator system and not provided elsewhere.

C. Pre-Installation Meeting: Convene not less than one week prior to commencing work of this Section. Require attendance of those directly affecting work of this Section.

1. Review installation procedures and coordination required with related work.

1.4 SUBMITTALS

A. Product Data: Submit descriptive brochures or detail drawings of landing buttons, hall fixtures, car position indicators, car operating panels, car interior and hoistway doors and frames for review.

1. Wiring Diagrams: Furnish complete diagrams for elevator system.

B. Shop Drawings: Indicate space requirements, general arrangement of elevator equipment, and material being supplied.

1. Show connections, attachments, reinforcing, anchorage and location of exposed fastenings, and location of loads and reactions to be carried on building structure.

C. Samples: Submit samples of finishes, operating and signal system fixtures, samples of each type of sign or graphics provided, and finish of hoistway entrances and doors.

D. Design/Build Certificates: Submit certification signed by manufacturer indicating design/build compliance with Contract Documents and code requirements.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Elevator manufacturer or firm approved by elevator manufacturer in writing and with minimum five years successful experience installing elevators like to those required for Project.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver items and materials to site only after area in which they are to be installed is ready to receive them in their place of final installation.

B. Store materials in storage area allotted.

C. Fully protect movable and operating equipment from weather.

1.7 WARRANTY

A. Component Warranties: Provide coincidental product warranties, where available, for major components of elevator work.

PART 2 - PRODUCTS

2.1 SYSTEMS MANUFACTURERS

A. ThyssenKrupp Elevators.

B. Otis Elevator Co., United Technologies.

C. Schindler Elevator Corp.

D. Substitutions: Refer to Section 01 25 00.

2.2 MATERIALS

A. System Description: Provide holeless type hydraulic elevator system including guide rails, brackets, cylinder, plunger, hydraulic fluid reservoir, pit buffers, hardware, and accessories.

1. Provide motors, pumps, piping, controls and wiring to main switch.
2. Provide hoistway doors, frames, and sills.
3. Provide passenger cars and car doors.

B. Regulatory Requirements, General: Comply with applicable codes and regulations for elevator work and including to ANSI A17.1 Safety Code for Elevators, Dumbwaiters and Escalators, and Moving Walks.

1. Fire Emergency Service: Comply with requirements of applicable codes; provide required control circuits to meet code requirements.

a. Comply with requirements of California Code of Regulations, Title 24.
a. Three position "on-off-bypass" key switch at ground floor.
b. Instructions for operation in ground floor cabinet.
c. Connect elevators to smoke detectors in lobbies.

2. Medical Emergency Operation: Comply with California Building Code for providing medical emergency operation.

3. Emergency Power Operation: Provide automatic switch to building emergency power system in case of standard power failure; type easily reset by building maintenance.

4. Emergency Battery Power Operation: Provide as required by California Building Standards Code.

C. Regulatory Requirements, Accessibility: Provide for assuring access for persons with disabilities in accordance with state and federal regulations.

1. California Regulations: Comply with California Building Standards Code.

2. Federal Regulations: Comply with Americans with Disabilities Act (ADA) Standards.

D. Design Criteria:

1. Elevator Characteristics:

a. Net Capacity: 3500 lbs.
b. Speed: 125 fpm.
c. Stops: Openings in line
d. Entrance Opening Size: 3'-6" wide by 7’-0” high.
e. Door Operation: Single speed side opening.

2. Operation: Selective collective operation.

a. Home Landing: Ground floor.
b. Sound Isolation: For equipment as applicable.
c. Door Operation: High-speed direct current master operators.

3. Signal Equipment:

a. Car control station and in-car position indicator.
b. Hall push-button stations.
c. Lanterns and gongs.
d. Hall position indicators.

4. Special Features:

a. Access for persons with disabilities.
b. Fire emergency service.
c. Medical emergency service.
d. Earthquake requirements.
e. Emergency exit service.
b. Battery type emergency power service for egress standby power.
c. Elevator keyed security operation.
d. Swing service.

B. Rolled Steel Sections, Shapes, and Rods: ANSI A17.1; ASTM A924 and A653 G90 galvanized coating.

C. Sheet Steel: ASTM A653, G90 coating designation, stretcher leveled, commercial grade.

D. Stainless Steel: ASTM A666, Type 304.

E. Aluminum: ASTM B221; enameling or anodizing quality as applicable.

F. Plywood: PS 1, fire retardant treated.

G. Sills: Extruded aluminum.

H. Plastic Laminate: NEMA LD3.1, General Purpose type; color, texture, and pattern conforming to approved samples.

1. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

2.2 FABRICATION

A. Machine: A.C. type specifically designed for hydraulic elevator service, having motor, pump, tank valves and muffler mounted and aligned on steel bedplate.

1. Provide solid state motor starter for car.

B. Viscosity Control: Provide complete hydraulic electronic control maintaining hydraulic fluid in reservoir, pump, and control valve at minimum 100 degrees F (plus or minus 5 degrees).

C. Cylinder/Plunger: Machine polished steel tube welded stop on bottom, sliding in high strength steel pipe cylinder having closed bottom and stuffing box with packing gland at top and necessary piping connections.

1. Provide internal couplings where jointed.

D. Elevator Car: Sheet steel enclosure with structural steel frame and bracing; 3/4" fire retardant treated plywood floor and wall cladding fastened with hidden mechanical fasteners.

1. Provide cars with 10'-0" high cab with ceiling removed.

E. Doors: Power operated hollow metal doors with track, rollers and frame; two-point suspension, nonmetallic sheaves; minimum 3" diameter for car doors, 2-1/2" diameter for hoistway doors.

1. Finish: Stainless steel.

2. Finish:

a. Car Doors: Stainless steel.
b. Hoistway Doors: Stainless steel.
c. Garage Level Hoistway Doors: Baked enamel on steel.

F. Hoistway Entrances: Provide formed metal entrances with struts, hanger headers, fascia plates, toe guards, and Underwriters' Laboratory labels.

1. Finish: Match doors.

2. Floor Graphics: Provide minimum 2" high embossed Arabic numerals, with Braille immediately left of numeral, on each side of each door frame; center at 60" above floor.

a. Provide medical emergency symbol at medical emergency elevator.
b. Provide star symbol at grade level in accordance with applicable codes.

c. Star symbol shall be raised, 2” diameter with points equal length.

3. Entrance Protection: Provide infrared door detectors complying with applicable codes and regulations, including requirements for access for persons with disabilities.

G. Car Finishes: Finishes as indicated.

1. Front Wall Panels: Stainless steel with inset buttons, swing return panels.

2. Side and Back Wall Panels: Removable plastic laminate panels with stainless steel trim, base, and reveals.

a. Colors: Where color is not indicated on Drawings or Finish Schedule, provide custom color as directed by Architect.

3. Flooring: Tile provided under Section 09 30 00 – Tiling.

4. Flooring: Carpet provided under Section 09 68 00 - Carpeting.

5. Ceiling: Removable stainless-steel LED downlight type.

6. Ceiling: Manufacturer’s standard LED luminous ceiling.

7. Railings: Stainless steel tubular rail, both sides and back.

8. Pads: Provide wall attachment buttons and protective pads.

H. Operating Fixtures and Signals: Comply with requirements for providing access for persons with disabilities; comply with applicable codes and regulations; stainless steel face panels unless otherwise indicated.

1. Car Control Station: Provide one car station with illuminated mechanical buttons, with hands free emergency communication not requiring voice communication, and service cabinet.

a. Provide door hold open button.

2. Hall Call Station: Provide one hall station risers with illuminated mechanical hall buttons.

3. In-Car Position Indicator: Provide car position indicator; provide indicator above elevator hoistway entrance or above control panel, as approved by Architect.

4. Lobby Car Position Indicator: Provide car position indicator above elevator hoistway entrance at Main Floor lobby, as approved by Architect.

5. Hall Lanterns: Provide wall-mounted lanterns with audible signal, one for up travel, two for down travel, above each hoistway entrance.

6. Jamb Lanterns: Provide jamb-mounted lanterns with audible signal, one for up travel, two for down travel.

7. Signs in Lobbies: 1/2" letters to read "IN CASE OF FIRE USE STAIRWAY FOR EXIT - DO NOT USE ELEVATOR"; sign to be approved by Architect and applicable authorities; stainless steel.

    a. Provide elevator lobby graphics conforming to applicable code requirements.

I. Miscellaneous Items: Provide as required by applicable codes and as follows.

1. Provide battery operated emergency lighting in each car.
2. Provide two-speed fan in each car.

J. Special Features:

1. Elevator Lobby Keyed Security Operation: Provide keyed buttons at hall call stations to prevent unauthorized use of elevators. Coordinate keying with Owner’s security system.

2. Elevator Control Stations Keyed Security Operation: Provide keyed buttons in car control stations allowing each floor to be individually locked out to prevent passenger from access to floor. Coordinate keying with Owner’s security system.

3. Independent Service Operation: Provide independent operation with key lock in elevator car cabinet or at car control panel to remove car from normal hall button service.

4. Swing Service Operation: Provide special call buttons in jamb for swing service operation, when key at first floor is turned "ON" elevator to be independent from standard hall call signals.

    a. Where not indicated on Drawings, confer with Architect regarding which elevator will provide swing service operation.

5. Battery Type Emergency Power Operation: Provide battery type emergency power system in case of standard power failure; type easily reset by building maintenance.

2.3 FINISHES

A. Nonexposed-to-View Surfaces:

1. Structural and Nonexposed Ferrous Metal Surfaces: Clean surfaces of rust, oil or grease and prime with structural steel primer.

2. Field Welds: Remove oxidation, flux or residue, wire brush clean and apply two coats of primer.

3. Wood: Provide one coat primer and two coats semi-gloss acrylic enamel.

B. Exposed-to-View Surfaces in Car, Machine Room and Hoistway Entrances:

1. Stainless Steel: Number 4 finish (satin directional polish).

2. Baked Enamel: Clean, degrease zinc-coated metal surface; one coat zinc oxide primer sprayed and baked; two coats semi-gloss enamel sprayed and baked; color as approved.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine work of other trades on which elevator work depends. Report defects to Architect in writing which may affect elevator work or equipment operation.

B. Ensure shafts and openings for moving equipment are plumb, level and in line. Verify pits are to proper depth, waterproofed and drained, with necessary access doors, ladder and guards.

C. Ensure machine room is properly illuminated, heated and ventilated, complete with floor and access door, and with equipment foundations or supporting beams correctly located.

D. Before fabrication, take necessary job site measurements and verify where work is governed by other trades; check measurement of space for equipment and means of access for installation and operation.

1. Obtain dimensions from site for preparation of shop drawings.

E. Ensure preparatory work has been properly completed to receive elevator work, including such work as:

1. Electrical feeder wires are provided to fused disconnect switches.

2. Provisions of hoistway outlets and power are provided for car light and for light in pit and outlets in machine room for light.

3. Furnishing of electric power is available for testing and adjusting equipment.

4. Provision of hoistway outlet is provided for telephone.

5. Machine room is enclosed and protected from moisture, with lockable door.

F. Supply in ample time for installation by other trades, inserts, anchors, bearing plates, brackets, supports and bracing, including setting templates and diagrams for placement.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions, applicable codes, and standards to provide a quiet, smoothly operating installation, free from sidesway, oscillation or vibration.

1. Work shall be by mechanics skilled in this work and under direct control and supervision of elevator manufacturer's experienced supervisor.

B. Set hoistway entrances in alignment with car openings and true with plumb sill lines.

C. Mount machine in accordance with approved shop drawings; isolate and dampen machine vibration with properly sized sound-reducing anti-vibration pads.

D. Excavate for plunger and cylinder, set in place plumb and accurate, and enclose with 3000 psi concrete.

E. Erect hoistway sills, headers and frames prior to erection of rough walls and doors; erect fascias and toe guards after rough walls are finished.

F. Grout sills and hoistway entrance frames.

G. Make necessary adjustments of equipment to ensure elevator operates smoothly and accurately.

H. Locate and protect or lock movable equipment and controls in such a way that they can be operated only by authorized persons.

3.3 FIELD QUALITY CONTROL

A. Inspections and Permits: Obtain and pay for inspections and permits and make such tests as are required by regulations and authorities.

1. Final inspection shall be after elevator installation, hoisting enclosure and machine room are complete.

2. Inspect installation in accordance with ANSI A17.2.

3. Deliver test certificates and permits to Architect.

3.4 MAINTENANCE

A. Elevator Maintenance Period: Maintain entire elevator installation 12 months after date of Substantial Completion of Work.

1. Include systematic examination, adjustment and lubrication of elevator equipment.

a. Repair or replace worn electrical and mechanical parts of elevator equipment, using parts produced by manufacturer of equipment.

2. Perform work without removing cars during peak traffic periods.

3. Provide 24-hour emergency call-back service during maintenance period.

4. Ensure competent personnel handle maintenance service; maintain locally an adequate stock of parts for replacement or emergency purposes.

    a. Have qualified personnel available at such places to ensure fulfillment of this service without unreasonable loss of time.

B. Extended Maintenance Proposal: Submit proposal for maintenance of installed elevator work for a period of three years after termination of regular maintenance required at end of this section.

1. Proposal shall include stipulated sum for time period stated, with premiums due annually.

2. Extended maintenance proposal shall include requirements specified at end of section for first year maintenance agreement.

END OF SECTION

SECTION 22 05 13

COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes single- and three-phase motors for application on equipment provided under other sections and for motors furnished loose to Project.

B. Related Sections:

1. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
2. Section 26 05 53 - Identification for Electrical Systems.

1.2 REFERENCES

A. American Bearing Manufacturers Association:

1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. National Electrical Manufacturers Association:

1. NEMA MG 1 - Motors and Generators.

C. International Electrical Testing Association:

1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit catalog data for each motor furnished loose. Indicate nameplate data, standard compliance, electrical ratings and characteristics, and physical dimensions, weights, mechanical performance data, and support points.

C. Test Reports: Indicate procedures and results for specified factory and field testing and inspection.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Testing Agency: Company member of International Electrical Testing Association and specializing in testing products specified in this section with minimum three years experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Lift only with lugs provided. Handle carefully to avoid damage to components, enclosure, and finish.

C. Protect products from weather and moisture by covering with plastic or canvas and by maintaining heating within enclosure.

D. For extended outdoor storage, remove motors from equipment and store separately.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS FOR MOTORS FURNISHED WITH EQUIPMENT

A. Motors 3/4 hp and Larger: Three-phase motor as specified below.

B. Motors Smaller Than 3/4 hp: Single-phase motor as specified below, except motors less than 250 watts or 1/4 hp may be equipment manufacturer's standard.

C. Three-Phase Motors: NEMA MG 1, Design B, energy-efficient squirrel-cage induction motor, with windings to accomplish starting methods and number of speeds as indicated on Drawings.

1. Voltage: As indicated on Drawings.
2. Service Factor: 1.15.
3. Enclosure: Meet conditions of installation unless specific enclosure is indicated on Drawings.
4. Design for continuous operation in 40 degrees C environment, with temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.
5. Insulation System: NEMA Class H.
6. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.
7. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors embedded in motor windings and epoxy encapsulated solid state control relay with wiring to terminal box.
8. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum ABMA 9, L-10 life of 200,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.
9. Sound Power Levels: Conform to NEMA MG 1.

D. Single Phase Motors:

1. Permanent split-capacitor type where available, otherwise use split-phase start/capacitor run or capacitor start/capacitor run motor.
2. Voltage: 115/230 volts, single phase, 60 Hz.

E. Wiring Terminations: Furnish terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated.

2.2 THREE-PHASE MOTORS FURNISHED LOOSE

A. Manufacturers:

1. GE Industrial Motors; Wolong Electric Group Co., Ltd.
2. Marathon Electric Motors.
3. Siemens Industry, Inc., Energy Management Division.
4. WEG.
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: NEMA MG 1, Design B, energy-efficient squirrel-cage induction motor, with windings to accomplish starting methods and number of speeds indicated.

C. Voltage: As indicated on drawings.

D. Service Factor: 1.15 or as indicated on Drawings.

E. Enclosure: Meet conditions of installation unless specific enclosure is specified or indicated.

F. Design for continuous operation in 40 degrees C environment, with temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.

G. Insulation System: NEMA Class H.

H. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.

I. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors embedded in motor windings and epoxy encapsulated solid state control relay with wiring to terminal box.

J. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum ABMA 9, L-10 life of 200,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.

K. Sound Power Levels: Conform to NEMA MG 1.

L. Wiring Terminations: Furnish terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated.

2.3 SOURCE QUALITY CONTROL

A. Test motors in accordance with NEMA MG 1, including winding resistance, no-load speed and current, locked rotor current, insulation high-potential test, and mechanical alignment tests.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Disconnect and remove abandoned motors

B. Maintain access to existing motors and other installations remaining active and requiring access. Modify installation or provide access panel.

C. Clean and repair existing motors to remain or are to be reinstalled.

3.2 INSTALLATION

A. Install securely on firm foundation. Mount ball bearing motors with shaft in any position.

B. Install engraved plastic nameplates in accordance with Section 26 05 53.

C. Ground and bond motors in accordance with Section 26 05 26.

3.3 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements, 017000 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.15.

END OF SECTION

SECTION 22 05 16

EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Flexible pipe connectors.
2. Expansion joints.
3. Expansion compensators.
4. Pipe alignment guides.
5. Swivel joints.
6. Pipe anchors.

B. Related Sections:

1. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment: Product and installation requirements for piping hangers and supports.
2. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment: Product and installation requirements for vibration isolators used in piping systems.
3. Section 22 11 00 - Facility Water Distribution: Product and installation requirements for piping used in domestic water systems.

1.2 REFERENCES

A. American Society of Mechanical Engineers:

1. ASME B31.9 - Building Services Piping.
2. ASME Section IX - Boiler and Pressure Vessel Code - Welding and Brazing Qualifications.

B. American Welding Society:

1. AWS D1.1 - Structural Welding Code - Steel.

1.3 DESIGN REQUIREMENTS

A. Provide structural work and equipment required for expansion and contraction of piping. Verify anchors, guides, and expansion joints provide and adequately protect system.

B. Expansion Compensation Design Criteria:

1. Installation Temperature: 50 degrees F.
2. Domestic Hot Water: 140 degrees F.
3. Safety Factor: 30 percent.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Requirements for submittals.

B. Shop Drawings: Indicate layout of piping systems, including flexible connectors, expansion joints, expansion compensators, loops, offsets and swing joints.

C. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

D. Design Data: Indicate criteria and show calculations.

E. Manufacturer's Installation Instructions: Submit special procedures.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

G. Welders' Certificate: Include welders' certification of compliance with ASME Section IX.

H. Manufacturer's Field Reports: Indicate results of inspection by manufacturer's representative.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of flexible pipe connectors, expansion joints, anchors, and guides.

C. Operation and Maintenance Data: Submit adjustment instructions.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.

B. Perform Work in accordance with State of California standard.

C. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience.

C. Design expansion compensating system under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept expansion joints on site in factory packing with shipping bars and positioning devices intact. Inspect for damage.

C. Protect equipment from exposure by leaving factory coverings, pipe end protection, and packaging in place until installation.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for leak free performance of packed expansion joints.

1.11 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Supply two 12 ounce containers of packing lubricant and cartridge style grease gun.

PART 2 - PRODUCTS

2.1 FLEXIBLE PIPE CONNECTORS

A. Manufacturers:

1. Flexicraft Industries.
2. Metraflex Company (The).
3. NIBCO INC.
4. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
5. Victaulic Company.
6. Substitutions: Section 01 60 00 - Product Requirements.

B. Furnish materials in accordance with State of California standards.

C. Steel Piping:

1. Inner Hose: Carbon Steel.
2. Exterior Sleeve: Single braided.
3. Pressure Rating: 125 psig WSP and 450 degrees F.
4. Joint: As specified in Section 23 21 13.
5. Size: Use pipe-sized units.
6. Maximum offset: 3/4 inch on each side of installed center line.

D. Copper Piping:

1. Inner Hose: Bronze.
2. Exterior Sleeve: Braided bronze.
3. Pressure Rating: 125 psig WSP and 450 degrees F.
4. Joint: As specified in Section 23 21 13.
5. Size: Use pipe sized units.
6. Maximum offset: 3/4 inch on each side of installed center line.

2.2 EXPANSION JOINTS

A. Manufacturers:

1. Flexicraft Industries.
2. Flex-Weld, Inc.
3. Hyspan Precision Products, Inc.
4. Mason Industries, Inc.
5. Metraflex Company (The).
6. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
7. U.S. Bellows, Inc.
8. Victaulic Company.
9. Substitutions: Section 01 60 00 - Product Requirements.

B. Stainless Steel Bellows Type:

1. Pressure Rating: 125 psig WSP and 400 degrees F.
2. Maximum Compression: 1-3/4 inch.
3. Maximum Extension: 1/4 inch.
4. Joint: As specified in Section 23 21 13.
5. Size: Use pipe sized units.
6. Application: Steel piping 3 inch and smaller.

C. External Ring Controlled Stainless Steel Bellows Type:

1. Pressure Rating: 125 psig WSP and 400 degrees F.
2. Maximum Compression: 15/16 inch.
3. Maximum Extension: 5/16 inch.
4. Maximum Offset: 1/8 inch.
5. Joint: Flanged.

6. Size: Use pipe sized units.
7. Accessories: Internal flow liner.
8. Application: Steel piping 3 inch and larger.

D. Single Sphere, Elbow Compensators:

1. Body: Teflon.
2. Working Pressure: 125 psi.
3. Maximum Temperature: 400 degrees F.
4. Maximum Compression: 1/2 inch.
5. Maximum Elongation: 3/8 inch.
6. Maximum Offset: 3/8 inch.
7. Maximum Angular Movement: 15 degrees.
8. Joint: Tapped steel flanges.
9. Size: Use pipe sized units.
10. Accessories: Control rods.
11. Application: Steel piping 2 inch and larger.

E. Two-ply Bronze Bellows Type:

1. Construction: Bronze with anti-torque device, limit stops, internal guides.
2. Pressure Rating: 125 psig WSP and 400 degrees F.
3. Maximum Compression: 1-3/4 inch.
4. Maximum Extension: 1/4 inch.
5. Joint: As specified in Section 23 21 13.
6. Size: Use pipe sized units.
7. Application: Copper piping.

F. Low Pressure Compensators with two-ply Bronze Bellows:

1. Working Pressure: 75 psig.
2. Maximum Temperatures: 250 degrees F.
3. Maximum Compression: 1/2 inch.
4. Maximum Extension: 5/32 inch.
5. Joint: Soldered.
6. Size: Use pipe sized units.
7. Application: Copper or steel piping 2 inch and smaller.

G. Copper with Packed Sliding Sleeve:

1. Maximum Temperature: 250 degrees F.
2. Joint: As specified in Section 23 21 13.
3. Size: Use pipe sized units.
4. Copper or steel piping 2 inches and larger.
5. Application: Copper or steel piping 2 inch and larger.

2.3 ACCESSORIES

A. Manufacturers:

1. Aeroquip Performance Products; Eaton, Hydraulics Sector.

2. Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
3. Flex-Weld, Inc.
4. Hyspan Precision Products, Inc.
5. Metraflex Company (The).
6. NIBCO INC.
7. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
8. Substitutions: Section 01 60 00 - Product Requirements.

B. Pipe Alignment Guides: Two piece welded steel with enamel paint, bolted, with spider to fit standard pipe, frame with four mounting holes, clearance for minimum 1 inch thick insulation, minimum 3 inch travel.

C. Swivel Joints: Fabricated steel body, double ball bearing race, field lubricated, with rubber (Buna-N) o-ring seals.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install Work in accordance with ASME B31.9.

B. Install flexible pipe connectors on pipes connected to equipment supported by vibration isolation. Refer to Section 22 05 48. Provide line size flexible connectors.

C. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

D. Rigidly anchor pipe to building structure. Provide pipe guides to direct movement only along axis of pipe. Erect piping so strain and weight is not on cast connections or apparatus.

E. Provide support and anchors for controlling expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints as indicated on Drawings. Refer to Section 22 05 29 for pipe hanger installation requirements.

F. Provide grooved piping systems with minimum one joint per inch pipe diameter instead of flexible connector supported by vibration isolation. Grooved piping systems need not be anchored.

G. Provide expansion loops as indicated on Drawings.

3.2 MANUFACTURER'S FIELD SERVICES

A. Section 01 40 00 - Quality Requirements: Manufacturers' field services.

B. Furnish inspection services by flexible pipe manufacturer's representative for final installation and certify installation is in accordance with manufacturer's recommendations and connectors are performing satisfactorily.

END OF SECTION

SECTION 22 05 29

HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pipe hangers and supports.
2. Hanger rods.
3. Inserts.
4. Flashing.
5. Sleeves.
6. Mechanical sleeve seals.
7. Formed steel channel.
8. Firestopping relating to plumbing work.
9. Firestopping accessories.
10. Equipment bases and supports.

B. Related Sections:

1. Section 03 10 00 - Concrete Forming and Accessories: Execution requirements for placement of inserts or sleeves in concrete forms specified by this section.
2. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of concrete housekeeping pads specified by this section.
3. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
4. Section 09 90 00 - Painting and Coating: Product and execution requirements for painting specified by this section.
5. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment: Product and execution requirements for vibration isolators.
6. Section 22 11 00 - Facility Water Distribution: Execution requirements for placement of hangers and supports specified by this section.
7. Section 22 13 00 - Facility Sanitary Sewerage: Execution requirements for placement of hangers and supports specified by this section.
8. Section 22 14 00 - Facility Storm Drainage: Execution requirements for placement of hangers and supports specified by this section.
9. Section 22 16 00 – Facility Natural Gas Piping: Execution requirements for placement of hangers and supports specified by this section.

1.3 DEFINITIONS

A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.4 SYSTEM DESCRIPTION

A. Firestopping Materials: UL 1479 to achieve fire ratings as noted on Drawings for adjacent construction, but not less than 1 hour fire rating.

B. Firestop interruptions to fire rated assemblies, materials, and components.

1.5 PERFORMANCE REQUIREMENTS

A. Firestopping: Conform to UL for fire resistance ratings and surface burning characteristics.

B. Firestopping: Provide certificate of compliance from authority having jurisdiction indicating approval of materials used.

1.6 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate system layout with location including critical dimensions, sizes, and pipe hanger and support locations and detail of trapeze hangers.

C. Product Data:

1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
2. Firestopping: Submit data on product characteristics, performance and limitation criteria.

D. Firestopping Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.

E. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers.

F. Manufacturer's Installation Instructions:

1. Hangers and Supports: Submit special procedures and assembly of components.
2. Firestopping: Submit preparation and installation instructions.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Firestopping Engineering Judgments: For conditions not covered by UL or WH listed designs, submit judgments by licensed professional engineer suitable for presentation to authority having jurisdiction for acceptance as meeting code fire protection requirements.

1.7 QUALITY ASSURANCE

A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 with 0.10 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

a. Floor Penetrations Within Wall Cavities: T-Rating is not required.

B. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.

1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.

2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.

D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

E. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

F. Perform Work in accordance with AWS D1.1 for welding hanger and support attachments to building structure.

G. Perform Work in accordance with State of California standard.

H. Maintain one copy of each document on site.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years.

1.9 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.

C. Protect from weather and construction traffic, dirt, water, chemical, and damage, by storing in original packaging.

1.11 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements: Environmental conditions affecting products on site.

B. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees F.

C. Maintain this minimum temperature before, during, and for minimum 3 days after installation of firestopping materials.

D. Provide ventilation in areas to receive solvent cured materials.

1.12 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.13 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for pipe hangers and supports.

PART 2 - PRODUCTS

2.1 PIPE HANGERS AND SUPPORTS

A. Manufacturers:

1. B-Line.
2. Tolco.
3. Anvil International.
4. Unistrut.
5. Superstrut.
6. Hilti, Inc.
7. NIBCO INC.
8. PHD Manufacturing, Inc.
9. Substitutions: Section 01 60 00 - Product Requirements.

B. Plumbing Piping - DWV:

1. Conform to ASME B31.9.
2. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron, adjustable swivel, split ring.
3. Hangers for Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.
4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
5. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hook.
6. Wall Support for Pipe Sizes 4 inches and Larger: Welded steel bracket and wrought steel clamp.
7. Vertical Support: Steel riser clamp.
8. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
9. Copper Pipe Support: Copper-plated, carbon-steel adjustable, ring.

C. Plumbing Piping - Water:

1. Conform to ASME B31.9.
2. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron, adjustable swivel, split ring.
3. Hangers for Cold Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.
4. Hangers for Hot Pipe Sizes 2 to 4 inches: Carbon steel, adjustable, clevis.
5. Hangers for Hot Pipe Sizes 6 inches and Larger: Adjustable steel yoke, cast iron roll, double hanger.
6. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
7. Multiple or Trapeze Hangers for Hot Pipe Sizes 6 inches and Larger: Steel channels with welded spacers and hanger rods, cast iron roll.
8. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hook.
9. Wall Support for Pipe Sizes 4 inches and Larger: Welded steel bracket and wrought steel clamp.
10. Wall Support for Hot Pipe Sizes 6 inches and Larger: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron roll.
11. Vertical Support: Steel riser clamp.
12. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
13. Floor Support for Hot Pipe Sizes 4 inches and Smaller: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
14. Floor Support for Hot Pipe Sizes 6 inches and Larger: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
15. Copper Pipe Support: Copper-plated, Carbon-steel ring.

2.2 ACCESSORIES

A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.

2.3 INSERTS

A. Manufacturers:

1. B-Line.
2. Tolco.
3. Hilti.
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.4 FLASHING

A. Metal Flashing: 26 gage thick galvanized steel.

B. Metal Counterflashing: 22 gage thick galvanized steel.

C. Lead Flashing:

1. Waterproofing: 5 lb./sq. ft sheet lead.
2. Soundproofing: 1 lb./sq. ft sheet lead.

D. Caps: Steel, 22 gage minimum; 16 gage at fire resistant elements.

2.5 SLEEVES

A. Sleeves for Pipes Through Non-fire Rated Floors: 18 gage thick galvanized steel.

B. Sleeves for Pipes Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.

C. Sealant: Acrylic.

2.6 MECHANICAL SLEEVE SEALS

A. Manufacturers:

1. Thunderline Link-Seal Inc.

2. NMP Corporation.
3. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.7 FORMED STEEL CHANNEL

A. Manufacturers:

1. B-line; Eaton, Electrical Sector.
2. Unistrut; Atkore International.
3. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

2.8 FIRESTOPPING

A. Manufacturers:

1. 3M Fire Protection Products.
2. Dow-Corning.
3. Hilti, Inc.
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.

1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
2. Foam Firestopping Compounds: Single component foam compound.
3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
4. Fiber Stuffing and Sealant Firestopping: Composite of mineral fiber stuffing insulation with silicone elastomer for smoke stopping.
5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
7. Firestop Pillows: Formed mineral fiber pillows.

2.9 FIRESTOPPING ACCESSORIES

A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.

B. Dam Material: Permanent:

1. Mineral fiberboard.
2. Mineral fiber matting.

C. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.

D. General:

1. Furnish UL listed products.
2. Select products with rating not less than rating of wall or floor being penetrated.

E. Non-Rated Surfaces:

1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where piping is exposed.
2. For exterior wall openings below grade, furnish mechanical sealing device to continuously fill annular space between piping and cored opening or water-stop type wall sleeve.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify openings are ready to receive sleeves.

C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.

B. Remove incompatible materials affecting bond.

C. Install damming materials to arrest liquid material leakage.

D. Obtain permission from Architect/Engineer before using powder-actuated anchors.

E. Do not drill or cut structural members.

F. Obtain permission from Architect/Engineer before drilling or cutting structural members.

3.3 INSTALLATION - INSERTS

A. Install inserts for placement in concrete forms.

B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.

D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut above slab.

3.4 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install in accordance with ASME B31.1.

B. Support horizontal piping as scheduled.

C. Install hangers with minimum 1/2 inch space between finished covering and adjacent work.

D. Place hangers within 12 inches of each horizontal elbow.

E. Use hangers with 1-1/2 inch minimum vertical adjustment.

F. Support horizontal cast iron pipe adjacent to each hub, with 5 feet maximum spacing between hangers.

G. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.

H. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.

I. Support riser piping independently of connected horizontal piping.

J. Provide copper plated hangers and supports for copper piping.

K. Design hangers for pipe movement without disengagement of supported pipe.

L. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

M. Provide clearance in hangers and from structure and other equipment for installation of insulation. Refer to Section 22 07 00.

3.5 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

A. Provide housekeeping pads of concrete, minimum 3-1/2 inches thick and extending 6 inches beyond supported equipment. Refer to Section 03 30 00.

B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.

C. Construct supports of formed steel channel or steel pipe and fittings. Brace and fasten with flanges bolted to structure.

D. Provide rigid anchors for pipes after vibration isolation components are installed. Refer to Section 21 05 48.

3.6 INSTALLATION - FLASHING

A. Provide flexible flashing and metal counterflashing where piping penetrates weather or waterproofed walls, floors, and roofs.

B. Flash vent and soil pipes projecting 3 inches minimum above finished roof surface with lead worked 1 inch minimum into hub, 8 inches minimum clear on sides with 24 x 24 inches sheet size. For pipes through outside walls, turn flanges back into wall and caulk, metal counter-flash, and seal.

C. Flash floor drains in floors with topping over finished areas with lead, 10 inches clear on sides with minimum 36 x 36 inch sheet size. Fasten flashing to drain clamp device.

D. Seal floor, shower, and mop sink drains watertight to adjacent materials.

E. Adjust storm collars tight to pipe with bolts; caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.

3.7 INSTALLATION - SLEEVES

A. Exterior watertight entries: Seal with mechanical sleeve seals.

B. Set sleeves in position in forms. Provide reinforcing around sleeves.

C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.

D. Extend sleeves through floors 1 inch above finished floor level. Caulk sleeves.

E. Where piping penetrates floor, ceiling, or wall, close off space between pipe and adjacent work with stuffing insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.

F. Install chrome plated steel escutcheons at finished surfaces.

3.8 INSTALLATION - FIRESTOPPING

A. Firestopping Materials: Comply with requirements of Section 07 84 00.

B. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping and other items, requiring firestopping.

C. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

D. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating to uniform density and texture.

E. Compress fibered material to maximum 40 percent of its uncompressed size.

F. Place intumescent coating in sufficient coats to achieve rating required.

G. Fire Rated Surface:

1. Seal opening at floor, wall, partition, ceiling, and roof as follows:

a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
b. Size sleeve allowing minimum of 1 inch void between sleeve and building element.
c. Pack void with backing material.
d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.

H. Non-Rated Surfaces:

1. Seal opening through non-fire rated wall, partition floor, ceiling, and roof opening as follows:

a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
b. Size sleeve allowing minimum of 1 inch void between sleeve and building element.
c. Install type of firestopping material recommended by manufacturer.

2. Install escutcheons where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
3. Exterior wall openings below grade: Assemble rubber links of mechanical sealing device to size of piping and tighten in place, in accordance with manufacturer's instructions.
4. Interior partitions: Seal pipe penetrations. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

3.9 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Requirements for inspecting, testing.

B. Section 01 70 00 - Execution and Closeout Requirements: Requirements for testing, adjusting, and balancing.

C. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.10 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for cleaning.

B. Clean adjacent surfaces of firestopping materials.

3.11 PROTECTION OF FINISHED WORK

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for protecting finished Work.

B. Protect adjacent surfaces from damage by material installation.

3.12 SCHEDULES

A. Pipe Hanger Spacing:

1. Pipe Material: Cast iron.

a. Maximum Hanger Spacing: 5 feet.
b. Hanger Rod Diameter: 5/8 inch.

2. Pipe Material: Cast Iron, with 10-foot length of pipe.

a. Maximum Hanger Spacing: 10 feet.
b. Hanger Rod Diameter: 5/8 inch.

3. Pipe Material: Copper tube.

    a. Size: 1-1/4 inches and smaller.
    b. Maximum Hanger Spacing: 6 feet.
    c. Hanger Rod Diameter: 1/2 inch.

4. Pipe Material: Copper tube.

    a. Size: 1-1/2 inches and larger.
    b. Maximum Hanger Spacing: 10 feet.
    c. Hanger Rod Diameter: 1/2 inch.

5. Pipe Material: Steel.

    a. Size: 3 inches and smaller.
    b. Maximum Hanger Spacing: 12 feet.
    c. Hanger Rod Diameter: 1/2 inch.

6. Pipe Material: Steel.

    a. Size: 4 inches and larger.
    b. Maximum Hanger Spacing: 12 feet.
    c. Hanger Rod Diameter: 5/8 inch.

END OF SECTION

SECTION 22 05 48

VIBRATION AND SEISMIC CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Inertia bases.
2. Vibration isolators.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of isolators in floating floor slabs specified by this section and product requirements for concrete for placement by this section.
2. Section 07 90 00 - Joint Protection: Product requirements for joint sealers specified for placement by this section.
3. Section 22 05 16 - Expansion Fittings and Loops for Plumbing Piping: Product requirements for anchors and piping expansion compensation.
4. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment: Product requirements for pipe hangers and supports.
5. Section 23 05 93 - Testing, Adjusting, and Balancing for HVAC: Requirements for sound and vibration measurements performed independent of this section.

1.2 REFERENCES

A. American National Standards Institute:

1. ANSI S1.4 - Sound Level Meters.
2. ANSI S1.8 - Reference Quantities for Acoustical Levels.
3. ANSI S12.36 - Survey Methods for the Determination of Sound Power Levels of Noise Sources.

B. Air-Conditioning and Refrigeration Institute:

1. ARI 575 - Method of Measuring Machinery Sound within Equipment Space.

C. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE Handbook - HVAC Applications.

1.3 PERFORMANCE REQUIREMENTS

A. Provide vibration isolation on motor driven equipment over 0.5 hp, plus connected piping.

B. Provide minimum static deflection of isolators for equipment as follows:

1. Basement, Under 20 hp:

    a. Under 400 rpm: .
    b. 400 - 600 rpm: 1 inch.
    c. 600 - 800 rpm: 0.5 inch.
    d. 800 - 900 rpm: 0.2 inch.
    e. 1100 - 1500 rpm: 0.14 inch.
    f. Over 1500 rpm: 0.1 inch.

2. Basement, Over 20 hp.

    a. Under 400 rpm: .
    b. 400 - 600 rpm: 2 inch.
    c. 600 - 800 rpm: 1 inch.
    d. 800 - 900 rpm: 0.5 inch.
    e. 1100 - 1500 rpm: 0.2 inch.
    f. Over 1500 rpm: 0.15 inch.

3. Upper Floors, Normal:

    a. Under 400 rpm: .
    b. 400 - 600 rpm: 3.5 inch.
    c. 600 - 800 rpm: 2 inch.
    d. 800 - 900 rpm: 1 inch.
    e. 1100 - 1500 rpm: 0.5 inch.
    f. Over 1500 rpm: 0.2 inch.

4. Upper Floors, Critical:

    a. Under 400 rpm: .
    b. 400 - 600 rpm: .
    c. 600 - 800 rpm: 3.5 inch.
    d. 800 - 900 rpm: 2 inch.
    e. 1100 - 1500 rpm: 1 inch.
    f. Over 1500 rpm: 0.5 inch.

C. Consider upper floor locations critical unless otherwise indicated.

D. Use concrete inertia bases for motors in excess of 40 hp and on base mounted pumps over 10 hp.

E. Maintain sound level of spaces at levels not to exceed those listed below by utilizing acoustical devices.

F. Maintain rooms at following maximum sound levels, in Room Criteria (RC) as defined by ASHRAE Handbook, HVAC Applications

1. Offices:

    a. Executive: 25.
    b. Conference rooms: 25.

c. Private: 30.
d. Open-plan areas: 35.
e. Computer/business machine areas: 40.
f. Public circulation: 40.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit schedule of vibration isolator type with location and load on each. Submit catalog information indicating, materials and dimensional data.

C. Design Data: Submit calculations indicating maximum room sound levels are not exceeded.

D. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions.

E. Manufacturer's Certificate: Certify isolators meet or exceed specified requirements.

F. Manufacturer's Field Reports: Indicate sound isolation installation is complete and in accordance with instructions.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of hangers including attachment points.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with ARI 575.

B. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience.

C. Design application of under direct supervision of Professional Engineer experienced in design of this Work and licensed in State of California.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for inertia bases.

PART 2 - PRODUCTS

2.1 INERTIA BASES

A. Manufacturers:

1. Kinetics Noise Control, Inc.
2. Vibration Mountings & Controls, Inc.
3. Vibro-Acoustics.
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Structural Bases:

1. Design: Sufficiently rigid to prevent misalignment or undue stress on machine, and to transmit design loads to isolators and snubbers.
2. Construction: Welded structural steel with gusset brackets, supporting equipment and motor with motor slide rails.

C. Concrete Inertia Bases:

1. Mass: Minimum of 1.5 times weight of isolated equipment.
2. Construction: Structured steel channel perimeter frame, with gusset brackets and anchor bolts, adequately reinforced, concrete filled.
3. Connecting Point: Reinforced to connect isolators and snubbers to base.
4. Concrete: Reinforced 3,000 psi concrete.

2.2 VIBRATION ISOLATORS

A. Manufacturers:

1. Ace Mountings Co., Inc.
2. Amber/Booth Company, Inc.; a VMC Group Company.
3. California Dynamics Corporation.
4. Isolation Technology, Inc.
5. Kinetics Noise Control, Inc.
6. Mason Industries, Inc.
7. Vibration Eliminator Co., Inc.
8. Vibration Isolation.
9. Vibration Mountings & Controls, Inc.
10. Substitutions: Section 01 60 00 - Product Requirements.

B. Open Spring Isolators:

1. Spring Isolators:

   a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
   b. Code: Color code springs for load carrying capacity.

2. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
3. Spring Mounts: Furnish with leveling devices, minimum 0.25 inch thick neoprene sound pads, and zinc chromate plated hardware.
4. Sound Pads: Size for minimum deflection of 0.05 inch; meet requirements for neoprene pad isolators.

C. Restrained Spring Isolators:

1. Spring Isolators:

   a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
   b. Code: Color code springs for load carrying capacity.

2. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
3. Spring Mounts: Furnish with leveling devices, minimum 0.25 inch thick neoprene sound pads, and zinc chromate plated hardware.
4. Sound Pads: Size for minimum deflection of 0.05 inch; meet requirements for neoprene pad isolators.
5. Restraint: Furnish mounting frame and limit stops.

D. Closed Spring Isolators:

1. Spring Isolators:

   a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
   b. Code: Color code springs for load carrying capacity.

2. Type: Closed spring mount with top and bottom housing separated with neoprene rubber stabilizers.
3. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
4. Housings: Incorporate neoprene isolation pad meeting requirements for neoprene pad isolators, and neoprene side stabilizers with minimum 0.25 inch clearance.

E. Restrained Closed Spring Isolators:

1. Spring Isolators:

a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
b. Code: Color code springs for load carrying capacity.

2. Type: Closed spring mount with top and bottom housing separated with neoprene rubber stabilizers.
3. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
4. Housings: Incorporate neoprene isolation pad meeting requirements for neoprene pad isolators, and neoprene side stabilizers with minimum 0.25 inch clearance and limit stops.

F. Spring Hanger:

1. Spring Isolators:

a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
b. Code: Color code springs for load carrying capacity.

2. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
3. Housings: Incorporate neoprene isolation pad meeting requirements for neoprene pad isolators or rubber hanger with threaded insert.
4. Misalignment: Capable of 20 degree hanger rod misalignment.

G. Neoprene Pad Isolators:

1. Rubber or neoprene-waffle pads.

a. 30 durometer.
b. Minimum 1/2 inch thick.
c. Maximum loading 40 psi.
d. Height of ribs: not to exceed 0.7 times width.

2. Configuration: 1/2 inch thick waffle pads bonded each side of 1/4 inch thick steel plate.

H. Rubber Mount or Hanger: Molded rubber designed for 0.5 inches deflection with threaded insert.

I. Glass Fiber Pads: Neoprene jacketed pre-compressed molded glass fiber.

J. Seismic Snubbers:

1. Type: Non-directional and double acting unit consisting of interlocking steel members restrained by neoprene elements.
2. Neoprene Elements: Replaceable, minimum of 0.75 inch thick.
3. Capacity: 4 times load assigned to mount groupings at 0.4 inch deflection.
4. Attachment Points and Fasteners: Capable of withstanding 3 times rated load capacity of seismic snubber.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify equipment and piping is installed before work in this section is started.

3.2 INSTALLATION

A. Install isolation for motor driven equipment.

B. Bases:

1. Set steel bases for 1 inch clearance between housekeeping pad and base.
2. Set concrete inertia bases for 2 inch clearance between housekeeping pad and base.

C. Adjust equipment level.

D. Install spring hangers without binding.

E. On closed spring isolators, adjust so side stabilizers are clear under normal operating conditions.

F. Prior to making piping connections to equipment with operating weights substantially different from installed weights, block up equipment with temporary shims to final height. When full load is applied, adjust isolators to load to allow shim removal.

G. Provide pairs of horizontal limit springs on fans with more than 6.0 inch static pressure, and on hanger supported, horizontally mounted axial fans.

H. Provide resiliently mounted equipment and piping with seismic snubbers. Provide each inertia base with minimum of four seismic snubbers located close to isolators. Snub equipment designated for post disaster use to 0.05 inch maximum clearance. Provide other snubbers with clearance between 0.15 inch and 0.25 inch.

I. Support piping connections to isolated equipment resiliently as follows:

1. Up to 4 inch Diameter: First three points of support.
2. 5 to 8 inch Diameter: First four points of support.
3. 10 inch Diameter and Over: First six points of support.
4. Select three hangers closest to vibration source for minimum 1.0 inch static deflection or static deflection of isolated equipment. Select remaining isolators for minimum 1.0 inch static deflection or 1/2 static deflection of isolated equipment.

3.3 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements or 017000 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Inspect isolated equipment after installation and submit report. Include static deflections.

C. Refer to Section 23 05 93 for sound measurements.

D. After start-up, final corrections and balancing of systems take octave band sound measurements over full audio frequency range in areas adjacent to plumbing equipment rooms, duct and pipe shafts, and other critical locations. Provide one-third octave band measurements of artificial sound sources in areas indicated as having critical requirements. Submit complete report of test results including sound curves.

E. Furnish services of testing agency to take noise measurement. Use meters meeting requirements of ANSI S1.4.

END OF SECTION

SECTION 22 05 53

IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nameplates.
2. Tags.
3. Stencils.
4. Pipe markers.
5. Ceiling tacks.
6. Labels.
7. Lockout devices.

B. Related Sections:

1. Section 09 90 00 - Painting and Coating: Execution requirements for painting specified by this section.

1.2 REFERENCES

A. American Society of Mechanical Engineers:

1. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturers catalog literature for each product required.

C. Shop Drawings: Submit list of wording, symbols, letter size, and color coding for mechanical identification and valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Samples: Submit two tags, labels, pipe markers, and ceiling tacks, size used on project.

E. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

1.5 QUALITY ASSURANCE

A. Conform to NFPA 99 requirements for labeling and identification of medical gas piping systems and accessories.

B. Conform to ASME A13.1 for color scheme for identification of piping systems and accessories.

C. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two containers of spray-on adhesive.

PART 2 - PRODUCTS

2.1 NAMEPLATES

A. Manufacturers:

1. Craftmark Pipe Markers.
2. Kolbi Pipe Marker Co.
3. Seton Identification Products; a Brady Corporation company.
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Laminated three-layer plastic with engraved black letters on light contrasting background color.

2.2 TAGS

A. Plastic Tags:

1. Manufacturers:

a. Brady ID.
b. Craftmark Pipe Markers.
c. Kolbi Pipe Marker Co.
d. R & R Identification Co.
e. Seton Identification Products; a Brady Corporation company.
f. Substitutions: Section 01 60 00 - Product Requirements.

2. Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inches diameter.

B. Metal Tags:

1. Manufacturers:

a. Brady ID.
b. Craftmark Pipe Markers.
c. Kolbi Pipe Marker Co.
d. R & R Identification Co.
e. Seton Identification Products; a Brady Corporation company.
f. Substitutions: Section 01 60 00 - Product Requirements.

2. Brass with stamped letters; tag size minimum 1-1/2 inches diameter with finished edges.

C. Information Tags:

1. Manufacturers:

a. Brady ID.
b. Seton Identification Products; a Brady Corporation company.
c. Substitutions: Section 01 60 00 - Product Requirements.

2. White plastic with printed "Danger," "Caution," or "Warning" and message; size 3-1/4 x 5-5/8 inches with grommet and self-locking nylon ties.

D. Tag Chart: Typewritten letter size list of applied tags and location in anodized aluminum frame.

2.3 STENCILS

A. Manufacturers:

1. Kolbi Pipe Marker Co.
2. R & R Identification Co.
3. Seton Identification Products; a Brady Corporation company.
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Stencils: With clean cut symbols and letters of following size:

1. Up to 2 inches Outside Diameter of Insulation or Pipe: 1/2 inch high letters.
2. 2-1/2 to 6 inches Outside Diameter of Insulation or Pipe: 1-inch high letters.
3. Over 6 inches Outside Diameter of Insulation or Pipe: 1-3/4 inches high letters.
4. Ductwork and Equipment: 1-3/4 inches high letters.

C. Stencil Paint: As specified in Section 09 90 00, semi-gloss enamel, colors and lettering size conforming to ASME A13.1.

2.4 PIPE MARKERS

A. Color and Lettering: Conform to ASME A13.1.

B. Plastic Pipe Markers

1. Manufacturers:

a. Brady ID.
b. Craftmark Pipe Markers.
c. R & R Identification Co.
d. Seton Identification Products; a Brady Corporation company.
e. Substitutions: Section 01 60 00 - Product Requirements.

2. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. Larger sizes may have maximum sheet size with spring fastener.

C. Plastic Tape Pipe Markers

1. Manufacturers:

a. Brady ID.
b. Craftmark Pipe Markers.
c. Kolbi Pipe Marker Co.
d. Seton Identification Products; a Brady Corporation company.
e. Substitutions: Section 01 60 00 - Product Requirements.

2. Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.

D. Plastic Underground Pipe Markers

1. Manufacturers:

a. Kolbi Pipe Marker Co.
b. Seton Identification Products; a Brady Corporation company.
c. Substitutions: Section 01 60 00 - Product Requirements.

2. Bright colored continuously printed plastic ribbon tape, minimum 6 inches wide by 4 mil thick, manufactured for direct burial service.

2.5 CEILING TACKS

A. Manufacturers:

1. Marking Services, Inc.
2. R & R Identification Co.
3. Seton Identification Products; a Brady Corporation company.
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Description: Steel with 3/4 inch diameter color-coded head.

2.6 LABELS

A. Manufacturers:

1. Brady ID.
2. Seton Identification Products; a Brady Corporation company.
3. Substitutions: Section 01 60 00 - Product Requirements.

B. Description: Aluminum, size 1.9 x 0.75 inches, adhesive backed with printed identification.

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

B. Prepare surfaces in accordance with Section 09 90 00 for stencil painting.

3.2 INSTALLATION

A. Apply stencil painting in accordance with Section 09 90 00.

B. Install identifying devices after completion of coverings and painting.

C. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.

D. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.

E. Install tags using corrosion resistant chain. Number tags consecutively by location.

F. Install underground plastic pipe markers 6 to 8 inches below finished grade, directly above buried pipe.

G. Identify water heaters, pumps, tanks, and water treatment devices with plastic nameplates. Identify in-line pumps and other small devices with tags.

H. Identify control panels and major control components outside panels with plastic nameplates.

I. Identify valves in main and branch piping with tags.

J. Identify piping, concealed or exposed, with plastic pipe markers or plastic tape pipe markers. Use tags on piping 3/4 inch diameter and smaller. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and tee, at each side of penetration of structure or enclosure, and at each obstruction.

K. Provide ceiling tacks to locate valves above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

END OF SECTION

SECTION 22 07 00

PLUMBING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plumbing piping insulation, jackets and accessories.
2. Plumbing equipment insulation, jackets and accessories.

B. Related Sections:

1. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
2. Section 09 90 00 - Painting and Coating: Execution requirements for painting insulation jackets and covering specified by this section.

1.2 REFERENCES

A. ASTM International:

1. ASTM C450 - Standard Practice for Fabrication of Thermal Insulating Fitting Covers for NPS Piping, and Vessel Lagging.
2. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
3. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
4. ASTM C585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System).
5. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
6. ASTM D1785 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedule 40, 80, and 120.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit product description, thermal characteristics and list of materials and thickness for each service, and location.

C. Samples: Submit two samples of representative size illustrating each insulation type.

D. Manufacturer's Installation Instructions: Submit manufacturers published literature indicating proper installation procedures.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Test pipe insulation for maximum flame spread index of 25 and maximum smoke developed index of not exceeding 450 in accordance with ASTM E84.

B. Pipe insulation manufactured in accordance with ASTM C585 for inner and outer diameters.

C. Factory fabricated fitting covers manufactured in accordance with ASTM C450.

D. Maintain one copy of each document on site.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Applicator: Company specializing in performing Work of this section with minimum three years experience.

1.6 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

C. Protect insulation from weather and construction traffic, dirt, water, chemical, and damage, by storing in original wrapping.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements: Environmental conditions affecting products on site.

B. Install insulation only when ambient temperature and humidity conditions are within range recommended by manufacturer.

C. Maintain temperature before, during, and after installation for minimum period of 24 hours.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for man made fiber.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Glass Fiber and Mineral Fiber Insulation

1. Manufacturers:

a. CertainTeed LLC; Saint-Gobain North America.
b. Johns Manville; a Berkshire Hathaway company.
c. Knauf Insulation.
d. Owens Corning.
e. Substitutions: Section 01 60 00 - Product Requirements.

2.2 PIPE INSULATION

A. TYPE P-1: ASTM C547, molded glass fiber pipe insulation.

1. Thermal Conductivity: 0.23 at 75 degrees F.
2. Operating Temperature Range: 0 to 850 degrees F.
3. Vapor Barrier Jacket: ASTM C1136, Type I, factory applied reinforced foil kraft with self-sealing adhesive joints.
4. Jacket Temperature Limit: minus 20 to 150 degrees F.

2.3 PIPE INSULATION JACKETS

A. Vapor Retarder Jacket:

1. ASTM C921, white Kraft paper with glass fiber yarn, bonded to aluminized film.
2. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.

B. PVC Plastic Pipe Jacket:

1. Product Description: ASTM D1785, One piece molded type fitting covers and sheet material, off-white color.
2. Thickness: 30 mil.
3. Connections: Brush on welding adhesive.

C. ABS Plastic Pipe Jacket:

1. Jacket: One piece molded type fitting covers and sheet material, off-white color.
2. Minimum service temperature: -40 degrees F.
3. Maximum service temperature of 180 degrees F.
4. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.

5. Thickness: 30 mil.
6. Connections: Brush on welding adhesive.

2.4 PIPE INSULATION ACCESSORIES

A. Vapor Retarder Lap Adhesive: Compatible with insulation.

B. Covering Adhesive Mastic: Compatible with insulation.

2.5 EQUIPMENT INSULATION

A. ASTM C553; glass fiber, flexible or semi-rigid, noncombustible.

1. Thermal Conductivity: 0.023 at 75 degrees F.
2. Operating Temperature Range: 0 to 450 degrees F.
3. Density: 2.3 pound per cubic foot.

2.6 EQUIPMENT INSULATION JACKETS

A. PVC Plastic Equipment Jacket:

1. Product Description: ASTM D1785, sheet material, off-white color.
2. Minimum Service Temperature: -40 degrees F.
3. Maximum Service Temperature: 150 degrees F.
4. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.
5. Thickness: 30 mil.
6. Connections: Brush on welding adhesive.

B. Aluminum Equipment Jacket:

1. ASTM B209.
2. Thickness: 0.020 inch thick sheet.
3. Finish: Embossed.
4. Joining: Longitudinal slip joints and 2 inch laps.
5. Fittings: 0.016 inch thick die shaped fitting covers with factory attached protective liner.
6. Metal Jacket Bands: 3/8 inch wide;

C. Stainless Steel Equipment Jacket:

1. ASTM ASTM A240/A240M OR ASTM 666 Type 304 stainless steel.
2. Thickness: 0.016 inch thick.
3. Finish: Corrugated.
4. Metal Jacket Bands: 3/8 inch wide; 0.010 inch thick stainless steel.

D. Canvas Equipment Jacket: UL listed, 6 oz/sq yd, plain weave cotton fabric with fire retardant lagging adhesive compatible with insulation.

E. Vapor Retarder Jacket:

1. ASTM C921, white Kraft paper with glass fiber yarn, bonded to aluminized film.
2. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.

F. Field Applied Glass Fiber Fabric Jacket System:

1. Insulating Cement/Mastic: ASTM C195; hydraulic setting on mineral wool.
2. Glass Fiber Fabric:

a. Cloth: Untreated; 9 oz/sq yd weight.
b. Blanket: 1.0 lb/cu ft density.

3. Indoor Vapor Retarder Finish:

a. Cloth: Untreated; 9 oz/sq yd weight.
b. Vinyl emulsion type acrylic, compatible with insulation, white color.

2.7 EQUIPMENT INSULATION ACCESSORIES

A. Vapor Retarder Lap Adhesive: Compatible with insulation.

B. Covering Adhesive Mastic: Compatible with insulation.

C. Tie Wire: 0.048 inch stainless steel with twisted ends on maximum 12 inch centers.

D. Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement: ASTM C449/C449M.

E. Adhesives: Compatible with insulation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify piping and equipment has been tested before applying insulation materials.

C. Verify surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION - PIPING SYSTEMS

A. Piping Exposed to View in Finished Spaces: Locate insulation and cover seams in least visible locations.

B. Continue insulation through penetrations of building assemblies or portions of assemblies having fire resistance rating of one hour or less. Provide intumescent firestopping when continuing insulation through assembly. Finish at supports, protrusions, and interruptions. Refer to Section 07 84 00 for penetrations of assemblies with fire resistance rating greater than one hour.

C. Piping Systems Conveying Fluids Below Ambient Temperature:

1. Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, and expansion joints.

2. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
3. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor retarder adhesive or PVC fitting covers.

D. Glass Fiber Board Insulation:

1. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.
2. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retarder cement.
3. Cover wire mesh or bands with cement to a thickness to remove surface irregularities.

E. Hot Piping Systems less than 140 degrees F:

1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.
3. Do not insulate unions and flanges at equipment, but bevel and seal ends of insulation at such locations.

F. Hot Piping Systems greater than 140 degrees F:

1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.
3. Insulate flanges and unions at equipment.

G. Inserts and Shields:

1. Piping 1-1/2 inches Diameter and Smaller: Install steel shield between pipe hanger and insulation.
2. Piping 2 inches Diameter and Larger: Install insert between support shield and piping and under finish jacket.

    a. Insert Configuration: Minimum 6 inches long, of thickness and contour matching adjoining insulation; may be factory fabricated.
    b. Insert Material: Compression resistant insulating material suitable for planned temperature range and service.

3. Piping Supported by Roller Type Pipe Hangers: Install galvanized steel shield between roller and inserts.

H. Insulation Terminating Points:
   1. Condensate Piping: Insulate entire piping system and components to prevent condensation.

I. Piping Exterior to Building: Provide vapor retarder jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor retarder cement. Cover with aluminum jacket with seams located at 3 or 9 o'clock position on side of horizontal piping with overlap facing down to shed water or on bottom side of horizontal piping.

J. Buried Piping: Insulate only where insulation manufacturer recommends insulation product may be installed in trench, tunnel or direct buried. Install factory fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with 1 mil thick aluminum foil sandwiched between three layers of bituminous compound; outer surface faced with polyester film.

K. Prepare pipe insulation for finish painting. Refer to Section 09 90 00.

3.3 INSTALLATION - EQUIPMENT

A. Factory Insulated Equipment: Do not insulate.

B. Exposed Equipment: Locate insulation and cover seams in least visible locations.

C. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retarder cement.

D. Equipment Containing Fluids Below Ambient Temperature:

   1. Insulate entire equipment surfaces.
   2. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.
   3. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
   4. Finish insulation at supports, protrusions, and interruptions.

E. Equipment Containing Fluids Below Ambient Temperature:

   1. Do not insulate flanges and unions, but bevel and seal ends of insulation.
   2. Install insulation with factory-applied or field applied jackets, with or without vapor barrier. Finish with glass cloth and adhesive.
   3. Finish insulation at supports, protrusions, and interruptions.

F. Equipment Located Exterior to Building: Install vapor barrier jacket or finish with glass mesh reinforced vapor barrier cement. Cover with aluminum jacket with seams located on bottom side of horizontal equipment.

G. Cover glass fiber insulation with aluminum jacket.

H. Nameplates and ASME Stamps: Bevel and seal insulation around; do not cover with insulation.

I. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation for easy removal and replacement without damage.

J. Prepare equipment insulation for finish painting. Refer to Section 09 90 00.

3.4 SCHEDULES

A. Water Supply Services Piping Insulation Schedule:

1. Domestic Hot Water Supply, Return and Condensate Piping:

a. Type: Molded Glass FIber.
b. Thickness:

1) Pipe Size 1 Inch and Smaller: 1 inch.
2) Pipe Size 1-1/4 Inches and Larger: 1.5 inch

END OF SECTION

SECTION 22 11 00

FACILITY WATER DISTRIBUTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Domestic water piping, within 5 feet of building.
2. Domestic water piping, above grade.
3. Unions and flanges.
4. General Duty Valves.
5. Pipe hangers and supports.
6. Pressure gages.
7. Pressure gage taps.
8. Thermometers.
9. Flow control valves.
10. Water pressure reducing valves.
11. Relief valves.
12. Strainers.
13. Hose bibs.
14. Hydrants.
15. Recessed valve box.
16. Backflow preventers.
17. Water hammer arrestors.
18. Trap Primers
19. Thermostatic mixing valves.
20. Pressure balanced mixing valves.
21. Diaphragm-type Expansion tanks.
22. In-line circulator pumps.
23. Water Filter System
24. Access Panels.
25. Bedding and cover materials.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of concrete house keeping pads specified by this section.
2. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
3. Section 08 31 13 - Access Doors and Frames: Product requirements for access doors for placement by this section.
4. Section 09 90 00 - Painting and Coating: Product and execution requirements for painting specified by this section.
5. Section 22 05 13 - Common Motor Requirements for Plumbing Equipment: Product requirements for motors for placement by this section.
6. Section 22 05 16 - Expansion Fittings and Loops for Plumbing Piping: Execution requirements for pipe expansion devices for placement by this section.

7. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment: Product requirements for pipe hangers and supports and firestopping for placement by this section.
8. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment: Product requirements for vibration isolators for placement by this section.
9. Section 22 05 53 - Identification for Plumbing Piping and Equipment: Product requirements for pipe identification and valve tags for placement by this section.
10. Section 22 07 00 - Plumbing Insulation: Product and execution requirements for pipe insulation.
11. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections to equipment specified by this section.
12. Section 31 05 13 - Soils for Earthwork: Soils for backfill in trenches.
13. Section 31 05 16 - Aggregates for Earthwork: Aggregate for backfill in trenches.
14. Section 31 23 16 - Excavation: Product and execution requirements for excavation and backfill required by this section.
15. Section 31 23 16.13 - Trenching: Execution requirements for trenching required by this section.
16. Section 31 23 23 - Fill: Requirements for backfill to be placed by this section.
17. Section 33 13 00 - Disinfecting of Water Utility Distribution: Product and execution requirements for disinfection of domestic water piping beyond 5 feet (1500 mm) of building.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:

1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturer's catalog information.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Hangers and Supports: Submit manufacturers catalog information including load capacity.
4. Domestic Water Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.
5. Pumps: Submit pump type, capacity, certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions: Submit installation instructions for pumps, valves and accessories.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of valves and equipment.

C. Operation and Maintenance Data: Submit spare parts list, exploded assembly views and recommended maintenance intervals.

1.5 QUALITY ASSURANCE

A. For drinking water service, provide valves complying with NSF 61.

B. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing Work of this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept valves and equipment on site in shipping containers with labeling in place. Inspect for damage.

C. Provide temporary protective coating on cast iron and steel valves.

D. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

E. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install underground piping when bedding is wet or frozen.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for domestic water piping.

1.12 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two packing kits for each size valve, two loose keys for outside hose bibs, hose end, vacuum breakers for hose bibs service kits for and two pump seals for each pump model.

PART 2 - PRODUCTS

2.1 DOMESTIC WATER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Copper Tubing: ASTM B88, Type K, annealed.

1. Fittings: ASME B16.18, cast copper, or ASME B16.22, wrought copper.
2. Joints: Compression connection or Brazed, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1190 to 1480 degrees F.

2.2 DOMESTIC WATER PIPING, ABOVE GRADE

A. Copper Tubing: ASTM B88, Type L, drawn.

1. Fittings: ASME B16.18, cast copper alloy or ASME B16.22, wrought copper and bronze.
2. Joints: ASTM B32, Alloy Grade Sb5 tin-antimony, or Alloy Grade Sn95 tin-silver, lead free solder, AWS A5.8 Classification BCuP-3 or BCuP-4 silver braze.

2.3 FLUE AND COMBUSTION AIR PIPING

A. PVC Pipe: ASTM D1785, Schedule 40, polyvinyl chloride (PVC) material.

1. Fittings: ASTM D2466, Schedule 40, PVC.
2. Joints: ASTM D2855, solvent weld with ASTM D2564 solvent cement. Prime joints with a contrasting color.

2.4 UNIONS AND FLANGES

A. Unions for Pipe 2 inches and Smaller:

1. Ferrous Piping: Class 150, malleable iron, threaded.
2. Copper Piping: Class 150, bronze unions with soldered brazed joints.
3. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
4. PVC Piping: PVC.
5. CPVC Piping: CPVC.

B. Flanges for Pipe 2-1/2 inches and Larger:

1. Ferrous Piping: Class 150, forged steel, slip-on flanges.
2. Copper Piping: Class 150, slip-on bronze flanges.
3. PVC Piping: PVC flanges.
4. CPVC Piping: CPVC flanges.
5. Gaskets: 1/16 inch thick preformed neoprene gaskets.

2.5 GENERAL DUTY VALVES

A. BALL VALVES

1. Manufacturers:

a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
b. Crane; a Crane Co. brand.
c. Hammond Valve.
d. KITZ Corporation.
e. Milwaukee Valve Company.
f. NIBCO INC.
g. Stockham; a Crane Co. brand.
h. Zurn Industries, LLC.

2. Substitutions: Section 01 60 00 - Product Requirements.
3. 2 inches and Smaller: MSS SP 110, 400 psi WOG, two piece bronze body, chrome plated brass ball, full port, teflon seats, blow-out proof stem, threaded ends with union, lever handle.
4. 2 inches and Smaller: MSS SP 110, Class 150, bronze, two piece body, type 316 stainless steel ball, full port, teflon seats, blow-out proof stem, threaded ends with union, lever handle.
5. 2 inches and Smaller: MSS SP 110, Class 150, bronze, three piece body, type 316 stainless steel ball, full port, teflon seats, blow-out proof stem, threaded ends, lever handle.

B. BUTTERFLY VALVES

1. Manufacturers:

   a. American Valve, Inc.
   b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
   c. Crane; a Crane Co. brand.
   d. DeZURIK.
   e. Hammond Valve.
   f. KITZ Corporation.
   g. Milwaukee Valve Company.
   h. NIBCO INC.
   i. Stockham; a Crane Co. brand.
   j. WATTS.

2. Substitutions: Section 01 60 00 - Product Requirements.
3. 2-1/2 inches and Larger: MSS SP 67, Class 150.

   a. Body: Cast or ductile iron, wafer or lug ends, stainless steel stem, extended neck.
   b. Disc: Aluminum bronze or stainless steel.
   c. Seat: Resilient replaceable EPDM.
   d. Handle and Operator: 10 position lever handle.

C. CHECK VALVES

1. Horizontal Swing Check Valves:

   a. Manufacturers:

      1) Anvil International/Smith-Cooper International; Tailwind Capital, LLC.
      2) APCO DeZurik Valve Co.
      3) Crane; a Crane Co. brand.
      4) Hammond Valve.
      5) Milwaukee Valve Company.
      6) NIBCO INC.

   b. Substitutions: Section 01 60 00 - Product Requirements.
   c. 2 inches and Smaller: MSS SP 80, Class 150, bronze body and cap, bronze seat, Buna-N disc, solder or threaded ends.

d. 2-1/2 inches and Larger: MSS SP 71, Class 125, cast iron body, bolted cap, bronze or cast iron disc, renewable disc seal and seat, flanged ends.

2. Spring Loaded Check Valves:

a. Manufacturers:

1) Hammond Valve.
2) Krombach; Crane Energy Flow Solutions.
3) NIBCO INC.

b. Substitutions: Section 01 60 00 - Product Requirements.
c. 2 inches and Smaller: MSS SP 80, Class 250, bronze body, in-line spring lift check, silent closing, Buna-N disc, integral seat, solder or threaded ends.
d. 2-1/2 inches and Larger: MSS SP 71, Class 125, wafer globe style, cast iron body, bronze seat, center guided bronze disc, stainless steel spring and screws, flanged ends.

2.6 PIPE HANGERS AND SUPPORTS

A. Refer to Section 22 05 29.

2.7 PRESSURE GAGES

A. Manufacturers:

1. Trerice.
2. Ameter, Inc..
3. Weiss.
4. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Gage: ASME B40.1, UL 393 with bourdon tube, rotary brass movement, brass socket, front calibration adjustment, black scale on white background.

1. Case: Steel.
2. Bourdon Tube: Brass.
3. Dial Size: 3-1/2 inch diameter.
4. Mid-Scale Accuracy: One percent.
5. Scale: Psi.

2.8 PRESSURE GAGE TAPS

A. Manufacturers:

1. Trerice.
2. Ameter, Inc..
3. Weiss.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Substitutions: Section 01 60 00 - Product Requirements.

D. Needle Valve: Brass, 1/4 inch NPT for minimum 300 psi.

E. Ball Valve: Brass, 1/8 inch NPT for 250 psi.

F. Pulsation Damper: Pressure snubber, brass with 1/4 inch NPT connections.

2.9 STEM TYPE THERMOMETERS

A. Manufacturers:

1. KOBOLD Instruments, Inc. - USA.
2. Marsh Bellofram.
3. Weiss Instruments, Inc.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Thermometer: ASTM E1, red appearing mercury, lens front tube, cast aluminum case with enamel finish.

1. Size: 7-inch scale.
2. Window: Clear glass.
3. Stem: Brass, 3/4 inch NPT, 3-1/2 inch long.
4. Accuracy: 2 percent.
5. Calibration: Both degrees F and degrees C.

2.10 FLOW CONTROL VALVES

A. Manufacturers:

1. Bell & Gossett.
2. Griswold.
3. Flocon.
4. NIBCO INC.
5. WATTS.
6. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Construction: Class 125, Brass or bronze body with union on inlet and outlet, temperature and pressure test plug on inlet and outlet.

D. Calibration: Control flow within 5 percent of selected rating, over operating pressure range of 10 times minimum pressure required for control, maximum minimum pressure 5 psi.

2.11 WATER PRESSURE REDUCING VALVES

A. Manufacturers:

1. Zurn Industries, LLC

2. Conbraco.
3. WATTS.
4. Cla-Val

B. Substitutions: Section 01 60 00 - Product Requirements.

C. 2 inches and Smaller: MSS SP 80, bronze body, stainless steel and thermoplastic internal parts, fabric reinforced diaphragm, strainer, threaded ends.

D. 2 inches and Larger: MSS SP 85, cast iron body, bronze fitted, elastomeric diaphragm and seat disc, flanged.

2.12 RELIEF VALVES

A. Manufacturers:

1. Zurn Industries, LLC.
2. Conbraco.
3. WATTS.
4. Cla-Val.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Pressure Relief:

1. ANSI Z21.22 certified, bronze body, teflon seat, steel stem and springs, automatic, direct pressure actuated.

D. Temperature and Pressure Relief:

1. ANSI Z21.22 certified, bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, temperature relief maximum 210 degrees F, capacity ASME certified and labeled.

2.13 STRAINERS

A. Manufacturers:

1. Conbraco.
2. WATTS.
3. NIBCO INC.
4. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. 2 inch and Smaller: Threaded brass body for 175 psi CWP, Y pattern with 1/32 inch stainless steel perforated screen.

D. 1-1/2 inch to 4 inch: Class 125, flanged iron body, Y pattern with 1/16-inch stainless steel perforated screen.

E. 5 inch and Larger: Class 125, flanged iron body, basket pattern with 1/8 inch stainless steel perforated screen.

2.14 HOSE BIBS (SEE SCHEDULE FOR AMEK & MODEL)

A. Manufacturers:

1. Acorn.
2. MiFAB.
3. J.R. Smith.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Interior: Bronze or brass with integral mounting flange, replaceable hexagonal disc, hose thread spout, chrome plated where exposed with lock shield and removable key, integral vacuum breaker in conformance with ASSE 1011.

2.15 HYDRANTS (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Acorn.
2. MiFAB.
3. J.R. Smith.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Wall Hydrant: ASSE 1019; non-freeze, self-draining type with chrome plated lockable recessed box hose thread spout, locks shield and removable key, and integral vacuum breaker.

2.16 RECESSED VALVE BOX (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. IPS Corporation.
2. Sioux Chief Manufacturing.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Washing Machine: Plastic preformed rough-in box with brass valves with single lever handle, socket for 2 inch waste, slip in finishing cover.

D. Refrigerator: Plastic preformed rough-in box with brass valves with wheel handle slip in finishing cover.

E. Ice Machine: The box shall contain lead-free quarter turn valve with integral water hammer arrestor. Valve shall comply with ASME A112.18.1 and water hammer arrestor shall comply with ASSE 1010.

2.17 BACKFLOW PREVENTERS

A. Manufacturers:

1. FEBCO; A WATTS Brand.
2. NIBCO INC.
3. WATTS.
4. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Reduced Pressure Backflow Preventers:

1. Comply with ASSE 1013.
2. Bronze body, with bronze internal parts and stainless steel springs.
3. Two independently operating, spring loaded check valves; diaphragm type differential pressure relief valve located between check valves; third check valve opening under back pressure in case of diaphragm failure; non-threaded vent outlet; assembled with two gate valves, strainer, and four test cocks.

D. Double Check Valve Assemblies: Comply with ASSE ASSE 1015 or AWWA C510; Bronze body with corrosion resistant internal parts and stainless steel springs; two independently operating check valves with intermediate atmospheric vent.

2.18 WATER HAMMER ARRESTORS (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. MiFAB.
2. J.R. Smith.
3. Precision Plumbing Products.
4. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. ASSE 1010; stainless steel construction, bellows type sized in accordance with PDI WH-201.

D. Pre-charged suitable for operation in temperature range -100 to 300 degrees F and maximum 250 psi working pressure.

2.19 TRAP PRIMER SYSTEM (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. MiFAB.
2. Precision Plumbing Products.

B. Automatically Activated:

1. Standard: ASSE 1044, ASSE 1018.
2. Piping: NPS 1/2 inch ASTM B88, Type L, copper, water tubing.

3. Vacuum Breaker: ASSE 1001.
4. Size Outlets: NPS 1/2 inches.
5. Provide distribution unit as required.

C. Electronic:

1. Standard: ASSE 1044, ASSE 1018.
2. Piping: NPS 1/2 inch ASTM B88, Type L, copper, water tubing.
3. Vacuum Breaker: ASSE 1001.
4. Size Outlets: NPS 1/2 inches.
5. Provide distribution unit as required.
6. 120 volt, single phase, 60 Hz

2.20 THERMOSTATIC MIXING VALVES (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Chicago Faucets.
2. WATTS.
3. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Valve: Chrome plated cast brass body, stainless steel or copper alloy bellows, integral temperature adjustment. Conform to ASSE 1070 to temper water to maximum 110 degrees F.

D. Capacity: Refer to Plumbing fixture schedule.

E. Accessories:

1. Check valve on inlets.
2. Volume control shut-off valve on outlet.
3. Stem thermometer on outlet.
4. Strainer stop checks on inlets.

2.21 PRESSURE BALANCED MIXING VALVES (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Symmons.
2. Bradley.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Valve: Chrome plated cast brass body, stainless steel cylinder and integral temperature adjustment.

D. Capacity: Refer to Plumbing fixture schedule.

E. Accessories:

1. Volume control shut-off valve on outlet.
2. Stem thermometer on outlet.
3. Strainer stop checks on inlets.

2.22 DIAPHRAGM-TYPE EXPANSION TANKS (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Amtrol.
2. Bell & Gossett; a Xylem brand.
3. Taco.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Construction: Welded steel, tested and stamped in accordance with ASME Section VIII; supplied with National Board Form U-1, rated for working pressure of 125 psig, with flexible EPDM diaphragm sealed into tank, and steel legs or saddles.

D. Accessories: Pressure gage and air-charging fitting, tank drain; pre-charge to 12 psig.

E. Size: Refer to tank schedule .

2.23 IN-LINE CIRCULATOR PUMPS (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Bell & Gossett.
2. Grundfos.
3. Taco Comfort Solutions.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Casing: Bronze rated for 125 psig working pressure with stainless steel rotor assembly.

D. Impeller: Bronze.

E. Shaft: Alloy steel with integral thrust collar and two, oil lubricated bronze sleeve bearings.

F. Seal: Carbon rotating against stationary ceramic seat.

G. Drive: Flexible coupling.

H. Performance:

1. Flow: Refer to Plumbing schedule.

I. Type: Horizontal shaft, single stage, close coupled, radial split casing, for maximum working pressure.

2.24 WATER FILTER SYSTEM

A. Refer to Food Service drawings

2.25 ACCESS PANELS

A. Manufacturers:

1. Karp.
2. Milcor.
3. Elmdor.
4. J.R. Smith.

B. Panel 8x8 minimum size, but larger if required. Concealed hinge, allen head lock.

C. Styles:

1. Gypsum Board or Masonry: Karp DSC-214M prime coated steel.
2. Tile: Karp DSC-214M stainless steel.
3. Plaster: Karp DSC-214L prime coated steel.
4. Acoustical Plaster: Karp DSC-210PL.
5. Fire Rated Construction: Karp KRP-150FR prime coated steel; UL listed "B" label.

2.26 BEDDING AND COVER MATERIALS

A. Bedding: Fill Type as specified in Division 31.

B. Cover: Fill Type, as specified in Division 31.

C. Soil Backfill from Above Pipe to Finish Grade: Soil Type, as specified in Division 31.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Remove scale and dirt, on inside and outside, before assembly.

3.3 INSTALLATION - METERS

A. Install positive displacement meters in accordance with AWWA M6, with isolating valves on inlet and outlet.

3.4 INSTALLATION - THERMOMETERS AND GAGES

A. Install one pressure gage for each pump, locate taps before strainers and on suction and discharge of pump; pipe to gage.

B. Install gage taps in piping.

C. Install pressure gages with pulsation dampers. Provide needle valve or ball valve to isolate each gage.

D. Provide instruments with scale ranges selected according to service with largest appropriate scale.

E. Install gages and thermometers in locations where they are easily read from normal operating level. Install vertical to 45 degrees off vertical.

F. Adjust gages and thermometers to final angle, clean windows and lenses, and calibrate to zero.

3.5 INSTALLATION - HANGERS AND SUPPORTS

A. Refer to Section 22 05 29.

3.6 INSTALLATION - BURIED PIPING SYSTEMS

A. Verify connection to existing piping system size, location, and invert are as indicated on Drawings.

B. Establish elevations of buried piping with not less than 1 ft of cover.

C. Establish minimum separation of 12 from other services piping in accordance with code.

D. Remove scale and dirt on inside of piping before assembly.

E. Excavate pipe trench in accordance with Division 31.

F. Install pipe to elevation as indicated on Drawings.

G. Place bedding material at trench bottom to provide uniform bedding for piping, level bedding materials in one continuous layer not exceeding 4 inches depth; compact to 95 percent maximum density.

H. Install pipe on prepared bedding.

I. Route pipe in straight line.

J. Install pipe to allow for expansion and contraction without stressing pipe or joints.

K. Install shutoff valves at locations indicated on Drawings in accordance with this Section.

L. Install plastic ribbon tape continuous over top of pipe. above pipe line; coordinate with Section. Refer to Section 22 05 53.

M. Pipe Cover and Backfilling:

1. Backfill trench in accordance with Division 31.
2. Maintain optimum moisture content of fill material to attain required compaction density.
3. After hydrostatic test, evenly backfill entire trench width by hand placing backfill material and hand tamping in 4 inches compacted layers to 6 inches minimum cover over top of jacket. Compact to 95 percent maximum density.
4. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
5. Do not use wheeled or tracked vehicles for tamping.

3.7 INSTALLATION - ABOVE GROUND PIPING

A. Install non-conducting dielectric connections wherever jointing dissimilar metals.

B. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

C. Install piping to maintain headroom without interfering with use of space or taking more space than necessary.

D. Group piping whenever practical at common elevations.

E. Slope piping and arrange systems to drain at low points.

F. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 22 07 00.

G. Provide access where valves and fittings are not accessible. Coordinate size and location of access doors with Section 08 31 13.

H. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

I. Provide support for utility meters in accordance with requirements of utility companies.

J. Install domestic water piping in accordance with ASME B31.9.

K. Sleeve pipes passing through partitions, walls and floors. Refer to Section 22 05 29.

L. Install firestopping at fire rated construction perimeters and openings containing penetrating sleeves and piping. Refer to Section 22 05 29.

M. Install unions downstream of valves and at equipment or apparatus connections.

N. Install valves with stems upright or horizontal, not inverted.

O. Install brass male adapters each side of valves in copper piped system. Solder adapters to pipe.

P. Install ball or butterfly valves for shut-off and to isolate equipment, part of systems, or vertical risers.

Q. Install ball or butterfly valves for throttling, bypass, or manual flow control services.

R. Provide lug end butterfly valves adjacent to equipment when functioning to isolate equipment.

S. Provide spring loaded check valves on discharge of water pumps.

T. Provide flow controls in water circulating systems as indicated on Drawings.

U. Install potable water protection devices on plumbing lines where contamination of domestic water may occur; on boiler feed water lines, janitor rooms, fire sprinkler systems, premise isolation, irrigation systems, flush valves, interior and exterior hose bibs.

V. Pipe relief from valves, back-flow preventers and drains to nearest floor drain.

W. Test backflow preventers in accordance with ASSE 5013.

X. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping to water closets, sinks, urinals, washing machine, dishwashers, hose bibbs, showers, tubs, and other fixtures with quick cksing valves. Place within 6 feet of fixture. Provide with access panel if required by Local Code.

3.8 INSTALLATION - PUMPS

A. Provide pumps to operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

B. Install long radius reducing elbows or reducers between pump and piping. Support piping adjacent to pump so no weight is carried on pump casings. For close coupled or base mounted pumps, install supports under elbows on pump suction and discharge line sizes 4 inches and over.

C. Install pumps on vibration isolators. Refer to Section 21 05 48.

D. Install flexible connectors at or near pumps where piping configuration does not absorb vibration. Refer to Section 23 21 16.
