E. Provide line sized shut-off valve and pump suction fitting on pump suction, and line sized combination pump discharge valve on pump discharge. Refer to Section 23 21 16.

F. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump so no weight is carried on pump casings. Provide supports under elbows on pump suction and discharge line sizes 4 inches and larger.

G. Provide air cock and drain connection on horizontal pump casings.

H. Check, align, and certify alignment of base mounted pumps prior to start-up.

I. Lubricate pumps before start-up.

3.9 INSTALLATION TANKS

A. Install Work in accordance with State of California standards.

B. Provide supports, independent of building structural framing members.

C. Clean and flush installation. Seal until pipe connections are made.

D. Install the following accessories on domestic water piping connections:

1. On inlet: Thermometer check valve and shut off valve.
2. On outlet: Thermometer and shut off valve.
3. Install relief valve piping to nearest approved receptor.

3.10 INSTALLATION - SERVICE CONNECTIONS

A. Provide new water service complete with approved reduced pressure back-flow preventer and water meter with by-pass valves pressure reducing valve, and strainer.

B. Provide sleeve in wall for service main and support at wall with reinforced-concrete bridge. Caulk enlarged sleeve and make watertight with pliable material. Anchor service main inside to concrete wall.

C. Provide 18 gage galvanized sheet metal sleeve around service main to 6 inch above floor and 6 feet minimum below grade. Size for minimum of 2 inches of loose batt insulation stuffing.

3.11 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements or 017000 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Test domestic water piping system in accordance with applicable code.

3.12 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for cleaning.

B. Disinfect water distribution system in accordance with Section 33 13 00.

C. Prior to starting work, verify system is complete, flushed and clean.

D. Verify pH of water to be treated is between 7.4 and 7.6 by adding alkali (caustic soda or soda ash) or acid (hydrochloric).

E. Inject disinfectant, free chlorine in liquid, powder and tablet or gas form, throughout system to obtain residual from 50 to 80 mg/L.

F. Bleed water from outlets to obtain distribution and test for disinfectant residual at minimum 15 percent of outlets.

G. Maintain disinfectant in system for 24 hours.

H. When final disinfectant residual tests less than 25 mg/L, repeat treatment.

I. Flush disinfectant from system until residual concentration is equal to incoming water or 1.0 mg/L.

J. Take samples no sooner than 24 hours after flushing, from percent of outlets and from water entry, and analyze in accordance with AWWA C651.

END OF SECTION

SECTION 22 13 00

FACILITY SANITARY SEWERAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sanitary sewer piping buried within 5 feet of building.
2. Sanitary sewer and vent piping above grade.
3. Condensate piping.
4. Pipe hangers and supports.
5. Floor drains.
6. Floor sinks.
7. Indirect Roof Receptors
8. Cleanouts.
9. Bedding and cover materials.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of concrete specified by this section.
2. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
3. Section 08 31 13 - Access Doors and Frames: Product requirements for access doors for placement by this section.
4. Section 09 90 00 - Painting and Coating: Product and execution requirements for painting specified by this section.
5. Section 22 05 13 - Common Motor Requirements for Plumbing Equipment: Product requirements for motors for placement by this section.
6. Section 22 05 16 - Expansion Fittings and Loops for Plumbing Piping: Execution requirements for pipe expansion devices for placement by this section.
7. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment: Product requirements for pipe hangers and supports and firestopping for placement by this section.
8. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment: Product requirements for vibration isolators for placement by this section.
9. Section 22 05 53 - Identification for Plumbing Piping and Equipment: Product requirements for pipe identification for placement by this section.
10. Section 22 07 00 - Plumbing Insulation: Product and execution requirements for pipe insulation.
11. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections to equipment specified by this section.
12. Section 31 05 13 - Soils for Earthwork: Soils for backfill in trenches.
13. Section 31 05 16 - Aggregates for Earthwork: Aggregate for backfill in trenches.
14. Section 31 23 16 - Excavation: Product and execution requirements for excavation and backfill required by this section.

15. Section 31 23 16.13 - Trenching: Execution requirements for trenching required by this section.
16. Section 31 23 23 - Fill: Requirements for backfill to be placed by this section.
17. Section 33 41 00 - Storm Utility Drainage Piping: Catch basins and manholes.

1.2 REFERENCES

A. American Society of Mechanical Engineers:

1. ASME A112.21.1 - Floor Drains.
2. ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings.
3. ASME B16.3 - Malleable Iron Threaded Fittings.
4. ASME B16.4 - Gray Iron Threaded Fittings.
5. ASME B16.23 - Cast Copper Alloy Solder Joint Drainage Fittings (DWV).
6. ASME B16.29 - Wrought Copper and Wrought Copper Alloy Solder Joint Drainage Fittings - DWV.
7. ASME B31.9 - Building Services Piping.

B. ASTM International:

1. ASTM A74 - Standard Specification for Cast Iron Soil Pipe and Fittings.
2. ASTM A536 - Standard Specification for Ductile Iron Castings.
3. ASTM B88 - Standard Specification for Seamless Copper Water Tube.
4. ASTM C564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.

C. Cast Iron Soil Pipe Institute:

1. CISPI 301 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.
2. CISPI 310 - Specification for Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, weights, and placement of openings and holes for sewage-ejectors, and manholes.

C. Product Data:

1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturers catalog information.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Hangers and Supports: Submit manufacturers catalog information including load capacity.
4. Sanitary Drainage Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.

5. Pumps: Submit pump type, capacity, certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Submit installation instructions for material and equipment.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of equipment and clean-outs.

C. Operation and Maintenance Data: Submit frequency of treatment required for interceptors. Include, spare parts lists, exploded assembly views for pumps and equipment.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with State of California standards.

B. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install underground piping when bedding is wet or frozen.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

1.12 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

PART 2 - PRODUCTS

2.1 SANITARY SEWER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Manufacturer:

1. Husky SD4000.
2. Clamp-All 125.
3. MG Coupling.
4. Charlotte Pipe.
5. AB & I Pipe,
6. Tyler Pipe.

B. Cast Iron Soil Pipe: CISPI 301 and A888. hubless, service weight.

1. Fittings: Cast iron, CISPI 301 and ASTM A888.
2. Joints: ASTM C1540, with C564 gaskets, heavy duty 304 stainless steel assemblies.

2.2 SANITARY SEWER AND VENT PIPING, ABOVE GRADE

A. Manufacturer:

1. Husky SD4000.
2. Clamp-All 125.
3. MG Coupling.
4. Charlotte Pipe.
5. AB & I Pipe,
6. Tyler Pipe.

B. Cast Iron Soil Pipe: CISPI 301 and A888. hubless, service weight.

1. Fittings: Cast iron, CISPI 301 and ASTM A888.
2. Joints: ASTM X1540, with C564 neoprene gaskets and 304 stainless steel clamp-and-shield assemblies.

2.3 CONDENSATE PIPING

A. ASTM B88, Type M with ASTM B16.23 vast bronze or ASTM B16.29 wrought copper fittings and ASTM B32 alloy grade SB5 tin antimony or alloy grade SN95 tin-silver lead-free solder..

2.4 PIPE HANGERS AND SUPPORTS

A. Refer to Section 22 05 29.

2.5 FLOOR DRAINS (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Jay R. Smith Mfg Co; a division of Morris Group International.
2. Josam Company.
3. WATTS.
4. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Floor Drain: ASME A112.21.1; lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze strainer.

D. Shower Drain: ASME A112.21.1; lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable round nickel-bronze strainer with removable perforated sediment bucket.

2.6 FLOOR SINKS (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Jay R. Smith Mfg Co; a division of Morris Group International.
2. WATTS.
3. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Floor Sink: Square lacquered cast iron body with integral seepage pan, epoxy coated interior, aluminum dome strainer, clamp collar, sediment bucket, epoxy coated, nickel bronze frame and see drawings for grate.

2.7 INDIRECT ROOF RECEPTOR (SEE SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Jay R. Smith Mfg Co; a division of Morris Group International.
2. WATTS.
3. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. 12-inch diameter all galvanized assembly with hubless cast iron body with bottom outlet, flashing device, 2-1/2 inch high water dam, underdeck clamp, sump receiver and dome strainer with vandal-proof mounting cast iron “P-Trap”.

2.8 CLEANOUTS

A. Manufacturers:

1. Jay R Smith Mfg. Co; a division of Morris Group International.
2. Josam Company.
3. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Exterior Surfaced Areas: Round cast nickel bronze access frame and non-skid cover.

D. Exterior Unsurfaced Areas: Line type with lacquered cast iron body and round epoxy coated cover wit gasket.

E. Interior Finished Floor Areas: Lacquered cast iron body with anchor flange, reversible clamping collar, threaded top assembly, and round scored cover with gasket in service areas and round depressed cover with gasket to accept floor finish in finished floor areas.

F. Interior Finished Wall Areas: Line type with lacquered cast iron body and round epoxy coated cover with gasket, and round stainless steel access cover secured with machine screw.

G. Interior Unfinished Accessible Areas: Calked or threaded type. Provide bolted stack cleanouts on vertical rainwater leaders.

2.9 BEDDING AND COVER MATERIALS

A. Bedding: Fill Type as specified in Division 31.

B. Cover: Fill Type, as specified in Division 31.

C. Soil Backfill from Above Pipe to Finish Grade: Soil Type, as specified in Division 31.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - HANGERS AND SUPPORTS

A. Refer to Section 22 05 29.

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Verify connection to existing piping system size, location, and invert are as indicated on Drawings.

B. Establish elevations of buried piping with not less than 3 ft of cover.

C. Establish minimum separation of 12 from other services piping in accordance with code.

D. Remove scale and dirt on inside of piping before assembly.

E. Excavate pipe trench in accordance with Division 31.

F. Install pipe to elevation as indicated on Drawings.

G. Place bedding material at trench bottom to provide uniform bedding for piping, level bedding materials in one continuous layer not exceeding 4 inches compacted depth; compact to 95 percent maximum density.

H. Install pipe on prepared bedding.

I. Route pipe in straight line.

J. Install plastic ribbon tape continuous buried 6 inches below finish grade, above pipe line; coordinate with Division 31. Refer to Section 22 05 53.

K. Pipe Cover and Backfilling:

1. Backfill trench in accordance with Division 31.
2. Maintain optimum moisture content of fill material to attain required compaction density.
3. After hydrostatic test, evenly backfill entire trench width by hand placing backfill material and hand tamping in 4 inches compacted layers to 6 inches minimum cover over top of jacket. Compact to 95 percent maximum density.
4. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
5. Do not use wheeled or tracked vehicles for tamping.

3.5 INSTALLATION - ABOVE GROUND PIPING

A. Establish invert elevations, slopes for drainage to1/8 inch per foot minimum. Maintain gradients.

B. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Provide clearances at cleanout for snaking drainage system.

C. Encase exterior cleanouts in concrete flush with grade.

D. Install floor cleanouts at elevation to accommodate finished floor.

E. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

F. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

G. Install piping to maintain headroom. Do not spread piping, conserve space.

H. Group piping whenever practical at common elevations.

I. Provide access where valves and fittings are not accessible. Coordinate size and location of access doors with Section 08 31 13.

J. Install piping penetrating roofed areas to maintain integrity of roof assembly.

K. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

L. Prepare exposed, unfinished pipe, fittings, supports, and accessories ready for finish painting. Refer to Section 09 90 00.

M. Install bell and spigot pipe with bell end upstream.

N. Sleeve pipes passing through partitions, walls and floors.

O. Install firestopping at fire rated construction perimeters and openings containing penetrating sleeves and piping. Refer to Section 22 05 29.

P. Support cast iron drainage piping at every joint.

3.6 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements or 017000 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Test sanitary waste and vent piping system in accordance with applicable code.

END OF SECTION

SECTION 22 14 00

FACILITY STORM DRAINAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Storm water piping buried within 5 feet of building.
2. Storm water piping above grade.
3. Pipe hangers and supports.
4. Roof and Overflow drains.
5. Downspout nozzles.
6. Cleanouts.
7. Bedding and cover materials.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of concrete specified by this section.
2. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
3. Section 08 31 13 - Access Doors and Frames: Product requirements for access doors for placement by this section.
4. Section 09 90 00 - Painting and Coating: Product and execution requirements for painting specified by this section.
5. Section 22 05 13 - Common Motor Requirements for Plumbing Equipment: Product requirements for motors for placement by this section.
6. Section 22 05 16 - Expansion Fittings and Loops for Plumbing Piping: Execution requirements for pipe expansion devices for placement by this section.
7. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment: Product requirements for pipe hangers and supports and firestopping for placement by this section.
8. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment: Product requirements for vibration isolators for placement by this section.
9. Section 22 05 53 - Identification for Plumbing Piping and Equipment: Product requirements for pipe identification for placement by this section.
10. Section 22 07 00 - Plumbing Insulation: Product and execution requirements for pipe insulation.
11. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections to equipment specified by this section.
12. Section 31 05 13 - Soils for Earthwork: Soils for backfill in trenches.
13. Section 31 05 16 - Aggregates for Earthwork: Aggregate for backfill in trenches.
14. Section 31 23 16 - Excavation: Product and execution requirements for excavation and backfill required by this section.
15. Section 31 23 16.13 - Trenching: Execution requirements for trenching required by this section.

16. Section 31 23 23 - Fill: Requirements for backfill to be placed by this section.
17. Section 33 41 00 - Storm Utility Drainage Piping: Catch basins and manholes.

1.2 REFERENCES

A. American Society of Mechanical Engineers:

1. ASME A112.21.2M - Roof Drains.
2. ASME B16.23 - Cast Copper Alloy Solder Joint Drainage Fittings (DWV).
3. ASME B31.9 - Building Services Piping.

B. ASTM International:

1. ASTM A74 - Standard Specification for Cast Iron Soil Pipe and Fittings.
2. ASTM C564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.

C. Cast Iron Soil Pipe Institute:

1. CISPI 301 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.
2. CISPI 310 - Specification for Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, weights, and placement of openings and holes for sump-pumps, catch basins and manholes.

C. Product Data:

1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturers catalog information.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Hangers and Supports: Submit manufacturers catalog information including load capacity.
4. Storm Drainage Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.

D. Manufacturer's Installation Instructions: Submit installation instructions for material and equipment.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of equipment and cleanouts.

C. Operation and Maintenance Data: Submit spare parts lists, exploded assembly views for pumps and equipment.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with State of California standards.

B. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install underground piping when bedding is wet or frozen.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

1.12 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

PART 2 - PRODUCTS

2.1 STORM WATER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Manufacturer:

1. Husky SD4000.
2. Clamp-All 125.
3. MG Coupling.
4. Charlotte Pipe.
5. AB & I Pipe,
6. Tyler Pipe.

B. Cast Iron Soil Pipe: CISPI 301 and A888. hubless, service weight.

1. Fittings: Cast iron, CISPI 301 and ASTM A888.
2. Joints: ASTM C1540, with C564 gaskets, heavy duty 304 stainless steel assemblies.

2.2 STORM WATER PIPING, ABOVE GRADE

A. Manufacturer:

1. Husky SD4000.
2. Clamp-All 125.
3. MG Coupling.
4. Charlotte Pipe.
5. AB & I Pipe,
6. Tyler Pipe.

B. Cast Iron Soil Pipe: CISPI 301 and A888. hubless, service weight.

1. Fittings: Cast iron, CISPI 301 and ASTM A888.
2. Joints: ASTM X1540, with C564 neoprene gaskets and 304 stainless steel clamp-and-shield assemblies.

2.3 PIPE HANGERS AND SUPPORTS

A. Refer to Section 22 05 29

2.4 ROOF AND OVERFLOW DRAINS

A. Manufacturers:

1. Jay R. Smith Mfg Co; a division of Morris Group International.
2. Josam Company.
3. Sioux Chief Manufacturing Company, Inc.
4. WATTS.
5. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Roof Drain:

1. Assembly: ASME A112.21.2M.
2. Body: Lacquered cast iron with sump.
3. Strainer: Removable cast iron dome with vandal proof screws.
4. Accessories: Coordinate with roofing type:

a. Membrane flange and membrane clamp with integral gravel stop.
b. Adjustable under deck clamp.
c. Roof sump receiver.
d. Waterproofing flange.
e. Controlled flow weir.
f. Leveling frame.
g. Adjustable extension sleeve for roof insulation.
h. Perforated or slotted ballast guard extension for inverted roof.
i. Perforated stainless steel ballast guard extension.

D. Overflow Drain:

1. Assembly: ASME A112.21.2M.
2. Body: Lacquered cast iron with sump.
3. Strainer: Removable cast iron dome with vandal proof screws.
4. Pipe extended to 2 inches above flood elevation.
5. Accessories: Coordinate with roofing type:

a. Membrane flange and membrane clamp with integral gravel stop.
b. Adjustable under deck clamp.
c. Roof sump receiver.
d. Waterproofing flange.
e. Controlled flow weir.
f. Leveling frame.
g. Adjustable extension sleeve for roof insulation.
h. Perforated or slotted ballast guard extension for inverted roof.
i. Perforated stainless steel ballast guard extension.

2.5 DOWNSPOUT NOZZLES

A. Manufacturers:

1. Jay R. Smith Mfg Co; a division of Morris Group International.
2. Josam Company.
3. MIFAB, Inc.
4. WATTS.
5. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Product Description: No hub outlet, opening serves as anchor. Provide birdscreen cover. Nickel bronze body and wall flange.

2.6 CLEANOUTS

A. Manufacturers:

1. J.R. Smith.
2. Josam Company.
3. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Exterior Surfaced Areas: Round cast nickel bronze access frame and non-skid cover.

D. Exterior Unsurfaced Areas: Line type with lacquered cast iron body and round epoxy coated cover with gasket.

E. Interior Finished Floor Areas: Lacquered cast iron body with anchor flange, reversible clamping collar, threaded top assembly, and round scored cover with gasket in service areas and round depressed cover with gasket to accept floor finish in finished floor areas.

F. Interior Finished Wall Areas: Line type with lacquered cast iron body and round epoxy coated cover with gasket, and round stainless steel access cover secured with machine screw.

G. Interior Unfinished Accessible Areas: Calked or threaded type. Provide bolted stack cleanouts on vertical rainwater leaders.

2.7 BEDDING AND COVER MATERIALS

A. Bedding: Fill Type as specified in Division 31.

B. Cover: Fill Type, as specified in Division 31.

C. Soil Backfill from Above Pipe to Finish Grade: Soil Type, as specified in Division 31. Subsoil with no rocks over 6 inches in diameter, frozen earth or foreign matter.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - HANGERS AND SUPPORTS

A. Refer to Section 22 05 29.

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Verify connection to existing piping system size, location, and invert are as indicated on Drawings.

B. Establish elevations of buried piping with not less than 1 ft of cover.

C. Establish minimum separation of 12 from other services piping according to code.

D. Excavate pipe trench according to Division 31.

E. Install pipe to elevation as indicated on Drawings.

F. Place bedding material at trench bottom to provide uniform bedding for piping, level bedding materials in one continuous layer not exceeding 4 inches compacted depth; compact to 95 percent maximum density.

G. Install pipe on prepared bedding.

H. Route pipe in straight line.

I. Install plastic ribbon tape continuous over top of pipe buried 6 inches below finish grade, above pipe line; coordinate with Division 31.

J. Pipe Cover and Backfilling:

1. Backfill trench according to Division 31.
2. Maintain optimum moisture content of fill material to attain required compaction density.
3. After hydrostatic test, evenly backfill entire trench width by hand placing backfill material and hand tamping in 4 inches compacted layers to 6 inches minimum cover over top of jacket. Compact to 95 percent maximum density.
4. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
5. Do not use wheeled or tracked vehicles for tamping.

3.5 INSTALLATION - ABOVE GROUND PIPING

A. Establish invert elevations, slopes for drainage to 1/8 inch per foot minimum. Maintain gradients.

B. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Provide clearance at cleanout for snaking drainage system.

C. Encase exterior cleanouts in concrete flush with grade.

D. Install floor cleanouts at elevation to accommodate finished floor.

E. Install non-conducting dielectric connections wherever jointing dissimilar metals.

F. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

G. Install piping to maintain headroom. Group piping to conserve space.

H. Group piping whenever practical at common elevations.

I. Support cast iron drainage piping at every joint.

J. Provide clearance in hangers and from structure and other equipment for installation of insulation. Refer to Section 22 07 00.

K. Install piping penetrating roofed areas to maintain integrity of roof assembly.

L. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

M. Prepare exposed, unfinished pipe, fittings, supports, and accessories ready for finish painting. Refer to Section 09 90 00.

N. Install bell and spigot pipe with bell end upstream.

O. Sleeve pipes passing through partitions, walls and floors. Refer to Section 22 05 29.

P. Install firestopping at fire rated construction perimeters and openings containing penetrating sleeves and piping. Refer to Section] 220529.

3.6 FIELD QUALITY CONTROL

A. Division 01 - Quality Requirements and Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Test storm drainage piping system according to applicable code.

END OF SECTION

SECTION 22 16 00

FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Natural gas piping buried within 5 feet of building.
2. Natural gas piping above grade.
3. Unions and flanges.
4. Plug Valves.
5. Pipe hangers and supports.
6. Strainers.
7. Natural gas pressure relief valves.
8. Underground pipe markers.
9. Bedding and cover materials.

B. Related Sections:

1. Section 08 31 13 - Access Doors and Frames: Access doors for concealed valves and accessories.
2. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment: Product requirements for pipe hangers and supports and firestopping for placement by this section.
3. Section 22 05 53 - Identification for Plumbing Piping and Equipment: Product requirements for valve and pipe identification for placement by this section.

1.2 REFERENCES

A. American National Standards Institute:

1. ASME B16.3 - Malleable Iron Threaded Fittings.
2. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes.
3. ASME B16.33 - Manually Operated Metallic Gas Valves for Use in Gas Piping Systems Up to 125 psig (sizes 1/2 - 2).
4. ASME B31.9 - Building Services Piping.
5. ASME Section IX - Boiler and Pressure Vessel Code - Welding and Brazing Qualifications.

C. ASTM International:

1. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

2. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.
3. ASTM F1973 – Factory Assembled Anodeless Risers and Transition Fittings in Polyethylene (PE) and Polyamide 11 (PA11) and Polyamide 12 (PA12) Fuel Gas Distribution Systems.

D. American Welding Society:

1. AWS D1.1 - Structural Welding Code - Steel.

E. American Water Works Association:

1. AWWA C105 - American National Standard for Polyethylene Encasement for Ductile-Iron Pipe Systems.

F. National Fire Protection Association:

1. NFPA 54 - National Fuel Gas Code.

1.3 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.

B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves, equipment.

C. Provide pipe hangers and supports in accordance with ASME B31.9.

D. Use plug valves for shut-off and to isolate equipment, part of systems, or vertical risers.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:

1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturers catalog information.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Hangers and Supports: Submit manufacturers catalog information including load capacity.
4. Piping Specialties: Submit manufacturers catalog information including capacity, rough-in requirements, and service sizes for the following:

a. Strainers.
b. Natural gas pressure regulators.
c. Natural gas pressure relief valves.

C. Design Data: Indicate pipe size. Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.

D. Test Reports: Indicate results of piping system pressure test.

E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

F. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of valves, piping system, and system components.

C. Operation and Maintenance Data: Submit for valves and gas pressure regulators installation instructions, spare parts lists.

1.6 QUALITY ASSURANCE

A. Perform natural gas Work in accordance with NFPA 54.

B. Perform work in accordance with applicable code and local gas company requirements.

C. Perform Work in accordance with ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.

D. Perform Work in accordance with applicable code authority having jurisdiction for welding hanger and support attachments to building structure.

E. Furnish shutoff valves complying with ASME B16.33 or ANSI Z21.15.

F. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

C. Protect piping and fittings from soil and debris with temporary end caps and closures. Maintain in place until installation. Furnish temporary protective coating on cast iron and steel valves.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install underground piping when bedding is wet or frozen.

1.11 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.12 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Requirements for coordination.

B. Coordinate trenching, excavating, bedding, and backfilling of buried piping systems with requirements of Division 31.

1.13 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five-year manufacturer's warranty for valves excluding packing.

1.14 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two packing kits for each type and size valve.

PART 2 - PRODUCTS

2.1 NATURAL GAS PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Medium density polyethylene, heat fusion pipe and fittings, PE2406, in accordance with ASTM D2513, D3350, D2683, D3261 and the Department of Transportation (DOT) Title 49 Part 192 Provide No 12 insulated copper trace wire and approved transitional fittings from thermoplastic to steel pipe.

1. Provide factory assembled anodeless transition gas riser; ASTM F1973-2008.

2.2 NATURAL GAS PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53/A53M Schedule 40 black.

1. Fittings: ASME B16.3, malleable iron, or ASTM A234/A234M forged steel welding type.
2. Joints: Threaded for pipe 2 inch and smaller; welded for pipe 2-1/2 inches and larger.

2.3 UNIONS AND FLANGES

A. Unions for Pipe 2 inches and Smaller:

1. Ferrous Piping: Class 150, malleable iron, threaded.

B. Flanges for Pipe 2-1/2 inches and Larger:

1. Ferrous Piping: Class 150, forged steel, slip-on flanges.
2. Gaskets: 1/16 inch thick preformed neoprene gaskets.

2.4 PLUG VALVES

A. Manufacturers:

1. DeZURIK.
2. Homestead Valve, a division of Olson Technologies, Inc.
3. Milwaukee Valve Company.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. 2 inches and Smaller: MSS SP 78, Class 150, construction, round port, full pipe area, pressure lubricated, teflon packing, threaded ends. Furnish one plug valve wrench for every ten plug-valves with minimum of one wrench.

D. 2-1/2 inches and Larger: MSS SP 78, Class 150, semi-steel construction, round port, full pipe area, pressure lubricated, teflon packing, flanged ends. Furnish wrench-operated.

2.5 PIPE HANGERS AND SUPPORTS

A. Refer to Section 22 05 29.

2.6 STRAINERS

A. Manufacturers:

1. Flomatic Corporation.
2. Hayward Flow Control.
3. Keckley Company.
4. NIBCO INC.

5. Zurn Industries, LLC.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. 2 inch and Smaller: Screwed brass or iron body for 175 psig working pressure, Y pattern with 1/32 inch stainless steel perforated screen.

D. 2-1/2 inches to 4 inches: Flanged iron body for 175 psig working pressure, Y pattern with 3/64 inch stainless steel perforated screen.

E. 5 inches and Larger: Flanged iron body for 175 psig working pressure, basket pattern with 1/8 inch stainless steel perforated screen.

2.7 NATURAL GAS PRESSURE RELIEF VALVES

A. Manufacturers:

1. Fischer; Emerson Electric Co., Automation Solutions.
2. Rockwell Automation, Inc.
3. Rosemount Inc.; Emerson Electric Company.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Product Description: Spring loaded type relief valve.

1. Body: Aluminum.
2. Diaphragm: Nitrile.
3. Orifice:
4. Maximum operating temperature: 150 degrees F.
5. Inlet Connections: Threaded.
6. Outlet or Vent Connection: Same size as inlet connection.

2.8 UNDERGROUND PIPE MARKERS

A. Manufacturers:

1. Kolbi Pipe Marker Co.
2. Seton Identification Products; a Brady Corporation company.

B. Substitutions: Section 01 60 00 - Product Requirements.

C. Plastic Ribbon Tape: Bright colored, continuously printed, minimum 6 inches wide by 4 mil thick, manufactured for direct burial service.

D. Trace Wire: Magnetic detectable conductor, brightly colored plastic covering, imprinted with "Natural Gas Service" in large letters.

2.9 BEDDING AND COVER MATERIALS

A. Bedding: Fill Type as specified in Division 31.

B. Cover: Fill Type as specified in Division 31.

C. Soil Backfill from Above Pipe to Finish Grade: Soil Type, as specified in Division 31. Subsoil with no rocks over 6 inches in diameter, frozen earth or foreign matter.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.3 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install pipe hangers and supports in accordance with Section 22 05 29.

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Install natural gas piping in accordance with NFPA 54.

B. Verify connection to existing piping system size, location, and invert are as indicated on Drawings.

C. Establish elevations of buried piping with not less than 1.5 ft of cover.

D. Establish minimum separation of 12 inches from other services piping in accordance with code.

E. Remove scale and dirt on inside of piping before assembly.

F. Excavate pipe trench in accordance with Division 31.

G. Place bedding material at trench bottom to provide uniform bedding for piping, level bedding materials in one continuous layer not exceeding 4 inches compacted depth; compact to 95 percent maximum density.

H. Install pipe on prepared bedding.

I. Route pipe in straight line.

J. Install plastic ribbon tape continuous over. buried 6 inches below finish grade, above pipe line; coordinate with Division 31.

K. Install trace wire continuous over top of pipe. Above pipe line; coordinate with Division 31.

L. Pipe Cover and Backfilling:

1. Backfill trench in accordance with Division 31.
2. Maintain optimum moisture content of fill material to attain required compaction density.
3. After hydrostatic test, evenly backfill entire trench width by hand placing backfill material and hand tamping in 4 inches compacted layers to 6 inches minimum cover over top of jacket. Compact to 95 percent maximum density.
4. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
5. Do not use wheeled or tracked vehicles for tamping.

3.5 INSTALLATION - ABOVE GROUND PIPING SYSTEMS

A. Install natural gas piping in accordance with NFPA 54.

B. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

C. Route piping in orderly manner and maintain gradient.

D. Where required, bend pipe with pipe bending tools in accordance with procedures intended for that purpose.

E. Install piping to conserve building space and not interfere with use of space.

F. Size and install gas piping to provide sufficient gas to supply maximum appliance demand at pressure higher than appliance minimum inlet pressure.

G. Group piping whenever practical at common elevations.

H. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

I. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 05 29.

J. Install firestopping at fire rated construction perimeters and openings containing penetrating sleeves and piping. Refer to Section 22 05 29.

K. Provide clearance for installation of insulation and access to valves and fittings.

L. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 08 31 13.

M. Install vent piping from gas pressure reducing valves to outdoors and terminate in weatherproof hood. Protect vent against entry of insects and foreign material.

1. Minimum Vent Size: Connection size at regulator vent connection.
2. Run individual vent line from each relief device, independent of breather vents.

N. Install identification on piping systems including underground piping. Refer to Section 23 05 53.

O. Install valves with stems upright or horizontal, not inverted.

P. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

3.6 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements or 017000 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Where gas appliance will be damaged by test pressure, disconnect appliance and cap piping during pressure test. Reconnect appliance after pressure test and leak test connection.

C. Where gas appliance is designed for operating pressures equal to or greater than piping test pressure, provide gas valve to isolate appliance or equipment from gas test pressure.

D. Pressure test natural gas piping in accordance with NFPA 54.

E. Inspect, test and purge gas piping in accordance with applicable code and local gas company requirements.

F. Where new branch piping is extended from existing system, pressure test new branch piping only. Leak test joint between new and existing piping with noncorrosive leak detection fluid or other approved method.

G. When pressure tests do not meet specified requirements, remove defective work, replace and retest.

H. Immediately after gas is applied to a new system, or a system has been restored after gas service interruption, check pipe for leakage.

1. Where leakage is detected, shut off gas supply until necessary repairs are complete.

I. Do not place appliances in service until leak testing and repairs are complete.

END OF SECTION

SECTION 22 34 00

DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Commercial gas-fired water heaters.
2. Packaged water heating systems.
3. Domestic hot water storage tanks.

B. Related Sections:

1. Section 03 30 00 - Cast-in-Place Concrete: Execution requirements for concrete housekeeping pads specified by this Section.
2. Section 22 05 13 - Common Motor Requirements for Plumbing Equipment: Product requirements for pump motors for placement by this Section.
3. Section 22 07 00 - Plumbing Insulation: Field applied insulation for domestic water heaters.
4. Section: 221100 - Facility Water Distribution: Supply connections to domestic water heaters.
5. Section 22 16 00 - Facility Natural-Gas Piping: Execution requirements for gas piping connections specified by this Section.
6. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections specified by this Section.

1.2 REFERENCES

A. American National Standards Institute:

1. ANSI Z21.10.3 - Gas Water Heaters - Vol. III Storage, with Input Ratings Above 75,000 Btu per Hour, Circulating and Instantaneous Water Heaters.

B. American Society of Mechanical Engineers:

1. ASME Section VIII - Boiler and Pressure Vessel Code - Pressure Vessels.

C. National Fire Protection Association:

1. NFPA 54 - National Fuel Gas Code.

D. United States Department of Energy:

1. DOE 10 CFR - Uniform Test Method for Measuring the Energy Consumption of Furnaces.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Not Required.

C. Product Data:

1. Water Heaters: Submit dimensioned drawings of water heaters indicating components and connections to other equipment and piping. Indicate pump type, capacity and power requirements. Submit electrical characteristics and connection locations.
2. Pumps: Submit certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable.

D. Manufacturer's Installation Instructions: Submit mounting and support requirements.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit replacement part numbers and availability.

1.5 QUALITY ASSURANCE

A. Conform to ASME Section VIII for construction of water heaters. Provide boilers registered with National Board of Boiler and Pressure Vessel Inspectors.

B. Water Heater Performance Requirements: Equipment efficiency not less than prescribed by ASHRAE 90.1.

C. Maintain one copy of each document on Site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum three years' experience.

B. Installer: Company specializing in performing Work of this Section with minimum three years' experience.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing Work of this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Products storage and handling requirements.

B. Accept water heaters on Site in original labeled cartons. Inspect for damage.

C. Protect tanks with temporary inlet and outlet caps. Maintain caps in place until installation.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five-year manufacturer warranty for domestic water heaters packaged water heating systems.

1.11 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two pump seals.

PART 2 - PRODUCTS

2.1 COMMERCIAL GAS FIRED WATER HEATERS

A. Manufacturers:

1. Lochinar, LLC.
2. A. O. Smith Corporation.
3. AERCO; A WATTS Brand.
4. Ajax Boiler Inc.
5. American Water Heaters.
6. Bock Water Heaters, Inc.
7. Bradford White Corporation.
8. Heat Transfer Products, Inc.
9. PVI; A WATTS Brand.
10. RBI.
11. Rheem Manufacturing Company.
12. State Industries.
13. Substitutions: Section 01 60 00 - Product Requirements.

B. Type: Automatic, natural gas -fired, vertical storage.

C. Capacity:

1. Storage Capacity: Refer to drawings.

D. Tank: Refer to drawings.

E. Accessories: Brass water connections and dip tube, drain valve, magnesium anode, and ASME rated temperature and pressure relief valve.

F. Controls: Automatic water thermostat with adjustable temperature range from 120 to 180 degrees F. Automatic reset high temperature limiting thermostat factory set at 195 degrees F, gas pressure regulator, multi-ribbon or tubular burner, 100 percent safety shut-off pilot and thermocouple, flue baffle and draft hood.

2.2 PACKAGED WATER HEATING SYSTEMS

A. Manufacturers:

1. Lochinvar, LLC.
2. Armstrong International, Inc.
3. Cemline Corporation.
4. Chromalox, Inc.
5. Substitutions: Section 01 60 00 - Product Requirements.

B. System: Gas-fired direct heating boiler, circulating pump, controls, piping and valves as indicated on Drawings, storage tank, all mounted on structural steel skid.

C. Boiler:

1. Type: natural gas-fired water tube boiler, with copper finned tube heat exchanger, 1-inch diameter, 13-gage steel boiler tubes and copper tube heat exchanger with bronze heads, steel jacket with glass fiber insulation.
2. Boiler Trim: Gas burner, thermometer and pressure gauge. Immersion thermostats for operating and high limit protection, 100 percent safety shut-off. Electric gas valve with transformer, electronic safety pilot and pilot burner, gas pressure regulator. Manual gas shut-off, low water cut off, ASME rated temperature and pressure relief valve, coil relief valve, automatic boiler fill and expansion tank, draft inverter.
3. Capacity:

a. Refer to drawings.

D. Vertical Storage Tank: Refer to Drawings

E. Pump: Refer to Drawings.

F. Thermostatic Valve: Three-way, self-contained, full line size, bronze body 1/2 inch to 2 inches in size, iron body 2-1/2 inches and over, set at 140 degrees F.

2.3 DOMESTIC HOT WATER STORAGE TANKS

A. Manufacturers:

1. Lochinvar, LLC
2. A. O. Smith Corporation.
3. Aldrich Company, Inc. (The).
4. American Water Heaters.
5. AMTROL, Inc.
6. Flexcon Industries.
7. GSW Water Heating.
8. Harsco Industrial, Patterson-Kelley.
9. Precision Boilers.
10. PVI; A WATTS Brand.
11. Raypak; a Rheem brand.
12. RBI.
13. RECO USA.
14. State Industries.
15. Substitutions: Section 01 60 00 - Product Requirements.

B. Tank: Refer to Drawings.

C. Lining: Refer to Drawings,

D. Accessories: Tank drain, water inlet and outlet, thermometer range of 40 to 200 degrees F, ASME pressure relief valve suitable for maximum working pressure.

E. Vertical Storage Tank: Refer to drawings.

F. Insulation: Refer to Section 22 07 00.

2.4 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics: According to Section 26 05 03.

B. Motors: According to Section 22 05 13.

C. Disconnect Switch: Factory mount disconnect switch in control panel on equipment.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Maintain manufacturer's recommended clearances around and over water heaters.

B. Install water heater on concrete housekeeping pad, minimum 3-1/2 inches high and 6 inches larger than water heater base on each side. Refer to Section 03 30 00.

C. Connect natural gas piping according to NFPA 54.

D. Connect natural gas piping to water heater, full size of water heater gas train inlet. Arrange piping with clearances for burner removal and service.

E. Connect domestic hot and cold water piping to supply and return water heater connections.

F. Install the following piping accessories. Refer to Section 22 11 00.

1. On Supply:

a. Thermometer well and thermometer.
b. Strainer.
c. Pressure gage.
d. Shutoff valve.

2. On Return:

a. Thermometer well and thermometer.
b. Pressure gage.
c. Shutoff valve.

G. Install the following piping accessories on natural gas piping connections. Refer to Section 22 16 00.

1. Strainer.
2. Pressure gage.
3. Shutoff valve.
4. Pressure reducing valve.

H. Install discharge piping from relief valves and drain valves to nearest floor drain.

I. Install circulator and diaphragm expansion tank on water heater.

J. Install water heater trim and accessories furnished loose for field mounting.

K. Install electrical devices furnished loose for field mounting.

L. Install control wiring between water heater control panel and field mounted control devices.

M. Connect flue to water heater outlet, full size of outlet. Refer to Section 23 51 00.

N. Domestic Hot Water Storage Tanks:

1. Provide steel pipe support, independent of building structural framing members.
2. Clean and flush after installation. Seal until pipe connections are made.

END OF SECTION

SECTION 22 40 00

PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Water closets.
2. Urinals.
3. Lavatories.
4. Sinks.
5. Service sinks.
6. Drinking fountains.
7. Showers.
8. Emergency combination shower with eye and face wash.
9. Lavatory insulation kit.

B. Related Sections:

1. Section 07 90 00 - Joint Protection: Product requirements for calking between fixtures and building components for placement by this Section.
2. Section 22 11 00 - Facility Water Distribution: Supply connections to plumbing fixtures.
3. Section 22 13 00 - Facility Sanitary Sewerage: Waste connections to plumbing fixtures.
4. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections to sensor valves and faucets specified by this Section.

1.2 REFERENCES

A. American National Standards Institute:

1. ANSI Z124.2 - Plastic Shower Units.
2. ANSI Z358.1 - Emergency Eyewash and Shower Equipment.

B. Air-Conditioning and Refrigeration Institute:

1. ARI 1010 - Self-Contained, Mechanically Refrigerated Drinking-Water Coolers.

C. American Society of Mechanical Engineers:

1. ASME A112.6.1 - Floor-Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
2. ASME A112.18.1 - Plumbing Fixture Fittings.
3. ASME A112.19.1M - Enameled Cast Iron Plumbing Fixtures.
4. ASME A112.19.2M - Vitreous China Plumbing Fixtures.
5. ASME A112.19.3 - Stainless Steel Plumbing Fixtures (Designed for Residential Use).

6. ASME A112.19.4 - Porcelain Enameled Formed Steel Plumbing Fixtures.
7. ASME A112.19.5 - Trim for Water-Closet Bowls, Tanks and Urinals.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit catalog illustrations of fixtures, sizes, utility sizes, trim, and finishes.

C. Samples: Not Required.

D. Manufacturer's Installation Instructions: Submit installation methods and procedures.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 SUSTAINABLE DESIGN SUBMITTALS

A. Section 01 81 13 - Sustainable Design Requirements: Requirements for sustainable design submittals.

B. Manufacturer's Certificate: Certify products meet or exceed specified sustainable design requirements.

1. Water Efficiency Certificates:

a. Certify plumbing fixture flow rates.
b. CLOSEOUT SUBMITTALS

C. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

D. Operation and Maintenance Data: Submit fixture, trim, exploded view, and replacement parts lists.

1.5 QUALITY ASSURANCE

A. Perform Work according to of standard.

B. Provide products requiring electrical connections listed and classified by as suitable for purpose specified and indicated.

C. Provide plumbing fixture fittings according to ASME A112.18.1 that prevent backflow from fixture into water distribution system.

D. Maintain one copy of each document on Site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum three years' experience .

B. Installer: Company specializing in performing Work of this Section with minimum three years' experience.

1.7 MOCKUPS

A. Section 01 40 00 - Quality Requirements: Mockup requirements.

B. Construct mockup of typical bathroom group.

C. Locate where.

D. Incorporate accepted mockup as part of Work.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum prior to commencing Work of this Section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept fixtures on Site in factory packaging. Inspect for damage.

C. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish 5-year manufacturer warranty for plumbing fixtures.

1.11 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two sets of faucet washers, flush valve, service kits, lavatory supply fittings, shower heads, and toilet seats.

PART 2 - PRODUCTS

2.1 FLUSH VALVE WATER CLOSETS (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. American Standard.
2. Sloan.
3. Crane Plumbing, LLC; a division of American Standard.
4. Gerber Plumbing Fixtures LLC.
5. Kohler Co.
6. TOTO USA, INC.
7. Zurn Industries, LLC.
8. Substitutions: Section 01 60 00 – Product Requirements.

B. Bowl: ASME A112.19.2M; wall hung, vitreous china closet bowl, with elongated rim, 1-1/2-inch spud, china bolt caps.

C. Sensor Operated Flush Valve: ASME A112.18.1; concealed rough brass, diaphragm type with operated solenoid operator, infrared sensor and over-ride button in chrome-plated plate, wheel handle stop and vacuum breaker; maximum 1.28 gal. Flush volume.

D. Seat: Solid plastic, open front, extended back, brass bolts, cover.

E. Floor Mounted Carrier: ASME A112.6.1; cast iron frame, integral drain hub and vent, adjustable spud, lugs for floor and wall attachment, threaded fixture studs with nuts and washers.

2.2 WALL HUNG URINALS (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. American Standard.
2. Sloan.
3. Crane Plumbing, LLC; a division of American Standard.
4. Gerber Plumbing Fixtures LLC.
5. Kohler Co.
6. TOTO USA, INC.
7. Zurn Industries, LLC.
8. Substitutions: Section 01 60 00 – Product Requirements .

B. Urinal: ASME A112.19.2M or ANSI Z124.9, vitreous; vitreous china, wall hung urinal with shields, integral trap, spud, steel supporting hanger.

C. Sensor Operated Flush Valve: ASME A112.18.1;, diaphragm type with operated solenoid operator, infrared sensor and over-ride button in chrome-plated plate, wheel handle stop and vacuum breaker; maximum 0.5 gal. flush volume.

D. Floor Mounted Carrier: ASME A112.6.1; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, threaded fixture studs for fixture hanger, bearing studs.

E. Provide elastomeric gasket complying with ASME A112.4.3, or approved setting compound, for fixture to flange connection.

2.3 LAVATORIES (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. American Standard.
2. Sloan.
3. Crane Plumbing, LLC; a division of American Standard.
4. Gerber Plumbing Fixtures LLC.
5. Kohler Co.
6. TOTO USA, INC.
7. Zurn Industries, LLC.
8. Substitutions: Section 01 60 00 – Product Requirements.

B. Vitreous China Wall Hung Basin: ASME A112.19.2M; vitreous china wall hung lavatory by inches minimum, with 4-inch high back, drillings on centers, rectangular basin with splash lip, front overflow, and soap depression.

C. Vitreous China Counter Top Basin: ASME A112.19.2M; vitreous china self-rimming counter top lavatory, by inches with drillings on centers, front overflow, seal of putty, caulking, or concealed vinyl gasket.

D. Undercounter Lavatory: ASME A112.19.2M; vitreous china, unglazed rim for under counter mount with rear overflow, by inches with drillings on centers.

E. Supply Fitting: ASME A112.18.1; chrome-plated supply fitting with water economy aerator with maximum 0.5 gpm flow,.

F. Metered Faucet: ASME A112.18.1; chrome-plated metered mixing faucet with low voltage operated solenoid operator and infrared sensor, and cover plate, open grid strainer.

G. Waste Fittings: ASME A112.18.2 or ASTM F 409.

H. For public hand washing facilities, provide tempered water through regulating device conforming to ASSE 1070.

I. Accessories:

1. Chrome-plated 17-gage brass P-trap and arm with escutcheon.
2. Offset waste with perforated open strainer.
3. Wheel handle stops.
4. Flexible supplies.
5. Trap and waste insulated and offset to meet ADA compliance.

J. Wall Mounted Carrier: ASME A112.6.1; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, bearing plate and studs.

2.4 SINKS (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Elkay.
2. Just Manufacturing.
3. Commercial Enameling Company.
4. Kohler Co.
5. Substitutions: Section 01 60 00 – Product Requirements.

B. Single Compartment Bowl: ASME A112.19.3; by by inches outside dimensions, thick, Type stainless steel. Self-rimming and undercoated, with , ledge back drilled for trim.

C. Double Compartment Bowl: ASME A112.19.3; by by inches outside dimensions thick, Type stainless steel. Self-rimming and undercoated, with , ledge back drilled for trim.

D. Enameled Bowl: porcelain enameled compartment, by by inches outside dimensions, self-rimming and undercoated, with 3-1/2-inch diameter crumb cup and chromed brass tailpiece, ledge back drilled for trim.

E. Trim: ASME A112.18.1; chrome-plated brass supply with swing spout, water economy aerator with maximum 1.5 gpm flow,.

F. Accessories: 17-gage brass P-trap and arm with escutcheon, stop, supplies.

2.5 SHOWERS (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Symmons.
2. Aqua Glass Corporation.
3. Aquarius Bathware; a Praxis Company.
4. Aquatic Industries, Inc.
5. Clarion Bathware.
6. Crane Plumbing, LLC; a division of American Standard.
7. Kohler Co.
8. Zurn Industries, LLC.
9. Substitutions: Section 01 60 00 – Product Requirements.

B. Cabinet: ASME A112.19.4; porcelain enameled steel, high, with receptor, soap dish, removable chrome-plated strainer, tail piece, color.

C. Cabinet: ANSI Z124.2 , high, with receptor, soap dish, removable chrome-plated strainer, tailpiece, color.

D. Trim: ASME A112.18.1; concealed shower supply with indexed handles, bent shower arm with ball joint showerhead with maximum 1.5 gpm flow, and escutcheon.

E. Trim: ASME A112.18.1; concealed straight way pattern valve with indexed cross handle.

F. Trim: ASME A112.18.1; concealed rough brass metering valve with closed fluid metering system adjustable from 5 to 120 seconds, chrome-plated push button and escutcheon, wheel handle stop.

G. Trim: ASME A112.18.1; concealed shower supply with mixing valves, integral service stops, bent shower arm with ball joint shower head with maximum 1.5 gpm flow, and escutcheon.

H. Trim: ASME A112.18.1; chrome-plated vandal-proof institutional head with integral wall bracket and built-in 2.5 gpm flow control.

I. Trim: ASME A112.18.1; concealed shower supply with mixing valves, integral service stops, hand held shower with hose and slide bar, female inlet.

J. Trim: ASME A112.18.1; built-in 1.5 gpm flow control, hand held shower with hose and slide bar, female inlet.

1. Provide backflow protection according to ASME A112.18.1 or by device complying with ASME 112.18.3.

2.6 DRINKING FOUNTAINS (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Elkay.
2. Halsey Taylor.
3. Haws Corporation.
4. Kohler Co.
5. Murdock Manufacturing; A Division of Morris Group International.
6. Oasis International.
7. Substitutions: Section 01 60 00 – Product Requirements.

B. Fountain: 14 gage, type 304 stainless steel with elevated anti-squirt bubbler with stream guard, automatic stream regulator, handle, access cover plate, mounting bracket, screwdriver stop. Provide with bottle filler.

2.7 SERVICE SINKS (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Acorn Engineering Company; a Division of Morris Group International.
2. American Standard.
3. Commercial Enameling Company.
4. Crane Plumbing, LLC; a division of American Standard.
5. Florestone Products Co., Inc.
6. Gerber Plumbing Fixtures LLC.
7. Kohler Co.
8. Stern-Williams Co., Inc.
9. Swan Corporation (The).
10. Zurn Industries, LLC.
11. Substitutions: Section 01 60 00 – Product Requirements.

B. Bowl: White, cast iron, floor mounted, with bumper guard, stainless-steel strainer.

C. Trim: ASME A112.18.1 exposed wall type supply with handles, spout wall brace, vacuum breaker, hose end spout, strainers, eccentric adjustable inlets, integral screwdriver stops with covering caps and adjustable threaded wall flanges.

D. Accessories:

1. 5 feet of 1/2 inch diameter plain end reinforced hose.
2. Hose clamp hanger.
3. Mop hanger.

2.8 EMERGENCY COMBINATION SHOWER WITH EYE AND FACE WASH (REFER TO PLUMBING SCHEDULE FOR MAKE & MODEL)

A. Manufacturers:

1. Guardian Equipment Co.
2. Acorn Safety; a Division of Morris Group International.
3. Bradley Corporation.
4. Haws Corporation.
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Shower: ANSI Z358.1; free standing, self- cleaning, non-clogging 8-inchdiameter stainless-steel shower head, instant action stay open valve actuated by rigid stainless-steel pull rod.

C. Eyewash: ANSI Z358.1; stainless-steel bowl with elbow, 1-1/4-inch stainless-steel pipe pedestal with floor flange, instant action stay open valve actuated by push flag, twin spray heads, and tailpiece and chrome-plated brass P-trap.

D. Supply and Waste Piping: 1-1/4-inch stainless-steel pipe pedestal with floor flange.

E. Furnish universal emergency sign.

F. Furnish corrosion resistant coating.

2.9 LAVATORY INSULATION KIT

A. Manufacturers:

1. Plumberex Specialty Products, Inc.
2. Truebro.
3. Substitutions: Section 01 60 00 – Product Requirements.

B. Product Description: Where Lavatories are noted to be insulated for ADA compliance, furnish the following: Safety Covers conforming to ANSI A177.1 and consisting of insulation kit of molded closed cell vinyl construction, 3/16 inch thick, color, for insulating tailpiece, P-trap, valves, and supply piping. Furnish with weep hole and angle valve access covers.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify walls and floor finishes are prepared and ready for installation of fixtures.

C. Verify electric power is available and of correct characteristics.

D. Confirm millwork is constructed with adequate provision for installation of counter top lavatories and sinks.

3.2 PREPARATION

A. Rough-in fixture piping connections according to minimum sizes indicated in fixture rough-in schedule for particular fixtures.

3.3 INSTALLATION

A. Install each fixture with trap, easily removable for servicing and cleaning.

B. Provide chrome-plated rigid or flexible supplies to fixtures with stops, reducers, and escutcheons.

C. Install components level and plumb.

D. Install and secure fixtures in place with wall and bolts.

E. Seal fixtures to wall and floor surfaces with sealant as specified in Section 07 90 00, color to match fixture.

F. Solidly attach water closets to floor with lag screws. Lead flashing is not intended hold fixture in place.

G. For ADA accessible water closets, install flush valve with handle to wide side of stall.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Review millwork shop-drawings. Confirm location and size of fixtures and openings before rough in and installation.

3.5 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

3.6 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean plumbing fixtures and equipment.

3.7 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Do not permit use of fixtures before final acceptance.

END OF SECTION

SECTION 23 05 00

COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY`

A. Section Includes:

1. Vibration and seismic controls for HVAC piping and equipment.
2. Mechanical seals for interior, exterior, below grade pipe penetrations.
3. PHP design supports for roof top ducts, piping & crossovers.
4. Sleeves for interior floor and wall pipe penetrations.
5. Pipe and valve markers for HVAC systems.
6. Firestopping relating to HVAC work.
7. Nameplates for HVAC equipment.
8. Calif. Mech Code supports.
9. Steel channel.
10. Motors.

1.2 SUBMITTALS

A. Product Data: Required.

B. Shop Drawings: Required.

C. Samples: Required for pipe and equipment identification.

D. Project Record Documents: Required.

PART 2 - PRODUCTS

2.1 MOTORS

A. Manufacturers:

1. U.S. manufactured motors for intended service odp, tefc, vfd, ecm, insulation, torque, service factor, nema.
2. Substitutions: Not Permitted.

B. Motor Type: NEMA with bearing shaft grounding ring for vfd motors.

C. Controls: Provide Nema control panels as required, Lonworks or BacNet IP.

2.2 VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT

A. Provide the following types of seismic vibration isolators:

1. Structural bases.

2. Open spring isolators.
3. Restrained spring isolators.
4. Closed spring isolators.
5. Restrained closed spring isolators.
6. Spring curbs and hangers.
7. Neoprene pad isolators.
8. Rubber mount or hanger.
9. Glass fiber pads.
10. Seismic snubbers.

2.3 IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

A. Plastic Nameplates: Laminated plastic with engraved letters.

B. Plastic Tags: Laminated plastic with engraved letters, minimum 1-1/2 inches diameter.

C. Plastic Pipe Markers: Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering.

D. Plastic Tape Pipe Markers: Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.

E. Plastic Underground Pipe Markers: Bright colored continuously printed plastic ribbon tape, for direct burial service.

2.4 SLEEVES

A. Sleeves for Pipes Through Non-fire Rated Floors: 18 gage thick galvanized steel.

B. Sleeves for Pipes Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.

C. Sleeves for Round Ductwork: Galvanized steel.

D. Sleeves for Rectangular Ductwork: Galvanized steel or wood.

2.5 MECHANICAL SLEEVE SEALS

A. Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 FORMED STEEL CHANNEL

A. Product Description: Galvanized 12 gage) thick steel. With holes 1-1/2 inches on center.

2.7 FIRESTOPPING

A. Firestopping Materials: Comply with requirements of Section 07 84 00.

B. Firestopping Materials: HILTI or approved equal.

1. Silicone firestopping elastomeric firestopping.
2. Foam firestopping compounds.
3. Formulated firestopping compound of incombustible fibers.
4. Fiber stuffing and sealant firestopping.
5. Mechanical firestopping device with fillers.
6. Intumescent firestopping.
7. Firestop pillows.

PART 3 - EXECUTION

3.1 INSTALLATION - PIPING AND EQUIPMENT IDENTIFICATION

A. Install plastic nameplates with adhesive.

B. Install plastic tags with corrosion resistant metal chain.

3.2 INSTALLATION - SLEEVES

A. Exterior watertight entries: Seal with mechanical sleeve seals.

B. Set sleeves in position in forms. Provide reinforcing around sleeves.

C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.

D. Extend sleeves through floors 1 inch above finished floor level. Caulk sleeves.

E. Install stainless steel escutcheons at finished surfaces.

3.3 INSTALLATION - FIRESTOPPING

A. Firestopping Materials: Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.

END OF SECTION

SECTION 23 05 13

COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes single- and three-phase motors for application on equipment provided under other sections.

B. Related Sections:

1. Division 26 - Grounding and Bonding for Electrical Systems.
2. Division 26 - Identification for Electrical Systems.

1.2 REFERENCES

A. American Bearing Manufacturers Association:

1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. National Electrical Manufacturers Association:

1. NEMA MG 1 - Motors and Generators.

C. International Electrical Testing Association:

1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit catalog data for each motor. Indicate nameplate data, standard compliance, electrical ratings and characteristics, and physical dimensions, weights, mechanical performance data, and support points.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Division 01 - Product Requirements: Product storage and handling requirements.

B. Protect products from weather and moisture by covering with plastic or canvas and by maintaining heating within enclosure.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS FOR MOTORS FURNISHED WITH EQUIPMENT

A. Manufacturers: Shall be in accordance with equipment manufacturer's preference.

B. Motors 1 hp and Larger: Three-phase motor as specified below.

C. Motors Smaller Than 1 hp: Single-phase motor as specified below, except motors less than 250 watts or 1/4 hp may be equipment manufacturer's standard.

D. Three-Phase Motors: NEMA MG 1, Design B, energy-efficient squirrel-cage induction motor, with windings to accomplish starting methods and number of speeds.

1. Voltage: As indicated on Drawings.
2. Service Factor: 1.15.
3. Enclosure: Meet conditions of installation unless specific enclosure is indicated on Drawings.
4. Design for continuous operation in 40 degrees C environment, with temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.
5. Insulation System: NEMA Class F. Motor insulation shall meet UL flame/smoke rating of 25/50 or less.
6. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.
7. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors embedded in motor windings and epoxy encapsulated solid state control relay with wiring to terminal box.
8. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum ABMA 9, L-10 life of 200,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.
9. Sound Power Levels: Conform to NEMA MG 1.

E. Single Phase Motors:

1. Permanent split-capacitor type, where available, otherwise use split-phase start/capacitor run or capacitor start/capacitor run motor.
2. HVAC motors for fans less than 1 hp and greater than 1/12 hp shall be ECM or have minimum motor efficiency of 70%. Motors must have means to adjust motor speed for balancing or remote control.
3. Voltage: As indicated on drawings.

F. Wiring Terminations: Furnish terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install securely on firm foundation. Mount ball bearing motors with shaft in any position.

B. Install engraved plastic nameplates in accordance with Division 26.

C. Ground and bond motors in accordance with Division 26.

3.2 FIELD QUALITY CONTROL

A. Division 01 - Quality Requirements and - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.15.

END OF SECTION

SECTION 23 05 29

HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pipe hangers and supports.
2. Hanger rods.
3. Inserts.
4. Flashing.
5. Equipment curbs.
6. Sleeves.
7. Mechanical sleeve seals.
8. Formed steel channel.
9. Firestopping accessories.
10. Equipment bases and supports.
11. See Contract Drawings for seismic bracing of ductwork, piping and equipment.

B. Related Sections:

1. Section 03 10 00 - Concrete Forming and Accessories: Execution requirements for placement of inserts in concrete forms specified by this section.
2. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of concrete housekeeping pads specified by this section.
3. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
4. Section 07 92 00 - Joint Sealant: Product requirements for sealant materials for placement by this section.
5. Section 09 90 00 - Painting and Coating: Product and execution requirements for painting specified by this section.
6. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product and execution requirements for vibration isolators.
7. Section 23 21 13 - Hydronic Piping: Execution requirements for placement of hangers and supports specified by this section.

1.2 REFERENCES

A. American Society of Mechanical Engineers:

1. ASME B31.5 - Refrigeration Piping.
2. ASME B31.9 - Building Services Piping.

B. American Welding Society:

1. AWS D1.1 - Structural Welding Code - Steel.

3. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.

E. Intertek Testing Services (Warnock Hersey Listed):

1. WH - Certification Listings.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate system layout with location including critical dimensions, sizes, and pipe hanger and support locations and detail of trapeze hangers.

C. Product Data:

1. Hangers and Supports: Submit manufacturers catalog data including load capacity.

D. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers. Submit sizing methods or calculations sealed by a registered professional engineer.

E. Manufacturer's Installation Instructions:

1. Hangers and Supports: Submit special procedures and assembly of components.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.5 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 61 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.

C. Protect from weather and construction traffic, dirt, water, chemical, and damage, by storing in original packaging.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.8 WARRANTY

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for pipe hangers and supports.

PART 2 - PRODUCTS

2.1 PIPE HANGERS AND SUPPORTS

A. Manufacturers:

1. B-Line Systems.
2. Anvil.
3. Tolco.
4. Unistrut Corp.
5. PHD Manufacturing Inc.
6. Anvil International.

B. Hydronic Piping:

1. Conform to ASME B31.9.
2. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron or Carbon steel, adjustable swivel, split ring.
3. Hangers for Cold Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.
4. Hangers for Hot Pipe Sizes 2 to 4 inches: Carbon steel, adjustable, clevis.
5. Hangers for Hot Pipe Sizes 6 inches and Larger: Adjustable steel yoke, cast iron roll, double hanger.
6. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
7. Multiple or Trapeze Hangers for Hot Pipe Sizes 6 inches and Larger: Steel channels with welded spacers and hanger rods, cast iron roll.
8. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hooks.
9. Wall Support for Pipe Sizes 4 inches and Larger: Welded steel bracket and wrought steel clamp.
10. Wall Support for Hot Pipe Sizes 6 inches and Larger: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron roll.
11. Vertical Support: Steel riser clamp.

12. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
13. Floor Support for Hot Pipe Sizes 4 Inches and Smaller: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
14. Floor Support for Hot Pipe Sizes 6 inches and Larger: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
15. Copper Pipe Support: Copper-plated, carbon steel ring.

C. Refrigerant Piping:

1. Conform to ASME B31.5.
2. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron or Carbon steel, adjustable swivel, split ring.
3. Hangers for Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.
4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
5. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hook.
6. Wall Support for Pipe Sizes 4 inches and Larger: Welded steel bracket and wrought steel clamp.
7. Vertical Support: Steel riser clamp.
8. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
9. Copper Pipe Support: Copper-plated carbon-steel ring.

2.2 ACCESSORIES

A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.

2.3 INSERTS

A. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.4 FLASHING

A. Metal Flashing: 26 gage thick galvanized steel.

B. Metal Counterflashing: 22 gage thick galvanized steel.

C. Lead Flashing:

1. Waterproofing: 5 lb./sq. ft sheet lead.
2. Soundproofing: 1 lb./sq. ft sheet lead.

D. Flexible Flashing: 47 mil thick sheet butyl; compatible with roofing.

E. Caps: Steel, 22 gage minimum; 16 gage at fire resistant elements.

2.5 EQUIPMENT CURBS

A. Fabrication: Welded 18 gage galvanized steel shell and base, mitered 3 inch cant, variable step to match roof insulation, 1-1/2 inch thick insulation, factory installed wood nailer.

2.6 SLEEVES

A. Sleeves for Pipes Through Non-fire Rated Floors: 18 gage thick galvanized steel.

B. Sleeves for Pipes Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.

C. Sleeves for Round Ductwork: Galvanized steel.

D. Sleeves for Rectangular Ductwork: Galvanized steel or wood.

E. Sealant: Refer to Section 07 90 00.

2.7 MECHANICAL SLEEVE SEALS

A. Manufacturers:

1. Thunderline Link-Seal, Inc.
2. NMP Corporation.
3. Substitutions: Section 01 61 00 - Product Requirements.

B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.8 FORMED STEEL CHANNEL

A. Manufacturers:

1. Allied Tube & Conduit Corp.
2. B-Line Systems.
3. Midland Ross Corporation, Electrical Products Division.
4. Unistrut Corp.

B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

PART 3 - EXECUTION

3.1 INSTALLATION - INSERTS

A. Install inserts for placement in concrete forms.

B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.

D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.2 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install in accordance with ASME B31.5 and ASME 31.9.

B. Support horizontal piping as scheduled.

C. Install hangers with minimum 1/2 inch space between finished covering and adjacent work.

D. Place hangers within 12 inches of each horizontal elbow.

E. Use hangers with 1-1/2 inch minimum vertical adjustment.

F. Support vertical piping at every floor.

G. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.

H. Support riser piping independently of connected horizontal piping.

I. Provide packing between hanger or support and piping.

J. Design hangers for pipe movement without disengagement of supported pipe.

K. Prime coat exposed steel hangers and supports. Refer to Section 09 90 00. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

L. Provide clearance in hangers and from structure and other equipment for installation of insulation. Refer to Section 22 07 00.

3.3 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

A. Provide housekeeping pads of concrete, minimum 3-1/2 inches thick and extending 6 inches beyond supported equipment. Refer to Section 03 30 00.

B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.

C. Construct supports of steel members, formed steel channel and steel pipe and fittings. Brace and fasten with flanges bolted to structure.

D. Provide rigid anchors for pipes after vibration isolation components are installed. Refer to Section 21 05 48.

3.4 INSTALLATION - FLASHING

A. Provide flexible flashing and metal counterflashing where piping and ductwork penetrate weather or waterproofed walls, floors, and roofs.

B. Provide acoustical lead flashing around ducts and pipes penetrating equipment rooms for sound control.

C. Provide curbs for roof installations 8 inches minimum high above roofing surface. Flash and counter-flash with sheet metal; seal watertight. Attach counterflashing to equipment and lap base flashing on roof curbs. Flatten and solder joints.

D. Adjust storm collars tight to pipe with bolts; caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.

3.5 INSTALLATION - SLEEVES

A. Exterior watertight entries: Seal with mechanical sleeve seals.

B. Set sleeves in position in forms. Provide reinforcing around sleeves.

C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.

D. Extend sleeves through floors 1 inch above finished floor level. Caulk sleeves.

E. Where piping or ductwork penetrates floor, ceiling, or wall, close off space between pipe or duct and adjacent work with stuffing, firestopping insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.

F. Install chrome plated steel escutcheons at finished surfaces.

3.6 FIELD QUALITY CONTROL

A. Section 01 43 00 - Quality Assurance, Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements. Field inspecting, testing, adjusting, and balancing.

B. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.7 CLEANING

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for cleaning.

3.8 PROTECTION OF FINISHED WORK

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for protecting finished Work.

B. Protect adjacent surfaces from damage by material installation.

3.9 SCHEDULES

A. Maximum Copper and Steel Pipe Hanger Spacing:

PIPE SIZE Inches	COPPER TUBING MAXIMUM HANGER SPACING Feet	STEEL PIPE MAXIMUM HANGER SPACING Feet	COPPER TUBING HANGER ROD DIAMETER Inches	STEEL PIPE HANGER ROD DIAMETER Inches
1/2	5	7	3/8	3/8
3/4	5	7	3/8	3/8
1	6	7	3/8	3/8
1-1/4	7	7	3/8	3/8
1-1/2	8	9	3/8	3/8
2	8	10	3/8	3/8
2-1/2 (Note 2)	9	11	1/2	1/2
3	10	12	1/2	1/2
4	12	14	1/2	5/8
5	13	16	1/2	5/8
6	14	17	5/8	3/4
8	16	19	3/4	3/4
10	18	22	3/4	7/8
12	19	23	3/4	7/8
14	22	25	7/8	1
16	23	27	7/8	1
18	25	28	1	1
20	27	30	1	1-1/4
24	28	32	1-1/4	1-1/4

B. Maximum Plastic and Ductile Iron Pipe Hanger Spacing:

PIPE MATERIAL	MAXIMUM HANGER SPACING Feet	HANGER ROD DIAMETER Inches
ABS (All sizes)	4	3/8
FRP (All Sizes)	4	3/8

Ductile Iron (Note 2)		
PVC (All Sizes)	4	3/8

C. Note 1: Refer to manufacturer's recommendations for grooved end piping systems.

D. Note 2: 20 feet maximum spacing, minimum of one hanger for each pipe section close to joint behind bell. Provide hanger at each change of direction and each branch connection. For pipe sizes 6 inches and smaller, subjected to loadings other than weight of pipe and contents, limit span to maximum spacing for water service steel pipe.

3.10 SEISMIC BRACING

A. Provide seismic bracing of pipe, ductwork and equipment for SMACNA Seismic Restraint Manual Guidelines in accordance with CBC, and ASCE requirements. See Contractor Drawings for additional details.

END OF SECTION

SECTION 23 05 48

VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Inertia bases.
2. Vibration isolators.
3. Ductwork lagging.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Product requirements for concrete for placement by this section.
2. Section 07 92 00 - Joint Sealant: Product requirements for joint sealers specified for placement by this section.
3. Section 08 91 00 - Louvers: Product requirements for acoustic wall louvers.
4. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for pipe hangers and supports.
5. Section 23 05 93 - Testing, Adjusting, and Balancing for HVAC: Requirements for sound and vibration measurements performed independent of this section.
6. Section 23 33 00 - Air Duct Accessories: Product requirements for both solid and flexible duct connectors for duct silencers specified for placement by this section.

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:

1. ARI 575 - Method of Measuring Machinery Sound within Equipment Space.

D. American Society of Heating, Refrigerating and:

1. ASHRAE 68 - Laboratory Method of Testing In-Duct Sound Power Measurement Procedure for Fans.
2. ASHRAE Handbook - HVAC Applications.

E. ASTM International:

1. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
2. ASTM E477 - Standard Test Method for Measuring Acoustical and Airflow Performance of Duct Liner Materials and Prefabricated Silencers.
3. ASTM E596 - Standard Test Method for Laboratory Measurement of the Noise Reduction of Sound-Isolating Enclosures.

F. Sheet Metal and Air Conditioning Contractors':

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.3 PERFORMANCE REQUIREMENTS

A. Provide vibration isolation on motor driven equipment over 0.5 hp, plus connected piping and ductwork.

B. Provide minimum static deflection of isolators for equipment as follows:

1. Upper Floors, Normal

a. Under 400 rpm: Per manufacturer.
b. 400 - 600 rpm: 3.5 inch
c. 600 - 800 rpm: 2 inch
d. 800 - 900 rpm: 1 inch
e. 1100 - 1500 rpm: 0.5 inch
f. Over 1500 rpm: 0.2 inch

C. Consider upper floor locations critical unless otherwise indicated.

D. Maintain sound level of spaces at levels not to exceed those listed below by utilizing acoustical devices.

E. Maintain rooms at following maximum sound levels, in Noise Criteria (NC), Room Criteria (RC) as defined by ASHRAE Handbook., HVAC Applications.

1. Offices

a. Executive: 30
b. Conference rooms: 30
c. Private: 35
d. Open-plan areas: 40
e. Computer/business machine areas: 45
f. Public circulation: 45

2. Schools

a. Lecture and classrooms: 25
b. Open-plan classrooms: 30

3. Meeting Rooms/Public Assembly: 35

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate and locate vibration isolators, with static and dynamic load on each. Indicate assembly, materials, thickness, dimensional data, pressure losses, acoustical performance, layout, and connection details for sound attenuation products fabricated for this project.

C. Product Data: Submit schedule of vibration isolator type with location and load on each. Submit catalog information indicating, materials, dimensional data, pressure losses, and acoustical performance for standard sound attenuation products.

D. Design Data: Submit calculations indicating maximum room sound levels are not exceeded.

E. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions. Indicate installation requirements maintaining integrity of sound isolation.

F. Manufacturer's Certificate: Certify isolators meet or exceed specified requirements.

G. Manufacturer's Field Reports: Indicate sound isolation installation is complete and in accordance with instructions.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of cross-talk silencers, acoustic housings, ductwork lagging.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with AMCA 300, ANSI S1.13, ARI 575, ANSI S12.36, standards and recommendations of ASHRAE 68.

B. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for inertia bases.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

A. Manufacturers:

1. MW Sausee.
2. Approved equal.
3. Substitutions: Section 01 61 00 - Product Requirements.

B. Open Spring Isolators:

1. Spring Isolators:

a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
b. Code: Color code springs for load carrying capacity.

2. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
3. Spring Mounts: Furnish with leveling devices, minimum 0.25 inch thick neoprene sound pads, and zinc chromate plated hardware.
4. Sound Pads: Size for minimum deflection of 0.05 inch; meet requirements for neoprene pad isolators.

C. Restrained Spring Isolators:

1. Spring Isolators:

a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
b. Code: Color code springs for load carrying capacity.

2. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
3. Spring Mounts: Furnish with leveling devices, minimum 0.25 inch thick neoprene sound pads, and zinc chromate plated hardware.
4. Sound Pads: Size for minimum deflection of 0.05 inch; meet requirements for neoprene pad isolators.
5. Restraint: Furnish mounting frame and limit stops.

D. Closed Spring Isolators:

1. Spring Isolators:

    a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
    b. Code: Color code springs for load carrying capacity.

2. Type: Closed spring mount with top and bottom housing separated with neoprene rubber stabilizers.
3. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
4. Housings: Incorporate neoprene isolation pad meeting requirements for neoprene pad isolators, and neoprene side stabilizers with minimum 0.25 inch clearance.

E. Restrained Closed Spring Isolators:

1. Spring Isolators:

    a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
    b. Code: Color code springs for load carrying capacity.

2. Type: Closed spring mount with top and bottom housing separated with neoprene rubber stabilizers.
3. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
4. Housings: Incorporate neoprene isolation pad meeting requirements for neoprene pad isolators, and neoprene side stabilizers with minimum 0.25 inch clearance and limit stops.

F. Spring Hanger:

1. Spring Isolators:

    a. For Exterior and Humid Areas: Furnish hot dipped galvanized housings and neoprene coated springs.
    b. Code: Color code springs for load carrying capacity.

2. Springs: Minimum horizontal stiffness equal to 75 percent vertical stiffness, with working deflection between 0.3 and 0.6 of maximum deflection.
3. Housings: Incorporate rubber hanger with threaded insert.
4. Misalignment: Capable of 20 degree hanger rod misalignment.

G. Neoprene Pad Isolators:

1. Rubber or neoprene-waffle pads.

    a. 30 durometer.
    b. Minimum 1/2 inch thick.

c. Maximum loading 40 psi.
d. Height of ribs: not to exceed 0.7 times width.

H. Rubber Mount or Hanger: Molded rubber designed for 0.5 inches deflection with threaded insert.

I. Glass Fiber Pads: Neoprene jacketed pre-compressed molded glass fiber.

J. Seismic Snubbers:

1. Type: Non-directional and double acting unit consisting of interlocking steel members restrained by neoprene elements.
2. Neoprene Elements: Replaceable, minimum of 0.75 inch thick.
3. Capacity: 4 times load assigned to mount groupings at 0.4 inch deflection.
4. Attachment Points and Fasteners: Capable of withstanding 3 times rated load capacity of seismic snubber.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 31 00 – Project Management and Coordination: Coordination and project conditions.

B. Verify equipment, ductwork and piping is installed before work in this section is started.

3.2 INSTALLATION

A. Install isolation for motor driven equipment.

B. Adjust equipment level.

C. Install spring hangers without binding.

D. On closed spring isolators, adjust so side stabilizers are clear under normal operating conditions.

E. Prior to making piping connections to equipment with operating weights substantially different from installed weights, block up equipment with temporary shims to final height. When full load is applied, adjust isolators to load to allow shim removal.

F. Support piping connections to isolated equipment resiliently as follows:

1. Up to 4 inch Diameter: First three points of support.
2. 5 to 8 inch Diameter: First four points of support.
3. 10 inch Diameter and Over: First six points of support.
4. Select three hangers closest to vibration source for minimum 1.0 inch static deflection or static deflection of isolated equipment. Select remaining isolators for minimum 1.0 inch static deflection or 1/2 static deflection of isolated equipment.

3.3 FIELD QUALITY CONTROL

A. Section 01 43 00 - Quality Assurance, Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements.

B. Inspect isolated equipment after installation and submit report. Include static deflections.

C. Refer to Section 23 05 93 for sound measurements.

D. Furnish services of testing agency to take noise measurement. Use meters meeting requirements of ANSI S1.4.

3.4 SCHEDULES

A. See Contract Drawings for requirements.

END OF SECTION

SECTION 23 05 53

IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nameplates.
2. Tags.
3. Stencils.
4. Pipe markers.
5. Ceiling tacks.
6. Labels.

B. Related Sections:

1. Section 09 90 00 - Painting and Coating: Execution requirements for painting specified by this section.

1.2 REFERENCES

A. American Society of Mechanical Engineers:

1. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturers catalog literature for each product required.

C. Shop Drawings: Submit list of wording, symbols, letter size, and color coding for mechanical identification and valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Samples: Submit two tags, labels, pipe markers and size used on project.

E. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

1.5 QUALITY ASSURANCE

A. Conform to ASME A13.1 for color scheme for identification of piping systems and accessories.

B. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 EXTRA MATERIALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Spare parts and maintenance products.

PART 2 - PRODUCTS

2.1 NAMEPLATES

A. Manufacturers:

1. Craftmark Identification Systems.
2. Safety Sign Co.
3. Seton Identification Products.

B. Product Description: Laminated three-layer plastic with engraved black letters on light contrasting background color.

2.2 TAGS

A. Plastic Tags:

1. Manufacturers:

a. Craftmark Identification Systems.

b. Safety Sign Co.
c. Seton Identification Products.

2. Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inches diameter.

B. Metal Tags:

1. Manufacturers:

a. Craftmark Identification Systems.
b. Safety Sign Co.
c. Seton Identification Products.

2. Stainless Steel with stamped letters; tag size minimum 1-1/2 inches diameter or square with finished edges.

C. Information Tags:

1. Manufacturers:

a. Craftmark Identification Systems.
b. Safety Sign Co.
c. Seton Identification Products.

2. Clear plastic with printed "Danger," "Caution," or "Warning" and message; size 3-1/4 x 5-5/8 inches with grommet and self-locking nylon ties.

2.3 STENCILS

A. Manufacturers:

1. Craftmark Identification Systems.
2. Safety Sign Co.
3. Seton Identification Products.

B. Stencils: With clean cut symbols and letters of following size:

1. Up to 2 inches Outside Diameter of Insulation or Pipe: 1/2 inch high letters.
2. 2-1/2 to 6 inches Outside Diameter of Insulation or Pipe: 1-inch high letters.
3. Over 6 inches Outside Diameter of Insulation or Pipe: 1-3/4 inches high letters.
4. Ductwork and Equipment: 1-3/4 inches high letters.

C. Stencil Paint: As specified in Section 09 90 00, semi-gloss enamel, colors and lettering size conforming to ASME A13.1.

2.4 PIPE MARKERS

A. Color and Lettering: Conform to ASME A13.1.

B. Plastic Pipe Markers:

1. Manufacturers:

    a. Craftmark Identification Systems.
    b. Safety Sign Co.
    c. Seton Identification Products.

2. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. Larger sizes may have maximum sheet size with spring fastener.

C. Plastic Tape Pipe Markers:

1. Manufacturers:

    a. Craftmark Identification Systems.
    b. Safety Sign Co.
    c. Seton Identification Products.

2. Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.

2.5 CEILING TACKS

A. Manufacturers:

1. Craftmark Identification Systems.
2. Safety Sign Co.
3. Seton Identification Products.

B. Description: Steel with 3/4 inch diameter color-coded head.

C. Color code as follows:

1. HVAC equipment: Yellow.
2. Fire dampers/smoke dampers: Red.
3. Plumbing valves: Green.
4. Heating/cooling valves: Blue.

2.6 LABELS

A. Manufacturers:

1. Craftmark Identification Systems.
2. Safety Sign Co.
3. Seton Identification Products.

B. Description: Laminated Mylar, size 1.9 x 0.75 inches, adhesive backed with printed identification and bar code.

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

B. Prepare surfaces in accordance with Section 09 90 00 for stencil painting.

3.2 INSTALLATION

A. Apply stencil painting in accordance with Section 09 90 00.

B. Install identifying devices after completion of coverings and painting.

C. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.

D. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.

E. Install tags using corrosion resistant chain. Number tags consecutively by location.

F. Identify air conditioning units, pumps, heaters, heat transfer equipment, tanks, and water treatment devices with plastic nameplates. Identify in-line pumps and other small devices with tags.

G. Identify control panels and major control components outside panels with plastic nameplates.

H. Identify valves in main and branch piping with tags.

I. Identify air terminal units and radiator valves with numbered tags.

J. Tag automatic controls, instruments, and relays. Key to control schematic.

K. Identify piping, concealed or exposed, with plastic pipe markers. Use tags on piping 3/4 inch diameter and smaller. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and tee, at each side of penetration of structure or enclosure, and at each obstruction.

L. For exposed natural gas lines other than steel pipe, attach yellow pipe labels with "GAS" in black lettering, at maximum 5 foot spacing.

M. Identify ductwork with stenciled painting. Identify with air conditioning unit identification number and area served. Locate identification at air conditioning unit, at each side of penetration of structure or enclosure, and at each obstruction.

N. Provide ceiling tacks to locate valves or dampers above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

3.3 SCHEDULES

A. Identification: Shall be per ANSI Standard.

END OF SECTION

SECTION 23 05 93

TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Testing adjusting and balancing of air systems.
2. Testing adjusting and balancing of hydronic systems.
3. Measurement of final operating condition of HVAC systems.
4. Sound measurement of equipment operating conditions.
5. Vibration measurement of equipment operating conditions.
6. Verification of fire/smoke damper operation.

1.2 REFERENCES

A. Associated Air Balance Council:

1. AABC MN-1 - National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 111 - Practices for Measurement, Testing, Adjusting and Balancing of Building Heating, Ventilation, Air-Conditioning and Refrigeration Systems.

C. Natural Environmental Balancing Bureau:

1. NEBB - Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Prior to commencing Work, submit proof of latest calibration date of each instrument.

C. Test Reports: Indicate data on AABC MN-1 National Standards for Total System Balance forms.

D. Field Reports: Indicate deficiencies preventing proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.

E. Prior to commencing Work, submit report forms or outlines indicating adjusting, balancing, and equipment data required. Include detailed procedures, agenda, sample report forms and copy of AABC National Project Performance Guaranty.

F. Submit draft copies of report for review prior to final acceptance of Project.

G. Furnish reports in soft cover, letter size, 3-ring binder manuals, complete with table of contents page and indexing tabs, with cover identification at front and side. Include set of reduced drawings with air outlets and equipment identified to correspond with data sheets and indicating thermostat locations.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of flow measuring stations of balancing valves and rough setting.

C. Operation and Maintenance Data: Furnish final copy of testing, adjusting, and balancing report inclusion in operating and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with AABC MN-1 National Standards for Field Measurement and Instrumentation, Total System Balance.

B. Maintain one copy of each document on site.

C. Prior to commencing Work, calibrate each instrument to be used.

1.6 QUALIFICATIONS

A. Agency: Company specializing in testing, adjusting, and balancing of systems specified in this section with minimum years documented experience certified by AABC.

B. Perform Work under supervision of AABC Certified Test and Balance Engineer.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

1.8 SEQUENCING

A. Section 01 11 00 - Summary: Work sequence.

B. Sequence balancing between completion of systems tested and Date of Substantial Completion.

1.9 SCHEDULING

A. Section 01 31 00 – Project Management and Coordination: Coordination and project conditions.

B. Schedule and provide assistance in final adjustment and test of life safety system with Fire Authority.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 31 00 – Project Management and Coordination: Coordination and project conditions.

B. Verify systems are complete and operable before commencing work. Verify the following:

1. Systems are started and operating in safe and normal condition.
2. Temperature control systems are installed complete and operable.
3. Proper thermal overload protection is in place for electrical equipment.
4. Final filters are clean and in place. If required, install temporary media in addition to final filters.
5. Duct systems are clean of debris.
6. Fans are rotating correctly.
7. Fire and volume dampers are in place and open.
8. Air coil fins are cleaned and combed.
9. Access doors are closed and duct end caps are in place.
10. Air outlets are installed and connected.
11. Duct system leakage is minimized.
12. Hydronic systems are flushed, filled, and vented.
13. Pumps are rotating correctly.
14. Proper strainer baskets are clean and in place or in normal position.
15. Service and balancing valves are open.

3.2 PREPARATION

A. Furnish instruments required for testing, adjusting, and balancing operations.

B. Make instruments available to Architect/Engineer to facilitate spot checks during testing.

3.3 INSTALLATION TOLERANCES

A. Air Conditioning Systems: Adjust to within plus or minus 5 percent of design.

B. Air Outlets and Inlets: Adjust total to within plus 5 percent and minus 5 percent of design to space. Adjust outlets and inlets in space to within plus or minus 10 percent of design.

C. Hydronic Systems: Adjust to within plus or minus 10 percent of design.

3.4 ADJUSTING

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Testing, adjusting, and balancing.

B. Verify recorded data represents actual measured or observed conditions.

C. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.

D. After adjustment, take measurements to verify balance has not been disrupted. If disrupted, verify correcting adjustments have been made.

E. Report defects and deficiencies noted during performance of services, preventing system balance.

F. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.

G. At final inspection, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by Owner.

H. Check and adjust systems approximately six months after final acceptance and submit report.

3.5 AIR SYSTEM PROCEDURE

A. Adjust air conditioning and distribution systems to obtain required or design supply, return, and exhaust air quantities.

B. Make air quantity measurements in main ducts by Pitot tube traverse of entire cross sectional area of duct.

C. Measure air quantities at air inlets and outlets.

D. Adjust distribution system to obtain uniform space temperatures free from objectionable drafts.

E. Use volume control devices to regulate air quantities only to extent adjustments do not create objectionable air motion or sound levels. Effect volume control by using volume dampers located in ducts.

F. Vary total system air quantities by adjustment of fan speeds. Provide sheave drive changes to vary fan speed. Vary branch air quantities by damper regulation.

G. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.

H. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across fan. Make allowances for 50 percent loading of filters.

I. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.

J. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.

K. At modulating damper locations, take measurements and balance at extreme conditions. Balance variable volume systems at maximum airflow rate, full cooling, and at minimum airflow rate, full heating.

L. Measure building static pressure and adjust supply, return, and exhaust air systems to obtain required relationship between each to maintain approximately 0.05 inches positive static pressure near building entries.

M. For variable air volume system powered units set volume controller to airflow setting indicated. Confirm connections properly made and confirm proper operation for automatic variable-air-volume temperature control.

3.6 WATER SYSTEM PROCEDURE

A. Adjust water systems, after air balancing, to obtain design quantities.

B. Use calibrated Venturi tubes, orifices, or other metered fittings and pressure gauges to determine flow rates for system balance. Where flow-metering devices are not installed, base flow balance on temperature difference across various heat transfer elements in system.

C. Adjust systems to obtain specified pressure drops and flows through heat transfer elements prior to thermal testing. Perform balancing by measurement of temperature differential in conjunction with air balancing.

D. Effect system balance with automatic control valves fully open or in normal position to heat transfer elements.

E. Effect adjustment of water distribution systems by means of balancing cocks, valves, and fittings. Do not use service or shut-off valves for balancing unless indexed for balance point.

F. Where available pump capacity is less than total flow requirements or individual system parts, simulate full flow in one part by temporary restriction of flow to other parts.

3.7 FIRE/SMOKE DAMPERS

A. Provide field verification of fire/smoke damper per code requirement including, but not limited to, the following:

1. Visual confirmation of the complete closure of the dampers when the fire/alarm system is in simulated fire modes and during power simulated power failure.
2. Visual confirmation that the dampers are fully open during normal modes without any unusual noise and vibrations.

3.8 SCHEDULES

A. Equipment Requiring Testing, Adjusting, and Balancing:

1. Plumbing Pumps.
2. HVAC Pumps.
3. Boilers.
4. Air Handling Units.
5. Split System Air Conditioning Systems
6. Computer Room Air Conditioning Units.
7. Fans.
8. Air Filters.
9. Air Terminal Units.
10. Air Inlets and Outlets.

B. Report Forms

1. Title Page:

a. Name of Testing, Adjusting, and Balancing Agency
b. Address of Testing, Adjusting, and Balancing Agency
c. Telephone and facsimile numbers of Testing, Adjusting, and Balancing Agency
d. Project name
e. Project location
f. Project Architect
g. Project Engineer
h. Project Contractor
i. Project altitude
j. Report date

2. Summary Comments:

a. Design versus final performance
b. Notable characteristics of system
c. Description of systems operation sequence
d. Summary of outdoor and exhaust flows to indicate building pressurization
e. Nomenclature used throughout report
f. Test conditions

3. Instrument List:

a. Instrument
b. Manufacturer
c. Model number
d. Serial number
e. Range
f. Calibration date

4. Electric Motors:

a. Manufacturer
b. Model/Frame
c. HP/BHP and kW
d. Phase, voltage, amperage; nameplate, actual, no load
e. RPM
f. Service factor
g. Starter size, rating, heater elements
h. Sheave Make/Size/Bore

5. V-Belt Drive:

a. Identification/location
b. Required driven RPM
c. Driven sheave, diameter and RPM
d. Belt, size and quantity
e. Motor sheave diameter and RPM
f. Center to center distance, maximum, minimum, and actual

6. Pump Data:

a. Identification/number
b. Manufacturer
c. Size/model
d. Impeller
e. Service
f. Design flow rate, pressure drop, BHP and kW
g. Actual flow rate, pressure drop, BHP and kW
h. Discharge pressure
i. Suction pressure
j. Total operating head pressure
k. Shut off, discharge and suction pressures
l. Shut off, total head pressure

7. Combustion Test:

a. Manufacturer
b. Model number
c. Serial number
d. Firing rate
e. Overfire draft
f. Gas meter timing dial size
g. Gas meter time per revolution
h. Gas pressure at meter outlet
i. Gas flow rate
j. Heat input
k. Burner manifold gas pressure
l. Percent carbon monoxide (CO)
m. Percent carbon dioxide (CO2)
n. Percent oxygen (O2)
o. Percent excess air
p. Flue gas temperature at outlet

q. Ambient temperature
r. Net stack temperature
s. Percent stack loss
t. Percent combustion efficiency
u. Heat output

8. Air Moving Equipment:

a. Location
b. Manufacturer
c. Model number
d. Serial number
e. Arrangement/Class/Discharge
f. Air flow, specified and actual
g. Return air flow, specified and actual
h. Outside air flow, specified and actual
i. Total static pressure (total external), specified and actual
j. Inlet pressure
k. Discharge pressure
l. Sheave Make/Size/Bore
m. Number of Belts/Make/Size
n. Fan RPM

9. Return Air/Outside Air Data:

a. Identification/location
b. Design air flow
c. Actual air flow
d. Design return air flow
e. Actual return air flow
f. Design outside air flow
g. Actual outside air flow
h. Return air temperature
i. Outside air temperature
j. Required mixed air temperature
k. Actual mixed air temperature
l. Design outside/return air ratio
m. Actual outside/return air ratio

10. Exhaust Fan Data:

a. Location
b. Manufacturer
c. Model number
d. Serial number
e. Air flow, specified and actual
f. Total static pressure (total external), specified and actual
g. Inlet pressure
h. Discharge pressure
i. Sheave Make/Size/Bore
j. Number of Belts/Make/Size

k. Fan RPM

11. Duct Traverse:

    a. System zone/branch
    b. Duct size
    c. Area
    d. Design velocity
    e. Design air flow
    f. Test velocity
    g. Test air flow
    h. Duct static pressure
    i. Air temperature
    j. Air correction factor

12. Duct Leak Test:

    a. Description of ductwork under test
    b. Duct design operating pressure
    c. Duct design test static pressure
    d. Duct capacity, air flow
    e. Maximum allowable leakage duct capacity times leak factor
    f. Test apparatus

        1) Blower
        2) Orifice, tube size
        3) Orifice size
        4) Calibrated

    g. Test static pressure
    h. Test orifice differential pressure
    i. Leakage

13. Air Monitoring Station Data:

    a. Identification/location
    b. System
    c. Size
    d. Area
    e. Design velocity
    f. Design air flow
    g. Test velocity
    h. Test air flow

14. Flow Measuring Station:

    a. Identification/number
    b. Location
    c. Size
    d. Manufacturer
    e. Model number

f. Serial number
g. Design Flow rate
h. Design pressure drop
i. Actual/final pressure drop
j. Actual/final flow rate
k. Station calibrated setting

15. Terminal Unit Data:

a. Manufacturer
b. Type, constant, variable, single, dual duct
c. Identification/number
d. Location
e. Model number
f. Size
g. Minimum static pressure
h. Minimum design air flow
i. Maximum design air flow
j. Maximum actual air flow
k. Inlet static pressure

16. Air Distribution Test Sheet:

a. Air terminal number
b. Room number/location
c. Terminal type
d. Terminal size
e. Area factor
f. Design velocity
g. Design air flow
h. Test (final) velocity
i. Test (final) air flow
j. Percent of design air flow

END OF SECTION

SECTION 23 07 00

HVAC INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. HVAC piping insulation, jackets and accessories.
2. HVAC equipment insulation, jackets and accessories.
3. HVAC ductwork insulation, jackets, and accessories.

B. Related Sections:

1. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
2. Section 09 90 00 - Painting and Coating: Execution requirements for painting insulation jackets and covering specified by this section.

1.2 REFERENCES

A. ASTM International:

1. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
2. ASTM C449/C449M - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
3. ASTM C450 - Standard Practice for Fabrication of Thermal Insulating Fitting Covers for NPS Piping, and Vessel Lagging.
4. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
5. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
6. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
7. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
8. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
9. ASTM C585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System).
10. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
11. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
12. ASTM C921 - Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
13. ASTM C1071 - Standard Specification for Thermal and Acoustical Insulation (Glass Fiber, Duct Lining Material).

14. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
15. ASTM C1290 - Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
16. ASTM D1785 - Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
17. ASTM D4637 - Standard Specification for EPDM Sheet Used in Single-Ply Roof Membrane.
18. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials.
19. ASTM E162 - Standard Test Method for Surface Flammability of Materials Using a Radiant Heat Energy Source.

B. Sheet Metal and Air Conditioning Contractors':

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

C. Underwriters Laboratories Inc.:

1. UL 1978 - Standard for Safety for Grease Ducts.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit product description, thermal characteristics and list of materials and thickness for each service, and location.

C. Samples: Submit two samples of representative size illustrating each insulation type.

D. Manufacturer's Installation Instructions: Submit manufacturers published literature indicating proper installation procedures.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Test pipe insulation for maximum flame spread index of 25 and maximum smoke developed index of not exceeding 5 in accordance with ASTM E84.

B. Pipe insulation manufactured in accordance with ASTM C585 for inner and outer diameters.

C. Factory fabricated fitting covers manufactured in accordance with ASTM C450.

D. Duct insulation, Coverings, and Linings: Maximum 25/50 flame spread/smoke developed index, when tested in accordance with ASTM E84, using specimen procedures and mounting procedures of ASTM E 2231.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Applicator: Company specializing in performing Work of this section with minimum five years documented experience.

1.6 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 61 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

C. Protect insulation from weather and construction traffic, dirt, water, chemical, and damage, by storing in original wrapping.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 61 00 - Product Requirements: Environmental conditions affecting products on site.

B. Install insulation only when ambient temperature and humidity conditions are within range recommended by manufacturer.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Product warranties and product bonds.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Manufacturers for Glass Fiber and Mineral Fiber Insulation Products:

1. CertainTeed.
2. Knauf.
3. Johns Manville.
4. Owens-Corning.

B. Manufacturers for Closed Cell Elastomeric Insulation Products:

1. Aeroflex. Aerocell.
2. Armacell, LLC. Armaflex.
3. Nomaco. K-flex.

C. Manufacturers for Polyisocyanurate Foam Insulation Products:

1. Dow Chemical Company.
2. Substitutions: Section 01 60 00 - Product Requirements.

D. Manufacturers for Extruded Polystyrene Insulation Products:

1. Dow Chemical Company.
2. Substitutions: Section 01 61 00 - Product Requirements.

2.2 PIPE INSULATION

A. TYPE P-1: ASTM C547, molded glass fiber pipe insulation.

1. Thermal Conductivity: 0.23 at 75 degrees F.
2. Operating Temperature Range: 0 to 850 degrees F.
3. Vapor Barrier Jacket: ASTM C1136, Type I, factory applied reinforced foil kraft with self-sealing adhesive joints.
4. Jacket Temperature Limit: minus 20 to 150 degrees F.

B. TYPE P-2: ASTM C547, molded glass fiber pipe insulation.

1. Thermal Conductivity: 0.23 at 75 degrees F.
2. Operating Temperature Range: 0 to 850 degrees F.

C. TYPE P-3: ASTM C612; semi-rigid, fibrous glass board noncombustible, end grain adhered to jacket.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Operating Temperature Range: 0 to 650 degrees F.
3. Vapor Barrier Jacket: ASTM C1136, Type II, factory applied reinforced foil kraft with self-sealing adhesive joints.
4. Jacket Temperature Limit: minus 20 to 150 degrees F.

D. TYPE P-4: ASTM C612; semi-rigid, fibrous glass board noncombustible.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Operating Temperature Range: 0 to 650 degrees F.

E. TYPE P-5: ASTM C534, Type I, flexible, closed cell elastomeric insulation, tubular.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Operating Temperature Range: Range: Minus 70 to 180 degrees F.

F. TYPE P-6: ASTM C534, Type I, flexible, closed cell elastomeric insulation, tubular.

1. Thermal Conductivity: 0.30 at 75 degrees F.
2. Maximum Service Temperature: 300 degrees F.
3. Operating Temperature Range: Range: Minus 58 to 300 degrees F.

G. TYPE P-7: ASTM C534, Type I, flexible, nonhalogen, closed cell elastomeric insulation, tubular.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Maximum Service Temperature: 250 degrees F.
3. Operating Temperature Range: Range: Minus 58 to 250 degrees F.

H. TYPE P-8: ASTM C547, Type I or II, mineral fiber preformed pipe insulation, noncombustible.

1. Thermal Conductivity: 0.23 at 75 degrees F.
2. Maximum Service Temperature: 1200 degrees F.
3. Canvas Jacket: UL listed, 6 oz/sq yd, plain weave cotton fabric treated with fire retardant lagging adhesive.

I. TYPE P-11: ASTM C533; Type I, hydrous calcium silicate pipe insulation, rigid molded white; asbestos free.

1. Thermal Conductivity: 0.45 at 200 degrees F.
2. Operating Temperature Range: 140 to 1200 degrees F.

2.3 PIPE INSULATION JACKETS

A. Vapor Retarder Jacket:

1. ASTM C921, white Kraft paper with glass fiber yarn, bonded to aluminized film.
2. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.

B. PVC Plastic Pipe Jacket:

1. Product Description: ASTM D1785, One piece molded type fitting covers and sheet material, off-white color.
2. Thickness: 10 mil.
3. Connections: Brush on welding adhesive and tacks.

C. ABS Plastic Pipe Jacket:

1. Jacket: One piece molded type fitting covers and sheet material, off-white color.
2. Minimum service temperature: 0 degrees F.
3. Maximum service temperature of 180 degrees F.
4. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.
5. Thickness: 30 mil.
6. Connections: Brush on welding adhesive.

D. Aluminum Pipe Jacket:

1. ASTM B209.

2. Thickness: 0.025 inch thick sheet.
3. Finish: Smooth.
4. Joining: Longitudinal slip joints and 2 inch laps with caulking.
5. Fittings: 0.025 inch thick die shaped fitting covers with factory attached protective liner.
6. Metal Jacket Bands: 1/2 inch wide; 0.010 inch thick stainless steel.

2.4 PIPE INSULATION ACCESSORIES

A. Vapor Retarder Lap Adhesive: Compatible with insulation.

B. Covering Adhesive Mastic: Compatible with insulation.

C. Piping 1-1/2 inches diameter and smaller: Galvanized steel insulation protection shield. MSS SP-69, Type 40. Length: Based on pipe size and insulation thickness.

D. Piping 2 inches diameter and larger: Wood insulation saddle, hard maple. Inserts length: not less than 6 inches long, matching thickness and contour of adjoining insulation.

E. Closed Cell Elastomeric Insulation Pipe Hanger: Polyurethane insert with stainless steel jacket single piece construction with self-adhesive closure. Thickness to match pipe insulation.

F. Tie Wire: 0.048 inch stainless steel with twisted ends on maximum 12 inch centers.

G. Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement: ASTM C449/C449M.

H. Insulating Cement: ASTM C195; hydraulic setting on mineral wool.

I. Adhesives: Compatible with insulation.

2.5 EQUIPMENT INSULATION

A. TYPE E-1: ASTM C553; glass fiber, flexible or semi-rigid, noncombustible.

1. Thermal Conductivity: 0.24 at 75 degrees F.
2. Operating Temperature Range: 0 to 450 degrees F.
3. Density: 1.5 pound per cubic foot.

B. TYPE E-2: ASTM C612; glass fiber, rigid board, noncombustible with factory applied kraft reinforced aluminum foil jacket.

1. Thermal Conductivity: 0.24 at 75 degrees F.
2. Operating Temperature Range: 0 to 450 degrees F.
3. Density: 3.0 pound per cubic foot.
4. Jacket Temperature Limit: minus 20 to 150 degrees F.

C. TYPE E-3: ASTM C612; semi-rigid, fibrous glass board noncombustible, end grain adhered to jacket.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Operating Temperature Range: 0 to 650 degrees F.
3. Vapor Barrier Jacket: ASTM C1136, Type II, factory applied reinforced foil kraft with self-sealing adhesive joints.
4. Jacket Temperature Limit: minus 20 to 150 degrees F.

D. TYPE E-4: ASTM C612; semi-rigid, fibrous glass board noncombustible.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Operating Temperature Range: 0 to 650 degrees F.

E. TYPE E-5: ASTM C612; glass fiber, semi-rigid board, noncombustible.

1. Thermal Conductivity: 0.23 at 75 degrees F.
2. Maximum Operating Temperature: 850 degrees F.
3. Density: 3.0 pound per cubic foot.

F. TYPE E-6: ASTM C553; mineral fiber blanket, Type I.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Maximum Operating Temperature: 1000 degrees F.
3. Density: 1.0 pound per cubic foot.

G. TYPE E-7: ASTM C533; Type II, hydrous calcium silicate block insulation, asbestos free.

1. Thermal Conductivity: 0.45 at 200 degrees F.
2. Operating Temperature Range: 140 to 1200 degrees F.

H. TYPE E-8: ASTM C534, Type II, flexible, closed cell elastomeric insulation, sheet.

1. Thermal Conductivity: 0.27 at 75 degrees F.
2. Operating Temperature Range: Range: Minus 70 to 220 degrees F.

I. TYPE E-9: ASTM C612, manmade mineral fiber, noncombustible, Classes 1-4.

1. Thermal Conductivity: 0.25 at 100 degrees F.
2. Maximum Service Temperature: 1200 degrees F.
3. Density: 6 pound per cubic foot.

2.6 EQUIPMENT INSULATION JACKETS

A. PVC Plastic Equipment Jacket:

1. Product Description: ASTM D1785, sheet material, off-white color.
2. Minimum Service Temperature: 0 degrees F.
3. Maximum Service Temperature: 150 degrees F.
4. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.
5. Thickness: 20 mil.
6. Connections: Brush on welding adhesive and tacks.

B. Aluminum Equipment Jacket:

1. ASTM B209 Thickness: 0.025 inch thick sheet.
2. Finish: Smooth.
3. Joining: Longitudinal slip joints and 2 inch laps.
4. Fittings: 0.016 and 0.025 inch thick die shaped fitting covers with factory attached protective liner.
5. Metal Jacket Bands: 3/8 inch wide; 0.010 inch thick stainless steel.

C. Canvas Equipment Jacket: UL listed, 6 oz/sq yd, plain weave cotton fabric with fire retardant lagging adhesive compatible with insulation.

D. Vapor Retarder Jacket:

1. ASTM C921, white Kraft paper with glass fiber yarn, bonded to aluminized film.
2. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.

2.7 EQUIPMENT INSULATION ACCESSORIES

A. Vapor Retarder Lap Adhesive: Compatible with insulation.

B. Covering Adhesive Mastic: Compatible with insulation.

C. Tie Wire: 0.048 inch stainless steel with twisted ends on maximum 12 inch centers.

D. Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement: ASTM C449/C449M.

E. Adhesives: Compatible with insulation.

2.8 DUCTWORK INSULATION

A. TYPE D-1: ASTM C1290, Type III, flexible glass fiber, commercial grade with factory applied reinforced aluminum foil jacket meeting ASTM C1136, Type II.

1. Thermal Conductivity: 0.25 at 75 degrees F.
2. Maximum Operating Temperature: 250 degrees F.
3. Density: 1.5 pound per cubic foot.

B. TYPE D-2: ASTM C612, Type IA or IB, rigid glass fiber, with factory applied reinforced aluminum foil facing meeting ASTM C1136, Type II.

1. Thermal Conductivity: 0.22 at 75 degrees F.
2. Density: 3.0 pound per cubic foot.

C. TYPE D-4: ASTM C1071, Type I, flexible, glass fiber duct liner with coated air side.

1. Thermal Conductivity: 0.24 at 75 degrees F.
2. Density: 1.5 pound per cubic foot.
3. Maximum Operating Temperature: 250 degrees F.
4. Maximum Air Velocity: 6,000 feet per minute.

D. TYPE D-5: ASTM C1071, Type II, rigid, glass fiber duct liner with coated air side.

1. Thermal Conductivity: 0.23 at 75 degrees F.
2. Density: 3.0 pound per cubic foot.
3. Maximum Operating Temperature: 250 degrees F.
4. Maximum Air Velocity: 4,000 feet per minute.

2.9 DUCTWORK INSULATION JACKETS

A. Exterior Ductwork: Provide dual wall ductwork with specified insulation per Section 23 32 100.

B. Vapor Retarder Jacket:

1. Kraft paper with glass fiber yarn and bonded to aluminized film.
2. Water Vapor Permeance: ASTM E96/E96M; 0.02 perms.
3. Secure with pressure sensitive tape.

C. Canvas Duct Jacket: UL listed, 6 oz/sq yd, plain weave cotton fabric with fire retardant lagging adhesive compatible with insulation.

2.10 DUCTWORK INSULATION ACCESSORIES

A. Vapor Retarder Tape: Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure sensitive rubber based adhesive.

B. Vapor Retarder Lap Adhesive: Compatible with insulation.

C. Adhesive: Waterproof, ASTM E162 fire-retardant type.

D. Liner Fasteners: Galvanized steel, welded with press-on head.

E. Tie Wire: 0.048 inch stainless steel with twisted ends on maximum 12 inch centers.

F. Lagging Adhesive: Fire retardant type with maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

G. Impale Anchors: Galvanized steel, 12 gage self-adhesive pad.

H. Adhesives: Compatible with insulation.

I. Membrane Adhesives: As recommended by membrane manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 31 00 – Project Management and Coordination: Coordination and project conditions.

B. Verify piping, equipment and ductwork has been pressure tested before applying insulation materials.

C. Verify surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION - PIPING SYSTEMS

A. Piping Exposed to View in Finished Spaces: Locate insulation and cover seams in least visible locations.

B. Continue insulation through penetrations of building assemblies or portions of assemblies having fire resistance rating of one hour or less. Provide intumescent firestopping when continuing insulation through assembly. Finish at supports, protrusions, and interruptions. Refer to Section 07 84 00 for penetrations of assemblies with fire resistance rating greater than one hour.

C. Piping Systems Conveying Fluids Below Ambient Temperature:

1. Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.
2. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
3. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor retarder adhesive or PVC fitting covers.

D. Glass Fiber Board Insulation:

1. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.
2. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retarder cement.
3. Cover wire mesh or bands with cement to a thickness to remove surface irregularities.

E. Hot Piping Systems less than 140 degrees F:

1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.
3. Do not insulate unions and flanges at equipment, but bevel and seal ends of insulation at such locations.

F. Hot Piping Systems greater than 140 degrees F:

1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.

3. Insulate flanges and unions at equipment.

G. Inserts and Shields:

1. Piping 1-1/2 inches Diameter and Smaller: Install galvanized steel shield between pipe hanger and insulation.
2. Piping 2 inches Diameter and Larger: Install insert between support shield and piping and under finish jacket.

    a. Insert Configuration: Minimum 6 inches long, of thickness and contour matching adjoining insulation; may be factory fabricated.
    b. Insert Material: Compression resistant insulating material suitable for planned temperature range and service.

H. Insulation Terminating Points:

1. Coil Branch Piping 1 inch and Smaller: Terminate hot water piping at union upstream of the coil control valve.
2. Condensate Piping: Insulate entire piping system and components to prevent condensation.

I. Closed Cell Elastomeric Insulation:

1. Push insulation on to piping.
2. Miter joints at elbows.
3. Seal seams and butt joints with manufacturer’s recommended adhesive.
4. When application requires multiple layers, apply with joints staggered.
5. Insulate fittings and valves with insulation of like material and thickness as adjacent pipe.

J. High Temperature Pipe Insulation:

1. Install in multiple layers to meet thickness scheduled.
2. Attach each layer with bands. Secure first layer with bands before installing next layer.
3. Stagger joints between layers.
4. Cover with aluminum jacket with seams located on bottom side of horizontal piping.

K. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces (less than 10 feet above finished floor): Finish with canvas jacket sized for finish painting.

L. Piping Exterior to Building: Provide vapor retarder jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor retarder cement. Cover with aluminum jacket with seams located at 3 or 9 o’clock position on side of horizontal piping with overlap facing down to shed water or on bottom side of horizontal piping.

M. Prepare pipe insulation for finish painting. Refer to Section 09 90 00.

3.3 INSTALLATION - EQUIPMENT

A. Factory Insulated Equipment: Do not insulate.

B. Exposed Equipment: Locate insulation and cover seams in least visible locations.

C. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retarder cement.

D. Equipment Containing Fluids Below Ambient Temperature:

1. Insulate entire equipment surfaces.
2. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.
3. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
4. Finish insulation at supports, protrusions, and interruptions.

E. Equipment Containing Fluids 140 degrees F Or Less:

1. Do not insulate flanges and unions, but bevel and seal ends of insulation.
2. Install insulation with factory-applied or field applied jackets, with or without vapor barrier. Finish with glass cloth and adhesive.
3. Finish insulation at supports, protrusions, and interruptions.

F. Equipment Containing Fluids Over 140 degrees F:

1. Insulate flanges and unions with removable sections and jackets.
2. Install insulation with factory-applied or field applied jackets, with or without vapor barrier. Finish with glass cloth and adhesive.
3. Finish insulation at supports, protrusions, and interruptions.

G. Equipment in Mechanical Equipment Rooms or Finished Spaces: Finish with canvas jacket sized for finish painting.

H. Equipment Located Exterior to Building: Install vapor barrier jacket or finish with glass mesh reinforced vapor barrier cement. Cover with aluminum jacket with seams located on bottom side of horizontal equipment.

I. Nameplates and ASME Stamps: Bevel and seal insulation around; do not cover with insulation.

J. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation for easy removal and replacement without damage.

K. Prepare equipment insulation for finish painting. Refer to Section 09 90 00.

3.4 INSTALLATION - DUCTWORK SYSTEMS

A. Duct dimensions indicated on Drawings are finished inside dimensions.

B. Insulated ductwork conveying air below ambient temperature:

1. Provide insulation with vapor retarder jackets.
2. Finish with tape and vapor retarder jacket.
3. Continue insulation through walls, sleeves, hangers, and other duct penetrations.
4. Insulate entire system including fittings, joints, flanges, fire dampers, flexible connections, and expansion joints.

C. Insulated ductwork conveying air above ambient temperature:

1. Provide with or without standard vapor retarder jacket.
2. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.

D. Ductwork Exposed in Mechanical Equipment Rooms or Finished Spaces (below 10 feet above finished floor): Finish with canvas jacket sized for finish painting.

E. External Glass Fiber Duct Insulation:

1. Secure insulation with vapor retarder with wires and seal jacket joints with vapor retarder adhesive or tape to match jacket.
2. Secure insulation without vapor retarder with staples, tape, or wires.
3. Install without sag on underside of ductwork. Use adhesive or mechanical fasteners where necessary to prevent sagging. Lift ductwork off trapeze hangers and insert spacers.
4. Seal vapor retarder penetrations by mechanical fasteners with vapor retarder adhesive.
5. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.

F. External Elastomeric Duct Insulation:

1. Adhere to clean oil-free surfaces with full coverage of adhesive.
2. Seal seams and butt joints with manufacturer’s recommended adhesive.
3. When application requires multiple layers, apply with joints staggered.
4. Insulate standing metal duct seams with insulation of like material and thickness as adjacent duct surface. Apply adhesive at joints with flat duct surfaces.
5. Lift ductwork off trapeze hangers and insert spacers.

G. Duct and Plenum Liner:

1. Adhere insulation with adhesive for 100 percent coverage.
2. Secure insulation with mechanical liner fasteners. Comply with SMACNA Standards for spacing.
3. Seal and smooth joints. Seal and coat transverse joints.
4. Seal liner surface penetrations with adhesive.
5. Cut insulation for tight overlapped corner joints. Support top pieces of liner at edges with side pieces.

H. Ducts Exterior to Building:

1. Install insulation according to schedule below.
2. Provide external insulation with vapor retarder jacket. Cover with caulked aluminum jacket with seams located on bottom side of horizontal duct section.
3. Calk seams at flanges and joints. Located major longitudinal seams on bottom side of horizontal duct sections.

I. Prepare duct insulation for finish painting. Refer to Section 09 90 00.

3.5 SCHEDULES

A. Cooling Services Piping Insulation Schedule:

PIPING SYSTEM	INSULATION TYPE	PIPE SIZE	INSULATION THICKNESS inches
Condensate Piping from Cooling Coils	P-5	All sizes	0.5
Refrigerant Suction	P-5	All sizes	1.5

B. Heating Services Piping Insulation Schedule:

PIPING SYSTEM	INSULATION TYPE	PIPE SIZE	INSULATION THICKNESS inches
Heating Water Supply and Return 141 to 200 degrees F	P-1		1.5

C. Equipment Insulation Schedule:

EQUIPMENT	INSULATION TYPE	INSULATION THICKNESS inches
Hot Water Pump Bodies	E-8	1.0
Hot Water Air Separators	E-8	1.0
Hot Water Expansion Tanks	E-8	1.0

D. Ductwork Insulation Schedule:

DUCTWORK SYSTEM	INSULATION TYPE	INSULATION THICKNESS inches
Supply Ducts (internally insulated)	D-4, D-5	1.0
Return Ducts (internally insulated)	D-4, D-5	1.0
Supply Ducts (externally insulated)	D-1	1.5

Return Ducts (externally insulated)	D-1	1.5
Supply Air, Return Air (exterior to building on roof)	D-2, D-7	2.0
Rectangular Supply Ducts Downstream of Variable Air Volume Boxes (internally insulated)	D-4, D-5	1.0
Rectangular Supply Ducts Downstream of Variable Air Volume Boxes (externally insulated)	D-1, D-2	1.5
Round Supply Ducts Downstream of Variable Air Volume Boxes (externally insulated)	D-1, D-2	1.5
Transfer Air Ducts (internally insulated)	D-5	1.0

END OF SECTION

SECTION 23 08 00

COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 COMMISSIONING DESCRIPTION

A. HVAC commissioning process includes the following tasks:

1. Testing and startup of HVAC equipment and systems.
2. Equipment and system verification checks.
3. Assistance in functional performance testing to verify testing and balancing, and equipment and system performance.
4. Provide qualified personnel to assist in commissioning tests, including seasonal testing.
5. Complete and endorse functional performance test checklists provided by Commissioning Authority to assure equipment and systems are fully operational and ready for functional performance testing.
6. Provide equipment, materials, and labor necessary to correct deficiencies found during commissioning process to fulfill contract and warranty requirements.
7. Provide operation and maintenance information and record drawings to Commissioning Authority for review verification and organization, prior to distribution.
8. Provide assistance to Commissioning Authority to develop, edit, and document system operation descriptions.
9. Provide training for systems specified in this Section with coordination by Commissioning Authority.

B. Equipment and Systems to Be Commissioned:

1. All Air conditioning units.
2. All Hydronic heating system (boiler, heat exchanger, pumps, fan coils etc)
3. Exhaust Fans.

C. Perform seasonal function performance tests for the following equipment and systems:

1. Heating equipment during heating season.
2. Cooling equipment during cooling season.
3. Fan interlocks.

1.2 COMMISSIONING SUBMITTALS

A. Draft Forms: Required.

B. Test Reports: Required.

C. Field Reports: Required.

1.3 CLOSEOUT SUBMITTALS

A. Project Record Documents: Required.

B. Operation and Maintenance Data: Required.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with BCA, ASHRAE, Guideline 1, NEBB, TABB requirements.

1.5 COMMISSIONING RESPONSIBILITIES

A. Equipment or System Installer Commissioning Responsibilities:

1. Attend commissioning meetings: Required.
2. Provide instructions and demonstrations for owner's personnel: Required.
3. Ensure participation of equipment manufacturers in appropriate startup, testing, and training activities: Required.
4. Develop startup and initial checkout plan: Required.
5. During verification check and startup process, execute hvac related portions of checklists for equipment and systems to be commissioned: Required.
6. Perform and document completed startup and system operational checkout procedures: Required.
7. Provide manufacturer’s representatives to execute starting of equipment: Required.
8. Provide personnel to assist commissioning authority during equipment or system verification checks and functional performance tests: Required.
9. Prior to startup, inspect, check, and verify correct and complete installation of equipment and system components for verification checks: Required.
10. Provide factory supervised startup services for equipment and systems: Required.
11. Perform verification checks and startup on equipment and systems: Required. Assist commissioning authority in performing functional performance tests on equipment and systems: Required.
12. Perform operation and maintenance training sessions: Required.
13. Conduct hvac system orientation and inspection: Required.

B. Temperature Controls Installer Commissioning Responsibilities:

1. Attend commissioning meetings: Required.
2. Review design for ability of systems to be controlled: Required.
3. Inspect, check, and confirm proper operation and performance of control hardware and software: Required.
4. Submittal of proposed procedures for performing automatic temperature control system point-to-point checks: Required.
5. Inspect check and confirm correct installation and operation of automatic temperature control system input and output device operation through point-to-point checks: Required.
6. Perform training sessions to instruct owner's personnel in hardware operation, software operation, programming, and application: Required.

7. Demonstrate system performance and operation to commissioning authority during functional performance tests including each mode of operation: Required.
8. Provide control system technician to assist during commissioning authority verification check and functional performance testing: Required.
9. Provide control system technician to assist testing, adjusting, and balancing agency: Required.
10. Assist in performing operation and maintenance training sessions: Required.

C. Testing, Adjusting, and Balancing Agency Commissioning Responsibilities:

1. Attend commissioning meetings: Required.
2. Participate in verification of testing, adjusting, and balancing report for verification or diagnostic purposes: Required.
3. Assist in performing operation and maintenance training sessions: Required.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 FIELD TESTING AND INSPECTIONS

A. Seasonal Sensitive Functional Performance Tests: Required.

B. Initial and Alternate Peak Season Test of Systems: Required.

C. Occupancy Sensitive Functional Performance Tests: Required.

END OF SECTION

SECTION 23 09 23

DIRECT-DIGITAL CONTROL SYSTEM FOR HVAC

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Scope of Work:

1. The installing contractor shall furnish and install a fully integrated building automation system, incorporating direct digital control (DDC) for energy management equipment monitoring and control, and subsystems with open communications capabilities.
2. All materials and equipment used shall be standard components, regularly manufactured for this and/or other systems and not custom designed especially for this project. All systems and components shall have been thoroughly tested and proven in actual use for at least five years. Wireless controllers and control devices shall not be acceptable.
3. Installing contractor shall be responsible for all BMS and Temperature Control wiring for a complete and operable system. All wiring shall be done in accordance with all local and national codes.
4. Commissioning shall be point to point upon completion.
5. DROP CONDUIT IN WALLS FOR ANY EMS/LC LOW VOLTAGE W/ JBOX AT LEAST UP TO ABOVE CEILING. PROVIDE CONDUIT FOR EMS/IP IN OPEN EQUIPMENT ROOMS, BELOW GROUND, ON ROOFS AS SPECIFIED IN ELECTRICAL DIVISION 26. In general, all wiring shall be in conduit.
6. Garage CO monitor, alarm, ventilation exhaust systems.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.

C. Related Sections include the following:

1. Section 23 05 19 "Meters and Gages for HVAC Piping" for measuring equipment that relates to this Section.
2. Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC"
3. Section 23 08 00 "Mechanical Systems Commissioning"
4. Section 26 05 00 "Basic Materials and Methods"
5. Section 26 11 00 "Conduits and Raceways"

D. Products furnished but installed under the provisions of other sections include the following:

1. Control valves
2. Flowmeters
3. Flow switches
4. Pressure and/or temperature sensor wells & sockets.

E. Communications with Third Party Equipment:

1. Provide BACnet interface for any additional integral control systems provided under this section to be integrated into the Direct Digital Control System described in this section.
2. Provide technical assistance and technical field labor during engineering, startup and commissioning phases for the points included in the Sequence of Operation.

1.3 DEFINITIONS

A. BMS: Building management system.

B. BACnet: A control network technology platform for designing and implementing interoperable control devices and networks.

C. CE: Conformite Europeene (European Compliance).

D. CPT: Control power transformer.

E. DDC: Direct digital control.

F. EMI: Electromagnetic interference.

G. I/O: Input/output.

H. ISP: Internet service provider.

I. LonWorks: A control network technology platform for designing and implementing interoperable control devices and networks.

J. MS/TP: Master slave/token passing.

K. PC: Personal computer.

L. PID: Proportional plus integral plus derivative.

M. RFI: Radio-frequency interference.

N. RTD: Resistance temperature detector.

O. VFD: Variable-frequency motor controller.

1.4 SYSTEM PERFORMANCE

A. Comply with the following performance requirements:

1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 15 seconds.
2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 10 seconds.
3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
4. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.
5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
6. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
7. Performance: Programmable controllers shall execute DDC PID control loops, and scan and update process values and outputs at least once per second.
8. Reporting Accuracy: The system shall report all values with an end-to-end accuracy as listed or better than those listed in the following table:

Measured Variable	Reported Accuracy
Space Temperature	±0.5ºC [±1ºF]
Ducted Air	±0.5ºC [±1ºF
Outside Air	±1.0ºC [±2ºF]
Dewpoint	±1.5ºC [±3ºF]
Water Temperature	±0.5ºC [±1ºF]
Delta-T	±0.15ºC[±0.25ºF]
Relative Humidity	±5% RH
Water Flow	±5% of full scale
Airflow (terminal)	±10% of full scale *(see Note 1)*
Airflow (measuring stations)	±5% of full scale
Air Pressure (ducts)	±25 Pa [±0.1 "W.G.]
Air Pressure (space)	±3 Pa [±0.01 "W.G.]
Water Pressure	±2% of full scale *(see Note 2)*
Electrical (A, V, W, Power factor)	5% of reading *(see Note 3)*
Carbon Monoxide (CO)	±5% of reading
Carbon Dioxide (CO_2)	±50 ppm
Note 1: 10%-100% of scale	
Note 2: For both absolute and differential pressure	
Note 3: Not including utility-supplied meters	

9. Stability of Control. Control loops shall maintain measured variable at setpoint within the tolerances listed in Table 1.

TABLE 1: Control Stability and Accuracy

Controlled Variable	*Control Accuracy*	*Range of Medium*

Air Pressure	±50 Pa [±0.2" w.g.] ±3 Pa [±0.01" w.g.]	0-1.5 kPa [0-6" w.g.] -25 to 25 Pa [-0.1 to 0.1" w.g.]
Airflow	±10% of full scale	
Temperature	±0.5ºC [±1.0ºF]	
Humidity	±5% RH	
Fluid Pressure	±10 kPa [±1.5 psi]	0-1 kPa [1-150 psi]
" " differential	±250 Pa [±1.0" w.g.]	0-12.5 kPa [0-50"w.g.]

1.5 SEQUENCE OF OPERATION

A. Comply with sequence as indicated on Drawings.

1.6 ACTION SUBMITTALS

A. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated. Comply with submittal requirements listed in Division 01 Specification Sections.

1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.
2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, loads (Panel Full Load Amps), required clearances, components, and location and size of each field connection. Comply with submittal requirements listed in Division 01 Specification Sections.

1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
2. General arrangement diagrams: Indicating locations of control panels and power supplies for coordination with Electrical.
3. Wiring Diagrams: Power, signal, and control wiring, including control system architecture/riser diagram.
4. Details of control panels, including controls, instruments, wire duct, wiring and labeling.

5. Written description of sequence of operation.
6. Schedule of valves including flow characteristics.
7. DDC System Hardware:

    a. Wiring diagrams for control units with termination numbers.
    b. Schematic diagrams and floor plans for field sensors and control hardware.
    c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.

8. Controlled Systems:

    a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
    b. Schematic diagrams showing wiring of all field installed instrumentation.
    c. Written description of sequence of operation including schematic diagram.
    d. Points list.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 and Section 01 78 00 "Closeout Submittals," include the following:

1. Index sheet, listing contents in alphabetical order or control panel sequencing.
2. Manufacturer's equipment parts list of all functional components of the system, CD/DVD ROM disk or flash memory card/stick of system schematics, including wiring diagrams and Bill of Materials.
3. Description of sequence of operations.
4. As-Built interconnection wiring diagrams.
5. Manufacturer's descriptive literature, operating instruction, and maintenance and repair data, if available from BMS system manufacturer.
6. Backbone cable schematic showing remote electronic panel location, and all backbone data.
7. List of connected data points, including panels to which they are connected and input device.

B. Software and Firmware Operational Documentation: Include the following:

1. Software operating manuals.
2. Program Software Backup: On digital media or storage device, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.
5. Software license required by and installed for DDC workstations and control systems.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with ASHRAE 135(BACnet) for DDC system components.

D. Materials and equipment shall be the catalogued products of manufacturers regularly engaged in production and installation of automatic temperature control systems and shall be manufacturer's latest standard design that complies with the specification requirements.

E. All BAS peer-to-peer network controllers, central system controllers, floor level controllers and local user displays shall be UL Listed under Standard UL 916, category PAZX.

F. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Governing Radio Frequency Electromagnetic Interference and be so labeled.

1.9 WARRANTY

A. Provide all services, materials and equipment necessary for the successfully operation of the BACnet BAS system for a period of one year after beneficial use.

B. Provide all services, materials and equipment necessary for the successfully operation of the control valves and control damper operators for a period of five years after beneficial use.

C. The adjustment, required testing, and repair of the system includes all computer equipment, transmission equipment and all sensors and control devices.

D. The on-line support services shall allow the local BAS subcontractor to monitor and control the facility's building automation system. This remote connection to the facility shall be within 2 hours of the time that the problem is reported. This coverage shall be extended to include normal business hours, after business hours, weekends and holidays.

E. If the problem cannot be resolved with on-line support services, the BAS contractor shall dispatch the appropriate personnel to the job site to resolve the problem within 3 hours of the time that the problem is reported.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.

B. System Software: Update to latest version of software at Project completion.

1.11 COORDINATION

A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.

B. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.

C. Coordinate locations and mounting of control panels and low voltage power supplies.

D. Coordinate locations, mounting, and electrical power for VFD's.

PART 2 - PRODUCTS

2.1 CONTROL SYSTEM

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include manufacturer listed.

B. Manufacturer

1. Delta Controls by Envise.

C. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.

2.2 MATERIALS

A. All products used in this project installation shall be new, currently under manufacture, and shall be applied in similar installations for a minimum of two years. This installation shall not be used as a test site for any new products unless explicitly approved by the Owner's Representative in writing. Spare parts shall be available for at least five years after completion of this contract.

2.3 COMMUNICATION

A. All control products provided for this project shall comprise a BACnet internetwork. Communication involving control components (i.e., all types of controllers and Operator Workstations) shall conform to ANSI/ASHRAE Standard 135-2004, BACnet.

B. Each BACnet device shall operate on the BACnet Data Link/Physical layer protocol specified for that device as defined in this section.

C. The Contractor shall provide all communication media, connectors, repeaters, bridges, hubs, switches, and routers necessary for the internetwork.

D. All controllers shall have a communication port for connections with the Operator Workstations using the BACnet Data Link/ Physical layer protocol.

E. Communication services over the internetwork shall result in operator interface and value passing that is transparent to the internetwork architecture as follows:

1. Connection of an Operator Workstation device to any one controller on the internetwork will allow the operator to interface with all other controllers as if that interface were directly connected to the other controllers. Data, status information, reports, system software, custom programs, etc., for all controllers shall be available for viewing and editing from any one controller on the internetwork.
2. All database values (e.g., objects, software variables, custom program variables) of any one controller shall be readable by any other controller on the internetwork. This value passing shall be automatically performed by a controller when a reference to an object name not located in that controller is entered into the controller's database. An operator/installer shall not be required to set up any communication services to perform internetwork value passing.

F. The time clocks in all controllers shall be automatically synchronized daily. An operator change to the time clock in any controller shall be automatically broadcast to all controllers on the network.

G. The network shall have the following minimum capacity for future expansion:

1. Each Building Controller shall have routing capacity for 99 controllers.
2. The Building Controller network shall have capacity for 1000 Building Controllers.
3. The system shall have an overall capacity for 12,500 Building Controller, Advanced Application Controller, and Application Specific Controller input/output objects.

2.4 DDC EQUIPMENT

A. Operator Workstation: Furnish one PC-based microcomputer as shown on the system drawings. The workstation shall be able to access all information in the system. The workstation shall reside on the same Ethernet protocol network as the Building Controllers. The owner shall furnish appropriate static IP addresses as required for the system and connection to the Internet via high-speed cable modem, ADSL, ISDN, T1 or through the facility ISP. The owner shall pay for all monthly Internet access fees and connection charges. The workstation shall consist of the minimum configuration as follows:

1. Motherboard: With 8 integrated USB 2.0 ports, integrated Ethernet, audio, bios, and hardware monitoring.
2. Processor: Minimum dual core processor.

3. Random-Access Memory: 4 GB.
4. Graphics: HD compatible
5. Monitor: Minimum 24 inches, wide screen LCD color.
6. Keyboard: QWERTY, 105 keys in ergonomic shape.
7. Hard-Disk Drive: Minimum 320 GB.
8. DVD-ROM Read/Write Drive
9. Mouse: Three button
10. Uninterruptible Power Supply: 2 kVa.
11. Operating System: Microsoft Windows 7 Professional with high-speed Internet access.

    a. ASHRAE 135 Compliance: Workstation shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

12. Printer: Black-and-white, laser-jet type.
13. System Software:

    a. Operating System: Furnish a concurrent multi tasking operating system. The operating system also shall support the use of other common software applications that operate under Microsoft Windows. Examples include Microsoft Excel, Microsoft Word, and Microsoft Access. Acceptable operating system is Windows 7 Professional with high-speed Internet access.
    b. System Graphics: The operator workstation software shall be a graphical user interface (GUI). The system shall allow display of up to 10 dynamic and animated graphic screens at once for comparison and monitoring of system status. Provide a method for the operator to easily move between graphic displays and change the size and location of graphic displays on the screen. The system graphics shall be able to be modified while on-line. An operator with the proper password level shall be able to add, delete, or change dynamic objects on a graphic. Dynamic objects shall include analog and binary values, dynamic text, static text, and animation files. Graphics shall have the ability to show animation by shifting image files based on the status of the object.
    c. Custom Graphics: Custom graphic files shall be created with the use of a graphics generation package furnished with the system. The graphics generation package shall be a graphically based system that uses the mouse to create and modify graphics. The graphics generation package also shall provide the capability of capturing or converting graphics from other programs such as Visio or AutoCAD.
    d. Graphics Library: Furnish a complete library of standard HVAC equipment graphics such as chillers, boilers, air handlers, terminals, fan coils, and unit ventilators. This library also shall include standard symbols for other equipment including fans, pumps, coils, valves, piping, dampers, and ductwork. The library shall be furnished in a file format compatible with the graphics generation package program. Graphics shall be created by drag-and-drop selection of graphic symbols and drag-and-link with BACnet objects with dynamic and interactive display fields.
    e. Multilingual: Software shall be supported in the following languages English, Spanish, French, German, and Chinese.

f. Dynamic Data Exchange (DDE): Software shall support dynamic data sharing with other Windows-based programs for third party add-on functionality e.g. preventative maintenance, tenant billing, etc.

14. System Applications: Each workstation shall provide operator interface and off line storage of system information. Provide the following applications at each workstation:

    a. System Database Save and Restore: Each workstation shall store on the hard disk a copy of the current database of each Building Controller. This database shall be updated whenever an operator initiates a save command.
    b. Manual Database Save and Restore: A system operator with the proper password clearance shall be able to save the database from any system panel. The operator shall be able to clear a panel database via the network and may initiate a download of a specified database to any panel in the system from the network.
    c. System Configuration: The workstation software shall provide a method of configuring the system. This shall allow for future system changes or additions by users under proper password protection.
    d. On-Line Help: Provide a context-sensitive, on-line help system to assist the operator in operating and editing the system. On- line help shall be available for all applications and shall provide the relevant data for that particular screen. Additional help information shall be available through the use of hypertext.
    e. Security: Each operator shall be required to log on to the system with a user name and password in order to view, edit, add, or delete data. System security shall be selectable for each operator. The system supervisor shall have the ability to set passwords and security levels for all other operators. Each operator password shall be able to restrict the functions accessible to viewing and/or changing each system application.
    f. System Diagnostics: The system shall automatically monitor the operation of all workstations, printers, network connections, building management panels, and controllers.
    g. Alarm Processing: Any object in the system shall be configurable to alarm in and out of normal state. The operator shall be able to configure the alarm limits, alarm limit differentials, states, and reactions for each object in the system.
    h. Alarm Messages: Alarm messages shall use the English language descriptor for the object in alarm, in such a way that the operator will be able to recognize the source, location, and nature of the alarm without relying upon acronyms or other mnemonics.
    i. Alarm Reactions: The operator shall be able to determine (by object) what if any actions are to be taken during an alarm. Actions shall include logging, printing, starting programs, displaying messages, dialing out to remote stations, paging, providing audible annunciation.
    j. Trend Logs: The operator shall be able to define a custom trend log for any data object in the system. This definition shall include change-of-value digital, change-of-value analog, time interval, start time, and stop time. Trend data shall be sampled and stored on the Building Controller panel and be archivable on the hard disk and be retrievable for use in spreadsheets and standard database programs.

k. Alarm and Event Log: The operator shall be able to view all system alarms and change of states from any location in the system. Events shall be listed chronologically. An operator with the proper security level may acknowledge and clear alarms.
l. Object and Property Status and Control: Provide a method for the operator to view, and edit if applicable, the status of any object and property in the system. The status shall be available by menu, on graphics, or through custom programs.
m. Clock Synchronization: The real-time clocks in all building control panels and workstations shall be using the BACnet Time Synchronization service. The system also shall be able to automatically synchronize all system clocks daily from any operator-designated device in the system. The system shall automatically adjust for daylight savings and standard time, if applicable.

B. Diagnostic Terminal Unit (Laptop): Portable laptop, PC-based microcomputer terminal capable of accessing system data by connecting to system network with minimum configuration as follows:

1. System: With one integrated USB 2.0 port, integrated Ethernet, integrated audio, bios, and hardware monitoring.
2. Processor: Intel Core i7
3. Random-Access Memory: 4 GB.
4. Graphics: HD compatible
5. Monitor: Minimum 15 inches, LCD color.
6. Keyboard: QWERTY 105 keys in ergonomic shape.
7. Hard-Disk Drive: Minimum 320 GB.
8. DVD-ROM Read/Write Drive
9. Pointing Device: Touch pad or other internal device.
10. Operating System: Microsoft Windows 7 Professional with high-speed Internet access.

C. Diagnostic Terminal Unit (Tablet): Portable tablet, wireless based microcomputer capable of accessing system data wirelessly by connecting to system network with minimum configuration as follows:

1. System: Mobile or remote keyboard docking station with built-in rechargeable battery.
2. Processor: Intel Atom (1.50GHz) 512KB.
3. Wireless: Wireless 802.11a/b/g/n and BlueTooth 4.0.
4. Random-Access Memory: 2 GB SDRAM.
5. Graphics: Intel Graphics Media Accelerator.
6. Display: 10.1" (1280x800) Wide Viewing Angle LED.
7. Mobile Brandband: Wireless Mini Card.
8. Solid State Drive: Minimum 64 GB.
9. Drive: DVD Drive.
10. Pointing Device: Touch pad & pen input device.
11. Webcam: Dual Webcams with Digital Microphone, 1.2MP Front / 5.0MP Rear.
12. Operating System: Microsoft Windows 7 Professional with high-speed Internet access

D. Report Management:

1. The following reporting capability shall be provided at the operator workstation.

    a. Reporting:

        1) Internal reports built into operator workstation software
        2) External reporting via ODBC

    b. Internal Reports:

        1) User definable query reports (support advanced multiple property, multiple object).
        2) Reports shall be scheduled for automatic generation by schedule or event.
        3) Manual execution to printing/file.
        4) Ability to save report in system report folder.
        5) Query controller hierarchy.
        6) Report to multiple destinations:

            a) Email
            b) Print
            c) File (text, csv, xml)
            d) Terminal

    c. Enterprise Interface

        1) ODBC driver supporting common SQL statements (select, update, insert, where, order by, group by, etc.)
        2) Allow integration to Enterprise software
        3) Shall be capable of being used with third party software that supports ODBC connection such as: Microsoft Access, Excel, Crystal Reports, etc.
        4) All queries shall be real time into live controller network.
        5) Shall be able to both read and write using SQL.

E. Internet Connection: The owner shall furnish appropriate static IP addresses as required for the system and connection to the Internet via high-speed cable modem, ADSL, ISDN, T1 or through the facility ISP. The owner shall pay for all monthly Internet access fees and connection charges.

F. Web Browser Interface

1. The system shall be capable of supporting an unlimited number of clients using a standard Web browser such as Internet Explorer™ 9 or Google Chrome™ or Safari™ or Firefox™.
2. The Web browser software shall run on any operating system and system configuration that is supported by the Web browser. Systems that require specific machine requirements in terms of processor speed, memory, etc., in order to allow the Web browser to function with the BAS, shall not be acceptable.
3. The Web browser shall provide the same view of the system, in terms of graphics, schedules, calendars, logs, etc., and provide the same interface methodology as is provided by the Graphical User Interface. Systems that

require different views or that require different means of interacting with objects such as schedules, or logs, shall not be permitted.

4. The Web browser client shall support at a minimum, the following functions:

    a. User log-on identification and password shall be required. If an unauthorized user attempts access, a blank web page shall be displayed. Security using Java authentication and encryption techniques to prevent unauthorized access shall be implemented.

5. Graphical screens developed for the GUI shall be the same screens used for the Web browser client. Any animated graphical objects supported by the GUI shall be supported by the Web browser interface.
6. HTML editing of the Web page shall be allowed if the user desires a specific look or format.
7. Storage of the graphical screens shall be in the Server, without requiring any graphics to be stored on the client machine.
8. Real-time values displayed on a Web page shall update automatically without requiring a manual "refresh" of the Web page.
9. Users shall have administrator-defined access privileges. Depending on the access privileges assigned, the user shall be able to perform the following:

    a. Modify common application objects, such as schedules, calendars, and set points in a graphical manner.

10. Holidays shall be set by using a graphical calendar, without requiring any keyboard entry from the operator.
11. Commands to start and stop binary objects shall be done by right-clicking the selected object and selecting the appropriate command from the pop-up menu. No entry of text shall be required.
12. The system shall provide the capability to specify a user's (as determined by the log-on user identification) home page. Provide the ability to limit a specific user to just their defined home page. From the home page, links to other views, or pages in the system shall be possible, if allowed by the system administrator.
13. Graphic screens on the Web Browser client shall support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.

G. Sustainability Dashboard (Web Based Dashboard):

1. Provide a web accessible graphical interface to the system with a summary of the facilities sustainability metrics to include:

    a. Total facility energy consumption by month, this year and last year.
    b. Current facility electrical demand.
    c. Electrical demand trend over the last 48 hours
    d. Total facility gas consumption by month, this year and last year.
    e. Monthly water consumption totals for each meter listed in the point schedule.
    f. The facility's total energy consumption quotient (MMBTU's / sq.ft. / year) calculated for the most recent 12 months.
    g. The design team's baseline for energy consumption for the facility by month (furnished by the design team). This should be displayed along with the

actual consumption in a bar or line graph format to clearly show how the facility is doing versus design.
h. Energy Star Rating for the facility.
i. Equivalent Carbon Emissions for the facilities total energy consumption over the last 12 months versus the design-teams' baseline.
j. The ASHRAE Building EQ Operational Rating (calculated from the real time energy consumption index for the previous 12 months) and the design team furnished Building EQ Asset rating.

H. Server Functions and Hardware:

1. A central server shall be provided. The server shall support all Network Area Controllers connected to the customer's network whether local or remote.
2. Local connections shall be via an Ethernet LAN. Remote connections can be via ISDN, ADSL or T1 connection.
3. The server shall provide scheduling for all Area Controllers and their underlying field control devices.
4. The server shall implement the BACnet Command Prioritization scheme (16 levels) for safe and effective contention resolution of all commands issued to Network Area Controllers. Systems not employing this prioritization shall not be accepted.
5. The server shall provide central management of alarm data for all Network Area controllers supported by the server inclusive of the following:

   a. View and acknowledge alarms.
   b. View and edit comments on acknowledged alarms.

6. Server Hardware Requirements: The server hardware platform shall have the following requirements:

   a. Processor: Minimum quad core processor or multiple dual core processor.
   b. Random-Access Memory: 8 GB minimum.
   c. Hard-Disk Drive: Minimum 320 GB.
   d. NIC: Minimum 2 10/100 Network Cards.
   e. Video Card & rack mounted.
   f. Operating System: Microsoft Windows Server 2012.

I. Controller Software

1. Furnish the following applications software for building and energy management. All software applications shall reside and operate in the system controllers. Editing of applications shall occur at the operator workstation
2. System Security:

   a. User access shall be secured using individual security passwords and user names.
   b. Passwords shall restrict the user to the site, objects, applications, and system functions as assigned by the system manager.
   c. User Log On/Log Off attempts shall be recorded.

3. Scheduling: Provide the capability to schedule each object or group of objects in the system. Each schedule shall consist of the following:

    a. Provide an event scheduling system that allows the operator to specify a single event, multiple day event and/or recurring events. The event schedule specifies both the on/off times and the date in a calendar planning format similar to Microsoft Outlook®.
    b. Calendar Schedules: Provide the capability for the operator to define up to 99 special schedules. These schedules may be placed on the scheduling calendar and will be repeated each year. The operator shall be able to define the length of each calendar period.

4. Alarm Reporting: The operator shall be able to determine the action to be taken in the event of an alarm. Alarms shall be routed to the appropriate workstations based on time and other conditions.
5. Remote Communication: The system shall have the ability to send text messages to cell phones and email messages in the event of an alarm using SMTP protocol.
6. Maintenance Management: The system shall monitor equipment status and generate maintenance messages based upon user-designated run-time, starts, and/or calendar date limits.
7. Sequencing: Provide application software to properly sequence the start and stop of chillers, boilers, and pumps to minimize energy usage in the facility.
8. PID Control: A PID (proportional-integral-derivative) algorithm with direct or reverse action and anti-windup shall be supplied. The algorithm shall calculate a time-varying analog value that is used to position an output or stage a series of outputs. The controlled variable, setpoint, and PID gains shall be user-selectable.
9. Staggered Start: This application shall prevent all controlled equipment from simultaneously restarting after a power outage.
10. Energy Calculations: Provide software to allow instantaneous power (e.g., kW) or flow rates (e.g., L/s [GPM]) to be accumulated and converted to energy usage data. Provide an algorithm that calculates a sliding-window kW demand value.
11. Anti-Short Cycling: All binary output objects shall be protected from short cycling. This feature shall allow minimum on-time and off-time to be selected.
12. On/Off Control with Differential: Provide an algorithm that allows a binary output to be cycled based on a controlled variable and setpoint. The algorithm shall be direct-acting or reverse-acting and incorporate an adjustable differential.
13. Run-time Totalization: Provide software to totalize run-times for all binary input objects. A high run-time alarm shall be assigned, if required, by the operator.

J. General Building Controllers:

1. Provide an adequate number of BACnet® Building Controllers to achieve the performance specified in the Part 1 Article on "System Performance." Each of these panels shall meet the following requirements. Additionally, provide Building Controllers where shown on the drawings.

    a. The Energy Management and Control System shall be comprised of one or more independent, standalone, microprocessor-based Building Controllers to manage the global strategies described in the System Software section.

b. The Building Controller shall have sufficient memory to support its operating system, database, and programming requirements.
c. Data shall be shared between networked Building Controllers.
d. The operating system of the Building Controller shall manage the input and output communication signals to allow distributed controllers to share real and virtual object information and allow central monitoring and alarms.
e. Controllers that perform scheduling shall have a battery or super-cap backed up real-time clock.

2. Communications:

a. Each Building Controller shall support direct Ethernet or a communications card. The Building Controller shall be connected to the BACnet network using the ISO 8802-3 (Ethernet) Data Link/ Physical layer protocol, or BACnet IP (Annex J).
b. Each Building Controller with a communications card shall perform BACnet routing if connected to a network of Custom Application and Application Specific Controllers.
c. The controller shall provide a service communication port using BACnet Data Link/ Physical layer protocol P-T-P for connection to a hand-held workstation/ and/or modem.
d. The Building Controller secondary communication network shall support BACnet MS/TP.

3. Environment: Controller hardware shall be suitable for the anticipated ambient conditions.

a. Controllers used outdoors and/or in wet ambient conditions shall be mounted within waterproof enclosures and shall be rated for operation at 0°C to 40°C [32°F to 100°F] and 10 to 90% RH.
b. Controllers used in conditioned space shall be mounted in dust proof enclosures and shall be rated for operation at 0°C to 50°C [32°F to 120°F].

4. Building Controllers shall be fully peer to peer.
5. Serviceability: Provide diagnostic LEDs for power, communication, and processor. All wiring connections shall be made to field- removable, modular terminal strips - or to a termination card connected by a ribbon cable.
6. Memory: The Building Controller shall have as a minimum standard SRAM of 256 KB, standard DRAM of 1MB and standard non-volatile 1 MB of flash memory in lieu of EPROM. Memory shall be user extendible through RAM chip sockets and SIMMs for future memory expansion.
7. Immunity to power and noise: Controller shall be able to operate at 90% to 110% of nominal voltage rating and shall perform an orderly shutdown below 80% nominal voltage. The Building Controller shall maintain all database information including BIOS and programming information in the event of a power loss for at least 72 hours. Operation shall be protected against electrical noise of 5 to 120 Hz and from keyed radios up to 5 W at 1 m [3 ft].
8. Inputs/Outputs:

a. Inputs: Controller input/output board shall support dry contact, 0-5 VDC and 0-10 VDC- voltage, 4-20 mA- current and thermistor-resistive signal types on

an individual basis for connecting any status or sensing device. Analog resolution shall be minimum 10-bit A to D.

b. Outputs: Controller input/output board shall support plug-and-play I/O modules or built in HAO modules configured with manual-auto-off override switch, potentiometer and input channel for feedback status or an unrelated analog or digital input. Output supported shall be 0-10 VDC. All HAO's shall be supervised.
c. Diagnostics: Controller input board shall have variable intensity LEDs providing input status indication. Outputs shall have variable intensity LEDs indicating the output voltage with Color indication of HAO's status when present.
d. Bump-less Transfer: On analog outputs with override switches, provide a Hand-Auto-Off switch either built-in or external to the board that allows for manual positioning of the output, then transferring the output to automatic without any "bump" in the output voltage (don't go through off before transferring from manual to auto).

K. Entelibus Building Controllers:

1. Provide a fully programmable, BTL listed, UL 916 certified, expandable modular style native BACnet® Building Controller, (BACnet Device Profile B-BC), which supports the following minimum communications methods as standard: BACnet/IP, BACnet over Ethernet and BACnet MS/TP.
2. The controller shall be expandable in functionality and shall consist of a main control unit and multiple DIN rail mounted, removable plug in modular component units which shall include the following:

a. The Manager shall contain the primary 32 - bit RISC CPU, 64 MB flash memory and 32 MB SDRAM storage memory with SD/SDIO card slot for memory expansion, a real-time clock (temperature compensated), as well as Ultracap power backup for real time clock & memory.
b. Standard Communications ports shall include as minimum external 3 Port 10/100 Ethernet Switch communication ports, (2) RS-485 Ports (up to 76800 bps) as well as 2 USB host ports. The manager unit shall communicate and provide the control logic for the plug in I/O modules via expansion backplanes. The manager must be able to communicate with sufficient plug-in modules to accommodate 500 connected I/O points at one time.
c. Controller activity of power/scan and Ethernet ports shall be indicated through face mounted LED status light indications.

3. The modular I/O components shall be hot swappable and provide a variation of input or output ranges by positioning of jumpers located on each module.

a. Inputs: Modular controller input/output unit shall support dry contact, RTD, 0-5 VDC and 0-10 VDC- voltage, 4-20 mA- current and thermistor-resistive signal types on an individual basis for connecting any status or sensing device. Analog resolution shall be minimum 10-bit A to D.
b. Outputs: Modular controller input/output unit shall have or built in Hand-Auto-Off (HAO) modules configured with manual-auto-off override switch, potentiometer and input channel for feedback status and/or unrelated

analog or digital input. Outputs supported shall be 0-10 VDC, internal SPST relays, Triac, and internally powered current loop control from 0-20mA .
c. All HAO's shall be supervised.

4. Diagnostics: Modular controller input unit shall have variable intensity LEDs providing analog input status indication or configurable tri-color LEDs for binary input status indication. Outputs shall have variable intensity LEDs indicating the output voltage with Color indication of HAO's status when present.
5. Bump-less Transfer: On outputs with override switches, provide an HAO switch either built-in or external to the board that allows for manual positioning of the output, then transferring the output to automatic without any "bump" in the output voltage, (don't go through off before transferring from manual to auto).

L. Advance Application Controllers:

1. General: Provide an adequate number of BACnet®Advanced Application Controllers to achieve the performance specified in the Part 1 Article on "System Performance." Each of these panels shall meet the following requirements:

a. The Advanced Application Controller shall have sufficient memory to support its operating system, database, and programming requirements.
b. Advanced Application Controllers shall be fully peer to peer.
c. The operating system of the Controller shall manage the input and output communication signals to allow distributed controllers to share real and virtual object information and allow central monitoring and alarms.
d. All equipment that requires scheduling shall be scheduled in that equipments controller.
e. Both firmware and controller database shall be loadable over the network.

2. Communication:

a. Each Advanced Application Controller shall reside on a BACnet network using the MS/TP or Ethernet Data Link/ Physical layer protocol.
b. The controller shall provide a service communication port using BACnet Data Link/ Physical layer protocol for connection to portable operators workstation and allow access to the entire network.

3. Environment: Controller hardware shall be suitable for the anticipated ambient conditions.

a. Controllers used outdoors and/or in wet ambient conditions shall be mounted within waterproof enclosures and shall be rated for operation at 0°C to 40°C [32°F to 100°F].
b. Controllers used in conditioned space shall be mounted in dust proof enclosures and shall be rated for operation at 0°C to 50°C [32°F to 120°F].

4. Serviceability: Provide diagnostic LEDs for power, communication, and processor. All wiring connections shall be made to field-removable, modular terminal strips - or to a termination card connected by a ribbon cable.
5. Memory: The Advanced Application Controller shall be non-volatile FLASH memory.

6. Immunity to power and noise: Controller shall be able to operate at 90% to 110% of nominal voltage rating and shall perform an orderly shutdown below 80% nominal voltage. Operation shall be protected against electrical noise of 5 to120 Hz and from keyed radios up to 5 W at 1 m [3 ft].

M. Application Specific Controllers:

1. General: Provide BACnet® Application Specific Controllers (ASCs) as required to execute the sequence of operations. ASC's are microprocessor-based DDC controllers which through hardware or firmware design are able to control a wide variety of equipment. They shall be fully user-configurable.

   a. Each ASC shall be capable of standalone operation and shall continue to provide control functions without being connected to the network.
   b. Each ASC will contain sufficient I/O capacity to control the target system.
   c. Both firmware and controller database shall be loadable over the network
   d. ASC's shall come with an integrated housing to allow for easy mounting and protection of the circuit board. Only wiring terminals shall be exposed.

2. Communication:

   a. The controller shall reside on a BACnet network using the MS/TP Data Link/ Physical layer protocol or BACnet® over ZigBee protocol.
   b. Each controller shall have a BACnet Data Link/ Physical layer compatible connection for a laptop computer or a portable operator's tool. This connection shall be extended to a space temperature sensor port where shown and allow access to the entire network.

3. Environment: The hardware shall be suitable for the anticipated ambient conditions.

   a. Controllers used outdoors and/or in wet ambient conditions shall be mounted within waterproof enclosures, and shall be rated for operation at -40°C to 65°C [40°F to 150°F] and/or suitably installed in a heated or fan cooled enclosure
   b. Controllers used in conditioned space shall be mounted in dust proof enclosures and shall be rated for operation at 0°C to 50°C [32°F to 120°F].

4. Serviceability: Provide diagnostic LEDs for power, communication, and processor. All wiring connections shall be made to field-removable, modular terminal strips.
5. Memory: The Application Specific Controller shall use non-volatile memory and maintain all BIOS and programming information in the event of a power loss.
6. Immunity to power and noise: ASC shall be able to operate at 90% to 110% of nominal voltage rating and shall perform an orderly shutdown below 80%. Operation shall be protected against electrical noise of 5-120 Hz and from keyed radios up to 5 W at 1 m [3 ft].
7. Transformer: Power supply for the ASC must be rated at minimum of 125% of ASC power consumption and shall be fused or current limiting type.
8. Input/Output: ASC shall support as a minimum, directly connected, a combination of analog outputs and binary outputs and universal software

selectable analog or digital inputs. ASC inputs shall support 0-5 VDC-voltage, 4-20mA-current, thermistor-resistance and dry contacts. ASC outputs shall support 0-10 VDC-voltage, digital triac rated at 0.5 amps at 24 VAC.

N. I/O Interface:

1. Hardwired inputs and output points may be wired into the system through Building, Advanced Application, or Application Specific Controllers.
2. Digital inputs shall allow the monitoring of ON/OFF signals from remote devices. The digital inputs shall provide a current of at least 12 mA to be compatible with commonly available control devices and shall be protected against the effects of contact bounce and noise. Digital inputs shall sense "dry contact" closure without external power (other than that provided by the controller) being applied.
3. Pulse Accumulation Inputs: Accept 0-200 Hz and 0-2000 Hz.
4. Analog inputs shall allow the monitoring of 0-5 VDC, 0-10 VDC-voltage, 4-20 mA-current, or thermistors. Analog inputs shall be compatible and be field configurable to commonly available sensing devices.
5. Digital outputs shall provide for ON/OFF operation. Digital outputs on Building and Advanced Application Controllers shall have three-position override switches, Hand-Off-Auto with status lights. Outputs shall be selectable for either normally open or normally closed operation.
6. Analog outputs shall provide a modulating signal for the control of end devices. Outputs shall provide a 0 to 10 VDC signal as required to provide proper control of the output device. Analog outputs on Building or Advanced Application Controllers shall have status lights and a two-position (AUTO/MANUAL) switch and manually adjustable potentiometer for manual override. Analog outputs shall not exhibit a drift of greater than 0.4% of range per year.
7. Tri-State Outputs: Provide tri-state outputs (two coordinated binary outputs) for control of three-point floating type electronic actuators without feedback. Use of three-point floating devices shall be limited to zone control and terminal unit control applications (VAV terminal units, duct mounted heating coils, zone dampers, radiation, etc.)
8. System Object Capacity. The system size shall be expandable to at least twice the number of input/output objects required for this project. Additional controllers (along with associated devices and wiring) shall be all that is necessary to achieve this capacity requirement. The Operator Workstations installed for this project shall not require any hardware additions or software revisions in order to expand the system.

O. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:

1. Output ripple of 5.0 mV maximum peak to peak.
2. Built-in overcurrent protection with auto reset.

2.5 ELECTRONIC SENSORS

A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

B. Thermistor Temperature Sensors and Transmitters:

1. Available Manufacturers:

   a. ACI.
   b. BAPI.
   c. Honeywell International Inc.; Home & Building Control
   d. Delta Controls.
   e. Ebtron, Inc.
   f. Kele.
   g. Precon.
   h. MAMAC Systems, Inc.
   i. Greystone Energy Systems Inc.

2. Accuracy: Plus or minus 0.36 deg F at calibration point.
3. Wire: Twisted, shielded-pair cable.
4. Insertion Elements in Ducts: Single point, 4 to 18 inches long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft.
5. Averaging Elements in Ducts: 8 to 24 ft long flexible 18 to 36 inches long rigid; use where prone to temperature stratification or where ducts are larger than 10 sq. ft.
6. Insertion Elements for Liquids: Brass or stainless-steel socket with minimum insertion length of 2-1/2 inches.
7. Room Sensor:

   a. Built-in 10k ohm at 77 deg F Thermistor.
   b. Plastic housing.
   c. Programmable (optional)
   d. Occupancy override: Push button (optional)
   e. LCD display with push button control (optional)
   f. Built-in humidity sensor (optional).
   g. Screw-type terminal connectors.
   h. Color: White.

8. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

C. RTDs and Transmitters:

1. Available Manufacturers:

   a. ACI
   b. BAPI
   c. Kele.
   d. MAMAC Systems, Inc.
   e. Minco.
   f. Greystone Energy Systems Inc.

2. Room Sensor Accuracy: Plus or minus 0.8 percent of span.
3. Duct, Average, Immersion & Outside Air Sensor Accuracy: Plus or minus 0.1 percent of span.
4. Wire: Twisted, shielded-pair cable.

5. Insertion Elements in Ducts: Single point, 8 inches long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft.
6. Averaging Elements in Ducts: 12 or 24 inch long copper coil;use where prone to temperature stratification or where ducts are larger than 9 sq. ft.; length as required.
7. Insertion Elements for Liquids: Brass or stainless steel well with minimum insertion length of 5-1/2 inches.
8. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.
9. Room Sensor Cover Construction: Manufacturer's standard locking covers.

    a. Insulating Bases: For sensors located on exterior walls.
    b. Sensor with LCD display tamper-proof lockable push buttons.

D. Humidity Sensors: Bulk polymer sensor element.

1. Available Manufacturers:

    a. General Eastern Instruments.
    b. General Electric.
    c. Kele.
    d. MAMAC Systems, Inc.
    e. Minco.
    f. Greystone Energy Systems Inc.
    g. Vaisala.

2. Accuracy: Plus or minus 2 percent relative humidity (10% to 90% RH).
3. Room Sensor Range: 0 to 95 percent relative humidity, non-condensing.
4. Duct Sensor: 0 to 99 percent, non-condensing.
5. Outside-Air Sensor: 0 to 100 percent relative humidity range with mounting enclosure, suitable for operation at outdoor temperatures of minus 4 to 140 deg F.
6. Duct and Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity.

E. Pressure Transmitters/Transducers:

1. Available Manufacturers:

    a. Ashcroft.
    b. Cleveland Controls.
    c. Emerson, Rosemount
    d. General Eastern Instruments.
    e. MAMAC Systems, Inc.
    f. Modus.
    g. Setra.
    h. Greystone Energy Systems Inc.
    i. United Electric.
    j. Vaisala.

2. Air Differential Pressure Transmitter: Non-directional or bidirectional sensor with range for expected input, and temperature compensated.

a. Accuracy: 1 percent of range with adjustable zero & span.
b. Output: 4 to 20 mA.
c. Building Static-Pressure Range: 0- to 0.25-inch wg.
d. Duct Static-Pressure Range: 0- to 5-inch wg.

3. Water Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig operating pressure; linear output 4 to 20 mA.
4. Water Differential-Pressure Transducers: Stainless-steel diaphragm construction, suitable for service; minimum 150-psig operating pressure and tested to 300-psig; linear output 4 to 20 mA.
5. Differential-Pressure Switch (Air or Water): Snap acting, with pilot-duty rating and with suitable scale range and differential.
6. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; linear output 4 to 20 mA.

F. Room Static Pressure Sensor:

1. Stainless steel, ivory, or white plastic wall plate.
2. Wall mounted to standard electrical box.
3. 100 micron stainless steel breather vent.

2.6 STATUS SENSORS

A. Available Manufacturers:

1. ACI
2. Veris Industries

B. Status Inputs for Fans: Current switch or built-in auxiliary contacts on VFD’s.

C. Status Inputs for Pumps: Current switch or built-in auxiliary contacts on VFD’s.

D. Current Transducer: Current-sensing fixed or split-core transducer with loop powered 4-20mA output, adjustable amperage range.

E. Power Monitor: 3-phase type with disconnect/shorting switch assembly, listed voltage and current transformers, with pulse kilowatt hour output and 4- to 20-mA kW output.

F. Current Switches: Self-powered, solid-state with adjustable trip current, selected to match current and system output requirements.

G. Electronic Valve Actuator Position Indicator: Visual scale indicating percent of travel and 2- to 10-V dc, feedback signal for modulating control and for 2-position control built-in auxiliary contact switches are acceptable.

H. Damper Position Indicator: 2- to 10-V dc, feedback signal for modulating control and for 2-position control built-in auxiliary contact switches for spring return actuators are acceptable.

I. Water-Flow Switches: Bellows-actuated mercury or snap-acting type with pilot-duty rating, stainless-steel or bronze paddle, with appropriate range and differential adjustment, in NEMA 250, Type 1 or Type 3R enclosure depending on location.

2.7 GAS DETECTION EQUIPMENT

A. Available Manufacturers:

1. 3M
2. BAPI
3. General Electric Inc.
4. Greystone Energy Systems Inc.
5. Honeywell International Inc.; Home & Building Control.
6. INTEC Controls, Inc.
7. Kele
8. MSA Canada Inc.
9. Vulcain Inc.

B. Carbon Monoxide Detectors: Single or multichannel, dual-level detectors using solid-state plug-in sensors with a 3-year minimum life; suitable over a temperature range of 32 to 104 deg F; with 2-stage alarming contacts and a measurement range between 0 and 200 ppm. Transmitter sensor outputs: 4- to 20-mA output; for wall or duct mounting.

C. Carbon Dioxide Sensor and Transmitter: Single detectors using solid-state infrared sensors; suitable over a temperature range of 32 to 122 deg F and accuracy of plus or minus 75 ppm, measurement range between 0 and 2000 ppm with continuous or average reading, 4- to 20-mA or 0-10 VDC output; for wall or duct mounting.

D. Oxygen Sensor and Transmitter: Single detectors using solid-state sensing; suitable over a temperature range of 40 to 104 deg F and accuracy of plus or minus 1 percent, with a range of 0 to 25 percent oxygen, 4- to 20-mA or 0-10 VDC output; for wall mounting.

E. Occupancy Sensor: Passive infrared, with time delay, daylight sensor lockout, sensitivity control, and 180-degree field of view with vertical sensing adjustment; for flush mounting.

2.8 AIRFLOW MEASURING STATIONS

A. Duct Airflow Station: Combination of air straightener and multiport, self-averaging pitot tube station or thermal dispersion airflow temperature measurement device technology.

1. Available Manufacturers:

a. ACCUTROL.

2. Casing: Galvanized-steel frame for pitot tube station.
3. Flow Straightener: Aluminum honeycomb, 3/4-inch parallel cell, 3 inches deep.

4. Sensing Manifold: Copper manifold with bullet-nosed static pressure sensors positioned on equal area basis.
5. Thermal dispersion airflow station: Aluminum alloy multi-point thermal sensing probes with mounting brackets, suitable over a temperature range of minus 20 to 160 deg F and a velocity range between 0 to 5000 fpm.

2.9 THERMOSTATS

A. Available Manufacturers:

1. Delta Controls Inc.
2. Venstar
3. Viconics Electronics, Inc.

B. Specifications

1. LCD (Optional)

   a. 2-line custom segmented display with icons

2. Buttons

   a. 2 rows of 4 capacitive touch zones, allowing up to 8 individual buttons or combined to form larger buttons.

3. Backlight (Optional)

   a. Optional RGB LED backlight for multicolor LCD and button illumination

4. Temperature

   a. Digital Temperature Sensor +/- 0.2° C (+/- 0.36°F)

5. Humidity Sensor (Optional)

   a. Accuracy +/- 3%

6. CO2 Sensor (Optional)

   a. Dual Beam, Self Calibrating NDIR
   b. Detection Range: 0-2000 ppm
   c. Accuracy @ 77°F (25°C): ± (50ppm + 2% of value)
   d. Temperature Dependence: 2ppm/°C (1 ppm/ °F) typical
   e. Pressure Dependence: 0.13% of reading per mm Hg
   f. Stability: 20 ppm/year (typical)

7. Occupancy Sensor (Optional)

   a. Passive infrared motion (PIR) sensor Range: 5m (16.4 ft.)
   b. Coverage: 100° Horizontal

8. Inputs

a. 1 10kΩ input (16 bit A/D)

9. Description

a. The eZNS-T100 network sensor offers building occupants an intuitive touch-interface to adjust individual comfort levels while tailoring to the needs of their specific market. Featuring a standard temperature sensor with humidity, CO2 and motion options, the eZNS also offers a choice of backlit colors to provide additional user feedback and esthetic appeal.
b. The eZNS sensor's NFC technology allows installers to use NFC-enabled mobile devices to configure the eZNS and enable enteliWEB integration.

10. Application

a. The eZNS is suitable for a wide range of sensing applications, from basic temperature monitoring, to indoor air quality and occupancy sensing. A customizable interface allows for intuitive user interaction.
b. An available external input allows for additional zone monitoring such as window or door contact, temperature averaging or other dry contact sensor information.
c. When paired with an application controller, the eZNS supports advanced control strategies such as demand control ventilation, energy savings based on occupancy and optimal user comfort.

11. Features

a. RGB backlight allows choice of colors to indicate conditions, alarms and night mode.
b. Large easy-to-read LCD screen.
c. Onscreen visual feedback on button selection.
d. Capacitive touch zones allow custom button sizes.
e. Multiple button layout options. Simple one-touch buttons, or two-touch buttons for added functionality.
f. Slider to quickly adjust setpoint or tap for precise changes.
g. Fully programmable in GCL+.
h. USB Service port, software enabled or disabled. Service tool not required.
i. Smartphone and tablet integration and setup using NFC technology.
j. Recessed mount for minimal profile or surface mount backplate options.
k. Fits most electrical boxes worldwide.
l. 2-piece design with tamper set screw.

C. Combination Thermostat and Fan Switches: Line-voltage thermostat with push-button or lever-operated fan switch.

1. Label switches ["FAN ON-OFF"] ["FAN HIGH-LOW-OFF"] ["FAN HIGH-MED-LOW-OFF"].
2. Mount on single electric switch box.

D. Electric, solid-state, microcomputer-based room thermostat with remote sensor.

1. Automatic switching from heating to cooling.

2. Preferential rate control to minimize overshoot and deviation from set point.
3. Set up for four separate temperatures per day.
4. Instant override of set point for continuous or timed period from 1 hour to 31 days.
5. Short-cycle protection.
6. Programming based on [weekday, Saturday, and Sunday] [every day of week].
7. Selection features include degree F or degree C display, 12- or 24-hour clock, keyboard disable, remote sensor, and fan on-auto.
8. Battery replacement without program loss.
9. Thermostat display features include the following:

    a. Time of day.
    b. Actual room temperature.
    c. Programmed temperature.
    d. Programmed time.
    e. Duration of timed override.
    f. Day of week.
    g. System mode indications include "heating," "off," "fan auto," and "fan on."

E. Low-Voltage, On-Off Thermostats: 24-V, bimetal-operated, mercury-switch type, with adjustable or fixed anticipation heater, concealed set-point adjustment, 40 to 90 deg F set-point range, and 2 deg F maximum differential.

F. Line-Voltage, On-Off Thermostats: Bimetal-actuated, open contact or bellows-actuated, enclosed, snap-switch or equivalent solid-state type, with heat anticipator; listed for electrical rating; with concealed set-point adjustment, 55 to 85 deg F set-point range, and 2 deg F maximum differential.

1. Electric Heating Thermostats: Equip with off position on dial wired to break ungrounded conductors.
2. Selector Switch: Integral, manual on-off-auto.

G. Remote-Bulb Thermostats: On-off or modulating type, liquid filled to compensate for changes in ambient temperature; with copper capillary and bulb, unless otherwise indicated.

1. Bulbs in water lines with separate wells of same material as bulb.
2. Bulbs in air ducts with flanges and shields.
3. Averaging Elements: Copper tubing with either single- or multiple-unit elements, extended to cover full width of duct or unit; adequately supported.
4. Scale settings and differential settings are clearly visible and adjustable from front of instrument.
5. On-Off Thermostat: With precision snap switches and with electrical ratings required by application.
6. Modulating Thermostats: Construct so complete potentiometer coil and wiper assembly is removable for inspection or replacement without disturbing calibration of instrument.

H. Fire-Protection Thermostats: Listed and labeled by an NRTL acceptable to authorities having jurisdiction; with fixed or adjustable settings to operate at not less than 75 deg F above normal maximum operating temperature, and the following:

1. Reset: Manual.
2. Reset: Automatic, with control circuit arranged to require manual reset at central control panel; with pilot light and reset switch on panel labeled to indicate operation.

I. Immersion Thermostat: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range and adjustable set point.

J. Electric, Low-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual reset switch that trips if temperature is equal to or below set point.

1. Bulb Length: Minimum 20 feet.
2. Quantity: One thermostat for every 20 sq. ft. of coil surface.

K. Electric, High-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual reset switch that trips if temperature is equal to or above set point.

1. Bulb Length: Minimum 20 feet.
2. Quantity: One thermostat for every 20 sq. ft. of coil surface.

2.10 HUMIDISTATS

A. Available Manufacturers:

1. DELTA.

B. Duct-Mounting Humidistats: Electric insertion, 2-position type with adjustable setpoint, humidity sensing range from 0 to 100 percent relative humidity, non-condensing, and single- or double-pole contacts.

2.11 ACTUATORS

A. Electronic Actuators:

1. Available Manufacturers:

a. Belimo Aircontrols (USA), Inc.
b. Bray Controls, A division of Bray International, Inc.

2. Valves: Size for torque required for valve close off at maximum pump differential pressure.
3. Dampers: Size for running torque calculated as follows:

a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. of damper.
b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. of damper.
c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft of damper.
d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. of damper.

4. Coupling: V-bolt and V-shaped, toothed cradle.
5. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external manual override on non-spring-return actuators.
6. Power Requirements (Two-Position Spring Return): 24 or 120-V ac.

7. Power Requirements (Modulating): Maximum 10 VA at 24-V ac or 8 W at 24-V dc.
8. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal as an option.
9. Run Time: 90 to 120 seconds.
10. Economizer Outdoor-Air Damper Operation:

    a. Manufactured, brand labeled or distributed by BELIMO.
    b. Economizer shall be capable of single dry bulb, differential dry bulb, single enthalpy or differential enthalpy control strategy, as required, per ASHRAE 90.1. Sensing devices shall be non-proprietary.
    c. ASHRAE Climate Zone selection for high limit setting shall be through entry of the installed location zip code through the MMI without the use of printed documentation.
    d. The device shall incorporate brownout protection that will prevent the compressors from operating in low voltage conditions while remaining in control. Upon startup from a brownout or blackout condition the unit shall provide automatic random on to prevent electrical surge from multiple compressor starting.
    e. Alarms for fault detection and diagnostics shall be indicated by both a visual LED indicator and text description accessible through the MMI. Current and historical alarms (including elapsed time since occurance) shall be accessible via the MMI. Upon sensor failure the economizer shall automatically detect the proper economizer sequence to maintain control.
    f. Device shall be compliant with the latest version of the following energy codes: ASHRAE 90.1, CA Title 24, and NECB.
    g. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
    h. Occupied Periods.
    i. Open to [10] [25] <Insert percent>percent fixed minimum intake and maximum 100 percent of the fan capacity to comply with ASHRAE 90.1. Controller shall permit air side economizer operation when outdoor air is below the outdoor air temperature/enthalpy as determined by entry of the installed location zip code on the integrated display.
    j. Economizer dampers shall be capable of being sequenced with the mechanical cooling system and be capable of providing a partial cooling load with the mechanical cooling.
    k. The outdoor air intake minimum position shall automatically reduce upon reaching a predetermined high limit setpoint. When outdoor air is 100% and the mechanical cooling is enabled the outdoor air damper shall close to reduce freeze conditions if required.
    l. Unoccupied Periods.
    m. Close outdoor air damper and open return air damper.
    n. Carbon Dioxide Sensor Operation.
    o. Occupied Periods. Reset minimum outdoor air down to minimum [10] <Insert percent> percent to maintain maximum concentration per ASHRAE 90.1
    p. Unoccupied Periods: Close outdoor air damper and open return air damper.]

2.12 CONTROL VALVES

A. Available Manufacturers:

1. Belimo Aircontrols (USA), Inc.

B. Energy Control Valves: Factory fabricated, of type body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated. Electronic pressure independent control valve by Belimo Controls complete with mag/ultra flow-meter, temperature sensors, N2 communication, smart control capabilities to maintain automatic modulating controlled flow and coil design temperature differential.

1. NPS 2 and Smaller: Forged brass body rated at no less than 250 PSI, stainless steel ball and stem, female NPT union ends, dual EPDM lubricated O-rings and a brass or TEFZEL characterizing disc.
2. NPS 2-1/2 through 6: GG25 cast iron body according to ANSI Class 125, standard class B, stainless steel ball and blowout proof stem, flange to match ANSI 125 with a dual EPDM O-ring packing design, PTFE seats, and a stainless steel flow characterizing disc.
3. Accuracy: The control valves shall accurately control the flow from 0 to 100% rated flow with an operating pressure differential range of 5 to 50 PSI differential across the valve with a valve body flow accuracy of +/- 5 total assembly error incorporating differential pressure fluctuation, manufacturing tolerances and valve hysteresis
4. Flow Characteristics: Equal percentage characteristic.
5. All actuators shall be capable of being electronically programmed in the field by use of external computer software or a dedicated handheld tool for the adjustment of flow. Programming using actuator mounted switches or multi-turn actuators are not acceptable.
6. [Water coil optimization shall be accomplished by utilizing a pressure independent control valve assembly; two temperature sensors providing feedback of coil inlet and outlet water temperatures; and an electronic flow meter to provide analog flow feedback. Software shall control the valve to avoid the coil differential temperature from falling below a programmed set point, The valve assembly shall be capable of accepting an analog signal representing the coil power required. Real-time data and configuration of valve operating parameters shall be available by means of BACnet MS/TP, BACnet/IP or HTTP. Monitored points shall include, but not be limited to inlet and outlet coil water temperatures, absolute flow, absolute valve position, absolute coil power and total heating/cooling energy in BTU/hr. Configuration points shall include but not be limited to valve, flow, and power settings. Historical trend data shall be stored for up to 13 months and be retrievable in a standard time-stamped format.]
7. The manufacturer shall provide a published commissioning procedure following the guidelines of the National Environmental Balancing Bureau (NEBB) and the Testing Adjusting Balancing Bureau (TABB).
8. A wet calibrated electronic flow meter shall provide dynamic feedback to measure flow and verify performance.
9. The control valve shall require no maintenance and shall not include replaceable cartridges.

C. Hydronic system characterized control valves (CCV) shall have the following characteristics:

1. NPS 2 and Smaller: Forged brass or bronze body, stainless steel ball, blow-out resistant stem, dual seal packing design, reinforced PTFE seats, flow characterizing disc and screwed ends.
2. NPS 2-1/2 to 3": ANSI Class 125 iron body, stainless steel ball and blow-out resistant stem, dual seal packing design, flanged ends, and renewable PTFE seat and disc.
3. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.
4. Close-Off Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure of 200 psi for 1/2"-2" sizes and 100 psi for 2"-3" sizes.
5. Maximum Differential Pressure Across Valve (Range): 30 psid.

D. Hydronic system pressure independent characterized control valves (PICCV) shall have the following characteristics:

1. NPS 2 and Smaller: Two-way forged brass or bronze body, plated brass ball and stem, characterizing disc and screwed ends.
2. Internal Construction: Reinforced PTFE seats, lubricated packing, synthetic diaphragm, stainless steel, brass, or thermoplastic regulator components, and stainless steel spring
3. Flow Rates: 0.5 to 100 gallons per minute.
4. Flow Characteristics: Two-way valves shall have equal percentage characteristics.
5. Close-Off Pressure Rating: 200 psi.
6. Maximum Differential Pressure Across Valve (Range): 5 to 50 psid.

E. Hydronic system globe valves shall have the following characteristics:

1. 2" and Smaller: ANSI Class 250 bronze body, stainless steel stem, brass plug, bronze seat, a TFE packing, and female threaded ends.
2. 2-1/2" and Larger: ANSI Class 125 or 250 cast iron body, stainless steel stem, bronze plug, bronze seat, a TFE V-ring packing, and flanged end connections..
3. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.
4. Close-Off (Differential) Pressure Rating: ½" - 2" 35 psid, 21/2" - 6" 25 psid or 50 psid.

F. Butterfly Valves: 150-psig maximum pressure differential, ASTM A 126 cast-iron or ASTM A 536 ductile-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals.

1. Body Style: One-piece Lug.
2. Disc Type: Type 304 stainless steel
3. Body Pressure: 250 psi.

2.13 CONTROL CABLE

A. Electronic and fiber-optic cables for control wiring are specified in Section 27 10 00 "Structured Cable System."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that power is available to control units and operator workstation.

B. Verify that duct-, pipe-, and equipment-mounted devices are installed before proceeding with installation.

3.2 PROTECTION

A. Provide protection against damage to work and material caused by Contractor's work or employees. All damages incurred will be assessed as outlined in Division 01.

B. Protect material not immediately installed. Close open ends of work with temporary covers or plugs during storage and construction to prevent entry of foreign objects.

3.3 INSTALLATION

A. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.

B. Connect and configure equipment and software to achieve sequence of operation specified.

C. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. Install devices 48 inches above the floor.

1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.

D. Install guards on thermostats or lock room sensor LCD display with buttons in the following locations:

1. Entrances.
2. Public areas.
3. Where indicated.

E. Install automatic dampers according to Section 23 33 00 "Air Duct Accessories."

F. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.

G. Install labels and nameplates to identify control components according to Section 23 05 53 "Identification for HVAC Piping and Equipment."

H. Install hydronic instrument wells, valves, and other accessories according to Section 23 21 13 "Hydronic Piping."

I. Install steam and condensate instrument wells, valves, and other accessories according to Section 23 22 13 "Steam and Condensate Heating Piping."

J. Install refrigerant instrument wells, valves, and other accessories according to Section 23 23 00 "Refrigerant Piping."

K. Install duct volume-control dampers according to Section 23 31 13 "Metal Ducts" and Section 23 31 16 "Nonmetal Ducts."

L. Install electronic and fiber-optic cables according to Section 27 10 00 "Structured Cable System."

3.4 COORDINATION

A. Submittals: See Division 01.

B. Test and Balance:

1. Provide a single set of necessary tools to interface with control system for testing and balancing.
2. Train Test and Balance Contractor to use system interface tools.
3. Provide a qualified technician to assist with testing and balancing the first 4 terminal units.
4. At completion of test and balance, Test and Balance Contractor shall return tools undamaged and in working condition.

C. Life Safety:

1. Fire and smoke damper actuators required provided under Section 23 33 00 "Air Duct Accessories" Damper control provided under Division 28.

D. Other Control Systems: Integrate and coordinate with control devices and systems furnished or installed by others as follows:

1. Communication media and equipment shall be provided as specified in Divisions 27 & 28.
2. Each supplier of a control system shall configure, program, start and test their system or products to meet the Sequence of Operation.
3. Resolve incompatibility issues with other control systems or products as required to meet the Sequence of Operation.
4. Integrate control products as describe within the Contract Documents.

3.5 ELECTRICAL WIRING AND CONNECTION INSTALLATION

A. Install raceways, boxes, and cabinets according to Section 26 05 00 "Basic Materials and Methods" and Section 26 11 00 "Conduits and Raceways."

B. Install building wire and cable according to Section 26 12 00 "Low-Voltage Wires."

C. Install signal and communication cable according to Section 27 10 00 "Structured Cabling System."

1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.
2. Install exposed cable in raceway where subject to mechanical damage and at levels below 10ft in mechanical, electrical, or service rooms
3. Install UL listed cable where exposed in attics or plenums.
4. Use structural members to support or anchor plenum cables without raceway.
5. Secure raceways with raceway clamps fastened to structure and spaced according to code requirements. Raceways and pull boxes shall not be hung on or attached to ductwork, electrical raceways, piping, or ceiling suspension system.
6. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
7. Make wiring splices in listed junction box. Provide means of protecting the wire/cable jacket from wear when penetrating the junction box with chase nipple, plastic grommet or clamp style connector.
8. Provide 300 VAC or greater rated wire entering motor control sensors, combination motor starters, etc.
9. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.
10. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.

D. Install sensors according to manufacturer's recommendations.

1. Mount sensors rigidly and adequately for operating environment.
2. Install sensors with averaging tubing in a serpentine manner vertically across airflow cross-section using capillary clips for support.

E. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.

F. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

3.6 IDENTIFICATION AND LABELING

A. Label wiring and cabling, and pneumatic tubing.

1. Wires and cables - Label at each end within 6 inches of termination.

B. Label control panels with minimum ½ inch letters on laminated plastic nameplates.

1. Label each control component and plug-in components.

C. Warning Labels

1. Affix permanent warning labels to motor starter and control panels that are connected to multiple power sources utilizing separate disconnects.

3.7 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections.

B. Perform the following field tests and inspections and prepare test reports:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
2. Test and adjust controls and safeties.
3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
4. Test each point through its full operating range to verify that safety and operating control set points are as required.
5. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
6. Test each system for compliance with sequence of operation.
7. Test software and hardware interlocks.

C. DDC Verification:

1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
2. Check instruments for proper location and accessibility.
3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
4. Check flow instruments. Inspect tag number and line and bore size and verify that inlet side is identified and that meters are installed correctly.
5. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
6. Check temperature instruments and material and length of sensing elements.
7. Check control valves. Verify that they are in correct direction.
8. Check dampers. Verify proper blade alignment, either parallel or opposed, has been provided.
9. Check DDC system as follows:

    a. Verify that DDC controller power supply is from emergency power supply, if applicable.
    b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
    c. Verify that spare I/O capacity has been provided, if applicable.

D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

3.8 ADJUSTING

A. Calibrating and Adjusting:

1. Calibrate instruments which require field calibration.
2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals
4. Control System Inputs and Outputs:

    a. Check analog inputs at 0, 50, and 100 percent of span for 0-5/10VDC or 4-20m analog inputs.
    b. Check analog outputs using milliampere meter at 0, 50, and 100 percent output.
    c. Check digital inputs using jumper wire.
    d. Check digital outputs using ohmmeter to test for contact making or breaking.
    e. Check resistance temperature inputs with hand held calibrated testing equipment.

5. Flow:

    a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 0, 50, and 100 percent of span.
    b. Manually operate flow switches to verify that they make or break contact.

6. Pressure:

    a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
    b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.

7. Temperature:

    a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
    b. Calibrate temperature switches to make or break contacts.

8. Stroke and adjust control valves and dampers that are 2 positions, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.
9. Stroke and adjust control valves and dampers that are proportional, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
10. Provide diagnostic and test instruments for calibration and adjustment of system.

B. Adjust initial temperature and humidity set points, if required.

3.9 TRAINING

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC instrumentation and controls. Refer to Division 01.

B. Training shall enable students to accomplish the following objectives:

1. Proficiently operate system.
2. Understand control system architecture and configuration.
3. Understand DDC system components.
4. Understand system operation, including DDC system control and optimizing routines (algorithms)
5. Operate workstation and peripherals
6. Log on and off system
7. Access graphics, point reports, and logs
8. Adjust and change system setpoints, time schedules, and holiday schedules
9. Recognize common HVAC system malfunctions by observing system graphics, trend graphs, and other system tools
10. Understand system drawings and Operation and Maintenance manual
11. Understand job layout and location of control components
12. Access data from DDC controllers
13. Operate portable operator's terminals
14. Create and change system graphics
15. Create, delete, and modify alarms, including configuring alarm reactions
16. Create, delete, and modify point trend logs (graphs) and multi-point trend graphs
17. Configure and run reports
18. Add, remove, and modify system's physical points
19. Create, modify, and delete application programming
20. Add operator interface stations
21. Add a new controller to system
22. Download firmware and advanced applications programming to a controller
23. Configure and calibrate I/O points
24. Maintain software and prepare backups
25. Interface with job-specific, third-party operator software
26. Add new users and understand password security procedures

C. Divide presentation of objectives into three sessions (1-13, 14-23, and 24-26). Participants will attend one or more of sessions, depending on knowledge level required.

1. Day-to-day Operators (objectives 1-13)
2. Advanced Operators (objectives 1-13 and 14-23)
3. System Managers and Administrators (objectives 1-13 and 24-26)

END OF SECTION

SECTION 23 23 00

REFRIGERANT PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Refrigerant piping.
2. Unions, flanges, and couplings.
3. Pipe hangers and supports.
4. Refrigerant moisture and liquid indicators.
5. Valves.
6. Refrigerant filter-driers.
7. Refrigerant expansion valves.
8. Electronic expansion valves.

B. Related Sections:

1. Section 05 12 00 - Structural Steel Framing: Product requirements for touch-up painting of structural steel.
2. Section 05 21 00 - Steel Joist Framing: Product requirements for touch-up painting of steel joists.
3. Section 07 84 00 - Firestopping: Product requirements for firestopping for placement by this section.
4. Section 08 31 13 - Access Doors and Frames: Access doors for concealed valves and accessories.
5. Section 09 90 00 - Painting and Coating: Product requirements for painting for placement by this section.
6. Section 23 05 03 - Pipes and Tubes for HVAC Piping and Equipment: Piping materials for refrigerant systems.
7. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for pipe hangers and supports, sleeves, [and firestopping] for placement by this section.
8. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for Vibration Isolation for placement by this section.
9. Section 23 05 53 - Identification for HVAC Piping and Equipment: Product requirements for pipe identification for placement by this section.
10. Section 23 07 00 - HVAC Insulation: Product requirements for Piping Insulation for placement by this section.
11. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections specified by this section.

1.3 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.

B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves or equipment.

C. Provide pipe hangers and supports in accordance with ASME B31.5.

D. Flexible Connectors: Use at or near compressors where piping configuration does not absorb vibration.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate layout of refrigeration piping system, including equipment, critical dimensions, and sizes.

C. Product Data:

1. Piping: Submit data on pipe materials, fittings, and accessories.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Hangers and Supports: Submit manufacturers catalog information including load capacity.
4. Refrigerant Specialties: Submit manufacturers catalog information including capacity, component sizes, rough-in requirements, and service sizes for the following:

    a. Refrigerant moisture and liquid indicators.
    b. Refrigerant strainers.
    c. Refrigerant filter-driers.
    d. Refrigerant expansion valves.
    e. Electronic expansion valves.

D. Design Data: Indicate pipe size. Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.

E. Test Reports: Indicate results of piping system pressure test.

F. Manufacturer's Installation Instructions: Submit hanging and support methods, joining procedures and isolation.

G. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of valves, equipment and refrigerant accessories.

C. Operation and Maintenance Data: Submit instructions for installation and changing components, spare parts lists, exploded assembly views.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with ASME B31.5 code for installation of refrigerant piping systems.

B. Perform Work in accordance with applicable code and authority having jurisdiction for welding hanger and support attachments to building structure.

C. Maintain one copy of document on site.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Fabricator or Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Section 01 61 00 - Product Requirements: Product storage and handling requirements.

B. Dehydrate and charge refrigeration components including piping and receivers, seal prior to shipment. Maintain seal until connected into system.

C. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

D. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

E. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 61 00 - Product Requirements.

1.11 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.12 COORDINATION

A. Section 01 31 00 – Project Management and Coordination: Requirements for coordination.

1.13 WARRANTY

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for valves excluding packing.

1.14 MAINTENANCE MATERIALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Spare parts and maintenance products.

1.15 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two packing kits for each size and valve type.

C. Furnish two refrigerant filter-dryer cartridges of each type.

PART 2 - PRODUCTS

2.1 REFRIGERANT PIPING

A. Copper Tubing: ASTM B280, drawn.

1. Fittings: ASME B16.22 wrought copper.
2. Joints: Braze, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1190 to 1480 degrees F.

2.2 UNIONS, FLANGES, AND COUPLINGS

A. 2 inches and Smaller:

1. Ferrous Piping: 150 psig malleable iron, threaded.
2. Copper Pipe: Bronze, soldered joints.

B. 2-1/2 inches and Larger:

1. Ferrous Piping: 150 psig forged steel, slip-on.
2. Copper Piping: Bronze.
3. Gaskets: 1/16 inch thick preformed neoprene.

C. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

2.3 PIPE HANGERS AND SUPPORTS

A. Manufacturers:

1. B-Line Systems.
2. Anvil.
3. Tolco.
4. Substitutions: Section 01 61 00 - Product Requirements.

B. Conform to ASME B31.5.

C. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Malleable iron, adjustable swivel, split ring.

D. Hangers for Cold Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.

E. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

F. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hooks.

G. Vertical Support: Steel riser clamp.

H. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

I. Copper Pipe Support: Carbon steel rings, adjustable, copper plated.

J. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.

K. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.4 REFRIGERANT MOISTURE AND LIQUID INDICATORS

A. Manufacturers:

1. Alco Controls Div, Emerson Electric Co.
2. Parker Hannifin Corp., Refrig. & Air Cond. Div.
3. Sporlan Valve Co.
4. Substitutions: Section 01 61 00 - Product Requirements.

B. Indicators:

1. Port: Single, UL listed.
2. Body: Copper or brass, flared or solder ends.
3. Sight glass: Color-coded paper moisture indicator with removable element cartridge and plastic cap.
4. Maximum working pressure: 500 psig
5. Maximum working temperature: 200 degrees F.

2.5 VALVES

A. Manufacturers:

1. Alco Controls Div, Emerson Electric Co.
2. Parker Hannifin Corp., Refrig. & Air Cond. Div.
3. Sporlan Valve Co.
4. Substitutions: Section 01 61 00 - Product Requirements.

B. Diaphragm Packless Valves:

1. UL listed, globe or angle pattern, forged brass body and bonnet solder or flared ends.
2. Phosphor bronze and stainless steel diaphragms, rising stem and hand wheel.
3. Stainless steel spring, nylon seats, disc with positive back seating.
4. Maximum working pressure: 500 psig.
5. Maximum working temperature: 275 degrees F.

C. Packed Angle Valves:

1. Forged brass, solder or flared ends.
2. Forged brass seal caps with copper gasket, rising stem and seat [with back seating], molded stem packing.
3. Maximum working pressure: 500 psig.
4. Maximum working temperature: 275 degrees F.

D. Ball Valves:

1. Two piece forged brass body with teflon ball seals and copper tube extensions, brass seal cap, chrome plated ball, stem with neoprene ring stem seals, soldered or threaded ends.
2. Maximum working pressure: 500 psig.
3. Maximum working temperature: 325 degrees F.

E. Service Valves:

1. Forged brass body with copper stubs, brass caps, removable valve core, integral ball check valve, flared or solder ends.
2. Maximum working pressure: 500 psig.

F. Refrigerant Check Valves:

1. Manufacturers:

a. Alco Controls Div, Emerson Electric Co.
b. Parker Hannifin Corp., Refrig. & Air Cond. Div.
c. Sporlan Valve Co.
d. Substitutions: Section 01 61 00 - Product Requirements.

2.6 REFRIGERANT STRAINERS

A. Manufacturers:

1. Alco Controls Div, Emerson Electric Co.
2. Parker Hannifin Corp., Refrig. & Air Cond. Div.
3. Sporlan Valve Co.
4. Substitutions: Section 01 61 00 - Product Requirements.

B. Straight Line or Angle Line Type:

1. Brass or steel shell, steel cap and flange, and replaceable cartridge, with screen of stainless steel wire or monel reinforced with brass.
2. Maximum working pressure: 430 psig.

C. Straight Line, Non-Cleanable Type:

1. Steel shell, copper plated fittings, stainless steel wire screen.
2. Maximum working pressure: 500 psig.

2.7 REFRIGERANT FILTER-DRIERS

A. Manufacturers:

1. Alco Controls Div, Emerson Electric Co.
2. Parker Hannifin Corp., Refrig. & Air Cond. Div.
3. Sporlan Valve Co.
4. Substitutions: Section 01 61 00 - Product Requirements.

B. Replaceable Cartridge Angle Type:

1. Shell: ARI 710, UL listed, steel, removable cap, for maximum working pressure of 500 psig, inches outside diameter size connections.
2. Filter Cartridge: Pleated media with integral end rings, stainless steel support.
3. Filter/Dryer Cartridge: Pleated media with solid core sieve with activated alumina.
4. Wax Removal Cartridge: Molded bonded core of activated charcoal with integral gaskets.

C. Permanent Straight Through Type:

1. ARI 710, UL listed, steel shell with molded desiccant filter core, for maximum working pressure of 500 psig.

2.8 REFRIGERANT EXPANSION VALVES

A. Manufacturers:

1. Alco Controls Div, Emerson Electric Co.
2. Parker Hannifin Corp., Refrig. & Air Cond. Div.
3. Sporlan Valve Co.
4. Substitutions: Section 01 61 00 - Product Requirements.

B. Angle or Straight Through Type: ARI 750; design suitable for refrigerant, brass body, internal or external equalizer, mechanical pressure limit (maximum operating pressure MOP feature), adjustable superheat setting, replaceable inlet strainer, with replaceable capillary tube and remote sensing bulb.

C. Selection: Evaluate refrigerant pressure drop through system to determine available pressure drop across valve. Select valve for maximum load at design operating pressure and minimum 10 degrees F superheat. Select to avoid being undersized at full load and oversized at part load.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 31 00 – Project Management and Coordination: Coordination and project conditions.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - INSERTS

A. Provide inserts for placement in concrete forms.

B. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.

D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.4 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install hangers and supports in accordance with ASME B31.5.

B. Support horizontal piping hangers as scheduled.

C. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.

D. Place hangers within 12 inches of each horizontal elbow.

E. Install hangers to allow 1-1/2 inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.

F. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.

G. Where installing several pipes in parallel and at same elevation, provide multiple pipe hangers or trapeze hangers.

H. Provide copper plated hangers and supports for copper piping.

I. Prime coat exposed steel hangers and supports in accordance with Section 09 90 00. Finish paint exposed steel hangers and supports in accordance with Section 09 90 00. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

J. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings.

3.5 INSTALLATION - ABOVE GROUND PIPING SYSTEMS

A. Route piping parallel to building structure and maintain gradient.

B. Install piping to conserve building space, and not interfere with use of space.

C. Group piping whenever practical at common elevations.

D. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 05 29.

E. Install pipe identification in accordance with Section 23 05 53.

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

G. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 08 31 13.

H. Arrange refrigerant piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.

I. Flood refrigerant piping system with nitrogen when brazing.

J. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds. Refer to Section.

K. Prepare unfinished pipe, fittings, supports, and accessories, ready for finish painting. Refer to Section 09 90 00.

L. Install valves with stems upright or horizontal, not inverted.

M. Insulate piping and equipment; refer to Section 23 07 00.

N. Provide replaceable cartridge filter-dryers, with isolation valves and bypass with valve.

O. Locate expansion valve sensing bulb immediately downstream of evaporator on suction line.

P. Provide external equalizer piping on expansion valves with refrigerant distributor connected to evaporator.

Q. Install flexible connectors at right angles to axial movement of compressor, parallel to crankshaft.

R. Fully charge completed system with refrigerant after testing.

S. Follow ASHRAE 15 procedures for charging and purging of systems and for disposal of refrigerant.

T. Install refrigerant piping in accordance with ASME B31.5.

3.6 INSTALLATION - REFRIGERANT SPECIALTIES

A. Refrigerant Liquid Indicators:

1. Install line size liquid indicators in main liquid line downstream of condenser.
2. When receiver is provided, install line size liquid indicators in liquid line downstream of receiver.
3. Install line size liquid indicators downstream of liquid solenoid valves.

B. Refrigerant Valves:

1. Install service valves on compressor suction and discharge.
2. Install gage taps at compressor inlet and outlet.
3. Install gage taps at hot gas bypass regulators, inlet and outlet.
4. Install check valves on compressor discharge.
5. Install check valves on condenser liquid lines on multiple condenser systems.
6. Install refrigerant charging valve in liquid line between receiver shut-off valve and expansion valve.

C. Strainers:

1. Install line size strainer upstream of each automatic valve.
2. Where multiple expansion valves with integral strainers are used, install single main liquid-line strainer.
3. On steel piping systems, install strainer in suction line.
4. Install shut-off valves on each side of strainer.

D. Filter-Dryers:

1. Install permanent filter-dryers in low temperature systems.
2. Install permanent filter-dryer in systems containing hermetic compressors.
3. Install replaceable cartridge filter-dryer vertically in liquid line adjacent to receivers.
4. Install replaceable cartridge filter-dryer upstream of each solenoid valve.

3.7 FIELD QUALITY CONTROL

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Test refrigeration system in accordance with ASME B31.5.

C. Pressure test refrigeration system with dry nitrogen to 200 psig. Perform final tests at 27 inches vacuum and 200 psig using electronic leak detector.

D. Repair leaks.

E. Retest until no leaks are detected.

3.8 SCHEDULES

A. Pipe Hanger Spacing:

PIPE SIZE Inches	COPPER TUBING MAXIMUM HANGER SPACING Feet	MINIMUM HANGER ROD DIAMETER COPPER TUBING Inches	MINIMUM HANGER ROD DIAMETER STEEL PIPE Inches
1/2	5	3/8	3/8
3/4	5	3/8	3/8
1	6	3/8	3/8
1-1/4	7	3/8	3/8
1-1/2	8	3/8	3/8
2	8	3/8	3/8
2-1/2	9	1/2	1/2
3	10	1/2	1/2
4	10	1/2	5/8
5	10	1/2	5/8
6	10	5/8	3/4

END OF SECTION

SECTION 23 31 00

HVAC DUCTS AND CASINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Duct Materials.
2. Insulated flexible ducts.
3. Single wall spiral round ducts.
4. Transverse duct connection system.
5. Ductwork fabrication.
6. Duct cleaning.

B. Related Sections:

1. Division 09 - Painting and Coating: Execution requirements for Weld priming, weather resistant, paint or coating specified by this section.
2. Division 23 - Hangers and Supports for HVAC and Plumbing Piping and Equipment: Product requirements for hangers, supports and sleeves for placement by this section.
3. Division 23 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.

1.2 REFERENCES

A. ASTM International:

1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
2. ASTM A90/A90M - Standard Test Method for Weight Mass of Coating on Iron and Steel Articles with Zinc or Zinc-Alloy Coatings.
3. ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
4. ASTM A568/A568M - Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.
5. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
6. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
7. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
8. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
9. ASTM C14 - Standard Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.

10. ASTM C443 - Standard Specification for Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.
11. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. California Mechanical Code:

1. CMC – State of California Mechanical Code.

C. National Fire Protection Association:

1. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
2. NFPA 90B - Standard for the Installation of Warm Air Heating and Air Conditioning Systems.

D. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - HVAC Air Duct Leakage Test Manual.
2. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

E. Underwriters Laboratories Inc.:

1. UL 181 - Factory-Made Air Ducts and Connectors.

1.3 PERFORMANCE REQUIREMENTS

A. Variation of duct configuration or sizes other than those of equivalent or lower loss coefficient is not permitted except by written permission. Size round ducts installed in place of rectangular ducts in accordance with ASHRAE table of equivalent rectangular and round ducts, if it is not shown on the drawings.

1.4 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Submit duct fabrication drawings, drawn to scale not smaller than 1/4 inch equals 1 foot, on drawing sheets same size as Contract Documents, indicating:

1. Fabrication, assembly, and installation details, including plans, elevations, sections, details of components, and attachments to other work.
2. Duct layout, indicating pressure classifications and sizes in plan view. For exhaust duct systems, indicate classification of materials handled as defined in this section.
3. Fittings.
4. Reinforcing details and spacing.
5. Seam and joint construction details.
6. Penetrations through fire rated and other walls.
7. Terminal unit, and coil installations.
8. Hangers and supports, including methods for building attachment, vibration isolation, and duct attachment.

9. Equipment service clearance, access panels and door swings.

C. Product Data: Submit data for duct materials, duct liner and duct connectors.

D. Acceptance or no exceptions taken by the engineer on any substitution proposed by the contractor shall not be construed as relieving the contractor from compliance with the project's specifications and performance requirements nor departure there from. The contractor remains responsible for details and accuracy for confirming and correlating quantities and dimensions and for the selection of fabrication processes, techniques and assembly, coordination of his work with that of all other trades and making any needed modifications consequent to the substitution at his own cost and for performing the work in a safe manner.

1.5 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of ducts and duct fittings. Record changes in fitting location and type. Show additional fittings used.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA - HVAC Duct Construction Standards - Metal and flexible.

B. Construct ductwork to NFPA 90A standards.

C. Maintain one copy of each document on site.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum three weeks prior to commencing work of this section.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Division 01 - Product Requirements.

B. Do not install duct sealant when temperatures are less than those recommended by sealant manufacturers.

C. Maintain temperatures during and after installation of duct sealant.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

PART 2 - PRODUCTS

2.1 DUCT MATERIALS

A. Galvanized Steel Ducts: ASTM A653/A653M minimum 24 gauge galvanized steel sheet, lock-forming quality, having G90 zinc coating of in conformance with ASTM A90/A90M.

B. Fasteners: Rivets, bolts, or sheet metal screws.

C. Steel shapes shall be hot rolled, galvanized.

D. Screws and bolts shall be cadmium plated.

E. Materials and fabrication shall comply with 2013 California Mechanical Code.

F. For supply air and return air ductwork above roof, or exposed to weather, use double walled duct with insulation in between. Size of duct indicated on the drawings shall be internal dimension. Internal and external duct shall be of same gauge.

G. Hanger Rod: ASTM A36/A36M; steel, galvanized; threaded both ends, threaded one end, or continuously threaded.

2.2 INSULATED FLEXIBLE DUCTS

A. Manufacturers:

1. Casco
2. Thermflex
3. Glen Flex
4. Substitutions: Division 01 - Product Requirements.

B. Product Description: Flexible duct shall consist of an exterior reinforced laminated vapor barrier, 1-1/2 inch thick fiberglass insulation (K = .25 @ 75 degrees F), encapsulated spring steel wire helix and impervious, smooth, non-perforated interior vinyl liner. Individual lengths of flexible ducts shall contain factory fabricated steel connection collars. Flexible fiberglass duct shall meet the requirements of NFPA No. 90A and UL 181.

1. Pressure Rating: 10 inches wg positive and 1.0 inches wg negative.
2. Maximum Velocity: 4000 fpm.
3. Temperature Range: -10 degrees F to 160 degrees F.

4. Furnish each flexible duct section with integral clamping devices for connection to round or oval fittings.
5. Join each flexible duct section to main trunk duct through sheet metal fittings. Construct fittings of galvanized steel and equip with factory installed volume damper having positive locking regulator. Provide fittings installed in lined ductwork with insulation guard.
6. Flexible ducts shall be supported at or near mid-length with 2 inch wide, 28 gage steel hanger collar, attached to the structure with an approved duct hanger. Installation shall minimize sharp radius turns or offsets. The maximum length connecting to terminal outlets shall be 7 feet and minimum length of 5 feet.
7. Insulated flexible ducts shall be continuous, single pieces, 7' in length for low pressure, and they shall be adequately supported with a center strap support. Ducts shall be installed with a minimum radius of bend of two duct diameters. These flexible ducts are specified to tie into side inlet/outlet insulated ceiling diffusers or return air grills. The metal duct system shall be installed such that sufficient room exists to accommodate the flex duct straight runs from the metal duct to the ceiling devices. Distances too close to meet the intent of the specifications will be revised and installed according to the specifications.
8. Low pressure ductwork shall have precut lengths with continuous inner liner, factory installed female collars and fastening devices at each end, a factory installed manual balancing damper assembly complete with a level position indicator and a positive locking device.
9. Provide all round duct takeoffs from low pressure ducts with aluminum draw band, or Spin In Twist Lok fittings, approved for installation in return air plenum.

C. UL Requirements:

1. The entire flexible duct assembly shall be labeled in accordance with UL 181 Class I air duct requirements and not have a flame and smoke spread rating in excess of 25/50.
2. Installation must conform with factory supplied and UL approved print installation instruction sheets.
3. Submittals will be required to include product data sheets and installation instruction sheets in order to assure awareness of the proper installation technique.

2.3 SINGLE WALL SPIRAL ROUND DUCTS

A. Manufacturers:

1. McGill Airflow Corporation
2. Semco Incorporated
3. Tangent Air Corp
4. Spiral Mfg. Co., Inc.
5. Substitutions: Division 01 - Product Requirements.

B. Product Description: UL 181, Class 1, round spiral lock seam duct constructed of galvanized steel.

C. Construct duct with the following minimum gages:

Diameter	Gauge

3 inches to 14 inches	26
15 inches to 26 inches	24
28 inches to 36 inches	22
38 inches to 50 inches	20
52 inches to 84 inches	18

D. Construct fittings with the following minimum gages:

Diameter	Gauge
3 inches to 14 inches	24
15 inches to 26 inches	22
28 inches to 36 inches	20
38 inches to 50 inches	20
52 inches to 60 inches	18
62 inches to 84 inches	16

2.4 RECTANGULAR DUCT FABRICATION (GENERAL)

A. Fabricate ducts, elbows, transitions, offsets, branch connections, and other construction according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" and complying with requirements for metal thickness, reinforcing types and intervals, tie-rod applications, and joint types and intervals except as modified by this specification.

1. Lengths: Fabricate rectangular ducts in lengths appropriate to reinforcement and rigidity class required for pressure class.
2. Deflection: Duct systems shall not exceed deflection limits according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."

B. Elbows shall be radius or short radius with vanes, type RE 1 and RE 3 in the SMACNA manual. Mitered elbows with turning vanes shall be used where shown on drawings. Construct vanes per pages A.41 and A.43 of the SMACNA manual.

C. Divided flow branches shall be per SMACNA manual figure 2-5, type 1 or type 4A or 4B only.

D. Branch connections per SMACNA manual figure 2-6; 45-degree entry shall only be used where airflow in branch is less than 25% of total airflow in main duct.

E. Offsets shall be SMACNA manual figure 2-7, type 3 only.

F. Bell-mouth transitions shall be used on connections to air handling units and plenums.

G. Transverse Joints: Prefabricated slide-on joints and components constructed using manufacturer's guidelines for material thickness, reinforcement size and spacing, and joint reinforcement.

1. Manufacturers:

   a. TDC.
   b. Ductmate Industries, Inc.
   c. Nexus Inc.

H. Longitudinal Seams: Pittsburgh lock sealed with non-curing polymer sealant. Button punch snap lock seams are not acceptable to the University and shall not be used.

I. Provide drive slip or equivalent flat seams for ducts exposed in the conditioned space or where necessary due to space limitations.

J. Cross Breaking or Cross Beading: Cross break or cross bead duct sides 19 inches and larger and 0.0359 inch thick or less, with more than 10 sf of non-braced panel area unless ducts are lined.

2.5 RECTANGULAR DUCTWORK FABRICATION (INTERIOR)

A. Low Pressure Duct Construction Schedule: (2 inch" S.P. and below). Include all return, exhaust, supply branches and ductwork downstream of terminal units.

Duct Dimension (Inches)	Material Gauges	Construction of Transverse Joints, Bracing and Reinforcing
0 to 12	26	Hemmed S slip spaced not more than 10’ apart
13 to 30	24	Ductmate Jr.**, or 1” G lock spaced not more than 10’ apart
31 to 42	22	Ductmate Jr.**, spaced not more than 5’ apart
43 to 54	22	Ductmate**, spaced not more than 4’ apart
55 to 60	20	Ductmate**, spaced not more than 4’ apart
61 to 84	20	Ductmate**, spaced not more than 4’ apart
85 and up	18	Ductmate**, spaced not more than 4’ apart. Provide intermediate bracing for low pressure ductwork 85” and larger

Note: * Based on maximum of 2.0" WG.

** The Lockformer Company TDC or approved equal

1. Provide intermediate bracing for low pressure ductwork 85 inches and larger.
2. All ducts over 18 inches in either dimension shall be stiffened with beads on 24 through 20 gage. Cross break on 18 and 16 gauge. Longitudinal seams shall be Pittsburgh locks Snap-Lock shall be limited to 12 inch maximum width of ducts.

B. Strap hanger shall be a minimum of 1 inch, #18 gauge galvanized steel attached to the bottom of ducts at 8'- 0" OC and as required by CMC and SMACNA guidelines.

C. Elbows shall be radius or short radius with vanes, type RE 1 and RE 3 in the SMACNA manual. Mitered elbows with turning vanes shall be used where shown on drawings. Construct vanes per pages A.41 and A.43 of the SMACNA manual.

D. Divided flow branches shall be per SMACNA manual figure 2-5, type 1 or type 4A or 4B only.

E. Branch connections per SMACNA manual figure 2-6; 45-degree entry shall only be used where airflow in branch is less than 25% of total airflow in main duct.

F. Offsets shall be SMACNA manual figure 2-7, type 3 only.

G. Bellmouth transitions shall be used on connections to air handling units and plenums.

H. Provide Ductmate and Ductmate, Jr. with all required material including metal cleats, corner bolts and nuts, angles, clips and gaskets, all installed in accordance with manufacturer's recommendations and supervision.

I. Quadrant volume damper blades in fittings shall be two gauges heavier than the fittings.

J. Longitudinal Seams: Pittsburgh lock sealed with non-curing polymer sealant. Button punch snap lock seams are not acceptable and shall not be used.

K. Provide drive slip or equivalent flat seams for ducts exposed in the conditioned space or where necessary due to space limitations.

L. Cross Breaking or Cross Beading: Cross break or cross bead duct sides 19 inches and larger and 0.0359 inch thick or less, with more than 10 sq. ft. of non-braced panel area unless ducts are lined.

M. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.

N. Provide standard 45-degree lateral wye takeoffs. When space does not allow 45-degree lateral wye takeoff, use 90-degree conical tee connections.

2.6 RECTANGULAR DUCTWORK FABRICATION (EXTERIOR)

A. Provide duct and fittings with exceptional noise and thermal control in air handling systems. This double-wall, insulated ductwork shall be constructed of a solid steel outer pressure shell and a steel inner liner with a layer of insulation sandwiched between. Other insulation materials and rectangular duct and fittings shall be shipped fully assembled with transverse duct connector flanged ends. Both outer pressure shell and metal inner liner shall incorporate Pittsburgh lockseam construction and TDC end connectors. Ductwork is fully assembled with a finished length of 56-1/4 inches or 68-1/4 inches. Refer to 2.06 for duct gauge requirements.

2.7 ROUND DUCT AND FITTING FABRICATION (INTERIOR)

A. Circular (across section) ducts shall be galvanized steel of spiral seam construction, fittings shall have continuous, welded, stamped construction both manufactured by United Sheet Metal, Omniduct, Spiromatic, Spiro Duct, Casco or approved equal.

B. Make joints between two ducts with beaded sleeve joint, with duct sealer applied to both the male and female duct ends, then mechanically fastened with sheet metal screws.

C. Install all duct work according to the following: the radius of elbows shall be minimum of 1 1/2 times diameter or maximum width of duct. Gored ells are not acceptable. Violations of this requirement shall be removed from the system and replaced per the design documents and the drawings at no cost to the Owner. Failure to do so will result in the Project Manager replacing the defective installation and back charging the cost to the offending contractor.

D. Tee fittings shall be of conical type changing in shape from round to rectangular with transformation joint with minimum of 1 to 7 taper.

E. Corrugated or flexible metal duct, or shop fabricated circular ducts will not be acceptable.

2.8 ROUND DUCT AND FITTING FABRICATION (EXTERIOR)

A. Provide double-wall, insulated duct and fittings with exceptional noise and thermal control in air handling systems. They shall be constructed of a solid galvanized sheet metal outer pressure shell and a solid galvanized sheet metal inner liner with a layer of 2” insulation sandwiched. The shell constructions shall have longitudinal seam. Refer to 2.03 for duct gauge requirements.

2.9 DUCT SEALANT MATERIALS

A. Joint and Seam Sealants, General: The term "sealant" is not limited to materials of adhesive or mastic nature but includes tapes and combinations of open-weave fabric strips and mastics.

B. Tape Sealing System: Woven-fiber tape impregnated with gypsum mineral compound and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.

C. Water-Based Joint and Seam Sealant: Flexible, adhesive sealant, resistant to UV light when cured, UL 181 listed; passes UL 723 for flame spread and smoke development; and complying with NFPA requirements for Class 1 ducts.

D. Flanged Joint Mastic: One-part, acid-curing, silicone, elastomeric joint sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use O.

E. Flange Gaskets: Butyl rubber or EPDM polymer with polyisobutylene plasticizer.

F. Provide sealant or tape for metal ducts at duct joints which are defined as transverse joints between duct sections including girth joints, branch and sub-branch intersections, duct collar tap-ins, fitting subsections, louver and air terminal connections, access doors and frames, and abutments to building structure. Also provide the same at duct seams which are defined as longitudinal joint between duct sections. Spiral lock seams in factory fabricated round or oval ducts are excluded.

G. Sealant for low-pressure ducts shall be: Design Polymerics- DP1010 or 1020, Childers Chil-Flex CP145A/146, Foster's Duct-Fas 32-19, Kingco-Glenkote11-500, Ductmate ProSeal or FiberSeal, or equal. Provide tape joints with canvas fastened with Borden Chemical Division Arabol adhesive, or equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify sizes of equipment connections before fabricating transitions.

3.2 INSTALLATION

A. Install ducts in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, as required in this section and in the Contract Drawings.

B. During construction, install temporary closures of metal or taped polyethylene on open ductwork to prevent construction dust from entering ductwork system.

C. Use beaded sleeve couplings for joining round duct and flexible ducts.

D. Install duct hangers and supports in accordance with Section 23 05 29.

E. Use double nuts and lock washers on threaded rod supports.

F. Seal all ductwork.

3.3 INSTALLATION OF METAL DUCTWORK

A. General: Assemble and install ductwork in accordance with recognized industry practices which will achieve air-tight (5% leakage for systems rated 3 inch and under; 1% for systems rated over 3 inch) and noiseless (no objectionable noise) systems capable of performing each indicated service. Install each run with a minimum number of joints. Align ductwork accurately at connections, within 1/8 inch misalignment tolerance and with internal surfaces smooth. Support ducts rigidly with suitable ties, braces, hangers and anchors of type which will hold ducts true-to-shape and to prevent buckling. Support vertical ducts at every floor.

B. Field Fabrication: Complete fabrication of work at project as necessary to match shop fabricated work and accommodate installation requirements.

C. Routing: Locate ductwork runs, except as otherwise indicated, vertically and horizontally and avoid diagonal runs wherever possible. Locate runs as indicated by diagrams, details and notations or, if not otherwise indicated, run ductwork in shortest route which does not obstruct useable space or block access for servicing building and its equipment. Hold ducts close to walls, overhead construction, column, and other structural and permanent enclosure elements of building. Limit clearance to 1/2 inch where furring is shown for enclosure or concealment of ducts, but allow for insulation thickness, if any. Where possible, locate insulated ductwork for 1 inch clearance outside of insulation. Wherever possible in finished and occupied spaces, conceal ductwork from view, by locating in mechanical shafts, hollow wall construction or above suspended ceilings. Do not encase horizontal runs in solid partitions, except as specifically shown. Coordinate layout with suspended ceiling and lighting layouts and similar finished work.

D. Coordination: Coordinate duct installations with installation of accessories, dampers, coil frames, equipment, controls and other associated work of ductwork system.

E. Tape the clips, Snaplock seams and joints or connections of the metal supply, return and exhaust ducts and the grilled and diffuser connections with 4 inch strips of 6 oz. canvas attached with Arabol or Hardcast adhesive. Tape the filter frames the same as ducts. Coat all canvas exposed to the weather with Tuff Bond #12. Taping of Pittsburgh seams is required. Exposed interior ductwork intended for open ceilings shall not be taped or covered with canvas.

F. Install access doors to open against system air pressure, with latches operable from either side, except outside only where duct is too small for person to enter.

G. Coordinate with other work, including ductwork, as necessary to interface installation of ductwork accessories properly with other work.

H. Round ducts shall be used to the maximum extent possible. As duct size increases, flat oval shall be considered. Rectangular ducts shall be limited to areas of space restriction with a maximum aspect ratio of 2:1. If due to a structural clearance constraint, duct aspect ratio can be increased and/or duct cross section reduced if upstream transition has included angles of 60 degrees or less and downstream transition has included angles of 30 degrees or less.

I. Ducts exposed outside to elements shall only be of round construction to shed rainwater. If conditions do not allow round ducts, provisions shall be provided to slope the flat top of rectangular ductwork so rainwater will not stand on top of duct.

J. Except for connection of terminal discharge duct to air outlets, 90 degree taps shall not be used unless space prohibits the use of low loss fittings. Takeoff feeding terminals shall be conical branch; 45 wye, conical branch; low loss tee; bell mouth, or branch with a loss coefficient equivalent to that for the conical branch. The slopes of transitions shall be approximately one to five, and no abrupt changes or offsets of any kind in the duct system shall be permitted.

K. Install round ducts in lengths not less than 12 feet unless interrupted by fittings.

L. Install ducts with fewest possible joints.

M. Install fabricated fittings for changes in directions, size, and shape and for connections.

N. Install couplings tight to duct wall surface with a minimum of projections into duct. Secure couplings with sheet metal screws. Install screws at intervals of 12 inches, with a minimum of 3 screws in each coupling.

O. Install ducts vertically and horizontally and parallel and perpendicular to building lines; avoid diagonal runs in ducts that would be over 12 feet in length.

P. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

Q. Install ducts with a clearance of 2 inch on each side, plus allowance for insulation thickness.

R. Conceal ducts from view in finished spaces. Do not encase horizontal runs in solid partitions unless specifically indicated.

S. Coordinate layout with suspended ceiling, fire- and smoke-control dampers, lighting layouts, and similar finished work.

T. Seal all joints and seams. If specification requires duct pressure test then duct sealant can be used instead of canvas and Arabol. Apply sealant to male end connectors before insertion, and afterward to cover entire joint and sheet metal screws.

U. Duct hangers shall be attached to horizontal slabs with steel angle clips secured with inserts, strapped to vertical walls, bolted to beams and joists, as per SMACNA guidelines, or as approved by the Architect.

V. All ducts and equipment shall be blown out prior to operating.

W. Electrical Equipment Spaces: Route ducts to avoid passing through transformer vaults and electrical equipment spaces and enclosures and telephone equipment rooms.

X. Non-Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls and are exposed to view, conceal spaces between construction openings and ducts or duct insulation with sheet metal flanges of same metal thickness as ducts. Overlap openings on 4 sides by at least 1-1/2 inches.

Y. Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, install appropriately rated fire dampers or combination fire/smoke dampers, sleeves.

Z. Install ducts with hangers and braces designed to withstand, without damage to equipment, seismic force required by California building codes.

AA. Protect duct interiors from the elements and foreign materials until building is enclosed. Follow SMACNA's "Duct Cleanliness for New Construction."

BB. Do not paint interiors of metal ducts.

CC. Protect duct openings from damage and prevent entrance of foreign materials.

3.4 INSTALLATION OF FLEXIBLE DUCTS

A. Maximum length: For any duct run using flexible ductwork, do not exceed 7'- 0" extended length.

B. Installation: Install in accordance with Section III of SMACNA's "HVAC Duct Construction Standards, Metal and Flexible", latest edition.

C. Bends in flexible ducts shall have a radius of not less than 1.5 times the internal diameters.

3.5 EQUIPMENT CONNECTIONS

A. General: Connect metal ductwork to equipment as indicated. Provide flexible connection for each ductwork connection to equipment mounted on vibration isolators, and/or equipment containing rotary machinery. Provide access doors as indicated.

3.6 HANGING AND SUPPORTING

A. Support horizontal ducts within 24 inches of each elbow and within 48 inches of each branch intersection.

B. Support vertical ducts at maximum intervals of 16 feet and at each floor.

C. Install upper attachments to structures with an allowable load not exceeding one-fourth of failure (proof-test) load. Wire and friction clamps shall not be used.

D. Install concrete inserts before placing concrete.

E. Install drilled in concrete anchors after concrete is placed and completely cured.

F. Do not use powder-actuated concrete fasteners.

3.7 INTERFACE WITH OTHER PRODUCTS

A. Install openings in ductwork where required to accommodate thermometers and controllers. Install Pitot tube openings for testing of systems. Install Pitot tube complete with metal can with spring device or screw to prevent air leakage. Where openings are provided in insulated ductwork, install insulation material inside metal ring.

B. Connect diffusers or light troffer boots to low pressure ducts directly or with 5 to 7 feet maximum length of flexible duct held in place with strap or clamp except as otherwise shown on the drawings. Do not use flexible duct on moisture laden air systems.

C. Connect air terminal units to supply ducts directly with at least one duct size larger than air terminal connection, except as shown otherwise on the drawings.

3.8 CLEANING NEW SYSTEM

A. Division 01 - Execution and Closeout Requirements: Final cleaning.

B. If the ductwork system is maintained in a clean state during the installation the following is not required. If in the opinion of the Architect/Engineer or Owner’s Representative the ductwork system is dirty the following shall be complied with.

C. Mark position of dampers and air-directional mechanical devices before cleaning, and perform cleaning before air balancing.

D. Use service openings, as required, for physical and mechanical entry and for inspection.

E. Create other openings to comply with duct standards.

F. Disconnect flexible ducts as needed for cleaning and inspection.

G. Remove and reinstall ceiling sections to gain access during the cleaning process.

H. Vent vacuuming system to the outside. Include filtration to contain debris removed from HVAC systems, and locate exhaust down wind and away from air intakes and other points of entry into building.

I. Clean the following metal duct systems by removing surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, and actuators except in ceiling plenums and mechanical equipment rooms.
6. Supply-air ducts, dampers, actuators, and turning vanes.

J. Cleaning Requirements:

1. Interior surfaces of all supply ductwork shall be cleaned of dust and dirt at the fabrication shop during fabrication.
2. Supply Ductwork shall be sealed to protect interior surfaces prior to being shipped and handled.
3. Seals and wrapping shall be removed on job site at time of installation.
4. Seal open duct ends during at the end of each day.

K. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet.

5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.

L. Cleanliness Verification:

1. Visually inspect metal ducts for contaminants.
2. Where contaminants are discovered, re-clean and re-inspect ducts.

3.9 SCHEDULES

A. Static-Pressure Classes: Construct ducts according to the following:

1. Supply Ducts (Exterior Installation): 4-inch wg.
2. Supply Ducts before Air Terminal Units (VAV Boxes or Air Valves): 4-inch wg.
3. Supply Ducts after Air Terminal Units (VAV Boxes or Air Valves): 2-inch wg.
4. Supply Ducts (In Mechanical Equipment Rooms): 4-inch wg.
5. Return Ducts (Negative Pressure) Before Air Terminal Units: 4-inch wg.
6. Return Ducts (Negative Pressure): 2-inch wg.
7. General Exhaust (Negative Pressure) Before Air Terminal Units: 4-inch wg.
8. General Exhaust Ducts (Negative Pressure): 2-inch wg.
9. Vertical risers shall be constructed to a minimum of 4-inch wg, regardless of type.

END OF SECTION

SECTION 23 33 00

AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Back-draft dampers.
2. Combination fire-and-smoke dampers.
3. Duct access doors.
4. Volume control dampers.
5. Flexible duct connections.
6. Duct test holes.

B. Related Sections:

1. Division 23 - HVAC Ducts and Casings: Requirements for duct construction and pressure classifications.
2. Division 26 - Equipment Wiring Connections: Execution requirements for connection of electrical Combination Smoke and Fire Dampers specified by this section.

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:

1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

B. ASTM International:

1. ASTM E1 - Standard Specification for ASTM Thermometers.

C. National Fire Protection Association:

1. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
2. NFPA 92A - Recommended Practice for Smoke-Control Systems.

D. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

E. Underwriters Laboratories Inc.:

1. UL 555 - Standard for Safety for Fire Dampers.
2. UL 555C - Standard for Safety for Ceiling Dampers.
3. UL 555S - Standard for Safety for Smoke Dampers.

1.3 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate for shop fabricated assemblies including volume control dampers, duct access doors and duct test holes.

C. Product Data: Submit data for shop fabricated assemblies and hardware used.

D. Product Data: Submit for the following. Include where applicable electrical characteristics and connection requirements.

1. Fire dampers including locations and ratings.
2. Smoke dampers including locations and ratings.
3. Backdraft dampers.
4. Flexible duct connections.
5. Volume control dampers.
6. Duct access doors.
7. Duct test holes.

E. Product Data: For fire dampers, smoke dampers, combination fire and smoke dampers submit the following:

1. Include UL ratings, California Sate Fire Marshal approval and NFPA 90A, dynamic ratings, leakage, pressure drop and maximum pressure data.
2. Indicate materials, construction, dimensions, and installation details.
3. Damper pressure drop ratings based on tests and procedures performed in accordance with AMCA 500.

F. Manufacturer's Installation Instructions: Submit for Fire and Combination Smoke and Fire Dampers.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Acceptance or no exceptions taken by the engineer on any substitution proposed by the contractor shall not be construed as relieving the contractor from compliance with the project's specifications and performance requirements nor departure there from. The contractor remains responsible for details and accuracy for confirming and correlating quantities and dimensions and for the selection of fabrication processes, techniques and assembly, coordination of his work with that of all other trades and making any needed modifications consequent to the substitution at his own cost and for performing the work in a safe manner.

1.4 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of access doors, test holes and combination smoke/fire dampers.

C. Operation and Maintenance Data: Submit for Combination Smoke and Fire Dampers.

1.5 QUALITY ASSURANCE

A. Dampers tested, rated and labeled in accordance with the latest UL requirements.

B. Damper pressure drop ratings based on tests and procedures performed in accordance with AMCA 500.

C. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.7 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum three weeks prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Division 01 - Product Requirements: Product storage and handling requirements.

B. Protect dampers from damage to operating linkages and blades.

C. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly indicating manufacturer and material.

D. Storage: Store materials in a dry area indoor, protected from damage.

E. Handling: Handle and lift dampers in accordance with manufacturer's instructions. Protect materials and finishes during handling and installation to prevent damage.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 COORDINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work where appropriate with building control Work.

1.11 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

1.12 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Spare parts and maintenance products.

PART 2 - PRODUCTS

2.1 BACK-DRAFT DAMPERS

A. Manufacturers:

1. Pottorff
2. Ruskin
3. Greenheck

B. Product Description: Multi-Blade, back-draft dampers: Parallel-action, gravity-balanced, extruded aluminum. Blades, maximum 6 inch width, with felt or flexible vinyl sealed edges. Blades linked together in rattle-free manner with 90-degree stop, steel ball bearings, and plated steel pivot pin. Furnish dampers with adjustment counter balance weight to permit setting for varying differential static pressure. Back draft damper shall be capable of adjusting to 0.025 inches of water pressure.

2.2 COMBINATION FIRE AND SMOKE DAMPERS / FIRE DAMPERS

A. Manufacturers:

1. Pottorff
2. Ruskin
3. Air Balance, Inc.

B. Furnish and install California State Fire Marshal approved combination smoke/fire dampers where shown on plans. The dampers shall meet all the requirements for smoke dampers per the latest edition of NFPA 90A and UL standards. Units shall be tested and listed under UL 555 and UL 555S. Rating 1-1/2 hours for installation in one or 2-hour partitions. The seals shall be non-degradable steel to steel. Leakage shall not exceed 15 cfm/sq. ft. at one inch w.g. and shall be tested at 850 degrees F. Fire releasing device shall be UL 33 listed melting fusible links. Dampers shall be provided in sleeves with pre-mounted non-stall motor actuators and dual-position indicators for remote annunciation, if required. The complete assembly shall be factory cycled and tested prior to shipment. Provide suitable access for inspection and servicing of each damper.

2.3 DUCT ACCESS DOORS

A. Manufacturers:

1. Air Balance, Inc.
2. Duro Dyne Corp.
3. Register & Grille Mfg. Co., Inc.
4. Ruskin Mfg. Co.
5. Ventfabrics, Inc.

6. Zurn Industries, Inc.; Air Systems Div.

B. General:

1. Access doors shall be of size to permit duct cleaning, inspection and adjustment and replacement of fire damper links, fan bearings, etc. through access opening. The minimum size shall be 12" x 12" or equivalent size as approved by the engineer. Access door gauges shall match duct.
2. Fore square or rectangular ducts:

a. Door shall be double wall type with felt or foam rubber gasket seal and shall have butt hinges and sash locks on 2-opposite sides, at a maximum spacing of 9". Use sash locks on both sides where hinged door swings may be obstructed.
b. Door in insulated ducts shall be double walled and shall contain a full thickness of insulation between the door panels.

3. Access doors for circular ducts shall be United Sheet Metal Type AR-W, Omniduct, Spiromatic, Spiro-Duct, or approved equal. Door shall have same requirements as for rectangular duct.

C. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.

2.4 VOLUME CONTROL DAMPERS

A. Manufacturers:

1. Ventfabrics, Inc.
2. Young Regulator Co.
3. Duro Dyne Corp.

B. General Description: Factory fabricated, with required hardware and accessories. Stiffen damper blades for stability. Include locking device to hold single-blade dampers in a fixed position without vibration. Close duct penetrations for damper components to seal duct consistent with pressure class.

1. Pressure Classes of 3-Inch wg or Higher: End bearings or other seals for ducts with axle’s full length of damper blades and bearings at both ends of operating shaft.

C. Dampers installed in ductwork, in furred ceiling spaces or in roof spaces with less than 30" of clearance below beams, joints or other construction, and where access panels are not provided shall have damper rods extended below ceiling and terminated with a concealed damper regulator, Ventlok, Young, or approved equal. The location of each damper shall be identified by a Green dot for supply air registers and a red dot for return air grills. The one inch diameter dots shall be placed by the HVAC contractor on tee tee bar ceiling gird nearest the damper and stuck on the damper side of the tee with one half of the dot showing and the other half of the dot folded up around the top part of the tee bar.

D. Damper blades shall not exceed 10" in width and shall be a minimum of 16-gauge galvanized steel, or Re-gauge aluminum. All dampers shall be frame mounted. The damper frame shall be of minimum 12-gauge steel channel. Except that dampers less than 18" maximum size may have 16-gauge by 1-1/4" minimum flat bar stock frames. Multi blade dampers shall be arranged for opposed blade operation.

E. Steel parts shall be galvanized or factory-finished with a metal primer and enameled finish and all cut edges shall be coated as described above. All parts of dampers in outside air intakes shall be galvanized. Bearings shall be precision sleeve type of oil-impregnated bronze, Teflon or Nylon.

F. Provide locking and indicating quadrants installed in accessible locations. For wrapped ducts, quadrants shall be bracket mounted with a recessed flange.

G. Where dampers are inaccessible for adjustments, provide Ventfabrics No. 666,or equal by Young Regulator Co.; with remote operator.

H. All dampers shall be shipped with factory attached 18” long orange ribbon attached to operator shaft.

2.5 FLEXIBLE DUCT CONNECTIONS

A. Manufacturers:

1. Duro Dyne Corp.
2. Ventfabrics, Inc.

B. General Description: Flame-retardant or noncombustible fabrics, coatings, and adhesives complying with UL 181, Class 1.

C. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches wide attached to two strips of 2-3/4-inch- wide, 0.028-inch- thick (24 ga), galvanized sheet steel or 0.032-inch- thick aluminum sheets. Select metal compatible with ducts.

D. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.

1. Minimum Weight: 26 oz. /sq. yd.
2. Tensile Strength: 480 lbf/inch in the warp and 360 lb/inch in the filling.
3. Service Temperature: Minus 40 to plus 200 deg F.

2.6 SCREENS

A. Screens shall be 1 inch mesh, 12 gauge stainless steel wire set in 1 inch galvanized channel frames for all openings.

2.7 DUCT HARDWARE

A. General: Provide duct hardware, manufactured by one manufacturer for all items on project, for the following:

1. Test holes: Provide in ductwork at fan inlet and outlet, and elsewhere as indicated, duct test holes, consisting of slot and cover, for instrument tests.

2. Quadrant locks: Provide for each damper, quadrant lock device on one end of shaft; and end bearing plate on other end for damper lengths over 12 inch. Provide extended quadrant locks and end extended bearing plates for externally insulated ductwork.

B. Manufacturer: Subject to compliance with requirements, provided duct hardware of one of the following:

1. Ventfabrics, Inc.
2. Young Regulator Co.
3. Duro Dyne

2.8 TURNING VANES

A. Square throat elbow with vanes not allowed. Provide short radius elbows with vanes per SMACNA details as indicated on the drawings.

2.9 DUCT SILENCERS

A. Basis-of-Design Product: Silencers shall be Vibro-Acoustics.

1. Alternate manufacturers must request and obtain written approval by the Engineer to bid the project at least 10 days prior to the bid due-date. As a condition of pre-approval, alternate manufacturers must submit to the Engineer a minimum of twenty (20) different HVAC silencer test reports. Each report shall be for a silencer tested in full accordance with the ASTM E-477-06a silencer test standard in an aero-acoustic test facility which is NVLAP accredited for the ASTM E-477-06a standard. Each test shall have been conducted within the last 12 month period. A copy of the laboratory's NVLAP accreditation certificate must be included with the submitted reports. Any changes to the specifications must be submitted and approved in writing by the Engineer at least 10 days prior to the bid due-date.

B. General Requirements:

1. Silencers shall be of the size, configuration, capacity and acoustic performance as scheduled on the drawings. All silencers shall be factory fabricated and supplied by the same manufacturer.
2. Silencer inlet and outlet connection dimensions must be equal to the duct sizes shown on the drawings. Duct transitions at silencers are not permitted unless shown on the contract drawings.
3. Silencers shall be constructed in accordance with ASHRAE and SMACNA standards for the pressure and velocity classification specified for the air distribution system in which it is installed. Material gauges noted in other sections are minimums. Material gauges shall be increased as required for the system pressure and velocity classification. The silencers shall not fail structurally when subjected to a differential air pressure of 8 inches water gauge.
4. All casing seams and joints shall be lock-formed and sealed or stitch welded and sealed except as noted in Section G below, to provide leakage-resistant construction. Airtight construction shall be achieved by use of a duct-sealing compound supplied and installed by the contractor at the jobsite.

5. All perforated steel shall be adequately stiffened to insure flatness and form. All spot welds shall be painted.
6. Fire-Performance Characteristics: Silencer assemblies, including acoustic media fill, Vibar™ film liner, sealants, and acoustical spacer, shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84, NFPA 255 or UL 723.
7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2007.

C. Rectangular Silencers. Outer casing shall be ASTM A 653/A 653M, G90 galvanized sheet steel, 22 gauge.

D. Rectangular Elbow Silencers. Outer casing shall be ASTM A 653/A 653M, G90 galvanized sheet steel, 18 gauge. All acoustical splitters shall be internally radiused and aerodynamically designed for efficient turning of the air. Half and full splitters are required as necessary to achieve the scheduled insertion loss. All elbow silencers with a turning cross-section dimension greater than 48” shall have at least two half splitters and one full splitter.

E. Circular Silencers. Outer casing shall be ASTM A 653/A 653M, G90 galvanized sheet steel, gauge as listed below.

1. Sheet metal thickness for units up to 18 Inches in Diameter: 22 gauge.
2. Sheet metal thickness for units 18 through 30 Inches in Diameter: 20 gauge.
3. Sheet metal thickness for units 30 through 54 Inches in Diameter: 18 gauge.
4. Sheet metal thickness for units over 54 Inches in Diameter: 16 gauge.

F. Inner perforated metal liner: ASTM A 653/A 653M, G90 galvanized sheet steel.

1. Rectangular Silencers: 26 gauge.
2. Rectangular Elbow Silencers: 22 gauge.
3. Circular Silencers:

    a. Connection diameter up to 18 inches: 26 gauge.
    b. Connection diameter greater than 18 inches: 22 gauge.

4. Transitional Silencers: 22 gauge.

G. Principal Sound-Absorbing Mechanism:

1. No-Media (Packless) silencers:

    a. Models shall not contain absorptive media of any kind. Attenuation shall be achieved with controlled impedance membranes and broadly tuned resonators.

2. Dissipative and Film Lined silencers:

    a. Models type with acoustic media. Media shall be of acoustic quality, shot-free glass fiber insulation with long, resilient fibers bonded with a thermosetting resin. Glass fiber density and compression shall be as

required to insure conformance with laboratory test data. Glass fiber shall be packed with a minimum of 15% compression during silencer assembly. Media shall be resilient such that it will not crumble or break, and conform to irregular surfaces. Media shall not cause or accelerate corrosion of aluminum or steel. Mineral wool will not be permitted as a substitute for glass fiber.

H. Media Protection:

1. Dissipative silencers where indicated on the silencer schedule, media shall be encapsulated in glass fiber cloth to help prevent shedding, erosion and impregnation of the glass fiber.
2. Film Lined silencers: acoustic media shall be completely wrapped with Vibar™ film to help prevent shedding, erosion and impregnation. The wrapped acoustic media shall be separated from the perforated metal by a factory installed ½" thick acoustically transparent spacer. The spacer shall be flame retardant and erosion resistant. A mesh, screen or corrugated perforated liner will not be acceptable as a substitute for the specified spacer. Silencer manufacturer shall provide a written test report by a third party organization showing silencer assemblies have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84, NFPA 255 or UL 723.

I. Special Construction:

1. Where noted on the silencer schedule, silencers shall have 16 gauge casing, continuously welded.
2. Where indicated on the silencer schedule, silencers shall have RF filters integral to the silencer. Performance shall be 100 dB at 1 MHz. Pressure drop shall be included in overall silencer pressure drop. RF filter shall be located such that it cannot be bypassed.
3. Where indicated on the silencer schedule, provide a non-conductive section in the silencer casing at the end of the silencer next to the room wall, and provide a minimum of 10" (254mm) x 10" (254mm) inspection port in the silencer casing next to the wall. These features shall not compromise the composite HTL casing of the silencer.
4. Where indicated on the silencer schedule, provide security bars running at 6" (150mm) centers both ways inside the silencer casing to prevent ingress through the silencer.

J. Accessories:

1. Access Doors: Where indicated on the silencer schedule, silencers shall be supplied with an access door(s) to permit fire damper service. Access doors shall be supplied as an integral part of the silencer by the silencer manufacturer. Where HTL walls are also supplied, the access doors shall not reduce the effectiveness of the HTL walls.
2. Shipping Protection: Silencers shall be shipped with factory-installed end caps to prevent contamination during shipping.
3. Airflow Measuring Devices: Where indicated on the silencer schedule, silencers shall have airflow measuring devices factory installed as part of the silencer assembly.

K. Source Quality Control: Test according to ASTM E 477-06a.

1. The manufacturer shall test the silencer(s) as indicated in the silencer schedule. The engineer shall be notified of the test date at least two weeks in advance and the test may be witnessed by the engineer. Test shall show compliance with the project criteria and is subject to engineer approval.
2. Test facilities and test reports shall be open to inspection upon request from the Engineer. Silencer performance must have been substantiated by laboratory testing according to ASTM E-477-06a and so certified when submitted for approval. The aero-acoustic laboratory must be NVLAP accredited for the ASTM E-477-06a test standard. A copy of the accreditation certificate must be included with the submittals. Data from non-NVLAP accredited test facilities will not be accepted.

L. Capacities and Characteristics:

1. See duct silencer performance schedule on mechanical drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify rated walls are ready for fire damper installation.

C. Verify ducts and equipment installation is ready for accessories.

D. Check location of air outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.2 INSTALLATION.

A. Install in accordance with NFPA 90A, and follow SMACNA HVAC Duct Construction Standards - Metal and Flexible. Refer to Section 23 31 00 for duct construction and pressure class.

B. Provide a volume control for each grille and diffuser and in all other locations necessary to properly balance the system.

C. Quadrants on insulated ducts shall be mounted on sheet metal brackets, set flush with the insulation.

D. Install back-draft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated on Drawings. Back draft dampers are not required for the fans with continuous operation and kitchen exhaust fans.

E. Provide and install access doors at convenient and individual locations in ducts where fire, smoke or automatic dampers, fan bearings, filters, humidifiers or other equipment is installed in ducts.

F. Provide and deliver to the appropriate trade for installation where you direct, access doors or panels in building construction for access to duct doors or panels, damper quadrants, control devices, or other devices requiring access.

G. Access Door Sizes: Install minimum 8 x 8 inch size for hand access, 18 x 18 inch size for shoulder access. Review locations prior to fabrication.

H. Install the following sizes for duct-mounting, round access doors:

1. 8 inches in diameter for up to 12-inch diameter duct size.
2. 12 inches in diameter for 13-inch to 19 inch duct sizes.
3. 18 inches in diameter for 20-inch to 25 inch duct sizes.
4. 24 inches in diameter for larger duct sizes than listed above.

I. Label access doors according to Division 23.

J. Install temporary duct test holes required for testing and balancing purposes. Cut or drill in ducts. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.

K. Install fire dampers, combination fire and smoke dampers and smoke dampers at locations as indicated on Drawings. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings and hinges.

1. Install smoke dampers and combination smoke and fire dampers in accordance with NFPA 92A.
2. Install dampers square and free from racking with blades running horizontally.
3. Do not compress or stretch damper frame into duct or opening.
4. Handle damper using sleeve or frame. Do not lift damper using blades, actuator, or jack shaft.
5. Install bracing for multiple section assemblies to support assembly weight and to hold against system pressure. Install bracing as needed.

L. Install flexible connectors immediately adjacent to equipment in ducts associated with fans and motorized equipment supported by vibration isolators.

M. For fans developing static pressures of 5 inch wg and higher, cover flexible connectors with loaded vinyl sheet held in place with metal straps.

N. Connect flexible ducts to metal ducts with adhesive and draw bands.

O. Provide instrument test holes in ductwork at fan inlets and outlets and elsewhere as required by Testing, Adjusting and Balancing Contractor for testing and balancing purposes.

3.3 DEMONSTRATION

A. Division 01 - Execution and Closeout Requirements: Requirements for demonstration and training.

B. Demonstrate re-setting of fire dampers and combination fire/smoke dampers to Owner's representative.

END OF SECTION

SECTION 23 34 00

HVAC FANS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Power Ventilators.
2. Prefabricated roof curb.
3. Inline ceiling fans.
4. Duct blowers or cabinet fans.

B. Related Sections:

1. Division 23 - Vibration and Seismic Controls for HVAC and Plumbing Piping and Equipment: Product requirements for resilient mountings and snubbers for fans for placement by this section.
2. Division 23 - HVAC and Plumbing Insulation: Product requirements for power ventilators for placement by this section.
3. Division 23 - HVAC Ducts and Casings: Product requirements for hangers for placement by this section.
4. Division 23 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.
5. Division 26 - Equipment Wiring Connections: Execution and product requirements for connecting equipment specified by this section.

1.2 REFERENCES

E. Underwriters Laboratories Inc.:

1. UL 705 - Power Ventilators.

1.3 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, ductwork and accessory connections.

C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Submit fan manufacturer’s instructions.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Acceptance or no exceptions taken by the engineer on any substitution proposed by the contractor shall not be construed as relieving the contractor from compliance with the project's specifications and performance requirements nor departure there from. The contractor remains responsible for details and accuracy for confirming and correlating quantities and dimensions and for the selection of fabrication processes, techniques and assembly, coordination of his work with that of all other trades and making any needed modifications consequent to the substitution at his own cost and for performing the work in a safe manner.

1.4 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.

B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705.

D. Balance Quality: Conform to AMCA 204.

E. Energy Recovery Unit Wheel Energy Transfer Rating: Meet ARI 1060.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.7 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Division 01 - Product Requirements: Product storage and handling requirements.

B. Protect motors, shafts, and bearings from weather and construction dust.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

1.11 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two sets of belts for each fan.

PART 2 - PRODUCTS

2.1 POWER VENTILATORS

A. Manufacturer:

1. Loren Cook
2. Greenheck
3. ACME
4. Penn Barry
5. Substitutions: Section 01 06 00 – Product Requirements.

B. General: Except as otherwise indicated, provide standard prefabricated power ventilator units of type and size indicated, modified as necessary to comply with requirements, and as required for complete installation.

C. Centrifugal Roof Ventilators: Provide centrifugal roof type, curb mounted, power ventilators of type, size, and capacity as scheduled, and as specified herein.

1. Type: Centrifugal fan, direct or belt driven as scheduled. Provide aluminum, weatherproof housings, low silhouette, statically and dynamically balanced, UL labeled and certified by AMCA. Provide square base to suit roof curb. Provide permanently lubricated type motor.
2. Housing Design: Hooded low contour type.
3. Provide high efficiency type motor. The motor and drive assembly shall be located out of the exhaust air system supported by a rugged galvanized steel frame. Motors shall be factory wired and installed with safety switches.
4. Electrical: Provide factory-wired non-fusible type disconnect switch at motor in fan housing. Provide thermal overload protection in fan motor. Provide conduit chase within unit for electrical connection. Motors shall have neoprene vibration isolator
5. Bird Screens: Provide removable bird screens, 1/2" mesh, 16-gage aluminum or brass wire.
6. Provide fabricated roof curb with integral backdraft dampers.

2.2 PREFABRICATED ROOF CURBS

A. Available Manufacturers: Subject to compliance with requirements, roof curbs that may be incorporated in the work shall be of same manufacture as fan.

B. General: Provide manufacturer's standard shop-fabricated units modified if necessary to comply with requirements.

C. Gage and Height: Fabricate units of metal gage and to height above roof surface as indicated. Where gage or height are not indicated, fabricate units of 14 gage metal, and nominal height of 14 inch. Provide treated wood nailer, not less than 1-5/8 inch thick and of width indicated, but not less than width of support wall assembly. Anchor nailer securely to top of metal frame unit. Provide lumber pressure treated with water-borne preservatives for "above ground" use, complying with AWPB LP-2.

D. Insulate units inside structural support wall with rigid glass fiber insulation board of approximately 3 pound density and 1-1/2 inch minimum thickness, except as otherwise indicated.

2.3 INLINE FANS

A. Manufacturers:

1. Loren Cook
2. Greenheck
3. ACME
4. Penn Barry

B. Substitutions: Section 01 61 00 – Product Requirements.

C. Fan shall be duct mounted, belt driven centrifugal cabinet fan with external motor mount.

D. Fan shall bear the AMCA certified ratings seal for sound and air performance.

E. The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. Housing shall be minimum 18 gauge galvanized steel with two access doors and integral duct collars. Internal blower assembly shall be mounted on rubber vibration isolators. Motor shall be out of the air stream. Hanging brackets shall be provided for horizontal installation. Unit shall bear an engraved aluminum nameplate.

F. Wheel shall be centrifugal backward inclined, constructed of 100% aluminum. Wheel shall be balanced in accordance with AMCA Standard 204-96.

G. Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage and phase.

H. Bearings shall be permanently lubricated, sealed ball type selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.

I. Belts shall be oil and heat resistant, non-static type. Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150% of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.

2.4 CEILING FANS

A. Manufacturers:

1. Loren Cook
2. Greenheck
3. ACME
4. Penn Barry

B. Substitutions: Section 01 61 00 – Product Requirements.

C. Centrifugal Fan Unit: Direct driven with injection molded resin, galvanized steel housing, resilient mounted motor, gravity backdraft damper in discharge opening, integral outlet duct collar. Discharge position convertible by moving interchangeable panels.

D. Disconnect Switch: Fan mounted toggle switch for thermal overload protected motor.

E. Grille: Injection molded white plastic.

F. Wheel: Centrifugal forward curved type constructed of injection molded or polypropylene resin.

G. Motor: Open drip proof type with permanently lubricated sealed bearings and thermal overload protection.

H. Accessories:

1. Wall cap with damper, round duct rectangular duct (as shown on drawings) inlet.
2. Roof cap with roof curb.
3. Fan speed controller.

I. Performance:

1. Air Flow: As per drawings.
2. Static Pressure: As per drawings.
3. Fan RPM: As per drawings.
4. Sones: As per drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify roof curbs are installed and dimensions are as instructed by manufacturer.

3.2 PREPARATION

A. Furnish roof curbs to roofing contractor for installation.

3.3 INSTALLATION

A. Secure fans and gravity ventilators with stainless steel lag screws to roof curb or anchor the unit ash shown on the drawings.

B. Fans: Install flexible connections specified in Section 23 33 00 between fan and ductwork. Ensure metal bands of connectors are parallel with minimum one inch flex between ductwork and fan while running.

C. Install backdraft dampers on inlet to exhaust fans and gravity ventilators used in relief air applications where shown on the drawings and schedules.

D. Provide backdraft dampers on outlet from cabinet and ceiling fans and as indicated on Drawings.

E. Install safety screen where inlet or outlet is exposed.

F. Pipe scroll drains to nearest floor drain.

G. Install backdraft dampers on discharge of exhaust fans as indicated on Drawings. Refer to Section 23 33 00.

H. Provide sheaves required for final air balance.

I. Solder bottom joints and up 2 inches of side joints of duct under roof ventilator to prevent any moisture from entering ventilator.

3.4 MANUFACTURER'S FIELD SERVICES

A. Division 01 - Quality Requirements: Requirements for manufacturer’s field services.

B. Furnish services of factory trained representative for minimum of one days to start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.5 CLEANING

A. Division 01 - Execution and Closeout Requirements: Requirements for cleaning.

B. Vacuum clean coils and inside of fan cabinet.

3.6 DEMONSTRATION

A. Division 01 - Execution and Closeout Requirements: Requirements for demonstration and training.

B. Demonstrate fan operation and maintenance procedures.

3.7 PROTECTION OF FINISHED WORK

A. Division 01 - Execution and Closeout Requirements: Requirements for protecting finished Work.

B. Do not operate fans for until ductwork is clean, filters in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION

SECTION 23 37 00

AIR OUTLETS AND INLETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Diffusers.
2. Registers
3. Grilles.
4. Door grilles.
5. Louvers.
6. Gravity roof ventilators.

B. Related Sections:

1. Division 08 - Louvers: Wall Louvers.
2. Division 09 - Painting and Coating: Execution and product requirements for Painting of ductwork visible behind outlets and inlets specified by this section.
3. Section 23 33 00 - Air Duct Accessories: Volume dampers for inlets and outlets.

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:

1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.

C. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.3 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit sizes, finish, and type of mounting. Submit schedule of outlets and inlets showing type, size, location, application, and noise level.

C. Test Reports: Rating of air outlet and inlet performance.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. Acceptance or no exceptions taken by the engineer on any substitution proposed by the contractor shall not be construed as relieving the contractor from compliance with the project's specifications and performance requirements nor departure there from. The contractor remains responsible for details and accuracy for confirming and correlating quantities and dimensions and for the selection of fabrication processes, techniques and assembly, coordination of his work with that of all other trades and making any needed modifications consequent to the substitution at his own cost and for performing the work in a safe manner.

1.4 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of air outlets and inlets.

1.5 QUALITY ASSURANCE

A. Test and rate diffuser, register, and grille performance in accordance with ASHRAE 70 and ADC 1062 “Certification, Rating and Test Manual”.

B. NFPA Compliance: Install air outlets in accordance with NFPA 90A “Standard for the Installation of Air Conditioning and Ventilation Systems”.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

1.7 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

1.9 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Spare parts and maintenance products.

PART 2 - PRODUCTS

2.1 CEILING AIR DIFFUSERS, REGISTERS, AND GRILLES

A. Acceptable Manufacturers:

1. Titus

2. Price
3. Krueger
4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. General:

1. Grilles, registers, diffusers and appurtenances shall conform to requirements specified herein and shall be of type and sizes as specified and indicated on Drawings. Performance shall be in accordance with Air Diffusion Council Test Code 1602R2 including airflow velocity, pressure, temperature, and sound measurements. Noise level ratings shall be in accordance with ADC Test Code No. 1062RI and ASHRAE Standards 36 62 and 36B 3.
2. Sponge neoprene, rubber, vinyl or felt border gaskets shall be provided for surface-mounted registers, grilles or diffusers.
3. The noise generating characteristics of all specified grilles, registers, and diffusers shall be tested to, and comply with, all requirements of this specification. Representative samples shall be subjected to tests in accordance with applicable standards and procedures in order to demonstrate such compliance. A special test for this project is not required if the manufacturer has previous certified test results that can be made applicable to this project. Maximum Sound Levels of diffusers, grilles and registers shall be as follows:

a.	Administrative office area:	NC 30
b.	Classrooms:	NC 20
c.	Libraries and other noise sensitive areas:	NC 25
d.	Gymnasiums, cafeterias, lockers areas:	NC 30.

4. Provide suitable frame types to match the ceiling types as specified or indicated on the Architectural Drawings.
5. Ceiling diffusers shall be provided with equalizing deflectors.
6. Ceiling mounted grilles, registers and diffusers shall be provided with a factory applied, baked enamel, dull finish, bone white to match acoustical ceiling tile.
7. Grilles or registers mounted on painted walls or other surfaces shall be furnished with a baked prime coat and finish painted to match Architectural requirements.
8. Do not provide opposed blade dampers at diffusers and registers for to balance the airflow, as they tend to create noise. Provide a manual volume damper at each branch take-off and also at branch duct to each diffuser and register. Air throw patterns shall be as indicated on the drawings.
9. Diffusers, registers and grilles indicated or scheduled on the drawings to comply with special requirements shall take precedence over the standard items specified.

C. Performance: Provide ceiling air diffusers that have, as minimum, temperature and velocity traverses, throw and drop, and noise criteria ratings for each size device as listed in manufacturer's current data.

D. Finishes: Ceiling diffusers, registers and grilles: Finishes shall be coordinated with the Architect.

E. Diffusers and registers shall be provided with opposed blade volume dampers.

2.2 EXHAUST AND RETURN CEILING GRILLES

A. Acceptable Manufacturer:

1. Titus
2. Price
3. Krueger
4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. Finish: Baked enamel, White or off-white as selected by the Architect.

C. Mounting: Surface mounted or Lay-in.

D. Provide filler panel when installed in 24” X 24” T-bar ceiling. Panel to match ceiling construction. For 24" x 48" T-bar ceilings, coordinate with ceiling installer for auxiliary tees as required to provide 24" x 24" space. Where full 24" x 24" grid module is not available, surface mount the outlet in center cut to fit ceiling tile.

E. Exhaust and return air registers and grilles, except as noted, shall be removable hinged perforated face plate with 24" x 24" nominal panel size and horizontal inlet flexible duct adapter, applicable to the ceiling it is installed.

2.3 EXHAUST AND RETURN SIDE WALL GRILLES

A. Acceptable Manufacturer:

1. Titus
2. Price
3. Krueger
4. Metal-Aire

B. Substitutions: Section 01 61 00 – Product Requirements Finish: Baked enamel, White or off-white as selected by the Architect.

C. Face Arrangement: ½ blade spacing, 35 degree Fixed deflection

D. Frame: 1 ¼” wide

E. Mounting: Side wall

2.4 CEILING SUPPLY DIFFUSERS

A. Acceptable Manufacturer:

1. Titus
2. Price
3. Krueger
4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. Material: All Aluminum.

C. Finish: Baked enamel, White or off-white as selected by the Architect.

D. Pattern: Adjustable form 1-4 way throw.

E. Mounting: Surface mounted or Lay-in.

F. Provide filler panel when installed in 24” X 24” T-bar ceiling. Panel to match ceiling construction. For 24" x 48" T-bar ceilings, coordinate with ceiling installer for auxiliary tees as required to provide 24" x 24" space. Where full 24" x 24" grid module is not available, surface mount the outlet in center cut to fit ceiling tile.

G. Ceiling diffusers, except as noted, shall be perforated face plate modular core diffuser with removable hinged perforated face plate with 24" x 24" nominal panel size and horizontal inlet flexible duct adapter, applicable to the ceiling it is installed.

H. Ceiling diffusers in rooms without lay in T Bar ceiling shall have frame suitable for ceiling type and as approved by Architect/Engineer.

I. Ceiling diffusers with automatic fire dampers or combination smoke fire dampers where diffusers are installed in fire rated ceilings, shall be State Fire Marshal approved type. Rated enclosures between rated ceiling and fire dampers shall be provided by the Contractor under this Section.

2.5 SUPPLY SIDE WALL GRILLES

A. Acceptable Manufacturer:

1. Titus
2. Price
3. Krueger
4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. Material: All Aluminum

C. Finish: Baked enamel, White or off-white as selected by the Architect.

D. Face Arrangement: 3/4 blade spacing Double Deflection Adjustable Airfoil Blades

E. Frame: 1 1/4” wide

F. Mounting: Side wall

G. Damper: Opposed blade damper

2.6 LINEAR SLOT SUPPLY AND RETURN CEILING DIFFUSERS

A. Acceptable Manufacturer:

1. Titus
2. Price
3. Krueger

4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. Material: Aluminum.

C. Finish: White, baked enamel or off-white as selected by the Architect.

D. Size: Refer to the floor plans for number and size of the slots.

E. Plenum: 12-inch tall with external insulation and vapor barrier.

F. Blank-Offs: Provide blank off panels where diffuser is not activated

G. Mounting: Lay-in or surface mounted

H. Filter Mount: None

I. Pattern: Full 180 degree pattern controller (Adjustable)

J. Damper: Integral.

2.7 DIRECT SPIRAL DUCT MOUNTED SUPPLY GRILLES (FOR EXPOSED DUCTS IN THE MECHANICAL AND ELECTRICAL ROOMS)

A. Acceptable Manufacturer:

1. Titus
2. Price
3. Krueger
4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. Material: Aluminum.

C. Finish: White, baked enamel.

D. Blade: ¾” Blade spacing

E. Mounting: Duct mounted on spiral duct

F. Filter Mount: None

G. Pattern: Double deflection

H. Damper: Opposed blade damper

2.8 DIRECT SPIRAL DUCT MOUNTED PERFORATED RETURN GRILLES (FOR EXPOSED DUCTS IN THE MECHANICAL AND ELECTRICAL ROOMS)

A. Acceptable Manufacturer:

1. Titus

2. Price
3. Krueger
4. Metal-Aire
5. Substitutions: Section 01 61 00 – Product Requirements.

B. Material: Aluminum.

C. Finish: White, baked enamel.

D. Face: Perforated Grille

E. Mounting: Duct mounted on spiral duct

F. Filter Mount: None

G. Pattern: Fixed

H. Damper: Opposed blade damper

2.9 LOUVERS

A. Louvers: As specified in Division 08.

2.10 GRAVITY ROOF VENTILATOR

A. General:

1. Ventilator shall be low silhouette gravity type.
2. Ventilator shall be Cook, Greenheck, U.S. Fan or approved equal.

B. Features:

1. Housing shall be heavy gauge aluminum and bird screening covering the opening. Top shall be aluminum.
2. Finish shall be aluminum.
3. Unit shall set on built-up roof curb.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify inlet and outlet locations.

C. Verify ceiling and wall systems are ready for installation.

D. Verify exact air inlet and outlet type with equipment schedules on drawings and reflected ceiling plans.

3.2 INSTALLATION

A. Install diffusers to ductwork with airtight connection.

B. Install balancing dampers on duct take-off to diffusers, grilles, and registers, whether or not dampers are furnished as part of diffuser, grille, and register assembly. Refer to Division 23, Air Duct Accessories.

C. Paint visible portion of ductwork behind air outlets and inlets matte black. Refer to Division 09.

3.3 DIFFUSERS, REGISTERS AND GRILLES INSTALLATION

A. Coordination with Ceiling Features.

1. Install components to insure that all return air registers are located away from and in a neutral position with respect to any Television, computer station, refrigerators, stoves, microwave ovens, doors and windows. The thermostat will be located such that it senses the average return air temperature most accurately.

    a. These requirements and all components will be outlined on the shop drawings from the HVAC contractor early in the submittal phase for the approval of the design engineer.

2. Install all inlets and outlets as close as possible to that shown on the plans but adjust to fit into the ceiling materials shown on the Architectural, Electrical and Fire Sprinkler plans. All ceiling mounted inlet and outlet devices shall be of the side inlet design and insulated for noise control.
3. In dry wall and plaster ceilings, diffuser, register or grilled trim shall overlap the plaster line with adequate trim.
4. In ceilings with acoustic tile adhesively applied to drywall or plaster ceilings, furnish diffusers, registers or grilles with overlapping margins.
5. In perforated metal plate systems: Square or rectangular diffuser and grille edge trim shall be flush with the finished ceiling.
6. Furnish and install plaster frames for diffusers, grilles and registers which are located on finish plaster surfaces. Plaster frames for grilles and registers shall be set flush with the finished surface and attached to ductwork by hickey punching, with rivets or sheet metal screws. Grilles and registers shall be fastened to the frames with sheet metal screws. All inlet and outlet devices shall be Casketed for air tight mounting.
7. Provide any intake duct not protected by a louver, grille or register with a 1/4" mesh galvanized screen over open end.
8. Paint all ductwork visible through grilles, registers, and other openings with one coat of flat black paint.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

END OF SECTION

SECTION 23 40 00

HVAC AIR CLEANING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pre-filters.
2. Temporary construction filters.
3. Universal holding frames.

B. Related Sections:

1. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for wiring products for placement by this section.

1.2 REFERENCES

A. Air-Conditioning and Refrigeration Institute:

1. ARI 850 - Commercial and Industrial Air Filter Equipment.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.

C. Military Standardization Documents:

1. MIL MIL-STD-282 - Filter Units, Protective Clothing, Gas-Mask Components, and Related Products: Performance-Test Methods.

D. Underwriters Laboratories Inc.:

1. UL 586 - High-Efficiency. Particulate, Air Filter Units.
2. UL 867 - Electrostatic Air Cleaners.
3. UL 900 - Air Filter Units.

1.3 PERFORMANCE REQUIREMENTS

A. Conform to ARI 850 Section 7.4.

1.4 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate filter assembly and filter frames, dimensions, motor locations, and electrical characteristics and connection requirements.

C. Product Data: Submit data on filter media, filter performance data, dimensions, and electrical characteristics.

D. Manufacturer's Installation Instructions: Submit assembly and change-out procedures.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Acceptance or no exceptions taken by the engineer on any substitution proposed by the contractor shall not be construed as relieving the contractor from compliance with the project's specifications and performance requirements nor departure there from. The contractor remains responsible for details and accuracy for confirming and correlating quantities and dimensions and for the selection of fabrication processes, techniques and assembly, coordination of his work with that of all other trades and making any needed modifications consequent to the substitution at his own cost and for performing the work in a safe manner.

1.5 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit instructions for operation, changing, and periodic cleaning.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum ten years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.7 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish one year manufacturer warranty for air cleaning devices.

1.9 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish one set of disposable panel filters.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Filtration Group – Aerostar

B. Flanders Filters Inc.

C. Burke Environmental

D. Cam-Fil/Farr Company

E. American Air Filter

F. Or equal

2.2 FILTERS

A. Types.

1. Filter shall be AAF AMAir 62 Plus with Intersept or equal. Panel filter shall be cotton polyester pleat which exceeds ASHRAE 62-1989 R Standards for minimum filtration efficiency of Merv13 with Intercept, (durable, low toxicity, broad spectrum antimicrobial that inhibits the growth of mildew, bacteria, and fungi on filter media).
2. Filter face velocity shall not exceed 300 FPM at nominal airflows.
3. Filter shall be U.L. fisted Class 2.
4. Filter shall have a maximum rating as follows: flame spread 25, fuel contribution 50, smoke development 50.
5. Provide the larger of a minimum of (24) spare filters, or one filter for each unit supplied, delivered to the Owner.

B. Certification:

1. Include an individual test report for each type of filter prepared by an independent testing laboratory with test equipment specified in ASHRAE Standard 52 81 using a 24 1/ x 24 1/2" duct section for the filter under test.
2. Each test report shall include filter descriptive information and assurance that the construction and performance is in accordance with the Specifications.
3. All filters tested shall have been procured by the independent testing laboratory from the open market independent of the manufacturer of these filters, and a statement of this fact shall accompany the submittal along with the test report.

2.3 FILTER GAUGES

A. The HVAC Contractor shall purchase and install gauges on the HVAC equipment. The Gages shall be of the diaphragm actuated differential pressure type, Dwyer Series 2000 Magnehelic.

B. Gauges shall have a 4 1/2" dial face, white with black numbers, graduations and pointer.

C. Gauges shall be capable of being calibrated.

D. Select range to operate at not more than 85% of dial range at filter maximum change out static pressure differential not less than 25% of range for new filters with minor divisions of .05" wc.

E. Install adjustable signal flags on each gauge.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Furnish units complete with start-up filters, retainer frames and housing certified to meet design requirements. The HVAC Sub-Contractor shall install them in the units prior to air balance.

B. Install all air cleaning devices in accordance with approved shop drawings and the manufacturer’s printed recommendations

C. Install differential magnehelic pressure gauges across each filter bank.

D. Prevent passage of unfiltered air around filters with felt, rubber, or neoprene gaskets.

E. Do not operate fan system until filters (temporary) are in place. Replace temporary filter used during construction.

F. Install static pressure tip on the upstream side in an unobstructed area and not obstructing the removal of filters. Sensor on downstream side shall be a perforated tube traversing the filter face. Mount filter gages on outside of filter housing or filter plenum, in accessible position. Adjust and level.

G. Provide alarm to indicate the time for change-out. Typical or all filter banks.

H. Filter banks shall be installed without any measurable air leakages

3.2 TEMPORARY AND CONSTRUCTION FILTERS

A. Provide (4) sets of 1-1/2 inch polyester media blankets to protect all pre filter banks during the construction period. Provide two (2) sets MERV8 filters for use in the pre filter bank during the construction period. At no time during the construction period are systems to be operated without blanket filters and filters.

B. Blanket polyester media shall be used in conjunction with filters at all times

C. The Contractor shall provide continuous maintenance of the temporary filters in all units during the entire construction, start-up, testing, and final acceptance activities. The Contractor shall provide additional temporary filters as necessary to facilitate completion of all start-up, testing and commissioning activities.

D. After completion of the testing of the air handling equipment and systems and approval of same, but before final acceptance of the project, replace all filters and

ensure that the correct quantity of spare filters are stored on site and signed for by the MUSD Project Management Team.

END OF SECTION

SECTION 23 51 00

`BREACHING CHIMNEYS, AND STACKS

PART 1 - GENERAL

PRODUCT DATA SHEET 0 - Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.1 SUMMARY

A. Section Includes:

1. Type B double wall gas vents.
2. Double wall metal stacks.

B. Related Sections:

1. Section 03 10 00 - Concrete Forming and Accessories: Execution requirements for inserts specified by this section.
2. Section 03 30 00 - Cast-In-Place Concrete: Concrete for stack foundations.
3. Section 22 34 00 - Fuel-Fired Domestic Water Heaters: Water heaters using breeching, chimneys, and stacks.
4. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for draft fan motors for placement by this section.
5. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers and supports for placement by this section.
6. Section 23 07 00 - HVAC Insulation: Execution requirements for insulation specified by this section.

1.2 REFERENCES

A. American National Standards Institute:

B. ASTM International:

2. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
3. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
4. A1011/A1011M-07 Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength
5. ASTM C401 - Standard Classification of Alumina and Alumina-Silicate Castable Refractories.

C. National Fire Protection Association:

1. NFPA 31 - Standard for the Installation of Oil-Burning Equipment.
2. NFPA 54 - National Fuel Gas Code.
3. NFPA 211 - Standard for Chimneys, Fireplaces, Vents, and Solid Fuel Burning Appliances.

D. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - Guide for Steel Stack Construction.
2. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

E. Underwriters Laboratories Inc.:

1. UL 103 - Factory-Built Chimneys for Residential Type and Building Heating Appliances.
2. UL 127 - Factory-Built Fireplaces.
3. UL 378 - Draft Equipment.
4. UL 441 - Gas Vents.
5. UL 641 - Type L Low-Temperature Venting Systems.
6. UL 959 - Medium Heat Appliance Factory Built Chimneys.

1.3 DEFINITIONS

A. Breeching: Vent Connector.

B. Chimney: Primarily vertical shaft enclosing at least one vent for conducting flue gases outdoors.

C. Smoke Pipe: Round, single wall vent connector.

D. Vent: Portion of a venting system designed to convey flue gases directly outdoors from a vent connector or from an appliance when a vent connector is not used.

E. Vent Connector: Part of a venting system that conducts the flue gases from the flue collar of an appliance to a chimney or vent, and may include a draft control device.

1.4 DESIGN REQUIREMENTS

A. Design refractory lined metal stacks for wind loading of 110 mphand seismic loads for Zone 4.

1.5 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittals procedures.

B. Shop Drawings: Indicate general construction, dimensions, weights, support and layout of breeching. Submit layout drawings indicating plan view and elevations [where factory built unit is used] [; signed and sealed by professional engineer].

C. Product Data: Submit data indicating factory built chimneys, including dimensional details of components and flue caps, dimensions and weights, electrical characteristics and connection requirements.

D. Product Data: Submit data on fans and accessories including fan curves with specified operating point plotted, power, RPM, and electrical characteristics and connection requirements.

E. Samples: one sample in size illustrating finish of chimney and general appearance including flue cap.

F. Manufacturer's Installation Instructions: Submit assembly, support details, and connection requirements.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with State of standard.

B. Maintain one copy of each document on site.

C. Provide factory built vents and chimneys used for venting natural draft appliances complying with NFPA 211 and UL listed and labeled.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years [documented] experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Division 01 - Product Requirements.

B. Maintain water integrity of roof during and after installation of chimney or vent.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for manufactured units.

PART 2 - PRODUCTS

2.1 TYPE B DOUBLE WALL GAS VENTS

A. Manufacturers:

1. Parker Boiler
2. Fabrication: Inner pipe of sheet aluminum, and outer pipe of galvanized sheet steel, tested in compliance with UL 441.

2.2 DOUBLE WALL METAL STACKS

A. Manufacturers:

1. Parker Boiler.
2. Substitutions: [Allowed

B. Furnish materials in accordance with State standards.

C. Furnish double wall metal stacks, tested to UL 103 UL 127 UL 641 and UL listed, for use with building heating equipment, in compliance with NFPA 211.

D. Fabricate with 1 inch minimum air space between walls. Construct inner jacket of 20 gage ASTM A240/A240M or ASTM A666Type 304 Type 316 stainless steel. Construct outer jacket of aluminum coated steel [Type 304 Type 316 stainless steel 24 gage for sizes 10 inches to 24 inches and 20 gage for sizes 28 inches to 48 inches.

E. Accessories, UL labeled:

1. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers and storm collar.
2. Exit Cone: Consists of inner cone, and outer jacket, to increase stack exit velocity 1.5 times.
3. Stack Cap: Consists of conical rainshield with inverted cone for partial rain protection with low flow resistance.

PART 3 - EXECUTION

3.1 PREPARATION

A. Install concrete inserts for support of breeching, chimneys, and stacks in coordination with formwork.

3.2 INSTALLATION

A. Install in accordance with NFPA 54NFPA 31SMACNA Guide for Steel Stack Construction.

B. Install Work in accordance with State and local standards.

C. Install breeching with minimum of joints. Align accurately at connections, with internal surfaces smooth.

D. Support breeching from building structure, rigidly with suitable ties, braces, hangers and anchors to hold to shape and prevent buckling. Support vertical breeching, chimneys, and stacks at 12 foot spacing, to adjacent structural surfaces, or at floor penetrations. Refer to SMACNA HVAC Duct Construction Standards - Metal and Flexible for equivalent duct support configuration and size.

E. Install stacks on concrete foundations. Refer to Section 03 30 00.

F. Pitch breeching with positive slope up from fuel-fired equipment to chimney or stack.

G. Coordinate installation of dampers, and induced draft fans.

H. Insulate breeching in accordance with Section 23 07 00.

I. For Type B double wall gas vents, maintain UL listed minimum clearances from combustibles. Assemble pipe and accessories for complete installation.

J. Install vent dampers, locating close to draft hood collar, and secured to breeching.

K. Assemble and install stack sections in accordance with NFPA 82, industry practices, and in compliance with UL listing. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.

L. Level and plumb chimney and stacks.

M. Clean breeching, chimneys, and stacks during installation, removing dust and debris.

N. Install slip joints allowing removal of appliances without removal or dismantling of breeching, breeching insulation, chimneys, or stacks.

O. Provide [minimum length] [maximum 2 feet] of breeching to connect appliance to chimney. [Provide Type B chimney continuously from appliances.]

P. Extend vent above roof in accordance with applicable code.

Q. Maximum Vent Horizontal Distance: 75 percent of vent vertical distance.

R. Where appliance requires draft hood or barometric control device, install manufacturer furnished listed devices in accordance with manufacturer's instructions and applicable code.

J. AHRI 270 - Sound Rating of Outdoor Unitary Equipment. (all below 135,000)

K. AHRI 370 - Sound Rating of Large Outdoor Refrigerating and Air Conditioning Equipment. (all above 135,000 Btuh)

L. ANSI/NFPA 70-1995 - National Electric Code. (all)

1.2 SUBMITTALS

A. Submit unit performance data including: capacity, nominal and operating performance.

1.3 DELIVERY, STORAGE and HANDLING

A. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

1.4 WARRANTY

A. Provide parts warranty (excluding refrigerant) for one year from start-up or 18 months from shipment, whichever occurs first.

B. Provide five-year extended warranty for compressors.

C. Provide five-year heat exchanger limited warranty.

1.5 REGULATORY REQUIREMENTS

A. Unit shall conform to ANSI Z21.47/UL1995 for construction of packaged air conditioner.

1. In the event the unit is not UL approved, the manufacturer must, at his expense, provide for a field inspection by a UL representative to verify conformance to UL standards. If necessary, contractor shall perform modifications to the unit to comply with UL, as directed by the UL representative, at no additional expense to the Owner.
2. Equipment shall be supplied as factory direct by manufacturer. Dealer and/ or distributor provided equipment will not be acceptable.
3. Manufacturer shall maintain a minimum of (8) factory direct service technicians and a parts store within a 75 mile radius from the jobsite to ensure timely on-site assistance and minimize equipment downtime.
4. Manufacturer shall provide a factory direct service agency with a 24 hour Emergency Support.
5. Manufacturer shall provide local factory direct representative for engineering, installation, controls and design support.

PART 2 - PRODUCTS

2.1 SUMMARY

A. The contractor shall furnish and install package rooftop unit(s) as shown and scheduled on the contract documents. The unit(s) shall be installed in accordance with this specification and perform at the specified conditions as scheduled.

B. APPROVED MANUFACTURERS

1. Approved manufacturer shall be Trane, with pre-approved alternates York and Carrier considered. Alternates must comply with all performance and features as called for in this specification. Job awarded on basis of specified equipment. Alternate will be evaluated and considered after job is awarded.
2. Manufacturer must clearly define any exceptions made to Plans and Specifications. Any deviations in layout or arrangement shall be submitted to consulting engineer prior to bid date. Acceptance of deviation(s) from specifications shall be in the form of written approval from the consulting engineer. Mechanical Contractor is responsible for expenses that occur due to exceptions made.

2.2 GENERAL UNIT DESCRIPTION

A. Unit(s) furnished and installed shall be gas electric packaged rooftop (s) as scheduled on contract documents and these specifications. Cooling capacity ratings shall be based on AHRI. Unit(s) shall consist of insulated weather-tight casing with compressor(s), air-cooled condenser coil, condenser fans, evaporator coil, return-air filters, supply motors and unit controls.

B. Unit(s) shall be 100% factory run tested and fully charged with R-410A.

C. Units shall be convertible airflow design as manufactured.

2.3 UNIT CASING

A. Cabinet: Galvanized steel, phosphatized, and finished with an air-dry paint coating with removable access panels. Structural members shall be 18 gauge with access doors and removable panels of minimum 20 gauge.

B. Units cabinet surface shall be tested 1000 hours in salt spray test in compliance with ASTM B117.

C. Cabinet top cover shall be one piece construction or where seams exits, it shall be double-hemmed and gasket-sealed.

D. Access Panels: Water- and air-tight panels with handles shall provide access to filters, heating section, return air fan section, supply air fan section, evaporator coil section, and unit control section.

E. Units base pan shall have a raised 1 1/8 inch high lip around the supply and return openings for water integrity.

F. Insulation: Provide 1/2 inch thick fiberglass insulation with foil face on all exterior panels in contact with the return and conditioned air stream. All edges must be captured so that there is no insulation exposed in the air stream.

G. Provide openings either on side of unit or through the base for power, control, condensate, and gas connections.

2.4 AIR FILTERS

A. Air Filters: Factory installed filters shall mount integral within the unit and shall be accessible through access panels. One-inch thick glass fiber disposable media filters shall be provided with the provisions within the unit for Merv 13 two inch thick filters to be field- provided and installed.

2.5 FANS AND MOTORS

A. Provide evaporator fan section with forward curved, double width, double inlet, centrifugal type fan.

B. Provide self-aligning, grease lubricated, ball or sleeve bearings with permanent lubrication fittings.

C. Provide units 5 tons and below with direct drive, multiple speed, dynamically balanced supply fans.

D. Provide units 6 tons and above with belt driven, supply fans with adjustable motor sheaves.

E. Outdoor and Indoor Fan shall be permanently lubricated and have internal thermal overload protection.

F. Outdoor fans shall be direct drive, statically and dynamically balanced, draw through in the vertical discharge position.

G. Provide shafts constructed of solid hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.

2.6 GAS FIRED HEATING SECTION

A. Completely assembled and factory installed heating system shall be integral to unit, UL or CSA approved specifically for outdoor applications for use downstream from refrigerant cooling coils. Threaded connection with plug or cap provided. Provide capability for gas piping.

B. Induced draft combustion type with direct spark ignition system, redundant main gas valve, and 2-staged heat.

C. Gas Burner Safety Controls: Provide safety controls for the proving of combustion air prior to ignition, and continuous flame supervision. Provide flame rollout switches.

D. Induced draft blower shall have combustion air proving switches and built-in thermal overload protection on fan motor.

E. Heat Exchanger: Provide tubular section type constructed from 18-gauge aluminized steel.

F. Limit controls: High temperature limit controls will shut off gas flow in the event of excessive temperatures resulting from restricted indoor airflow or loss of indoor airflow.

2.7 EVAPORATOR COIL

A. Provide configured aluminum fin surface mechanically bonded to copper tubing coil.

B. Provide an independent expansion device for each refrigeration circuit. Factory pressure tested at 450 psig and leak tested at 200 psig.

C. Provide a removable, reversible, cleanable double sloped drain pan for base of evaporator coil constructed of PVC.

2.8 CONDENSER SECTION

A. Provide vertical discharge, direct drive fans with aluminum blades. Fans shall be statically balanced. Motors shall be permanently lubricated, with integral thermal overload protection in a weather tight casing.

2.9 REFRIGERATION SYSTEM

A. Compressor(s): Provide scroll compressor with direct drive operating at 3600 rpm. Integral centrifugal oil pump. Provide suction gas cooled motor with winding temperature limits and compressor overloads.

B. Units shall have cooling capabilities down to 0 degree F as standard. For field-installed low ambient accessory, the manufacturer shall provide a factory-authorized service technician that will assure proper installation and operation.

C. Provide each unit with refrigerant circuit(s) factory-supplied completely piped with liquid line filter-drier, suction and liquid line pressure ports.

D. For heat pump units, provide reversing valve, discharge muffler, flow control check valve, and electronic adaptive demand defrost control on all units.

2.10 EXHAUST/RETURN SECTION

A. Provide, on down flow units above 6 tons, a factory supplied field installed 100% relief power exhaust assembly that shall assist the barometric relief damper in the economizer in relieving building pressurization.

2.11 OPERATING CONTROLS

A. Provide microprocessor unit-mounted DDC control which when used with an electronic zone sensor provides proportional integral room control. This UCM shall perform all unit functions by making all heating, cooling, and ventilating decisions through resident software logic.

B. Provide factory-installed indoor evaporator defrost control to prevent compressor slugging by interrupting compressor operation.

C. Provide an anti-cycle timing and minimum on/off between stages timing in the microprocessor.

D. Economizer Preferred Cooling (if supplied with economizer) - Compressor operation is integrated with economizer cycle to allow mechanical cooling when economizer is not adequate to satisfy zone requirements. Compressors are enabled if space temperature is recovering to cooling setpoint at a rate of less than 0.2 degrees per minute. Compressor low ambient lockout overrides this function.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify roof curbs are installed and dimensions are as shown on shop drawings.

3.2 INSTALLATION

A. Roof Curb:

1. Assemble roof curb.
2. Install roof curb level.
3. Coordinate curb installation and flashing.
4. Install units on roof curb providing watertight enclosure to protect ductwork and utility services.
5. Install gasket material between unit base and roof curb.

B. Connect units to supply and return ductwork with flexible connections.

C. Install condensate piping with trap and route from drain pan to a code approved receptor.

D. Install components furnished loose for field mounting.

E. Install electrical devices furnished loose for field mounting.

F. Install control wiring between unit and field installed accessories.

G. Provide sheaves required for final air balance.

3.3 INSTALLATION - NATURAL GAS HEATING SECTION

A. Connect natural gas piping in accordance with NFPA 54.

B. Connect natural gas piping to unit, full size of unit gas train inlet. Arrange piping with clearances for burner service.

C. Install the following piping accessories on natural gas piping connections.

1. Strainer.
2. Pressure gage.
3. Shutoff valve.
4. Pressure reducing valve.

3.4 MANUFACTURER'S FIELD SERVICES

A. Furnish services of factory trained representative for minimum of one days to leak test, refrigerant pressure test, evacuate, dehydrate, charge, start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.5 CLEANING

A. Vacuum clean coils and inside of cabinets.

B. Install new throwaway filters in units at Substantial Completion.

3.6 DEMONSTRATION

A. Demonstrate unit operation and maintenance.

B. Furnish services of manufacturer's technical representative for one 8 hour day to instruct Owner's personnel in operation and maintenance of units. Schedule training with Owner, provide at least 7 days notice to Architect/Engineer of training date.

END OF SECTION

SECTION 23 81 26

SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Split heat pump units
2. Condensing unit.

B. Related Sections:

1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for concrete foundations specified by this section.
2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Vibration isolators.
3. Section 23 09 23 - Direct-Digital Control System for HVAC: Controls remote from unit.
4. Section 23 21 13 - Hydronic Piping: Execution requirements for connection to hot water and drain piping specified by this section.
5. Section 23 23 00 - Refrigerant Piping: Execution requirements for connection to refrigerant piping specified by this section.
6. Section 23 33 00 - Air Duct Accessories: Flexible connections.
7. Section 25 50 00 - Integrated Automation Facility Controls: Control systems remote from unit.
8. Section 26 05 03 - Equipment Wiring Connections: Electrical connection to units.

1. Cooling and heating capacities.
2. Dimensions.
3. Weights.
4. Rough-in connections and connection requirements.
5. Electrical requirements with electrical characteristics and connection requirements.
6. Controls.
7. Accessories.

C. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

D. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

E. Manufacturer’s Field Reports: Submit start-up report for each unit.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements Closeout procedures.

B. Project Record Documents: Record actual locations of controls installed remotely from units.

C. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

1.5 QUALITY ASSURANCE

A. Performance Requirements: Energy Efficiency Rating (EER) not less than prescribed by ASHRAE 90.1 when used in combination with compressors and evaporator coils when tested in accordance with ARI 210/240.

B. Cooling Capacity: Rate in accordance with ARI 210/240.

C. Sound Rating: Measure in accordance with ARI 270.

D. Insulation and adhesives: Meet requirements of NFPA 90A.

E. Perform Work in accordance with State of California standards.

F. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 31 00 – Project Management and Coordination: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 61 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept units and components on site in factory protective containers, with factory shipping skids and lifting lugs. Inspect for damage.

C. Comply with manufacturer's installation instruction for rigging, unloading and transporting units.

D. Protect units from weather and construction traffic by storing in dry, roofed location.

1.9 COORDINATION

A. Section 01 31 00 – Project Management and Coordination: Requirements for coordination.

B. Coordinate installation of condensing units with roof structure.

C. Coordinate installation of air handling units with building structure.

1.10 WARRANTY

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for warranties.

B. Furnish five year manufacturer’s warranty for compressors.

1.11 MAINTENANCE SERVICE

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for maintenance service.

B. Furnish service and maintenance of equipment for one year from Date of Substantial Completion. Include maintenance items as shown in manufacturer's operating and maintenance data, including filter replacements, fan belt replacement, and controls checkout and adjustments.

C. Furnish 24-hour emergency service on breakdowns and malfunctions for this maintenance period. Furnish capability of response time within hours.

1.12 MAINTENANCE MATERIALS

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for maintenance materials.

PART 2 - PRODUCTS

2.1 SPLIT SYSTEM AIR CONDITIONING UNITS

A. Manufacturers:

1. Daikin
2. Mitsubishi
3. Substitutions: Section 01 61 00 - Product Requirements.

B. Product Description: Split system consisting of air handling unit or fan coil unit and condensing unit including cabinet, evaporator fan, refrigerant cooling coil, compressor, refrigeration circuit, condenser, air filters, controls, air handling unit accessories, condensing unit accessories, and refrigeration specialties.

C. Provide all factory sized and approved installation components and controls including refrigerant piping, heat recovery boxes, and all field supplied components ductwork, insulation, condensate pump and drain. Make-up outside air shall be ducted to each fan coil as required per T24 from dedicated outside air unit as required.

D. Refrigerant Pipe and Pipe Fittings: ACR grade type K & L hard drawn copper piping with brazed wrought copper solder pressure fittings when exposed to view, may be soft annealed concealed to view. Install all piping as recommended and specified by the equipment manufacturer and as necessary for a complete installation and warranty. Insulation shall be Owens Corning Certainteed FSK & continuous vapor barrier in PVC, stainless steel or aluminum jacket, and pre-molded insulated fitting covers. Staples and other penetrations not allowed.

2.2 FAN COIL UNIT

A. General: Indoor, direct-expansion, wall-mounted fan coil. Unit shall be complete with cooling/heating coil, fan, fan motor, piping connectors, electrical controls,

microprocessor control system, and integral temperature sensing. Unit shall be furnished with integral wall mounting bracket and mounting hardware.

B. Unit Cabinet: Cabinet discharge and inlet grilles shall be attractively styled, high-impact polystyrene. Cabinet shall be fully insulated for improved thermal and acoustic performance.

C. Fans:

1. Fan shall be tangential direct-drive blower type with air intake at the top of the unit and discharge at the bottom front. Automatic, motor-driven vertical air sweep shall be provided standard.
2. Air sweep operation shall be user selectable. The vertical sweep may be adjusted (using the remote control) and the horizontal air direction may be set manually.

D. Coil: Coil shall be copper tube with aluminum fins and galvanized steel tube sheets. Fins shall be bonded to the tubes by mechanical expansion. A drip pan under the coil shall have a drain connection for hose attachment to remove condensate. Condensate pan shall have internal trap.

E. Motor: Motors shall be open drip-proof, permanently lubricated ball bearing with inherent overload protection. Fan motors shall be 3-speed.

F. Controls:

1. Controls shall consist of a microprocessor-based control system which shall control space temperature, determine optimum fan speed, and run self diagnostics. The temperature control range shall be from 62 deg F to 84 deg F.
2. User interface with the unit shall be accomplished through the standard wireless remote control or an optional wired controller or Zone Manager. The unit shall have the following functions as a minimum:

    a. An automatic restart after power failure at the same operating conditions as at failure.
    b. A timer function to provide a minimum 24-hour timer cycle for system Auto Start/Stop.
    c. Temperature-sensing controls shall sense return air temperature.
    d. Indoor coil freeze protection.
    e. Automatic air sweep control to provide on or off activation of air sweep louvers.
    f. Fan-only operation to provide room air circulation when no cooling is required.
    g. Fan speed control shall be user-selectable: high, medium, low, or microprocessor controlled automatic operation during all operating modes.

G. Filters: Unit shall have filter track with factory-supplied cleanable filters.

H. Refrigerant Lines: All units should have refrigerant lines that can be oriented to connect from the left, right or back of the unit. Both refrigerant lines need to be insulated.

2.3 CONDENSING UNIT

A. Air-Cooled Condensing Unit (Outdoor Unit):

1. System Description:

a. Outdoor-mounted, air-cooled, split-system air conditioning unit suitable for ground or rooftop installation. Unit shall consist of a scroll compressor, and air-cooled coil, propeller-type blow-thru condenser fan, accumulator, full refrigerant charge, and control box and provide with ECM or separate permanent split capacitor motor.
b. Unit shall discharge supply air HORIZONTALLY as shown on contract drawings.
c. Unit shall be used in a condensing unit circuit to match up to a fan coil unit.

2. Quality Assurance:

a. Unit shall be rated in accordance with the latest edition of ARI Standard 210, and be certified for capacity, efficiency, and listed in the latest ARI directory.
b. Unit construction shall comply with latest edition of ANSI/ASHRAE and with NEC.
c. Unit shall be constructed in accordance with UL standards and carry the UL label of approval.
d. Unit cabinet shall be capable of withstanding Federal Test Method Standard No. 141 (Method 6061) 500-hr salt spray test.
e. Air-cooled condenser coils shall be leak tested at 150 psig and pressure tested at 300 psig.

3. Equipment:

a. Factory-assembled, single-piece air-cooled condensing unit. Contained within the unit enclosure shall be all factory wiring, piping, controls, compressor, refrigerant charge (R410A), and special features required prior to field start-up.
b. Unit cabinet shall be constructed of galvanized steel, bonderized, and coated with powder coat paint.
c. Condenser fan shall be direct-drive propeller type, discharging air horizontally. Condenser fan motors shall be totally enclosed, 1-phase type with class B insulation and permanently lubricated bearings. Shafts shall be corrosion resistant and fan blades shall be statically and dynamical balanced.
d. Condenser fan openings shall be equipped with PVC-coated steel wire safety guards.
e. Compressor will be hermetically sealed and mounted on rubber vibration isolators.
f. Condenser coil shall be air cooled and constructed of aluminum fins mechanically bonded to copper tubes, cleaned, dehydrated, and sealed.
g. Refrigeration circuit components shall include liquid line shutoff valve with sweat connections, suction line shutoff valves with sweat connections, system charge of refrigerant R410A, compressor oil, accumulator, bi-flow filter drier and pressure relief.

2.4 CONTROLS

A. Thermostat: Remote space thermostat with single stage cooling. Furnish system selector switch off-cool.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 31 00 – Project Management and Coordination: Verification of existing conditions before starting work.

B. Verify concrete pad for condensing unit is ready for unit installation.

3.2 INSTALLATION - AIR HANDLING UNIT (FAN COIL UNIT)

A. Install air handling units as recommended by manufacturer on vibration isolators.

B. Refer to Section 23 33 00.

C. Install condensate piping with trap and route from drain pan to condensate drainage system. Refer to Section 23 21 13.

D. Install components furnished loose for field mounting.

E. Install connection to electrical power wiring in accordance with Section 26 05 03.

3.3 INSTALLATION - CONDENSING UNIT

A. Install condensing units on vibration isolators.

B. Install units on equipment platforms. Refer to Section 03 30 00.

C. Install refrigerant piping from unit to condensing unit. Install refrigerant specialties furnished with unit.

D. Evacuate refrigerant piping and install initial charge of refrigerant.

E. Install electrical devices furnished loose for field mounting.

F. Install control wiring between air handling unit, condensing unit, and field installed accessories.

G. Install connection to electrical power wiring in accordance with Section 26 05 03.

3.4 MANUFACTURER'S FIELD SERVICES

A. Section 01 43 00 - Quality Assurance: Requirements for manufacturer’s field services.

B. Furnish initial start-up and shutdown during first year of operation, including routine servicing and checkout.

3.5 CLEANING

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for cleaning.

B. Vacuum clean coils and inside of unit cabinet.

C. Install new throwaway filters in units at Substantial Completion.

3.6 DEMONSTRATION

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for demonstration and training.

B. Demonstrate air handling unit operation and maintenance.

C. Demonstrate starting, maintenance, and operation of condensing unit including low ambient temperature operation.

D. Furnish services of manufacturer's technical representative for one 4-hour day to instruct Owner's personnel in operation and maintenance of units. Schedule training with Owner, provide at least 7 days notice to Architect/Engineer of training date.

3.7 PROTECTION OF FINISHED WORK

A. Section 01 73 00 – Execution Requirements and Section 01 77 00 – Closeout Requirements: Requirements for protecting finished Work.

B. Do not operate air handling units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION

SECTION 26 05 00

ELECTRICAL GENERAL PROVISIONS

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment, facilities, transportation, and services necessary for and incidental to performing all operations in connection with furnishing, delivery, and installation of the work of this Section, complete, as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to, the following:

1. Examine all other Sections for work related to those other Contract Document Sections and required to be included as work under this Section and this Division.

2. Electrical General Provisions and Requirements for electrical work.

3. Division-1; General Requirements; General Conditions.

B. Organization of the Specifications into Divisions, Sections and Articles, and arrangement of Drawings shall not control the Contractor in dividing the Contract Work among Sub-Contractors or in establishing the extent of work to be performed by any trade.

1.2 GENERAL SUMMARY OF ELECTRICAL WORK

A. The Specifications and Drawings are intended to cover a complete installation of systems. The omission of expressed reference to any item of labor or material for the proper execution of the work in accordance with present practice of the trade shall not relieve the Contractor from providing such additional labor and materials.

1. The Contract Document terms “Provide”, “Provided”, “Providing”, are each defined to mean individually and collectively: Contractor shall furnish, and Contractor shall install, and Contractor shall connect.

B. Refer to the Drawings and Shop Drawings of other trades for additional details, which affect the proper installation of this work. Diagrams and symbols showing electrical connections are diagrammatic only. Wiring diagrams do not necessarily show the exact physical arrangement of the equipment.

C. Before submitting a bid, Become familiar with all features of the Building Drawings and Site Drawings, which may affect the execution of the work. No extra payment will be allowed for failure to obtain this information.

D. If there are omissions or conflicts between the Drawings and Specifications, clarify these points with the Owner’s Representative before submitting bid and before commencing work.

E. Provide work and material in conformance with the Manufacturer's published recommendations for respective equipment and systems.

1.3 LOCATIONS OF EQUIPMENT

A. The Drawings indicate diagrammatically the desired locations or arrangements of conduit runs, outlets, equipment, etc., and are to be followed as closely as possible. Proper judgment shall be exercised in executing the work to secure the best possible installation in the available space and to overcome local difficulties due to space limitations or interference of structure conditions encountered.

B. Where outlets are placed on a wall, locate symmetrically with respect to each other, furniture, cabinets, and other features or finishes on the wall.

C. In the event changes in the indicated locations or arrangements are necessary, due to developed conditions in the building construction or rearrangement of furnishings or equipment, such changes shall be made without cost to the Contract, providing the change is ordered before the conduit runs, etc., and work directly connected to same is installed and no extra materials are required.

D. Lighting fixtures in mechanical spaces are shown in their approximate location only. Do not install light outlets or fixtures until mechanical piping and ductwork is installed; then installs lights in a location to provide best lighting.

E. Coordinate and cooperate in every way with other trades to avoid interference and assure a satisfactory job.

F. The location of the existing utilities, building, equipment, and conduit shown on the Drawings is approximate. Verify exact locations and routing of existing systems during pre-construction.

1. Pothole all trench routes prior to digging the trench. Pothole at least 100 feet ahead of the actual trenching to allow space to alter the new conduit routing to accommodate existing conditions.

2. In-buildings employ raceway/circuit tracers, x-ray visual detection, RF/ ultrasound, electromagnetic circuit detection to avoid damaging existing hidden conditions.

3. Repair/replace, without additional cost to the Contract, and to the satisfaction of the Owner any existing work damaged that was identified in the Record Drawings provided; Identified by the Owner's Representative; Identified by In-Building Investigation; Identified by the Underground Detection Services performed; or any existing work damaged as a result of failure to comply with all the Referenced Requirements.

G. Underground Detection Services Existing Utility Structures

1. Detection/location services shall be provided utilizing the latest detection equipment available. Services shall be performed by a company regularly engaged in the business of existing Underground Utility Structure Detection for the past 5-years.

2. Prior to excavation and prior to directional boring the following work shall be performed:

    a. Contractor to mark excavation, trenching and directional boring locations and indicate width and depth.
    b. Locate, by way of vertical and horizontal control dimensions, existing subgrade petroleum product pipes, process piping, conduits, sewer, water, gas, storm drain, electrical, telephone, and irrigation lines in the affected areas of Contract construction work.
    c. Arrange and meet with the Owner's Representative to review existing underground conditions.
    d. The proposed location and route of each excavation shall be continuously surveyed along the entire excavation path using Ground-Penetrating Radar (GPR) operating from the surface grade. The GPR shall detect and map existing underground metal and non-metal, both private and public utility lines, pipes, conduits, conductors, etc. The GPR shall identify the horizontal and vertical location of existing underground conditions located at a depth of up to 3-meters below finish grade and located with a vertical and horizontal accuracy within ±12-inches of actual condition. The Contractor shall add this information to the existing Conditions Site Plan.

3. Exercise extreme caution in directional boring, excavating and trenching on this site to avoid existing underground utilities and structures, and to prevent hazard to Personnel and/or damage to existing underground utilities or structures. The Contract Documents, Drawings and Specifications do not include necessary components for construction safety, which is the responsibility of the Contractor.

4. The Contractor shall contact Common Ground Alliance (CGA) telephone #811 “Know What’s Below-Call Before You Dig” and Underground Service Alert (USA), not less than 72-hours prior to excavation. Contractor shall not excavate until verification has been received from CGA and USA that existing underground utilities serving the site have been located, identified, and marked.

H. The locations of existing in-building or underground utilities, where shown on Drawings, are shown diagrammatically and have not been independently verified by the Owner, the Owner’s Representative, Architect/Engineer. The Owner, Owner’s Representative, and the Owner’s Architect/Engineer are not responsible for the location of existing utilities or structures, whether or not shown or detailed and installed under this or any other Contracts. The Contractor shall identify each existing utility line prior to cutting on excavation and mark the locations on the building’s surfaces and ground surfaces of each existing circuit and utility line.

1.4 HVAC-AIR CONDITIONING, HEATING, PLUMBING EQUIPMENT WIRING

Provide electrical work, materials, and control components required for proper operation of the air conditioning, heating and plumbing systems as indicated on the Electrical, Mechanical, and Plumbing Contract Documents and specified herein.

1.5 ELECTRICAL POWER SERVICE

A. Electrical power service and metering facilities shall conform to the Requirements of the serving Utility Companies. Contractor shall verify Service Locations and

Requirements and shall pay all costs levied by the serving Utility Companies for rendering utility services to the Contract without additional cost to the Owner. Service information will be furnished by the serving utilities.

B. Conform to All Requirements of the serving Utility Company. Location of transformer pad and or manholes and pull boxes and routing of service conduits indicated on the Drawings are approximate and shall be verified with the serving Utility Company prior to installation. Installation of service shall not begin until approved Drawings have been received from the serving Utility Company.

C. Within 30-calendar days of receipt of notice that the Contract award has been made, the Contractor shall notify the New Business Departments of the District Office of the serving Utility Company concerning the project Contract and shall provide information as to the total Lighting, and Power Requirements of the Contract. The Contractor shall furnish at the same time information as to the estimated completion date of job or the date when the respective Utility Company circuits, will be ready for installation, energizing and activation of the respective services.

D. Contractor shall submit Electrical Utility Metering and Electrical Service Entrance Equipment Shop Drawings to the Electric Utility Company supplying the project for review and approval by the serving Utility Company. The submittal and acceptance by the Utility shall occur prior to submitting of Shop Drawings to the Owner's Representative or A/E for review. Copies of the serving Electrical Utility approval of the service entrance equipment shall be included in the Shop Drawings submittals to the Owner's Representative and A/E.

1.6 PERMITS

Take out and pay for all required permits, inspections, and examinations without additional cost to the Owner.

1.7 QUALITY ASSURANCE

A. Work and Materials shall be in full accordance with the latest recommendations, Rules, and Regulations. The publications shall be included in the Contract Documents as Contract Requirements. If a conflict occurs between the following publications and any other part of the Contract Documents, the Requirements describing the more restrictive provisions shall become the applicable Contract Definition and Requirement:

1. American National Standards Institute – ANSI.

2. California Code of Regulations Title 24.

3. California Part 3 "California Electrical Code" CEC, Title 24 and Title 8 "Division of Industrial Safety".

4. California Building Code - CBC.

5. California Fire Code – CFC

6. The National Electrical Code – NEC/NFPA 70.

7. The Life Safety Code – NFPA 101.

8. Illuminating engineering Society of North America. IES and IESNA.

9. International Building Code – IBC.

10. National Fire Protection Agency - NFPA.

11. National Fire Alarm Code – NFAC/NFPA 72.

12. Underwriter's Laboratory – UL.

13. Other applicable State and Local Government Agencies Laws and Regulations.

14. Electrical Installation Standards National Electrical Contractors Association (NECA) and National Electrical Installation Standards (NEIS):

    a. NECA/NEIS-1: Standard of Practices for Good Workmanship in Electrical Construction.
    b. NECA/NEIS-90: Standard for Commissioning Building Electrical Systems
    c. NECA/NEIS-101: Standard for Installing Steel Conduit (Rigid, IMC, EMT) (ANSI)
    d. NECA/AA-104: Recommended Practice for Installing Aluminum Building Wire and Cable (ANSI)
    e. NECA -111: Standard for Installing Nonmetallic Raceways (RNC, ENT, LFNC) (ANSI)
    f. NECA/NEIS-169: Standard for Installing and Maintaining Arc-Fault Circuit Interrupters.
    g. NECA/NEIS-230: Standard for Installing and Maintaining Electric Motors and Motor Controllers
    h. NECA/NEIS-305: Standard for Fire Alarm System Job Practice
    i. NECA/NEIS–331: Standards for Installing Building and Service Entrance Grounding
    j. NECA/NEIS-400: Standard for Installing and Maintaining Switchboards
    k. NECA/NEIS-407: Recommended Practice for Installing Panelboards
    l. NECA/NEIS-409: Standard for Installing and Maintaining Dry-Type Transformers
    m. NECA/NEIS-413: Standard for Installing and Maintaining Electrical Vehicle Supply Equipment
    n. NECA/NEIS-420: Standard for Fuse Applications.
    o. NEIS/NECA and IESNA-500: Standard for Installing Indoor Lighting Systems
    p. NEIS/NECA and IESNA-501: Standard for Installing Exterior Lighting Systems
    q. NECA/NEMA–605: Recommended Practice for Installing Underground Nonmetallic Utility Duct
    r. NECA/NEIS and BICSI–607: Standard for Telecommunications Bonding and Grounding, Planning, and Installation Methods
    s. NECA/NEIS-700: Standard for Installing Overcurrent Protection to Achieve Selective Coordination

t. NECA/NEMA–701: Standard for Energy Management, Demand Response and Energy Solutions.

B. All material and equipment shall be new and shall be delivered to the site in unbroken packages. All material and equipment shall be listed and labeled by Underwriters Laboratories or other recognized Testing Laboratories, where such listings are available. Comply with all Installation Requirements and restrictions pertaining to such listings.

C. Work and material shown on the Drawings and in the Specifications are new and included in the Contract unless specifically indicated as existing or N.I.C. (not in Contract).

D. Keep a copy of all applicable Codes and Standards available at the job site at all times for reference while performing work under this Contract. Nothing in Plans or Specifications shall be construed to permit work not conforming to the most stringent of Building Codes.

E. Where a conflict or variation occurs between applicable Codes, Standards and/or the Contract Documents, the provisions of the most restrictive provision shall become the Requirement of the Contract Documents.

1.8 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. General

1. Review of Contractor's submittals is for general conformance with the design concept of the Project and general compliance with the information given in the Contract Documents. Any action shown is subject to the Requirements of the Plans and Specifications. Contractor is responsible for quantities; dimensions which shall be confirmed and correlated at the job site; fabrication processes and techniques of construction; coordination of work with that of all other trades and satisfactory performance of their work.

2. The Contractor shall review each submittal in detail for compliance with the Requirements of the Contract Documents prior to submittal. The Contractor shall “Stamp" and sign each item of the submittal with a statement "CERTIFYING THE SUBMITTAL HAS BEEN REVIEWED BY THE CONTRACTOR AND COMPLIES WITH ALL THE REQUIREMENTS OF THE CONTRACT DOCUMENTS". The Contractor shall clearly and specifically identify each individual proposed substitution, substitution of equal or proposed deviation from the Requirements of the Contract Documents with a statement "THIS ITEM IS A SUBSTITUTION".

   The burden of research, preparation of calculations and the furnishing of adequate and complete Shop Drawings information to demonstrate the suitability of Contractor’s proposed substitutions and suitability of proposed deviations from the Contract Documents is the responsibility of the Contractor.

3. Departure from the submittal procedure will result in resubmittals and delays. Failure of the Contractor to comply with the Submittal Requirements shall render void any acceptance or any approval of the proposed variation. The Contractor

shall then be required to provide the equipment or method without variation from the Contract Documents and without additional cost to the Contract.

4. The Contractor at no additional cost or delays to the Contract shall remove any work, material and correct any deficiencies resulting from deviations from the Requirements of the Contract Documents not approved in advance by the Owner prior to commencement of work.

5. Shop Drawings submitted by the Contractor, which are not specifically required for submittal by the Contract Documents, or Contractor Shop Drawings previously reviewed and resubmitted without a written resubmittal request to the Contractor, will not be reviewed, considered, or commented on. The respective Shop Drawing submittal/resubmittal will not be returned to the Contractor and will be destroyed without comment or response to the Contractor. The respective submittal shall be considered null and void as being not in compliance with the Requirements of the Contract Documents.

6. Refer to Division-1 for Additional Requirements.

B. Material Lists and Shop Drawings

1. Submit material list and Equipment Manufacturers for review within 35 days of Award of Contract. Give name of Manufacturer and where applicable, brand name, type and/or catalog number of each item. Listing of more than one Manufacturer for any one item of equipment, or listing items "as specified", without both make and model or type designation, is not acceptable. Shop Drawings shall not be submitted before review completion of Manufacturers list. The right is reserved to require submission of samples of any material whether or not particularly mentioned herein.

2. After completion of review of the Material and Equipment Manufacturers list, submit Shop Drawings for review. Shop Drawings shall be submitted in completed bound groups of materials (i.e., all lighting fixtures or all switchgear, etc.). The Contractor shall verify dimensions of equipment and be satisfied as to fit and that they comply with all Code Requirements relating to clear working space about electrical equipment prior to submitting Shop Drawings for review. Submittals, which are intended to be reviewed as substitution or departure from the Contract Documents, must be specifically noted as such. The Requirements of the Contract Documents shall prevail regardless of the acceptance of the submittal.

3. Shop Drawings shall include catalog data sheets, instruction manuals, Dimensioned Plans, elevations, details, wiring diagrams, and descriptive literature of component parts where applicable. Structural calculations and mounting details, signed by a Structural Engineer registered in good standing by the State of California, shall be submitted for all equipment weighing over 400-pounds, and shall be in compliance with Title 21 and Title 24 of the California Code of Regulations (CCR).

4. Each Shop Drawing item shall be identified with the Specification Section, applicable paragraph number(s), lighting fixture/equipment types and Drawing

sheet numbers; the specific Shop Drawing is intended to represent. Shop Drawing pages/sheets submittals shall be sequentially numbered with unique alphanumeric numbering system to facilitate correspondence referencing identification of individual sheets.

5. The time required to review and comment on the Contractor's submittals will not be less than 14 calendar days, or more than 21-calendar days after receipt of the submittals at the office of FBA Engineering. The review of Contractor submittals and return to Contractor of submittals with review comments will occur in a timely manner conditioned upon the Contractor complying with all the following:

    a. The submittals contain complete and accurate information, complying with the Requirements of the Contract Documents.
    b. Contractor's submittals are each marked with Contractor's approval "Stamp", and with Contractor signatures.
    c. The submittals are received in accordance with a written, Shop Drawing submittal schedule for each submittal. The Contractor distributes the schedule not less than 35-calendar days in advance of the Shop Drawing Submittals, and the schedule identifies the calendar dates, the Contractor will deliver the various submittals for review.

6. Shop Drawings shall include the Manufacturers' projected days for shipment from the factory of completed equipment, after the Contractor releases the equipment for production. It shall be the responsibility of the Contractor to ensure that all material and equipment is ordered in time to provide an orderly progression of the work. The Contractor shall notify the Owner's Representative of any changes in delivery, which would affect the project completion date.

7. Submittal Identification

    a. Each submittal shall be dated: with submittal transmission date; sequentially numbered and titled with submittal contents identification and applicable Specification/Drawing references *(i.e., Submittal dated: 05/12/19 Submittal #4 Contents: Branch Circuit Panelboards Sheet #E5.1 and Transformers Specification Section 260500 Paragraph 2.11, etc.)*.
    b. Each resubmittal shall be dated: with original submittal date and resubmittal transmission dates; sequentially numbered with original submittal number and sequential resubmittal revision number and titled with submittal contents identification and applicable Specifications/Drawing references *(i.e., Original Submittal Date: 05/12/19 Resubmittal Date: 10/09/19 Original Submittal #4 Resubmittal Revision R2 Contents: Transformer Resubmittal Specification Section - 260500 Paragraph 2.11, etc.).*
    c. Contractor shall provide a written response narrative with each resubmittal. Describe each response action, resubmittal addition, change and deletion. Correspond to each response to A/E specific review comment.

C. The Contractor shall be responsible for incidental, direct and indirect costs resulting from the Contractor's substitution of; or changes to; the specified Contract Materials and Work.

D. The Contractor shall pay, upon request by the Owner's Representative, a fee for the Owner's Representative time involved in the review of substitution submittals and design changes resulting from the Contractor's requested substitutions. The fee shall be not less than $135.00 per hour but, in no case, less than stated in Division-1, whichever is greater.

E. Maintenance and Operating Manuals

1. The Contractor shall furnish three copies of type-written maintenance and operating manuals and electronic digital copy for all electrical equipment, fire alarm equipment, sound system equipment, etc., to the Owner.

2. Instruct Owner's Personnel in correct operation of all equipment at completion of Project.

3. Maintenance and operating manuals shall be bound in three ring, hard-cover, plastic binders with table of contents. Manuals shall be delivered to the Owner's Representative, with an itemized receipt.

F. Portable or Detachable Parts: The Contractor shall retain in his possession and shall be responsible for all port-able and detachable parts or portions of the installation such as fuses, keys, locks, adapters, locking clips, and inserts until final completion of Contract work. These parts shall then be delivered to the Owner's Representative with an itemized receipt.

G. Record Drawings (Additional Requirements)

1. Provide and maintain in good order a complete set of Electrical Contract "Record" prints. Changes to the Contract to be clearly recorded on this set of prints. At the end of the Project, transfer all changes to one set of transparencies to be delivered unfolded to the Owner's Representative.

2. The actual location and elevation of all buried lines, boxes, monuments, vaults, stub-outs and other provisions for future connections shall be referenced to the building lines or other clearly established base lines and to approved benchmarks. If any necessary dimensions are omitted from the Record Drawings, the Contractor shall, at the Contractor's own expense, do all excavation required to expose the buried work and to establish the correct locations.

3. The Contractor shall keep the "Record" prints up to date and current with all work performed.

4. Refer to Division-1 for Additional Requirements.

1.9 CLEANING EQUIPMENT, MATERIALS, PREMISES

All Parts of the Equipment shall be thoroughly cleaned of dirt, rust, cement, plaster, etc., and all cracks and corners scraped out clean. Surfaces to be painted shall be carefully cleaned of grease and oil spots and left smooth, clean and in proper condition to receive paint finish.

1.10 JOB CONDITIONS - PROTECTION

Protect all work, materials and equipment from damage from any cause whatever and provide adequate and proper storage facilities during the progress of the work. Provide for the safety and good condition of all the work until final acceptance of the work by the Owner and replace all damaged or defective work, materials and equipment before requesting final acceptance.

1.11 EXCAVATION, CUTTING, BACKFILL AND PATCHING ADDITIONAL REQUIREMENTS

A. General

1. Perform excavation, cutting, backfill, core drilling, directional boring, and patching of the construction work required for the proper installation of the electrical work.

2. Patching shall be of the same material, thickness, workmanship, and finish as existing and accurately match-surrounding work to the satisfaction of the Owner's Representative.

3. Prior to penetrating, coring, drilling or cutting existing building elements, concrete and/or masonry, provide imaging equipment examinations of each specific location. The imaging process shall identify existing internal embedded components and locations, including structural elements/ anchors, conduit, and piping that are present. Do not penetrate or damage the existing internal embedded elements. Imaging shall employ one of the following, with GPR methodology preferred:

   a. Non-invasive imaging employing high frequency, Ground Penetrating Radar (GPR), single side echo reflection technology.
   b. Non-invasive imaging employing x-ray radiography, through-and-through imaging technology.

B. Excavation Temporary Cover

1. Excavations for Contract Work occurring in streets, vehicular drive areas, parking lots, sidewalks; any paved surface; or any area accessible to the public; provide temporary steel plating and shoring support for the plates, to completely cover the excavations under one or more of the following conditions:

   a. Excavation shall not remain "open" for more than 4-calendar days; provide temporary plating.
   b. Excavation shall not be "open" over weekends (Saturday, Sunday) or Holidays; provide temporary plating.

2. The temporary plating shall be a minimum of 0.75-inch thickness steel, but in no case shall the thickness be less than required to support AASHO-H20 traffic loading.

3. Provide a minimum of two [one] 100% open lane(s) (12 feet lane width) for vehicular traffic at all times during construction, for vehicle access to all areas.

1.12 IDENTIFICATION

A. Equipment Nameplates

1. Panelboards, terminal cabinets, circuit breakers, disconnect switches, starters, relays, time switches, contactors, push-button control stations, and other apparatus used for the operation or control of feeders, circuits, appliances, or equipment shall be properly identified by means of descriptive nameplates or tags permanently attached to the apparatus and wiring.

2. Provide nameplate label on electrical service entrance equipment describing available short circuit information and Arc-Flash information calculated by the Contractor, including:

   a. Calculation date, month-day-year.
   b. Calculate maximum available short circuit fault current and Arc-Flash intensities.
   c. Description of parameters and changes affecting the Requirements for recalculation of the fault current information and Arc-Flash information.

3. Electrical equipment including switchgear, switchboards, electric panels and control panels, motor control centers, combination motor starters, transformers, disconnects, etc., shall each be labeled by the Manufacturer with “Electric-Arc-Flash” warning signs. The signs shall explain a hazard to personnel may exist if the equipment is worked on while energized or operated by personnel while energized. The sign shall instruct personnel to wear the correct Protective Equipment/clothing (PPE) when working “Live” or operating “Live” electrical equipment and circuits.

4. Nameplates shall be engraved laminated phenolic, rated UV-resistant for wet locations and outdoor locations, fade resistant. Shop Drawings with dimensions and format shall be submitted before installation. Attachment to equipment shall be with escutcheon pins, rivets, self-tapping screws or machine screws. Self-adhering or adhesive backed nameplates shall not be used.

5. Provide black-on-white laminated plastic nameplates for normal power and white-on-red nameplates for emergency power, engraved in minimum ¼-inch high letters sized as required, to identify each piece of electrical distribution and control equipment and associated sections, compartments, and components.

   a. Switchboards:

      1) Equipment designations as shown on Drawings.
      2) Identify ampere rating.
      3) Identify voltage and phase.
      4) Identify power source and circuit number. Include location when not within sight of equipment.
      5) Use identification nameplate to identify load(s) served for each branch device.

b. Motor Control Centers:

1) Equipment designations as shown on Drawings.
2) Identify ampere rating.
3) Identify voltage and phase.
4) Use identification nameplate to identify main overcurrent protective device.
5) Use identification nameplate to identify load(s) served for each branch device.

c. Panelboards:

1) Equipment designations as shown on Drawings.
2) Identify ampere rating.
3) Identify voltage and phase.
4) Identify power source and circuit number. Include location when not within sight of equipment.
5) Identify main overcurrent protective device. Use identification label for panelboards with a door. For power distribution panelboards without a door, use identification nameplate.
6) Use typewritten circuit directory to identify load(s) served for panelboards with a door.
7) For power panelboards without a door, use identification nameplate to identify load(s) served for each branch device.

d. Transformers:

1) Equipment designations as shown on Drawings.
2) Identify kVA rating.
3) Identify voltage and phase for primary and secondary.

e. Enclosed switches, circuit breakers, and motor controllers:

1) Equipment designations as shown on Drawings.
2) Identify voltage and phase.
3) Identify power source and circuit number. Include location when not within sight of equipment.

f. Time Switches:

1) Equipment designations as shown on Drawings.
2) Identify load(s) served and associated circuits controlled. Include location.

g. Enclosed Contactors:

1) Equipment designations as shown on Drawings.
2) Identify ampere rating.
3) Identify voltage and phase.
4) Identify configuration, e.g., E.O.E.H. (electrically operated, electrically held) or E.O.M.H. (electrically operated, mechanically held).

h. Transfer Switches:

1) Identify voltage and phase.
2) Identify power source and circuit number for both normal power source and standby power source. Include location when not within sight of equipment.
3) Identify short circuit current rating based on the specific overcurrent protective device type and settings protecting the transfer switch.

2. Service Equipment:

a. Use identification nameplate to identify each service dis-connecting means.
b. For buildings or structures supplied by more than one service, or any combination of branch circuits, feeders, and services, use identification nameplate or means of identification acceptable to authority having jurisdiction at each service disconnecting means to identify all other services, feeders, and branch circuits supplying that building or structure. Verify format and descriptions with authority having jurisdiction.

3. Emergency System Equipment:

a. Use identification nameplate or voltage marker to identify emergency system equipment in accordance with NFPA 70.
b. Use identification nameplate at each piece of service equipment to identify type and location of on-site emergency power sources.

B. Plates: All cover and device plates shall be furnished with engraved or etched designations under any one of the following conditions (minimum character size not less than 0.188 inch. Engraving shall indicate circuits and equipment controlled or connected):

1. More than two devices under a common coverplate.

2. Lock switches.

3. Pilot switches.

4. Switches in locations from which the equipment or circuits controlled cannot be readily seen.

5. Manual motor starting switches.

6. Where so indicated on the Drawings.

7. As required on all control circuit switches, such as heater controls, motor controls, etc.

8. Receptacles other than standard 15-amp 120-volt duplex receptacles; shall indicate circuit voltage, ampere, phase and source circuit number.

9. Where outlets or switches are connected to emergency power circuit; provide panelboard and circuit number engraved on plate.

10. Low voltage and signal system outlets.

C. For equipment and access doors or gates to equipment containing or operating on circuits of more than 100 volts AC or DC nominal. Provide red-on-white laminated warning signs engraved in ½-inch high letters to read: "DANGER - 480 (or applicable voltage) VOLTS KEEP OUT AUTHORIZED PERSONNEL ONLY".

D. Conduit Identification.

1. Adhesive Marking Labels for Raceway and Metal Clad Cable: Preprinted flexible, self-adhesive labels with legend indicating voltage and service (Emergency, Power, Lighting, Air-Conditioning, Control, Voice and data Communications, Fire Alarm and Detection, Public Address (Paging) Electronic Security). Manufacturer: Brady, Ideal, Waytech.

2. Label size as follows:

a. Raceways 1-inch and Smaller: ½-inch high by minimum 2¼-inch long.
b. Raceways Larger than 1-inch: 1⅛-inch high by minimum 4¼-inch long.

E. Wire and Cable Identification

1. Provide identification on individual wire and cable including signal systems, fire alarm, electrical power systems (each individual phase, neutral and ground), empty conduit pull ropes, and controls circuit.

2. Permanent identification shall be provided at each termination location, splice location, pullbox, junction box and equipment enclosure.

a. Individual wire and cable larger than #6AWG or 0.25-inch diameter, shall be provided with polypropylene identification tag holders, with yellow polypropylene tags interchangeable black alphanumeric characters, character height 0.25 inch. Attach identification tags with plastic “tie” wraps, minimum of two for each tag. As manufactured by Almetek Industries- “EZTAG” Series; or TECH Products - “EVERLAST” Series.
b. Individual wire and cable #6AWG and smaller or smaller than 0.25-inch diameter, shall be provided with water and oil resistant, flexible, self-laminating pressure sensitive machine embossed plastic tags that wrap a minimum of 360 degrees around the wire/cable diameter. The entire tag shall then be covered with a clear flexible waterproof plastic cover wrapped a minimum of 540 degrees around the wire/cable diameter and completely covering the identification. As manufactured by: Brady Identification; or 3M; or Panduit.
c. Each identification tag location shall indicate the following information: circuit number, circuit phase, source termination and destination termination equipment name (or outlet number as applicable).

3. Install permanent identification after installation/pulling of wire/cable is complete, to prevent loss or damage to the identification.

F. Cardholders and Cards shall be provided for circuit identification in panelboards. Cardholders shall consist of a metal frame retaining a clear plastic cover permanently attached to the inside of panel door. List of circuits shall be type-written on card. Circuit description shall include name or number of circuits, area, and connected load.

G. Junction and Pullboxes shall have covers stenciled with box number when shown on the Drawings, or circuit numbers according to panel schedule. Data shall be lettered in a conspicuous manner with a color contrasting to finish.

1.13 TESTING

A. The Contractor shall obtain an independent Testing Laboratory, provide all instrumentation and perform tests on the electrical system and equipment as hereinafter described and further directed by the Owner's Representative. The test shall be performed after the completion of all electrical systems included in the Contract Scope of Work. All tests shall be recorded and documented and submitted to the Owner's Representative for review, six copies.

1. All equipment and personnel required for set-up and testing shall be provided by the Contractor.

2. Return all equipment and circuits to corrected operational condition when test-and-pass is successfully completed.

B. Test for Phase to Ground and Neutral Condition:

1. Open main service disconnects.

2. Isolate the system neutral from ground by removing the neutral disconnects link located in the service switchboard.

3. Close all submain disconnects.

4. Close all branch feeder circuit breakers.

5. Turn all switches to "on" position, unplug all portable equipment from outlet receptacles.

6. Measure the resistance of each non-energized phase-to-phase, phase-to-ground and phase-to-neutral. A properly calibrated "megger" type test instrument shall be used. The test voltage shall be a nominal 500 volts.

7. Record all readings after one minute duration and document into a complete report.

8. Isolating Grounds and Phases: If low resistance phase and/or ground neutral connections are found in the system, they shall be isolated and located by testing each circuit individually as outlined above. Make proper corrections to restore the resistance values to an acceptable value.

C. Method of obtaining ground resistance shall be in accordance with the latest edition of the James G. Biddle (Plymouth Meeting, Pennsylvania) manual published on this subject.

1. Perform "fall-of-potential" three-point tests on the main grounding electrode of system per IEEE Standard No. 81, Section 8.2.1.5. when suitable locations for test rods are not available, a low resistance dead earth or reference ground shall be utilized.

2. Perform the two-point method test per IEEE Standard No. 81, Section 8.2.1.1, to determine the ground resistance between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.

D. The testing, calibrating and setting of all ground and ground fault equipment, circuit breakers, circuit device protection relays, and meters adjustable settings shall be by an independent Testing Laboratory. Set as recommended by the respective Manufacturer and coordination and arc-flash studies, to be coordinated with other protection devices within the electrical design. Bound and tabulated copies of the test and settings shall be sent to the Owner's Representative.

E. Ampere and Voltage Measurements

1. Measure and record ampere and line voltage measurements under full load on all panel feeders, switchboard, and switchgear feeders, motor control centers and motor circuits provided in the Contract. Record measurements at the equipment tested and submit to the Owner's Representative for review.

2. Ampere and voltage measurements shall be:

a. Phase A-B, A-C, and B-C.
b. Phase A-Neutral, B-Neutral and C-Neutral.

3. The ampere and voltage readings shall be not less than 20-minutes duration for each test. Record and submit the measured minimum, maximum and 20-minute average for each ampere and voltage value and test location. Voltage and ampere measurements shall occur at the connected load end of each respective feeder, not at the source of supply end of each feeder.

4. Test equipment shall be accurate within plus or minus 1%.

5. Branch circuit devices 40-amp or less and motor loads ten horsepower or smaller are excluded from individual Ampere and Voltage Testing Requirement.

6. If, in the opinion of the Owner's Representative, the voltages and regulations are not met within acceptable limits, make arrangements with the serving utility for proper electrical service. Retest feeder line voltages, and submit to Owner's Representative for review, after the utility company has completed corrective actions. Reset "voltage taps" on transformers provided or modified as part of the Contract Work, to adjust line voltages to within acceptable values, as directed by the Owner's Representative.

F. State of California Title-24 Compliance Testing

1. Mandatory California Title-24 Building Energy Code, Part-6 acceptance testing. Shall insure those respective systems properly installed and functioning, all in conformance with Title-24.

2. Refer to Process Guide to Acceptance Testing, published by the State of California, complete the testing and documentation.

3. Perform California Title-24 Testing and Certification. Submit the completed Certification of Acceptance documentation to the AHJ and Owner's Representative.

G. Complete the following work before any electrical equipment is energized.

1. All equipment shall be permanently anchored.

2. All bus connections and conductor/wire connections shall be tightened per Manufacturer's instructions and witnessed by the Owner's Representative.

3. All ground connections shall be completed and identified. Perform and successfully complete all required megger and ground resistance tests.

4. Low voltage/signal circuits, line voltage branch circuits and feeders shall be connected, tested and identified.

5. The interiors of all electrical enclosures including busbars and wiring terminals shall be cleaned of all loose material and debris, paint, plaster, cleaners or other abrasive's overspray removed, and equipment vacuumed clean. The Owner's Representative shall observe all interiors before covers are installed.

6. All wall, ceiling, and floor work and painting shall be completed within areas containing electrical equipment prior to installation of equipment. The equipment indoor rooms and spaces shall be weathertight, and weather protected from environmental incursions.

7. All doors for line voltage and low voltage/signal electrical equipment rooms shall be provided with locks to restrict access to energized equipment.

8. Electrical spaces and rooms shall not be used as storage rooms after power is energized.

9. Outdoor electrical equipment enclosures and housings shall be weather protected.

10. The electrical system time current coordination and Arc-Flash studies shall be complete for circuit breakers, ground relays set, and circuit relay sets, fuses; set-up, tested and calibrated accordingly. Protection settings for all devices shall be completed and tested.

1.14 COMMISSIONING - CX

A. General

1. The Commissioning shall verify the electrical systems for the term of the Contract, by observation; and by calibration; and by testing. The Commissioning shall ensure the electrical systems perform interactively and correctly, according to the Contract and Operational Requirements.

2. Commissioning shall provide startup, testing and documented confirmation of the Contract constructed systems, materials and work, functions in compliance within the criteria set forth in the Contract Documents to the satisfaction of the Owner's needs. The Commissioning Scope shall encompass each system identified as requiring "Commissioning" by the Contract Documents, including but not limited to:

    a. Electrical circuits' protection, short circuit, overcurrent, ground fault devices and electrical grounding.
    b. Electrical circuits monitoring and metering.
    c. Light fixtures, lamps and ballasts.
    d. Lighting control devices, equipment and lighting control systems.
    e. Standby and emergency electric power supply equipment and systems.
    f. Motor Control Equipment.
    g. Fire alarm, equipment, devices, and fire alarm systems.
    h. Communications, low voltage and signal devices and systems.
    i. Additional systems described in the Contract Documents.

3. Commissioning process shall review all the Shop Drawing submittals, including:

    a. Controls, Operation and Maintenance Requirements.
    b. Facility performance testing compliance.
    c. Project Contract Requirements compliance.
    d. Compliance with basis for design and operational descriptions provided in the Contract.

4. Commissioning shall be the process of ensuring all the systems described in the Contract Documents comply with the Contract Document design; all systems are installed properly; all systems are functional, tested and capable of being operated and maintained to perform within the Contract Requirements and design intent.

5. Functional setup, recalibration, correcting deficiencies, retesting and the associated costs, for system(s) that fail Commissioning, shall be the responsibility of the Contractor. The Contractor shall include all Commissioning costs in the Contract Scope of Work.

6. Complete all Commissioning functions prior to the occupancy of the facility by the Owner, unless directed otherwise by the Owner's Representative.

7. Submit six copies of Commissioning Documentation to Owner's Representative.

B. Commissioning Procedures

1. Prepare a Commissioning Matrix identifying components and systems included in the Commissioning Scope; the status; actions completed and actions to be completed.

2. Verify Contractor compliance with Contract Document Requirements Manufacturer's recommendations and approved Shop Drawings.

3. Perform startup, functional tests, reports, and document results.

4. Evaluate and document the setup parameters, software, operating condition and performance of each system at the time of functional test completion. Document and record each performance parameter and condition, in the Commissioning Report.

5. Schedule testing and prepare descriptions of testing.

6. Describe measures performed to correct deficiencies.

7. Verify that instructions to Owner's Representatives, operations and maintenance manuals comply with Contract Documents.

8. Prepare warranty matrix identifying the start dates, expiration dates, routine preventative maintenance dates and the Owner’s responsibility for performing preventative maintenance and keeping logs for each maintenance function and warranty claims.

9. Confirm completion of all punch list items that have been acceptably accomplished and a list of what has not been acceptably completed.

10. Describe uncorrected deficiencies accepted by the Owner.

C. Commissioning Phasing

The Commissioning Phases of work shall include the following activities:

1. SDQ - Shop Drawing Qualification shall verify complete and correct Shop Drawings have been submitted.

2. IQ – The Installation Qualification of Contract Work shall verify systems are correctly and properly installed.

3. OQ - Verify systems interfaces and software is correctly and properly operational.

4. ITM - Verify the Contract Inspection, Testing and procedures for Maintenance are complete.

5. PQ - Performance Qualification complete the functional performance testing to validate each building system.

1.15 POWER AND FIRE ALARM OUTAGES

A. All Electrical Services (line voltage, low voltage/signal and fire alarm) in all occupied facilities of the Contract work are to remain operational during the entire Contract period. Any interruption of the electrical services for the performance of this work shall be at the convenience of the Owner and performed only after consultation with the Owner's Representative. Work involving circuit outages shall be only at such a time and of such a duration as approved in writing. Work involving circuit outages for the work required to connect new equipment and disconnect existing equipment shall be performed at the convenience of the Owner.

B. Contract Work involving outages or disruption of normal function in electrical power systems, telephone/communication systems, fire alarms, shall be performed during the following time periods. The Contract Work shall be phased to limit outages in the respective systems to the stated periods:

1. 11:30 p.m. Friday to 11:30 p.m. Sunday of the same weekend. Work shall occur on multiple weekend periods if a single weekend is not sufficient time to complete the work.

2. The Contract Work involving outages shall be phased in multiple work time units, to comply with the permitted outage limitations.

C. Work involving system outages to the building fire alarm system shall be performed only after consultation with the Owner and shall be only at such a time and of such duration as approved in writing. Contractor shall provide continuous "Fire-Watch" during fire alarm system outages and comply with AHJ "Fire-Watch" Requirements.

D. Provide overtime work; double shift work; nighttime work; Saturday, Sunday, and holiday work to meet outages schedule.

E. Provide temporary electrical power to meet the Requirements of this Article.

F. Any added costs to Contractor due to necessity of complying with this Article shall be included in the Contract Scope of Work.

G. When electrical work involving power disruptions to existing areas is initiated, the work shall proceed on a continuous basis without stopping until electric system power is restored to the affected areas.

H. Request in writing to the Owner's Representative a minimum of 3-weeks in advance, for scheduling proposed electrical systems outage.

1.16 TEMPORARY ELECTRICAL POWER

Provide temporary electrical power if work requiring power outages cannot be completed in time permitted and approved by the Owner's Representative.

1.17 ASBESTOS, POLYCHLORINATED BIPHENYL (PCB) OR HAZARDOUS WASTE:

A. It is understood and agreed that this Contract does not contemplate the handling of asbestos, PCB or any hazardous waste material. If asbestos, PCB or any hazardous

waste material is encountered, notify the Owner's Representative immediately. Do not disturb, handle or attempt to remove.

B. Lighting Fixture Demolition Hazardous Materials

1. The removal of existing lighting fixtures will generate Hazardous Material Waste Disposal Contract Documents.

a. The existing lighting fixture ballast contains PCB material.
b. The existing lighting fixture lamps contain mercury.
c. The existing lighting fixture internal wire insulation may contain asbestos.

2. Remove, handle, store, contain, dispose of and document the hazardous materials resulting from existing lighting fixtures work, as part of the Contract Requirements.

1.18 TIME/CURRENT COORDINATION, SHORT CIRCUIT, ARC-FLASH AND SERIES RATED EQUIPMENT

A. Series Rated Equipment.

1. Circuit Protective Devices identified as "Series Rated" or "Current Limiting" (i.e., SR – Series Rated; CLCB - Current Limiting Circuit Breaker; CLF - current limiting fuse, etc.) shall be series rated and tested (UL 489, UL 67, and CSA5) by the Manufacturer with all equipment and circuit protective devices installed downstream of the identified series rated or current limiting device.

2. Provide nameplates on all equipment located downstream, including the CLCB and CLF devices, to comply with CEC/NEC paragraphs 110-22 and 240-83 "CAUTION SERIES RATED SYSTEM - NEW DEVICE INSTALLATIONS AND REPLACEMENTS SHALL BE THE SAME MANUFACTURER AND MODELS".

B. Short Circuit, Coordination and Arc-Flash

1. Perform Engineering Analysis and submit engineered settings for each equipment location, fuse and circuit breaker device, showing the correct time and current settings to provide the selective coordination within the limits of the specified equipment. Shall comply with the latest application Standards of IEEE and ANSI. Provide electrical system short circuit worst case bolted-fault analysis, both 3-phase line-to-line and 1-phase line-to-ground calculations as part of the Coordination Analysis recommendations. Provide Electric Arc-Flash calculations as part of the Coordination Analysis recommendations. Obtain the necessary information including the maximum fault current from the secondary side of the utility company transformer to complete the calculations from the serving Electrical Utility Company.

2. Obtain the short-circuit current ratings (SCCR) for all equipment with control panels or controllers (elevators, HVAC, plumbing equipment, etc.). Incorporate these items into the short circuit analysis and determine that the available fault current does not exceed the SCCR of the equipment.

3. The information shall be submitted in both tabular form and on time current log-log graph paper with an engineering narrative. Written narrative describing data, assumptions, analysis of results and prioritized recommendations, six copies.

4. The goal is to minimize an unexpected but necessary electrical system outage and personnel exposure to the smallest extent possible within the fault occurrence location, using the specified Contract equipment. Shall comply with, but not limited to:

    a. IEEE-242, Recommended Practices for Protection and Coordination of Industrial and Commercial Distribution.
    b. IEEE-399, Recommended Practices for Industrial and Commercial Power System Analysis.
    c. IEEE-1584, Guide for Performing Arc-Flash Hazard Calculations Working Calculation.
    d. CEC/NEC

5. Provide permanent warning labels on each equipment location. The labels shall describe Arc-Flash, Short-Circuit and Time/Current Coordination, including safety precautions and protective clothing. Also describe actions to be taken if any circuit changes or equipment modifications occur.

6. The analysis shall be submitted with the Shop Drawing submittals for the respective equipment.

7. The Contractor shall independently contact the serving utility company to obtain the current system short circuit amps or available fault current.

8. The Contractor shall independently obtain As-Built Drawings for the existing infrastructure to establish lengths. If As-Built Drawings are no available, the Contractor shall research existing conditions and make reasonable but conservative estimates of conductor length. Where existing conductors have been re-used, the Contractor shall confirm conductor quantity, size, and conduit type.

1.19 INDEPENDENT TESTING LABORATORY

A. Testing Laboratories Definition

1. The Testing Laboratory shall meet Federal OSHA Criteria for accreditation of Nationally Recognized Testing Laboratories (NRTL) Title 29 Part 1907 and 29 CFR-1910.

2. Membership in the National Electrical Testing Association (NETA) shall also constitute acceptance of meeting said criteria, for testing of electrical systems.

1.20 EQUIPMENT SEISMIC AND WIND LOAD REQUIREMENTS (ADDITIONAL REQUIREMENTS)

A. General

1. Equipment supports and anchorages provided as part of the Contract shall be designed, constructed and installed in accordance with the Earthquake Regulations of the California Building Code (CBC), International Building Code (IBC).

2. Provide equipment anchorage details, coordinated with the equipment mounting provision, prepared, signed and "stamped" with PE registration in good standing, by a Civil or Structural Engineer Licensed as a Professional Engineer (PE) in the State of California.

3. Mounting recommendations shall be provided by the Manufacturer based upon approved shake-table tests used to verify the seismic design of that type of equipment.

4. The Equipment Manufacturer shall document the details necessary for proper wind-load and seismic mounting, anchorage, and bracing of the equipment for floor, ceiling, and wall/back installation location.

5. Seismic performance shall be based on actual install location of the respective equipment in the building and height above or below grade.

6. The Seismic Requirements are typical for each equipment item exceeding 100-pounds, including but not limited to the following:

a. Switchgear, switchboards, and motor control equipment
b. Transformers
c. Equipment racks and terminal cabinets
d. Panels
e. Conduits with floor, ceiling or wall attachment support and conduits with suspension attachments.
f. Busway, wire way and cable tray
g. Uninterruptable power supplies (UPS)
h. Inverters
i. Generators and related equipment
j. Lighting equipment
k. Fire alarm equipment

C. Wall Mounted Electrical Equipment

1. Surface Mounted Equipment

a. Provide multiple horizontal sections of metal “C” channels for support and attaching wall mounted equipment to walls. Channels shall provide “turned lips” at longitudinal edges to hold “lock-in” fasteners and shall comply with ANSI-1008 and ASTM-A569 latest revision. The channels shall be steel hot dip zinc galvanized. As manufactured by Unistrut or Kindorf.

b. The “C” channels shall be positioned horizontally within 3-inches of the top and bottom of each, equipment section cabinet and located behind each equipment vertical section. Provide additional intermediate “C” channels at not less than 36-inches on center between the “top” and “bottom” “C” channel positions, located behind each equipment vertical section.
c. The “C” channels shall be of sufficient length to provide connection to not less than two vertical structural wall framing elements separated by not less than 16-inches; but in no case shall the “C” channel length be less than the width of the respective equipment section.
d. Attach the “C” channels to the wall structural elements after the wall, finish surface, installation (including painting) is complete.
e. Attach the “C” channels with fasteners to the building wall framing structural elements as follows: welded to steel framing; bolted to wood framing; cast in place concrete inserts for masonry and concrete construction; drilled “afterset” expansion anchors for existing masonry and concrete construction.
f. Attach the equipment to the “C” channels with threaded and bolted fasteners to “pre-locate” and lock into the channel “turned lips” and channel walls.

2. Flush mount equipment

a. Provide anchor attachment of equipment into adjacent wall structural elements.

D. Housekeeping Pad

1. Provide cast-in-place, steel re-enforced concrete raised “housekeeping” pads under all floor standing electrical equipment (except data network equipment racks).

2. Pad sizes

a. The raised housekeeping pad height shall extend 4-inches above the surrounding finished floor elevation for interior building locations.
b. The pad shall extend 8-inches below finish grade plus 4-inches above finish grade for outdoor equipment location on grade.
c. The pads shall extend 7-inches past the “footprint” edge of the respective floor standing equipment.

3. Anchor equipment to pads. Anchor pads to the building structural floor. Equipment pad, equipment re-enforcing and equipment anchoring shall comply with Seismic Earthquake Requirements and Wind Load Requirements.

4. Unless shown otherwise on Drawings. The equipment housekeeping pad steel re-enforcing shall consist of two layers of Number-4 size steel-rebar laid horizontally and uniformly spaced 6-inches on center. Position rebar in two directions (90-degrees opposed) and centered inside the concrete house-keeping pad. Horizontal rebar shall extend to within 3-inches of the edge of the concrete pad in all directions. Metal wire “tie-wrap” shall be provided at each rebar crossing.

5. Equipment anchor attachments shall extend through the housekeeping pad and into the structural concrete below the pad a minimum of not less than 2-inches.

1.21 ELECTRICAL WORK CLOSEOUT

A. Prepare the following items and submit to the Owner's Representative before final acceptance.

1. Two copies of all test results as required under this Section.

2. Two copies of Local and/or State Code Enforcing Authority's Final Inspection Certificates.

3. Copies of Record Drawings as required under the General Conditions, pertinent Division One Sections and Electrical General Provisions.

4. Two copies of all receipts transferring portable or detachable parts to the Owner's Representative when requested.

5. Notify the Owner's Representative in writing when installation is complete and that a final inspection of this work can be performed. In the event any defect or deficiencies are found during this final inspection they shall be corrected to the satisfaction of the Owner's Representative before final acceptance can be issued.

6. Prior to energizing, retighten to the proper torque, each circuit conductor lug landing, each bus bar (phases, neutral and ground) and circuit protection device threaded connections in all switchboards, switchgear, motor control centers, transformers, busways, disconnect switches, motor starters, motor terminals and panelboards, after the equipment is installed/ connected and prior to energizing the equipment. The torque values shall comply with Manufacturer's recommendations.

B. Electrical Power Single Line Diagrams – SLD

1. Provide single line diagrams showing the Contract Document work complete electrical power system (normal and emergency). SLD shall show inter-connection circuits, electrical equipment, panels, and circuit protection devices, nominal 50% (½-size) approximately 18-inches by 24-inches. Show installed voltages and electrical capacity sizes.

2. SLD shall be mounted in metal (picture frame) rigid enclosure frame with rigid-backing (backer-board) and clear/transparent front, for hanging on wall. Provide clear transparent cover over SLD inside the frame.

3. Provide a wall-hung (±48-inches) SLD in each "main" and "sub" electrical equipment room. If wall space is limited, alternatively securely attach SLD frame to room door facing into the respective electrical room.

END OF SECTION 260500
010423/535050

SECTION 26 05 01

BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment, facilities, transportation, and services necessary for and incidental to performing all operations in connection with furnishing, delivery, and installation of the work of this Section, complete as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Sections for work related to those other Sections and required to be included as work under this Section.

2. General Provisions and Requirements for electrical work.

1.2 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. Submit product data sheets for all outlet boxes, floor boxes, wiring devices, device plates, relays, contactors, timeswitches, and disconnects fuses.

B. Submit detailed Shop Drawings including Dimensioned Plans, elevations, details, schematic and point-to-point wiring diagrams and descriptive literature for all component parts for transformers, relays, time clocks and photocells.

C. Submit Transformer Test Reports.

D. Submit Material List for Outlet Boxes.

PART 2 - PRODUCTS

2.1 OUTLET AND JUNCTION BOXES

A. General:

1. Flush or concealed outlet boxes and junction boxes.

a. Non-masonry and/or non-concrete locations provide pressed steel boxes. Steel thickness not less than 0.062-inch, hot-dip galvanized. Knockout (KO) type with conduit entrances and quantities size to match conduits shown connecting to respective junction box and outlet box.
b. UL-514 listed and labeled.
c. Minimum required box depth is exclusive of extension-ring depth.
d. Provide all boxes with matching cover plates. Cover plates shall be gasketed water-tight in wet and outdoor locations.
e. Boxes installed in masonry or concrete shall be UL "concrete-tight" approved for installation in concrete and shall allow the placing of conduit without displacing reinforcing bars.

2. Provide outlet boxes of proper Code size for the number of wiring devices, connecting conduits, and conductors/cables or conduits passing through or terminating therein. In no case shall outlet box be less than 4.0-inches square by 2.125-inches deep. Unless specified elsewhere or noted otherwise on the Drawings, 2.5-inches minimum depth for box width's exceeding 2-gang.

3. Increase the minimum outlet box size to 4.69-inches square by not less than 2.125-inches deep, where one or more of the following conditions occurs:

    a. More than two conduits connect to the outlet box.
    b. Circuit "Homerun" or Conduit "Homerun" connects to outlet box.

4. Signal, Communication and Low Voltage Outlet Boxes:

    a. Individual or duplex audio/visual, telephone, computer or data outlets: 4.69-inches square by 2.125-inches deep minimum with single gang wide extension ring.
    b. Combination AV/signal/telephone/data or computer outlets: 4.69-inches square by 2.125-inches deep minimum with 2-gang wide extension ring.

5. Junction boxes shall be sized to comply with the following:

    a. Code Requirements size based on the conduit quantities, conduit sizes and wire-fill connected to the junction box.
    b. Junction box minimum size shall not be less than 4.69-inches square by 2.5-inches deep, but not less than size indicated on the Drawings or required by Code.

6. Provide extension rings on flush outlet boxes and flush junction boxes, to finish face of extension ring flush to (within ±0.63-inches) of finished building surfaces. Extension ring shall match outlet box materials/ construction and contain "attachment mounting-tabs" for wiring devices. Extension rings shall be "screw-attached" to respective box and maintain "ground" bonding continuity.

7. Outlet boxes installed in outdoor locations, or in wet locations, or in concrete/masonry, shall be cast-iron or cast-bronze, with threaded conduit hubs. UL rated for wet locations.

    a. Aluminum boxes shall NOT be in contact with concrete or masonry. Die-cast aluminum or cast aluminum water-tight electrical outlet boxes with threaded hubs may be provided as an alternate to cast-iron or cast-bronze outlet boxes, only where one or more of the following conditions occur:

        1) Outdoor locations above finish grade.
        2) Indoor wet locations surface or flush in walls or ceilings.
        3) Not in contact with concrete or masonry.

8. Provide fixture-supporting device in outlet boxes for surface mounted fixtures as required.

9. Provide solid gang boxes for three or more devices, typical for line and low voltage switches, receptacles, low voltage/signal outlets, etc. for mounting devices behind a common device plate.

10. Provide isolation barriers in outlet boxes:

    a. Between line voltage and low voltage devices.
    b. Where more than one device is installed in an outlet box, between and separating each device.
    c. Between 277-volt and 120-volt devices.
    d. Between devices connected to emergency and non-emergency circuits of all voltages.

11. Outlet boxes installed penetrating into fire rated walls, fire rated floors, fire rated ceilings and all fire rated construction. The outlet boxes shall be UL listed, classified and labeled, for fire rated and temperature rated penetration of the respective fire rated surface and fire rated construction. The outlet box fire rating and temperature rating shall equal or exceed the fire/temperature rating of the surface/construction being penetrated. Provide UL listed and labeled supplemental fire and temperature protection to maintain ratings:

    a. Wall and ceiling penetrations, supplemental tumescent fire wrap (external or internal of outlet box).
    b. Floors provide subfloor supplemental fireproofing below floor box.

12. Outlet boxes installed in floors. The floor outlet boxes shall be UL listed and labeled for scrub water exclusion Requirements, including but not limited to tiles, carpeting and exposed wood and concrete floor fishes.

13. Outdoor flush in wall device outlet boxes:

    a. Flush in wall outlet box with corrosion resistant gasketed watertight, hinged, key locking cast metal, self-closing cover. Tamper resistant and vandal resistant.
    b. UL-listed and labeled for installation in masonry, cast-in-place concrete, hollow-framed walls and wet locations.
    c. Flush cast-iron or cast-bronze or brass, device back-box, nominal 4.68-inch square by 2.25-inches deep.
    d. Internal metal adapter plate for wiring device types, in the box as indicated on the Drawings.
    e. As manufactured by Legrand/Pass and Seymour #4600 Series: or C.W. Cole #310 Series.

14. Refer to Architectural and Structural Contract Documents and Details for additional Box and Install Requirements.

B. Surface Outlet Boxes

1. Surface mounted outlet boxes, cast iron Type FS or FD, with threaded hubs as required. Box interior dimensions and interior volume capacity not less than

required for “press steel boxes”, and “sheet steel boxes”. Provide plugs in all unused openings. Provide weatherproof gaskets for all exterior boxes.

C. Floor Boxes

1. General:

a. Outlet boxes installed in floors. The floor outlet boxes shall be UL listed and labeled for Scrub Water Exclusion Requirements, including but not limited to floor tiles, carpeting and exposed wood and concrete floor fishes.
b. Electrical power receptacles in a floor box; shall be industrial grade wet location heavy-duty, high abuse rated devices, tamper resistant. Grounding type, 125 volts, 60Hz AC, 20-amp, NEMA 5-20R (duplex), or other NEMA configurations noted on the Drawings. Standard length receptacle mounting strap as required by the Manufacturer of floor box being furnished.
c. Tested, listed and labeled to comply with UL-514A and/or UL514C.

2. Pedestal Type Floor Outlets (Non-Poke-Thru Type)

a. Power (high potential) floor outlets pedestal shall be nominal 3-inches by 3-inches high by 4.5-inches long, die cast aluminum brushed finish with duplex grounding type convenience receptacles. Pedestal shall be mounted on 3-inches nominal depth metal, electrical flush in floor box, complete with proper adapter and nipple for mounting to floor box and attachment of conduits.

1) Back-to-back, two 20-amp 120 volt, 60Hz AC grounding duplex convenience receptacles.

b. Low voltage-signal (low potential) floor outlets pedestal shall be nominal 3-inches by 3-inches high by 4.5-inches long, die cast aluminum brushed finish. Pedestal shall be mounted on flush in floor 3-inches nominal depth metal, electrical floor box, complete with proper nipple and adapter for mounting to floor box and attachment of conduits. The Contractor shall provide the type of outlet(s) at each floor box location as required by the Low Voltage-Signal Contract Documents.
c. The pedestal shall provide 0.25-inch or greater protective top-over-hang (drip-lip) shading the wiring device coverplates. Provide stainless steel device coverplates.
d. Metal electrical floor boxes for pedestals shall be cast-iron, concrete pour rated or open framing rated as applicable. Not less than two 0.75-inch and two 1.0-inch conduit entrances. “Box Leveling” adjustable supports.
e. Pedestal as manufactured by Hubbell LO-CON/SC Series pedestal with matching cast-iron floor boxes; or Wiremold/ Legrand series pedestal with matching cast-iron floor boxes.

3. Poke-Thru floor boxes for “After-Set” Floor Outlets.

a. Through floor wiring for power and communication shall be UL listed with a fire and temperature rating of not less than 2-hours. The units shall include an internally divided floor fitting; a divided through-floor conduit/raceway, and a divided under floor junction “split-box” not less than 4.7-inches by 4.7-

inches by 2.125-inches in size. Junction box shall be installed concealed in ceiling space of the floor below. The length of the floor "through-raceway" shall match the thickness of the finish floor and as recommended by the Manufacturer. Unit shall be self-supporting without the attachment of an above floor fitting. Internal isolation barriers between high potential and low potential circuits and sections. The integral fire barrier shall incorporate a cold smoke barrier to prevent the passage of smoke when heat is not present.

b. Poke-Thru Floor boxes shall contain dual services for high potential and low potential devices and circuits.

c. Poke-Thru Floor pedestal type; (internally divided high potential and low potential sections) service fittings die cast, brushed aluminum, single piece device housing, with stainless steel device cover plates front and rear of the housing as follows:

    1) Front side (high potential) one 20-amp, 120 volt, 60Hz, AC, grounding duplex convenience outlet plugs.
    2) Rear side (low potential) shall contain "knockouts" or "keystones" as follows at locations shown on the Drawings:

        a) Knockouts for signal cables one 1-inch diameter and two 0.5-inch diameter with rubber bushing grommets for each knockout.
        b) Four RJ-45 keystone, snap-in retainers for low potential plug-in signal connections.
        c) The Contractor shall provide the type of outlet(s) at each poke-thru location as required by the low voltage-signal Contract Documents.

    3) Alternately where specifically indicated on the Drawings, the front and rear cover plates shall be supplied with knockouts for 1.0-inch flexible conduit "Furniture" connection, one per cover plate.
    4) The pedestal shall provide 0.25-inch or greater protective over-hang (drip-lip) of the device coverplates. Provide stainless steel device coverplates.

d. Non-Pedestal Poke-Thru flush in floor type; (internal divided high potential and low potential sections) die cast, flush with finish floor, metal cover flip-open, locking, hinged access covers. Open-close die cast aluminum port-covers for plug-in portable cable connections. ADA compliant, wide trim matching flange.

    1) Two 20-amp, 120-volt, 60Hz, AC, grounding duplex convenience receptacles for high potential power connections.
    2) Four RJ-45 keystone, snap-in retainers for low potential plug-in signal connections. The Contractor shall provide the type of outlet(s) at each poke-thru location as required by the Low Voltage-Signal Contract Documents.
    3) Cover shall close and lock after portable plug-in cables have been inserted into respective connections, under the cover.
    4) UL wet mop, scrub water rated for carpeted and non-carpeted floors.

e. Die cast aluminum cover, nominal 8-inch diameter metal housing flush in "core-hole", outlet metal body size.

f. Flush with floor or pedestal type as indicated on Drawings. As manufactured by Wiremold/Legrand# Evolution Poke-Thru 8AT Series, Smoke and Fire Rated Poke-Through fittings; no known equal.

4. Floor Boxes for Flush Floor Outlets (non-pedestal) recessed concealed inside outlet box, plug-in receptacles.

a. Provide cast-in-floor with concrete pour pan, rated for on grade to prevent direct earth contact, cast-in-place concrete floors on-grade and above-grade; adjustable "leveling-feet" for box.
b. UL wet mop, scrub water rated for carpeted and non-carpeted floors. UL-File E171211 installation fire rating and/or UL-Fire Resistance Classified.
c. Floor boxes shall contain dual services:

1) High potential with not less than two 120-volt 60Hz AC 20-amp grounding duplex convenience receptacles.
2) Low potential for low voltage system outlets and signal circuits with up to and including eight RJ-45 plug-in keystone snap-in retainer receptacles. The Contractor shall provide the type of outlet(s) at each poke-thru location as required by the Low Voltage-Signal Contract Documents.
3) Internal isolating barrier between high and low potential circuits and sections of box.
4) Also refer to Drawings for Additional Outlet Requirements.

d. Conduit knockouts in bottom of box and in each side walls of box. Not less than one 1.25-inch and one 0.75-inch knockouts for both low potential and high potential conduits connections on each opposing box sides. Include the same configuration of knockouts on the bottom of the box, for high potential section and low potential sections.
e. Floor box cover:

1) Flush tamper resistant "lock-down” removable main cover. Independent hinged "flip-out" port in the removable cover, to allow main box cover to be in a fully closed position with "plug-in" cords connected into box when the lock-down cover is closed. Main cover "lock-down" to prevent non-authorized access into box interior.
2) Brass, removable recessed main cover, rated for carpet, or tile for floor finish, brass overlapping trim cover finish. Cover recess depth 0.25-inch, 0.5-inch or 0.75-inch as required to match respective floor covering thickness and type. ADA compliant, wide trim matching flange.

f. Floor box with metal body, nominal box size 10-inches by 12-inches by depth to match floor, but not less than 3.0-inches deep box.
g. Floor box as manufactured by FSR #FL-500P Series; no known equal.

2.2 PULLBOXES

A. General

1. Sizes as indicated on the Drawings and in no case of less size or material thickness than required by the Governing Code and AHJ.

2. Exercise care in locating pullboxes to avoid installation in drain water flow areas and to clear existing condition interferences.

3. UL listed and labeled for electrical circuits.

B. General Purpose Sheet Metal Pullbox

1. General purpose sheet steel pullboxes: Install only in dry protected locations with removable screw attached covers. Manufacturer's standard rust proofing and baked enamel finishes.

2. Weatherproof sheet steel pull boxes: Fabricate of Code gauge steel. All surfaces interior and exterior hot-dip galvanized steel. Gasketed weather-tight cover of same material.

C. Concrete Pullboxes and Hand-Holes for Electrical

1. AASHTO H-20 traffic loading rated box and cover, pre-cast concrete, steel reinforced pullboxes and hand-holes. Provide complete with pulling irons, hot-dip galvanized metal traffic cover with hot-dip galvanized metal cover frame, pull-box concrete base with sump. Four cable full height wall racks with porcelain cable support blocks.

2. Boxes shall be “Intercept” type with multiple box sections. Extension cable-intercepts at both ends of box. Refer to Drawings for box size.

3. Covers shall be flush bolt down. Covers weighing more than 40-pounds shall be split cover type “Torsion-Sping” assist, hinged open-close.

4. Box covers shall comply with Federal ADA, UL, State and Local AHJ for slip resistance. Provide cast-or-bead weld on cover of pull box to indicate services within pullbox (i.e., "480/277-VOLT, 3-PHASE, 4-WIRE ELECTRICAL" OR “SIGNAL/TEL/P.A./CLOCK/FIRE ALARM" etc.).

5. Shall be set on a machine-compacted pea gravel base 12-inches thick with gravel base extend 6-inches beyond box base on all sides. Provide a 0.75-inch by 10-feet copper clad ground rod through the box bottom with 9-inch projection into box, for grounding all metal parts and frames with continuous #10AWG copper bond wire.

6. Seal all box joints and seal box between cover and frame with a mastic compound similar to Parmagum or Dukseal. After cables have been pulled, connected, tested and inspected, seal box cover and bolt-close cover.

7. As manufactured by Jensen Precast, or Oldcastle Precast.

2.3 SWITCHES, WIRING DEVICES

A. General

1. Provide wiring device circuit switches totally enclosed, electrical insulating Bakelite or electrical insulating composition base, manual operator type with 277-

volt 60Hz AC rating for full capacity contacts rated for incandescent lamp loads, fluorescent lamp loads and motor loads. Switch mounting-ears for screw attachment to outlet box. Switches shall be UL listed and labeled; conform to NEMA-WD1 and WD6.

2. Switch controlling (on-off) rated for all lighting loads and all non-lighting loads; switch ratings shall be 20-amp, unless indicated otherwise on Drawings.

3. Color as selected by Owner's Representative. Switches and wiring devices controlling circuits connected to emergency power shall be red.

4. All switches shall be of the same Manufacturer.

5. Where switches are mounted in multiple gang assembly and are operating at 277 volts and/or 277 volts and 120 volts or emergency/non-emergency and mounted in same outlet box, there shall be an insulating barrier installed between each switch.

6. Devices shall additionally be listed and labeled as UL-All Weather-Resistant wet-location for the following install locations:

   a. Devices indicated on Drawings as Weather-Proof (W.P.).
   b. Devices installed in outdoor locations
   c. Installed in classified wet or damp area locations both indoor and outdoor.

7. Wiring devices shall be listed and labeled for connection of both "solid" and "stranded" copper circuit conductors.

8. Switches with ampere and voltage ratings different than described herein. The different rated switches shall have the same characteristics and performance as the respective described switches, except for differing ampere and voltage characteristics.

B. Switches Heavy Duty (Toggle – Type)

1. Single Pole Switches – 20-amp at 277V

Manufacturer	Toggle Type	Lock Type
Hubbell	#HBL1221	#HBL1221-L
Legrand/P&S	#20AC1	#20AC1-L
Leviton	#1221	#1221-L
Cooper-Arrow/Hart	#AH1221	#AH1221-L

2. Double Pole Switch – 20-amp at 277V

Manufacturer	Toggle Type	Lock Type
Hubbell	#HBL1222	#HBL1222-L
Legrand/P&S	#20AC2	#20AC2-L
Leviton	#1222	#1222-L
Cooper-Arrow/Hart	#AH1222	#AH1222-L

3. Three-Way Switches – 20-amp at 277V

Manufacturer	Toggle Type	Lock Type
Hubbell	#HBL1223	#HBL1223

Legrand/P&S	#20AC3	#20AC3-L
Leviton	#1223	#1223-L
Cooper-Arrow/Hart	#AH1223	#AH1223-L

4. Four-Way Switches – 20-amp at 277V

Manufacturer	Toggle Type	Lock Type
Hubbell	#HBL1224	#HBL1224-L
Legrand/P&S	#20AC4	#20AC4-L
Leviton	#1224	#1224-L
Cooper-Arrow/Hart	#AH1224	#AH1224-L

5. Momentary Contact Switches – 20-amp at 277V

Manufacturer	3-Position Regular	3-Position Lock
Hubbell	#HBL1557	#HBL1557-L
Legrand/P&S	#1251	#1251-L
Leviton	#1251	#1251-L
Cooper-Arrow/Hart	#AH (extra)	#AH (extra)

6. Maintained Contact Switches (Double Throw, Center Off) – 20-amp at 277-volt

	Toggle Type		Lock Type	
Manufacturer	1-Pole	2-Pole	1-Pole	2-Pole
Legrand/P&S	#1225	#1226	#12250L	#1226-L
Hubbell	#HBL1385	#HBL1386-L	#HBL1385-L	#HBLM1386-L
Leviton	#1385	#1386		
Cooper-Arrow/Hart	#AH (extra)	#AH (extra)	#AH (extra)	#AH (extra)

7. Pilot lights used in conjunction with circuit switches shall be LED type with red jewel.

C. Weather-Proof (W.P.) Switches

1. Outdoor switches provide heavy-duty, tamper resistant gasketed weather- proof metal, hinged door cover for each switch.

2. Cover door shall be key locking-type or padlock-type.

D. Other Switches, Receptacles, Devices, and Outlets

1. Special devices outlets and outlet locations shall be as indicated on the Drawings. Modify device and outlet characteristics to accommodate the actual install location conditions for each outlet.

2.4 ELECTRIC RECEPTACLE WIRING DEVICES

A. General

1. All receptacle wiring devices in flush type outlet boxes shall be installed with a bonding jumper to connect the box to the receptacle ground terminal. Grounding through the receptacle mounting straps is not acceptable. The bonding jumper

shall be sized in accordance with the branch circuit protective device as tabulated herein under "Grounding". Bonding jumper shall be attached at each outlet to the back of the box using drilled and tapped holes and washer head screws 6-32 or larger (except isolated ground receptacles). For receptacles in surface mounted outlet boxes direct metal-to-metal contact between receptacle mounting strap (if it is connected to the grounding contacts) and outlet box may be used. Receptacle mounting-ears for screw attachment to outlet box. Receptacle shall be UL listed and labeled; conform to NEMA-WD1 and WD6.

2. All receptacles shall be a product of the same Manufacturer.

3. Receptacle color as selected by Owner's Representative. Receptacles connected to emergency power circuits shall be red.

4. Wiring devices shall be listed and labeled for connection of both "solid" and "stranded" copper circuit conductors.

5. Duplex convenience receptacles and 120-volt single phase branch circuits.

    a. Duplex (convenience) receptacle, wiring device with two single receptacles with the same electrical rating, integrated into a single assembly by the Manufacturer.
    b. 20-amp branch circuits with a single duplex convenience receptacle connection on each circuit, receptacles shall be rated for 20-amp.
    c. 15-amp and 20-amp branch circuits with two or more duplex convenience receptacle connections each circuit, receptacle shall be rated 15-amp or 20-amp.

6. Devices shall additionally be listed and labeled as UL-All Weather-Resistant, provide weather resistant receptacles for the following install locations. Modify Manufacturer's Catalog number descriptions, shall include all-weather-resistant UL listing and labeling:

    a. Devices indicated on Drawings as Weather-Proof (W.P.).
    b. Devices installed in outdoor locations.
    c. Devices installed in classified as damp or wet locations both indoor and outdoor.
    d. All GFCI (ground-fault) receptacles all locations.

7. Receptacles with ampere and voltage ratings different than described for duplex convenience receptacles. The different rated receptacles shall have the same characteristics and performance as the respective duplex convenience receptacles, except for differing ampere and voltage characteristics. Refer to "Floor Boxes" for additional Receptacle Requirements".

8. Receptacles shall be GFCI type for the following locations:

    a. located within 84-inches of a sink or hosebib shall be GFCI receptacles.
    b. Devices installed in outdoor locations.
    c. Devices installed in classified as damp or wet locations both indoor and outdoor.

d. Devices indicated on Drawings as GFCI or Weather-Proof (W.P.).

9 “Split-Wire” duplex convenience receptacles. Each split-wire receptacle plug connects on independent common circuit. Provide nameplate or graphic on face of receptacle describing the receptacle function and control source. Comply with California Title-24 and ASHRAE-90.1, latest revisions.

B. Duplex Convenience Receptacles.

1. Shall be grounding type, 120 volt and shall have two current carrying contacts and one grounding contact which are internally connected to the frame. Outlet shall accommodate standard parallel blade cap and shall be side wired. Receptacles shall be tamper-resistant–TR, UL-TR.

2. GFCI receptacles shall be all Weather-Resistant and wet location rated. Duplex rated 120-volt 60Hz AC, 20-amp, unless indicated otherwise on Drawings.

3. Heavy Duty Industrial Grade

Manufacturer	NEMA 5-15R	NEMA 5-20R	NEMA 5-20R-GFCI
Legrand/P&S	#5262	#5362	#2095HG
Leviton	#5262	#5362	#W7899
Hubbell	#CR5252	#5362	#GFR8300
Cooper-Arrow/Hart	#AH5262	#AH5362	#WRVGF20

C. Weatherproof (W.P.) Receptacle

1. Outdoor receptacles shall be duplex convenience GFCI type rated 20-amp 120-volt 60Hz AC weatherproof, GFCI, unless indicated otherwise on Drawings. Test-reset buttons and visual pilot.

2. GFCI receptacles shall be wet location and Weather-Resistant rated weatherproof, gasketed, key locking tamper resistant, wet location.

3. Outdoor, flush mount outlet with hinged, key-locking, weather-proof cover (CEC/NEC – 406.8 compliant). As manufactured by: Pass and Seymour/ Legrand #4600 Series; or C.W. Cole #310 Series.

4. On exposed conduit runs, provide weatherproof ground fault circuit interrupter type GFCI receptacles installed in "FS" condulet watertight cast metal body, with weather-proof spring door type covers, gasket watertight. Door shall be key locking-type or padlock-type.

D. Other Switches, Receptacles, Devices, and Outlets.

1. Special devices, outlets and outlet locations shall be as indicated on the Drawings. Modify device and outlet characteristics to accommodate the actual install location conditions for each outlet.

2.5 PLATES

A. Cover Plates for Devices

1. Provide cover plates for every line voltage and low voltage switch, receptacle, telephone, computer, television, signal and other device out-lets.

a. All cover plates shall be nylon or thermoplastic, color as selected by Architect.

2. Plates shall be as manufactured by P&S; or Hubbell; or Leviton; or General Electric.

2.6 STRUCTURAL AND MISCELLANEOUS STEEL

Structural and miscellaneous steel used in connection with electrical work and located out-of-doors or in damp locations, shall be hot dip galvanized unless otherwise specified. Included are underground pull box covers and similar electrical items. Galvanizing averages 2.0 ounce per square foot and conforms to ASTM A123.

2.7 FLASHING ASSEMBLIES

A. General

1. Flashing shall be compatible with the material being penetrated and with the pipe passing through the flashing. Coordinate with and comply with Manufacturer's recommendations, for both the flashing and the material being penetrated.

2. Provide lead metal flashing assemblies at all roof penetrations, unless recommended otherwise by Manufacturer.

3. Seal the joint between the flashing and pipe passing through the flashing with waterproofing compound.

4. Lead flashing for roof penetrations, as manufactured by: Santa Rosa Lead Products; or Semco; or Flashco.

B. Storm Collars

1. In addition to penetration flashing, provide a storm-collar counterflashing for each roof penetration flashing. Shall attach to the structure of the penetration and form a water-tight “Umbrella” counter flashing over the roof penetration flashing.

2. As manufactured by: STD-Storm collars; or ASI-Storm collars.

2.8 RELAYS, CONTACTORS, AND TIMESWITCHES

A. Individual Control Relays (HVAC Plumbing of the Control Functions)

1. Individual control relays shall have convertible contacts rated a minimum of 10-amp, 600-volt regardless of usage voltage. Coil voltage, number and type of contacts shall be verified and supplied to suit the specific usage as shown in the

wiring diagrams and/or schedules on the Electrical and Mechanical Drawings. Coil control circuit shall be independently fused, sized to protect coil. Relays shall be installed on prefabricated mounting strips. Each relay shall have a surge suppressor to limit coil transient voltages. Furnished in the NEMA Type I enclosure unless indicated otherwise.

2. The following relays are approved:

Manufacturer	Type
Cooper-Arrow/Hart	IMP
General Electric	Class CR 2811
Square D Co.	Class 8501, Type A
Westinghouse	Bul. 16-321, Type NH
Allen Bradley	Approved Equal

B. Contactors and/or Relays

1. Contactors and/or relays for control of lighting shall be 600-volt AC, electrically operated, mechanically held units, open type for panel mounting with number of poles and of size as indicated on the Drawings. Provide auxiliary control relay for operation of each contactor and/or relay with a 2-wire control circuit.

2. Contactors and/or relays shall be mounted in panelboards in barriered section under separate hinged lockable doors or in contactor and/or relay cabinets as called for on the Drawings. Contactors and/or relays shall be installed on Lord sound absorbing rubber mounts.

3. Contactors and/or relays shall be Automatic Switch Co. Bulletin #920 Series for 2-pole and 3-pole, Automatic Switch Co. Bulletin 917 Series with poles as indicated on Drawings. Coil control circuit shall be independently fused, sized to protect coil.

4. Contactors and/or relays shall be equipped with a switch, in the proper configuration, to disconnect the control circuit controlling the coil of the respective device. Control circuit disconnect switch shall be labeled showing function of device.

C. Time-switches

1. All timeswitches shall have synchronous motor drive for operation on 120 or 277-volt, 60Hz, AC and shall be furnished with a 10-hour, spring-driven, reserve-power motor. Contacts shall be rated 40-amp per pole.

   a. Exterior lighting timeswitches for control of individual circuits or electrically operated relays shall have astronomic dial and shall be Tork 7000ZL Series or approved equal by Paragon or Intermatic.
   b. Interior lighting timeswitches for control of individual circuits or electrically operated relays shall be Tork 7000 Series or approved equal by Paragon or Intermatic.

c. Timeswitches for control of air conditioning or plumbing equipment shall have 7-day dial and shall be Tork WL Series or approved equal by Paragon or Intermatic.

2. All timeswitches shall be mounted in separate section in top of panelboards under separate lockable door unless otherwise indicated on Drawings. Clear opening for time-switch shall be a minimum of 12-inches by 12-inches.

D. Contactors and/or Relays/Time-switch Cabinet

1. Contactors, relays, and/or timeswitches not indicated to be mounted in electrical panels shall be mounted in a cabinet, size as required, with hinged lockable door keyed same as panelboards. Construction of cabinet shall be similar to terminal cabinets.

2. Each contactor, relay or time-switch mounted in the contactor cabinet shall be barriered in its own compartment and shall be installed on Lord sound absorbing mounts.

3. Contactor cabinets shall be of the same Manufacturer as the panelboards.

4. Where relays and/or contactors occupy the same enclosure as time-switches they shall have a clear acrylic shield installed over each relay or contactor to guard line exposed parts from accidental contact by nonauthorized personnel.

2.9 DISCONNECTS (SAFETY SWITCHES)

A. General

1. Disconnect switches shall all be rated:

a. 600-volt 60Hz AC for all disconnect safety switches.
b. NEMA Type HD, quick-make, quick-break, H.P.-rated.
c. Fused Class "R", in NEMA Type I indoor location enclosure. Where enclosure is indicated outdoor or W.P. (Weather-Proof) switches shall be rain tight NEMA 3R enclosure. Lockable access door.
d. Number of poles horsepower rating and amperage as indicated on the Drawings.

2. Provide internal neutral bus, ground-lug and conductor landing lugs, size to match conductors shown on Drawings. Switch access door shall be interlocked with switch to prevent access inside switch when switch is “ON” closed position.

3. Maximum voltage, current and horsepower rating clearly marked on the switch enclosure and switches having dual element fuses shall have rating indicated on the nameplate.

4. Disconnect switch and fuses ampere rating shall also comply with Manufacturer’s recommendation for the connected load.

2.10 TRANSFORMERS (600 VOLTS AND BELOW)

A. General

1. Provide dry type transformers constructed to meet Underwriters' Laboratories Specification UL 506 and tested in accordance with ANSI and NEMA Standards. Performance on transformers equal to or better than ANSI, NEMA, IEEE and CEC/NEC published criteria.

    a. 60Hz AC line and load.

2. UL Class 220°C insulation with maximum winding temperature rise of 150°C in 40°C ambient at 100% continuous rated capacity with overload capacity per ANSI C57.12 and C57.96 vacuum impregnated core and coil insulation.

3. Transformers shall be equipped with not less than a total of five 2.5% full capacity voltage taps; two taps above normal voltage; and three taps below normal voltage.

4. Line and load terminals shall be accessible, located behind removable front cover plate. Transformer connects shall terminate in “Conductor-Lugs” to match line side incoming and outgoing secondary side conductors, shall occur on a common (same) side of transformer on insulated supports.

5. Provide wall mount and ceiling mount transformers support brackets, platforms and attachment structures for transformers.

6. Dry type transformers shall meet or exceed NEMA TP-1 (latest revision), Class-1 efficiency levels. Shall be marked as energy efficient for United States Department of Energy and Environmental Protection Agency DOE/ EPA “Energy Star” complaint.

7. Transformer windings shall be copper or aluminum.

8. Electrostatic Shield: Provide full width, copper, 100% electrostatic shield (Faraday Shield), between line and load transformer windings, on each transformer phase. Shield shall be low impedance grounded to the transformer metal frame and shall attenuate common mode electrical noise 120dB at 1-500MHz range and transverse mode electrical noise, 30dB at 1-500MHz range. Average effective coupling capacitance of thirty picofarads between line and load sides.

9. Connect transformers by one of the following methods:

    a. Underfloor conduit resulting in no rigid connections to transformer (provide ground strap for equipment ground).
    b. Liquid tight flexible metal conduit (provide ground wire for equipment ground).
    c. Pullbox or wireways from transformer which are isolated from transformer with an approved sound absorbing neoprene gasket (provide ground strap for equipment ground).

10. The physical dimensions of the transformer shall not exceed the size shown on the Drawings.

11. Transformer and transformer mounting shall be designed and tested and comply with install location seismic earthquake resistance seismic loads, typical for floor, wall and ceiling mount/suspended transformers. Bolt floor-mounted transformers to floor and mounting brackets or wall/ceiling brackets as applicable. Provide seismic rated isolation rubber mounts, on each attachment contact location.

B. Test Requirements:

1. The transformers shall be subjected to the following production tests:

a. Applied Potential
b. Induced Potential
c. No Load Loss.
d. Voltage Ratio.
e. Polarity
f. Continuity

2. The Manufacturer shall have performed the following additional tests on transformer units identical to the design type being supplied to this Specification. Proof of performance of these tests in the form of test data sheets shall be provided at the Time Shop Drawings are submitted for approval.

a. Sound Levels
b. Temperature
c. Full Load and 50% Load Losses for linear and nonlinear loads
d. Voltage Regulation
e. Impedance

C. Transformer Housing

1. Metal, air cooled enclosure

a. Removable metal NEMA 1 enclosure, indoor location
b. Removable NEMA – 3R enclosures, outdoor locations, with vent shields and rodent shields.
c. Provide screen protected ventilation for all openings, including bottom of housing, to prevent accidental contact with internal components and prevent rodent/insect entrance.

2. Manufacture’s rust inhibitor primer and standard finish paint.

3. Removable lifting and skidding provisions.

4. Provide wall mount and ceiling mount transformers support brackets, platforms and attachment structures for transformers.

D. Sound Levels: Transformer sound levels, between no load to full load, shall be guaranteed by the Manufacturer not to exceed the following values:

9kVA and below	40dBa
10kVA to 50kVA	45dBa
51kVA to 150kVA	50dBa
151kVA to 300kVA	55dBa
301kVA to 500kVA	60dBa

2.11 CONCRETE WORK (ADDITIONAL REQUIREMENTS)

A. Portland Cement

1. ASTM C33- (latest revision), Type II, Low Alkali Cement. Composed of Portland cement, coarse aggregate, fine aggregate, and water.

   a. Concrete for use as electrical equipment footings, lighting pole bases and equipment slabs on grade, concrete shall attain minimum 28-day compressive strength of 4000psi, using not less than 5.75 sacks of cement per cubic yard of wet concrete.
   b. Concrete for underground duct/conduit encasement, the minimum 28-day compressive strength shall be 2000psi. Provide a minimum of 10-pounds of red oxide concrete coloring per yard of concrete.
   c. Mix shall obtain a 6-inches slump, measured with standard slump cone per ASTM C143/C143M (latest revision).

2. Coarse Aggregate: Uniformly graded between maximum size not over 1½-inch and not less than 0.75-inch and minimum Size #4, crushed rock or washed gravel. For concrete encased conduit only, maximum aggregate size shall be ½-inch.

3. Fine Aggregate: Clean, natural washed sand of hard and durable particles varying from fine to particles passing ⅜-inch screen, of which at least 12% shall pass fifty mesh screens.

B. Water: Clean and free from deleterious quantities of acids, alkalis, salts, or organic materials.

C. Reinforcement

1. Bars: Intermediate Grade Steel conforming to ASTM A615/A615M grade 60, with pattern deformations.

2. Welded Wire Fabric: ASTM A185/A185M.

3. Bending: Conform to Requirements of ACI 318.

D. Form Material: For exposed work, use PS 1-66 "B-B Concrete Form" plywood forms, or equal. Elsewhere, forms may be plywood, metal, or 1-inch by 6-inch boards. Forms for round lighting pole bases shall be Sono-tube.

2.12 WIREWAY

A. General:

1. Unobstructed lay in type, metal wireway, fittings and connectors UL listed for use as wireway and auxiliary gutter. Length, elbows and "T-S" as shown on Drawings. Minimum cross-section size 4-inches by 4-inches, but not less than shown on the Drawings. Suitable for mounting in any position orientation.

B. Construction:

1. Minimum metal gauge shall not be less than 14-gage.

2. Cover shall be hinged entire length of cover. Cover shall be held in the closed position with bolts and nuts.

3. Provide spring nuts on all hardware fastener penetrations into the interior of the wireway to protect against wire insulation damage.

4. The inside of 90-degree corners in the wireway shall be a 45-degree bevel.

5. Grounding continuity between wireway sections and fittings shall be continuous the entire length of the wireway.

C. Finish:

1. Indoor non-raintight, rust inhibitor phosphatizing base coating and baked enamel finish, Manufacturer's standard color.

2. Raintight outdoor-galvanized metal, with corrosion resistant phosphate primer and baked enamel finish, Manufacturer's standard color, NEMA 3R construction.

3. All hardware shall be plated to prevent corrosion.

PART 3 - EXECUTION

3.1 GROUNDING (ADDITIONAL REQUIREMENTS)

A. Grounding shall be executed in accordance with all applicable Codes and Regulations, both State of California and Local Authorities Having Jurisdiction.

B. The Neutral of each Transformer and each Uninterruptable Power Supply - UPS and each inverter shall be grounded by individual separate ground conductors in individual conduits as follows:

1. Conductor and conduit shall be grounded to building main ground bus.

2. Conductor and conduit shall be grounded to respective room/closet ground bus, where occurs.

3. Conductor and conduit shall be grounded to nearest available effectively grounded building structural steel member or grounded metal cold water pipe.

4. The neutral ground conductors for secondary side of each transformer each, inverter and each UPS unit shall be copper and shall be sized according to the following table:

Secondary Total Equivalent Size Copper	Neutral Ground Wire Size Copper
#2 or smaller	#6-1-inch conduit
1 or 1/0	#4-1-inch conduit
2/0 or 3/0	#2-1¼-inch conduit
4/0 thru 350 MCM	#1-1¼-inch conduit
Over 350 MCM thru 600 MCM	2/0-1½-inch conduit
Over 600 MCM thru 1100 MCM	3/0-1½-inch conduit
Over 1100 MCM	4/0-2-inch conduit

C. Each pullbox or any other enclosure in which several ground wires are terminated shall be equipped with a ground bus secured to the interior of the enclosure. The bus shall have a separate lug for each ground conductor. No more than one conductor shall be installed per lug.

D. The Maximum Resistance to Ground shall not exceed 5 ohms.

3.2 OUTLET AND JUNCTION BOXES

A. General:

1. Accurately place boxes and securely fastens to structural members. Where outlets are shown at same location but at different mounting heights, install outlets in one vertical line. Where outlets are shown at same location and mounting height, mount outlets as close together in a horizontal row as possible. Where the outlet boxes for switches and receptacles are shown at the same location and mounting height, mount in common outlet box with barriers between devices. Provide single piece multi-gang cover plate for close mounted outlet boxes. Where switches are shown on wall adjacent to hinge side of doors, box shall be installed to clear door when door is fully opened.

2. Flush mounted boxes shall be attached to not less than two parallel studs or structure members by means of metal supports. The supports shall span between and attach to the structure members.

3. Boxes above accessible ceilings shall be attached to structural members. Where boxes are suspended, they shall be supported independently of conduit system by means of hanger rods and/or preformed steel channels. Boxes shall be supported independently of all piping, ductwork, equipment, ceiling hanger wires and suspended ceiling grid system.

4. Surface mounted outlets shall be attached to concrete or masonry walls by means of expansion shields.

5. Floor boxes shall be installed level with finish floor and within adjustable limits of floor ring. Where outlets are shown at same or adjacent location, use multi-gang boxes.

    a. Provide cut-outs in the sub-floor assembly, to accept the recess depth of each electrical floor box. Provide added “fire-proof” applications on the bottom of each floor box location extending through the sub-floor. The “fire-proof” application shall be equal to the floor fire-assembly withstand rating.
    b. Poke-thru floor outlets, core drill floor for installation of poke-thru. Install “split-box” in the ceiling space of the floor below. If the ceiling space of the floor below is not accessible ceiling type (lift-out), then provide 12-inches round removable fire-rated stainless steel access panel and trim-ring in the finish ceiling for hand-access to poke-thru “split-box” above the ceiling.

6. Outlet Box Horizontal and Vertical Separation: Outlet boxes and device outlet rings installed flush in walls shall be horizontally and vertically separated by not less than 24-inches (edge of box to edge of box) from device outlet boxes and rings in common wall surfaces located on the opposite (back) side of the same wall.

    a. Where the separation cannot be maintained, provide a solid backing behind and completely enclosing each outlet box.
    b. The backing shall extend the width of the wall cavity (i.e., between "studs" or masonry cells) behind the box and 12-inches above and below the outlet box centerline, completely enclosing the outlet box.
    c. The backing shall consist of the following:

        1) ⅝-inch thick gypsum board anchored in place for "Stud" wall construction.
        2) Solid "Mortar" to completely fill the outlet box "Cell" behind the box in masonry construction.

7. Provide metal outlet box for each device. Install devices in metal outlet boxes. Typical for all wiring devices including, switches, receptacles, line voltage devices, and low voltage/signal system devices.

B. Fire Wrap:

1. In fire rated walls and ceilings provide fire rated "Box-Wrap" around the outside of each outlet box placed in fire rated wall or ceiling. Install the fire wrap on exterior of box inside the wall or ceiling, to maintain the fire rating of wall or ceiling with the installed outlet boxes.

3.3 SWITCHES AND RECEPTACLES-DEVICES

A. General

1. Provide outlet boxes for all devices, switches, receptacles, both line-voltage and low-voltage.

2. Devices installed in wireways shall be installed flush in wireway assembly.

3. Install and screw attach devices into outlet boxes and wireways.

4. Provide ground circuit connections to all devices.

5. Provide branch circuit connections to all devices.

6. Provide testing and commissioning for proper operation and phase/ground connectors.

    a. Test each GFCI devices and Arc-Fault devices after installation and circuit connection is complete.
    b. Test all devices for correct polarity and proper electrical energization.
    c. Test On-Off operation of automatically controlled outlets and receptacles.

7. Install and adjust all coverplates to be flush and level, with correct device and circuit identification.

8. Were one or more devices occurring at the proximity with other similar devices, all the devices shall be “Granged” under one common coverplate as follows:

    a. Duplex convenience receptacles with other proximity (within 18-inches) duplex convenience receptacles.
    b. Lighting control switches not exceeding 20-amp switch rating with other proximity (within 18-inches) similar switches.

B. Line-Voltage Plug-In Type Receptacle Installation Orientation:

1. The “Ground-Pin” shall face “UP” at the receptacle top location (double duplex) 4-plex, individual and vertically mounted individual duplex receptacles.

2. The “Neutral-Blade” shall face “UP” at the receptacle top location on horizontally mounted duplex receptacles.

3.4 CONCRETE WORK

A. Form:

1. Space forms properly with spreaders and securely tie together. Do not use twisted wire form ties. Keep forms wet to prevent joints from opening up before concrete is placed. Replace improper construction as directed. Do not use wood inside forms.

2. Build in and set all anchors, dowels, bolts, sleeves, iron frames, expansion joints and other materials required for the Electrical Work. Place all items carefully, true, straight, plumb, and even.

3. Carefully remove all exposed forms. Cut nails and tie wires below face of concrete and fill all holes. Rubbish will not be allowed to remain in, under, or around concrete.

B. Mixing: Use batch machine mixer of approved type. After ingredients are in mixer, mix for at least 1½-minutes.

C. Transit Mixing: In lieu of mixing at site, transit mixing may be used if rate of delivery, haul time, mixing time, and hopper capacity is such that concrete delivered will be placed in forms within 90-minutes from time of introduction of cement and water to mixer.

D. Placing of Concrete

1. Before placing concrete, remove wood, rubbish, vegetable matter and loose material from inside forms. Thoroughly wet down wood forms to close joints.

2. Clean reinforcement; remove paint, loose rust, scale and foreign material. Bars with bends not called for will be rejected. Hold securely in place to prevent displacement. Lap bar splices 24-diameters, min; lap fabric one mesh min. Tie intersections, corners, splices with 16-gallon annealed wire, or as otherwise called for.

3. Place concrete immediately after mixing. Do not use concrete that has begun to set; no tempering will be allowed. If chuting is used, avoid segregation. In placing new concrete against existing concrete, use bonding agent per Manufacturer's directions.

4. Give careful and thorough attention to curing of concrete. Keep concrete and forms wet for a minimum of 10-days, after placing concrete.

E. Concrete Finish

1. Finish of Exposed Concrete: Horizontal surfaces, steel troweled monolithic finish; vertical surfaces, smooth and free of fins, holes, projection, etc.

2. Exposed lighting pole bases shall be filled, and sack finished to a smooth finish.

3. Remove concrete pour-forms.

3.5 WIREWAY INSTALLATION

Wireway hangers shall provide clamp type, hanger rod type, direct bolted bracket type from ceiling or walls as indicated on the Drawings and required for field installation locations. Supports shall be installed a minimum of 5-feet on center.

END OF SECTION 26 05 01
010423/535050

SECTION 26 05 30

CONDUIT AND WIRE

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment, facilities, transportation, and services necessary for and incidental to performing all operations in connection with furnishing, delivery, and installation of the work of this Section, complete as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Sections for work related to those other Sections and required to be included as work under this Section.

2. General Provisions and Requirements for electrical work.

1.2 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. Submit product data sheets for all wire, supports, conduit, raceways, ground rods, fittings, and splicing materials.

B. Submit material list for all conduit and conduit fittings.

C. Submit Details and Structural Engineer (PE) Calculations for conduit support systems.

PART 2 - PRODUCTS

2.1 CONDUIT

A. General

1. The interior surfaces of conduits and fittings shall be continuous and smooth, with a constant interior diameter. Conduits and conduit fittings shall provide conductor raceways of fully enclosed circular cross section. The interior surfaces of conduits and fittings shall be without ridges, burrs irregularities or obstructions. Conduits and fittings of the same type shall be of the same uniform weight and thickness.

2. Type of conduit, type of conduit fittings and conduit supports shall be suitable for the conditions of use and the conditions of location of installation, based on the Manufacturer’s recommendations and based on applicable Codes.

3. All fittings for metal conduit shall be suitable for use as a grounding means, pursuant to the applicable Code Requirements. All metal conduit and metal conduit fittings shall provide 3-second duration ground fault current carrying ratings, when installed and connected to the respective conduit, as follows:

a. RMC and EMT conduit fittings.

1) 0.5-inch through 1.5-inch conduit/fitting size - 10,000-amp RMS.
2) 2.0-inches and larger conduit/fitting size - 20,000-amp RMS.

b. FMC and LTFMC Conduit Fittings

1) 0.5-inch through 1.25-inch conduit/fitting size - 1,000-amp RMS (without external bonding jumper).
2) 1.5-inch through 4.0-inch fitting size - 10,000-amp RMS with bonding jumper.

4. Protective corrosion resistant finish for metal conduit fabricated from steel and metal conduit fittings fabricated from steel, shall be as follows:

a. Clean all metal surfaces (including metal threads) with acid bath “Pickle” prior to coating, to remove dirt, oil and prepare surfaces for galvanizing.
b. Hot-dip galvanized zinc coating on all interior and exterior steel surfaces. Minimum finish zinc coating thickness shall not be less than 0.002 inches.
c. Threads shall be hot-dip zinc coated after machine fabrication.
d. Exterior metal surfaces shall be finished with clear organic polymer topcoat layer, after galvanizing.
e. The inner metal surfaces of conduit fittings shall be finished with a lubricating topcoat after galvanizing, to facilitate conductor pulling through the conduit/fitting.

5. Threads for metal conduit and metal conduit fittings shall be taper-pipe-thread, National Pipe Standards (NPS) and shall comply with ANSI-B1.20.1.

6. Metal conduit termination connector fittings shall be provided with a Manufacturer installed, insulating throat bushing inside the fitting. The bushing shall protect the wire conductor insulation from cutting, nicks and abrasion during conductor installation and electrical load “Cycling” after installation is complete. The bushing shall comply with UL 94V-0 flammability.

7. Provide conduit bonding/grounding jumper from metal enclosures with “Concentric Ring” knockouts, to positively ground/bond each respective conduit(s) to the metal enclosure.

8. Metal conduit fittings connecting to PVC coated metal conduit shall be PVC coated to match the conduit.

9. The conduit and fittings shall be watertight and airtight without cracks and pinholes.

B. Rigid Metal Conduit (RMC)

1. Rigid metal, round tubing, machine threaded at both ends.

a. The conduit and conduit fittings shall comply with the Requirements for an equipment grounding conductor, pursuant to applicable Codes.

2. RMC raceway types shall be as follows:

    a. Rigid Galvanized Steel conduit (RGS), minimum yield strength shall be 35,000 PSI. Shall comply with NEMA Standard 5-19 (latest revision); ANSI C80.1 and ANSI-C80.4 (latest revision); UL 514-B and UL 6 (latest revisions); National Pipe Standard Specification (latest revision).
    b. Intermediate steel conduit (IMC). Shall comply with NEMA Standard 5-19 (latest revision) ANSI-C80.6 (latest revision); UL 2142 (latest revision).

3. RMC fittings:

    a. Fittings shall be compatible with RGS and IMC.
    b. Fittings shall be rated “Liquid Tight”.
    c. Fittings imbedded in concrete shall be rated “Liquid Tight” and “concrete tight”.
    d. Connectors and couplings for terminating, connecting and coupling to RMC conduit shall be threaded metal.
    e. Fittings shall comply with ANSI C80.4 and ANSI C33-84 (latest revision); NEMA FB1 (latest revision); UL 514 (latest revision).
    f. Conduit seal fittings:

        1) Conduit seals shall prevent the passage of gasses, liquids and vapors past the location of the seal installation in the conduit.
        2) Conduit seals shall be suitable for installation in both vertical and horizontal conduit locations.
        3) Conduit seals shall be visible and accessible for inspection after installation is complete.
        4) Conduit seals shall be rated for the following locations:

            a) Wet locations
            b) Classified hazardous location materials NEC Class 1 Division 1.
            c) Temperature ranges from minus 20 degrees centigrade through plus 90 degrees centigrade.

        5) Conduit seals, sealing compound and sealing compound “dam” shall be the products of the same Manufacturer.

4. RMC fittings as manufactured by:

    a. For threaded enclosure, termination connection.

        1) Thomas & Betts - 106 Series bonding locknut, 5302 Series sealing ring with stainless steel retainer.

    b. For non-threaded enclosure, termination connector.

        1) Thomas & Betts - 370 Series watertight threaded sealing hub, 106 Series threaded bonding lock nut, Sta-Con Series enclosure bonding jumper and 3870 Series threaded ground bushing.
        2) Emerson-OZ/Gedney-CHMT/CHT watertight threaded hub with bonding locknut and GH50G Series enclosure bonding jumper.

c. For RMC-to-RMC conduit-to-conduit coupling

1) Thomas & Betts/Erickson - 674 (threaded) Series
2) Emerson-OZ/Gedney Type TPC (threaded) Series
3) Threaded RMC conduit couplings, product of the same Manufacturer as the RMC conduit.

d. For RMC Conduit Seals

1) Emerson-OZ/Gedney-EYA and EYAM (threaded) Series
2) Appleton-EYF and EYM (threaded) Series

C. Electrical Metallic Tubing (EMT)

1. Rigid metal round tubing, “Thin Wall” steel construction, with non-threaded ends.

a. The conduit and conduit fittings shall comply with the Requirements for an equipment grounding conductor pursuant to applicable Codes.
b. The conduit shall be watertight and airtight without cracks and pinholes.

2. EMT shall be allowed for conduit size ranges from 0.5-inch through 4.0-inches.

3. Comply with ANSI C80.3, C80.4, and ANSI C33.98 (latest revisions); UL 594 and UL 797 (latest revisions); CEC Section 12500 (latest revision).

4. EMT fittings:

a. Connectors and couplings for terminating, connecting and coupling to EMT conduit shall be non-threaded steel fabrication.
b. EMT termination connector fittings shall be as follows:

1) Set screw type “Concrete Tight” when installed in dry interior locations.
2) Compression types “Rain Tight” and “Concrete Tight” when installed in wet or damp locations, outdoors and in concrete or masonry construction.

c. Fittings shall comply with ANSI C33.84 (latest revision); UL 514 (latest revision); NEMA FB-1.

5. EMT fittings as manufactured by:

a. For threaded and non-threaded enclosure, termination connector

1) Thomas & Betts-TC721A (set screw type) Series (with locknuts).
2) Emerson-OZ/Gedney-TC500I (set screw type) Series (with locknuts).
3) Thomas & Betts-5123 (compression type) Series (with two locknuts).
4) Emerson-OZ/Gedney-TC600I (compression type) Series (with locknut).
5) Thomas & Betts-4240 (compression type) Series (90-degree angle with locknut).
6) Emerson-OZ/Gedney-TWL (compression type) Series (90-degree angle with locknut).

b. For EMT-to-EMT conduit-to-conduit coupling:

1) Thomas & Betts-TK121A (set screw type) Series (with locknut).
2) Emerson-OZ/Gedney-5000 (set screw type) Series (with locknut).
3) Thomas & Betts-5120 (compression type) Series.
4) Emerson-OZ/Gedney-TC600 (compression type) Series.

c. For EMT to RMC conduit to conduit combination coupling:

1) Thomas & Betts-HT221 (set screw type) Series.
2) Emerson-OZ/Gedney-ESR (set screw type) Series.
3) Thomas & Betts-530 (compression type) Series.
4) Emerson-OZ/Gedney-ETR (compression type) Series.

D. Flexible Metal Conduit (FMC)

1. Round flexible conduit, fabricated from a single continuous steel strip. The steel shall be factory formed into continuous interlocking convolutions to form a complete lock between steel strips and provide raceway flexibility.

2. Metal to metal grounding contact shall be maintained throughout the length of the FMC conduit.

3. FMC shall be allowed for conduit size ranges from 0.5 inch through 4.0-inches.

4. FMC shall comply with ANSI-C.33.84 and ANSI C33.92; NEMA FB-1; CEC 12-1100.

5. FMC Fittings

a. FMC fittings shall be malleable iron construction or steel construction.
b. Fitting shall automatically cause the FMC raceway throat opening to be centered with respect to the fitting throat opening.
c. Straight and angled connector termination fittings shall be threaded on one end and shall include a threaded locknut, suitable for connection to threaded and unthreaded enclosures.
d. The attachment of the fittings to FMC shall be angled saddle type, to engage and interlock with the FMC spiral groove, and shall be unaffected by vibration. Direct bearing screw type fittings shall not be used.
e. Direct FMC conduit-to-FMC conduit coupling of FMC shall not be permitted.
f. Shall comply with ANSI C33.9, and ANSI C33.92 (latest revision); NEMA FB1 (latest revision); UL 514.

6. FMC fittings as manufactured by:

a. Straight Termination Connectors
Thomas & Betts - 3110 Series (with locknut)
45- and 90-Degree Angle Connectors
Thomas & Betts - 3130 Series (with locknut)

b. FMC to EMT conduit combination coupling:
Thomas & Betts 503TB Series.

E. Liquid Tight Flexible Metal Conduit (LTFMC)

1. The metal conduit core of LTFMC shall comply with the same Requirements as FMC conduit, with the addition of a thermoplastic exterior flexible jacket over the metal core.

2. The exterior jacket shall be positively locked to the metal core to prevent jacket “sleeving”.

3. The LTFMC shall be rated for installation and operating service temperatures of between minus 20-degrees centigrade through plus 90-degrees centigrade.

4. The LTFMC jacket shall be suitable for continuous exposure to sunlight, rainwater, water vapor, mineral oils and liquid solvents, without penetrating into the conduit and without deteriorating the jacket.

5. LTFMC sizes from 0.5-inch through 1.25-inches shall include an additional internal ground conductor, fabricated by the Manufacturer, as an integral part of the conduit core.

6. Direct LTFMC conduit-to-LTFMC conduit coupling of LTFMC shall not be permitted.

7. LTFMC shall be allowed for conduit size ranges from 0.5-inch through 4.0-inches.

8. In addition to the Requirements for FMC conduit, LTFMC shall also comply with ANSI C-33.84 (latest revision); NEMA-FB1 (latest revision); CEC 12-1400 (latest revision).

9. LTFMC fittings

   a. Fittings shall include an external mechanical ground/bond wire connector.
   b. The attachment of the fitting to LTFMC shall be threaded compression type onto the conduit core with locknut and liquid tight jacket compression seal. The fitting shall automatically prevent “Sleeving” of the jacket.
   c. Straight and angled termination connector fittings shall be threaded on one end and shall include locknut suitable for connection to threaded and unthreaded enclosures.

10. LTFMC fittings as manufactured by:

    a. Termination connector fittings:
       <u>Straight</u>

       1) Thomas & Betts - 5331 GR Series.
       2) Appleton-STB Series; STN-L Series for use with preformed “knockouts”
       3) Emerson- OZ/Gedney - 4Q Series.

       <u>45- and 90-Degree Angle Connectors</u>

       1) Thomas & Betts - 5341GR and 5351GR Series.

2) Appleton-STB-L Series; STN-L Series for use with preformed "knockouts".
3) Emerson-OZ/Gedney-4Q Series

b. LTFMC to RMC conduit to conduit combination coupling fittings:

1) Thomas & Betts-5271 GR Series.
2) Emerson-OZ/Gedney-4Q Series

F. Rigid Non-Metallic Conduit (RNMC)

1. General

a. Fabricated from homogeneous material, free from visible cracks, holes or foreign inclusions, with integral "End-Bell". The conduit and conduit fittings shall be watertight and airtight.
b. Conduit, conduit fittings and conduit fitting assembly "Solvent Cement" shall all be the product of the same Manufacturer. RNMC Conduit and fittings shall be solvent cement welded watertight.
c. Conduit and fittings shall be identified with legible markings showing ratings, size and Manufacturers name.
d. RNMC and fitting shall be corrosion resistant, watertight.
e. Conduit and fittings shall be suitable for conductor and ambient operating temperatures from minus 20 degrees centigrade to plus 90 degrees centigrade.
f. RNMC shall comply with NEMA TC-2 (PVC 40 conduit, latest revision) NEMA TC-6 (EB conduit latest revision) and NEMA TC-3 (fittings, latest revision); UL 514 and UL 651 (latest revision).

2. Polyvinyl Chloride (PVC)-RNMC

a. PVC-Schedule 40 heavy wall construction.
b. PVC-Schedule 80 extra heavy wall construction.
c. PVC-Type EB, with concrete full encasement end-to-end.

3. RNMC fittings connecting to metallic raceways shall be provided with a ground/bond jumper connection.

G. Expansion Joint, Deflection Joint and Seismic Joint Conduit Fittings

1. Expansion Conduit Fitting - Fitting shall provide for a minimum of 2-inches straight line movement between two connecting conduits in each direction (total 4-inches conduit expansion and contraction) parallel to the respective conduit lengths. Fitting shall be watertight.

2. Deflection Conduit Fitting - Fitting shall provide for a minimum of 30 degrees angular deflection movement ("Shear" deflection) between two connecting conduits, in any direction perpendicular to the length of the respective conduits. Fitting shall be watertight.

3. Combination Expansion/Deflection Conduit Fitting - Fitting shall provide the combined "Expansion" and "Deflection" movement capacity between two

connecting conduits as described for separate “expansion” and “Deflection” conduit fittings. Fitting shall be approved for installation concealed in both masonry/concrete construction; concealed inside hollow wall and in ceiling construction; and exposed non-masonry/ concrete construction. Fitting shall be watertight.

4. Fittings shall comply with UL.

5. Fittings as manufactured by:

    a. Conduit expansion fittings exposed, or concealed locations as manufactured by:

        1) Emerson-OZ/Gedney – AXB-8 Series for RMC conduit.
        2) Emerson-OZ/Gedney - TX Series for EMT conduit.
        3) Appleton – AXB or XJ8 Series for RMC conduit and EMT conduits. Provide RMC to EMT combination conduit coupling fittings for each end of the expansion fitting.

    b. Combination expansion/deflection conduit fittings exposed, or concealed conduit locations as manufactured by:

        1) Emerson-OZ/Gedney-AXDX Series for RMC conduit.
        2) Emerson-OZ/Gedney-AXDX Series for EMT conduit.
        3) Appleton-DX Series for RMC conduit.
        4) Provide RMC to EMT combination conduit coupling fittings for each end of the expansion/ deflection fitting.

    c. Conduit expansion/deflection fittings for FMC and LTFMC conduit.

        1) Provide a minimum of 12-inches of “Slack” LTFMC in each FMC or LTFMC conduit at building and structure seismic or expansion joint conduit crossings.
        2) Note: Each FMC “Slack” expansion/deflection location, shall be considered as not less than a 90-degree conduit bend location, for compliance with the maximum quantity of conduit bends allowed in a raceway.

6. Conduit fitting bonding jumper:

    a. The grounding/bonding path of metal conduit shall be maintained by the fitting.
    b. Provide a bonding jumper at each expansion, deflection and combination expansion deflection conduit fitting.
    c. The jumper shall be a bare flexible copper “braid”. The copper braid electrical current carrying capacity shall be equal to the metal conduit.
    d. Provide a factory terminated ground clamp on each end of the braid with adjusting steel conduit grounding clamps and connect to each respective conduit end.
    e. The jumper braid length shall be 8-inches longer than the respective conduit fitting.

f. Bonding jumper for FMC and EMT fittings as manufactured by:

1) Emerson-OZ/Gedney – BJ and BJE Series
2) Appleton – BJ/XJ Series

H. Conduit Bodies Conduit Fitting

1. Conduit bodies shall provide conductor access with a removable conduit body cover and wiring area enclosed in metal housing. The conduit body shall facilitate pulling conductors.

2. In-line form “C” conduit bodies shall be prohibited.

3. The interior space “Length” of 90 degree “Elbow” conduit bodies shall not be less than six times the diameter size of the largest conduit connecting to the conduit body.

4. Conduit body covers shall be removable, gasketed; watertight “Domed” metal covers “Mogul-Type” with threaded screw attachment to the conduit body.

5. Lubricated, reusable, wire roller guards inside the conduit body shall protect wire from insulation damage during wire “Pulling”.

6. Conduit body fittings shall comply with UL 514.

7. Conduit bodies as manufactured by:

a. For RMC Conduit

1) Hubbell/Killark – LB/Mogul (90-degree elbow) Series – threaded body.
2) Emerson-OZ/Gedney - LB 6X/Mogul (90-degree elbow) Series - threaded body.
3) Appleton – NEC6X-LB/Mogul (90-degree elbow) Series - threaded body.

b. For EMT Conduit

1) Same as for RMC conduit. Provide EMT to RMC conduit combination coupling fitting for each outlet body connection.

2.2 PVC COATING

A. PVC Coatings shall be provided as described for specified metal products.

B. PVC Coating shall be factory applied, to comply with NEMA-RN1 and 5-19.

C. The adhesion of the PVC coating to the coated metal shall exceed the strength of the coating itself, based on 0.5-inch “Strip-Pull” test.

D. Uniform coating thickness shall be continuous without “Breaks” or “Pinholes” and shall not be less than the following:

1. Exterior metal surfaces, 40-millimeter coating thickness.

2. Interior metal surfaces, 10-millimeter PVC or urethane coating thickness (i.e., interior of conduits, interior of conduit fittings etc.).

2.3 CONDUIT SUPPORTS

A. General

1. Conduit Supports, hangers and fasteners for metal conduit shall be steel, hot dip zinc galvanized.

2. Conduit supports, hangers and fasteners for PVC coated conduit shall be PVC coated to match the conduit PVC coating.

3. Threaded hardware shall be continuous, free running threads.

4. Conduit support systems, including support channels, pipe clamps, braces, anchors, hardware, fasteners, shall be sized to support the full capacity circuit conductors' weight, plus the installed conduit weight, plus the conduit fitting weight and support hardware weight, plus a 300% additional weight capacity safety factor.

5. Provide lock washer at each "Bolted"/threaded connection.

6. Conduit supports, fasteners, channels, braces, hardware, anchors, pipe clamps, and hangers as manufactured by Unistrut or Kindorf.

7. Supports shall be free of "BURRS" and sharp edges.

8. Metal supports cut in the field shall be zinc galvanized after cutting to prevent rust.

B. Conduit Hangers

1. Threaded steel hanger rods.

   a. Hanger rods smaller than 0.375-inches in diameter shall not be used for support of individual conduits.
   b. Hanger rods smaller than 0.5-inches in diameter shall not be used for support of multiple conduits.

2. Conduit hanger wires shall be not less than 12-gauge steel.

3. Conduit hangers shall attach to structure fasteners with steel "Clevis" or "Swing" hangers and shall provide a minimum of 45 degrees of angular movement in any direction at the point of the conduit hanger attachment to the structure fasteners.

4. Conduits individually suspended by conduit hangers shall fasten to the respective hangers with "Clevis" type pipe hangers. The pipe hangers shall be steel, adjustable to fit conduit size and shall completely enclose the conduit circumference.

C. Conduit Support Channels

1. “C” channels shall be factory preformed with a minimum 12-gauge thickness metal. The channel shall be factory “Punched” with regularly spaced slotted holes for fastener attachments along the length of the channel.

2. The “C” channel shall not deflect more than 0.1-inch between channel supports at maximum installed design load, including required safety factor.

3. Channels shall comply with ANSI-1008 (latest revision) and ASTM-A569 latest revision).

4. Channels shall provide “Turned Lips” at longitudinal edges to hold (lock-in) fasteners.

5. Conduit support channels suspended from conduit hangers shall attach to conduit hangers with treaded connections. Provide a minimum of two hangers (trapeze style) connected to each channel.

6. Non-suspended conduit support channels shall connect to structure fasteners with threaded connectors.

D. Fasteners, Seismic Earthquake Rated

1. Channel fasteners:

   a. Channel fasteners shall “Pre-Locate” and lock into the channel “Turned Lips” and channel “Walls”.
   b. A separate metal strap shall “Tie” each conduit to each channel with conduit channel fasteners.

2. Structure fasteners:

   a. Structure fasteners for wall and floor mounted conduit attachments shall attach to existing masonry and concrete structures with structure fasteners using drilled, mechanical, expansion shield anchors.
   b. Structure fasteners for wall and floor mounted conduit attachments shall attach to new masonry and concrete structures with structure fasteners using steel threaded inserts precast into the structures.
   c. Structure fasteners shall center the support load above or below the beam flanges and reduce torsion-rotation forces exerted on the structural beam. Attach to steel structural members with “Swing-Beam Clamps”, with set-locking screw structure fasteners.

      1) Beam clamps shall include integral safety rod, strap or “J”-hook to secure the attachment clamp to the beam flanges on both sides of the beam, with integral hanger rod attachment.
      2) Or double-ended beam clamp to secure the attachment clamp to the beam flanges on both sides of the beam, with integral hanger rod attachment.

d. Structure fasteners for wall and floor mounted conduit attachments shall attach to wood structural members with flush “Through-Bolted” wood beam/wood framing stud structure fasteners.
e. Structure fasteners for wall mounted conduit attachments shall attach to steel framing studs and steel structural elements with spot welded steel structure fasteners or drilled and bolted structure fasteners.

E. Brace Connectors

1. Provide lateral brace connectors to resist horizontal, lateral and vertical movement of suspended conduits during seismic earthquakes.

2. The braces shall connect from each conduit support, attach as close to the conduit support as possible, and attach to fixed rigid, non-suspended building “Main” structural elements with fixed anchoring.

3. Brace attachment connectors and fasteners shall be rigid preformed steel channels or flexible #10-gauge steel hanger wire.

4. Connect and attach the brace connectors to fixed structural elements in the same manner as conduit support hangers. The connection of braces to structural elements shall be independent of the conduit support hanger structure fasteners.

2.4 ELECTRICAL POWER WIRE AND CABLE (600 VOLT AND BELOW)

A. General

1. All wire and cable shall be single-conductor, annealed copper, insulated 600-volt, #12AWG minimum unless specifically noted otherwise on the Drawings.

2. Conductors #10AWG and smaller shall be solid. Conductors #8AWG and larger shall be stranded.

3. Insulation of conductor connected to circuit protection devices required to be "100%" rated, shall be 90-degree centigrade rated insulation.

4. Insulation of conductors installed outdoors, on grade or underground, insulation shall be rated for wet locations.

5. Insulation of conductors installed outdoors, installed exposed to the sun, installed in exposed conduits, insulation shall be rated for high-temperature 90 degrees centigrade.

6. Insulation of branch circuit conductors installed internal of light fixtures; insulation shall be rated for not less than 90 degrees centigrade.

7. Conductor exposed to oil. The insulation and jacket shall be oil resistant, complying with “Oil Resistant-1” and “Oil Resistant-2” UL83.

B. Conductor Insulation

1. 600-volt AC and/or DC insulated conductors complying with UL83 installed entirely inside conduits, or enclosed inside wireways, or enclosed inside raceways, insulation shall be rated as follows.

   a. Indoor above Grade locations either concealed or exposed.

      1) Dual rated THHN and THWN
      2) Individually rated THHN-2
      3) Individually rated THWN-2
      4) XHHW-2

   b. Outdoor above Grade either concealed or exposed.

      1) XHHW-2
      2) THWN-2
      3) THW-2

   c. Outdoor below Grade or outdoor on Grade.

      1) XHHW-2
      2) THWN-2
      3) THW-2

   d. All other enclosed raceway locations not described above.

      1) XHHW-2
      2) THWN-2
      3) THW-2

2. 600-volt AC and/or DC insulated conductors installed in open cable tray or open wireway or exposed; insulation also shall be additionally rated for the specific exposed install locations.

C. Insulation Color Coding and Identification

1. The following color code for branch circuits:

   a. Neutral . . . White (Tape feeder neutrals with white tape near connections)
   b. Normal Power

120/208 Volt	480/277 Volt
Ground Green	Ground Green
Phase A Black	Phase A Brown
Phase B Red	Phase B Orange
Phase C Blue	Phase C Yellow

   c. Isolated ground insulation shall be green with a longitudinal yellow stripe.
   d. Emergency power same insulation color as normal power except as follows:
      120/208 Volt
      Provide an additional continuous stripe on each conductor insulation, orange or yellow, except ground

480/277 Volt
Provide an additional continuous stripe on each conductor insulation blue or black, except ground

2. When individual neutral conductors are shown/required for each branch circuit, the color code for the neutral conductors shall be as follows:

   a. 120/208 volt; Phase A - White with Black stripe; Phase B - White with Red stripe; Phase C - White with Blue stripe.
   b. 277/480 volt; Phase A - White with Brown stripe; Phase B - White with Orange stripe; Phase C - White with Yellow stripe.

3. Feeders identified as to phase or leg in each, switchboard, switchgear, panelboard, junction and termination location with printed identifying tape/ tags.

4. Fire alarm conductors: Use 600-volt, type THHN-2/THWN-2 conductors and color-coded per Equipment Manufacturer's recommendations and approved and listed for use on fire alarm systems by the State Fire Marshal and AHJ.

5. Color coding for HVAC mechanical and plumbing control wiring shall be an agreed upon color code between the Mechanical/Plumbing Contractor and the Electrical Contractor, and color code shall be submitted to the Owner’s Representative in writing for approval prior to installation.

D. Equipment Feeders, Copper or Aluminum:

1. Wire size shown on the Drawings is for copper conductors, unless specifically indicated otherwise.

2. If aluminum wire is proposed, increase aluminum wire size to ampere capacity of copper wire and voltage drop, not to exceed that of copper feeders indicated on Drawings. Increase conduit size and quantity as required by Code. Provide feeder calculation sheet, eight copies, if aluminum wire is proposed, showing feeder number, length, size and voltage drop in percentage for original copper feeders and for equal aluminum feeders.

3. Aluminum Conductors (600-volt or Less Only): Contractor has the option of using aluminum conductors in lieu of copper conductors for feeders only to panels, distribution boards/panels, switchboards, switchgear, trans-formers, motor control centers, and dimmer switchboard.

4. Aluminum Conductors shall be Aluminum Association AA-8000 Series Alloy, compact-stranded, with the same insulation as called for under copper conductors.

   a. Aluminum conductor larger than 750 MCM shall not be used.
   b. Aluminum conductors smaller than #2AWG shall not be used.

5. If the conductor termination is to be made on a bus bar or similar flat surface, a Burndy Type YA-A HYPLUG compression terminal intended for the specific conductor size, factory filled with oxide inhibitor compound shall be used. Terminal must be installed using a hydraulic compression tool equipment with a

die head for the particular terminal used. Only Burndy Hypress tools shall be used for compression.

a. Typical for existing aluminum conductors identified on Drawings for in-place reuse.
b. Typical for new aluminum conductors.

6. If the conductor termination is to be made into a circuit breaker or similar insert compartment it shall be terminated by use of a Burndy AYP HYPLUG compression connector intended for the specific conductor size, factory filled with oxide inhibitor compound. Connector must be installed using only Burndy Hydraulic compression tool specifically approved for each respective connector.

   a. When an aluminum lug is terminated to a copper or aluminum bus with a steel, aluminum or copper stud or bolt, place aluminum lug on stud or bolt followed by a flat steel washer, a Belleville washer, and steel or copper nut, in that order.

7. Connector aid shall be used for all aluminum conductor terminations, slices and connections. Connector aid shall be Burndy Pentrox A, NO-OX-1D Grade “A”.

2.5 MC CABLE

A. General

1. Metal clads electrical cable type “MC”, UL listed and labeled; low smoke per IEEE-FT4 1212 procedure and UL-1685 and 1569. Fire stop penetration rated. Rated for installation in environmental air plenums.

2. The cable assembly shall be rated for continuous full load operation in ambient temperatures as follows:

   a. Dry locations 90 degrees centigrade.
   b. Wet locations 75 degrees centigrade.

3. The type of MC cable, MC Fittings and supports shall be suitable for the conditions of use and the conditions of location of installation, based on the Manufacturer’s recommendations and based on applicable Codes.

4. Provide MC Terminations with MC cable bushings, rated “Anti-Short”.

5. Health Care facilities MC cable shall be rated for Hospital-Grade, with two individual, separate internal dedicated ground/bond conductors.

B. Conductors

1. Wire conductors shall be 600-volt 60Hz AC thermoplastic insulated, wire conductor.

   a. Wire sizes smaller than #8AWG shall be solid conductors. Wire sizes #8AWG and larger shall be stranded conductors.

b. Copper conductor - soft annealed copper, ASTM-B3 or B8. Minimum wire conductor size shall not be less than #12AWG. Aluminum conduct MC cable shall not be permitted.

2. 600-volt color-coded insulation phase wire conductors.

3. 600-volt white insulation neutral wire conductor. Provide a separate independent neutral wire conductor for each MC cable branch circuit phase conductor, shared neutral conductor shall not be permitted on multi-wire branch circuits contained within the same common MC cable.

4. 600-volt green insulation ground wire conductor. A second redundant, independent ground conductor shall be provided inside the MC cable. The ground conductors shall be bare or insulated conductor wire, type and size to match the main ground conductor.

5. A 100% coverage internal jacket binder tape shall enclose all conductors, located directly under the jacket armor. The binder tape shall provide isolation of “Movement” (reduce friction contact) between the conductors and the metal jacket.

6. The insulation of each wire conductor shall be individually 100% enclosed in a continuous tape. The tape shall provide isolation of “Movement” (reduce friction contact) between individual conductors’ insulation and between conductor insulation and the internal jacket tape.

C. Jacket

1. Interlocking spiral winding flexible metal armor shall be galvanized steel armor jacket. The armor jacket shall 100% enclose the insulated wire conductors inside the armor jacket. Aluminum jacket shall not be permitted.

2. PVC overall cable jacket for wet locations:

a. A continuous Polyvinyl Chloride (PVC) flexible jacket shall be applied over the armor jacket 100% enclosing coverage.
b. The PVC jacket shall be impervious to water infiltration, free of cracks and “Pin-Holes”.
c. The PVC jacket shall be provided on MC locations as described in the Contract Documents.

3. The interior surfaces of fittings shall be continuous and smooth, with a constant interior diameter. Fittings shall provide fully enclosed circular cross section. The interior surfaces of fittings shall be without ridges, burrs irregularities or obstructions. Fittings of the same type shall be of the same uniform weight and thickness.

4. Protective corrosion resistant finish for MC fittings fabricated from steel shall be as follows:

a. Clean all metal surfaces (including metal threads) with acid bath “Pickle” prior to coating, to remove dirt, oil and prepare surfaces for galvanizing.

b. Hot-dip galvanized zinc coating on all interior and exterior steel surfaces. Minimum finish zinc coating thickness shall not be less than 0.002-inch.
c. Threads shall be hot-dip zinc coated after machine fabrication.
d. Exterior metal surfaces shall be finished with clear organic polymer topcoat layer, after galvanizing.
e. The inner metal surfaces shall be finished with a lubricating topcoat after galvanizing, to facilitate conductor pulling through the fitting.

5. Threads for MC cable fittings shall be taper-pipe-thread, National Pipe Standards (NPS) and shall comply with ANSI-B1.20.1.

6. Terminal connector fittings shall be provided with a Manufacturer installed, insulating throat bushing inside the fitting. The bushing shall protect the wire conductor insulation from cutting, nicks, and abrasion during conductor installation and electrical load “Cycling” after installation is complete. The bushing shall comply with UL 94V-0 flammability. The bushing shall be visible and provide physical isolation between the jacket metal armor and the internal conductor insulation.

7. Fittings connecting to MC cable with PVC jacket coating shall be PVC coating to match the cable.

PART 3 - EXECUTION

3.1 TRENCHING, FOOTINGS, SLEEVES

A. General

1. Provide excavation and trenching, concrete encasement of conduits, trench backfilling, and compaction for the underground electrical work.

2. Provide concrete footings and concrete reinforcement for all post and/or pole-mounted lighting fixtures.

3. Joists, girders, beams, columns or reinforcing steel shall not be cut or weakened. Where construction necessitates the routing of conduit or raceways through structural members, framing or footings, written permission to make such installation shall first be obtained from the Owner’s Representative. Such permission will not be granted, however, if any other method of installation is possible.

B. Sleeves

1. Provide sleeves for raceways, conduit and wire/cables passing through the following construction elements:

a. Concrete and masonry foundations, floors, walls and slabs.
b. Gypsum, Lath, and plaster walls and ceilings.
c. Building structures (i.e., foundations, walls, floors, ceilings, beams, and roofs) with a fire rating exceeding 20-minutes.

2. Sleeves shall extend 1.5-inch above and below floors, except under floor standing electrical equipment. Sleeves shall be flush with wall ceiling foundations and partitions exposed to public view and extend approximately 0.5-inch past penetration in fire rated construction. Sleeves shall be installed at exact penetration locations and angles to accommodate wire/cable, race-way and conduit routings.

3. The layout and design of raceways and conduits located in or routed through masonry or reinforced beams or the Owner's Representative shall review walls before any work is performed. All sleeving shall be accomplished according to the instructions of the Owner's Representative and shall be accepted before any concrete is poured.

4. Sleeves, raceways and conduit shall be located to clear steel reinforcing bars in beams. Reinforcing bars in walls shall be offset to clear piping and sleeves.

5. Provide a continuous clearance between the inside of a sleeve and exterior of wire/cables, conduits and raceways passing through the sleeve not less than the following:

    a. 0.5-inch clearance except as required otherwise.
    b. 1.0-inch clearance through outside walls below grade.
    c. 3.0-inch clearance through seismic joints.

6. Sleeves set in fire rated construction shall be caulked between sleeves and building structure, additionally sleeves shall be caulked between the sleeve and the wire/cables, conduits/raceways passing through the sleeve. The caulking shall be a fireproof sealant, equal to the fire rating and temperature being penetrated. Clearance between components inside of sleeve and exterior of components passing through sleeve and between components inside the sleeve shall comply with Fireproof Sealant Manufacturer's recommendations.

7. Sleeve material:

    a. In floor construction: Schedule 40 black steel pipe, with upper surface to be sealed watertight.
    b. In concrete or masonry walls roofs or ceilings: Schedule 40 black steel pipe. When installed in roofs or outside walls, seal outer surface watertight.
    c. In fire rated construction; 24-gauge galvanized iron or steel.
    d. Sleeves through waterproof membranes: Cast iron or Schedule 40 steel with flashing clamp device and corrosion resistant clamping bolts. Caulk space between pipe and sleeve and surfaces between sleeve and conduits sealed watertight.

3.2 GROUNDING AND BONDING

A. General

1. Grounding and Bonding shall be executed in accordance with all applicable Codes and Regulations, both State and Local Authorities Having Jurisdiction (AHJ).

2. Where nonmetallic conduit is used in the distribution system, the Contractor shall install the proper sized copper ground wire in the conduit with the feeder for use as an equipment ground. The electrical metallic raceway system shall be grounded to this ground wire.

3. The maximum ground/bond resistance to the grounding electrode shall not exceed 1-ohms from any location in the electrical system. The maximum ground resistance of the grounding electrode to earth shall not exceed 5-ohms.

B. Ground/Bond Conductors

1. Provide an additional, dedicated, green insulation equipment ground/bond wire inside each conduit type and raceway as follows. Size the ground/ bond conductors to comply with CEC/NEC Requirements. The metal conduit or raceway shall not be permitted to serve (function) as the only (exclusive) electrical ground return path:

   a. All types of nonmetallic conduit and all types of non-metallic raceways including but not limited to: RNMC - Rigid Nonmetallic Conduit.
   b. FMC - Flexible Metal Conduit.
   c. LTFMC - Liquid Tight Flexible Metal Conduit.
   d. Metal and non-metal raceways.
   e. RMC - Rigid Metal Conduit.
   f. EMT - Electrical Metal Tubing.

2. The equipment ground/bond wire shall be continuous from the electrical circuit source point of origin to the electrical circuit end termination utilization point as follows:

   a. Every conduit and raceway path containing any length of the above identified conduits or raceway.
   b. Every conduit path and raceway path connected to any length of the above-identified conduits and raceways.

3. The equipment ground/bond wire shall be sized as follows, but in no case smaller than indicated on the Drawings. Install equipment ground/bond wire in each conduit/raceway, with the respective phase conductors:

   a.

Feeder, Sub-feeders and Branch Circuit Protection	Minimum Equipment Ground Copper Wire Size
15 amp	#12
20 amp	#12
0 to 60 amp	#10
70 to 100 amp	#8
101 to 200 amp	#6
201 to 400 amp	#2
401 to 600 amp	#1
801 to 1000 amp	2/0
1001 to 1200 amp	3/0
1201 to 1600 amp	4/0
1601 to 2000 amp	250 MCM

2001 to 2500 amp	350 MCM
2501 to 4000 amp	500 MCM
4001 to 6000 amp	800 MCM

4. Isolated grounds - Raceways containing branch circuit or feeder-phase conductors connected to panelboards equipment, or receptacles with isolated grounds or isolated ground bus shall contain an additional dedicated insulated ground conductor connected to the isolated ground system only. The isolated ground conductor shall be continuous the length of the raceways and connected only to the isolated ground terminals in addition to and independent of the equipment bonding/ground conductor. The isolated ground conductor shall be sized as indicated above, for equipment ground/bond wire.

5. Splices in ground/bond wires shall be permitted only at the following locations:

   a. Ground buses with listed and approved ground lugs.
   b. Where exothermic welded ground/bond wire splices and/or terminations are provided.

6. Provide ground/bond wire jumpers for conduit fittings with ground lugs, expansion and deflection conduit fittings at conduit fittings connecting between metallic and non-metallic raceways and to bond metal enclosures to conduit fittings with ground lugs.

7. Where conductors are run in parallel in multiple raceways, the grounding conductor shall be run in parallel. Each parallel equipment-grounding conductor shall be sized based on the ampere rating of the overcurrent device protecting the circuit conductors in the raceway. When conductors are adjusted in size to compensate for voltage drop, grounding conductors, where required, shall be adjusted proportionately in size.

8. Ground conductors for branch circuit wiring shall be attached at each outlet to the back of the box using drilled and tapped holes and washer head screws, 6-32 or larger.

9. Each motor control, electrical panel, panelboard, switchboard, switchgear, pull box or any other enclosure in which more than two ground wires are terminated shall be equipped with a ground bus secured to the interior of the enclosure. The bus shall have a separate lug for each ground conductor. No more than one conductor shall be installed per lug.

C. UFER Ground

1. In addition to all cold-water metal pipe and structural steel grounds provided to meet this Specification, there shall be a main ground system of the UFER ground style.

2. The UFER ground electrodes shall be a minimum of two 20-feet lengths of #4/0 AWG bare stranded copper cable embedded horizontally in the cast in place concrete footing, extending in opposite directions in the footings. All portions of

the ground electrodes shall be placed inside the concrete, between 2-inches and 4-inches from the earth surrounding the concrete.

3. The lengths of cable shall extend in opposite directions in the footings, with the center end of each cable terminated onto the main electrical service ground bus for the main electrical service equipment.

    a. Typical in each separate building.
    b. Typical for each main electrical service equipment location.

4. All wire cable connection terminations onto the ground bus shall be exothermic weld type.

5. The “UFER” grounding electrode, embedded in concrete, shall be exothermically welded to each steel reinforcing bar (rebar) and each steel anchor bolt located within 18-inches of the grounding electrode inside the concrete. Note: Reinforcing steel (rebar), in concrete foundations, attached with metal “Tie-Wraps” and in direct physical contact to other adjacent rebar that is in turn exothermic welded to the UFER grounding electrode, may be classified as attached to the UFER grounding electrode, and does not require additional exothermic weld connections to the UFER grounding electrode.

D. Additional Ground/Bond Connects

1. Provide a separate ground/bond insulated grounding electrode conductor, copper wire from the main electrical service ground bus homerun to each of the following locations. Exothermic weld connects or UL listed and approved compression ground/bond fittings/couplers. The ground/bond conductor shall be sized to comply with applicable Codes and as indicated on the Drawings, but in no case smaller than the following:

    a. Main service entrance equipment ground bus:

        1) Services smaller than 1200 amp 1.5-inch conduit with 1#4/0.
        2) Services 1200 amp and larger 2.5-inches conduit with 1#500 MCM.
        3) Where a separate ground bus is not required, connect ground to electrical equipment metal housing

    b. Each telephone backboard and signal system backboard location, each IDF and MDF, 1.25-inch conduit with 1#1.
    c. Metal cold water pipe located inside the building, 1.5-inch conduit with 1#4/0.
    d. Outdoor underground metal cold water pipe, make connection five feet from the building, 1.5-inch conduit with 1#4/0.
    e. Each transformer (size equipment ground conductor as indicated and to comply with applicable Codes).
    f. Each service entrance ground bus and each separately derived ground rod system:

        1) Services smaller than 1200-amp 1.5-inch conduit with 1#4/0.
        2) Services 1200 amp and larger 2.5-inch conduit with 1#500MCM.

g. Separate 1.25-inch conduit with 1#2(AWG) bonding conductor to each interior metal pipe system located in the same building, including but not limited to, the following:

1) Fire sprinkler system each stand-pipe location (water based and non-water-based).
2) HVAC chilled water supply and return, at each pump location.
3) Metal roof drains and down-spouts.
4) Waste liquid disposal systems.
5) Metal gas pipe service entrance and service meters.
6) Hydraulic elevator main hydraulic lift-piston housing pipes for each hydraulic elevator.

h. Each Inverter Unit and each Uninterruptable Power Supply – UPS (size equipment bonding conductor and neutral ground conductor as indicated and to comply with applicable Codes).

3.3 CONDUIT

A. General

1. The sizes of the conduits for the various circuits shall be as indicated on the Drawings, but not less than the conduit size required by Code for the size and quantity of conductors to be installed in the conduit.

2. Conduits shall be installed concealed from view. Install conduits concealed in walls, concealed below floors and concealed above ceilings, except as specifically noted otherwise.

   a. Conduits shall not be installed in concrete floors.

3. The following systems shall be considered as circuits 100 volts and less, all other circuits shall be considered to be over 100 volts (power circuits) unless specifically noted otherwise: Fire alarm, energy management control, telephone, public address, data, computer, television, intercom, intrusion alarm and nurse call.

4. Conduits shall be provided complete with conduit bends, conduit fittings, outlet boxes, pullboxes, junction boxes, conduit anchors/supports, and grounding/bonding for a complete and operating conductor/wire raceway system.

5. Metal and nonmetal conduits shall be provided mechanically continuous between termination connection points. Metal conduit shall be provided electrically continuous between termination connection points.

6. Individual conduit paths and home runs shown on the Drawings shall be maintained as separate individual conduits for each homerun and path.

7. Conduits, conduit fittings and installation work occurring in classified hazardous materials locations shall comply with applicable Code Class 1 Division 1 Requirements, unless specifically noted otherwise.

8. Transitions between conduits constructed of different materials and occurring in above grade locations shall be allowed only at outlet boxes, junction boxes, pull boxes and equipment enclosures unless specifically indicated otherwise. Provide outlet boxes and junction boxes.

9. Metal conduit terminating to nonmetal enclosures; terminating into metal enclosures with “Concentric.Ring” knockouts; terminating into metal enclosures with knockout reducing washers, including but not limited to equipment housings, outlet boxes, junction boxes, pull boxes, cable trenches, manholes, shall be provided with a ground/bonding lug integrated with the conduit termination conductor fitting construction, by the Fitting Manufacturer. The lug shall provide for connection of a grounding/bonding conductor (insulated or uninsulated). The grounding lug shall be located on the fitting, inside the termination enclosure.

10. The type of conduit, type of conduit fittings, and type of conduit supports, and method of conduit installation shall be suitable for the conditions of use and conditions of location of installation based on the Manufacturer’s recommendations; based on the applicable Codes and based on the Requirements of the Contract Documents.

B. RMC Installation Locations
RGS, IMC conduits and RGS, IMC fittings shall be installed in the following locations:

1. Embedded in floors, walls, ceilings, roofs, foundations, and footings constructed with concrete.

2. Embedded in walls and foundations constructed with brick and masonry.

3. Interior of buildings, within 9-feet of finish floor lines for exposed conduit locations.

4. Exterior of building for exposed conduit locations.

5. Damp or wet locations exposed or concealed locations.

6. Exposed on roofs.

7. In hazardous materials areas and locations; below hazardous materials areas and locations; above hazardous materials areas and locations.

8. Exposed on utility service poles, for pole risers less than 9-feet above finish grade.

9. RMC conduit and RMC fittings may be installed in any location where EMT and FMC conduit is permitted to be installed.

C. PVC Coated RMC Installation Locations
PVC coated RMC conduit and PVC coated RMC fittings shall be installed in the following locations:

1. Underground conduit locations for elbows and bends with a radius of less than 36-times the conduit diameter.

2. Underground vertical risers extending above grade.

3. Entire length of underground conduits for the following circuits:

   a. Analog Audio microphones and analog video circuits.
   b. Analog Lighting dimming controls.

4. Installed in contact with earth or corrosive materials.

5. Exposed in “Cold” rooms and “Refrigerated” rooms, rooms with a maintained temperature below 65 degrees Fahrenheit.

6. Exposed conduit in exterior outdoor locations.

7. Exposed conduit in interior locations.

D. EMT Installation Locations
EMT conduit and EMT fittings may be installed in the following locations, for circuit conductors operating below 600 volts to ground; locations containing only “Non-Hazardous Materials”; only dry locations:

1. Concealed in hollow non masonry/non-concrete, metal stud frame and wood stud frame walls and floors.

2. Concealed above ceilings.

3. Exposed inside interior enclosed crawl spaces.

4. Exposed interior locations placed 9-feet or higher above finished floors (except as described in paragraph below at lower heights).

5. Exposed on walls and ceilings (any height) in the following dedicated function areas, interior enclosed room locations:

   a. Indoor enclosed electrical equipment rooms and closets.
   b. Indoor enclosed data and telecommunication terminal rooms and closets.
   c. Indoor enclosed HVAC equipment rooms and closets.

6. Any location where FMC is described to be installed, except as the final connection to rotating or vibrating equipment.

E. FMC Installation Locations
FMC conduit and FMC fittings may be installed in the following locations for circuit conductors operating below 600 volts to ground; locations containing only “Non-Hazardous Materials”; only dry, interior locations:

1. Concealed in hollow non-masonry metal stud frame and wood stud frame fully enclosed walls.

2. Concealed above fully enclosed ceiling spaces.

3. FMC conduit shall be installed in continuous lengths between termination points. FMC shall not be “Spliced” or coupled directly to FMC or any other conduit type under any circumstance.

4. The maximum continuous length of FMC that shall be installed between termination end points is 15-feet. Circuits requiring continuous conduit lengths exceeding 15-feet between termination end points shall be installed using either RMC or EMT conduits. FMC lengths shorter than 16-inches are prohibited.

5. The minimum size FMC conduit shall be as shown on the Drawings but not be less than the following:

    a. FMC lengths of 6-feet or less, minimum FMC conduit size shall be 0.50-inch.
    b. FMC lengths exceeding 6-feet, minimum FMC conduit size shall be 1.0-inch.

F. LTFMC Installation Locations
LTFMC conduit and LTFMC fittings shall be installed in the following locations for circuit conductors operating below 600 volts to ground; locations containing only “Non-Hazardous Materials”:

1. Final electrical connection to vibrating or rotating equipment; control and monitoring devices mounted on vibrating and rotating equipment including the following. Minimum conduit length shall not be less than 24-inches:

    a. Motor, engines, boilers, solenoids, and valves.
    b. Fixed mounted “Shop” (manufacturing) production equipment.
    c. Fixed mounted food preparation equipment and “Kitchen” equipment.

2. All locations where exposed flexible conduit connections are required, both indoor and outdoor.

3. Final connection to indoors electrical transformers. Minimum conduit length shall not be less than 24-inches; maximum conduit length shall not exceed 72-inches.

4. Do not install LTFMC located in environmental air plenums.

G. RNMC Installation Locations
RNMC conduit and RNMC fittings shall be installed in the following locations containing only “Non-Hazardous Material”:

1. Underground, concealed below earth grade, unless specifically noted or specified otherwise.

2. Exposed on utility service poles, for pole risers at 9-feet or higher above finish grade, Schedule 80 PVC only.

3. RNMC type “EB” conduit(s) shall be concrete encased along the entire length of the conduits for all installation locations.

4. Non-metal type raceways and RNMC type conduit shall not be installed inside buildings or exposed on buildings.

H. Combi-Duct Installation Locations:
Combi-duct conduits shall be installed where shown on the Drawings. Combi-duct shall be installed underground (below grade) as follows:

1. Do not install exposed or inside buildings above grade.

2. Provide a 0.25-inch pull rope in each inner duct.

3. Radius and elbows shall be rigid non-metallic, PVC, Manufacturer factory fabricated, in lieu of PVC coated RMC conduit.

4. Inner ducts shall be supported by internal spacers inside the enclosing outer duct.

5. Provide end bell and three hole "Snug-Plugs" at each entrance end of Combi-duct into pullboxes, manholes, equipment cabinets stub-ups and Combi-duct terminations. Compression type “Snug-Plugs” shall provide watertight and airtight seal between inner and outer ducts and around future cables installed in inner duct.

I. Conduit Installation

1. Conduit Supports

a. Securely and rigidly support all raceways/conduits from the building structure. Raceways/Conduits shall be supported independent of all piping, air ducts, equipment ceiling hanger wires, and suspended ceiling grid systems. Secure conduit to structural element by means of UL listed and approved hangers, fasteners, “C” channels and pipe clamps.
b. Provide conduit supports spaced along the length of the conduit as follows:

1) RMC and EMT conduit, maximum not to exceed 96-inches on center; within 24-inches of each conduit bend and conduit termination location.
2) FMC and LTFMC conduit, maximum not to exceed 24-inches on center; within 6-inches of each conduit bend and conduit termination location.

c. Suspended conduit methods:

1) Individual, suspended raceways/conduits separated by more than 12-inches from any other conduit and suspended from ceilings and roofs shall be supported as follows:

a) Conduits smaller than 1.5-inch by means of hanger rods or hanger wires.
b) Conduits 1.5-inch and larger by means of hanger rods.
c) The conduit shall attach to the hangers with pipe clamps.
d) Hanger wire, not less than #12AWG steel; hanger rods, threaded, not less than 0.375-inch diameter steel.

2) Suspended raceways/conduits positioned within 24-inches of any other conduit shall be grouped and supported by hanger rods using trapeze

type conduit support channels ("C" channels). Conduits shall individually attach to common channels side-by-side, with pipe clamps.

d. Non-suspended conduit methods:

1) Individual raceway/conduits placed against wall/ceiling/ floors, placed inside hollow wall/ ceiling construction or structure framing (i.e., “Dry-Wall” or plaster hollow wall construction), shall be secured by means of individual pipe clamps and fasteners attached to the framing studs or other structural members and the conduit/raceway.
2) Provide common “C" channel supports for all multiple raceway/conduits placed against vertical or horizontal surfaces and positioned within 24-inches of other raceways/conduits. Attach channels to the framing studs or other structural members. Attach the conduits/raceway individually to common channels, side-by-side, with pipe clamps.
3) The use of toggle bolts is prohibited.

e. Conduit rising from floor for motor connection shall be independently supported if extending over 18-inches above floor. Support shall not be to a motor or ductwork, which may transmit vibrations.
f. Provide conduit anchoring, conduit support and conduit bracing systems conforming to Earthquake Seismic Requirements at each install location. The conduit support/anchoring system capacity shall include the weight of the conduits, conduit fittings, conduit supports, and conductors/wires/cables installed in the conduits plus a 300% safety factor. Submit Shop-Drawing details showing each typical conduit anchor, conduit support and conduit brace location. Submit structural calculations performed by and signed by a Professional Structural Engineer (P.E.) with a P.E. license, registered in the State of California, U.S.A.

2. Conduit Separation:

a. Conduit installed underground or below building slab without full concrete encasement: Shall be separated from adjacent conduits of identical systems (i.e., signal to signal, data to data, power to power, control to control etc.) by a minimum of 3-inches. Conduits of non-identical systems (i.e., signal to power; data to power; power to control; signal to control, etc.) shall be separated by a minimum of 12-inches.
b. Conduit installed underground with full concrete encasement; shall be separated from adjacent conduits of similar systems (100 volt and less) by a minimum of 2-inches; conduits for non-power systems (100 volt and less to ground) shall be separated by a minimum of 6-inches from power circuits (over 100-volt to ground); conduits for power circuits shall be separated from adjacent conduits of similar power systems (over 100-volt to ground) by a minimum of 3-inches.
c. Separation of conduits entering termination points or crossing other conduits may be reduced as required within 60-inches of the termination or crossing points.
d. Conduits containing Utility Company service circuits (i.e., electrical power, telephone, or cable television) shall be separated a minimum of 12-inches from all other utilities and conduits, with or without concrete encasement,

metallic or non-metallic conduit, above grade or underground conduit locations.

e. Conduits shall be separated from hot water piping, exhaust flues/ chimneys, steam piping, boilers, furnaces, ovens by a minimum of 18-inches.

3. Conduit Stubs:

   a. Branch circuit and telephone conduits turned up from floor at the following locations shall terminate each conduit in a flush conduit coupling at the floor and then extend into partition or to equipment. Refer to Owner's Representative's Drawings for location of walls and partitions.

      1) Interior demountable partitions.
      2) Below, into or adjacent to equipment not installed directly adjoining to a wall.
      3) Up from below the floor into hollow stud frame walls.

   b. From each panel, and signal cabinet which is wall mounted, stub up from top of the panel/cabinet a minimum of three 1-inch conduits to the nearest accessible ceiling spaces or other accessible location. Where the floor below the panel is accessible or is a ceiling space, stub an additional three 1-inch conduits from the bottom of the panel into the accessible space below the panel. Cap conduits for future use.
   c. Conduits stubbed underground outside of building line for future use shall be terminated a minimum of 5-feet clear (whichever distance is greater) of building or adjacent concrete walks and AC paving. The stub-out conduit shall be capped. Provide concrete monuments, 6-inches by 6-inches by 15-inches deep, buried flush with grade over the capped ends. The face of monument shall be furnished with 3-inches square brass plates securely mounted and engraved with the number and size of conduits and type of service (i.e., "POWER", "TEL.", etc.).
   d. Conduits stubbed into ceiling or floor spaces from outlets for telephone, video, computer/data or television shall be provided with an insulated throat bushing, on the end of each conduit stubout.
   e. Conduit stubouts from outlet boxes and equipment located in hollow stud walls, into ceiling and floor spaces, shall be EMT or RMC conduit. The stubouts shall terminate into the ceiling and floor spaces with a conduit termination connector fitting.
   f. Empty conduit stubs into building spaces and equipment shall be individually identified with an "ID-Tag" located at each end of the conduit. The ID-tag shall state the origination point and termination point of the respective conduit (i.e., "from PNL-A/to Room #121"; "from outlet #24/to outlet #17 in Room #120"; etc.).
   g. Provide a conduit termination fitting with insulated throat bushing and mechanical ground lugs at each conduit "Stub-Up" location.

4. Conduit concrete encasement:

   a. Conduits which are run underground exterior to building slab shall be continuously concrete encased, except 15-, 20- and 30-amp power branch circuit conduits underground do not require concrete encasement.

b. PVC rigid-non-metallic-type EB conduit, of any size and any location shall be continuously concrete encased the full length of the conduit installation, including under building slab.
c. Concrete for encasement of underground conduits shall be 2000-PSI 28-days cure strength with a mix of cement, sand, water and maximum of ¾-inch gravel. Concrete encasement of conduits shall be continuous without voids. The encasement shall extend 3-inches past the edges of all conduits on all sides of the circuit. Provide ten pounds of red oxide cement coloring uniformly mixed with each cubic yard of concrete for conduit encasement.
d. Conduits located below or adjacent to structural foundations shall be separated from the foundation by a minimum of 12-inches. Conduits located below structural foundations shall be fully and continuously concrete backfilled and encased between the bottom of the foundation to the bottom of the conduits. The concrete shall be 4000-PSI 28-day cure strength instead of 2000-PSI concrete.
e. Conduits of any size and type (including 15-amp and 20-amp power branch circuits) located under roads, paved areas and “Transit-System” right of way shall be concrete encased.

5. Underground conduits:

a. Three or more underground conduits occupying the same trench shall be separated and supported on factory fabricated, non-metallic, duct/ conduit support spacers. The spacers shall be modular, keyed inter-locking type, "Built-Up" to accommodate quantity, size orientation and spacing of installed conduits. The spacers shall maintain a constant distance between adjacent conduit supports and hold conduits in place during trench backfill operations. Minimum support spacer installation interval along with length of the conduits shall be as follows:

1) Concrete encased conduits, not less than 8-feet on center.
2) Non-concrete encased conduits, not less than 5-feet on center.

b. Provide trenching, excavation, shoring and Backfilling required for the proper installation of underground conduits. Tops of backfill shall match finish grade.
c. Bottoms of trenches shall be cut parallel to “Finish Grade” elevation. Make trenches 12-inches wider than the greatest diameter of the conduit.
d. Back-filling Trenches for Conduits without Concrete Encasement Requirements

1) Conduits which are not required by the Contract Documents to be concrete encased and are located exterior to building slab, shall be set on a 3-inch bed of damp clean sand. Conduit trenches shall be backfilled to within 12-inches of finished grade with damp sand after installation of conduit is completed. Remainder of backfill shall be native soil.
2) Conduits located under a building which are not required by the Contract Documents to be concrete encased, shall be completely backfilled and compacted with clean damp sand to the same level as the building foundation pad.

3) Provide a continuous yellow 12-inches wide flat plastic tracer tape, located 12-inches above the conduits in the trench. The tracer tape shall be imprinted with “Warning-Electric Circuits” a minimum of 24-inches on center.

e. Backfilling trenches for conduits under paved areas:

1) In addition to the Requirements of conduit concrete encasement; conduits under walkways, roads, parking lots, driveways, and buildings shall be cast in place concrete “Slurry Mix” backfill. The slurry mix shall cover each side and top of conduits and conduit concrete encasement. The slurry mix shall be continuous to the underside of the finish subgrade surface.

f. Backfilling trenches for conduits with Concrete Encasement Requirements by the Contract Documents:

1) Trenches with all conduits concrete encased shall be backfilled with clean damp sand when located under building pads.
2) Trenches with all conduits concrete completely (sides, top, and bottom) encased and not located under a building pad and not located under paved areas, shall be backfilled with clean damp sand or native soil.
3) Concrete mix, consisting of cast-in-place concrete, sand, and gravel. 2000 psi compressive 28-day cure strength. Red-dye concrete coloring. See additional Requirements.

g. Backfill material:

1) Sand backfill shall be clean with no clay or organic materials, free of State of California and EPA defined toxic constituents, total chloride content less than 500ppm, total sulfate content less than 150ppm, sand pH greater than 4.5 and less than 9.0. Sand and native soil backfill of trenches shall be machine vibrated in 6-inch lifts to provide not less than 90% compaction of backfill.
2) Native soil backfill shall have no gravel or stones, and no organic matter of aggregate greater than 1-inches.
3) Concrete mix and slurry mix backfill shall be machine vibrated during installation to remove “Air-Voids”.
4) The slurry mix shall consist of concrete, clean gravel, clean sand and clean water mixture, 1000psi compressive 28-day cure strength. Maximum shrinking of slurry mix shall not exceed 5% wet to dry.

h. Do not backfill until Owner’s Representative has approved Installation and As-Built Drawings are up to date. Promptly install conduits after excavation has been done, to keep the excavations open as short a time as possible. Excess soil from trenching shall be removed from the site.

i. Installation depth below finish grade of underground conduits and underground raceways. In no condition/location less than 12-inches below winter underground frost-line. Underground depth dimensions shall be measured from finish top of grade elevation to top of all underground conduits/raceways, typical except under buildings.

1) Under non-traffic areas not covered with paving or concrete, not less than 24-inches underground.
2) Under traffic areas including roads and parking areas, not less than 36-inches underground.
3) Under public/private transit system right-of-way and rail-road right-of-way, not less than 48-inches under-ground.

j. Conduit crossing existing underground utilities shall cross below the bottom depth of the existing utilities. If the top portion of the existing utility depth below finish grade exceeds 72-inches and the specified separation and depths are maintained when crossing over the top of the existing underground utility, the conduit may cross above the existing underground utility.
k. Provide long radius horizontal bends (minimum radius of 36-times the conduit diameter) in underground conduits where the conduit is in excess of 100-feet long.
l. Conduits installed below grade and on grade below buildings, shall not be smaller than 0.75-inch. Conduits for circuits exceeding 600 volts shall not be smaller than 5.0-inches.
m. Underground conduits entering a building shall be sloped. The conduit direction of slope shall be away from the building and shall prevent water in the conduit from “Gravity Draining” towards the building. The conduit slope “High Point” shall originate from the building, out to the first exterior pullbox, manhole etc. exterior conduit termination “Low Point”. The minimum slope angle shall be a constant 8-inches (or greater) of fall for each 100-feet of conduit length.
n. Dewatering:

1) Provide pumping to remove, maintain and dispose of all water entering the excavation during the time the excavation is being prepared, for the conduit laying, during the laying of the conduit, and until the backfill at the conduit zone has been completed. These provisions shall apply on a continuous basis. Water shall be disposed of in a manner to prevent damage to adjacent property. Trench water shall not be drained through the construction site. Groundwater shall not be allowed to rise around the pipe until joining compound has firmly set.
2) The Owner’s Representative shall be notified 48 hours prior to commencement of dewatering.

6. Raceway/Conduits, which are installed at this time and left empty for future use, shall have 0.25-inch diameter polyvinyl rope left in place for future use. The pull rope shall be 500-pounds minimum tensile strength. Provide a minimum of 5-feet of slack at each end of pull ropes.

7. Unless otherwise restricted by Structural Drawings and Specifications, the maximum size conduit permitted in concrete slab on-grade, walls, ceilings and roofs constructed of masonry or concrete shall not be greater than 15% of the concrete/masonry thickness. Conduits installed in these locations shall not cross other conduits.

a. Conduits shall not be installed in cast-in-place concrete floors.

8. Provide openings in building structures for conduit penetrations:

    a. New construction shall be provided with conduit sleeves, to provide conduit penetrations.
    b. Existing construction shall be drilled (core drill masonry and concrete) and provide conduit sleeves installed after drilling, to provide conduit penetrations.
    c. Where the structure penetrations for underground conduits penetrating through foundations will not comply with the (restriction/penetration) shown in the Contract Documents, install the conduits below and clear of the foundation lowest point.

9. Conduit bends risers and offsets:

    a. The minimum bend radius of “Factory or Field” fabricated conduit bends shall not be less than the following. The bend radius shall be measured at the surface, inside radius of the conduit wall:

        1) FMC and LTFMC conduit - conduit minimum bend radius 12-times the conduit diameter.
        2) RMC and EMT conduit minimum bend radius - conduit for power circuits over 100-volts and less than 600-volts, 8-times conduit diameter. Conduit for power circuits over 600-volt, 12-times conduit diameter. Conduit for low voltage, signal and fiber optic circuits, 10-times conduit diameter.
        3) RNMC conduit - conduit minimum bend radius 36-times the conduit diameter. Under building reduce minimum bend radius to 10-times the conduit diameter. Conduit bends and offsets in RNMC with less than 36-times conduit diameter bend/offset radius shall be RNMC PVC Schedule 80 or PVC coated RGS.
        4) Conduits for Utility Company conductors. Conduit minimum bend radius and separations shall comply with the respective Utility Company Requirements.

    b. Bends and offsets in conduits shall be kept to an absolute minimum. The total summation of all bends and offsets permitted in a conduit segment, occurring between two conduit termination/ connection end points, shall not exceed the following, including conduit fittings:

        1) RMC and EMT conduit - 360 angular degrees
        2) FMC and LTFMC conduit - 180 angular degrees
        3) RNMC conduit - 270 angular degrees

    c. Each field fabricated conduit offset, bend and elbow which are not the standard product of the Raceway/Conduit Manufacturer shall be mandrel tested. The test shall be conducted after the conduit installation is complete and prior to pulling-in any wire, in the same manner as for underground conduits.
    d. Factory manufactured angle connector conduit fittings shall be installed in exposed conduit locations only. Installation in locations normally concealed from view shall not be permitted. Not more than one factory manufactured

angle connector shall be permitted in any length of conduit between conduit termination end points.

e. RNMC conduit risers from below grade shall be PVC coated RGS. Conduit risers, bends or offsets entering into a building shall be PVC coated RGS.

f. If three or more conduit-bends of the same conduit size and same conduit material type, installed, as part of the Contract Work, fail to comply with the required minimum conduit bend radius or conduit angular degree limits. The following corrective actions shall occur:

1) The Contractor shall remove all the non-complying conduit bends and the respective wire in the conduit from the project site. Provide new conduit and wire, complying with the Contract Documents.
2) Where the conduit bends similar to the non-complying conduit bends are installed concealed in walls, floors, above ceilings or below grade, the Contractor shall expose the conduit bends to allow visual observation.
3) The Contractor shall remove the non-complying conduit bends and dispose of the Project Site. The Contractor shall provide new conduit bends and conductors complying with the Contract Documents.
4) All the costs to correct the deficient material and work along with costs to repair the direct, indirect, incidental damages and Contract delays shall be the sole responsibility of the Contractor and shall be included in the bid price.

10. Expansion joint, deflection joint and seismic joint fittings.

a. Provide a conduit expansion fitting for each conduit length and conduit type as follows (Note - The installation of specified combination expansion /deflection fittings at seismic joints shall satisfy this Spacing Requirement also):

1) Conduit Type: RMC and EMT
Conduit: Exposed exterior locations
Fitting Length Spacing: 200-feet intervals

2) Conduit Type: RMC and EMT
Conduit: Interior weather protected locations
Fitting Length Spacing: 400-feet intervals

b. Provide a conduit combination expansion/deflection fitting for each conduit, crossing the following elements:

1) At each building or non-building structure seismic joint.
2) At each building or non-building structure expansion joint.
3) At each conduit penetration of a “Sound-Rated” wall, floor or ceiling.

11. Provide two locknuts and an insulated throat bushing at each metal conduit terminating at enclosures, including but not limited to outlet boxes, junction boxes, terminal cabinets, switchgear, transformers, switchboards, distribution panels and panelboards.

12. Provide metallic or plastic closure caps on all conduit ends during construction, until installation of conductors in the respective conduit.

13. Conduit run exposed, shall be run at right angles or parallel to the walls or structures. All changes in exposed conduit directions, either horizontally or vertically, shall be made with conduit bodies. Conduits on exposed beams or trelliswork shall be painted to match surrounding surfaces.

14. Conduit exposed on roof:

    a. Conduits installed exposed on roofs shall be installed on conduit sleepers. Place the conduit sleepers a maximum of 5-feet on center along the entire length of the conduit; under conduit expansion/ deflection fittings; under each junction box and within 24-inches of each conduit bend.
    b. Provide a conduit support “C” channel continuous along the top length of the sleeper and rigidly bolted to the sleeper. Conduits shall be loosely fastened to each sleeper “C” channel with pipe clamps to allow for relative movement between the sleeper and conduit.
    c. Conduits shall not block or interfere with roof hatches, doors, ventilation openings, dampers, equipment access panels/doors, sky-lights, and roof water drainage.
    e. Conduit sleepers shall be fabricated from “clear” solid redwood 4-inches by 4-inches (nominal) size. Sleeper length shall extend a minimum of 9-inches past the conduits attached to the sleeper, but in no case shall the length of the sleeper be less than 24-inches.
    f. Provide a pad under each sleeper; sleepers shall not be installed in direct contact with the roofing. Sleeper pads shall extend a minimum of 6 inches past each side of the sleeper. The sleeper pad shall be semirigid mineral surfaced composition board, not less than 0.375-inch thickness, bituminous impregnated, manufactured for application on the specific roofing material. Remove roofing “Ballast” (gravel) under pad, prior to installation of sleeper pad. Do not puncture roof membrane.
    g. Position the “Length” of the conduit sleepers’ parallel to the roof slope, slightly-angled to prevent obstruction of roof drainage water flow. Where the conduit routing prevents placing the conduit sleeper parallel to the roof slope, provide two separate sleeper pads for the conduit sleeper, with a continuous 3-inches wide water drainage gap between the sleepers. Align the water drainage gap to allow unimpeded water travel along the roof slope drainage flow line between the pads.
    h. Sleepers and sleeper pads shall be set in nonhardening mastic, a minimum of 0.25-inch thickness. Mastic shall be inorganic, non-hardening, and complying with ASTM-D1227. Mastic shall be applied with continuous uniform coverage, minimum 0.25-inch thickness, on all the surfaces of each conduit sleeper and on the sleeper pad contact surface with the roof.

15. Rigid conduit shall not be strapped or fastened to equipment subject to vibration or equipment mounted on shock absorbing bases.

16. RMC conduit threads:

    a. Machine cut threads on RMC conduit required for field fabrication shall comply with NPS and ANSI-B1.20.1. Galvanized after fabrication.
    b. The length of bare metal exposed during thread fabrication shall be completely covered by conduit couplings and fittings. Additionally, the thread length shall insure that conduit joints will reach “Torque” tightness and become secure before conduit ends “Butt” together and before conduit ends “Butt” into the “Shoulders” of other conduit fittings.
    c. Running threads or right/left-handed threads shall not be used to connect RMC.

17. RNMC conduit:

    a. Joints and fittings shall be solvent welded to RNMC conduit. Joints and fittings shall be watertight and airtight after fabrication.

18. Tighten each conduit fittings and fitting appurtenance, to the “Torque” (allowable tolerance ±5%) value recommended by the Fitting Manufacturer and applicable Code. If three or more conduit fittings are found to not be in compliance with the Manufacturer’s “Torque” (tightness) recommendations, the following corrective actions shall occur:

    a. The Contractor shall tighten “Re-Torque” the defective fittings and all similar conduit fittings installed as part of the Contract Documents in the presence of the Owner’s Representative.
    b. If the respective conduit fittings similar to the deficient “Torque Tightness” fittings are installed concealed in walls, floors, above ceilings or below grade, the Contractor shall expose the fitting, to allow retightening each similar conduit fitting to the Manufacturers recommended “Torque” values.
    c. All the cost to repair the direct, indirect, incidental damages and Contract delays resulting from complying with these Requirements shall be the sole responsibility of the Contractor and shall be included in the bid price.

19. Horizontal directional boring for underground conduit:

    a. Provide a directional guided horizontal “bore-hole” underground conduit installation where one or more of the following conduits occur:

        1) Continuous trenching excavation and backfill for conduit installation is not permitted by the Contract.
        2) Where continuous trenching excavation due to the existing surface and below grade conditions and restrictions, is not possible or practical to excavate a trench.

    b. Provide “Path-Tracing” of the underground bore head, from the surface, along the entire horizontal bore length. Path tracing shall use electronic transmitters and receivers, continuously communicating the underground bore head locations and depth to the bore equipment operator. The directional boring system shall employ active tracking and directional position/steering control of the bore equipment drill head location. The

active tracking system shall provide a portable receiver/transmitter unit for tracking the position of the moving drill head; a sensor “Sonde” unit on the drill head for tracking signals to the receiver /transmitter; and a drill head tracking data view display located at the boring equipment operator position to view the drill head position information sent from the portable receiver/ transmitter. As manufactured by SPX-Radiodetection Company or similar products.

c. Provide vertical pilot excavations not more than 50 feet on center along the path of the borehole to intercept the horizontal bore-hole routing, provide excavations at the beginning and end terminals staging points of the horizontal borehole.
d. Provide full depth “Shoring” of the vertical pilot excavations. Remove the shoring, backfill, compact and repair the excavations when conduit installation is complete.
e. “Drilling-fluid” shall be used during “Back-reaming” and “Pullback”, pumped through the drill pipe to the bore drill head.
f. Directional guided horizontal drilling shall employ equipment specifically designed and manufactured for the process. The Equipment Manufacturer shall train bore equipment operating personal in the proper operation of said equipment.
g. Locate the position, size, depth and identify all underground “Cross-Bore” existing underground utilities, pipes, structures and conflicts along the entire bore path of each underground bore, prior to initiating directional boring work. Notify respective Agency for each “Cross Bore” potential crossing. Comply with the recommendations of the Cross Bore Safety Association (CBSA).
h. Horizontal, directionally guided boring equipment, as manufactured: by Ditch Witch; Vermeer Manufacturing; or Case Corporation.

J. Conduit Seals

1. Provide conduit seal fittings at each location where a conduit transitions or passes through the following areas and where indicated on the Drawings:

   a. Refrigerated areas.
   b. Temperature control rooms including warming rooms, steam rooms, saunas etc.
   c. Classified hazardous material areas.
   d. Water intrusion areas.

2. Provide conduit seals on each conduit entering a building from a below grade area located outside the building (i.e., basement, vault etc.) and connecting to the following types of equipment

   a. Transformers
   b. Panelboards
   c. Motor control centers
   d. Switchboards
   e. Switchgear
   f. Motors
   g. Terminal cabinets

h. Terminal backboards
i. Cable trenches

3. Conduit seals shall be installed in locations to ensure the fitting is visible and accessible.

K. Conduit Bodies

1. Conduit bodies shall be installed in exposed conduit locations only or above accessible ceilings.

2. Conduit bodies shall be accessible for removing body cover and pulling wire through the conduit body.

3. Conduit bodies shall not be installed inside enclosed walls.

L. Preparation of Reuse of Existing Conduits

1. Prepare existing conduits shown to be reused as part of Contract Work as follows: Complete the required work prior to installing any conductors or cables in respective existing conduits.

a. “Rod” out existing raceways to be used under this contact, with approved test and flexible mandrels to remove all obstructions to clear debris from inside conduits.
b. Use test mandrels at least 12-inches long, 0.25-inch less than diameter of duct at center, tapering to 0.5-inches less than duct size at ends.

2. If test mandrels cannot be pulled through raceways, Contractor shall perform the following to clear the existing raceways:

a. Force rigid or semi-rigid rods through the raceways to clear the obstructions from one to both ends of the raceway.
b. Force a power-driven rotating router device through the conduit from one or both ends of raceways. Device shall incorporate small diameter cutting blades. Repeat the “Router” process in incremental stages to a cutting blade diameter approximately ⅛-inch smaller than the raceway inside diameter.

3. After clearing the raceway of obstructions, pull a test mandrel or brush through the raceway to clear the remaining debris from the raceway.

3.4 WIRE AND CABLE

A. Branch circuit and fixture joints for #10AWG and smaller wire shall be made with UL-approved connectors listed for 600 volts, approved for use with copper and/or aluminum wire. Connector to consist of a cone-shaped, expandable coil spring insert, insulated with a nylon shell and two wings placed opposite each other to serve as a built-in wrench or shall be molded one-piece. As manufactured by 3M-"Scotchlok".

B. Branch circuit joints of #8AWG and larger shall be made with screw pressure connectors made of high strength structural aluminum alloy and UL-approved for use with both copper and/or aluminum wire as manufactured by Thomas & Betts. Joints

shall be insulated with plastic splicing tape, tapered half-lapped and at least the thickness equivalent to 1.5-times the conductor insulation. Tapes shall be fresh and of quality equal to Scotch.

C. Use UL listed pulling compound for installation of conductors in conduits.

D. Correspond each circuit to the branch number indicated on the panel schedule shown on the Drawings except where departures are approved by the Owner's Representative.

E. All wiring, including low voltage, shall be installed in conduit.

F. Control wiring to conform to the Wiring Diagrams shown on the Mechanical Drawings and the Manufacturer's Wiring Diagrams.

G. All splices in exterior pullboxes and light poles shall be cast resins encapsulated.

1. Power conductor splices as manufactured by 3M Scotchcast Series 82/85/90; or Plymouth; or equal.

2. Control and signal circuits as manufactured by 3M Scotchcast Series 8981 thru 8986; or Plymouth; or equal.

H. Neatly group and lace all wiring in panelboards, switchboards, motor control centers and terminal cabinets with plastic ties at 3-inches on centers. Identify and tag all spare conductors.

3.5 MC CABLE INSTALLATION

A. General

1. MC cable shall not be "Spliced" or coupled directly to any other conduit type under any circumstance.

2. MC cable shall not be installed exposed. Where exposed installation occurs, provide a conduit to completely enclose and protect the MC cable. The inside diameter of the conduit shall be sized 1.6-times the outside diameter of the MC cable. The conduit type and installation methods shall comply with the Contract Documents.

3. MC cable shall be continuous length between end point terminations, without intermediate splices or junctions.

4. MC cable shall be supported and attached. MC cable supports and attachments shall be the same as Contract Document Requirements for conduit, with the following exceptions:

a. Support at not more than 3-feet intervals along the entire length of the MC cable.
b. Support within 12-inches of each bend or change of direction.
c. Support within 12-inches of each termination entrance.

d. MC cables shall not be bundled. Provide “stack-supports” to separate parallel MC cables.

5. The minimum installed bending radius shall not be less than 8-times the outside diameter of cable assembly, as measured at the inside radius cable jacket surface.

6. Cable lengths of less than 6-feet shall not be permitted.

7. MC cable shall be installed and terminated to comply with Manufacturer’s recommendations.

B. Permitted Applications

1. MC cable may be provided only for electric power circuits and where complying with all of the following conditions:

   a. Circuits operating online to ground 60Hz AC circuit voltages, exceeding 100 volts and less than 500 volts.
   b. The full load ampere rating and circuit conductor quantities of the proposed MC cable shall be equal to or greater than the full load ampere rating for the conduit and wire conductors shown on the Contract Drawings.
   c. The electrical circuit voltage drop of the proposed MC cable shall be equal to or less than for the conduit and wire conductor sizes shown on the Contract Drawings.
   d. The conductor sizes in MC cable shall not be smaller than the conductor sizes described for conduit and wire installations.
   e. MC cable shall not be permitted on circuits with more than one phase conductor per phase.
   f. MC cable circuits or portions of MC cable circuits shall not be connected to wiring devices, lighting equipment or motors. MC cable shall not be permitted for circuit wire sizes #4AWG or smaller.

2. MC Type cable may only be installed in the following locations in areas that do not contain classified hazardous materials (MC cables without PVC jacket):

   a. Concealed in hollow non-masonry metal stud frame and wood stud frame fully enclosed walls.
   b. Concealed above fully enclosed ceiling spaces.

3. MC cables with PVC jacket may only be installed in the following locations:

   a. Underground installation locations.
   b. MC cable installed below grade shall be not less than #4AWG conductor size.
   c. The Underground Installation Requirements for MC cable shall be the same as for conduit and wire systems including but not limited to trenching, burial depth, circuit separation, supports, concrete encasement, etc.
   d. MC cables shall not be installed below areas with classified hazardous materials.

3.6 CABLE RACKS

Provide cable racks in precast and cast-in place concrete pullboxes, manholes and cable trenches.

3.7 TESTING

A. Testing Conduit and Conduit Bends
The Contractor shall demonstrate the usability of all underground raceways, and field fabricated conduit bends installed as part of this Contract.

1. A round tapered segmented semi-rigid mandrel with a diameter approximately ¼-inch smaller than the diameter of the raceway, shall be pulled through each new raceway.

2. The mandrel shall be pulled through after the raceway installation is completed. Conduits which stub-out only, may have the mandrel pulled after the concrete encasement is completed, but prior to completing the backfill.

3. Owner's Representative shall witness the raceway testing for usability. A Representative of the respective Utility Company shall witness the raceway testing where applicable.

4. Contractor shall repair/replace any conduit and conduit bend provided under this Contract which will not readily pass the mandrel during this test.

END OF SECTION 26 05 30
010423/535050

SECTION 26 24 13

SWITCHBOARDS

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment necessary for and incidental to performing all operations in connection with furnishing, delivery and installation of the work of this Section, complete, as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Specification Sections and Drawings for related work required to be included as work under Division 26.

2. General Provisions and Requirements for electrical work.

1.2 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. Provide Schematic "ladder type" logic control wiring diagrams and "point-to-point control wiring diagrams showing control and protective systems interlocks.

B. Provide Nameplate Engraving Schedule.

C. Submit Full-Scale Time/Current Transparencies on Log/Log Paper for all Fuses, circuit breakers, ground fault system devices, and relays.

D. Short Circuit and Arc-Flash

1. Perform and submit engineered settings for each fuse and adjustable circuit breaker device, showing the correct time and current settings to provide the coordination within the limits of the specified equipment, per the latest applicable Standards of IEEE and ANSI. Provide Electric Arc-Flash calculations as part of the Coordination Study recommendations. The information shall be submitted in tabular form with an engineering narrative, six copies. Obtain the necessary information to complete the calculations from the serving electrical utility company.

2. The goal is to minimize an unexpected but necessary electrical system outage and personnel exposure to the smallest extent possible within the fault occurrence location, using the specified Contract Equipment, including but not limited to:

a. IEEE-242, Recommended Practices for Protection and Coordination of Industrial and Commercial Distribution.
b. IEEE-1584, Guide to Performing Arc-Flash Hazard Study.
c. CEC/NEC

E. Factory Tests: Switchgear Tests - ANSI C37.20. Certified copies of design tests, production tests, and conformance tests of the switchgear shall be submitted and

review comments shall be received before delivery of equipment to the project site. In lieu of the above tests, a report of these tests previously performed on identical units of each rating will be acceptable.

1.3 APPLICABLE STANDARDS

A. The Switchgear Equipment shall be Designed, Tested and Assembled to comply with ANSI, IEEE, and NEMA and UL.

B. Equipment Components/Devices, Switchboards, and/or Switchgear shall be manufactured by: General Electric, Eaton, Square–D, or Siemens.

PART 2 - PRODUCTS

2.1 BUSSING

A. Horizontal and Vertical Busses shall be full lengths in each Equipment Section. Buses shall have a minimum withstand rating equal to available fault current indicated on Drawings, but in no case shall the rating be less than 42,000-amp, symmetrical.

B. Provide Interconnected Full Capacity Neutral Bus in each Section with the same ratings and construction as the phase busses.

C. Provide Interconnected Ground Bus in each Section.

D. Provide Space and all Hardware and Mounting Attachments for future devices as indicated on the Drawings.

E. Main Horizontal Bussing shall be full capacity in all Switchboard Sections.

F. Vertical Buss may be Tapered, to not less than 1/3 the ampacity is of the Main Horizontal Buss; but in no case shall the vertical buss be of less capacity than the sum of the frame size ampacities of overcurrent devices mounted in the respective Sections including any indicated spares and spaces.

G. The Switchboard Bussing shall be of sufficient cross-sectional area to meet UL Standard 891 on temperature rise Bus shall be copper with silver plated bus joints or extruded aluminum with tin plated bus joints. The through bus shall have provisions for the addition of future Sections. The through bus supports, connections and joints are to be bolted with grade 5 hex head bolts and Belleville washers to minimize Maintenance Requirements.

2.2 CIRCUIT BREAKERS

A. General

1. Circuit protective devices as indicated on the Drawings. All devices shall have an interrupting capacity not less than the maximum available fault current at the circuit breaker as indicated on the Drawings, but in no case shall the interrupting capacity be less than 65,000-amp symmetrical interrupting for 480/277-volt devices and 42,000-amp symmetrical for 240 volt or 208/120 volt devices.

2. Provide padlock-off devices on each device. Breakers shall provide time overcurrent and instantaneous circuit protection.

3. Circuit breakers shall employ a stored energy, quick make-quick break, and trip free operating system on each phase, with common trip. Breakers shall comply with UL 489 and NEMA AB1 latest revisions.

4. Circuit breakers noted as "100%" on the Drawings shall be tested and rated to carry the breaker full rated (100%) ampere load continuously including the assemblies the circuit breakers are installed into.

5. Provide conductor lugs on circuit breakers to accept conductor sizes and quantities shown on Drawings.

6. Electrical equipment including switchgear, switchboards, electric panels and control panels, motor control centers, combination motor starters, trans-formers, disconnects, etc., shall each be labeled by the Manufacturer with “Electric-Arc-Flash” warning signs. The signs shall explain a hazard to personnel may exist if the equipment is worked on while energized or operated by Personnel while energized. The sign shall instruct personnel to wear the correct Protective Equipment/clothing (PPE) when working “Live” or operating “Live” electrical equipment and circuits.

B. Performance Requirements for Circuit Breakers Conforming to one or more of the following applications:

- 600-amp or larger frame size.
- Larger than 400-amp trip.
- Service entrance in main switchboard.
- Noted as main circuit breakers on the Drawings.

1. Circuit breaker shall employ current sensors and static electronic automatic trip system. Three phase or single-phase operation as noted on the Drawings. Current carrying components shall be completely isolated from the static trip units. The trip unit shall be independent of external power sources. Circuit breaker shall be UL listed for reverse connection.

2. Breaker solid state trip control functions shall provide the following field adjustable features.

    a. Adjustable ampere setting to vary the continuous current carrying capacity, minimum range of 80% thru 100% of full load trip rating.
    b. Adjustable long-time delay setting to vary the time the breaker will trip under sustained overload conditions. Minimum of three settings, "minimum - intermediate - maximum".
    c. Adjustable short-time pickup to vary the level of high current the breaker can carry for short periods of time, minimum range of 2 times thru 8 times of ampere setting.
    d. Adjustable short time delay to vary the time of the short-time pickup. Minimum of three settings "minimum-intermediate-maximum".

e. Short time "I^2t" switch to allow a current-squared multiplied by time ramp function in the short-time system. Two position setting "in-out".
f. Adjustable instantaneous pickup to vary the breaker ampere setting for immediate (instantaneous) interruption of severe overloads (short circuits). Adjustable minimum range of 2.0 times thru 9 times of circuit breaker ampere sensor rating (note where the coordination study requires a higher instantaneous setting, change the specified adjustable instantaneous trip to fixed instantaneous trip at 15 times the breaker ampere sensor setting).
g. Individual fault trip indicators shall provide local indication on the breaker for overload and short circuit (and ground fault where applicable) conditions.
h. Provide one Manufacturer standard test set for solid state trip circuit breakers.

3. Arc Energy Reduction

a. Where the highest continuous current trip setting for which the actual overcurrent device installed in a circuit breaker is rated or can be adjusted is 1,200-amp or higher the following shall apply:

1) Documentation. Documentation shall be available to those authorized to design, install, operate, or inspect the installation as to the location of the circuit breaker(s).
2) Method to Reduce Clearing Time. One of the following or approved equivalent means shall be provided:

a) Zone-selective interlocking
b) Differential relaying
c) Energy-reducing maintenance switching with local status indicator
d) Energy-reducing active arc flash mitigation system
e) An approved equivalent means

C. Performance Requirements for Circuit Breakers Conforming to one or more of the following applications:

- Smaller than 600 amp frame size.
- 400 amp and smaller trip.
- 225 amp and larger frame size.
- Larger than 100 amp trip.

1. Circuit breaker shall be molded case thermal-magnetic or solid-state trip. Thermal-magnetic circuit breakers shall be furnished with field adjustable, instantaneous magnetic trip element.

2. Solid state trip breakers shall conform to the Requirements described for solid state breakers larger than 400 amp trip except, only the following field adjustments are required;

a. Ampere setting adjustable minimum range of 80% thru 100% of full load trip rating.
b. Short time pickup adjustable minimum range of 2 times thru 8 times of the ampere setting.

c. Fixed or field adjustable instantaneous trip.

D. Performance Requirements for Circuit Breakers Conforming to the following applications:

- 100 amp frame size and smaller.
- 100 amp and smaller trip.

1. Circuit breaker shall be molded case thermal-magnetic trip.

E. Series Rated Circuit Breakers (SR)

1. Performance Requirements for circuit breakers conforming to the following applications:

a. 400 amp and smaller trip and identified as Series Rated (SR) on the Drawings. Circuit breakers shall be UL listed for series rating with all downstream circuit breakers.

2.3 SWITCH AND FUSE FEEDER PROTECTIVE DEVICES

A. Fusible Switches: Quick-make, quick-break type with rejection clips for use with Class "R" fuses. Switches with ratings up to and including 100-amp at 240 volts shall be twins mounted. Switches rated through 60-amp and 480 volts shall be twins mounted. Switches shall be removable from front of switchboard without disturbing adjacent units or switchboard bus structure.

B. Fuses shall be time delay current limiting types, UL Class RK-1 unless otherwise indicated on the Drawings. Provide one spare set of fuses of each size and type in each switchboard.

2.4 MAIN SWITCHBOARDS

A. Switchboard shall be floor-mounted, dead-front, dead-rear type, front and rear aligned, self-supporting, consisting of one or more Vertical Sections with group mounted non-drawout circuit protective devices, instrumentation and control wiring as indicated on the Drawings and as specified herein.

B. Switchboard shall be designed, built and tested in accordance with applicable portion of the latest editions of NEMA PB-2, Underwriters Laboratories No. UL-891 and the National Electrical Code.

C. Switchboard Sections shall be floor standing self-supporting, of the universal frame type using die-formed, 12-gauge steel members bolted and welded together. Provide removable side and rear plates with formed edges all around. Provide ventilation openings required maintaining minimum operating temperature. Provide removable steel cover plates for all usable device spaces. Provide lifting means and provisions for moving by means of rollers or skids to installation location. Bolt individual Sections together to form a single rigid switchboard assembly. Provide full height, hinged, vertical wireway metal covers, on each vertical wireway, of each Distribution Section of the switchboard, containing group mounted feeder protective devices.

D. Switchboard shall include, but not be limited to, the following:

1. Underground Pull Section as required by the serving utility incoming service.

2. Metering facilities as required by the serving utility.

3. Current transformer space.

4. Main disconnects.

5. Distribution and feeder circuit protective devices.

6. Owner metering (where indicated on Drawings).

7. Bussing, incoming utility compliant and distribution.

2.5 DISTRIBUTION SWITCHBOARDS

A. Switchboards shall be floor mounted, dead-front, dead-rear type, front and rear aligned, self-supporting, consisting of one or more Vertical Sections with group mounted circuit protective devices, instrumentation and control wiring as indicated on the Drawings and as specified herein. Switchboards shall comply with UL Standard #UL-891.

B. Distribution switchboards shall include but not be limited to the following:

1. Main disconnects (where indicated on Drawings).

2. Feeder protective devices.

3. Owner metering (where indicated on Drawings).

4. Bussing.

C. Switchboard Sections shall of the universal frame type using die-formed, 12 gauge steel members bolted and welded together. Provide removable side and rear plates with formed edges all around. Provide ventilation openings required maintaining minimum operating temperature. Provide removable steel cover plates for all usable device spaces. Provide lifting means and provisions for moving by means of rollers or skids to installation location. Bolt individual Sections together to form a single rigid switchboard assembly. Provide full height, hinged, vertical wireway metal covers, on each vertical wireway, of each Distribution Section of the switchboard, containing group mounted feeder protective devices.

2.6 CONTROL WIRING

A. Terminal Blocks with Barriered Terminals shall be provided for all control wiring terminator points. Control wiring shall be run in horizontal and vertical, isolated, internal metal wireways and shall be carried across hinges in laced bundles. Wire terminators shall be crimp-on type spade terminal

B. Secondary Control Wiring shall be a minimum of 14 AWG stranded copper type SIS 600-volt insulation.

C. Control Circuits shall have circuit number tags at each termination or break in the wire to match circuit numbers on terminal strips and control wiring diagrams.

PART 3 - EXECUTION

3.1 INSTALLATION

Install switchboards in accordance with Manufacturer's written instructions and applicable portions of NECA's "Standards of Installations" for switchboards and motor control centers.

3.2 SWITCHBOARD ANCHORING

Bolt switchboards to floor and wall where wall exists. Where units are free standing provide preformed steel channel or angle iron bracing to nearest wall or building structural member. Switchboard anchoring shall be designed for a 1.0 gravity lateral acceleration of the equipment. Submit structural calculations and details.

3.3 TESTING (ADDITIONAL REQUIREMENTS)

Adjustable settings shall be set and tested after the equipment installation is complete, for proper operation at set pickup and/or drop-out points, by an independent Test Laboratory. Testing shall comply with the Equipment Manufacturer recommendations. Submit three copies of all test results to OWNER'S Representative. Correct any deficiencies and retest.

3.4 IDENTIFICATION (ADDITIONAL REQUIREMENTS)

A. Provide a Red and White Bake-lite Nameplate with ½-inch High Letters in each Section Fastened to Face of Dead-Front Plate, to Read: "Danger 480 (actual volts) volts, KEEP OUT, AUTHORIZED PERSONNEL ONLY".

B. Manufacturer shall stencil the equipment name on each device and equipment section to correspond to the identification of the Drawing.

C. Devices Mounted in Equipment Controlling Protective Devices shall be provided with nameplates indicating device controlled or monitored.

END OF SECTION 26 24 13
010423/535050

SECTION 26 24 16

PANELBOARDS AND TERMINAL CABINETS

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment necessary for and incidental to performing all operations in connection with furnishing, delivery, and installation of the work of this Section, complete, as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Specification Sections and Drawings for related work required to be included as work under Division 26.

2. General Provisions and Requirements for electrical work.

1.2 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. Provide Manufacturers catalog data for panels, cabinets, and circuit breakers.

B. Provide Shop Drawing showing panel circuit arrangements, size, voltage, ampacity, overcurrent protective devices, etc.

C. Provide nameplate engraving schedule.

D. Short Circuit, Coordination and Arc-Flash

1. Perform and submit engineered settings for each equipment location, fuse and adjustable circuit breaker device, showing the correct time and settings to provide the selective coordination within the limits of the specified equipment, per the latest applicable Standards of IEEE and ANSI. Provide electrical system short circuit fault analysis, both 3-phase line-to-line and 1-phase line-to-ground calculations as part of the Coordination Analysis recommendations. Provide Electric Arc-Flash calculations as part of the Coordination Analysis recommendations.

2. The information shall be submitted in both tabular form and on time current log-log graph paper, with an engineering narrative. Written narrative describing data, assumptions, analysis of results and prioritized recommendations, six copies.

3. The goal is to minimize an unexpected but necessary electrical system outage and personnel exposure to the smallest extent possible within the fault occurrence location, using the specified Contract equipment. Shall comply with, but not limited to:

a. IEEE-242, Recommended Practices for Protection and Coordination of Industrial and Commercial Distribution.
b. IEEE-399, Recommended Practice for Industrial and Commercial Power System Analysis.

c. IEEE-1584, Guide for Performing Arc-Flash Hazard Calculations Working Group
d. CEC/NEC

4. Electrical equipment including switchgear, switchboards, electrical panels, and control panels, transformers, disconnects, etc., shall each be labeled by the Manufacturer with “Electrical-Arc-Flash” warning signs. The signs shall explain a hazard to Personnel may exist if the equipment is worked on while energized or operated by personnel, to wear the correct protective equipment/clothing (PPE) when working “Live” or operating “Live” equipment and circuits.

5. The Contractor shall independently contact the serving Utility Company to obtain the current system short circuit amps or available fault current.

6. The Contractor shall independently obtain As-Built Drawings for the existing infrastructure to establish lengths. If As-Built Drawings are no available, the Contractor shall research existing conditions and make reasonable but conservative estimates of conductor length. Where existing conductors have been re-used, the Contractor shall confirm conductor quantity, size, and conduit type.

PART 2 - PRODUCTS

2.1 PANELBOARDS AND DISTRIBUTION PANELS

A. Shall be flush or surface mounting as indicated with group -mount circuit protection devices as shown on panel schedule, hinged lockable doors, index cardholders and proper bussing.

1. Panelboards shall comply with the latest versions:

a. NEMA – PB1.
b. UL – 50 and 67.
c. CEC/NEC.
d. ASTM-B187.

2. Where indicated on the Drawings shall be furnished with sub-feed breakers and/or additional conductor lugs, split bussing, contactors, time switches, relays, etc., as required.

a. Branch circuit panels up through forty-two circuits shall be single section, to accommodate all the circuits and components.
b. Distribution panels shall be single section or multi-section, to accommodate all the circuits and components.

3. Panels shall be “Service-Entrance” equipment rated when the panel main incoming supply feeder originates from one of the following:

a. Originates outdoors exterior of the building in which the respective panel is located.

b. Originates from an electrical supply source not located in the same building as the respective panel.

B. Housing and Painting, Panels and Terminal Cabinets

1. Shall be finished with one coat of rust inhibitor zinc chromate and coat of primer sealer after a thorough cleaning.

2. Finish color paint as selected by Owner's Representative where exposed to public view (e.g., corridors, covered passages, offices, etc.). Prime coated panelboard shall be painted to match surroundings after installation in public areas.

3. Manufacturer's standard color in electrical rooms /closets, janitor's, HVAC and storage rooms.

4. Panel and panel doors shall be fabricated of sheet steel of the following minimum gauges.

   a. Full height hinged, locking door. Trim and door #12-gauge steel.
   b. Panel enclosure - Code gauge steel.
   c. Panels installed in indoor dedicated electrical equipment rooms and dedicated electrical equipment closets, may omit full height hinged locking panel door. Dead front cover behind omitted panel door shall remain.

5. NEMA-1 Metal Housing, for indoor locations.

6. NEMA-3R Metal Housing, tamper resistant, for outdoor locations.

7. Furnish all panels and terminal cabinets with the Manufacturers flush locks and keys except where indicated otherwise herein. Keys and locks shall be interchangeable for all panels. Provide two latches and two locks for door heights exceeding 36-inches.

8. Fasten the trim to panel and terminal cabinets by means of concealed, bolted or screwed fasteners accessible only when the door is open.

C. Panels 208/120 volt, three phase, 4-wire, S/N or 120/240-volt, single phase, 3-wire, S/N.
Branch circuit panel as manufactured by:

1. Eaton "Pow-R-Line 1 or 2" Series

2. General Electric "A" Series

3. Square D "NF/NQ" Series

4. Siemens "P1/P2" Series

D. Branch circuit panels for 480/277 volt, three phase, 4 wire, S/N. Panelboard as manufactured by:

1. Eaton “Pow-R-Line 2” Series
2. General Electric “A” Series
3. Square D “NF” Series
4. Siemens “P1/P2” Series

E. Distribution panels as manufactured by:

1. Eaton “Power-R-Line 4” Series
2. General Electric “Spectra” Series
3. Square D “I-Line” Series
4. Siemens “P4/P5” Series

F. Top and bottom gutter space shall not be less than 6-inches high. Provide 6-inches additional gutter space in all panels where double lugs are required, or where cable ampere size exceeds bus ampere size. Provide 12-inches additional gutter space in all panels for aluminum feeders where used.

G. Panel dimensions.

1. Panels with buss sizes 50-amp thru 400-amp

   a. Shall be 20-inches wide. Surface or flush mounting as indicated.
   b. Recess mounted type shall have a 20-inches wide (maximum) recess metal enclosure with overlapping edge trim plate cover extending 1-inch on all sides of enclosure.
   c. Depth shall be 5.75-inches nominal. Height of panel as required for devices and terminations.

2. Panels with buss sizes greater than 400-amp

   a. Narrow panels 24-inches (maximum) wide by 6.5-inches (maximum) deep units. Wide panels’ 25-inches to 44-inches (maximum) wide by 8-inches to 15-inches (maximum) deep units. Nominal 90-inch panel height.
   b. The wider units shall be used only at locations where the narrow unit is not available with the quantity or size of large-ampere frame branch / sub-feed circuit protective devices shown on the panel schedules, or where the main breaker size exceeds the narrow panel maximum.
   c. Distribution panels shall be floor standing and supported from behind the panels at walls.

H. Distribution panels and branch circuit panels maximum load rating

1. Panelboards and Distribution Panels exceeding 800-amp load rating shall not be permitted.

2. Provide Distribution Switchboards instead of Distribution Panels for bus load and circuit load ratings exceeding 800-amp.

I. Panel Auxiliary Cabinets

1. Panelboards shown on the Drawings with relays, time clocks or other control devices shall have a separate auxiliary metal barriered compartment mounted above panel.

2. Panelboards with circuits controlled by low voltage remote control relays shall be provided with separate auxiliary cabinets to contain the relays, adjacent to the panelboard.

3. Provide auxiliary cabinets with separate hinged locking door to match panel-board.

4. Provide mounting subbase in cabinet for control devices and wiring terminal strips.

J. Panels shall have a circuit index cardholder removable type, with clear plastic cover. Index card shall have circuit numbers imprinted to match circuit breaker numbers.

1. The panel identification nameplate shall describe the respective panel name and voltage, corresponding to the Contract Documents.

2. The electrical power source, name and location of each panel supply-feeder and supply equipment name shall also be identified and described on the respective panel nameplate.

2.2 SHORT CIRCUIT RATING

A. Circuit protective devices and bussing as indicated on the Drawings. All devices and bussing shall have a short circuit fault withstand and interrupting capacity not less than the maximum available fault current at the panel and as indicated on the Drawings, plus a 25% additional capacity (safety margin). However, in no case shall the short circuit fault interrupting and withstand capacity be less than the following symmetrical short circuit.

	C/B and/or Bus Rating	Circuit Voltage	Short Circuit Amp.
1.	400A and less	240V and below	10,000A
2.	400A and less	over 240V and below 600V	14,000A
3.	Over 400A & 800A & below	240V and below	42,000A
4.	Over 400A & 800A & below	over 240V and below 600V	30,000A

B. Panel Short Circuit Fault Rating

1. General

a. Provide a “fully rated” for short circuit fault interrupt and full load ampere main circuit breaker in each branch circuit panel and/or each distribution panel. Provide the main circuit breaker whether or not a main circuit breaker is shown otherwise on the Drawings, schedules or diagrams. The “utility-source” plus the “motor-load” transient contributions shall be used to establish the available fault duty values, unless indicated otherwise on the Drawings.
b. The panel main circuit breaker full load ampere capacity rating shall equal the respective panel main bus ampere rating.
c. The panel assembly, buss and circuit protection devices bolted fault short circuit withstand and bolted fault short circuit interrupt ratings shall not be less than 125% greater (including a 25% safety margin) than the available utility-source symmetrical and asymmetrical bolted fault short circuit current when “Series combined rated” with the panel main circuit breaker.
d. The main circuit breaker rated “bolted-fault” short circuit fault interrupt and withstand short circuit rating shall not be less than 125% (including a 25% safety margin) of the upstream main service entrance “bolted-fault” available (symmetrical and asymmetrical) short circuit current.

2. Distribution Panelboards

a. Distribution panel, main circuit breaker, all feeder circuit breakers, and all branch circuit breakers shall be “fully-rated” (plus safety margin) for the available bolted fault short circuit current (including safety margin).
b. Shall provide time/current-tripping coordination with downstream equipment and upstream equipment.

3. Non-emergency branch circuit panelboards 400-amp buss and smaller; Non-emergency branch circuit panelboards 400-amp trip main circuit breaker and smaller.

a. The branch circuit panel main circuit breaker shall be “fully-rated” (plus safety margin) Current Limiting Circuit Breaker type (CLCB). Shall provide time/current- tripping coordination with upstream equipment.
b. The branch circuit panel main circuit breaker shall be “Series-rated” with the panel downstream branch circuit devices and panel bussing. “The series-rating” shall provide short circuit bolted fault current with-stand protection and short circuit bolted fault interrupt rating protection during a downstream 3-phase line-to-line and/or single-phase line-to-ground short circuit bolted faults.
c. Typical for branch circuit panelboards connected to normal-power (non-emergency) power circuits.

2.3 PANEL CIRCUIT BREAKERS, CIRCUIT PROTECTION DEVICES

A. Circuit Breakers General, for Distribution Panels and Panelboards

1. NEMA-AB1 and AB3, comply with latest revision.

2. UL-1087, UL-489 and IEC-60.947.2 rated devices, comply with latest revision.

3. 5Hz AC closing and 3Hz AC trip and clear.

4. Main circuit breakers for distribution panels exceeding 400-amp and larger.

   a. Shall be Insulated Case Circuit Breaker type ICCB.

5. Main circuit breakers for branch circuit panelboards 400-amp buss and smaller.

   a. Shall be Current Limiting Circuit Breaker type-CLCB for non-emergency panelboards.
   b. Shall be Molded Case Circuit Breaker type-MCCB for emergency panelboards.

6. Branch circuit breakers and feeder circuit breakers smaller than 100-amp trip shall be Molded Case Circuit Breakers type-MCCB and/or Current Limiting Circuit Breakers type-CLCB.

7. All circuit breakers 100-amp and larger trip shall employ sensors and solid state digital electronic automatic trip system. Short-time and long-time. Time/ current curve shaping field adjustable functions and adjustable instantaneous trip. Typical for Molded Case Circuit Breaker type-MCCB, Insulated Case Circuit Breaker type-ICCB and Current Limiting Circuit Breaker type-CLCB.

8. Refer to Specification Section 26 24 13 and/or 26 11 00 for additional Circuit Breaker Requirements.

B. Manufacturer

1. Circuit breakers as manufactured by the following Companies only are acceptable:

   a. Eaton
   b. General Electric Co.
   c. Square D Co.
   d. Siemens

C. Configuration

1. Circuit breakers shall be arranged in the panels so that the breakers of the proper trip settings and numbers correspond to the numbering in the panel schedules on the Drawings.

2. Circuit numbers of breakers shall be black-on-white micarta tabs or other previously approved method. Circuit number tabs, which can readily be changed

from front of panel, will not be accepted. Circuit number tabs shall not be attached to or be a part of the breaker.

3. Panelboard circuit protection devices shall be bolt on type for connection to panel bus. Removable and installable without disturbing adjacent devices.

4. Provide conductor wire terminations (lugs) on each circuit protection device for incoming main feeder, branch circuits and outgoing feeder circuits. Dual rated copper/aluminum and compatible with the respective conductor size, type and quantity.

5. Where 2-pole or 3-pole breakers occur in the panels, they shall be common trip units. Single pole breakers with tie-bar between handles will not be accepted.

6. Branch circuit panels shall be field convertible for bottom entry main incoming feeder or top entry main incoming feeder.

7. Each panel section, the feeder and branch circuit protection devices (3-phase and/or 1-phase) shall be “twin-mount”, side-by-side double row construction for the following circuit sizes:

   a. 480/277 volt, 60-amp circuit size and smaller.
   b. 240 volt – 208/120-volt, 100-amp circuit size and smaller.

D. Lock-Off and Lock-On

1. All circuit breakers shall be pad-lockable in the "off" position.

2. Where branch circuit breakers supply the power to motors and signal systems, the breakers shall also be furnished with lockout clips, mounted in the “on” position. The breakers shall be able to trip automatically with lockout clips in place.

3. Provide lock-on clips on branch circuit breakers supplying fire alarm equipment and fire alarm panels. Provide identification of the dedicated "fire alarm" circuit function and operation. Color-code the circuit breakers to comply with AHJ Requirements.

4. Locking facilities shall be riveted or mechanically attached to the circuit breaker (submit sample for approval. Other means of attachment shall not be accepted without prior written approval of the Owner’s Representative.

E. Switch and Fuse Feeder Protective Devices for Distribution Panels

1. Locations where the Drawings show distribution panels employing switch-fuse circuit protection devices.

2. Fusible Switches: Quick-make, quick-break type with rejection clips for use with Class “R” fuses Current Limiting Fuses (CLF). Switches with ratings up to and including 100-amp at 240 volts shall be twins mounted. Switches rated through 60 amp and 480 volts shall be twins mounted. Provisions for padlocking in the

"on" and/or "off" positions. Switches shall be removable from front of panel without disturbing adjacent units or panel bus structure.

3. Fuses shall be time delay current limiting types, UL Class RK-1 unless otherwise indicated on the Drawings.

   Provide one spare set of fuses of each size and type in each Distribution Panel.

4. Provide auxiliary contact on switch for remote status (on-off) signaling and monitoring. Provide conductor lugs to accept conductor temperature rating, sizes and quantities shown on Drawings.

5. Switch and fuse devices shall be permitted only in distribution panels and only where specifically indicated on the Drawings for feeders.

2.4 PANEL BUSSING

A. Bus Material

1. Bussing shall be rectangular cross section tin-plated copper or alternately silver or tin-plated aluminum.

2. Bussing shall be non-tapered, full length of the enclosure.

B. Ground Bus

1. Each panel shall be equipped with a ground bus secured to the interior of the enclosure. The bus shall have a separate lug for each ground conductor. No more than one conductor shall be installed per lug.

2. Provide additional isolated ground bus in each panel with connecting isolated ground feeders and/or connecting isolated ground branch circuits.

C. Provisions

1. Provide space and all hardware and bus mounting attachments for future devices as indicated on the Drawings.

D. Neutral Bus

1. The ampere rating of the neutral bus of panels and distribution panels shall be a minimum of 100% greater ampere capacity than the ampere rating of the corresponding phase bus.

2. Where the panel is indicated to be provided with an "oversize-neutral" or "200%" neutral on the Drawings, provide 200% ampere capacity rated neutral bus.

2.5 TERMINAL AND AUXILIARY CABINETS

A. Cabinets

1. Fabricated of Code gauge sheet steel for flush mounting (except where noted as surface) of size indicated on the Drawings, and complete with hinged lock-able doors, provide the quantity of 2-way Feed through conductor terminals required for termination of all conductors, plus 15% spares of each type.

2. Cabinet locks to operate from same key used for panelboards. The trim to cabinets shall be fastened by means of concealed bolted or screwed fasteners accessible behind door into cabinets. All cabinets shall have ⅝-inch plywood backing, finished with fireproof intumescent primer and finish coat paint. Provide equipment ground bus in each cabinet.

3. Cabinets shall be finished with one coat of zinc chromate and one coat of primer sealer after a thorough cleaning. Where exposed to public view (e.g., corridors, covered passages, offices, etc.) finish color paint to match surrounding and Manufacture's standard gray color in switchboard, janitors, heater and storage rooms.

4. Provide grounded metal barriers inside cabinet to isolate and separate line voltage and low voltage from each other inside the cabinet.

B. Cabinet Dimensions.

1. Unless indicated otherwise on Drawings.

   a. Shall be 20-inches wide. Surface or flush mounting as indicated.
   b. Recess mounted type shall have a 20-inches wide (maximum) recess metal enclosure with overlapping edge trim plate cover extending 1-inch on all sides of enclosure.

2. Depth shall be 5.75-inches nominal. Height of cabinet as required for devices, plus 25% spare unused interior space for future use, but not less than 36-inches high.

C. Terminals

1. Non-digital analog circuits; line and low voltage modular signal systems, 15-amp dual row with isolation barriers, screw-down terminals insulated strips, heavy duty.

   a. As manufactured by: Molex, or ITT-Cannon, or General Electric.

2. Digital circuits; low voltage signal systems, ANSI/ EIA/TIA Category-6, 110-Block or 66-Block gas-tight punch down style, heavy duty.

   a. As manufactured by: Leviton, or Ortronics, or AMP.

D. Identification (additional requirements)

1. Provide engraved nameplate on each cabinet indicating its designation and system (i.e., “Life Safety System - Panel 2LS”, etc.).

2. Identify each terminal landing with unique circuit number and provide corresponding alphanumeric text-index card inside panel access door

PART 3 - EXECUTION

3.1 MOUNTING

A. Flush mounted panelboards and terminal cabinets shall be securely fastened to at least two studs or structural members. Trim shall be flush with finished surface.

1. Panels and cabinets installed flush (recess or semi-recess) into fire rated or smoke rated walls. The wall recess shall be fully wrapped inside the recess with fire/smoke rated materials. The wrap-materials shall provide the same fire and/or smoke protection rating as the respective wall.

B. Surface mounted panels and terminal cabinets shall be secured to walls by means of preformed galvanized steel channels securely fastened to at least two studs or structural members.

C. Panelboards and terminal cabinets shall be installed to ensure the top circuit protective device (including top compartment control devices) are not more than 6-feet-6-inches above finish floor in front of the panel and the bottom device is a minimum of 12-inches above the floor. Manufacturer shall specifically indicate on Shop Drawing submittals each panel where these conditions cannot be met.

3.2 IDENTIFICATION (ADDITIONAL REQUIREMENTS)

A. Provide a red and white Bakelite nameplate with ½-inch high letters in each 277/ 480-volt panel fastened to face of dead-front plate, to read: “DANGER 480 (or as applicable) VOLTS KEEP OUT AUTHORIZED PERSONNEL ONLY”.

B. Manufacturer shall stencil the panel/cabinet number identification on the inside of door to correspond with the designation on the Drawings.

C. Identification plates and numbers shall be attached with screws or twist lock fasteners. Adhesive attachment of any kind shall not be used.

3.3 SPARE CONDUITS (ADDITIONAL REQUIREMENTS)

Provide three 1-inch conduit only stubs from each panel and terminal cabinet into accessible ceiling space. Where floor level below panel or terminal cabinet is accessible, also provide an additional three 1-inch conduit only stubs into accessible floor space.

END OF SECTION 26 24 16
010423/535050

SECTION 26 24 19

MOTOR CONTROL EQUIPMENT

PART 1 - GENERAL

1.1 SCOPE

A. Work Included: All labor, materials, appliances, tools, equipment necessary for, and incidental to, performing all operations in connection with furnishing, delivery and installation of the work of this Section, complete, as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Specification Sections and Drawings for related work required to be included as work under Division 26.

2. General Provisions and Requirements for electrical work.

PART 2 - PRODUCTS

2.1 INDIVIDUAL STARTERS

A. Manual Motor Starters:

1. Provide flush or surface mounting manual motor starters with number of poles and size of thermal overload heaters as required for the motor being controlled (equipped with overload heaters, one for each motor lead). Back boxes shall be supplied with all flush mounting starters whether they are toggle type requiring only a 4-inch square outlet box or the larger type requiring a special box and cover designed to accept the particular unit.

2. Unless otherwise noted on the Drawings, all manual starters for single phase motors, smaller than 1 h.p., shall be the compact toggle type. Manual starters for all single-phase motors, 1 to 5 h.p., and all three phase motors up to 5 h.p. shall be the heavy-duty type.

3. Where manual motor starter is shown with pilot light, the pilot light shall be installed in a separate outlet box adjacent to the starter outlet, and engraved nameplate to indicate function of pilot light.

4. Motor starters as manufactured by the following:

Manufacturer	1hp and Below	Single-Phase Others
Arrow Hart	Type RL	Type LL
General Electric	CR 101	Class CR 1062
I.T.E.	Class C10, C11 or C12	Class C20
Square D Company	Class 2510, Type A	Class 2510, Type B & C
Westinghouse	Type MS	Type A100
Allen Bradley	Equal	Equal

B. Individual Magnetic Motor Starters:

1. Three phase magnetic motor starters NEMA Size 1 and larger controlling three phase motors 5 horsepower and larger shall provide integral motor single phasing protection. The starter shall automatically "open", turn off electrical power to the connected motor in the event of the loss of one or more circuit phases, lock out and require manual resetting of the single-phase protection to restart the magnetic motor starter. Provide single phase annunciator. Provide adjustable time delay, minimum range 0-3 seconds for initiating single phase shut down.

2. Magnetic motor starters shall be AC line voltage, across-the-line units in NEMA Type I enclosure, unless other types of enclosures are indicated.

3. All starters located outside of a building whether or not indicated shall be W.P. (weatherproof), and all starters noted W.P. shall be furnished in NEMA Type 4 cast or stainless-steel enclosures.

4. Starters shall be horsepower rated for the motor controlled and shall be equipped with properly sized overload elements. Every pole shall be with overload element.

5. Verify the exact motor current and voltage characteristics with the supplier of the motor before installation of a starter.

6. Each starter shall be equipped with "Hand-Off-Auto" switch or stop-start pushbutton as required.

7. Coils shall be designed to operate on voltage indicated on control diagrams and have built-in-under the voltage release for coil circuit to drop motor starter off the line when the line voltage drops below normal operating voltage.

8. The coil control circuit shall be independently fused, sized to protect coil.

9. Starters to be equipped with running pilot light indication with a "Push-to-Test" feature.

10. Magnetic starters shall have a minimum of two auxiliary contacts. Additional auxiliary contacts shall be provided as required to comply with the Requirements of the wiring diagrams on the Electrical, Mechanical and Plumbing Drawings and the description of the function in the Mechanical and Plumbing Sections of the Specifications.

11. Minimum starter size shall be NEMA Size 1 unless indicated otherwise.

12. Magnetic motor starters as manufactured by the following:

Manufacturer	Type
General Electric	Class CR 106
I.T.E.	Class A20
Square D Co.	Class 8536
Westinghouse	Type A200 (Size 4 Max.) or Class II-200 (Sizes

5 thru 8) Allen Bradley Equal

2.2 INDIVIDUAL COMBINATION MOTOR STARTERS

A. Combination starter shall incorporate fused disconnect switch and individual magnetic motor starter in a common enclosure. Combination starters shall be mounted in general purpose enclosures unless otherwise indicated on the plans. Provide oversized enclosures where required to accommodate the components and/or wiring indicated. Starters shall comply with NEMA Standards, size and horsepower as indicated on Drawings General Electric, Square D, Westinghouse or I.T.E.

B. The disconnect handle used on combination starters shall control the disconnect device with the door opened or closed. The disconnect handle shall be clearly marked as to whether the disconnect device is "ON" or "OFF", and shall include a two-color handle grip, the black side visible in the "OFF" position indicating a safe condition, and the red side visible in the "ON" position indicating an unsafe or danger condition.

C. Each starter shall be equipped with an integral control circuit transformer with secondary voltage or as indicated.

D. All starters used in combination starters shall be manufactured in accordance with the latest published NEMA Standards, sizes, and horsepower ratings. These starters shall be furnished with three melting alloy type thermal overload relays.

E. Thermal units shall be of one-piece construction and interchangeable. The starter shall be inoperative if a thermal unit is removed.

2.3 MOTOR CONTROL INTERLOCKS AND CONTROL DEVICES

A. Refer to Mechanical and Plumbing Drawings and Specifications and provide all control devices including timeswitches, relays and interconnection of starters as required.

B. Mount all relays and timeswitches in a separate NEMA 1 enclosure unless otherwise indicated.

C. Whether Shown on Mechanical and Plumbing Drawings or Control Center Schedules or not, where motors are controlled by external devices (i.e., thermostats, relays, float or pressure switches, etc.) or interlocked with other motors, each motor starter to be equipped with a "Hand-Off-Auto" selector switch in starter cover. Other starters equipped with a "Start-Stop" pushbutton station in starter cover.

D. Provide low voltage, 60Hz control power transformer(s), VA as required for HVAC and plumbing controls.

2.4 FUSES

A. Fuses shall be dual element, current limiting type, UL Class RK-5 unless otherwise indicated on the Drawings. Provide one spare set of fuses of each size and type in each motor control center.

B. Verify the full load amperes of all motors for which fuses are to be provided. Size fuses for the motor full load amps according to the recommendations of the Fuse Manufacturer.

PART 3 - EXECUTION

3.1 IDENTIFICATION

A. Manufacturer shall stencil the panel number or letter on each device and equipment section to correspond to identification on the Drawing.

B. Identification plates and numbers shall be attached with screws or twist lock fasteners. Adhesive attachment of any kind shall not be used.

END OF SECTION 26 24 19
010423/535050

SECTION 26 50 05

LIGHTING FIXTURES

PART 1 - GENERAL

1.1 SCOPE

A. Work Included:
All labor, materials, appliances, tools, equipment necessary for and incidental to performing all operations in connection with furnishing, delivery and installation of the work of this Section, complete, as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Specification Sections and Drawings for related work required to be included as work under Division 26.

2. General Provisions and Requirements for electrical work.

1.2 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. General

1. Submit certification letter from Manufacturers of LED or lamps and ballasts and power/driver supplies, (or alternately, Manufacturer's published catalog data) stating/showing the specific LED or lamp, ballast, or power/ driver supply combination comply with Manufacturer recommendation and approval for the combined use, shown on the Drawings.

2. Provide complete Manufacturers catalog data information for each light fixture (luminaire), ballast, power/driver supplies, LED or lamps, materials, auxiliary equipment/devices, finishes and photometrics.

B. Performance Certification

1. Submit Manufacturer's Certified LED or lamp and ballast tests report data showing compliance with Contract Document.

2. Submit Manufacturer's letter of Certification for each fixture type, confirming the proposed combination of specific LED or lamp, ballast, power/driver supply and auxiliary components for each light fixture (luminaire) type will function together correctly and perform in compliance with the Requirements of the Contract Documents as follows:

"The proposed lamp(s), LED or lamp ballast(s), drivers, (where, applicable), lamp sockets and fixture have been tested as an assembly. The proposed fixture products assemblies are certified by the Manufacturer to function within the required temperature, lumen output, electrical characteristics and operational life described in the Contract Documents".

C. Light Fixture Samples

1. If requested by the Owner's Representative, provide a sample of each fixture proposed as a substitution for a specified fixture. Sample fixture shall be complete with specified lamps, 3-wire grounding "SO" cord and plug for 120-volt 60Hz, AC plug-in operation. Sample fixtures shall be delivered to the Owner's Representative's office for review, the samples shall be picked up within 10-working days after review comments have been received; any samples left beyond this time will be discarded by the Owner's Representative. Decision of Owner's Representative regarding acceptability of any lighting fixture is final.

1.3 QUALITY ASSURANCE (ADDITIONAL REQUIREMENTS)

A. Work and Materials shall be in full accordance with the latest Rules and Regulations as follows. The publications shall be included in the Contract Document Requirements. If a conflict occurs between the following publications and any other part of the Contract Documents, the Requirements describing the more restrictive provisions shall become the applicable Contract definition:

1. UL – Underwriters' Laboratory:

a. UL – 1572: HID Lighting Fixtures
b. UL – 1570: Fluorescent Lighting Fixtures
c. UL – 1029: HID Ballast
d. UL – 935: Fluorescent Lamp Ballast
e. UL – 542: Lamp Holders, Starters, and Starter Holders
f. UL – 8750 and 1598C: Light Emitting Diode – LED Equipment for use in Lighting Products and Replacements

2. NEMA – National Electrical Manufactures Association:

a. NEMA – LE4: Recessed Luminaries Ceiling Compatibility
b. NEMA – SSL #1, #3 and #6: Electronic Drivers for LED; LED and Incandescent Lamp Replacement
c. NEMA – LSD #44, #45, #49 and #51: SSL-Solid State Lighting

3. United States Federal Government:

a. FCC – Part 18: EMI and RFI emissions limitations.
b. EPA: Energy Conservation Publications and Waste Disposal Regulations.

4. ETL and C.B.M. Certified and Approved.

5. Electrical Installation Standards, National Electrical Contractors' Association:

a. NEIS/NECA and IESNA – 500: Recommended Practice for Installing Indoor Commercial Lighting Systems.
b. NEIS/NECA and IESNA – 501: Recommended Practice for Installing Exterior Lighting Systems
c. NEIS/NECA and IESNA - 502: Recommended Practice for Installing Industrial Lighting Systems.

6. Illuminating Engineering Society – IES (IESNA):

    a. IES – LM41: Photometric and Reporting.
    b. IES – 587: Surge Protection.
    c. IES – LM79: Solid State Lighting (SSL) Testing and Measurement.
    d. IES – LM80: Testing for Lifetime of LED.

7. ANSI-American National Standards Institute:

    a. ANSI – C81
    b. ANSI – C82
    c. ANSI – C62.41: Transient Withstand
    d. ANSI – C78: Lamps

8. State California Code of Regulations - Title-24 Energy Code

PART 2 - PRODUCTS

2.1 GENERAL

A. Complete Fixture

1. Provide light fixtures complete including LED or lamps, ballasts, drivers, lamp holders' sockets, housings, ceiling and wall trim "rings" for each ceiling type, mounting and adapter support brackets, diffusers/lenses and outlet boxes.

2. Include an allowance of $300.00 to provide a light fixture for each lighting fixture outlet shown on Drawings without a fixture type designation.

B. Specific Fixture Requirements and Fixture Schedule Information

1. The catalog numbers included in the description of the various types of lighting fixtures shall be considered to establish the type or class of the fixture with a particular Manufacturer only. The fixture length, number of lamps and lamp types, component materials, accessories, mounting type, ceiling, wall and install adapters, operation voltage, and all other components required to fulfill the total description of the fixture based on all Drawing information, branch circuits, voltages, Specification information, and shall be included in the Contract Requirements regardless of whether or not the catalog number specifically includes these components.

2. Lighting fixtures shall be the types as indicated in fixture schedule on the Drawings and as described in the Specifications.

3. All fixtures of the same fixture type shall be the same Manufacturer and of identical finish and appearance, unless indicated otherwise on Drawings.

C. Manufacturer Certification of Operation

1. Lamps and lamp ballasts and power supplies (drivers) shall be recommended and certified by the respective Manufacturer(s), to be "matched" to operate

correctly together, within the published characteristics, for efficacy, lamp starting, operating life hours, lumen output, power factor, power input, operating line ampere, sound intensity, and temperature.

2.2 BALLASTS AND POWER SUPPLIES (FOR HID LAMPS AND FLUORESCENT LAMPS AND DRIVER-POWER SUPPLIES FOR LED-SOLID STATE LAMPS)

A. General

1. All ballast, power supplies, lighting fixtures assemblies and components shall be ANSI, ETL approved C.B.M. Certified, and UL labeled.

2. Ballasts shall provide Class "P" thermal protection.

3. Ballasts shall comply with FCC Part 18 Class-A and NEMA limits as to EMI or RFI and not interferes with normal operation of electrical or electronic data processing equipment.

4. Open circuit voltage, starting voltage, crest voltage and lamp-operating voltage shall comply with Requirements of the respective Manufacturer of the installed lamps.

5. Lamp ballasts, power supplies and transformers shall be for use with the specific lamps provided as part of the Contract.

6. Shall be suitable for use with automatic occupancy motion sensing type switching "on-off" control systems, with multiple "on-off" cycles per hour, on a 24-hours a day basis. Operation shall be without loss of performance in operating characteristics described in the Contract Documents.

7. Fusing

   a. Shall be independently fused on the incoming line side within the fixture compartment.
   b. Alternately the Ballast Manufacturer may install the equipment fuse inside the ballast/power supply.
   c. Provide a label next to ballast cover reading: "Ballast (Power Supply) is fused, check fuse prior to relamping". Provide an additional quantity of 10% spare fuses and deliver to Owner’s Representative.

8. Ballast Sound Rating Class-A or better. Where sound-rating classification is not published, the ballast sound rating shall be the best of product manufactured. Ballasts, which are judged by the Owner’s Representative to be excessively noisy, shall be removed and replaced at the Contractor's expense with low noise ballasts.

9. Electronic solid-state ballasts and power supplies shall be the product of Manufacturer that has been producing electronic ballasts/power supplies for a minimum of 5-consecutive years prior to the date of the Contract.

10. Shall be designed and supplied to operate on the incoming line voltage system circuits to which the respective light fixtures are connected.

11. Shall not contain any PCB (polychlorinated biphenyl).

12. Power factor shall be not less than 0.90, starting and operating. The input starting transient line input ampere should never exceed lamp normal operating ampere by more than 10%.

13. Ballast and power supply disconnect:

    a. Lighting Fixture Manufacturer factory installed and prewired inside each light fixture, for lamp-ballast or lamp-driver power supply.
    b. Shall comply with UL-2459 and CEC/NEC. Shall disconnect (load-break) energized or de-energized ballast/driver from respective line voltage circuit and dimming circuit. UL-94V-0 flame retardant.
    c. Hot pluggable, multi-pole, insulated connectors, with strain relief and finger-safe squeeze-to-release latching function.
    d. Suitable for available voltage and ampere dimming and non-dimming lamp-ballasts and lamp-power supplies.

14. Ballast and power supplies as manufactured by General Electric, Advance, Philips, Universal, Sylvania/Osram or equal.

B. Solid-State Electronic Fluorescent Lamp Ballast

1. Fluorescent ballasts shall be solid-state electronic type ANSI C82.11.

2. Ballast shall operate lamps at voltage frequency exceeding 40kHz, without visually detectable flicker, flicker index shall not exceed 3%. Shall deliver Lamp Manufacturers normal rated lamp life.

3. Ballast normal operations and life expectancy shall not be affected by lamp failure or sustained open circuit/short circuit.

4. Ballast shall be surge and transient protected to 6000 volts, ANSI-C62.41, Category-A.

5. Maximum Total Harmonic Distortion (THD) created by operation on the line (input) side of the ballast shall not exceed 10%.

6. The ballast shall provide an isolated output to the lamps. Metal ballast case shall be positively grounded to the light fixture metal housing.

7. The ballast shall incorporate surge protection device to prevent damage to the ballast due to line side transients.

8. The ballast lamp current crest factor shall be 1.7 or less (ratio of peak to RMS current).

9. The Ballast Factor (BF) shall be not less than the following unless indicated otherwise on the Drawings.

    a. 0.87 BF for normal light output.
    b. 0.95 BF for High light Output (HO) operation.

c. 1.0 BF for dimming ballast.

10. Normal rapid start (continuous full filament voltage) Rapid Start - Rapid start ballast shall energize (preheat) the lamp cathode “heater” filament prior to establishing the lamp arc ignition, normal lamp operation shall occur within 1-second after starting. The ballast shall provide approximately 15,000-lamp start “on-off” cycles prior to lamp failure.

11. Instant start - Instant start ballast shall energize the lamp with an initial increased voltage to initiate the lamp arc discharge between the unheated (no preheat) lamp cathodes and ensure the lamps start without delay or flashing, eliminate lamp operating power required for cathode heating. Preheating the lamp cathodes shall not be performed by the ballast. The ballast shall control the lamp start “on-off” cycles to provide approximately 10,000 starts prior to lamp failure.

12. Program Start - Integrated Circuit (IC) program start ballast shall energize (preheat) the lamp cathode “heater” filament for a programmed time duration prior to transition phase to lamp arc ignition and immediately de-energize the cathode after arc is established and lamp is operational. The ballast shall precisely control the cathode temperature and duration to increase lamp start “on-off” cycles prior to lamp failure to approximately 35,000 starts. The ballast shall reduce the “black-end” lamp condition resulting from frequent lamp “on-off” cycles. The Program Start ballast shall provide automatic End of Life (EOL) lamp current shut-off when a lamp fails.

13. DALI ballast, 1-lamp, 2-lamp, 3-lamp, or 4-lamp, dimming and switching capacity. Comply with DALI published control and communication protocol standards. Universal input line voltage operation.

C. Solid-State Electronic Metal Halide Lamp Ballast

1. Solid-state electronic for low wattage "pulse-start" metal halide type lamp operation.

2. Lamp current crest factor (ratio of peak to RMS current) shall not exceed 1.5.

3. Operate lamps at a frequency of less than 200Hz to minimize acoustic resonance inside the lamp arc tube and minimize lamp flicker.

4. Ballast Factor (BF) shall be 1.0.

5. Automatic ballast thermal protection and automatic shutdown at End of lamp Life (EOL) protection.

6. Total Harmonic Distortion (THD) on the input line side shall not exceed 16%.

D. Dimming Ballasts and Lighting Control System Ballasts

1. General

a. The light fixture ballasts shall comply with the recommendations of the Lighting Control System Manufacturer, as to ballast type and Ballast

Manufacturer sources. Provide documentation with Shop Drawings certifying compliance with the Requirements.

b. DALI ballasts shall comply with the recommendations of the DALI Lighting Control System Manufacturer. DALI ballast types and DALI Ballast Manufacturer sources shall comply with the recommendation with the Shop Drawings certifying compliance with these Requirements and Recommendations.

2. Fluorescent lamp dimming

a. One or multi-lamp rated dimming ballast shall be provided for fluorescent lamp dimming systems, as recommended by the Lighting Control System Manufacturer.

E. Emergency Lighting

1. Light fixtures shown connected to both normal power and external emergency power branch circuits, shall be furnished with separate lamp ballasts for the normal and emergency power circuits.

2. The ballast(s) for the lamps connected to the external emergency branch circuit shall be in a separate wireway isolated and barriered from the ballast(s) for the lamps connected to the normal power branch circuits. The fixture shall be factory labeled "emergency" and "normal" on the respective wireways and ballasts.

F. Tandem Ballast Connections

1. Ballasts in 1-lamp or 3-lamp fluorescent fixtures, when fixture is recessed mounted and within 8-feet of each other, or if surface on pendant mounted within 1-foot of each other, shall be furnished with a tandem wiring harness connected to inboard Ballasts of master fixture, to be field connected to inboard ballast of adjacent fixture. Night-light or emergency light fixtures shall be exempt from this Requirement.

2.2 LAMPS

A. General

1. Lamps shall be new, of wattage and type indicated. Each fixture or lighting outlet shall be supplied with the proper lamp(s).

2. Lamps shall comply with the characteristics as described in the lamp tables below, except where indicated otherwise on the Drawings.

3. Lamps shall comply with limits on mercury and classification as non-hazardous waste as follows:

a. Federal EPA – Toxicity Characteristics Leaching Procedures (TCLP).
b. State of California – Total Threshold Limit Concentration (TTLC).

4. Lamps shall be as manufactured by General Electric, Philips, Osram or Sylvania.

B. Incandescent Lamps

1. General-purpose incandescent "A" style lamps shall be inside frosted, medium base for 200 watts and smaller.

2. Reflector lamps shall be PAR-20, PAR-30 or PAR-38 as required, unless otherwise specified in fixture schedule.

3. Incandescent lamps in non-enclosed fixtures and fixtures without lens/ diffuser shall be rated for "open" fixture operation.

C. Fluorescent Lamps

1. Linear fluorescent shall be energy saving type and bi-pin operation. Rapid-start, Program Start or Instant Start as indicated in the Contract Documents.

2. Compact fluorescent lamps.

3. Average lamp life shall not be less than the following, based on 3 hours "on" operation and 20-minute "off" for each start cycle, when matched in combination with the specific lamp ballast and with the respective light fixture, unless noted otherwise:

   a. Linear fluorescent 20,000 hours.
   b. CFL – 20,000-hours and as noted in the lamp tables.
   c. HID – as noted in the lamp tables, based on 12-hours "on" operation for each start cycle.
   d. Incandescent – as noted in the lamp tables.

D. High Intensity Discharge Lamps HID

1. Mercury vapor lamps shall be Deluxe White or Brite White Deluxe phosphor coated Bonus-Line.

2. Provide proper base up, base down, horizontal, operating configuration for the fixture and lamps being furnished.

3. HID lamps (indoor or outdoor locations).

   a. HID lamps used outdoors or in damp/wet locations shall only be used in fully enclosed, lensed fixtures.
   b. Open type fixtures with HID lamps used indoors shall only be ANSI- “TYPE-0” protected lamps and protected lamp sockets or shall only be fully enclosed, lensed fixtures.
   c. Enclosed/lensed fixtures with HID lamps, shall be rated for “ARC-TUBE Containment”

4. Lamps in non-enclosed light fixtures shall be equipped with automatic switching device to de-energize the lamp when the lamp outer glass envelope is broken.

5. High-pressure sodium lamps shall be clear unless noted otherwise on Drawings.

6. Metal halide lamps shall be clear or coated as indicated on the Drawings.

7. Lamp socket and lamp “burning” position of operation rating (i.e., base-up, base-down, horizontal) shall comply with the actual lighting fixture installation location.

2.3 LIGHT FIXTURES (LUMINAIRES)

A. General

1. Lighting fixtures shall have all parts, ballasts, drivers, sockets, support attachments, trim flanges and fittings necessary to complete and properly install the fixture at the indicated installation locations. All fixtures shall be provided with lamps of size and type specified.

2. Ceiling and/or wall surface mounted lighting fixtures shall not have any exposed chase nipples or conduit knockouts visible to view within fixture housing. Lighting fixtures mounted in continuous rows shall have chase nipples or conduit knockouts between lighting fixture housing but shall not have visible chase nipples/conduit knockouts on the visible ends of the continuous row of lighting fixtures.

3. Where fixture color is indicated to be selected by the Architect and/or Owner’s Representative, provide two color chip samples for each color for review.

4. Recessed fixtures with attached junction box shall be provided with a junction box permanently attached to the plaster ring so that the junction box is accessible through the fixture opening when the fixture is removed. Connection between fixture and pull box shall be flexible metal conduit with not less than 16AWG "AF" or "CF" type fixture rated copper wires, high temperature wire insulation for not less than 600 volts AC. The flexible conduit shall be sufficient length, so that when the fixture is removed, the pullbox is readily accessible.

5. Recessed fixtures shall be Underwriters' Laboratory approved for recessed installation with plaster frame and attached pullbox. Lamp enclosure, reflectors and finish wiring shall not be installed until plastering is completed. Exposed finish trim shall not be installed until finish painting of the adjacent surface is completed.

6. The fixture shall bear Underwriters' Laboratory label of approval for the wattage and installation indicated.

7. Light fixtures installed outdoors, in damp or wet locations shall be UL labeled for said location as "damp-location" and "wet-location" for the respective installation location.

8. Fixtures in contact with thermal/building insulation shall be UL listed and rated for direct contact installation in thermal insulation systems.

9. Lamp auxiliary support brackets shall be heat-resistant, non-dielectric. Alternatively, metal auxiliary lamp support brackets shall be electrically isolated from the fixture, to prevent glass decomposition.

10. Lighting fixtures installed in masonry and/or concrete construction. The fixture housing shall be rated for "concrete-pour" installation location.

11. Provide a permanent label inside each light fixture stating the following relamping information. Not less than 0.125-inch-high black alphanumeric characters on white background.

    "Replacement lamp(s) installed in this light fixture must comply with the following criteria:

    **: CRI *: Lamp Watts*
    **: CCT-K *: Lamp Lumens*

    *Only lamp rated * type lamp ballast shall be installed in this fixture.*
    **Insert the value required for the specific lamp required by the Contract Documents for each light fixture.*

B. Lens and Diffusers

1. Acrylic plastic or Plexiglas for the light fixture diffusers or fixture lenses shall be 100% virgin material.

2. Thickness of not less than 0.125-inch, as measured at the "THINIST" portion on the diffuser or lens. However, thickness shall be increased to sufficient construction and camber to prevent the lens and diffusers from having any noticeable sag over the entire normal life of the installation.

3. Diffusers shall be formed from cast sheet by a vacuum and/or pressure technique.

4. Lighting fixtures containing lamps with dichroic reflectors and light fixtures with non-dichroic lens/diffuser shall be rated for high temperature lamp operations resulting from lamp heat redirected (reflected) back into the fixture.

C. Fixture/Luminaire Internal Wiring

1. Provide wiring between fluorescent lamp holders and associated operating and starting equipment. Provide ballasts/transformers inside lighting fixture.

2. Where there are two or more fluorescent lamps in a single luminaire, and multiple level intensity control is indicted on Specifications or Drawings, multiple-lamp ballasts shall be used to the greatest extent possible and the following tandem wiring configurations shall apply:

    a. If "inboard-outboard" wiring or multi-intensity light switching controls are specified for (odd-quantity) multi-lamp luminaires, then the two outboard lamps shall be connected to a single 2-lamp ballast within each luminaire. The inboard lamps of two adjacent luminaires shall be tandem wired, that is, connected to a 2-lamp ballast within one of the luminaires.
    b. A 1-lamp ballast may be used if a luminaire with ballast is separated by more than 10-feet from any other same type of luminaire with a ballast or if the nearest luminaire is on another control circuit. Otherwise, a lamp in one

luminaire shall be tandem wired, that is, connected to a multi-lamp ballast in another luminaire.

3. Wire insulation for ballast/lamps employing igniters, shall be rated and UL listed for the igniter pulse voltage.

4. Light fixture internal lamp sockets; installation of lamp sockets and ballasts; grounding of lamp sockets and ballasts; and wiring connections, shall all comply with the recommendations of Ballast Manufacturer and Lighting Control System Manufacturer.

D. Lamp Holders (Sockets) and Supports

1. Provide fluorescent luminaire lamp sockets that are white, constructed of high temperature heat-resistant plastic or ceramic/porcelain.

2. When electronic solid-state ballasts are provided, fluorescent lamp sockets for 4-feet-0-inches lamps shall be of the "knife edge" type. The lamp sockets providing the tightest electrical connection shall be furnished.

3. Lamp supports shall be used as recommended by Lamp Manufacturer.

4. Rigidly and securely attach lamp holder to the luminaire enclosure.

5. Provide lamp holders and sockets suitable for specified lamps and position the lamps in optically correct spacing and relationship to lenses, reflectors, filters, and baffles.

6. Lamp holder location shall provide properly located starting aid, as specified by the Lamp Manufacturer.

7. Lamp sockets in fixtures shall be compatible with the respective specified lamp(s), as recommended by the Lamp Manufacturer and shall provide specified lamp operational performance.

8. Provide horizontal position (±15-degree) lamp and lamp socket to automatically ensure lamp position, for lamps requiring horizontal only operation lamps, to ensure correct horizontal lamp install position.

9. Lamp sockets shall be rated for not less than actual volts of the igniter starting of the lamp.

2.4 SOLID STATE LIGHTING (SSL), LIGHT EMITTING DIODES (LED) LAMPS, POWER SUPPLIES, AND LIGHT FIXTURES (ADDITIONAL REQUIREMENTS)

A. General

1. Solid State LED light source (lamps), related control equipment (driver-power supply), and luminaire (light fixture) optics for light output distribution.

2. Shall comply with the US-DOE Energy Star Program for SSL-LED. Submit documentation with Shop Drawings.

3. Shall comply with the latest revision IESNA LM-79 and LM-80. Submit documentation with Shop Drawings.

4. SSL chromaticity shall comply with latest revision NEMA and ANSI – C78.377. Submit documentation with Shop Drawings.

5. Submit with Shop Drawings two samples of each light fixture type employing SSL, with prewired 120 volt, 60Hz AC “SO” cord and plug-in cap.

B. LED Lamps

1. Lamp lumen output and overall efficiency shall be based on the LED lamps installed in specified fixture and ambient operating temperature.

2. Lamp Color Rendition Index (CRI) shall equal or exceed CRI – 80, unless noted otherwise on Drawings.

3. Lamp color output shall be 4000-degree K (±100K), unless noted otherwise on Drawings.

4. CRI and lamp color temperature shall be same for all light fixtures of the same fixture type.

C. LED Power Supply (driver)

1. Combination of power supply and SSL – lamp shall be tested and certified by respective Manufacturers for performance and proper operation.

2. Provide dimming type driver where indicated on Drawings. Driver and dimming equipment shall be tested and certified by respective Manufactures for performance and proper operation.

D. Self-contained LED Lamp and Driver, integral “Screw-Base” and/or “Pin-Connect”, replacement assembly for incandescent lamps.

1. Shall be dimmable. Dimmer and lamp shall be certified by respective Manufacturers for compatible correct operation with each other.

2. Optical system and operating temperature thermal performance shall be compatible with light fixture.

3. Comply with latest revisions of NEMA LSD-49 and SSL-6.

2.5 LIGHTING STANDARDS (SUPPORT POLES, POLE MOUNTED LIGHTING FIXTURES AND LUMINAIRES)

A. General

1. Lighting poles, pole bases, pole arms, lighting fixtures (luminaires), supports with all lighting pole attachments and anchors shall be designed and constructed to withstand not less than 100 miles per hour steady horizontal wind loading and

130 miles per hour horizontal wind gust loading, without any damage to the lighting standards.

2. Provide tamper-resistant "hand-hole" and cover on the pole, for access into wiring terminations inside the pole. Provide ground "lug" attachment for equipment bond conductor.

3. Provide factory applied weather protective base undercoat and final finish on all exposed and internal components. Color as indicated or as selected by Owner's Representative.

B. Base Plate

1. Provide a base plate at the bottom of each pole to attach and secure the pole to the pole anchor bolts. The base plate shall be permanently attached to the bottom of the pole.

C. Anchors

1. Anchor bolts shall be threaded the entire bolt length, not less than four bolts for each pole equally spaced around the pole base. Provide a minimum of two threaded nuts for each anchor bolt. Install a nut on the top and bottom sides of each base plate anchor bolt location. Not less than four threads shall be exposed after pole is installed and leveled.

PART 3 - EXECUTION

3.1 LIGHT FIXTURE INSTALLATION

A. General

1. The Contractor shall verify actual ceiling and wall construction types as defined on the Architectural Drawings and furnish all lighting fixtures with the correct mounting devices, trim rings, brackets whether or not such variations are indicated by fixture catalog number. The Contractor shall verify depth of all recessed lighting fixtures with Architectural Drawings prior to ordering fixtures. Any discrepancies that would cause recessed lighting fixtures not to fit into ceiling shall be reported to the Owner's Representative prior to release of order to the Supplier of the fixtures.

2. On acoustical tile ceilings, fixture outlets shall be accurately located in the center, at the intersection of the four corners or at the center of the joints of two tiles.

3. The Contractor shall aim the exterior adjustable lighting fixtures after dark in the presence of, and at a time convenient to the Owner's Representative.

4. Fixtures shall be ordered and furnished to operate correctly on the branch circuit voltage connected to the respective fixture as shown on the Site Plan and Floor Plan Electrical Drawings. The voltages shown on the fixture schedule are for generic fixture information only.

5. Install and connect lighting fixtures to the circuits and control sequences indicated on the Drawings and to comply with respective Manufacturer's instructions/recommendations.

6. Lighting fixtures in building interstitial spaces, in mechanical plumbing and electrical spaces/rooms, are shown in their approximate locations. Do not install lighting outlets or light fixtures until the mechanical, plumbing and electrical equipment/pipes/ductwork are installed; then adjust and install lighting in revised clear (non-interfering) locations to provide best even-illumination. Coordinate the locations with all other trades prior to lighting

B. Lighting fixtures installed in ceiling support grids - suspended lay-in "T-bar" and concealed spline ceilings.

1. Provide two seismic clips at opposite ends of each recessed light fixture, the clip shall connect to the ceiling grid main runners and the light fixture. The light fixture with seismic clips and ceiling grid runner connections shall resist a horizontal seismic force equal to the total weight of the light fixture assembly.

2. Each light fixture weighing 40-pounds or less and where the respective ceiling grid system is "heavy duty" type, shall be suspended directly from the ceiling grid or shall be suspended independent of the ceiling grid support system as approved by the AHJ. Each light fixture weighing more than 40-pounds or where the ceiling grid system is not a "heavy duty" type shall be supported independent of the ceiling grid and independent of ceiling grid support system.

3. Each light fixture supported independent of the ceiling grid system shall be supported with a minimum of four taut independent support wires, one wire at each fixture corner.

4. Each light fixture supported directly from the ceiling grid or ceiling grid support system shall be additionally connected with a minimum of two independent slack safety support wires. One wire at each opposite diagonal fixture corner. Each 3-feet by 3-feet and larger light fixture shall be supported in the same manner, except provide a minimum of four independent slack safety wires, one at each fixture corner.

5. Light fixtures surface mounted to a suspended ceiling shall be installed with a 1½-inch steel – "C" channel which spans across and above a minimum of two parallel main ceiling grid "runners" and concealed above the ceiling. Each channel or angle member shall be provided with a minimum of two threaded studs for attaching to the fixture housing through the lay-in ceiling tile. Two steel "C" channel members shall be installed for each 4-feet (or smaller) fixture. Install the channels within 6-inches of each end of the light fixture to span a minimum of two ceiling grid parallel main runners. Provide two seismic clips connecting the ceiling grid main runners to each steel – "C" channel. Provide a not less than two taut independent support wires connecting to each channel. Bolt the light fixtures to the threaded studs on the channels or angles, to support the light fixture tight to the ceiling surface.

C. Fixture Supports

1. The support wires for light fixture support shall be 12-gauge steel (minimum). The wires including their building and light fixture attachments shall provide support capacity of not less than four times the weight of the light fixture assembly. Provide additional light fixture support wires and building anchors to meet these Requirements, as part of the Contract. The support wires shall be anchored to the building structural elements above the ceiling.

2. Pendant mounting fixtures shall be supplied with swivel hangers. Fixtures shall swing in any direction a minimum of 45 degrees of gravity, position. Fixtures shall have special stem lengths to give the mounting height indicated on the Drawings. Stem to be single continuous piece without coupling, and to be finished the same color as the canopy and the fixture, unless otherwise noted. The Contractor shall check all lock nuts and set screws to rigidly secure the swivel socket to the stem, and the stem to the outlet box.

   Fixtures shall be plumb and vertical. Where obstructions occur restricting 45-degrees free-swing of fixtures, the fixtures shall be "guy" wired to prevent fixtures from striking obstructions. The Owner’s Representative shall approve method of guying. Swinging fixtures shall have an additional safety hanger cable attached to the structure and the fixture at each support, with the capacity of supporting four times the vertical weight of the light fixture assembly.

3. Suspended fixtures weighing in excess of 40-pounds shall be supported independently of the fixture outlet box. Provide "aircraft" (minimum 12 gauge) steel hanger cable for suspended fixtures route cable concealed or in pendant where possible. Each cable attachments shall support four times the weight of the fixture assembly. Securely attach the cable to the building structure.

4. Surface mounted fixtures installed on drywall or plaster ceilings and weighing less than 40-pounds may be supported from outlet box. Provide structural supports above drywall or plaster ceilings for installation of fixtures weighing more than 40-pounds and secure fixture to structural supports. The use of toggle bolts is prohibited.

C. Recessed Lighting Fixtures - Fire Rated Building Surfaces

1. Lighting fixtures recessed in ceiling or wall which has a fire resistive rating of 1-hour or more shall be enclosed in a fully enclosed backbox (except over fixture lens/diffuser). The material used to fabricate the "enclosed backbox" shall have a fire rating equal to that of the respective ceiling or wall.

2. The space from the fixture to the box enclosure shall be a minimum of 3-inches.

3. The backbox shall be concealed behind the fire rated ceiling and wall finish surface. The light fixture shall be provided with lamp ballast rated for (normal light output) operation in a "high" ambient temperature.

3.2 LAMPS

A. Fluorescent and HID lamps controlled by dimming equipment shall be operated (aged) for 100-continuous hours without interruption, at 100% full lumen output prior to occupancy of the building by the Owner.

B. Lamps shall be the type and Manufacturer as recommended by the Dimming System Manufacturer.

C. Install all lamps in each light fixture.

D. Lamp and light fixture use during construction:

1. All lamps in lighting fixtures that have been operated (ON) for a total of more than 300-hours prior to final completion of the Contract Notice of Completion shall be relamped by the Contractor. Remove the existing lamps with more than 300-hours of illuminated operation and provide new lamps of the type required by the Contract Documents, install lamps in respective light fixtures, typical for the following lamp types:

a. Linear fluorescent.
b. Compact fluorescent (CFL).
c. H.I.D.
d. Incandescent.
e. LED

3.3 LENS AND DIFFUSERS

Lens, diffusers, internal reflectors shall be completely cleaned of all dust, dirt and fingerprints after the installation of the light fixtures and lamps, and after all trades have completed work and prior to occupancy of the facility by the Owner.

3.4 BALLASTS

A. Ballasts remote from the lighting fixture, mounted as shown on the Drawings and designed for remote operation. Additional wiring and conduit shall be provided whether shown on the Drawing or not, between lighting fixture and remote Ballasts with required quantity of "THHN" wire installed in conduit to operate said fixture(s).

B. Provide proper type and quantity of conductors with conduit system for proper operation of dimming system, whether or not shown on Drawings.

C. Contractor shall tandem wire 1-lamp or 3-lamp fluorescent fixtures when fixture is recessed mounted and within 8-feet of each other or if surface or pendant mounted within 1-foot of each other. To accomplish tandem wiring, a tandem wiring harness shall be installed between inboard master ballast and inboard slave lamp located in adjacent fixture. Night-light or emergency light fixtures shall not apply.

3.5 FLUORESCENT LIGHT FIXTURE TANDEM WIRING CONNECTIONS

A. The Contractor shall provide tandem wiring whether or not shown on the Drawing for fluorescent lighting fixtures conforming to all of the following criteria:

1. Light fixture contains fluorescent lamp ballast.

2. Odd number of lamps in light fixture (i.e., one lamp, three lamps, five lamps, etc.).

3. Light fixtures are recess mounted within 10-feet of each other; light fixtures are surface mounted or suspended/pendent mounted within 1-foot of each other.

4. Light fixtures are located in the same room.

B. Provide the tandem wiring connections between respective light fixtures as follows:

1. The tandem wiring harness shall be the product of the respective Lighting Fixture Manufacturer.

2. The tandem connection shall provide pre-assembled wiring harness connecting two fluorescent lamps in adjacent lighting fixtures with a master lamp ballast, remote adjacent fixture slave lamp.

3. The wiring harness shall contain the wiring in flexible steel conduit or enclosed metal raceway/jacket for installation in an air plenum.

C. Delete Tandem Wiring Requirement and provide Individual and Multi-Lamp Ballasts in each respective light fixtures under one or more of the following conditions.

1. Lighting fixtures are shown as night-light or emergency light type fixtures do not require tandem wiring.

2. Fluorescent Dimming Ballasts do not require tandem wiring.

3.6 COMMISSIONING LIGHTING FIXTURES (ADDITIONAL REQUIREMENTS)

A. General

1. Verify correct lighting control configurations and operation in each room.

2. Simulate normal source power failure by "opening" (turn off) building main service disconnect and verify connections and operation of each emergency lighting fixture.

3. Confirm "EXIT" sign directional arrows are visible in each "EXIT" sign.

4. Verify light fixture support-hangers, ceiling grid clips and seismic restraints comply with the Contract Documents.

5. Remove protective shipping/installation shields on fixtures. Verify fixtures and lamps are clean and free of construction debris. Clean light fixtures found to be contaminated or dirty.

6. Setup, program, and function test lighting control systems to perform each of the indicated control functions, area/room zones and sequences.

7. Provide “aiming”, directional adjustment of light fixtures, both indoor and outdoor. Aiming shall comply with Manufacturer’s aiming diagrams, and as directed by Owner’s Representative.

B. Sample spot-checks in each room the following lighting fixture information:

1. Lamp type and performance data.

2. Ballast type and performance data.

3. Combined lamp/ballast certification of performance and compatibility by respective Manufacturer.

4. Verify instructional signage is placed inside each lighting fixture in compliance with Contract Documents.

END OF SECTION 26 50 05
010423/535050

SECTION 28 46 20

FIRE ALARM

PART 1 – GENERAL

1.1 SCOPE

A. Work Included: All design, labor, materials, appliances, tools, equipment necessary for and incidental to performing all operations in connection with furnishing, delivery, and installation of the work of this Section, complete, as shown on the Drawings and/or specified herein. Work includes, but is not necessarily limited to the following:

1. Examine all other Specifications Sections and Drawings for related work required to be included as work under Division 26.

2. General Provisions and Requirements for electrical work.

1.2 SUBMITTALS (ADDITIONAL REQUIREMENTS)

A. Submit State Fire Marshal and UL Listing numbers for each piece of equipment and component.

B. Submit Block Wiring Diagrams Showing Major System Components, alarm and signaling stations, battery load calculations, and circuit voltage drop calculations with interconnecting circuit conductors and conduits. Riser type diagram shall be provided if the building has more than one floor level with information shown on riser diagram on each respective floor.

C. Submit Redrawn Building Floor Plan for each building area, same scale as the Contract Drawing. Drawings shall be on reproducible sepias. Plans shall show walls, doors, room names and numbers, windows, fire and smoke barriers, and all fire alarm system equipment locations. Show interconnecting conduit, conduit sizes, wire size and quantity between all components.

D. Submit Manufacturers Standard Catalog Data for Fire Alarm Components. The submittal shall be arranged in the order of the Specification and shall list the Specification paragraph number, the name, the proposed model and Manufacturer for each item as well as a reference indicating the specific piece of data which can be easily located in the brochure. The Manufacturer's data sheets shall be marked to indicate the specific item being proposed in cases where the sheet covers several types or sizes of item. The data sheet shall completely describe the proposed item. Where modification to the equipment is necessary to meet the Operational Requirements of the Contract Documents, the brochure shall include complete Mechanical and Electrical Shop Drawings detailing the modification. The brochure shall include a listing of the outlet rough in needed for every device and equipment item. The applicable symbol, which illustrates that rough-in item on the Job Plans, shall be drawn on the proposal, opposite the description of the rough in to facilitate locating the data by Field Personnel. Submit elevation and dimensional information.

E. Submit Battery Sizing Calculations.

F. Submit Voltage Drop Calculations on Worst Case Signal and Control Circuits.

G. After Review of Submittal by Architect, the Contractor shall submit to the local authorities for approval.

1.3 APPLICABLE STANDARDS

A. The fire alarm system devices shown on the Drawings do not include all the devices/ components/raceways/connections, etc., of a completely designed and engineered fire alarm system. The fire alarm system has not been submitted for review and approval by the AHJ as a complete system. The devices (if any) shown on the Drawings are to show additional devices that may exceed the Minimum Requirements of the AHJ and to define locations of selected specific significant components. However, the Drawings do not represent all the components and work required for a complete and operable fire alarm system.

B. The Contractor shall provide design engineering services and shall provide all material and labor for a complete and operable fire alarm system. The Contractor shall submit the fully designed and engineered fire alarm system to the AHJ for review and approval as a Deferred Approval fire alarm system. All the costs for Design Engineering, AHJ review approval, material and labor for a complete and operable fire alarm system shall be included in the Contractor's Contract.

C. The Requirements of Building Permits and Requirements of the AHJ to Proceed shall become a part of the Contract Documents. The Fire Alarm Building Permits and AHJ Approval to proceed shall be obtained by the Contractor.

D. Prior to Commencement of Work and After Completion of Work, the Contractor shall provide Written Notification to the AHJ.

1.4 APPLICABLE STANDARDS

A. The Equipment shall be listed, labeled, and approved for the application shown in Contract Documents, as fire alarm equipment complying with Requirements of

1. NFPA 72, National Fire Alarm Code.

2. NFPA, 90A. Installation of air conditioning and ventilating systems.

3. UL and the California State Fire Marshal.

4. Local Codes and authorities having jurisdiction.

5. N.E.C. Article 760.

B. Written certification by the Fire Alarm Equipment Manufacturer shall be submitted to the Architect, stating that the system and its component parts are listed and approved by the State Fire Marshal and the installation has been tested, is operational and conforms to the Requirements as set forth in Part 3, Article 24, Title 19, California Administrative Code.

1.5 EQUIPMENT QUALIFICATIONS

A. The Equipment shall be as manufactured Simplex Time Recorder Co., Notifier, Honeywell, Pyrotronics, or Gamewell.

B. The Supplier of the Equipment shall be the Factory Authorized Distributor and Service Facility for the brand of equipment provided.

PART 2 – PRODUCTS

2.1 GENERAL SYSTEM OPERATION

A. System shall be microprocessor-based, addressable, and power-limited with Class A or Class B supervised circuits.

1. The microprocessor shall execute all supervisory and control programming to detect, report the failure or disconnection of any system module or peripheral device and initiate programmed control sequences. An isolated supervision "watchdog" circuit shall monitor the micro-processor and, upon failure, shall activate the system trouble circuits.

2. The automatic fire detection and alarm system shall consist of main control panel, evacuation alarms, remote annunciator, automatic detection devices, and manual stations, installed and wired in accordance with the Drawings and shall function as specified herein.

3. The system shall be programmable in the field, by a non-computer-trained person. All programmed information shall be stored in non-volatile memory.

4. The system shall operate both addressable and non-addressable ionization, thermal and photoelectric detecting devices, manual stations, water-flow switches, and external control modules.

5. The control panel shall provide power, annunciation, supervision and control for the fire detection and alarm system. The system shall be designed such that alarm indications override trouble and control conditions.

6. External circuit supervision shall not require additional wires other than the pair used for detection or alarm (only two wires shall be used from the control panel to each loop of initiating devices and two wires for the audible devices). These two wires shall provide both supervision and alarm signals. There shall be no loss of supervision for Class "B" wired addressable devices. Class "A" supervision may be provided by adding an additional pair of wires.

B. Alarm Conditions

1. Actuation of any manual or automatic alarm-initiating device, connected to the system shall cause the following automatic functions.

a. All alarm evacuation signaling units shall activate continuously.

b. The respective zone alarm lamp or annunciator alphanumeric readout on the central control panel, and remote annunciator panel, shall be activated.
c. Activate the central alarm system.

2. Actuation of HVAC air duct smoke detectors shall cause the designated fans and motors with HVAC air duct smoke detectors to stop, in the air distribution system of the building.

3. Actuation of automatic self-contained fire/smoke doors/hatches or of smoke detectors on either side of smoke/fire doors/hatches shall energize the release mechanism on the smoke door causing all fire/smoke doors to close.

4. Actuation of any fire sprinkler flow switch shall energize the release mechanism on all fire/smoke doors causing them to close and stop operation of all air distribution system equipment monitored or controlled by the fire alarm system.

5. Activate HVAC fire/smoke air dampers electrical release, causing all the fire/ smoke air dampers to close.

6. Perform any additional functions as specified herein, shown on the Drawings or required by the Fire Marshal.

C. Trouble Condition

1. A break or short in a manual or automatic fire initiating wiring circuit shall activate the respective zone trouble lamp or annunciator readout on the fire alarm control panel and sound a trouble signal at the control panel.

2. A break or short in the evacuation alarm signaling wiring circuit shall activate the trouble lamp or annunciator readout in the control panel and sound a trouble signal at the control panel.

3. 120-volt AC normal power shall be monitored with indication by a "power on" lamp. Upon normal power outage, the system shall activate a power trouble condition lamp or annunciator readout and indicate a trouble condition.

4. The control panel shall monitor the standby batteries, upon a low battery condition, activate the low battery lamp or annunciator readout, and indicate a trouble condition.

5. System ground detection shall be provided for the entire system. Upon ground detection, activate the ground detection lamp or annunciator readout and indicate a trouble condition.

6. Actuation of any fire sprinkler shut-off valve tamper switch shall activate a separate zone trouble lamp or annunciator readout for each valve. The trouble zone shall be completely independent of the fire sprinkler flow switch zone, and completely independent of any other fire alarm zone.

D. Control Panels Employing Alphanumeric Readouts shall display the required data, along with a prompt to review the list chronologically. The end of the list shall be indicated.

E. Equipment shall be weatherproof gasketed where installed in locations exterior to the building, or where indicated on the Drawings. Weatherproof equipment shall be tamper-resistant.

F. The Control Panel shall provide power, annunciation, supervise and control for the fire detection system. The system shall be designed such that alarm indications override trouble and control conditions.

2.2 FIRE ALARM CONTROL PANEL

A. General

1. The fire alarm control panel shall be software programmable, micro-processor controlled, solid state, electronic integrated system. The panel shall be the product of one Manufacturer. The control panel shall provide power, annunciation, supervision and control for the detection and alarm system. The detection system shall remain 100% operational, responding to an alarm condition while in the routine maintenance mode.

2. Addressable detection and control devices shall be individually identified by the system, and any quantity of addressable detection devices shall be in alarm and any quantity of addressable control units shall be operable at any time up to the total number connected to the system.

3. The microprocessor shall access the system program, which is stored in non-volatile programmable memory, for all Control-By-Event (CBE) functions. The system program shall not be lost upon failure of both primary and secondary power. Volatile memory shall not be acceptable.

4. A means shall be provided for acknowledging each abnormal condition. Each activation of the appropriate acknowledges button shall sequentially acknowledge every point in the system. After all the points have been acknowledged, the LEDs shall glow steady, and the panel audible signal will be silenced. The total number of alarms, supervisory, and trouble conditions shall be displayed along with a prompt to review each list chronologically. The end of the list shall be so indicated.

5. An alphanumeric annunciator readout shall indicate on the control panel the activation by type, loop, and address of the specific device, sub-loop or alarm/ monitor/control point via an alphanumeric display. An audible alert shall sound at the control panel and an alarm light shall flash.

6. If the microprocessor fails, the system shall execute a default-signaling program. This program shall enable the control panel to sound the audible signals and summon the Fire Department. In addition, a red LED shall light to indicate the communication loop wherein the alarm originated. Inability of the system to sound signals or summon the fire department during microprocessor failure shall not be acceptable.

7. Protected access to the system controls shall be provided to allow the user/ operator access to the following system functions:

    a. Status of all addressable points.
    b. Status of all events logged.
    c. Set/change the real-time clock and date.
    d. Perform an operational manual test of the system from the control panel, including actuation of any initiating device and trouble circuit without alarming the remote central station. The panel shall automatically return to normal mode in the event the panel remains unattended in the service mode.
    e. Retrieve from event logs the last 300 alarms, or control points and 300 trouble conditions.

8. Individual input (monitor) and output (control) device addressability shall all be performed on the same pair of wires. Wiring shall be Class "A" or "B". When Class "B" wiring is used, no special wiring sequence shall be required on addressable device circuits. An unlimited number of wiring branches shall be permitted with no loss of supervision.

B. Cabinet

1. A metal tamper resistant cabinet shall contain the control panel components. Panel shall be surface or flush mounting as indicated on the Drawings. Provide a full height tamper resistant hinged locking cabinet door. The door shall have transparent, high impact windows to allow visual observation of all indicators and switches without opening the panel door.

2. "In-out" circuit conductors shall terminate on numbered screw-type terminals.

3. All groups of circuits or common equipment shall be clearly marked and shall be expandable by inserting interchangeable units.

C. Provide a Floor Plan of the Facility Framed Under Acrylic and Mounted Adjacent to the Fire Alarm Annunciator. The floor plan shall be to scale and shall have room numbers clearly displayed on all rooms corresponding to the annunciator for the purpose of easily identifying the fire zones.

D. The Control Panel shall provide positive protection against the fire alarm system inadvertently being left in a non-operating status. The alarm system shall automatically restore and resound alarms and trouble signals, if subsequent alarm initiating or trouble signals are received under any of the following conditions:

1. After the alarm or trouble silence switch have been activated.

2. Prior to resetting system after previous alarm or trouble conditions.

E. The system indicating, and operational control devices shall be mounted on the control panel face behind the panel door and shall provide the following minimum functions:

1. Individual visual indicating pilot lights annunciator or alpha numeric readout to monitor the following alarm system conditions:

a. Input power.
b. System common alarm.
c. System common trouble.
d. Alarm or trouble signal silenced.
e. Ground fault.
f. Battery conditions.
g. Each individual alarm, control or initiating zone-activation.
h. Each individual alarm, control or evacuation zone-trouble.
i. Report, by specific device number, any device removed from an addressable initiating circuit, all other devices shall continue to function.

2. Manual control switches to allow the following system controls:

a. Alarm silence.
b. Trouble silence.
c. Test all indicating pilot lights and readouts.
d. System reset, including remote devices connected to the alarm panel.
e. Alarm test to initiate an alarm condition from the control panel.
f. Central alarm disconnects for system testing without activating central alarm system.
g. Changing the status of configured circuits (arming or disarming and changing status of relays). If any change in status degrades system operation as configured, a trouble condition shall be reported and remain until system operation again meets configured status.
h. Perform multiple operations at the same time. These operations shall include but not be limited to timed functions and multiple configured sequences.

3. Individual indicating meters for the following information.

a. Battery ammeter.
b. Battery voltmeter.

F. Alarm Initiating Zone Modules.

1. Shall supervise and accept remote alarm actuating device-input signals. An alphanumeric readout shall indicate separate zone alarm and trouble indicators for each zone.

2. Zones shall be compatible and designed to operate with the connected initiating devices either addressable or non-addressable type.

3. A spare double throw set of software programmable auxiliary alarm relay contacts shall be provided for control of remote devices for each zone. Contacts shall be rated 120 volt, 60Hz, 3 Ampere.

4. The quantity of alarm initiating zones shall be provided as shown on the Drawings, but in no case shall the zoning be less than the following:

a. Addressable manually activated alarm-initiating stations by individual station location (i.e., pullstation #100 Room 100 1st floor; pullstation #300, corridor #300, 3rd floor north; etc.).
b. Non-addressable manually activated alarm initiating stations by floor and building area (i.e., pullstation #100 Room 100 1st floor; pullstation #300, corridor #300, 3rd floor north; etc.).
c. Addressable and non-addressable automatic alarm initiating devices (ceiling or wall mounted heat, flame and smoke detectors) by individual device location. Except rooms with multiple automatic smoke alarm initiating devices shall be zoned by room location (i.e., smoke detectors Corridor #121 1st floor south; flame detectors shop 404 4th floor etc.).
d. Elevator lobby automatic alarm initiating devices by floor level and individual elevator lobby area.
e. Air duct smoke detectors by individual location.
f. Smoke or heat activated fire doors/hatches by individual location.
g. Fire sprinkler water flow switch by individual location.
h. Fire sprinkler water shut off valve tamper switch by individual location. Activation of the tamper switch shall sound an independent trouble signal only. Activation of the tamper switch shall not cause a general fire alarm evacuation to be activated.
i. Smoke detectors for activation and control of fire/smoke air dampers by individual building room/space location.

G. Evacuation Alarm Signal Control.

1. Shall supervise and activate remote evacuation alarm devices.

2. Evacuation alarm shall be compatible and designed to properly operate with the connected audio and visual evacuation alarm devices, with no signal degradation. The alarm shall have spare capacity to allow the future addition of an additional 20% evacuation alarm devices, on any circuit.

3. The evacuation alarm shall provide group evacuation signal control of all evacuation zones.

4. The alarm modules shall be field resettable to provide either continuous or coded audio evacuation alarm signals. The Coded alarm signal shall provide an intermittent "on-off" pulsed sound activation of audible evacuation alarm devices.

5. An evacuation alarm circuit trouble indicating readout shall be provided for each evacuation zone.

H. Automatic Ground Detection shall detect either positive or negative voltages when earth connections of 50,000 OHMS or less occur and activate the ground trouble signal.

1. A ground fault code shall provide indication of either a positive or negative ground fault and shall operate the general trouble devices as specified herein but shall not cause an alarm to be sounded.

2. A short circuit error message shall be a standard feature of the fire alarm control panel. Each communication loop shall be monitored for short circuits and shall have a distinctive error message for visual indication of circuits and operating trouble devices as specified herein but shall not cause an alarm to be sounded.

I. Power Supply

1. The power supply shall be adequately sized to properly operate the equipment, including remotely connected, spare and future indicated equipment with all alarm devices in alarm condition. Provide 20% spare power supply capacity for future expansion. Provide transfer modules and multiple power supplies as required for proper operation.

2. Input voltage 120/240-volt or 120/208-volt 60Hz AC.

3. Lightning protection, surge transient voltage and RF noise filtering protection on the input and output phases of the power supply shall be provided.

4. Supervised voltage types (i.e., 120V, 60Hz AC, 24-volt AC, 24-volt D.C., etc.) required by special connected equipment shall be supplied, including but not limited to:

   a. Alarm initiating devices.
   b. Door or hatch hold-open or closing devices.
   c. Automatic fire/smoke doors and dampers.
   d. Evacuation alarm devices.
   e. Control and annunciator panels.
   f. Fire and smoke dampers.

5. A solid-state power transfer circuit shall provide (UPS) Uninterruptible Power supply between internal standby power and line power automatically and instantaneously if normal power fails or falls 15% of normal ("brown out" and overvoltage conditions).

6. Individual circuit fuses shall be provided for smoke detector power, main power supply signal circuits, battery standby power, and auxiliary output.

J. Battery Back-Up Operation

1. Internal batteries and battery power supplies shall be provided to allow 60 hours continuous automatic normal operation of the entire control panel and fire alarm system after the failure of the incoming utility power. Sufficient battery capacity shall remain at the end of 60-hour period to provide 10-minutes of continuous operation of all connected evacuation alarm devices.

2. Batteries shall be sealed lead-acid. Batteries shall be earthquakes restrained.

3. The battery charger shall be automatic, dual rate with capacity to recharge completely discharged batteries in 18 hours. Charger shall be temperature compensated.

4. The battery backup system shall not be required to provide capacity to maintain the normal operation of the following devices during a failure of the incoming utility power. The automatic smoke detectors associated with these devices shall maintain operation during power failures:

    a. Automatic fire/smoke air dampers “hold open” and close devices.
    b. Automatic fire/smoke doors and hatches “hold open” and close devices.

K. Lightning and Surge Protection Device shall be a standard feature of the fire alarm control panel and shall be incorporated in the power supply circuit, common control circuits, signal circuits, and telephone line circuit.

L. Central Station

1. Circuitry shall be provided in the control panel to permit transmission of trouble and alarm signals over leased or privately owned telephone cables to a remote-receiving panel. A reverse polarity and a “master box” circuit shall be provided in the control panel. There shall be a supervised disconnect switch to allow testing of the fire alarm system without transmitting an alarm signal to the central station.

M. The Alphanumeric Annunciator shall List upon Request:

1. Alarms with time, date and location.

2. Troubles with time, date and location.

3. Status of output functions, "on" or "off".

4. Sensitivity of addressable smoke detectors.

5. Detection device number, type and location.

6. Status of remote relays, "on" or "off".

7. Acknowledgment time and date.

8. Signal silence time and date.

9. Reset time and date.

N. The System shall also provide the Following:

1. Counting the number of addressable detectors within a "zone".

2. Which are in alarm.

3. Counting "zones" which are in alarm.

4. Counting the number of addressable detectors, which are in alarm.

5. Alarm on the system.

6. Differentiating among types of addressable detectors such as smoke detectors, manual stations, water-flow switches, thermal detectors, flame detectors etc.

7. Assigning priorities to types of detectors, zones or groups of detectors.

8. Cross-zoning.

O. Control Functions:

1. Control functions shall be assigned on the basis of multi relational system initiation patterns of detection devices including full logic element equations using as "anding" zones, counting zones, counting devices, "anding" groups, conditional "if", "then", "or" programming and "anding" types of detection devices.

2. Control functions shall be assigned on the basis of, cycle, delay, count, time of day, day of week, day of month and with a holiday schedule of up to 30-holidays per year. Each addressable detection device shall report its condition to the system control unit not less than every 4-seconds in a manner such that failure of the connections to the internal electronics of the device will result in a trouble signal which identifies the specific device involved.

3. The system shall be field programmable for the response of control points to monitored devices.

4. The operating software program shall provide programmable control for the Event-Initiated-Programs (E.I.P.) which shall allow automatic operation of system control points in the event of an alarm condition. To program these E.I.P.'s, the system shall use a specifically designed user friendly programming language, which shall not require a knowledge of computer programming to learn and understand.

5. The operating software shall support the following additional capabilities:

   a. Three levels of designated and unique Priority Alarms for each point.
   b. Designated "Sense Mode" for status interpretation for each point.
   c. Designated Print/No Print/Vectoring Mode for each point.

6. The input statement defines the conditions required to activate the associated output statement. The input statement shall consist of single or multiple monitor point status, subroutine status, time comparison and the utilization of AND, OR, NOT, COUNT, and DELAY logic functions.

7. The output statement defines the action to be taken by the control panel. The output statement shall consist of activation/deactivation of single or multiple control functions, subroutines, and remote Annunciator status LED's. Output statements shall also include the "Alert" messages.

8. The software shall provide an "alert" message, unique to each point in the system, which will provide specific instructions for the operator on duty. These messages shall be up to five lines with up to 70 characters in each line. Each system monitor point shall have five specific alert messages when in alarm. Control points shall also be assigned alert messages.

9. The hardware and software shall have the capacity to accept up to 64 independent programs. Each program shall have "Edit" or "No Edit" capability. Each program shall be written in an equation format comparable to ladder-logic equations. The Equations shall consist of an input and an output statement.

10. Provide initial programming services for coding, loading and debugging the initial Owner specified programs, as part of the Contract.

11. Programming Command Definition

    a. Timing command shall provide time delay and time control functions based on internal clock/calendar by time of day; day of week; day of month; month in year.
    b. Count command shall provide a specific number of events to occur before a control action is initiated.
    c. Pulse command shall provide on control for a specific period of time.
    d. Cycle command shall provide on-off control for preset periods of time.
    e. Print command shall provide printing of specified information after an event occurs.

2.3 MANUALLY ACTIVATED ALARM INITIATING DEVICES

A. General

1. An electronic, digital multiplex, addressable module shall be incorporated into each device. The module shall communicate the status and trouble condition of each device with a unique address code. The module shall communicate with and be supervised and monitored by the fire alarm control panel.

2. Devices shall be suitable for use on a Class "A" 4-wire (Class "B", 2-wire) supervised alarm-initiating circuit.

3. Numbered screw type terminals shall be provided for "in-out" connections of the alarm circuit wiring.

4. The face of the station shall have lettering indicating "fire" and operational instructions. Stations shall be tamper-resistant, semi-flush mounting.

5. Auxiliary spare switch contact shall be provided for control of remote devices rated 120 volts, 60Hz, AC, 3-amp minimum.

6. Stations shall provide visual indication the station has been activated. A key (and/or special tool) shall be required to gain access into the station to reset the station after being activated.

7. Stations shall be "break-glass" or "non-break- glass" type as required by local Fire Marshal or indicated on the Drawings.

8. Stations installed outdoors shall be weather resistant construction, double action to activate the pull station.

9. RF noise and transient voltage filtering shall be provided in the device electronics.

B. Pull Stations

1. Pull stations shall be non-coded single action, requiring a single manual "pulling" action to initiate the fire alarm.

2.4 AUTOMATIC ALARM INITIATING DEVICES

A. General

1. An electronic digital, multiplex, addressable module shall be incorporated into each device. The module shall communicate the status and trouble condition of each device with a unique address code. The module shall communicate with and be supervised and monitored by the fire alarm control panel.

2. Devices shall be suitable for use on a Class "A", 4-wire (Class "B", 2-wire) supervised alarm-initiating circuit. Where initiating devices are shown connected to an existing system, devices shall operate on 2-wire or 4-wire circuits plus, 2-wire power circuit, or on multiplex circuit as required by the existing equipment.

3. Numbered screw type terminals shall be provided for "in-out" connectors of the alarm circuit wiring.

4. Auxiliary double throw spare relay contact shall be provided for activation of remote rated devices 120V, 60Hz, AC, 1-amp minimum.

5. RF noise and transient voltage filtering shall be provided in the initiating device electronics.

6. Initiating devices shall be reset from the fire alarm control panel and shall not require local individual resetting.

B. Smoke Detector

1. Detectors shall comply with UL Standard 268, 167 and 168, and shall use solid state electronic circuits throughout.

2. The smoke detector shall operate on a total of two circuit wires. Alarm signaling and detector power shall use the same conductors. Detector sensitivity shall be factory set at 1.5%.

3. A fine mesh insect screen shall be provided on all detector openings.

4. The detector shall lock-in on alarm and shall provide a visual alarm/ trouble indicator light. An electromechanical test feature shall provide functional testing of the unit without smoke.

5. The detector shall also incorporate a fixed temperature heat detector rated at 135 degrees F. The heat detector shall operate the alarm circuit and alarm/trouble light.

    a. Photo electric type smoke detectors shall employ a Light Emitting Diode (LED) as the detector light source, activated by the presence of combustion smoke products. Failure of the LED shall activate the alarm/trouble light on the detector.
    b. Ionization type smoke detector shall employ the triple chamber (dual chamber) ionization principle, activated by the presence of combustion products. The ionization chamber shall be RF shielded.

6. Air duct smoke detector photo electric or ionization type for installation on a mechanical air duct. Two air tubes shall extend into the air duct. The sampling tube shall extend across the entire width of the air duct. The second tube shall allow air to escape back into the duct. Omit fixed temperature heat detector in air duct smoke detectors.

7. Area protection smoke detector, photoelectric or ionization type, self-contained inside a protective housing/cover. Separate fixed mounting base with wiring terminations and removable “plug-in” twist locking type smoke detector head.

C. Fire Detector - Heat

1. Heat detectors shall be dual action electro-thermostatic combination rate of temperature rise and fixed temperature operation. An indicator shall be visible when detector has activated.

2. The rate of rise element shall be self-restoring, after activation.

3. The fixed temperature unit shall be set at 136 degrees F (190 degrees F for high temperature areas, i.e., areas over 110 degrees F ambient.)

4. Provide a wire guard cover for the detector.

D. Fire Sprinkler Water Flow Detector

1. Vane-type water flow detectors shall be provided on the sprinkler system piping as shown on the Drawings. Detectors shall be designed for mounting on either vertical or horizontal piping but shall not be mounted in a fitting or within 12 inches of any fitting that changes the direction of water flow.

2. The detectors shall have a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.

3. Detector switch mechanisms shall incorporate an instantly recycling pneumatic retard element with an adjustable range of 0 to 70 seconds. Switches shall have a minimum rated capacity of 7-amp, 125-volt AC, 0.25-amp 24-volt D.C. A D.P.D.T. switch shall be actuated by a polyethylene vane extending into the waterway of the piping.

4. Detectors shall be of weatherproof, dust tight construction and shall provide a ¾-inch conduit entrance. Detector shall be finished in red baked enamel.

5. Flow switch shall be sized to match the fire sprinkler riser pipe diameter.

E. Fire Sprinkler Valve Tamper Switch

1. Tamper switch shall monitor the position of the fire sprinkler shut-off valve. Operation of the valve shall activate the switch and activate a trouble alarm. The valve trouble alarm shall be a separate zone from the respective water flow alarm.

2.5 EVACUATION ALARM DEVICES

A. General

1. Evacuation alarm devices shall activate automatically from the control panel. Devices shall operate on a Class "A", 4-wire (Class "B", 2-wire) supervised alarm evacuation circuit. Series wired alarm devices shall not be used.

2. Numbered screw type terminals shall be provided for "in-out" connections of the alarm circuit wiring.

3. Devices shall be installed in a box, 3½-inch deep maximum, flush mounting unless indicated otherwise on the Drawings. Size as required for the audible alarm indicating device and wiring connections. Provide a trim ring and metal grill cover assembly. Cover assembly shall be a minimum of 1/16-inch minimum thick flat stainless steel or aluminum. Finish color as selected by Architect. The word "fire" shall appear on the grill minimum ½-inch letters. The grill shall be screw attached to the box.

4. The visual alarm-indicating device shall be an integral part of the audible alarm box assembly.

5. Each audible evacuation device shall incorporate an integral visual alarm indicator.

6. Alarm initiating devices, audible evacuation device and visual evacuation devices shall be connected to separate circuit conductors. Do not connect these devices to the same circuit conductors. The separate audible evacuation circuits shall provide coded or non-coded audible signaling independent of the visual evacuation alarms.

B. Audible Alarms

1. Vibrating Horns

a. Vibrating type horns shall be used where audible devices are shown on the Drawings for the following areas: Building egress pathways, exterior of buildings, stairs, corridors, lobbies, reception areas, shops, exercise areas, areas exceeding 300 square feet, and all other areas not specifically listed or identified.

b. Horn shall be heavy-duty electromagnetic vibrating type. Horns shall have field adjustable sound output level control.
c. Horn shall provide a minimum sound level of 95dB at 10 feet, when installed in the field operating conditions shown on the Drawings.

2. Mini-Horns

a. Shall be used in rooms smaller than 300 square feet. Mini-horns shall not be used as a substitute where vibrating horns are required.
b. Mini-horn shall be electric-piezo electronic.
c. Mini-horn shall provide a minimum sound level of 87dB at 10-feet, when installed in the field operating conditions shown on the Drawings.

C. Visual Alarm Indicator

1. Lamp/Strobe internally illuminated projecting lens assembly, with flasher system. Unit shall flash on and off to provide visual indicating of fire alarm.

2. The word "FIRE" shall appear on the lens or lens plate. The lens shall project beyond the face of the cover assembly.

3. Flash rate, 1-3 flashes per second, with approximately 0.001 second flash duration. Flash rate independent of audible device coded signal output.

4. Light source, Xenon high intensity flash strobe tube white/clear color.

5. 75-candelas minimum, 120-candelas maximum flash intensity, along the direct line perpendicular axis viewing angles. Average flash intensity shall not be less than 15-candelas from any viewing angle, to comply with 2017 NFPA 72 and UBC 1994.

6. Visual devices located in multipurpose room shall be provided with 10-gauge wire guard.

D. Door Magnetic Hold-Open and Release-Close

1. Combination electromagnet and separate “pivot” type magnet armature latch. The mechanism shall “hold-open” and “release-close” the door from the open position to the closed position when electric power is interrupted to the “hold-open” electromagnet. Door opening operation shall be unobstructed by the hold-open mechanism.

2. The “pivot” shall provide not less than 120-degree adjustment range hinged flat plate to align to the door leaf position when the door is open. Integral “pivot” mounting plate with threaded stainless steel through-bolt attachment to the door leaf. The pivot “armature” shall make “full face” contact with the magnet when the door is open and provide shock absorbing nylon “pivot” bearing. The length of the pivot assembly shall be selected to allow the respective door to be held in a 90-degree or greater open position.

3. The electromagnet shall create magnetic force when energized to retain the armature with a hold-open force of not less than 25-pounds, (111N) and suitable

for continuous energized operation. Operating voltage shall match the respective electrical circuit connection. The electromagnet shall mount on and attach to surface or flush outlet box, “single-gang”, wall mounted or floor mounted.

2.6 REMOTE FIRE ALARM ANNUNCIATOR

A. General

1. The annunciator panel shall be powered and operated from the fire alarm control panel. "In-out" circuit conductors shall terminate on numbered screw-type terminals.

2. A metal tamper resistant weatherproof cabinet shall contain the annunciator components. The panel shall be surface or flush mounting as indicated on the Drawings. Provide a full height tamper resistant, hinged locking cabinet door. Door shall have transparent high impact windows to allow visual observation of all indicators and switches.

3. An electronic digital, multiplex, addressable module shall be incorporated into the annunciator. The module shall communicate the status and trouble condition of each device with a unique address code. The module shall communicate with and be supervised and monitored by the fire alarm control panel.

B. Each Alarm Initiating Zone (including spares) shall be individually annunciated in the annunciator panel by a back lighted, translucent identification plate. The translucent plate size shall be 1-inch high by 2-inches wide. The plate shall be engraved (black letters on white) with the respective ZONE number and name to match the control panel (i.e., ZONE 1 - 1st floor pull station; ZONE 7 – 2nd floor - AHI - duct detector; ZONE 9 – 3rd floor east - smoke detector; ZONE 11 - fire sprinkler water flow; etc.). Minimum letter size 12-point characters. Provide space for a minimum of four future zone plates.

C. A Common Fire Trouble Alarm shall be annunciated in the annunciator panel from the fire alarm control panel. The trouble annunciator shall match the alarm zone annunciator. Plate shall be marked "fire alarm system trouble". 18-point letter size.

D. A Separate Trouble/Supervisory Alarm shall be annunciated in the annunciator panel from the fire alarm control panel for each fire sprinkler water valve tamper switch. The trouble annunciator shall match the alarm zone annunciator. Plates shall be marked "sprinkler tamper switch trouble- (location". "Location" shall be the shut off valve location being monitored.

E. Annunciator Lamp Circuits shall be automatically supervised. Provide lamp test switch in the annunciator panel.

F. An Audible Alarm/Trouble Buzzer with Silence Switch and Automatic Resound for Subsequent Alarm/Trouble Signals shall be provided. The annunciator panel shall be automatically reset when the control panel is reset.

G. Provide a Sign on each Remote Fire Alarm Annunciator. The sign shall describe the location of the fire alarm control panel(s) connected to the respective annunciator

(i.e., Fire Alarm Control Panel (FACP) located in Art Building, 2nd floor, Room #226, etc.). Minimum size sign letters not less than ⅜-inch high, engraved plastic nameplate.

2.7 REMOTE EQUIPMENT MONITORING AND CONTROL (REMC)

A. An Electronic Digital Multiplex Addressable Module shall be provided at each device or equipment indicated to be controlled by the multiplex system. Multiple addressable control ports shall be provided in each module quantity as required for each point controlled or monitored. The module shall communicate the monitor status, control action and trouble condition of each device with a unique address code. The module shall communicate with and be supervised and monitored by the fire alarm control panel.

B. Where Multiple Points are Monitored or Controlled, Provide Digital, Multiplex, Multipoints, Monitor, Control Panel (REMC). The panel cabinet shall be self-contained NEMA 1 indoor area, NEMA 3R for outdoor areas, construction and hinged locking door. Provide tamper switch detection zone on the cabinet door; provide 60-hour battery UPS backup and power supply, the same as required for the fire alarm control panel. Panel shall be expandable using plug-in circuit monitor/ control printed circuit cards. Provide barriered numbered terminal strips.

C. Each Control Point shall provide a Class-A or Class-B supervised "dry" relay contact single pole double throw-maintained contact rated 10-amp, 120 volt, 60Hz AC.

D. Each Monitor Point shall provide not less than one of the following supervised methods of monitoring a remote device or equipment action or status.

1. Remote "dry" contact operation normal open, normally closed or momentary contact operation.

PART 3 - EXECUTION

3.1 IDENTIFICATION (ADDITIONAL REQUIREMENTS)

A. The Inside Cover of Alarm Initiating Devices shall be marked with the zone initiating number corresponding to the zone number in the control panel. Marking shall be with a felt-tip pen.

B. The Door(s) into the Room or Closet containing the Fire Alarm Control Panel shall be provided with a sign stating, "FIRE ALARM CONTROL PANEL INSIDE". Minimum 1-inch high "block" letters, white letters on a red background. Fasten sign to door with a minimum of four screws.

3.2 TESTING

A. The Entire Fire Alarm System shall be tested after the installation is complete.

1. Individually activate each manual initiating station and verify correct alarm operation and control panel response.

2. Individually test each automatic initiating device and verify correct alarm operation, control panel response and remote equipment operation.

3. Provide pressure differential testing for each air duct smoke detector.

B. Test the Battery Back-up System by disconnecting the incoming normal power and allowing this alarm system to operate 60 hours on battery power. Sound the alarm system for 5-minutes at the end of 60 hours on battery power.

C. Perform all Electrical and Mechanical Tests Required by the Equipment Manufacturer's Certification Form. Measure and adjust each automatic detection detectors to the maximum stable sensitivity setting. Detector tests shall be performed with the detector at its operational location and under normal operational environmental conditions in the area. Bench settings are not acceptable. An operational checkout test and report shall be performed. Submit six copies of test report results. The tests and report shall include, but not be limited to:

1. A complete list of equipment installed and wired.

2. Indication that all equipment is properly installed and functions and conforms to these Specifications.

3. Test of individual zones as applicable.

4. Serial numbers, a location by zone and model number for each installed detector.

5. Voltage (sensitivity) settings for each ionization and photoelectric detector as measured in place with the HVAC system operating.

6. Response times on thermostats and flame detectors (if used).

7. Technician's name, certificate number and date.

8. The completed manual and automatic monitoring and control system shall be tested to ensure that it is operating properly. This test will consist of exposing the installed units to a standard fire test.

9. Acceptance of the system shall also require a demonstration of the stability of the system. This shall be adequately demonstrated if the system operates for a 90-day test period without any unwarranted alarms. Should an unwarranted alarm(s) occur, the Contractor shall readjust or replace the equipment and detector(s) and begin another 90-day test period. As required by the Architect, the Contractor shall recheck the detectors using the fire test after each readjustment or replacement of detectors. This test shall not start until the Owner has obtained beneficial use of the building under tests.

3.3 WIRING (ADDITIONAL REQUIREMENTS)

A. Review the Total System Point-to-Point-Wiring Layout to assure that the correct number and type of wires and conduit sizes are installed.

B. Final Connections, Testing, Adjusting and Calibration shall be made under the direct Supervision of a Factory-Trained Technician of the System Supplier.

C. All Wiring shall be in Conduit.

D. All Wiring in Cabinets shall be neatly formed, laced and made up on bolt and nut terminal blocks. Tag all spare conductors. All conductors shall terminate on terminal strips with spade lugs, of adequate size for all incoming and outgoing conductors. The strips shall be labeled as to their use and wiring diagram shall be placed on the cabinet door showing connections of all related equipment to these strips.

E. Wiring Requirements for shielding certain conductors from others or routing in separate raceways shall be as recommended by the Manufacturer's documentation. The quantity of raceways and circuit conductors shown on the Drawings is schematic. Provide all conduit, raceways and conductors per Manufacturers recommendations and include all material and labor costs in the Contract price.

F. The conductors used for digital, multiplex communication between the fire alarm control panel and external remote initiation devices, control points and annunciators, shall be twisted insulated pairs, each pair 100% metallic shielded, 4-pair multi-conductor jacketed cable, with a separate 100% metallic shield enclosing all conductors under the jacket, #16 AWG copper conductors minimum with a separate internal ground/drain conductor, UL listed for fire alarm system use, isolation rated for 600 volts AC, 60Hz. One spare multiplex conductor cable shall be provided in all main and branch device/equipment connections for future system use. "Tees" and taps at any junction box location in the communication lines, shall be permitted by the system to additional devices without affecting proper system operation.

G. WIRE SIZE: Wire shall be sized to ensure installed circuit voltage drop does not exceed Manufacturer's recommendations, but in no case less than the following.

1. Wiring Requirements for shielding certain conductors from others or routing in separate raceways shall be as recommended by the Manufacturer's documentation. The quantity of raceways and circuit conductors shown on the Drawings is schematic. Provide all conduit, raceways and conductors per Manufacturer's recommendations and include all material and labor costs in the Contract price. The minimum insulated conductor size for fire alarm non-digital multiplex initiating circuits and control circuits shall be not less than #14 AWG (600-volt THHN/THWN) copper.

2. Conductors for evacuation alarm device circuits shall be insulated (600-volt THHN/THWN) copper conductors, quantity as recommended by Fire Alarm Manufacturer. Not more than a total of ten evacuation alarm devices shall be installed on any single circuit "run" extending from the fire alarm control panel, including "T" and "branch-tap" connections. The limit of ten devices shall count each horn or strobe as separate alarm devices (i.e., six-horns plus four strobes = ten alarm devices; five combination horn/strobe units' equals' ten alarm devices). Conductors smaller than #12 AWG shall not be used for evacuation alarm device circuits:

Total Circuit Conductor Length (Including "T" and "Branch" Connections)	Minimum Wire Size
Up to 300 feet and all device terminations	#12 AWG
301 thru 600 feet.	#10 AWG
601 thru 900 feet.	#8 AWG
Between Buildings and Over 900 feet.	#6 AWG

H. Air Duct Smoke Detector and Motor Controller Connections:

1. Provide a Remote Equipment Monitoring and Control REMC module for each air duct smoke detector location. Install the REMC at the respective motor control (magnetic motor starter) unit.

2. Provide connection for automatic airflow "shut-down" interlock, upon detection of smoke, by the respective air duct smoke detector from the REMC to the motor controller.

3. Provide software programming of the REMC from the fire alarm control panel to shut down all airflow control modules upon any fire alarm detection condition in the building when required by the Fire Marshal.

4. Provide ½-inchC. - 2#12 (AWG) CU-THHN/THWN from the REMC to respective motor control unit.

5. Provide connection of the REMC to the fire alarm multiplex control system with ¾-inch minimum conduit and multiplex conductors.

I. Automatic Fire/Smoke Doors/Hatches

1. Provide a remote equipment monitoring and control module REMC located at each automatic fire/smoke door and hatch containing internal or external automatic closures and/or hold open devices for fire and/or smoke.

2. Provide connection from the REMC to the respective door or hatch fire/ smoke detection system. The REMC shall monitor and report the door/ hatch automatic detection of smoke/fire. The REMC shall provide activation of the door/hatch automatic closure mechanism upon any fire alarm detection condition in the building, with software programming from the fire alarm control panel.

3. Provide ¾-inch conduit 6#14 from the REMC to the respective door/hatch system controls and hold open devices.

4. Provide connection of the REMC to the fire alarm multiplex control system with ¾-inch minimum conduit and multiplex conductors.

5. Provide ¾-inch conduit with 2#10 homerun to the fire alarm control panel from each door/hatch location, for 24-volt D.C. or 120-volt 60Hz AC control power for the door hold open/closing system.

J. Fire/Smoke Air Dampers

1. Provide a remote equipment monitoring and control module REMC located at each building space/room protected by fire/smoke air dampers.

2. Provide connection from the REMC to each fire/smoke air damper for the respective building space/room. The REMC shall provide activation of the respective dampers closure mechanism, with software programming from the fire alarm control panel.

3. Provide ½-inch conduit 3#14 from the REMC to each respective fire/smoke air damper.

4. Provide connection of the REMC to the fire alarm multiplex control system with ¾-inch minimum conduit and multiplex conductors.

5. Provide ¾-inch conduit with 2#10 to the fire alarm control panel from the REMC for 24-volt D.C. or 120-volt AC control power for fire/smoke air damper operators.

K. Provide Smoke Detection per NFPA 72 throughout all 1-hour corridors to operate a control module and relay in localized electrical room. From relay provide 120 VAC to each combination smoke/fire dampers; do not exceed 16-dampers per circuit.

3.4 OUTLET BOXES (ADDITIONAL REQUIREMENTS)

Device outlet boxes shall be flush mounted unless indicated otherwise on the Drawings. Provide extension rings to finish flush with finish surface. Where the Drawings indicate surface mounted devices, outlet boxes shall be cast metal with threaded hubs. Where the conduit entrances are not exposed for surface mounted devices, provide flush outlet box behind the device box and omit the conduit hubs on the device box. Size device boxes and outlet boxes per Manufacturers recommendation and as required by Code for wire fills.

3.5 SPECIAL INSTALLATION REQUIREMENTS

A. General:

1. Whether or not shown on the Fire Alarm Drawings, the following systems shall be provided as part of the Contract. Provide fire alarm devices and connection of the systems to the fire alarm control panel including all material, labor and cost in the Contract.

2. Refer to Mechanical, Plumbing and Architectural Drawings for the location and quantity of these systems.

B. Air Duct Detectors:

1. Provide air duct smoke detectors in each supply air duct and return air duct with an air flow of 2000 CFM or greater. Coordinate with Mechanical Contractor. Sampling tube shall extend across entire duct width.

2. The air duct smoke detectors shall be provided on both the return and discharge sides of the air ducts of each unit.

3. Air duct smoke detectors shall be physically accessible for testing and maintenance after installation.

4. Install the air duct smoke detectors to provide the separation distance, recommended by the Manufacturer, from obstructions in the air ducts causing non-uniform air flow patterns, including but not limited to the following:

   a. Elbows/bends in the air duct.
   b. Fan/blower air source.
   c. Air discharge or air intake louvers.

5. Provide additional airflow control “vanes” inside air ducts and air duct length extensions, where airflow turbulence causes operation problems with the respective air duct smoke detectors. Coordinate installation with Mechanical Contractor.

6. Prior to installation of smoke detectors in “air ducts”, perform airflow velocity and airflow turbulence test measurements. The tests shall be conducted at each proposed smoke detector installation location in the respective air duct, with normal operational airflow velocities present in the air ducts.

7. The smoke detector type and installation location in the respective air duct shall comply with the Manufacturer’s recommendations to insure proper smoke detector operation. Adjust the smoke detector locations and provide smoke detectors with air velocity and air turbulence sensitivities compatible with respective air duct.

8. Air duct detectors malfunctioning or failing to function as a result of incorrect application or improper installation shall be removed. Provide proper air duct smoke detector locations and provide smoke detectors with airflow velocity and air turbulence sensitivities compatible with respective air duct.

C. Fire Sprinkler Water Flow and Shut-off Valve Tamper Switches:

1. Provide fire sprinkler water flow switches installed on each main fire sprinkler rise pipe, coordinate with the Fire Sprinkler Contractor.

2. Provide fire sprinkler water valve tamper switches installed on each main fire sprinkler shut-off valve, coordinate with the Fire Sprinkler Contractor.

D. Fire/Smoke Rated Door/Hatch Closures and Hold Opens:

1. Provide connection to the fire alarm control panel, of each fire/smoke rated door/hatch and damper with self-contained fire/smoke detection, hold open or closure devices.

2. Provide automatic smoke detectors installed within 3-feet of each side of a fire/ smoke rated door/hatch and damper. Provide magnetic release hold open devices for each door/hatch. Provide connection to the fire alarm control panel.

E. Area Protection Automatic Smoke Detectors

1. Area protection smoke detectors shall be ceiling mounted unless noted otherwise on the Drawings.

2. Provide smoke detector quantities to ensure a minimum of one automatic smoke detector for each 600 square feet of area, (and fraction thereof) for each building space where smoke detectors are required.

3. Provide smoke detector quantities to ensure the centerline to centerline spacing of installed smoke detectors does not exceed 20 feet in the protected area.

4. Locate area protection smoke detectors a minimum of 48 inches horizontal distance from any air transfer grill, air intake grill and air discharge grill.

F. Fire/Smoke Air Dampers

1. Each room with HV/AC air supply and/or air return passing through one or more fire/smoke air dampers shall be provided with automatic smoke detector protection. The smoke detectors shall close the respective room Fire/Smoke dampers when smoke is detected by the room automatic smoke detector and activate the fire alarm control panel.

2. Provide automatic air duct smoke detectors or area protection automatic smoke detectors, for fire/smoke air dampers, based on the Requirements of Condition #1 or Condition #2 as follows:

   a. Condition #1 - Where all the following criteria are true for the respective room, provide air duct smoke detectors in each HVAC air duct connecting to the room:

      1) All the fire/smoke dampers for the room are located in HVAC air ducts for the respective room.
      2) All the air ducts exceed a cross sectional area of 64 square inches.
      3) The minimum air flow rate, during HVAC operation, in all the air ducts exceeds the Requirements of the Air Duct Smoke Detector Manufacturer’s recommendations.
      4) The separation distance between the fire/smoke damper in each air duct and any air discharge louver, any elbow/ bend in the air duct and any fan/blower, is greater than the minimum Installation Distance Requirements of the Air Duct Smoke Detector Manufacturer’s recommendations.

   b. Condition #2 - Where any of the criteria in Condition #1 are not true, provide area protection automatic smoke detectors in the respective room.

3. Provide power and control connections to the fire/smoke dampers, and respective fire/smoke damper smoke detectors. Connect all components to the fire alarm control panel.

4. Connection of fire/smoke air dampers shall comply with the Damper Manufacturer’s recommendations, to insure proper damper and fire alarm system operation.

END OF SECTION 28 46 20
010423/535050

SECTION 32 93 44
PALM TREE PLANTING

PART 1 - GENERAL

1.1 General Conditions:

The requirements of the "General Conditions of this Contract" and the "General Provisions," shall apply to all work of this Section with the same force and effect as though repeated in full herein.

1.2 Scope of Work:

All labor, materials, equipment, and services necessary for and incidental to performing all operations of the work for this section, complete as shown on the Contract Drawings or specified herein. Work includes, but is not necessarily limited to, the following:

A. Palm Tree Planting

B. Clean Up

1.3 Quality Assurance

A. Obtain source of palms for inspection and approval by “Certified Arborist / Palm Specialist.” Contractor to submit qualifications of proposed Certified Arborist to Owner for review and approval. Contractor shall submit hourly rates of Certified Arborist, with all hours of his involvement as specified herein to be paid by Contractor. Certified Arborist shall be involved in all stages of palm tree acquisition, removal, transport, storage, planting, and maintenance. If any discrepancies occur between the Certified Arborist and the plans and specifications, it shall be brought to the immediate attention of the Owner Inspector and resolved in an acceptable manner prior to the commencement of further work. Pre-approved and recommended “Certified Arborist”/”Palm Specialist”: Mr. Gregston D. Young, GDY Consulting; ASCA Registered Consulting Arborist #731 and ISA Board Certified Master Arborist WE-9732B, Tel: 760-250-1229 or GDY@earthlink.net, or approved equal.

B. Submit documentation and permits (if required) that the source of palm trees is approved. Obtain palms from an approved source.

1.4 Product Delivery, and Storage:

A. Delivery

1. Protect plant material during delivery to prevent damage to root ball and fronds.

2. The Contractor shall notify the Owner Inspector seven days prior to delivery of all plant materials and shall submit an itemized list of the plants in each delivery.

B. Storage

1. Store plant material in shade and protect from weather.

2. Maintain and protect plant material not to be planted within four hours.

1.5 Job Conditions:

Perform actual planting only when weather and soil conditions are suitable according to locally accepted practices.

1.6 Scheduling Work:

A. Notify the Engineer a minimum of seven (7) days in advance of balling, prepping and transporting.

B. Palm trees shall be planted at their new locations within 36 hours of removal from original ground.

PART 2 - PRODUCTS

2.1 General:

A. Palms shall be inspected by the “Certified Arborist / Palm Specialist”. Inspection shall include but not be limited to overall health and vigor, frond tying, etc. Any palms rendered unsuitable for planting because of this inspection shall not be used. Re-inspection of suitable palms will be at the Contractor’s expense.

B. All palms must be tagged, inspected, and approved by the “Certified Arborist / Palm Specialist” for planting prior to shipment and installation. All palms shall be matching in form. All palm trunks shall be straight and true.

C. All palms shall be obtained by W.D. Young & Sons Palm Nurseries, contact: Charlie Smith, 760-347-7906.

PART 3 - EXECUTION

3.1 Defronding and Tying:

A. In preparing palm trees for relocation, all dead fronds shall be removed and the entire trunk “Classic” or “Diamond cut” clean to the height of green fronds. Care shall be taken to prevent injury to the trunk of the tree. Green fronds below “10:30-1:30 o’clock” position shall be neatly cut off leaving a 2 inch stub and all fruit and stalks. Only a drain spade shall be used to trim fronds or trunks. Tools must be sanitized with 50% bleach solution between palms. NO chainsaws shall be used in any of the prepping.

B. All remaining fronds above “10:30-1:30 o’clock” position (approximately 35 fronds) shall be lifted up and tied together around the crown in an upright position. Due caution shall be taken not to bind or injure the crown. two-ply sisal twine shall be used in tying up the fronds; wire will not be permitted. After tying,

the tips of the fronds shall be hedged off above the crown approximately 1/4 of the frond length. Defronding and tying work shall be completed within 30 minutes of digging the rootball and carefully laying the palm down. Submit documentation that palms have been reviewed by the “Certified Arborist / Palm Specialist”. and that they are disease free.

3.2 Digging the Rootball:

A. When digging out the rootball, no excavation shall be done closer than 16 inches to the trunk at ground level (rootball should be minimum 48-inches wide by 48-inches wide and the excavation shall extend to a minimum depth of 4 feet. The bottom of the rootball shall be cut off square and perpendicular to the trunk just prior to planting on job site. Under no condition shall the Contractor cut down the size of the rootball in width or depth, without permission from Arborist

B. The Contractor shall not freefall, drag, roll, or abuse the tree or put a strain on the crown at any time. A Soft High Tensile Endless Polyester Lifting Sling with a lifting rating double of the heaviest palm,shall be used around the trunk of the tree while lifting and relocating so as not to scar or skin the trunk in any way. . At no time will trees be balled out and laid on the ground with rootball left exposed to direct sunlight and air. The rootball shall be shaded at all times.

C Palms shall not be stockpiled for replanting.

3.3 Planting of Palms:

A. Excavation for planting shall include the stripping and staking of all acceptable topsoil encountered within the areas to be excavated for the tree holes.

B. Excess soil generated from the planting holes and not used as backfill or in establishing the final grades shall be removed from the site.

C. Protect all areas from excessive compaction when trucking plants or other material to the planting site.

D. Center palm in pit or trench; align with adjacent palm plantings as indicated on plans. All palms shall be matched specimens (height, size, trunk diameter, character, etc. and shall be installed at matched planted heights).

E. Set palm plumb and hold rigidly in position until washed concrete sand has filled all voids, water jetting with 3/4-inch by five-foot-long sticker pipe on garden hose, removing all air pockets, then tamping sand firmly around rootball, before releasing palm..

F. All excavated holes shall have vertical sides with roughened surfaces and shall be of a size that is twice the diameter and 24 inch minimum. Palm shall be planted at the same depth as was originally grown. The top of the root initiation zone shall be even with the soil surface. Provide bracing as required per the recommendations of the certified arborist.

G. Palm back fill mix shall be as recommended by the certified arborist and agronomic soil report. ***The following mix may be used for bidding purposes only.*** Palms shall be backfilled with 100% washed concrete sand. Contractor shall submit sand sample with sieve analysis for review and approval prior to planting.

H. Palm root growth stimulant shall be as recommended by the certified arborist and agronomic soil report. ***The following root growth stimulant may be used for bidding purposes only.*** Root-growth stimulant shall be applied when the backfilling is between 1/2 to 2/3 height up the rootball. Application rate shall be per manufacturer's specifications. Contractor shall submit root growth stimulant product information for Owner review and approval prior to application.

I. Palm planting shall be in accordance with planting detail on construction documents.

J. Palm locations shall be identified from survey of digitized information provided by Architect, upon request of the contractor. Planting shall be done prior to pedestrian hardscape installation. Contractor shall coordinate as necessary with civil engineering plans to set palms at appropriate vertical height. Location of indicated palm trunk centers as indicated on planting plans and details shall be accurately surveyed and staked on-site prior to planting. Actual palm trunk locations, when planted, shall be as surveyed to allow for installation of adjacent pedestrian hardscape as indicated on plans and details.

3.4 Palm Tree Balling, prepping, and Transporting/Transplanting

A. General

1. The Work done hereunder consists of balling, prepping, trees and transporting/transporting said trees as described on the Plans.

2. The Certified Arborist shall be involved in all stages of the balling, prepping and transporting.

3. Erect barricades or signs as necessary to prohibit work, heavy vehicles, storage of materials, trenching, or any other activity detrimental to trees from occurring under tree driplines. Notify Engineer of any intention to work within tree driplines and gain approval prior to Work.

4. Obtain the services of a certified arborist (certified by the International Society of Arboriculture) for the duration of the balling, prepping and transporting of the trees. Prior to transplanting preparation, all palms are to be inspected by the Certified Arborist to evaluate the palms health and vigor, and shall provide written certification of findings and recommendations.

B. Submittals

1. Prior to beginning Work, photograph entire profile of all trees from at least two sides.

2. Submit one set of 4 inch x 6 inch color prints to Owner.

C. Quality Assurance

1. Contractor shall have or shall hire a subcontractor who has a California State Contractor's C-27 License and a minimum of three years' prior experience in balling, prepping and transporting similar sizes and types of trees. A certified arborist provided by the Contractor shall be present on the site to supervise all tree balling, prepping and transplanting.

2. Examine condition of trees to be balled, prepped. Immediately notify the Engineer of any unsatisfactory conditions detrimental to successful relocation. Beginning balling, prepping and transporting of tree means acceptance of conditions by Contractor.

3. Comply with all Federal, State, and local codes, ordinances, safety orders, and regulations of all authorities having jurisdiction over this Work.

D. Materials

1. Horticultural Materials:

a. Fungicide: "Subdue, Maxx + Cleary's 3336 (2 ounces of Subdue and ½ lb. of Cleary's per 100 gallons of water)" or approved equal. When the palm trees are planted, 7-10 gallons of fungicide 'subdue Maxx + Cleary's 3336', shall be applied to the roots of each palm tree in accordance with the printed instructions of the fungicide manufacturer. A copy of said printed instructions shall be furnished to the Engineer before applying any fungicide. Fungicide to be used shall be submitted to the Engineer for approval not less than 2 week days prior to its intended use. Fungicide not approved by the Engineer shall not be used.

b. Fertilizer and Amendments: As specified by certified arborist.

E. Guarantee

Should any tree fail during the balling, prepping and transporting, supply the Engineer with replacement plant material of similar or approved equal quality and size. Engineer is sole judge of need for replacement.

3.5 Cleanup:

Following planting work, all remaining excavation shall be backfilled and compacted in accordance with the requirements of the Owner Inspector. Burying of debris in holes will not be permitted. All excess soil and debris from the relocation work shall be disposed off the site by the Contractor. This site shall be left neat and clean to the satisfaction of the Owner.

3.6 Maintenance:

A. Be responsible for maintenance and guarantee of all installed new palms to the satisfaction of the Owner.

1. Maintenance will include spraying to control or prevent disease and weekly water management to include soil probing and observation of soil moisture sensing devices and palm tree pruning.

2. Pruning shall be accomplished with extension ladders or boom trunk. Climbing spikes shall not be used.

3. Pruning shall be done with reciprocal saws (chain saws will not be allowed).

4. Saw blades will be sterilized between each tree with 50 percent household bleach and 50 percent water for five minutes.

5. Pruning will be done to maintain a neat appearance as approved by the Owner.

6. Proposed pruning schedule is to be submitted to the Owner for approval.

B. 90 days after install, cut and fully remove sisal twine around fronds.

3.7 Inspection:

1. Inspection by Certified Arborist, certified by the International Society of Arboriculture. All palms are to be inspected for disease prior to their preparation for removal from the nursery. Contractor shall contact, schedule, and pay for inspection. The inspection will take place from ground level with field glasses. If disease is suspected, provide manlift for closer inspection of palm crown. Provide the manlift or other equipment as required, at no additional cost to the Owner.

2. All palms will be observed by the Certified Arborist for height, girth, and overall form in meeting design intent. Said observation and approval does not constitute a review of the palm’s health, vigor, and required health-free state, for which the Contractor is solely responsible.

3. Inspection and approval of new tree locations prior to digging pits.

4. Inspection of prepping and tying prior to loading of trees.

5. Inspection of palm planting operations in place.

6. Inspection for final acceptance and release from maintenance following completion of the maintenance period.

B. Inspection/Observation schedule.

Contact Owner and Certified Arborist a minimum of 48 hours (2 working days) in advance of scheduled inspections/observations.

Inspection Observation	Contact: Certified Arborist/Palm Specialist	Owner Engineer
1. Inspection of palm trees at source.	X	X
2. Inspection of defronding, prepping, and tying, as palms are dug in field.	X	
3. Observation of palm tree locations prior to digging planting pits.	X	X
4. Observation of typical palm planting.	X	X
5. Pre-maintenance observation.	X	X
6. *Inspection of palms at 12 months past 90 day maintenance	X	
7. *Inspection of palms at 20 months past 90 day maintenance.	X	

*NOTE: items 6 and 7 to be paid by Owner.

3.8 Guarantee

A. Newly planted palm trees shall be guaranteed against any and all poor, inadequate, or inferior plant materials, and workmanship for two years following planting and acceptance by Owner. Transplanted palm trees shall be guaranteed for one year, under the same conditions above, following planting and acceptance by the Owner.

B. During the guarantee period, any material found dead or not in satisfactory growth condition shall be removed from the site. These tree and disturbed improvements shall be replaced at no expense to the Owner, with the same variety and size as originally designated. Palms and all disturbed areas shall be guaranteed for one year from time of planting and replanting to the satisfaction of the Owner.

Mr. Chastain:

In accordance with your request, we have conducted a geotechnical investigation at the subject site. We are pleased to present this report summarizing the conclusions and recommendations developed from our investigation.

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

SOUTHERN CALIFORNIA GEOTECHNICAL, INC.

1.0 EXECUTIVE SUMMARY

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

Geotechnical Design Considerations

- Artificial fill soils were encountered at several of the boring locations, extending to depths of 2½ to 8± feet below the existing site grades.
- The fill soils possess varying strengths and are considered to represent undocumented fill. These soils, in their present condition, are not considered suitable for support of the foundation loads of the new structures.
- The fill soils are underlain by moderate strength native alluvium, which possesses favorable consolidation/collapse characteristics.
- Remedial grading will be necessary to remove the undocumented fill soils in their entirety and the upper portion of the near-surface native alluvial soils and replace these materials as compacted structural fill soils.

Site Preparation

- Demolition of the existing structures and pavements will be required in order to facilitate construction of the new building and structures. Demolition should also include all utilities and any other subsurface improvements that will not remain in place for use with the new development. The existing pool shell should be demolished and removed. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be crushed to a maximum 2-inch particle size and incorporated into new structural fills, or it may be crushed into miscellaneous base (CMB).
- Site stripping within vegetated areas should remove include all vegetation, including tree root masses and any organic topsoil.
- The existing pool shell should be removed in its entirety. This area can then be raised to grade using compacted structural fill.
- Remedial grading is recommended to be performed within the proposed building pad area to remove all of the undocumented fill soils, which extend to depths of 2½ to 8± feet at the boring locations. At a minimum, the building pad area should be overexcavated to a depth of at least 6 feet below existing grade and to a depth of at least 3 feet below proposed pad grade, whichever is greater. Overexcavation within the foundation areas is recommended to extend to a depth of at least 3 feet below proposed foundation bearing grade.
- Excavation to reach the new subgrade elevation in the new pool area is expected to remove most or all of the existing undocumented fill soils. Any remaining undocumented fill or low strength alluvium should be removed to a level of competent native alluvium.
- After overexcavation has been completed, the resulting subgrade soils should be evaluated by the geotechnical engineer to identify any additional soils that should be overexcavated, moisture conditioned (or air dried), and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. The previously excavated soils may then be replaced as compacted structural fill. Fill soils should be moisture conditioned to 2 to 4 percent above the optimum moisture content.

- The new flatwork area subgrade soils are recommended to be scarified to a depth of 12± inches, thoroughly moisture conditioned, or air dried, to 2 to 4 percent above the optimum moisture content, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

Building Foundations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 2,500 lbs/ft^2 maximum allowable soil bearing pressure.
- Reinforcement consisting of at least six (6) No. 5 rebars (3 top and 3 bottom) in strip footings. Additional reinforcement may be necessary for structural considerations.

Building Floor Slab

- Conventional Slab-on-Grade, 5 inches thick.
- Minimum reinforcement of the floor slab should consist of No. 4 bars at 16-inches on center in both directions, due to the presence of expansive soils. The actual floor slab reinforcement should be determined by the structural engineer, based on the imposed slab loading.

Pavements

ASPHALT PAVEMENTS (R = 15)			
Materials	**Thickness (inches)**		
	Auto Parking (TI = 4.0)	Auto Drive Lanes (TI = 5.0)	Light Truck Traffic (TI = 6.0)
Asphalt Concrete	3	3	3½
Aggregate Base	6	9	11
Compacted Subgrade	12	12	12

PORTLAND CEMENT CONCRETE PAVEMENTS (R = 15)			
Materials	**Thickness (inches)**		
	Automobile Parking and Drive Areas (TI = 4.0 to 5.0)	Truck Traffic Areas (TI =6.0)	Fire Lane (TI = 6.5)
PCC	5	5½	6
Compacted Subgrade (95% minimum compaction)	12	12	12

2.0 SCOPE OF SERVICES

The scope of services performed for this project was in accordance with our Proposal No. 21P336, dated July 28, 2021. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to provide criteria for preparing the design of the building foundations, building floor slab, and swimming pool along with site preparation recommendations and construction considerations for the proposed development. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical investigation.

3.0 SITE AND PROJECT DESCRIPTION

3.1 Site Conditions

The site is located at the street address of 1654 West 160th Street in Gardena, California. The site is bounded to the north by 160th Street, to the west by Harvard Boulevard, to the south by residential fourplexes and the Gardena Gymnasium, and to the east by La Salle Avenue. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The site consists of multiple rectangular-shaped lots which total 0.9± acres in size. The lots are currently developed with the Primm Memorial Pool and two residential fourplexes with two detached garage structures. The existing structures range from 900 to 2,500± ft² in size. Several of the buildings share common walls. The majority of these buildings are one- to two-story structures of wood frame and stucco construction, and are presumed to be supported on conventional shallow foundations with raised wood floors. The buildings are generally surrounded by Portland cement concrete (PCC) pavements which are in poor to fair condition, with moderate to severe cracking throughout. Turf grass and a few trees surround the buildings.

Detailed topographic information was not available at the time of this report. Based on elevations obtained from Google Earth, and visual observations made at the time of the subsurface investigation, the overall site topography is relatively flat.

3.2 Proposed Development

A preliminary conceptual site plan for the proposed development was provided to our office by the client. Based on the information provided by the client, demolition of the existing buildings, pool and pavements will be necessary to construct new development. The new development, identified as the Community Aquatics & Senior Center, will include a new L-shaped building, a 25-yard competition pool with a diving area, an activity pool, hardscape pathways, and new landscaping areas. The proposed swimming pool is expected to be 8 to 12± feet deep.

Detailed structural information has not been provided. It is assumed that the new building will be a single-story structure of masonry block construction, typically supported on a conventional shallow foundation system with a concrete slab-on-grade floor. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 50 kips and 1 to 4 kips per linear foot, respectively.

No significant amounts of below grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Based on the assumed topography, cuts and fills of up to 1 to 3± feet are expected to be necessary to achieve the proposed site grades.

4.0 SUBSURFACE EXPLORATION

4.1 Scope of Exploration/Sampling Methods

The subsurface exploration conducted for this project consisted of four (4) borings (identified as Boring Nos. B-1 through B-4) advanced to depths of 20 to 25± feet below the existing site grades. All of the borings were logged during drilling by a member of our staff.

The borings were advanced with hollow-stem augers, by a limited access drilling rig. Representative bulk and relatively undisturbed soil samples were taken during drilling. Relatively undisturbed soil samples were taken with a split barrel "California Sampler" containing a series of one inch long, 2.416± inch diameter brass rings. This sampling method is described in ASTM Test Method D-3550. In-situ samples were also taken using a 1.4± inch inside diameter split spoon sampler, in general accordance with ASTM D-1586. Both of these samplers are driven into the ground with successive blows of a 140-pound weight falling 30 inches. The blow counts obtained during driving are recorded for further analysis. Bulk samples were collected in plastic bags to retain their original moisture content. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory.

The approximate locations of the borings are indicated on the Boring Location Plan, included as Plate 2 in Appendix A of this report. The Boring Logs, which illustrate the conditions encountered at the boring locations, as well as the results of some of the laboratory testing, are included in Appendix B.

4.2 Geotechnical Conditions

Concrete Slabs

All of the borings were drilled through existing concrete slab areas. At Boring Nos. B-1 and B-2, the slabs consist of 3 and 3½± inches of Portland cement concrete (PCC) pavements with no reinforcement. At Boring Nos. B-3 and B-4, the slabs consist of 5± inches of PCC, reinforced with welded wire mesh.

Artificial Fill

Artificial fill soils were encountered at the ground surface at all of the boring locations. The fill soils generally consist of loose to medium dense silty fine sands and fine sandy silts, and stiff to very stiff silty clays, extending to depths of 2½± to 8± feet below the existing site grades. The fill soils possess a disturbed, mottled appearance, resulting in their classification as artificial fill.

Alluvium

Native alluvium was encountered below the fill soils at all of the boring locations, extending to at least the maximum depth explored of 25± feet below existing site grades. The alluvium generally consists of loose to medium dense silty fine sands, clayey fine sands and fine sandy silts, and medium stiff to very stiff silty clays and clayey silts.

Groundwater

Free water was encountered during drilling at Boring Nos. B-3 and B-4 at a depth of about 23½± feet below ground surface. No delayed readings were performed at the boring locations due to caving within the open boreholes after the augers were withdrawn. Based on the moisture contents of the recovered soil samples and the observations made at the time of drilling, the static groundwater table is considered to have existed at a depth of 23½± feet below existing site grades, at the time of the subsurface investigation.

As part of our research, we reviewed available groundwater data in order to determine the historic high groundwater level for the site. The primary reference used to determine the historic groundwater depths in the area of the subject site is CGS Seismic Hazard Zone Report, Open File Report 98-18, Plate 1.3 for the Inglewood 7.5 Minute Quadrangle, which indicates that the historic high groundwater level for the site was 25± feet below the ground surface.

5.0 LABORATORY TESTING

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. The field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Boring Logs and are periodically referenced throughout this report.

Dry Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Consolidation

Selected soil samples have been tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 through C-4 in Appendix C of this report.

Maximum Dry Density and Optimum Moisture Content

A representative bulk sample was tested for its maximum dry density and optimum moisture content. The results have been obtained using the Modified Proctor procedure, per ASTM D-1557. These tests are generally used to compare the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil type or soil mixes may be necessary at a later date. The results of this test are plotted on Plate C-5 in Appendix C of this report.

Direct Shear

Direct shear testing was performed on one (1) representative sample to determine its shear strength parameters. The test was performed in accordance with ASTM D-3080. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each of the three samples are then loaded with different

normal loads and the resulting shear strength is determined for that particular normal load. The shearing of the samples is performed at a rate slow enough to permit the dissipation of excess pore water pressure. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The results of the direct shear test are presented on Plates C-6 in Appendix C of this report

Expansion Index

The expansion potential of the on-site soils was determined in general accordance with ASTM D-4829. The testing apparatus is designed to accept a 4-inch diameter, 1-in high, remolded sample. The sample is initially remolded to 50± 1 percent saturation and then loaded with a surcharge equivalent to 144 pounds per square foot. The sample is then inundated with water and allowed to swell against the surcharge. The resultant swell or consolidation is recorded after a 24-hour period. The results of the EI testing are as follows:

Sample Identification	Expansion Index	Expansive Potential
B-4 @ 0 to 5 feet	50	Medium

Soluble Sulfates

A representative sample of the near-surface soils was submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes into contact with these soils. The results of the soluble sulfate testing are presented below and are discussed further in a subsequent section of this report.

Sample Identification	Soluble Sulfates (%)	Sulfate Classification
B-2 @ 0 to 5 feet	0.002	Not Applicable (S0)

Corrosivity Testing

A representative bulk sample of the near-surface soils was submitted to a subcontracted analytical laboratory for determination of electrical resistivity, pH, and chloride concentrations. The resistivity of the soils is a measure of their potential to attack buried metal improvements such as utility lines. The results of the resistivity and pH testing are presented below:

Sample Identification	Saturated Resistivity (ohm-cm)	pH	Chlorides (mg/kg)	Nitrates (mg/kg)
B-2 @ 0 to 5 feet	6,000	7.5	6.5	2.0

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of our review, field exploration, laboratory testing and geotechnical analysis, the proposed development is considered feasible from a geotechnical standpoint. The recommendations contained in this report should be taken into the design, construction, and grading considerations.

The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record. The recommendations are provided with the assumption that an adequate program of client consultation, construction monitoring, and testing will be performed during the final design and construction phases to verify compliance with these recommendations. Maintaining Southern California Geotechnical, Inc., (SCG) as the geotechnical consultant from the beginning to the end of the project will provide continuity of services. The geotechnical engineering firm providing testing and observation services shall assume the responsibility of Geotechnical Engineer of Record.

The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

6.1 Seismic Design Considerations

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structure should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered to be low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, seiches, flooding, and subsidence affecting the site is considered low.

Seismic Design Parameters

The California Building Code (CBC) provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. The seismic design parameters presented below are based on the soil profile and the proximity of known faults with respect to the subject site.

Based on standards in place at the time of this report, the proposed development is expected to be designed in accordance with the requirements of the 2019 edition of the California Building Code (CBC), which was adopted on January 1, 2020.

The 2019 CBC Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool, a web-based software application available at the website www.seismicmaps.org. This software application calculates seismic design parameters in accordance with several building code reference documents, including ASCE 7-16, upon which the 2019 CBC is based. The application utilizes a database of risk-targeted maximum considered earthquake (MCE_R) site accelerations at 0.01-degree intervals for each of the code documents. The tables below were created using data obtained from the application. The output generated from this program is included as Plate E-1 in Appendix E of this report.

The 2019 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped S_1 value greater than 0.2. However, Section 11.4.8 of ASCE 7-16 also indicates an exception to the requirement for a site-specific ground motion hazard analysis for certain structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) indicates that "In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites." **Based on our understanding of the proposed development, the seismic design parameters presented below were calculated assuming that the exception in Section 11.4.8 applies to the proposed structure at this site. However, the structural engineer should verify that this exception is applicable to the proposed structure.** Based on the exception, the spectral response accelerations presented below were calculated using the site coefficients (F_a and F_v) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2019 CBC.

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	S_S	1.795
Mapped Spectral Acceleration at 1.0 sec Period	S_1	0.636
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	S_{MS}	1.795
Site Modified Spectral Acceleration at 1.0 sec Period	S_{M1}	1.081
Design Spectral Acceleration at 0.2 sec Period	S_{DS}	1.196
Design Spectral Acceleration at 1.0 sec Period	S_{D1}	0.721

It should be noted that the site coefficient F_v and the parameters S_{M1} and S_{D1} were not included in the SEAOC/OSHPD Seismic Design Maps Tool output for the 2019 CBC. We calculated these parameters-based on Table 1613.2.3(2) in Section 16.4.4 of the 2019 CBC using the value of S_1 obtained from the Seismic Design Maps Tool, assuming that a site-specific ground motion hazards analysis is not required for the proposed buildings at this site.

Liquefaction

Research of the Earthquake Zones of Required Investigation Map (EZRIM) for the Inglewood Quadrangle, published by the California Geological Survey (CGS), indicates that the site is not located in a designated liquefaction hazard zone. In addition, the subsurface conditions encountered at the boring locations are not considered to be conducive to liquefaction. These conditions consist of moderate strength, predominantly cohesive, native alluvial soils. Based on these considerations, liquefaction is not considered to be a design concern for this project.

6.2 Geotechnical Design Considerations

General

The site is generally underlain by artificial fill soils, extending to depths of 2½ to 8± feet below the existing site grades. No documentation regarding the placement and compaction of these soils is expected to become available. The fill soils are therefore considered to be undocumented fill and are not considered suitable for support of the foundations and floor slabs of the new structure. The fill soils are underlain by native alluvium which possesses favorable consolidation/collapse characteristics. However, the near-surface alluvium is expected to be disturbed during demolition procedures. Remedial grading will be necessary within the proposed building area to remove the artificial fill soils in their entirety as well as a portion of the near-surface alluvium, and to replace these soils as compacted structural fill.

Settlement

The recommended remedial grading will remove the existing fill soils as well as a portion of the near-surface alluvium from the new building area and replace these materials as compacted structural fill. The native soils that will remain in place below the recommended depth of overexcavation will not be subject to significant load increases from the foundations of the new structure. Provided that the recommended remedial grading is completed, the post-construction settlement of the proposed structure is expected to be within tolerable limits for a mat foundation.

Soluble Sulfates

The results of the soluble sulfate testing indicate that the selected sample of the on-site soils possesses a sulfate concentration that corresponds to Class S0 with respect to the American Concrete Institute (ACI) Publication 318-14 Building Code Requirements for Structural Concrete and Commentary, Section 4.3. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. It is, however, recommended that additional soluble sulfate testing be conducted at the completion of rough grading to verify the

soluble sulfate concentrations of the soils which are present at the pad grade within the building and pool areas.

Corrosion Potential

The results of laboratory testing indicate that the on-site soils possess a saturated resistivity of 6,000 ohm-cm, and a pH value of 7.5. These test results have been evaluated in accordance with guidelines published by the Ductile Iron Pipe Research Association (DIPRA). The DIPRA guidelines consist of a point system by which characteristics of the soils are used to quantify the corrosivity characteristics of the site. Resistivity and pH are two of the five factors that enter into the evaluation procedure. Redox potential, relative soil moisture content and sulfides are also included. Although sulfide testing was not part of the scope of services for this project, we have evaluated the corrosivity characteristics of the on-site soils using resistivity, pH and moisture content. Based on these factors, and utilizing the DIPRA procedure, the on-site soils are not considered to be corrosive to ferrous pipes. Therefore, corrosion protection is not expected to be required for cast iron or ductile iron pipes.

Based on American Concrete Institute (ACI) Publication 318 Building Code Requirements for Structural Concrete and Commentary, reinforced concrete that is exposed to external sources of chlorides requires corrosion protection for the steel reinforcement contained within the concrete. ACI 318 defines concrete exposed to moisture and an external source of chlorides as "severe" or exposure category C2. ACI 318 does not clearly define a specific chloride concentration at which contact with the adjacent soil will constitute a "C2" or severe exposure. However, the Caltrans Memo to Designers 10-5, Protection of Reinforcement Against Corrosion Due to Chlorides, Acids and Sulfates, dated June 2010, indicates that soils possessing chloride concentrations greater than 500 mg/kg are considered to be corrosive to reinforced concrete. The results of the laboratory testing indicate a chloride concentration of 6.5 mg/kg. Although the soils contain some chlorides, we do not expect that the chloride concentrations of the tested soils are high enough to constitute a "severe" or C2 chloride exposure. Therefore, a chloride exposure category of C1 is considered appropriate for this site.

Nitrates present in soil can be corrosive to copper tubing at concentrations greater than 50 mg/kg. The tested sample possesses a nitrate concentration of 2.0 mg/kg. Based on this test result, the on-site soils are not considered to be corrosive to copper pipe.

Since SCG does not practice in the area of corrosion engineering, we recommend that the client contact a corrosion engineer to provide a more thorough evaluation.

Expansion

Laboratory testing performed on a representative sample of the near-surface soils indicates that these materials are medium expansive (EI = 50). Based on the presence of expansive soils at this site, special design and construction considerations are warranted. All building pad and flatwork subgrade soils should be properly moisture conditioned and maintained at adequate moisture content throughout the construction process. Further recommendations concerning the expansive soils are presented in subsequent sections of this report. It is recommended that additional expansion index testing be conducted at the completion of rough grading to verify the expansion potential of the as-graded structure pad.

Swimming Pool

The swimming pool should be designed by the pool engineer utilizing the design considerations included with this report. Specifically, the pool should be design in consideration of the medium expansion potential of the on-site soils. Limited remedial grading recommendations for the pool structure are included in a subsequent section of this report.

Shrinkage/Subsidence

Removal and recompaction of the near-surface artificial fill soils and near-surface alluvium is estimated to result in an average shrinkage of 6 to 12 percent. It should be noted that the potential shrinkage estimate is based on dry density testing performed on small-diameter samples taken at the boring locations. If a more accurate and precise shrinkage estimate is desired, SCG can perform a shrinkage study involving several excavated test-pits where in-place densities are determined using in-situ testing methods instead of laboratory density testing on small-diameter samples. Please contact SCG for details and a cost estimate regarding a shrinkage study, if desired.

Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.10± feet.

These estimates are based on previous experience and the subsurface conditions encountered at the boring locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

Grading and Foundation Plan Review

No detailed grading or foundation plans were available at the time of this report. It is therefore recommended that we be provided with copies of the plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report.

6.3 Site Grading Recommendations

The grading recommendations presented below are based on the subsurface conditions encountered at the boring locations and our understanding of the proposed development. We recommend that all grading activities be completed in accordance with the Grading Guide Specifications included as Appendix D of this report, unless superseded by site-specific recommendations presented below.

Site Stripping and Demolition

Demolition of some existing structures will be necessary in order to facilitate the construction of the new site improvements. Demolition should also include foundations, floor-slabs, pavements, underground utility lines and any other subsurface improvements that will not remain in place with the new development. The existing pool shell should also be removed in its entirety. Any artificial fill soils associated with the pool should also be removed. Debris resultant from demolition

should be disposed of off-site in accordance with all applicable federal, state, and local regulations. Any adjacent pavements and improvements that are to be reutilized with the new development should be protected from damage by construction traffic.

Initial site preparation should include stripping of any existing surficial vegetation and organic materials. Based on conditions observed at the time of the field exploration, stripping of grass and weed growth will be necessary within limited portions of the site. Any organic material should be disposed of off-site. Removal of any trees should include all of the associated root masses, with the resultant excavation being backfilled with compacted structural fill. The actual extent of site stripping should be determined by the geotechnical engineer at the time of grading, based on the organic content and the stability of the encountered materials.

Treatment of Existing Soils: Building Pad

Remedial grading should be performed within the new building pad area to remove all of the undocumented fill soils and a portion of the near surface native alluvium. Based on the conditions encountered at the borings, these fill soils extend to depths of 2½ to 8± feet below the existing site grades. The existing soils within the new building area are also recommended to be overexcavated to a depth of at least 6 feet below the proposed building pad subgrade elevations and to a depth of 3 feet below existing grade, whichever is greater, to produce a relatively uniform support condition throughout the building pad area. Additionally the overexcavation should also extend to a depth of at least 3 feet below proposed foundation bearing grades.

The overexcavation areas should extend at least 5 feet beyond the building and foundation perimeters and to an extent equal to the depth of fill below the foundations. If the proposed structure incorporates any exterior columns (such as for a canopy or overhang) the overexcavation should also encompass these areas.

Following completion of the overexcavation, the subgrade soils within the building area should be evaluated by the geotechnical engineer to verify their suitability to serve as the structural fill subgrade, as well as to support the foundation loads of the new structure. This evaluation should include proofrolling and probing to identify any soft, loose or otherwise unstable soils that must be removed. Some localized areas of deeper excavation may be required if additional fill materials or loose, porous, or low density native soils are encountered at the base of the overexcavation.

Based on conditions encountered at the exploratory boring locations, some zones of moist to very moist soils will be encountered at or near the base of the recommended overexcavation. Stabilization of the exposed overexcavation subgrade soils may be necessary. Scarification and air drying of these materials may be sufficient to obtain a stable subgrade. However, if highly unstable soils are identified, and if the construction schedule does not allow for delays associated with drying, mechanical stabilization, usually consisting of coarse crushed stone or geotextile, could be necessary. In this event, the geotechnical engineer should be contacted for supplementary recommendations.

After a suitable overexcavation subgrade has been achieved, the exposed soils should be scarified to a depth of at least 12 inches and moisture conditioned or air dried to achieve a moisture content of 2 to 4 percent above optimum moisture content. The subgrade soils should then be recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

Treatment of Existing Soils: Parking and Drive Areas

Based on economic considerations, overexcavation of the existing artificial fill soils in the new parking and drive areas is not considered warranted, with the exception of areas where lower strength, or unstable, soils are identified by the geotechnical engineer during grading.

Subgrade preparation in the new parking and drive areas should initially consist of removal of all soils disturbed during stripping and demolition operations. The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. The subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to 2 to 4 percent above optimum moisture content, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

The grading recommendations presented above for the proposed parking and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within the proposed parking areas. The grading recommendations presented above do not completely mitigate the extent of the existing artificial fill soils that may be present in the parking and drive areas. As such, settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the parking and drive areas should overexcavated to provide a new layer of structural fill at least 2 feet in thickness.

Treatment of Existing Soils: Flatwork Areas

Subgrade preparation in the new flatwork areas should initially consist of removal of all soils disturbed during stripping and demolition operations. The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. The subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to 2 to 4 percent above optimum, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. Based on the presence of existing undocumented fill and variable strength alluvial soils throughout the site, it is expected that some isolated areas of additional overexcavation may be required to remove zones of lower strength, unsuitable soils.

Some movement and associated cracking of the flatwork materials should be expected, due to the presence of expansive soils. If this movement and the associated cracking cannot be tolerated, consideration should be given to the use of an imported, non-expansive, granular fill material in order to reduce the potential for differential movements of lightly loaded slabs. This report provides recommendations for moisture conditioning and additional steel reinforcement in the flatwork areas in order to minimize the potential effects of the expansive soils. However, if additional protection is desired, the client should consider the placement of a 2-foot thick layer of non-expansive soil beneath all flatwork.

Treatment of Existing Soils: Retaining Walls and Site Walls

The existing soils within the areas of any proposed retaining walls (less than 5 feet of retained height) should be overexcavated to a depth of 3 feet below foundation bearing grade and replaced as compacted structural fill, as discussed above for the proposed building pads. The foundation

subgrade soils within the areas of any proposed non-retaining site walls should also be overexcavated to a depth of 3 feet below proposed foundation bearing grade. In any case, the overexcavation should be sufficient to remove all artificial fill soils which are encountered during remedial grading. For both types of walls, the overexcavation subgrade soils should be evaluated by the geotechnical engineer prior to scarifying, moisture conditioning and recompacting the upper 12 inches of exposed subgrade soils. The previously excavated soils may then be replaced as compacted structural fill.

If any walls retaining more than 5 feet of soil are proposed for this site, the geotechnical engineer should be contacted to provide supplementary remedial grading recommendations.

Treatment of Existing Soils: Swimming Pool Shell and New Foundation Areas

Based on the expected excavation that will be required in order to construct the new pool, it is expected that most of the fill soils will be removed and the excavation will extend into underlying moderate strength alluvium. After the necessary cuts to reach the new pool subgrade elevation have been made, any remaining undocumented fill soils should be removed. The subgrade soils within the swimming pool area should then be evaluated by the geotechnical engineer to verify their suitability to serve as the structural fill subgrade, as well as to support the new pool. The new pool subgrade should consist of competent native alluvium or newly-placed engineered fill soils. This evaluation should include proofrolling and probing to identify any soft, loose or otherwise unstable soils that must be removed. Some localized areas of deeper excavation may be required if additional fill or loose, porous, or low density native soils are encountered at the base of the overexcavation.

The bottom and sidewalls of the proposed pool are expected to be constructed using shotcrete. Remedial grading and compaction of the soils present in the sidewalls of the pool area is not expected to be necessary based on these construction methods.

Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned to 2 to 4 percent above the optimum moisture content, and compacted. Drying of the some of the on-site soils may be required before placement and compaction as fill.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer.
- All grading and fill placement activities should be completed in accordance with the requirements of the 2019 CBC and the grading code of the city of Gardena.
- All fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Fill soils should be well mixed.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

Imported Structural Fill

All imported structural fill should consist of very low expansive (EI < 20), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve). Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

Utility Trench Backfill

In general, all utility trench backfill should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by the city of Gardena. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

6.4 Construction Considerations

Excavation Considerations

The near surface soils generally consist of a variety of materials, including sands, silts, and clays. Some of these materials may be subject to caving within shallow excavations. Where caving occurs within shallow excavations, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, temporary excavation slopes should be made no steeper than 2h:1v. The contractor should take all necessary precautions during grading and foundation construction to prevent damage to improvements which are adjacent to the proposed development. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

Expansive Soils

The near-surface soils at this site are potentially expansive. Therefore, care should be given to proper moisture conditioning of all on-site soils to a moisture content of 2 to 4 percent above the Modified Proctor optimum during site grading. All imported fill soils should have very low expansive characteristics. In addition to adequately moisture conditioning the subgrade soils and fill soils during grading, special care must be taken to maintain moisture content of these soils at 2 to 4 percent above the Modified Proctor optimum. This will require the contractor to frequently moisture condition these soils throughout the grading process, unless grading occurs during a period of relatively wet weather.

Due to the presence of expansive soils at this site, provisions should be made to limit the potential for surface water to penetrate the soils immediately adjacent to the structures. These provisions

should include directing surface runoff into rain gutters and area drains, reducing the extent of landscaped areas around the structures, and sloping the ground surface away from the buildings. Where possible, it is recommended that landscaped planters not be located immediately adjacent to the buildings. If landscaped planters around the buildings are necessary, it is recommended that drought tolerant plants or a drip irrigation system be utilized, to minimize the potential for deep moisture penetration around the structures. Presented below is a list of additional soil moisture control recommendations that should be considered by the owner, developer, and civil engineer:

- Ponding and areas of low flow gradients in unpaved walkways, grass and planter areas should be avoided. In general, minimum drainage gradients of 2 percent should be maintained in unpaved areas.
- Bare soil within five feet of proposed structures should be sloped at a minimum five percent gradient away from the structure (about three inches of fall in five feet), or the same area could be paved with a minimum surface gradient of one percent. Pavement is preferable.
- Decorative gravel ground cover tends to provide a reservoir for surface water and may hide areas of ponding or poor drainage. Decorative gravel is, therefore, not recommended and should not be utilized for landscaping unless equipped with a subsurface drainage system designed by a licensed landscape architect.
- Positive drainage devices, such as graded swales, paved ditches, and catch basins should be installed at appropriate locations within the area of proposed development.
- Concrete walks and flatwork should not obstruct the free flow of surface water to the appropriate drainage devices.
- Area drains should be recessed below grade to allow free flow of water into the drain. Concrete or brick flatwork joints should be sealed with mortar or flexible mastic.
- Gutter and downspout systems should be installed to capture all discharge from roof areas. Downspouts should discharge directly into a pipe or paved surface system to be conveyed offsite.
- Enclosed planters adjoining, or in close proximity to proposed structures, should be sealed at the bottom and provided with subsurface collection systems and outlet pipes.
- Depressed planters should be raised with soil to promote runoff (minimum drainage gradient two percent or five percent, see above), and/or equipped with area drains to eliminate ponding.
- Drainage outfall locations should be selected to avoid erosion of slopes and/or properly armored to prevent erosion of graded surfaces. No drainage should be directed over or towards adjoining slopes.
- All drainage devices should be maintained on a regular basis, including frequent observations during the rainy season to keep the drains free of leaves, soil and other debris.
- Landscape irrigation should conform to the recommendations of the landscape architect and should be performed judiciously to preclude either soaking or excessive drying of the foundation soils. This should entail regular watering during the drier portions of the year and little or no irrigation during the rainy season. Automatic sprinkler systems should, therefore, be switched to manual operation during the rainy season. Good irrigation practice typically requires frequent application of limited quantities of water that are sufficient to sustain plant growth, but do not excessively wet the soils. Ponding and/or run-off of irrigation water are indications of excessive watering.

Other provisions, as determined by the landscape architect or civil engineer, may also be appropriate.

Moisture Sensitive Subgrade Soils

The near-surface soils generally consist of moist to very moist silty sands and silty clays and will become unstable if exposed to significant moisture infiltration or disturbance by construction

traffic. If grading occurs during a period of relatively wet weather, an increase in subgrade instability should also be expected. The site should, therefore, be graded to prevent ponding of surface water and to prevent water from running into excavations.

As discussed in Section 6.3 of this report, unstable subgrade soils are likely to be encountered at the base of the overexcavations within the proposed building areas. The extent of unstable subgrade soils will to a large degree depend on methods used by the contractor to avoid adding additional moisture to these soils or disturbing soils which already possess high moisture contents. If grading occurs during a period of relatively wet weather, an increase in subgrade instability should also be expected. Due to the potential for subgrade instability, it is recommended that only tracked vehicles be utilized for grading or construction activities that require traffic over the exposed subgrade soils.

If the construction schedule dictates that site grading will occur during a period of wet weather, allowances should be made for costs and delays associated with drying the on-site soils or import of a drier, less moisture sensitive fill material. Grading during wet or cool weather may also increase the depth of overexcavation in the pad areas as well as the need for and/or the thickness of the crushed stone stabilization layer, discussed in Section 6.3 of this report.

Groundwater

The static groundwater table at this site is considered to exist at a depth of 23½± feet. Therefore, groundwater is not expected to impact excavations during grading or foundation construction activities.

6.5 Foundation Design and Construction

Based on the preceding grading recommendations, it is assumed that the new building pad will be underlain by new structural fill soils used to replace the artificial fill soils and the upper portion of the near-surface native alluvium. These structural fill soils are expected to extend to a depth of at least 3 feet below proposed foundation bearing grade. Based on this subsurface profile, the proposed building may be supported on conventional shallow foundations.

Shallow Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 2,500 lbs/ft^2.
- Minimum wall/column footing width: 14 inches/24 inches.
- Minimum longitudinal steel reinforcement within strip footings: Six (6) No. 5 rebars (3 top and 3 bottom) in strip footings, due to the presence of expansive soils.
- Minimum foundation embedment: 12 inches into suitable structural fill soils, and at least 18 inches below adjacent exterior grade. Interior column footings may be placed immediately beneath the floor slab.

- It is recommended that the perimeter building foundations be continuous across all exterior doorways. Any flatwork adjacent to the exterior doors should be doweled into the perimeter foundations in a manner determined by the structural engineer.

The allowable bearing pressures presented above may be increased by 1/3 when considering short duration seismic and wind loads. Additional rigidity may be necessary for structural considerations. The actual design of the foundations should be determined by the structural engineer.

Foundation Construction

The foundation subgrade soils should be evaluated at the time of overexcavation, as discussed in Section 6.3 of this report. It is further recommended that the foundation subgrade soils be evaluated by the geotechnical engineer immediately prior to steel or concrete placement. Within the new building area, soils suitable for direct foundation support should consist of newly placed structural fill, compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Any unsuitable materials should be removed to a depth of suitable bearing compacted structural fill or competent native alluvial soils, with the resulting excavations backfilled with compacted fill soils. As an alternative, lean concrete slurry (500 to 1,500 psi) may be used to backfill such isolated overexcavations.

The foundation subgrade soils should also be properly moisture conditioned to 2 to 4 percent of the Modified Proctor optimum, to a depth of at least 12 inches below bearing grade**. Since it is typically not feasible to increase the moisture content of the floor slab and foundation subgrade soils once rough grading has been completed, care should be taken to maintain the moisture content of the building pad subgrade soils throughout the construction process.**

Estimated Foundation Settlements

Post-construction total and differential settlements of shallow foundations designed and constructed in accordance with the previously presented recommendations are estimated to be less than 1.0 and 0.5 inches, respectively. Differential movements are expected to occur over a 30-foot span, thereby resulting in an angular distortion of less than 0.002 inches per inch.

Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slabs and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 250 lbs/ft^3
- Friction Coefficient: 0.25

These are allowable values, and include a factor of safety. When combining friction and passive resistance, the passive pressure component should be reduced by one-third. These values assume

that footings will be poured directly against compacted structural fill soils. The maximum allowable passive pressure is 2,500 lbs/ft^2.

6.6 Floor Slab Design and Construction

Subgrades which will support new floor slabs should be prepared in accordance with the recommendations contained in the ***Site Grading Recommendations*** section of this report. Based on the anticipated grading which will occur at this site, the floor of the new building may be constructed as a conventional slab-on-grade supported on newly placed structural fill soils, extending to a depth of at least 3 feet below finished pad grade. Based on geotechnical considerations, the floor slabs may be designed as follows:

- Minimum slab thickness: 5 inches.

- Minimum slab reinforcement: No. 4 bars at 16 inches on-center, in both directions, due to the presence of expansive soils at the site. The actual floor slab reinforcement should be determined by the structural engineer based on the imposed loading.

- Slab underlayment: If moisture sensitive floor coverings will be used or if vapor transmission into the area above the building slab is problematic, then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire area of the proposed slab. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as 15-mil Stego Wrap Vapor barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.

- Moisture condition the floor slab subgrade soils to 2 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.

- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slabs should be completed by the structural engineer to verify adequate thickness and reinforcement.

6.7 Exterior Flatwork Design and Construction

Subgrades which will support new exterior slabs-on-grade for sidewalks, patios, and other concrete flatwork, should be prepared in accordance with the recommendations contained in the ***Grading Recommendations*** section of this report. As noted previously, flatwork supported on the existing medium expansive soils will be subject to minor to moderate amounts of movement as the moisture content within the subgrade soils fluctuates. This movement may cause cracking or other distress within the flatwork. If additional protection against flatwork cracking is desired, consideration should be given to the placement of a 1- to 2-foot-thick layer of very low expansive structural fill beneath all flatwork sections. Assuming that the flatwork is supported on the existing soils, exterior slabs on grade may be designed as follows:

- Minimum slab thickness: 4½ inches due to the presence of medium expansive soils.
- Minimum slab reinforcement: No. 4 bars at 18 inches on center, in both directions, due to the presence of medium to highly expansive soils.
- The flatwork at building entry areas should be structurally connected to the perimeter foundation that is recommended to span across the door opening. This recommendation is designed to reduce the potential for differential movement at this joint.
- Moisture condition the flatwork subgrade soils to at least 2 to 4 percent above optimum moisture content, to a depth of at least 12 inches. Adequate moisture conditioning should be verified by the geotechnical engineer 24 hours prior to concrete placement.
- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.
- Control joints should be provided at a maximum spacing of 8 feet on center in two directions for slabs and at 6 feet on center for sidewalks. Control joints are intended to direct cracking. Minor cracking of exterior concrete slabs on grade should be expected.
- Where flatwork is immediately adjacent to landscape planters, a thickened edge should be utilized. This edge should extend to a depth of at least 12 inches and incorporate longitudinal reinforcement consisting of at least two No. 4 bars.
- Expansion or felt joints should be used at the interface of exterior slabs on grade and any fixed structures to permit relative movement.

These recommendations are contingent upon additional expansion index testing being conducted at the completion of rough grading, to verify the actual expansion potential of the flatwork subgrade soils

6.8 Retaining Wall Design and Construction

In addition to the proposed swimming pool, the proposed development may require some small retaining walls (less than 5± feet in height).

Retaining Wall Design Parameters

Based on the soil conditions encountered at the boring locations, the following parameters may be used in the design of new retaining walls for this site. **Some of the near-surface soils consist of medium expansive silty clays. These materials are not considered suitable for use as retaining wall backfill**. It is recommended that very low to non-expansive on-site sands and silty sands, or a select imported material, be used to backfill all retaining walls. These materials are recommended to possess an internal angle of friction of at least 30 degrees when compacted to 90 percent relative compaction.

If desired, SCG could provide design parameters for an alternative select backfill material behind the retaining walls. The use of select backfill material could result in lower lateral earth pressures. In order to use the design parameters for the imported select fill, this material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal. If select backfill material behind the retaining wall is desired, SCG should be contacted for supplementary recommendations.

RETAINING WALL DESIGN PARAMETERS

Design Parameter		**Soil Type**
		On-Site Silty Sands or Imported Material
Internal Friction Angle (ϕ)		30°
Unit Weight		130 lbs/ft^3
Equivalent Fluid Pressure:	Active Condition (level backfill)	43 lbs/ft^3
	Active Condition (2h:1v backfill)	70 lbs/ft^3
	At-Rest Condition (level backfill)	65 lbs/ft^3

Regardless of the backfill type, the walls should be designed using a soil-footing coefficient of friction of 0.25 and an equivalent passive pressure of 250 lbs/ft^3. The structural engineer should incorporate appropriate factors of safety in the design of the retaining walls.

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

Seismic Lateral Earth Pressures

In accordance with the 2019 CBC, any retaining walls more than 6 feet in height must be designed for seismic lateral earth pressures. The recommended seismic pressure distribution is triangular in shape, assumed to occur at the top of the wall, decreasing to 0 at the base of the wall. For a level backfill condition behind the top of the wall, the seismic lateral earth pressure is 35H lbs/ft^2, where H is the overall height of the wall. The seismic pressure distribution is based on the Mononobe-Okabe equation, utilizing a design acceleration of 0.571g. The 2019 CBC does not provide definitive guidance on determination of the design acceleration to be used in generating the seismic lateral earth pressure. In accordance with standard geotechnical practice, we have calculated the design acceleration as $^2/_3$ of the PGA_M.

Backfill Material

Retaining wall backfill soils should consist of very low expansive on-site soils or imported select structural fill possessing an expansion index less than 20. All backfill material placed within 3 feet of the back wall face should have a particle size no greater than 3 inches. The retaining wall backfill materials should be well graded.

It is recommended that a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls be used. If the drainage composite material is not covered by an impermeable surface, such as a structure or pavement, a 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils. The drainage composite should be separated from the backfill soils by a suitable geotextile, approved by the geotechnical engineer.

All retaining wall backfill should be placed and compacted under engineering-controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 2-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 10-foot on-center spacing. Alternatively, 4-inch diameter holes at an approximate 20-foot on-center spacing can be used for this type of drainage system. In addition, the weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.

- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be

wrapped in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system. The actual design of this type of system should be determined by the civil engineer to verify that the drainage system possesses the adequate capacity and slope for its intended use.

6.9 Pool Design and Construction

Pool Setback

The setback between the pool and a top of slope condition, or top of retaining wall, is to be equal to one-half the building footing setback distance discussed in Section 1808.7.3 of the 2019 CBC. It is recommended that the proposed swimming pool wall be designed such that it is capable of supporting the water in the pool without relying on the adjacent soils for lateral support.

Geotechnical Design Parameters

The following recommendation may be utilized in the swimming pool design, if applicable.

- Maximum, net allowable soil bearing pressure: 2,000 lbs/ft^2.
- Minimum pool shell thickness: 6 inches
- Swimming pool bond beam minimum longitudinal steel reinforcement: Four (4) No. 4 rebars (2 top and 2 bottom)
- The pool bottom should be founded in competent native materials, which have been evaluated by the geotechnical engineer, or newly placed engineered fill.
- Passive Earth Pressure: 220 lbs/ft^3
- Friction Coefficient: 0.25

These are allowable values, and include a factor of safety. When combining friction and passive resistance, the passive pressure component should be reduced by one-third. These values assume that footings will be poured directly against compacted structural fill. The maximum allowable passive pressure is 2000 lbs/ft^2. The actual design of the swimming pool should be completed by the structural engineer.

Pool Wall Design and Construction

The design of the pool shell should include an analysis to verify that the pool walls can support the loads of the surcharging soils when empty.

The following parameters may be used in the design of new pool walls for this site. We have provided parameters assuming the use of on-site soils for retaining wall backfill. The on-site soils generally consist silty sands, silty clays and clayey sands. Based on the results of laboratory testing, these materials possess a friction angle of at least 27 degrees.

POOL WALL DESIGN PARAMETERS

Design Parameter	Soil Type
	On-Site Sandy Silts, Silty Clays and Sandy Clays
Internal Friction Angle (ϕ)	27°
Unit Weight	125 lbs/ft^3
Equivalent Fluid Pressure: At-Rest Condition (level backfill)	88 lbs/ft^3

6.10 Pavement Design Parameters

Site preparation in the pavement area should be completed as previously recommended in the ***Site Grading Recommendations*** section of this report. The subsequent pavement recommendations assume proper drainage and construction monitoring and are based on either PCA or CALTRANS design parameters for a twenty (20) year design period. However, these designs also assume a routine pavement maintenance program to obtain the anticipated 20-year pavement service life.

Pavement Subgrades

It is anticipated that the new pavements will be supported on the existing soils that have been scarified, moisture conditioned, and recompacted. These materials generally consist of silty sands and silty clays. These materials are expected to exhibit poor pavement support characteristics, with estimated R-values of 15 to 25. Since R-value testing was not included in the scope of services for the current project, the subsequent pavement designs are based upon a conservatively assumed R-value of 15. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering controlled conditions.

Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20-year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
4.0	0
5.0	1
6.0	3

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R = 15)			
Materials	**Thickness (inches)**		
	Auto Parking (TI = 4.0)	Auto Drive Lanes (TI = 5.0)	Light Truck Traffic (TI = 6.0)
Asphalt Concrete	3	3	3½
Aggregate Base	6	9	11
Compacted Subgrade	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the Marshall maximum density, as determined by ASTM D-2726. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

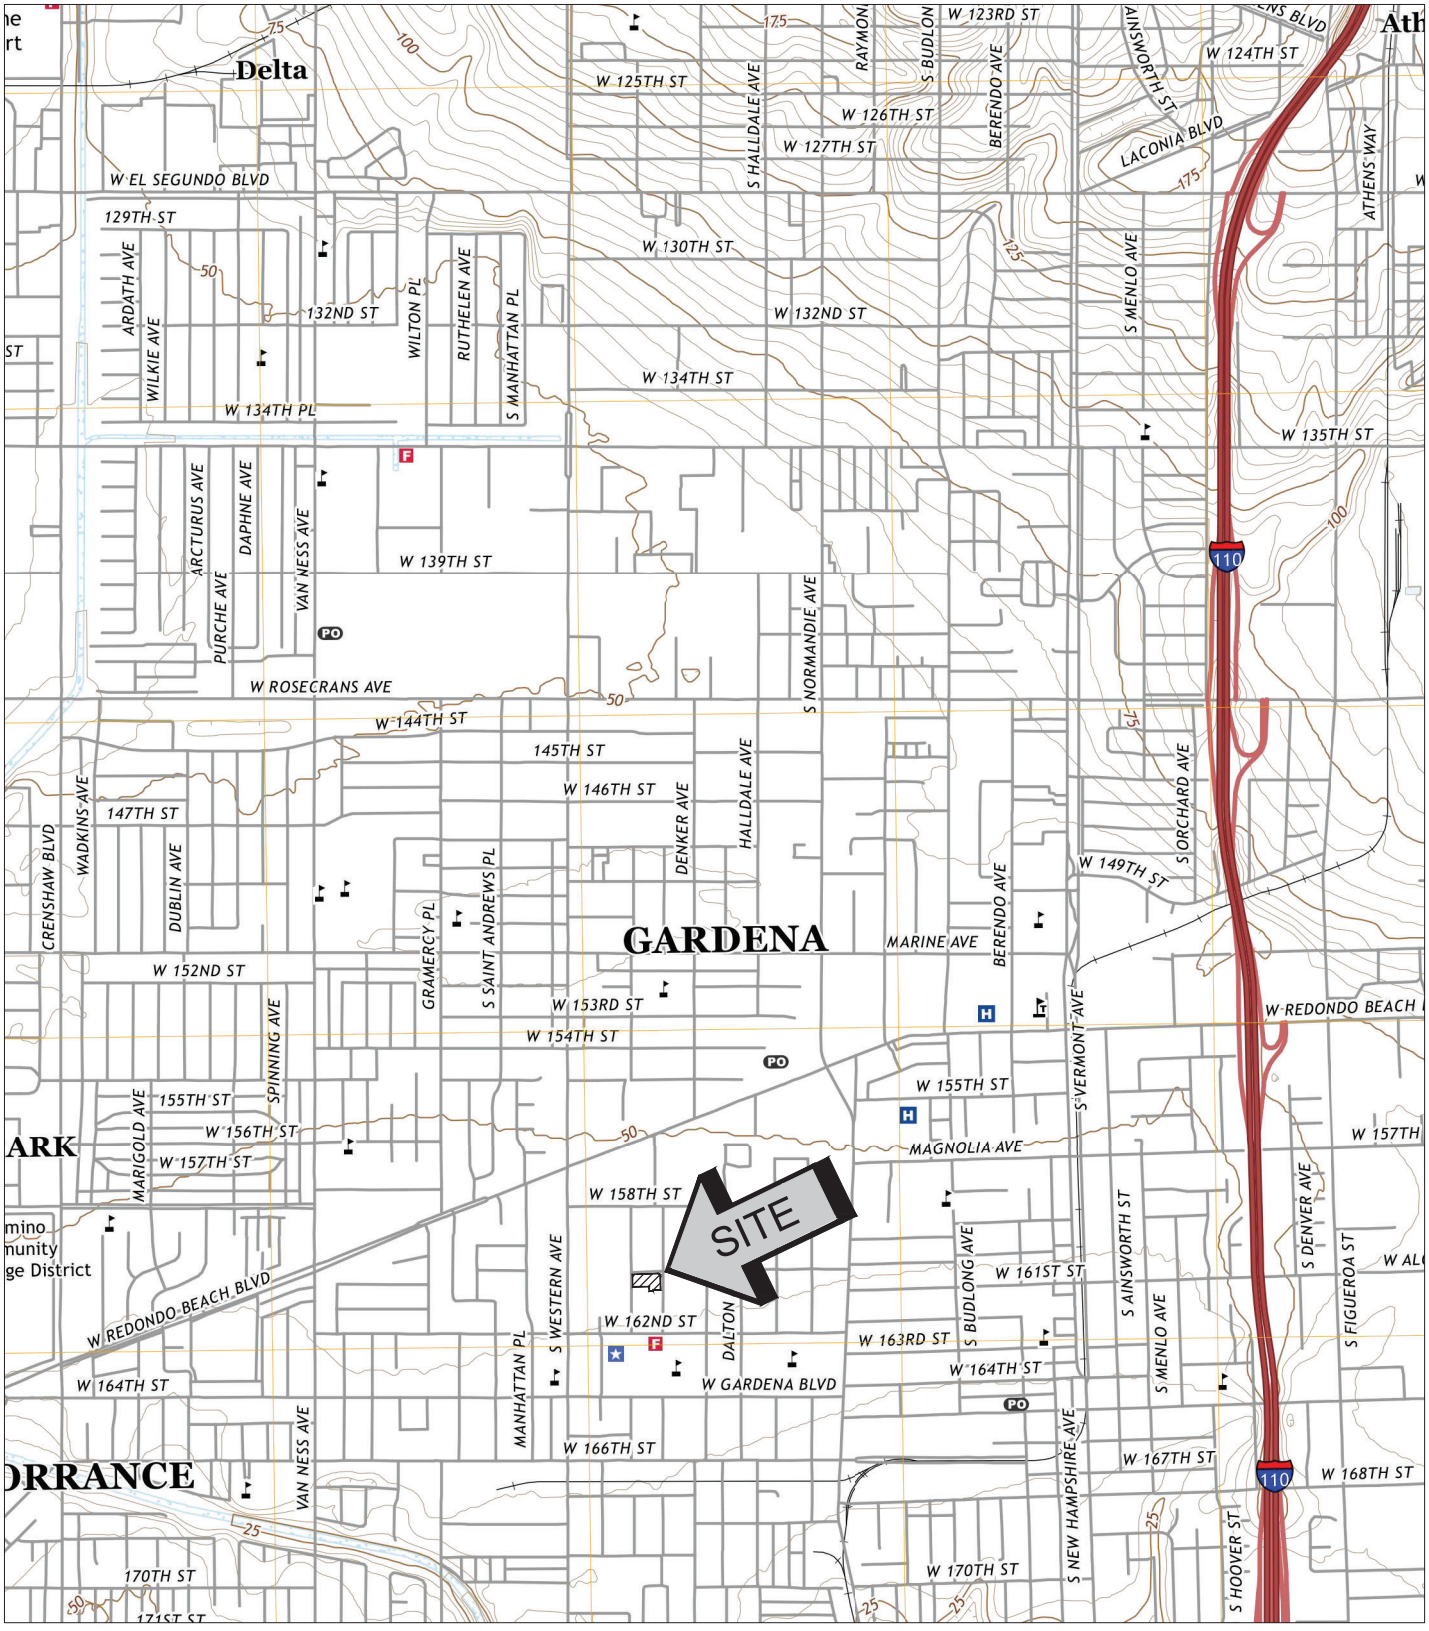
Portland Cement Concrete

The preparation of the subgrade soils within Portland cement concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R = 15)			
Materials	**Thickness (inches)**		
	Automobile Parking and Drive Areas (TI = 4.0 to 5.0)	Truck Traffic Areas (TI =6.0)	Fire Lane (TI = 6.5)
PCC	5	5½	6
Compacted Subgrade (95% minimum compaction)	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. Reinforcing within all pavements should be designed by the structural engineer. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness. The actual joint spacing and reinforcing of the Portland cement concrete pavements should be determined by the structural engineer.

7.0 GENERAL COMMENTS



This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

APPENDIX B

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

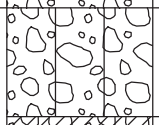
BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

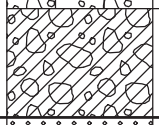
POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

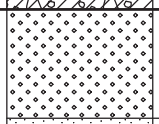
GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

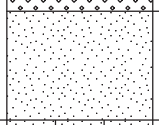
DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

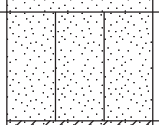
MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

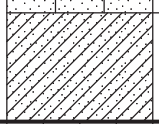


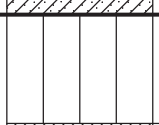


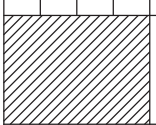


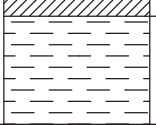


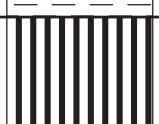


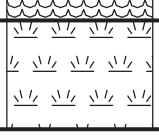












LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

APPENDIX D

GRADING GUIDE SPECIFICATIONS

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.

- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.

- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.

- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.

- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.

- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.

- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.

- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.

- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.

- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.

- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted

- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as "contaminated," and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.

- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.

- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.

- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:

    - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.

    - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.

- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.

- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.

- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.

- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.

- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.

- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.

- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.

- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.

- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.

- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.

- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.

- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core

- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.

- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.

- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).

- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.

- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

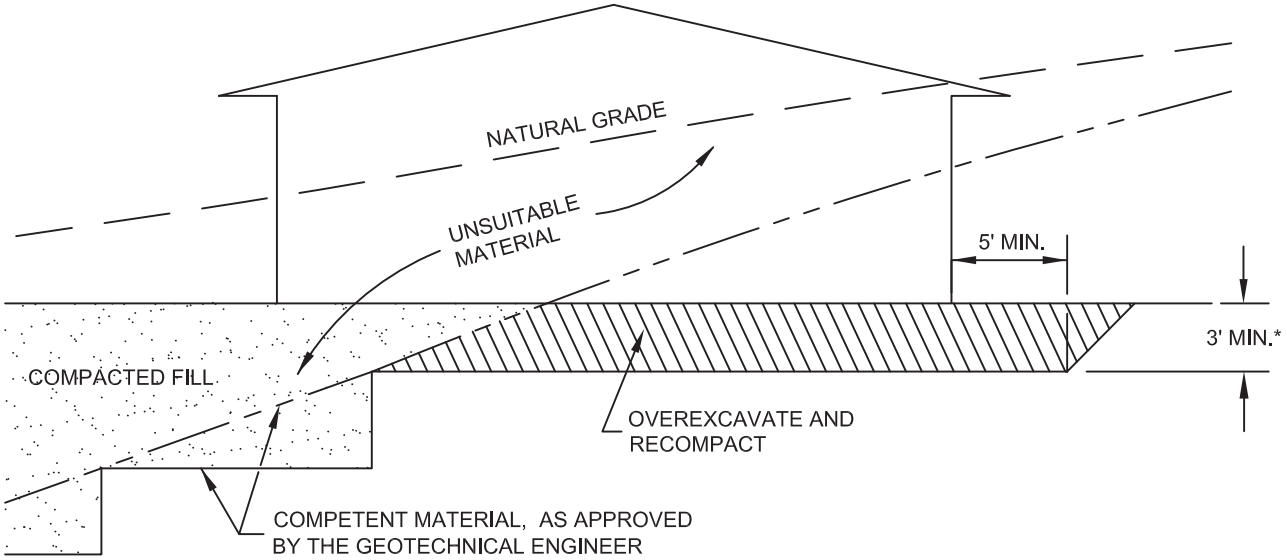
Cut Slopes

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.

- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.

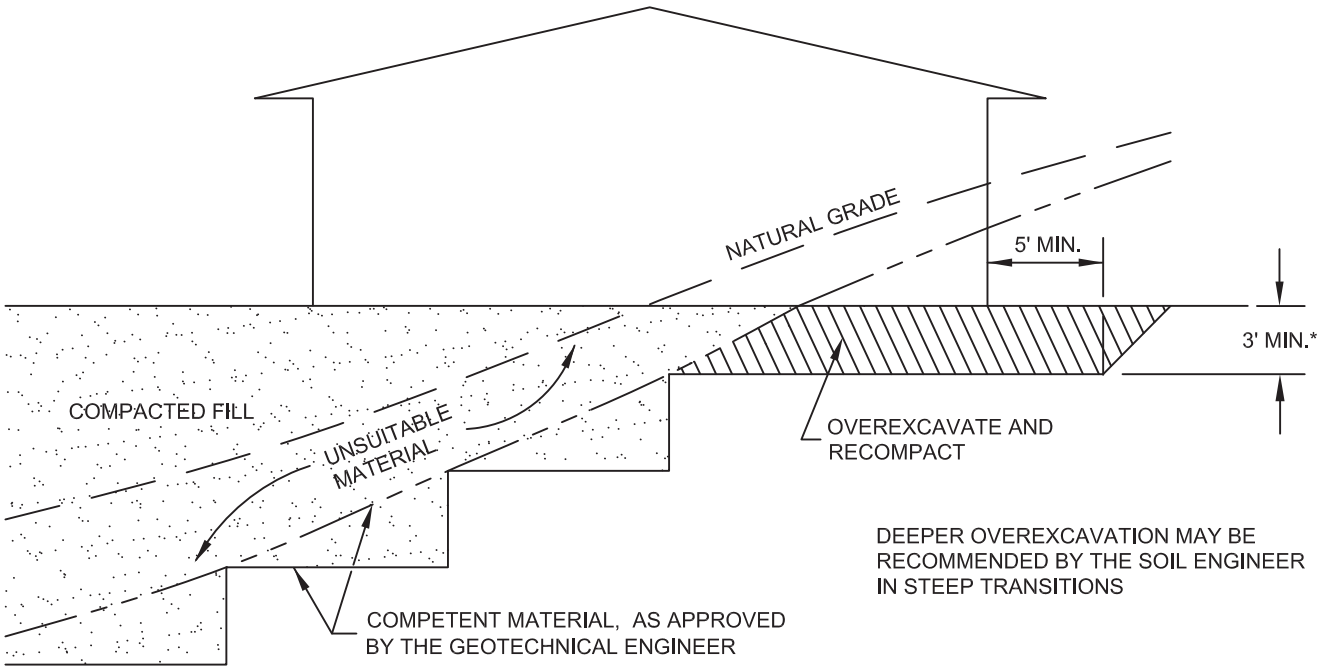
- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.



Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.



- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.

- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean ¾-inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

SOILS INFILTRATION TESTING REPORT

November 19, 2021

SOUTHERN CALIFORNIA GEOTECHNICAL
A California Corporation

RJM Design Group
31591 Camino Capistrano
San Juan Capistrano, California 92675

Attention: Mr. Eric Chastain, LLA
Principal, Landscape Architect

Project No.: **21G242-2**

Subject: **Results of Infiltration Testing**
Proposed Community Aquatic and Senior Center
1654 West 160th Street
Gardena, California

Reference: Geotechnical Investigation, Proposed Community Aquatic and Senior Center, 1654 West 160th Street, Gardena, California, prepared by Southern California Geotechnical, Inc. (SCG) for RJM Design Group, SCG project No. 21G242-1, dated November 19, 2021.

Mr. Chastain:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

Scope of Services

The scope of services performed for this project was in general accordance with our Proposal No. 21P336, dated July 28, 2021. The scope of services included site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the on-site soils. The infiltration testing was performed in general accordance with the Guidelines for Geotechnical Investigation and Reporting – Low Impact Development Stormwater Infiltration (GS200.1), prepared by Los Angeles County, Department of Public Works, Geotechnical and Materials Engineering Division, dated June 30, 2021.

Site and Project Description

The site is located at the street address of 1654 West 160th Street in Gardena, California. The site is bounded to the north by 160th Street, to the west by Harvard Boulevard, to the south by residential fourplexes and the Gardena Gymnasium, and to the east by La Salle Avenue. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The site consists of multiple rectangular-shaped lots which total 0.9± acres in size. The lots are currently developed with the Primm Memorial Pool and two residential fourplexes with two detached garage structures. The existing structures range from 900 to 2,500± ft² in size. Several of the buildings share common walls. The majority of these buildings are one- to two-

story structures of wood frame and stucco construction, and are presumed to be supported on conventional shallow foundations with raised wood floors. The buildings are generally surrounded by Portland cement concrete (PCC) pavements which are in poor to fair condition, with moderate to severe cracking throughout. Turf grass and a few trees surround the buildings.

Detailed topographic information was not available at the time of this report. Based on elevations obtained from Google Earth, and visual observations made at the time of the subsurface investigation, the overall site topography is relatively flat.

Proposed Development

A preliminary conceptual site plan for the proposed development was provided to our office by the client. Based on the information provided by the client, demolition of the existing buildings, pool and pavements will be necessary to construct new development. The new development, identified as the Community Aquatics and Senior Center, will include a new L-shaped building, a 25-yard competition pool with a diving area, an activity pool, hardscape pathways, and new landscaping areas. The proposed swimming pool is expected to be 8 to 12± feet deep.

The proposed development will include on-site infiltration to dispose of storm water. We understand that the infiltration system will consists of a below-grade chamber system located in the western region of the site. The bottom of the chamber system is expected to be located at a depth of 10± feet below existing site grades.

Concurrent Study

Southern California Geotechnical, Inc. (SCG) concurrently performed a geotechnical investigation at the subject site, referenced above. As part of this investigation, SCG performed a total of four (4) borings advanced to depths of 20 to 25± feet below the existing site grades.

All of the borings were drilled through existing concrete slab areas. At Boring Nos. B-1 and B-2, the slabs consist of 3 and 3½± inches of Portland cement concrete (PCC) pavements with no reinforcement. At Boring Nos. B-3 and B-4, the slabs consist of 5± inches of PCC, reinforced with welded wire mesh. Artificial fill soils were encountered beneath the pavements at all of the boring locations. The fill soils generally consist of loose to medium dense silty fine sands and fine sandy silts, and stiff to very stiff silty clays, extending to depths of 2½± to 8± feet below the existing site grades. The fill soils possess a disturbed, mottled appearance, resulting in their classification as artificial fill. Native alluvium was encountered below the fill soils at all of the boring locations, extending to at least the maximum depth explored of 25± feet below existing site grades. The alluvium generally consists of loose to medium dense silty fine sands, clayey fine sands and fine sandy silts, and medium stiff to very stiff silty clays and clayey silts.

Groundwater

Free water was encountered during drilling at Boring Nos. B-3 and B-4 at a depth of about 23½± feet below ground surface. No delayed readings were performed at the boring locations due to caving within the open boreholes after the augers were withdrawn. Based on the moisture contents of the recovered soil samples and the observations made at the time of

drilling, the static groundwater table is considered to have existed at a depth of 23½± feet below existing site grades, at the time of the subsurface investigation.

Subsurface Exploration

Scope of Exploration

The subsurface exploration for the infiltration testing consisted of two (2) infiltration test borings advanced to a depth of 10± feet below the existing site grades. The borings were logged during drilling by a member of our staff and were advanced using a limited access drilling rig, equipped with 7-inch-diameter hollow stem augers. The approximate locations of the infiltration test borings (identified as I-1 and I-2) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Upon the completion of the infiltration borings, the bottom of each test boring was covered with 2± inches of clean ¾-inch gravel. A sufficient length of 3-inch-diameter perforated PVC casing was then placed into each test hole so that the PVC casing extended from the bottom of the test hole to the ground surface. Clean ¾-inch gravel was then installed in the annulus surrounding the PVC casing.

Geotechnical Conditions

Artificial fill soils were encountered at the ground surface at both of the boring locations, extending to a depth of 5± feet below the existing site grades. The fill soils generally consist of very stiff silty clays and sandy clays. Native alluvial soils were encountered beneath the fill soils at both of the infiltration boring locations, extending to at least the maximum depth explored of 10± feet below ground surface. The native alluvial soils consist of medium dense silty sands with little clay and medium dense clayey sands and stiff sandy clays. The Boring Logs, which illustrate the conditions encountered at the infiltration test locations, are included with this report.

Groundwater

Free water was not encountered during the drilling of any of the infiltration borings. Based on the moisture content of the recovered soil samples and the lack of free water in the borings, the static groundwater table exists at a depth greater than the maximum explored depth of 10± feet below existing site grades.

As part of our research, we reviewed available groundwater data in order to determine the historic high groundwater level for the site. The primary reference used to determine the historic groundwater depths in the area of the subject site is CGS Seismic Hazard Zone Report, Open File Report 98-18, Plate 1.3 for the Inglewood 7.5 Minute Quadrangle, which indicates that the historic high groundwater level for the site was 25± feet below the ground surface.

Infiltration Testing

As previously mentioned, the infiltration testing was performed in general accordance with the guidelines published by the County of Los Angeles – Department of Public Works Geotechnical

and Materials Engineering Division, titled Guidelines for Design, Investigation, and Reporting Low Impact Development Stormwater Infiltration, GS200.1.

Pre-soaking

Both of the infiltration test borings were pre-soaked for at least 1 hour to ensure the sand around the annulus of the perforated pipe was fully saturated. The pre-soaking procedure consisted of filling each test boring with clean potable water to an elevation of at least 12± inches above the bottom of each test boring. In accordance with the Los Angeles County guidelines, since the water in both of the infiltration test borings did not completely infiltrate within a 30-minute time period after filling each boring, a falling head test was the appropriate test method.

Infiltration Testing Procedure

After the completion of the pre-soaking process, SCG performed the infiltration testing. A sufficient amount of water was added to the test borings so that the water level was approximately 12± inches higher than the bottom of the borings and less than or equal to the water level used during the pre-soaking process. Readings were taken at 30-minute intervals at all of the infiltration test locations. A stabilized rate of drop, where the highest and lowest readings from three consecutive readings are within 10 percent of each other, was obtained for each of the test borings. These water level readings are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.

The infiltration rates for the tests are tabulated in inches per hour. In accordance with the typically accepted practice, it is recommended that the most conservative reading from the latter part of the infiltration tests be used for design. These rates are summarized below:

Infiltration Test No.	Depth (feet)	Soil Description	Measured Infiltration Rate (inches/hour)
I-1	10	Light Brown Silty fine Sand, little Clay, trace medium Sand	0.9
I-2	10	Brown Clayey fine Sand to fine Sandy Clay, trace medium Sand	0.9

Laboratory Testing

Moisture Content

The moisture contents for selected soil samples from the trenches were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Grain Size Analysis

The grain size distribution of selected soils collected from the base of each infiltration test trench has been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of the grainsize analysis are presented on Plates C-1 and C-2 of this report.

Design Recommendations

Two (2) infiltration tests were performed at the subject site. As noted above, the measured infiltration rates at the infiltration test locations are 0.9 inches per hour. The Guidelines for Geotechnical Investigation and Reporting Low Impact Development Stormwater Infiltration, GS200.1 prepared by the County of Los Angeles, Department of Public Works, Geotechnical and Materials Division (GMED) on June 30, 2021 dictate that a reduction factor be utilized in the design infiltration rate. The following reduction factors are considered in the design infiltration rate:

Reduction Factor	
Small Diameter Boring	$RF_t = 1$
Site Variability, number of tests, and thoroughness of subsurface investigation	$RF_v = 1$
Long-term siltation plugging and maintenance	$RF_v = 1$
Total Reduction Factor, $RF = RF_t + RF_v + RF_v$	$RF = 3$
Design Infiltration Rate (DIR) = Measured Infiltration Rate (MIR)/RF	**DIR = 0.3**

Based on the results of the infiltration testing and reduction factors, we recommend an infiltration rate of **0.3 inches per hour** be used for the proposed infiltration system located in the western area of the subject site. The major factor affecting the lack of infiltration at these locations is the presence of very fine-grained soils.

The design of the proposed storm water infiltration systems should be performed by the project civil engineer, in accordance with the City of Gardena/County of Los Angeles guidelines. However, it is recommended that the system be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the systems. The presence of such materials would decrease the effective infiltration rates. **It is recommended that the project civil engineer apply an appropriate factor of safety. The infiltration rates recommended above are based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rates.** It should be noted that the recommended infiltration rates are based on infiltration testing at two (2) discrete locations and the overall infiltration rates of the storm water infiltration systems could vary considerably.

Infiltration Rate Considerations

The infiltration rates presented herein were determined in accordance with the Los Angeles County guidelines and are considered valid only for the time and place of the actual test. Varying subsurface conditions will exist in other areas of the site, which could alter the recommended infiltration rates

presented above. The infiltration rates will decline over time between maintenance cycles as silt or clay particles accumulate on the BMP surface. The infiltration rate is highly dependent upon a number of factors, including density, silt and clay content, grainsize distribution throughout the range of particle sizes, and particle shape. Small changes in these factors can cause large changes in the infiltration rates.

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil permeability. Changes in soil moisture content will affect the infiltration rate. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

Construction Considerations

The infiltration rates presented in this report are specific to the tested locations and tested depths. Infiltration rates can be significantly reduced if the soils are exposed to excessive disturbance or compaction during construction. Compaction of the soils at the bottom of the infiltration system can significantly reduce the infiltration ability of the basins. Therefore, the subgrade soils within proposed infiltration system areas should not be over-excavated, undercut or compacted in any significant manner. **It is recommended that a note to this effect be added to the project plans and/or specifications.**

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration systems to identify the soil classification at the base of each system. It should be confirmed that the soils at the base of the proposed infiltration systems correspond with those presented in this report to ensure that the performance of the systems will be consistent with the rates reported herein.

We recommend that scrapers and other rubber-tired heavy equipment not be operated on the basin bottom, or at levels lower than 2 feet above the bottom of the system, particularly within basins. As such, the bottom 24 inches of the infiltration systems should be excavated with non-rubber-tired equipment, such as excavators.

Location of Infiltration Systems

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Overlying structures and pavements in the infiltration area could potentially be damaged due to saturation of the subgrade soils. **The proposed infiltration systems for this site should be located at least 25 feet away from any structures, including retaining walls.** Even with this provision of locating the infiltration system at least 25 feet from the building(s), it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed or existing structures. It should also be noted that utility trenches which happen to collect storm water can also serve as conduits to transmit storm water toward the structure, depending on the slope of the utility trench. Therefore,

consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration system.

The infiltration system designer should also give special consideration to the effect that the proposed infiltration systems may have on nearby subterranean structures, open excavations, or descending slopes. In particular, infiltration systems should not be located near the crest of descending slopes, particularly where the slopes are comprised of granular soils. Such systems will require specialized design and analysis to evaluate the potential for slope instability, piping failures and other phenomena that typically apply to earthen dam design. This type of analysis is beyond the scope of this infiltration test report, but these factors should be considered by the infiltration system designer when locating the infiltration systems.

General Comments

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rates contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between trench locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted. The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

Closure

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

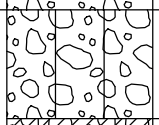
BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

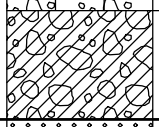
POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

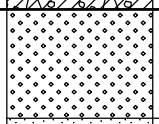
GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

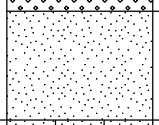
DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

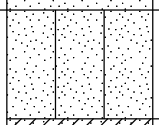
MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

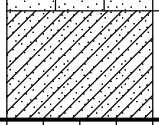


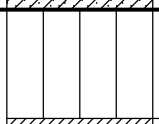


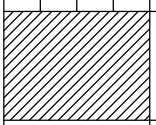


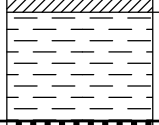


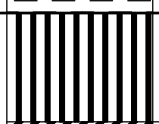


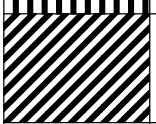


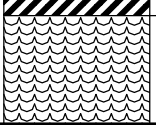


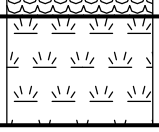












LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

WARNING
THE EXCAVATOR MUST TAKE ALL STEPS NECESSARY TO AVOID CONTACT WITH UNDERGROUND FACILITIES WHICH MAY RESULT IN INJURY TO PERSONS OR DAMAGE TO FACILITIES IN THE AREA. THE INDICATED LOCATIONS OF EDISON UNDERGROUND FACILITIES, AS PROVIDED, ARE BELIEVED TO BE ACCURATE, HOWEVER, THE FINAL DETERMINATION OF EXACT LOCATIONS AND THE COST OF REPAIR TO DAMAGED FACILITIES IS THE RESPONSIBILITY OF THE EXCAVATOR.

CONSTRUCTION NOTES:

Unless otherwise specified on the working drawing which forms a part of the specification, the Contractor/Developer shall furnish the following items at no cost to the Edison Company.

Southern California Edison Company has attempted to correctly show all existing utilities and substructures in the vicinity of the work, but does not guarantee there are no other substructures in the area.
Failure of SCE to show all substructures in their correct location will not be a basis for a claim for extra work, and the contractor shall be responsible for all damages to substructures whether shown or not.

1. FOR GENERAL SPECIFICATIONS SEE UGS GI 001.

2. CONDUIT:
   a. Minimum cover in street or parkway is 30" below gutter grade, unless noted otherwise.
   b. Minimum cover on private property is 30" below finished grade, unless noted otherwise.
   c. Contractor is to furnish and install approved conduit to Edison specifications per UGS CD 100.1, 110 AND 120.
   d. For the type of conduit for this job, See UGS CD 110.1.
   e. Install all risers per UGS CD 195, 185, 162 and 170.
   f. Cap all mainline conduits per UGS CD 148 and service conduits per UGS CD 150.
   g. Install blank conduit plugs in all conduits terminating into Vaults, Manhole's, PMH's, SCE's & all cap locations, per UGS CD 180.1 & UGS CD 180.2
   h. Install pull rope in all conduit runs. Pull rope to be at least 3/8" polypropylene rope, braided or twisted. For specifications, approved makes, and suppliers, see UGS GI 040.
   i. All conduit must be manshined with the approved mandrel UGS CD 197.

3. CONDUIT RADIUS REQUIREMENTS:
   a: The minimum radius for bends are:
      36" for conduits 3" in diameter or smaller
      48" for conduits 4" and 5" in diameter
      60" for 6" diameter conduit
   b: The minimum radius for all sweeps of all mainline conduits is 12'-6" (unless noted otherwise).

4. EXCAVATION AND BACKFILL:
   a. Work area shall be cleared and rough graded to within four inches of final grade prior to installation of Edison conduit or structures.
   b. All excavations shall be in accordance with the California State Construction Safety Orders (when applicable), Edison specifications, and all governing local ordinances.
   c. Each trench to be a uniform depth below final grade prior to installation of Edison conduit or structures.
   d. Backfill shall be provided by the contractor for all excavations and shall include crushed rock, concrete, slurry or native backfill as required.
   e. Backfill with a MINIMUM of one sack per yard sand cement slurry around and over vaults and manholes per UGS GI 020, section 6.4 and around PMH's within one foot of finished grade, per UGS SS 590.1.
   f. Backfill, per Edison specifications, shall immediately follow conduit or substructure installation. At no time shall conduit be left exposed over 24 hours.
   g. No rocks are allowed within 12 inches of direct-buried cables or any conduit without concrete encasement. Native backfill capable of passing through a one-half inch mesh screen shall be considered to be "rock free". If existing backfill does not pass through a 1/2" screen, place sand 6" below and 12" above Edison cables. After this point, no rocks larger than 12" diameter are permitted.
   h. All backfill shall be compacted to meet or exceed local ordinances or other requirements. It shall be placed in a manner that will not damage the conduit or substructure or allow future subsidence of the trench or structures.

5. PAVING:
   Repaving, where required, shall be placed in such a manner that interference with traffic, including pedestrian traffic, will be kept to a minimum. The Contractor shall establish a program of repaving acceptable to the Municipal(s), County, or other authority having jurisdiction and which is acceptable to Edison.

6. STRUCTURES:
   a. All substructures shall be constructed or installed to Edison specifications.
   b. Install protection barriers per UGS MS 830 when required in areas exposed to traffic, per Edison inspector.
   c. All conduit lines and concrete floored substructures shall be water tight.
   d. All grounding materials shall be furnished and installed by the Contractor.

7. RETAINING WALLS:
   When required, retaining walls shall be provided by the Developer. Walls are required wherever grade rises more than 18 inches above the structure or 24" above the pad surface at a distance of 5 feet from the same, or in areas subject to erosion. Design and installation must comply with local building ordinances.
   Refer to Edison inspector for typical space requirements.

8. PERMITS:
   All permits necessary for excavation shall be provided by the Contractor/Developer.

9. ACCESS:
   Heavy truck access shall be maintained to equipment locations. Structures must be clear of all appurtenances that would obstruct the loading or unloading of equipment.

10. SERVICES:
    a. Meters and services shall comply with Edison Electrical Services Requirements.
    b. Wiring must be in accordance with applicable local ordinances and approved by local Inspection Authorities.

11. LOCATION:
    a. The location of excavations and structures for Edison shall be as shown on the working drawing. No deviation from the planned locations will be permitted unless approved by the Edison Inspector. See UGS GI 001, section 2.2.
    b. Actual location of obstructions, storm drains, and/or other foreign utilities to be the responsibility of the Contractor. See UGS GI 001, section 2.3.

12. Contractor is to verify location and widths of all sidewalks and driveways prior to street light installation. See UGS CD 175.1, UGS CD 175.2 and UGS CD 175.3.

13. SURVEY:
    Surveying of street improvements, property corners, lot lines, finished grade, etc., necessary for the installation of underground facilities must be completed and markers or stakes placed prior to the start of the installation. In addition, Developer shall maintain the markers during the installation and inspection by Edison. Grade and property line stakes must show any offset measurements.

14. COORDINATION AND SUPERVISION:
    The Developer shall provide supervision over and coordination among the various contractors working within the development in order to prevent damage to Edison facilities. He is responsible for the cost of repairs, replacement, relocation, or other corrections to Edison facilities made necessary by his failure to provide supervision or to otherwise comply with these specifications.

15. TELEPHONE AND OTHER UTILITY REQUIREMENTS:
    The drawing prepared for this job may also cover the facilities to be installed for the telephone company and/or other utility. Any questions concerning details of their installation should be referred to the company concerned.

16. OWNERSHIP:
    Developer is to deed to the Edison Company all structures shown hereon except those shown as customer owned.

17. WARRANTY:
    Applicants expressly represent and warrant that all work performed and all material used in meeting Applicants' obligations herein are free from defects in workmanship and are in conformity with Southern California Edison Company's requirements. This warranty shall commence upon receipt by Applicants of Company's final acceptance and shall expire one year from that date. Applicants agree to promptly correct to the Company's satisfaction and that of any governmental agency having jurisdiction and at Applicant's expense any breach of this warranty which may become apparent through inspection or operation of underground electric system by Company during this warranty period.

18. INSPECTION:
    Inspection is required during the construction period. A 48 hour advance notice of intent to start construction is required from the contractor to the Southern California Edison Company. Standards of Edison construction requirements are available upon request.

Duct and Structure Inspector: RON WHITTAKER Phone: 310-710-9606
Cabling Construction Coordinator: Phone:

D25: Rev. 07/21/16

CONNECTING TO EXISTING SCE STRUCTURES

- Per SCE requirements, customers are not allowed to enter, intercept or tie-in to existing SCE facilities; e.g. structures, equipment, multi-conduit runs/banks, or conductors. These facilities may be energized and the work will only be performed by SCE. Contact the appropriate SCE Inspector to schedule an appointment. Customers may connect to an existing conduit stub without a SCE Inspector present.
- Multi-conduit runs/banks are runs of conduit in close proximity to each other and other SCE facilities. A conduit stub is a single empty conduit stub that is not in close proximity to other SCE owned facilities. Refer to the work order map for details.
- Per OPUC/SCE's Rule 15 B.1.A and Rule 16 D.1.A., the customer will provide all necessary excavations (with the exception of excavation under pads and primary splice boxes), material (including conduit and structures) and encasement, to be utilized in the intercept/tie-in process.
- The customer must adhere to all applicable Cal-OSHA, local, city, state and federal regulations, (including, but not limited to, all necessary shoring and traffic control in place to perform the intercept/tie-in work by SCE's underground civil contractor(s)).
- Intercept/tie-in work must be coordinated with SCE's civil contractors through the Division Inspector/I-Spec to limit exposure of excavation(s). Customer is responsible for securing excavation(s).

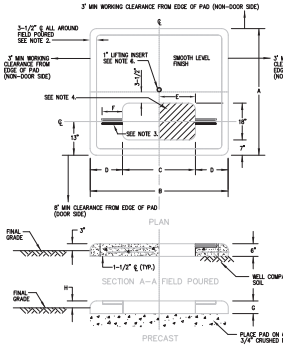
PAD FOR SURFACE-MOUNTED TRANSFORMER
SEE UGS SS 504



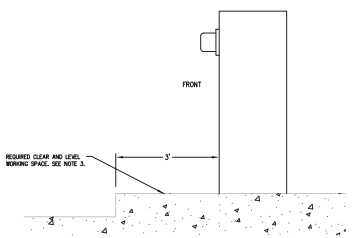


TABLE SS 504-1: Surface-Mounted Transformer Pads-Dimensions

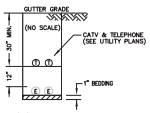
Transformer	Pad Dimensions (in)								Weight (lb)	SAP
	A	B	C	D	E	F	G	H		
1ø 25 KVA-167 KVA 3ø 75 KVA-500 KVA SW and Fuse	54	48	26	11	12	6	4	2	750	10118012
3ø	72	94	50	22	22	14	6	3	3,200	10118013

Note(s):
1. Concrete to be 3,000 psi (minimum) at 28 days.
2. Reinforcing steel to be No. 4 bars installed in a double net. Perimeter bars to be continuous (8" minimum lap or weld).
3. Hold-down brackets to be H-3200 series unistrut (or equal).
4. Primary cables must be installed in shaded area of drawing above as far to the right as possible on single phase transformers only. On three-phase transformers primary cables must be installed in the unshaded area of drawing above as far left as possible.
5. See AC 701 for pad-mounted transformer/capacitor grounding requirements and AC 703 for approved grounding materials.
6. 1-inch listing insert to be located at center of gravity on precast pads.
7. See SS 500 for approved manufacturers.
8. The three-phase transformer shall only be used on a pad when four or fewer services are to be installed. A slab box should be used when more than four services will be installed.
9. Use a thin layer of redi-crete (or equivalent) for rodent and weed control or where transformer does not fully cover opening in pad.
10. A 17" x 30" x 15" plastic handhole (SAP 10117726) shall be inverted and installed under the cable opening of the pad. This will provide adequate cable slack for operation of the load-break elbows on single phase transformers only.

D43: Rev. 10/26/20

PANEL CLEARANCE
UNDERGROUND SERVICE CONNECTIONS 0-600 VOLTS
SEE ESR 3-16

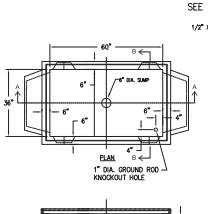


NOTES:
1. A MINIMUM OF THREE (3) FEET OF CLEAR, LEVEL WORK SPACE IS REQUIRED IN FRONT OF ALL TERMINATION, METERING, AND SERVICE EQUIPMENT.
2. SEE ESR-5 FOR METER-MOUNTING HEIGHT REQUIREMENTS. METER MOUNTING HEIGHT WILL BE MEASURED FROM THE STANDING AND WORKING SPACE TO THE CENTERLINE OF THE METER(S).
3. WHEN SERVICE EQUIPMENT IS INSTALLED ON AN ELEVATED PORTION OF THE FLOOR/GROUND, OR HOUSEKEEPING PAD, THE PAD SHALL BE FLUSH WITH AND EXTEND A MINIMUM OF THREE (3) FEET. THIS IS MEASURED FROM THE FRONT OF THE SERVICE EQUIPMENT OR THE OUTER DOOR(S) OF THE SWITCHBOARD NEMA 3R ENCLOSURE WHEN INSTALLED. IN NO CASE SHALL THE MAXIMUM METER HEIGHT OF SIX (6) FEET THREE (3) INCHES BE EXCEEDED.
4. TO MAINTAIN A SAFE, CLEAR, AND LEVEL WORKING AREA IN FRONT OF NEW OR EXISTING METER AND SERVICE EQUIPMENT, A CONCRETE SLAB OR OTHER SUITABLE PERMANENT HARD SURFACE, ACCEPTABLE TO THE COMPANY, MUST BE USED.
5. FOR SWITCHBOARDS ABOVE 600V, FIVE-FOOT MINIMUM OF CLEAR AND LEVEL STANDING AND WORKING SPACE IS REQUIRED IN THE FRONT, REAR, AND SIDE OF ANY SECTION WHERE SUCH PART SUPPORTS OR PROVIDES ACCESS TO METERING, TESTING EQUIPMENT, OR SERVICE CABLE TERMINATION SECTIONS.

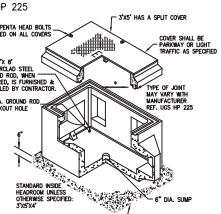
16.12 PROTECTIVE BARRIERS FOR SERVICE EQUIPMENT
BARRIER POSTS ARE USED TO PROTECT THE METER AND SERVICE EQUIPMENT, AS WELL AS PERSONNEL, FROM VEHICULAR CONTACT, AND TO PREVENT ENCROACHMENT INTO THE WORKING SPACE. (FOR EXAMPLE: LOADING ZONES, DRIVEWAYS, CONCRETED AREAS, OFF STREET PARKING, AND SO ON). THE CUSTOMER SHALL PROVIDE AND INSTALL "NON-REMOVABLE" BARRIERS TO PROVIDE THE PROPER SAFE WORKING CLEARANCES WHERE THE WORKSPACE IS EXPOSED TO VEHICULAR OR OTHER HAZARDOUS CONDITIONS. METERS WILL NOT BE SET UNTIL THE BARRIERS HAVE BEEN INSTALLED.

D99: 10/26/20

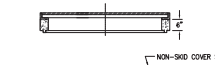
TYPICAL CONDUIT SECTION
JOINT WITH CATV & TELE
SEE UGS CD 120



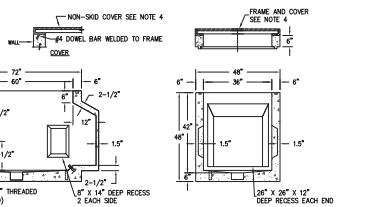
D81-J REV. 09/23/09



NOTE:
ALL ELECTRICAL DUCTS AND STRUCTURES WILL CONFORM TO GENERAL ORDER #128 (RULES FOR CONSTRUCTION OF UNDERGROUND ELECTRICAL SUPPLY AND COMMUNICATION PRESCRIBED BY THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA, JANUARY 2006).



TIE-IN MADE INTO A SECONDARY HANDHOLE



If PVC conduit is used, riser bend installation may be made by the customer with prior SCE approval. Customer not to remove handhole cover. If metallic conduit is used or handhole cover needs to be removed, a SCE Qualified Person must be present.

PULL BOX 3' X 6' PRECAST CONCRETE
SEE UGS HP 225

NOTE(S):
1. REINFORCEMENT:
   H20-S BRIDGE LOADING.
2. CONCRETE:
   CONCRETE SHALL BE CLASS "A" WITH 28-DAY COMPRESSIVE STRENGTH OF 3,000 PSI (MINIMUM). SLIGHT TAPER (1/4" IN DEPTH OF PULL BOX) AND 1" CHAMFER ON ALL INSIDE CORNERS PERMITTED FOR EASE OF FORMING.
3. INSTALLATION:
   PULL BOX SHALL BE PLACED ON 6" (MINIMUM) COMPACTED ROCK OR SAND BASE TO ENSURE UNIFORM DISTRIBUTION OF SOIL PRESSURE IN FLOOR. MINIMUM EXCAVATION FOR PULL BOX SHALL BE 52" X 97" X DEPTH TO SUIT JOB.
4. COVERS:
   SEE FC 812 AND FC 818 FOR PULL BOX COVERS.
5. GRADE RINGS:
   INSTALLING CONTRACTOR SHALL PROVIDE GRADE RINGS (6" MINIMUM) AS NECESSARY IN ORDER TO MAINTAIN COVER OVER CONDUITS PER SCE SPECIFICATIONS OR PERMIT AGENCY SPECIFICATIONS, WHICHEVER IS GREATER.
6. PULL IRONS AND EYES:
   SEE AC 729 FOR PULL IRONS AND AC 720 FOR PULL EYES.

NOT TO SCALE
DRAWN BY: CC1648

2. Two inch (2") conduit must be type DB 60 rigid plastic.
   - Minimum sweep for 2" conduit is two (2) ft 90 degree radius.
   - Three-sixteenth inch (3/16") minimum polypropylene pull rope or equivalent strength Polyester Woven Mule Tape must be installed in terminated conduit end to end.
   - Leave a minimum of 3' of secured rope in each box. Ropes must be one continuous length for each section and to the terminal room in the building (no tying or splicing of rope).
4. Conduits, plumber's fittings, water and gas pipes are NOT ACCEPTABLE.
7. Underground entrance conduit in a building must terminate 2" above the floor. The terminal room should be planned so that AT&T's entrance cable WILL NOT EXCEED 50' beyond the point where it enters the building.

Material Specifications

All pull boxes, splice boxes and manholes placed by the developer that will be owned and maintained by the property owner must be approved for use by AT&T. The developer may purchase from any manufacturer that meets AT&T's specifications for boxes and manholes, and must include the appropriate racking, sump, bolt down cover, and pulling eyes. Boxes and manholes owned by the property owner must have a generic telephone emblem on the lid. The use of AT&T's name or logo is not permitted on a property owner's boxes and manholes.

GENERAL NOTES:

1. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS BEFORE STARTING WORK.
2. THE ENGINEER DOES NOT WARRANT THE ACCURACY OF SCALED DIMENSIONS ON ANY PLAN. ALL DIMENSIONS SHALL BE AS DESIGNATED ON THE PLANS. THE CONTRACTOR SHALL PROTECT ALL PUBLIC AND PRIVATE PROPERTY
3. DURING THE PERFORMANCE OF WORK DONE UNDER THE CONTRACT, THE CONTRACTOR SHALL TAKE THE NECESSARY PRECAUTIONS TO AVOID ANY DAMAGE TO ANY STRUCTURES ADJACENT TO THE PROJECT BOUNDARIES.
4. EXISTING UTILITIES SHOWN ARE BASED ON AVAILABLE RECORDS OF PARENT UTILITY COMPANIES AND MAY NOT ACCURATELY REPRESENT THEIR ACTUAL LOCATIONS. PRIOR TO BEGINNING ANY CONSTRUCTION, THE CONTRACTOR SHALL VERIFY THE ACTUAL LOCATIONS (VERTICAL AND HORIZONTAL) OF ALL UTILITIES, IN THE FIELD OR COORDINATE SUCH INDEPENDENT VERIFICATION WITH THE PARENT UTILITY COMPANIES AND PROVIDE THE CITY WITH THE POTHOLE INFORMATION. THE CONTRACTOR SHALL PROTECT IN PLACE OR COORDINATE WITH PARENT COMPANY FOR THE RELOCATION OF CONFLICTING UTILITIES ENCOUNTERED DURING CONSTRUCTION.
5. ADJUST UTILITY VALVE COVERS, UTILITY BOXES, TRAFFIC SIGNAL BOXES, ETC. TO FINISH GARDE. PAYMENT SHALL BE INCLUDED IN THE APPLICABLE CONSTRUCTION BID ITEM AND REFER TO CONSTRUCTION NOTE AND/OR SPECIFICATIONS.
6. PROVIDE TRAFFIC CONTROL PER TECHNICAL PROVISIONS.
7. ALL SURVEY CENTERLINE TIES AND MONUMENTS THAT ARE DAMAGED OR REMOVED SHALL BE RE-ESTABLISHED. THE SURVEYOR SHALL ALSO ESTABLISH CENTERLINE MONUMENTS AND TIES AT ALL STREET INTERSECTIONS WITHIN THE PROJECT LIMITS WHERE NONE EXISTED PRIOR TO CONSTRUCTION. SEE TECHNICAL PROVISIONS.
8. 24 HOUR NOTICE FOR ALL INSPECTIONS REQUIRED.
9. CONTRACTORS SHALL REMOVE AND DISPOSE OF ALL TRASH AND BROKEN BRANCHES BEFORE AND AFTER PAVING.
10. PRIOR TO CUTTING OF ANY ROOTS, CALL PARKS DIVISION AT (310) 217-9564 FOR APPROVAL.
11. CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATION, OBTAINING NECESSARY APPLICABLE PERMITS WITH LOCAL AGENCIES AND OTHER OWNERS HAVING JURISDICTION AND PREPARING REQUIRED DOCUMENTATION NECESSARY FOR PERMITTING.
12. PROTECT ALL STORM DRAINS, CATCH BASINS, ETC. WITH SAND BAGS, FABRIC, AND OTHER APPROPRIATE BEST MANAGEMENT PRACTICES.
13. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (USA) AT 1-800-422-4133 TWO WORKING DAYS PRIOR TO ANY EXCAVATION WORK.
14.

GENERAL NOTES:

1. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS BEFORE STARTING WORK.
2. THE ENGINEER DOES NOT WARRANT THE ACCURACY OF SCALED DIMENSIONS ON ANY PLAN. ALL DIMENSIONS SHALL BE AS DESIGNATED ON THE PLANS. THE CONTRACTOR SHALL PROTECT ALL PUBLIC AND PRIVATE PROPERTY
3. DURING THE PERFORMANCE OF WORK DONE UNDER THE CONTRACT. THE CONTRACTOR SHALL TAKE THE NECESSARY PRECAUTIONS TO AVOID ANY DAMAGE TO ANY STRUCTURES ADJACENT TO THE PROJECT BOUNDARIES.
4. EXISTING UTILITIES SHOWN ARE BASED ON AVAILABLE RECORDS OF PARENT UTILITY COMPANIES AND MAY NOT ACCURATELY REPRESENT THEIR ACTUAL LOCATIONS. PRIOR TO BEGINNING ANY CONSTRUCTION, THE CONTRACTOR SHALL VERIFY THE ACTUAL LOCATIONS (VERTICAL AND HORIZONTAL) OF ALL UTILITIES, IN THE FIELD OR COORDINATE SUCH INDEPENDENT VERIFICATION WITH THE PARENT UTILITY COMPANIES AND PROVIDE THE CITY WITH THE POTHOLE INFORMATION. THE CONTRACTOR SHALL PROTECT IN PLACE OR COORDINATE WITH PARENT COMPANY FOR THE RELOCATION OF CONFLICTING UTILITIES ENCOUNTERED DURING CONSTRUCTION.
5. ADJUST UTILITY VALVE COVERS, UTILITY BOXES, TRAFFIC SIGNAL BOXES, ETC. TO FINISH GARDE. PAYMENT SHALL BE INCLUDED IN THE APPLICABLE CONSTRUCTION BID ITEM AND REFER TO CONSTRUCTION NOTE AND/OR SPECIFICATIONS.
6. PROVIDE TRAFFIC CONTROL PER TECHNICAL PROVISIONS.
7. ALL SURVEY CENTERLINE TIES AND MONUMENTS THAT ARE DAMAGED OR REMOVED SHALL BE RE-ESTABLISHED. THE SURVEYOR SHALL ALSO ESTABLISH CENTERLINE MONUMENTS AND TIES AT ALL STREET INTERSECTIONS WITHIN THE PROJECT LIMITS WHERE NONE EXISTED PRIOR TO CONSTRUCTION. SEE TECHNICAL PROVISIONS.
8. 24 HOUR NOTICE FOR ALL INSPECTIONS REQUIRED.
9. CONTRACTORS SHALL REMOVE AND DISPOSE OF ALL TRASH AND BROKEN BRANCHES BEFORE AND AFTER PAVING.
10. PRIOR TO CUTTING OF ANY ROOTS, CALL PARKS DIVISION AT (310) 217-9564 FOR APPROVAL
11. CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATION, OBTAINING NECESSARY APPLICABLE PERMITS WITH LOCAL AGENCIES AND OTHER OWNERS HAVING JURISDICTION AND PREPARING REQUIRED DOCUMENTATION NECESSARY FOR PERMITTING.
12. PROTECT ALL STORM DRAINS, CATCH BASINS, ETC. WITH SAND BAGS, FABRIC, AND OTHER APPROPRIATE BEST MANAGEMENT PRACTICES.
13. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (USA) AT 1-800-422-4133 TWO WORKING DAYS PRIOR TO ANY EXCAVATION WORK.

DEMOLITION GENERAL NOTES

SEE SHEET D-1.02 FOR ADDITIONAL NOTES.

DEMOLITION NOTES

1. REMOVE EXISTING TREE AND ROOT BALL AND DISPOSE - CONFIRM DISPOSITION PRIOR TO DEMO. WITH LANDSCAPE ARCHITECT AND CITY
2. NOT USED
3. REMOVE EXIST. FENCE/GATE, ASSOCIATED POSTS, FOOTINGS, ETC. AND DISPOSE
4. SAWCUT AND REMOVE EXISTING CONCRETE CONCRETE, A.C./A.B., STAIRS OR PAD (COMPLETE) AND DISPOSE ****
5. PROTECT IN PLACE - POTHOLE AND LOCATE EXISTING UNDERGROUND UTILITY LINES TO PROTECT AS REQUIRED
6. REMOVE EXISTING LANDSCAPE/IRRIGATION AND CAP AT LIMITS OF DEMOLITION AND DISPOSE **
7. DEMOLISH/REMOVE EXISTING BUILDING/STRUCTURE/FOUNDATION/SUBTERRANEAN PITS AND DISPOSE ****
8. REMOVE EXISTING GAS LINE AND/OR APPURTENANCE - COORD. REMOVAL WITH THE GAS COMPANY
9. REMOVE EXISTING WATER LINE (COMPLETE) AND DISPOSE - CAP EXISTING WATER LINE AT THE METER BOX , CUT & PLUG AND NOTIFY G.S.W.C. - DOCUMENT LOCATION OF EXISTING LINES - SEE ADDITIONAL NOTES THIS SHEET
10. REMOVE EXISTING SEWER LINE (COMPLETE) AND DISPOSE - CAP EXISTING SEWER LINE AT LIMITS OF DEMOLITION AND DOCUMENT LOCATION OF EXISTING LINES - SEE ADDITIONAL NOTES THIS SHEET
11. EXISTING ELECTRICAL/CATV/PHONE VAULT/LINE - SEE ELECTRICAL PLANS FOR CONDUIT RE-ROUTING/CAPPING
12. REMOVE LIGHT POLE, BASE, FOOTING, PULL BOX, CONDUIT AND CONDUCTORS, ETC. (COMPLETE) - SEE ELECTRICAL PLANS FOR CONDUIT RE-ROUTING/CAPPING *
13. REMOVE STORM DRAIN LINE AND/OR CATCH BASIN (COMPLETE) AND DISPOSE - CAP EXISTING STORM DRAIN AT LIMITS OF DEMOLITION AND DOCUMENT LOCATION OF EXISTING LINES - SEE ADDITIONAL NOTES THIS SHEET
14. REMOVE EXISTING WALL AND FOOTING (COMPLETE) AND DISPOSE
15. REMOVE EXISTING POOL (COMPLETE) AS REQUIRED AND DISPOSE
16. REMOVE EXISTING POOL PIPING (COMPLETE) AND DISPOSE
17. REMOVE EXISTING POOL EQUIPMENT/SUBTERRANEAN PIT (COMPLETE) AND DISPOSE ****
18. REMOVE EXISTING BENCH OR BLEACHER (COMPLETE) AND DISPOSE
19. CONFIRM REMOVAL OF EXIST. MISCELLANEOUS ITEM (COMPLETE)

* CONDUIT RE-ROUTING/CAPPING AS REQUIRED

** CAP AND REMOVE IRRIGATION LINES AS REQ'D

*** SEE SOILS REPORT FOR ADDITIONAL DEMOLITION REQUIREMENTS

LEGEND

- LIMITS OF DEMOLITION
- PROTECT UTILITY LINE IN PLACE WITHIN DEMOLITION LIMITS
- 6-FOOT TALL CONSTRUCTION FENCE - LOCATION MAY BE REVISED WITH CITY APPROVAL

NOTE TO CONTRACTOR:

CONTRACTOR TO REFER TO "ASBESTOS CONTAINING MATERIALS AND LEAD-BASED PAINT SURVEY REPORT GARDENA COMMUNITY AQUATIC CENTER" BY CLARK SEIF CLARK, INC., DATED OCTOBER 29, 2021 AND THE CES ENVIRONMENTAL REPORT DATED JANUARY 10, 2020 FOR THE PRIMM POOL FACILITY BLDG AND AUGUST 12, 2021 FOR THE 2-FOURPLEX BUILDINGS AND PERFORM REQUIRED HAZARDOUS MATERIAL REMOVALS IF RECOMMENDED IN THE REPORT PRIOR TO DEMOLITION SHOWN HEREON.

NOTE TO CONTRACTOR: ADDITIONAL REQUIREMENTS:

- THE DEMO CONTRACTOR SHALL MAINTAIN THE EXCAVATION IN COMPLIANCE WITH THE STORMWATER REGULATIONS AND PROVIDE PUMPING AND DESILTING DEVICES WHILE THE UNDER CONTRACT TO THE END OF THE RAINY SEASON, BEING APRIL 1. THE CITY WILL ONLY COVER PUMPING OF THE POOL EXCAVATION AFTER THE DEMO. CONTRACT NOTICE OF COMPLETION IS FILED.
- EROSION CONTROL SHALL COMPLY WITH THE LOS ANGELES COUNTY STORMWATER PERMIT FOR BMP'S AND ALL REQUIRED INSTALLED BMPS FOR THE DURATION OF THE CONTRACT. THE CONTRACTOR SHALL PREPARE A STORM WATER PLAN FOR CITY REVIEW AND APPROVAL PRIOR TO THE START OF CONSTRUCTION TO ENSURE COMPLIANCE WITH THE STORMWATER PERMIT REQUIREMENTS.

NOTE TO CONTRACTOR:

CONTRACTOR TO SCHEDULE A SITE WALK WITH THE CITY PRIOR TO START OF DEMOLITION TO VERIFY ALL ITEMS TO BE DEMOLISHED.

NOTE TO CONTRACTOR:

AT THE DEMOLITION LIMITS:
CONTRACTOR SHALL DOCUMENT THE SIZE, LOCATION, AND DEPTH OF EXISTING SEWER, WATER, AND DRAIN LINES AND CAP FOR FUTURE CONNECTION. CONTRACTOR TO PROVIDE WRITTEN DOCUMENTATION TO THE CITY AND ENGINEER ONCE UTILITY DEMOLITION WORK IS COMPLETE.

REVIEWED
FOR
CODE COMPLIANCE
Apr 02, 2022
CITY OF GARDENA

NOTE TO CONTRACTOR:

ALL UTILITIES SHOULD BE SHUT OFF AND CAPPED PER UTILITY COMPANY REQUIREMENTS. CONTRACTOR SHALL COORDINATE WITH APPROPRIATE UTILITY COMPANY PRIOR TO COMMENCEMENT OF WORK.

NOTE TO CONTRACTOR:

INSTALL 6-FOOT CHAIN LINK FENCE WITH WINDSCREEN AND GATES, WHERE NECESSARY, ALONG THE PERIMETER OF THE SITE AS NEEDED. CONTRACTOR SHALL PROTECT THESE FENCES AND KEEP AREA FULLY SECURE DURING DEMOLITION. PROJECT FENCE, GATE, PRIVATE SCREEN, PERIMETER WATER POLLUTION CONTROL SHALL BECOME THE PROPERTY OF THE CITY AND SHALL REMAIN IN PLACE AT THE COMPLETION OF DEMOLITION.

NOTE TO CONTRACTOR:

- LOCATION OF EXISTING FACILITIES SHOWN HEREON ARE BASED ON THE EXISTING TOPOGRAPHIC SURVEY PERFORMED BY civTEC, INC., DATED FEBRUARY, 2021. FIELD OBSERVATION AND A SEARCH OF AVAILABLE RECORDS AND MAY NOT REPRESENT A CTUAL CONDITIONS.
- CONTRACTOR MUST FIELD LOCATE ALL UTILITIES (LOCATION AND DEPTH) WITHIN WORK AREA AS A FIRST ITEM OF WORK AND VERIFY PROPOSED DESIGN IS VALID.
- CONTRACTOR SHALL PROTECT IN PLACE THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE TO THE EXISTING UTILITY LINES.
- CONTRACTOR TO VERIFY AND INFORM THE CITY OF ANY FACILITIES ENCOUNTERED IN THE FIELD WHICH IS NOT SHOWN ON THIS PLAN, OR DIFFERS IN LOCATION OR SIZE, PRIOR TO REMOVAL.
- THE CITY MAY IDENTIFY AND REMOVE ANY ITEMS THEY WISH TO RETAIN PRIOR TO THE CONTRACTOR MOVE IN.

NOTE TO CONTRACTOR:

EXACT LOCATION OF EXISTING UNDERGROUND STORM DRAIN LINES ON-SITE ARE UNKNOWN. CONTRACTOR SHALL:

- VERIFY LOCATION, SIZE, ELEVATIONS OF EXISTING STORM DRAIN AND VERIFY DESIGN AS A FIRST ITEM OF WORK. NOTIFY ENGINEER IMMEDIATELY OF ANY REQUIRED CHANGE IN DESIGN.
- CAP EXISTING STORM DRAIN AT DEMOLITION LIMITS - NOTIFY ENGINEER OF ALL LOCATIONS, SIZES AND INVERT ELEVATIONS AT COMPLETION OF DEMOLITION.
- IF INLET PIPES ARE FOUND CONNECTING TO EXISTING GRATES THAT ARE REMOVED DURING THE CONSTRUCTION OF THIS PROJECT (OR PIPES ARE DAMAGED OR REMOVED DURING CONSTRUCTION) THAT RUN OUTSIDE OF DEMOLITION LIMITS, NOTIFY ENGINEER IMMEDIATELY OF THE LOCATION AND SIZE TO INSURE CONTINUITY OF DRAINAGE UPSTREAM.

LANDSCAPE IRRIGATION DEMOLITION NOTES:

THE CONTRACTOR SHALL TEMPORARILY RELOCATE ANY IRRIGATION EQUIPMENT (BACKFLOWS, MAINLINE, VALVES, CONTROLLERS, ETC.) TO ENSURE ANY EXISTING IRRIGATION, OUTSIDE THE SCOPE OF WORK, REMAINS IN WORKING ORDER DURING THE TIME OF DEMOLITION AND CONSTRUCTION OF THE NEW FACILITIES. ALL "HIGHLINED" IRRIGATION PIPE AND WIRES SHALL BE INSTALLED ON-GRADE AND WITHIN THE CONSTRUCTION FENCING.

ELECTRICAL DEMOLITION NOTES:

1. ALL EXISTING ELECTRICAL WITHIN THE DEMOLITION AREA SHALL BE REMOVED AS REQUIRED TO CLEAR THE AREA. THIS WORK INCLUDES, BUT IS NOT LIMITED TO, THE FOLLOWING:
   - A. ALL EXISTING WIRE SHALL BE REMOVED FROM CONDUIT.
   - A. ALL EXISTING CONDUIT, THAT INTERFERES WITH ANY NEW CONSTRUCTION SHALL BE CUT BACK AS REQUIRED TO CLEAR NEW CONSTRUCTION.
   - B. FOR EXISTING CONSTRUCTION THAT IS TO BE REMOVED REMOVE ALL EXISTING EXPOSED, SURFACE, AND CONCEALED CONDUIT AND RACEWAYS. RECONNECT EQUIPMENT AND LIGHTING FIXTURES THAT REMAIN AND WHICH ARE NOW FED THROUGH THE CONDUIT AND WIRING TO BE REMOVED.
   - C. DO NOT REUSE SALVAGED MATERIALS AND EQUIPMENT, UNLESS SPECIFICALLY INDICATED ON PLANS OR SPECIFIED. REMOVE FROM PREMISES AND DISPOSE OF ALL MATERIALS CONSIDERED BY ARCHITECT TO BE SCRAP.
2. DISPOSAL OF HAZARDOUS MATERIALS SUCH AS LAMPS SHALL BE DISPOSED OF IN ACCORDANCE WITH ALL STATE AND FEDERAL REQUIREMENTS.

PLOT DATE: 3/8/2022

DEMOLITION GENERAL NOTES

1. CONTRACTOR SHALL CONDUCT A SURVEY OF EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED TO DETERMINE AND VERIFY THE EXTENT OF DEMOLITION REQUIRED.
2. CONTRACTOR SHALL RECORD EXISTING CONDITIONS BY USE OF PRE-CONSTRUCTION PHOTOGRAPHS, PRE-CONSTRUCTION VIDEOTAPES, AND DRAWINGS AS APPROPRIATE.
3. A SURVEY SHALL BE PERFORMED AS WORK PROGRESSES TO DETECT HAZARDS RESULTING FROM DEMOLITION ACTIVITIES.
4. CONTRACTOR SHALL KEEP INVENTORY AND RECORD THE CONDITION OF ITEMS TO BE REMOVED.
5. LOCATE ALL EXISTING UTILITIES WHETHER SHOWN HEREON OR NOT AS THE FIRST ITEM OF WORK AND PROTECT THEM FROM DAMAGE. NOTIFY OWNER IMMEDIATELY IF DAMAGE OCCURS AND ASSUME FULL RESPONSIBILITY FOR EXPENSE OF REPAIR OR REPLACEMENT. NOTIFY OWNER'S REPRESENTATIVE IMMEDIATELY SHOULD FIELD CONDITIONS VARY FROM THOSE SHOWN ON PLAN.
6. WHEN UNANTICIPATED ELECTRICAL, STRUCTURAL, OR OTHER ELEMENTS INCLUDING STORM DRAIN, WATER AND SEWER LINES THAT CONFLICT WITH INTENDED DESIGN ARE ENCOUNTERED, CONTRACTOR SHALL INVESTIGATE AND MEASURE THE NATURE AND EXTENT OF CONFLICT AND CONTRACTOR SHALL PROMPTLY SUBMIT A WRITTEN REPORT TO THE CITY.
7. CONTRACTOR SHALL LOCATE, IDENTIFY, DISCONNECT, AND SEAL OR CAP OFF INDICATED UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS SERVING AREAS TO BE SELECTIVELY DEMOLISHED AND:
   - SHALL ARRANGE TO SHUT OFF INDICATED UTILITIES WITH UTILITY COMPANIES.
   - IF SERVICES/SYSTEMS ARE REQUIRED TO BE REMOVED, RELOCATED, OR ABANDONED, BEFORE PROCEEDING WITH DEMOLITION CONTRACTOR SHALL PROVIDE TEMPORARY SERVICES/SYSTEMS THAT BYPASS AREA OF DEMOLITION AND THAT MAINTAIN CONTINUITY OF SERVICES/SYSTEMS TO OTHER PARTS OF BUILDING AND SITE.
   - SHALL CUT OFF PIPE OR CONDUIT IN WALLS TO BE REMOVED, CAP, VALVE, OR PLUG AND SEAL REMAINING PORTION OF PIPE OR CONDUIT AFTER BYPASSING. WHERE ENTIRE WALL IS TO BE REMOVED, EXISTING SERVICES/SYSTEMS MAY BE REMOVED WITH REMOVAL OF THE WALL. CONTRACTOR SHALL CUT OFF PIPE OR CONDUIT SO IT WILL NOT BE VISIBLE IN FINISHED CONSTRUCTION.
9. CONTRACTOR SHALL PROTECT EXISTING SERVICES/SYSTEMS INDICATED AGAINST DAMAGE DURING DEMOLITION OPERATIONS.
10. INACTIVE OR ABANDONED UTILITIES SHALL BE DISCONNECTED, REMOVED, AND PLUGGED OR CAPPED SUBJECT TO THE LOCAL GOVERNING AGENCIES.
11. ACTIVE UTILITIES SHALL BE PROTECTED BY AND AT THE EXPENSE OF THE CONTRACTOR. KEEP ANY REQUIRED UTILITY IN OPERATING CONDITION DURING THE ENTIRE PERIOD OF WORK, INCLUDING EXISTING IRRIGATION SYSTEMS FOR LANDSCAPE MAINTENANCE.
12. DO NOT WILLFULLY PROCEED WITH CONSTRUCTION WHEN IT IS OBVIOUS THAT KNOWN OBSTRUCTIONS EXIST THAT MAY NOT HAVE BEEN KNOWN DURING DESIGN. SUCH CONDITIONS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE OWNER'S AUTHORIZED REPRESENTATIVE. ASSUME RESPONSIBILITY FOR ALL NECESSARY REVISION DUE TO FAILURE TO GIVE SUCH NOTIFICATION.
13. CONTRACTOR SHALL CONDUCT DEMOLITION AND DEBRIS-REMOVAL OPERATIONS TO ENSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, WALKS, WALKWAYS, AND OTHER ADJACENT OCCUPIED AND USED FACILITIES.
14. CONTRACTOR SHALL PROVIDE TEMPORARY BARRICADES AND OTHER PROTECTION REQUIRED TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN AND:
   - SHALL PROVIDE TEMPORARY WEATHER PROTECTION, DURING THE INTERVAL BETWEEN DEMOLITION OF EXISTING CONSTRUCTION ON EXTERIOR SURFACES AND NEW CONSTRUCTION, TO PREVENT WATER LEAKAGE AND DAMAGE TO STRUCTURE AND INTERIOR AREAS.
   - SHALL PROTECT WORK THAT IS TO REMAIN OR THAT IS EXPOSED DURING DEMOLITION OPERATIONS.
   - SHALL COVER AND PROTECT EQUIPMENT THAT HAS NOT BEEN REMOVED.
15. CONTRACTOR SHALL PROVIDE AND MAINTAIN SHORING, BRACING, AND STRUCTURAL SUPPORTS AS REQUIRED TO PRESERVE STABILITY AND PREVENT MOVEMENT, SETTLEMENT, OR COLLAPSE OF CONSTRUCTION AND FINISHES THAT REMAIN, AND TO PREVENT UNEXPECTED OR UNCONTROLLED MOVEMENT OR COLLAPSE OF CONSTRUCTION BEING DEMOLISHED. CONTRACTOR SHALL STRENGTHEN OR ADD NEW SUPPORTS WHEN REQUIRED DURING PROGRESS OF DEMOLITION.
16. DEMOLITION AND REMOVAL WORK SHALL BE CAREFULLY PERFORMED TO AVOID DAMAGE TO EXISTING TREES NOTED ON THE PLANS TO REMAIN.
17. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE LATEST ADOPTED EDITIONS OF THE UNIFORM BUILDING CODE, THE AMERICANS WITH DISABILITIES ACT, AND ALL OTHER APPLICABLE LOCAL AND STATE CODES, ORDINANCES AND REGULATIONS.
18. CONTRACTOR SHALL USE METHODS REQUIRED TO COMPLETE THE WORK WITHIN THE LIMITATIONS OF GOVERNING REGULATIONS AND AS FOLLOWS:
   - SHALL NEATLY CUT OPENINGS AND HOLES PLUMB, SQUARE, AND TRUE TO DIMENSIONS REQUIRED, USING CUTTING METHODS LEAST LIKELY TO DAMAGE CONSTRUCTION TO REMAIN OR ADJOINING CONSTRUCTION. USE HAND TOOLS OR SMALL POWER TOOLS DESIGNED FOR SAWING OR GRINDING, NOT HAMMERING AND CHOPPING, TO MINIMIZE DISTURBANCE OF ADJACENT SURFACES. TEMPORARILY COVER OPENINGS TO REMAIN.
   - SHALL CUT OR DRILL FROM THE EXPOSED OR FINISHED SIDE INTO CONCEALED SURFACES TO AVOID MARRING EXISTING FINISHED SURFACES.
   - SHALL NOT USE CUTTING TORCHES UNTIL WORK AREA IS CLEARED OF FLAMMABLE MATERIALS. AT CONCEALED SPACES, SUCH AS DUCT AND PIPE INTERIORS, VERIFY CONDITION AND CONTENTS OF HIDDEN SPACE BEFORE STARTING FLAME-CUTTING OPERATIONS. MAINTAIN FIRE WATCH AND PORTABLE FIRE-SUPPRESSION DEVICES DURING FLAME-CUTTING OPERATIONS.
   - SHALL MAINTAIN ADEQUATE VENTILATION WHEN USING CUTTING TORCHES.
   - SHALL REMOVE DECAYED, TERMITE-INFESTED, VERMIN-INFESTED, OR OTHERWISE DANGEROUS OR UNSUITABLE MATERIALS AND PROMPTLY DISPOSE OF OFF-SITE.
   - SHALL LOCATE DEMOLITION EQUIPMENT AND REMOVE DEBRIS AND MATERIALS SO AS NOT TO IMPOSE EXCESSIVE LOADS ON STRUCTURES TO REMAIN.
19. CLEAR THE SITE OF GRASS, WEED GROWTH, RUBBISH, DEBRIS, PAVEMENT, CONCRETE, INACTIVE OR ABANDONED FACILITIES (VERIFIED BY THE AGENCY), THAT ARE TO BE REMOVED FOR CONSTRUCTION OF THE SITE IMPROVEMENTS TO THE LIMITS AND DEPTHS SHOWN ON THE PLANS.
20. ABANDONED UNDERGROUND FACILITIES (VERIFIED BY THE AGENCY), ROOTS THREE INCHES IN DIAMETER AND LARGER, AND ROCKS AND BROKEN MASONRY LARGER THAN 4 INCHES IN ANY DIMENSION SHALL BE REMOVED TO A MINIMUM DEPTH OF 12' BELOW FINISH GRADE.
21. ALL DELETERIOUS MATERIALS WITHIN THE LIMITS OF THE WORK SHALL BE DISPOSED OF OFF-SITE BY THE CONTRACTOR, WHO SHALL MAKE ALL NECESSARY ARRANGEMENTS AND PAY ALL RELATED COSTS.
22. CONTRACTOR SHALL REMOVE DEMOLISHED MATERIALS FROM PROJECT SITE AND LEGALLY DISPOSE OF THEM AT THE CONTRACTOR'S EXPENSE IN AN EPA-APPROVED LANDFILL AND:
   - SHALL NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE.
   - SHALL REMOVE AND TRANSPORT DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS.
23. CONTRACTOR SHALL NOT BURN DEMOLISHED MATERIALS.
24. CONTRACTOR SHALL CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT, AND DEBRIS CAUSED BY DEMOLITION OPERATIONS AND RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE DEMOLITION OPERATIONS BEGAN.

GENERAL NOTES:

1. ALL GRADING AND CONSTRUCTION SHALL CONFORM TO THE CITY OF GARDENA BUILDING CODE AND THE 2019 CALIFORNIA BUILDING CODE AND UNLESS SPECIFICALLY NOTED ON THESE PLANS.
2. ANY MODIFICATIONS OF OR CHANGES TO APPROVED GRADING PLANS MUST BE APPROVED BY THE BUILDING OFFICIAL.
3. NO GRADING SHALL BE STARTED WITHOUT FIRST NOTIFYING THE BUILDING OFFICIAL A PRE-GRADING MEETING AT THE SITE IS REQUIRED BEFORE THE START OF THE GRADING WITH THE FOLLOWING PEOPLE PRESENT: OWNER, GRADING CONTRACTOR, DESIGN CIVIL ENGINEER, SOILS ENGINEER, GEOLOGIST, COUNTY GRADING INSPECTOR(S) OR THEIR REPRESENTATIVES, AND WHEN REQUIRED THE ARCHEOLOGIST OR OTHER JURISDICTIONAL AGENCIES. PERMITTEE OR HIS AGENT ARE RESPONSIBLE FOR ARRANGING PRE-GRADE MEETING AND MUST NOTIFY THE BUILDING OFFICIAL AT LEAST TWO BUSINESS DAYS PRIOR TO PROPOSED PRE-GRADE MEETING.
4. APPROVAL OF THESE PLANS REFLECT SOLELY THE REVIEW OF PLANS IN ACCORDANCE WITH THE COUNTY OF LOS ANGELES BUILDING CODES AND DOES NOT REFLECT ANY POSITION BY THE COUNTY OF LOS ANGELES OR THE DEPARTMENT OF PUBLIC WORKS REGARDING THE STATUS OF ANY TITLE ISSUES RELATING TO THE LAND ON WHICH THE IMPROVEMENTS MAY BE CONSTRUCTED. ANY DISPUTES RELATING TO TITLE ARE SOLELY A PRIVATE MATTER NOT INVOLVING THE COUNTY OF LOS ANGELES OR THE DEPARTMENT OF PUBLIC WORKS.
5. ALL GRADING AND CONSTRUCTION ACTIVITIES SHALL COMPLY WITH COUNTY OF LOS ANGELES CODE, TITLE 12, SECTION 12.12.030 THAT CONTROLS AND RESTRICTS NOISE FROM THE USE OF CONSTRUCTION AND GRADING EQUIPMENT FROM THE HOURS OF 8:00 PM TO 6:30 AM, AND ON SUNDAYS AND HOLIDAYS. (MORE RESTRICTIVE CONSTRUCTION ACTIVITY TIMES MAY GOVERN, AS REQUIRED BY THE DEPARTMENT OF REGIONAL PLANNING AND SHOULD BE SHOWN ON THE GRADING PLANS WHEN APPLICABLE.)
6. CALIFORNIA PUBLIC RESOURCES CODE (SECTION 5097.98) AND HEALTH AND SAFETY CODE (SECTION 7050.5) ADDRESS THE DISCOVERY AND DISPOSITION OF HUMAN REMAINS. IN THE EVENT OF DISCOVERY OR RECOGNITION OF ANY HUMAN REMAINS IN ANY LOCATION OTHER THAN A DEDICATED CEMETERY, THE LAW REQUIRES THAT GRADING IMMEDIATELY STOPS AND NO FURTHER EXCAVATION OR DISTURBANCE OF THE SITE, OR ANY NEARBY AREA WHERE HUMAN REMAINS MAY BE LOCATED, OCCUR UNTIL THE FOLLOWING HAS BEEN MEASURES HAVE BEEN TAKEN:
   a. THE COUNTY CORONER HAS BEEN INFORMED AND HAS DETERMINED THAT NO INVESTIGATION OF THE CAUSE OF DEATH IS REQUIRED, AND
   b. IF THE REMAINS ARE OF NATIVE AMERICAN ORIGIN, THE DESCENDANTS FROM THE DECEASED NATIVE AMERICANS HAVE MADE A RECOMMENDATION FOR THE MEANS OF TREATING OR DISPOSING, WITH APPROPRIATE DIGNITY, OF THE HUMAN REMAINS AND ANY ASSOCIATED GRAVE GOODS.
7. THE LOCATION AND PROTECTION OF ALL UTILITIES IS THE RESPONSIBILITY OF THE PERMITTEE.
8. ALL EXPORT OF MATERIAL FROM THE SITE MUST GO TO A PERMITTED SITE APPROVED BY THE BUILDING OFFICIAL OR A LEGAL DUMPSITE. RECEIPTS FOR ACCEPTANCE OF EXCESS MATERIAL BY A DUMPSITE ARE REQUIRED AND MUST BE PROVIDED TO THE BUILDING OFFICIAL UPON REQUEST.
9. A COPY OF THE GRADING PERMIT AND APPROVED GRADING PLANS MUST BE IN THE POSSESSION OF A RESPONSIBLE PERSON AND AVAILABLE AT THE SITE AT ALL TIMES.
10. SITE BOUNDARIES, EASEMENTS, DRAINAGE DEVICES, RESTRICTED USE AREAS SHALL BE LOCATED PER CONSTRUCTION STAKING BY FIELD ENGINEER OR LICENSED SURVEYOR. PRIOR TO GRADING, AS REQUESTED BY THE BUILDING OFFICIAL, ALL PROPERTY LINES, EASEMENTS, AND RESTRICTED USE AREAS SHALL BE STAKED.
11. NO GRADING OR CONSTRUCTION SHALL OCCUR WITHIN THE PROTECTED ZONE OF ANY OAK TREE AS REQUIRED PER TITLE CHAPTER 22.56 OF THE COUNTY OF LOS ANGELES ZONING CODE. THE PROTECTED ZONE SHALL MEAN THAT AREA WITHIN THE DRIP LINE OF AN OAK TREE EXTENDING THERE FROM A POINT AT LEAST FIVE FEET OUTSIDE THE DRIP LINE, OR 15 FEET FROM THE TRUNK(S) OF A TREE, WHICHEVER IS GREATER.

    IF AN OAK TREE PERMIT IS OBTAINED: (ADD THE FOLLOWING NOTE :)

    ALL GRADING AND CONSTRUCTION WITHIN THE PROTECTED ZONE OF ALL OAK TREES SHALL BE PER OAK TREE PERMIT NO. . ALL RECOMMENDATIONS IN THE PERMIT AND ASSOCIATED OAK TREE REPORT MUST BE COMPLIED WITH AND ARE A PART OF THE GRADING PLAN. A COPY OF THE OAK TREE PERMIT AND ASSOCIATED REPORTS SHALL BE MAINTAINED IN THE POSSESSION OF A RESPONSIBLE PERSON AND AVAILABLE AT THE SITE AT ALL TIMES.
12. THE STANDARD RETAINING WALL DETAILS SHOWN ON THE GRADING PLANS ARE FOR REFERENCE ONLY. STANDARD RETAINING WALLS ARE NOT CHECKED, PERMITTED, OR INSPECTED PER THE GRADING PERMIT. A SEPARATE RETAINING WALL PERMIT IS REQUIRED FOR ALL STANDARD RETAINING WALLS.

    NOTE: THIS NOTE ONLY APPLIES TO STANDARD RETAINING WALLS. GEOGRID FABRIC AND SEGMENTAL RETAINING WALLS DO NOT REQUIRE A SEPARATE RETAINING WALL PERMIT. DETAILS AND CONSTRUCTION NOTES FOR ALL GEOGRID WALLS MUST BE ON THE GRADING PLAN.
13. A PREVENTIVE PROGRAM TO PROTECT THE SLOPES FROM POTENTIAL DAMAGE FROM BURROWING RODENTS IS REQUIRED PER SECTION J101.8 OF THE COUNTY OF LOS ANGELES BUILDING CODE. OWNER IS TO INSPECT SLOPES PERIODICALLY FOR EVIDENCE OF BURROWING RODENTS AND A FIRST EVIDENCE OF THEIR EXISTENCE SHALL EMPLOY AN EXTERMINATOR FOR THEIR REMOVAL.
14. WHERE A GRADING PERMIT IS ISSUED AND THE BUILDING OFFICIAL DETERMINES THAT THE GRADING WILL NOT BE COMPLETED PRIOR TO NOVEMBER 1, THE OWNER OF THE SITE ON WHICH THE GRADING IS BEING PERFORMED SHALL, ON OR BEFORE OCTOBER 1, FILE OR CAUSE TO BE FILED WITH THE BUILDING OFFICIAL AN ESCP PER SECTION J110.8.3 OF THE COUNTY OF LOS ANGELES BUILDING CODE.
15. TRANSFER OF RESPONSIBILITY: IF THE FIELD ENGINEER, THE SOILS ENGINEER, OR THE ENGINEERING GEOLOGIST OF RECORD IS CHANGED DURING GRADING, THE WORK SHALL BE STOPPED UNTIL THE REPLACEMENT HAS AGREED IN WRITING TO ACCEPT THEIR RESPONSIBILITY WITHIN THE AREA OF TECHNICAL COMPETENCE FOR APPROVAL UPON COMPLETION OF THE WORK. IT SHALL BE THE DUTY OF THE PERMITTEE TO NOTIFY THE BUILDING OFFICIAL IN WRITING OF SUCH CHANGE PRIOR TO THE RECOMMENCEMENT OF SUCH GRADING.

GENERAL GEOTECHNICAL NOTES

16. ALL WORK MUST BE IN COMPLIANCE WITH THE RECOMMENDATIONS INCLUDED IN THE GEOTECHNICAL CONSULTANT'S REPORT(S) AND THE APPROVED PLANS AND SPECIFICATIONS.
17. GRADING OPERATIONS MUST BE CONDUCTED UNDER PERIODIC INSPECTIONS BY THE GEOTECHNICAL CONSULTANTS AS REQUIRED BY THE CITY OF GARDENA.
18. THE SOIL ENGINEER SHALL PROVIDE SUFFICIENT INSPECTIONS DURING THE PREPARATION OF THE NATURAL GROUND AND THE PLACEMENT AND COMPACTION OF THE FILL TO BE SATISFIED THAT THE WORK IS BEING PERFORMED IN ACCORDANCE WITH THE PLAN AND APPLICABLE CODE REQUIREMENTS.
19. ROUGH GRADING MUST BE APPROVED BY A FINAL ENGINEERING GEOLOGY AND SOILS ENGINEERING REPORT. AN AS-BUILT GEOLOGIC MAP MUST BE INCLUDED IN THE FINAL GEOLOGY REPORT. PROVIDE A FINAL REPORT STATEMENT THAT VERIFIES WORK WAS DONE IN ACCORDANCE WITH REPORT RECOMMENDATIONS AND CODE PROVISIONS (SECTION J105.12 OF THE COUNTY OF LOS ANGELES BUILDING CODE). THE FINAL REPORT(S) MUST BE SUBMITTED TO THE CITY OF GARDENA FOR REVIEW AND APPROVAL.
20. ALL REQUIRED THIRD-PARTY TESTING TO BE PROVIDED AT CONTRACTORS EXPENSE.

FILL NOTES

21. GRADING WORK IS TO ONLY FOLLOW THE DEMOLITION RECOMMENDATIONS IN THE SOILS REPORT.
    a. OVEREXCAVATION AND PREP. FOR THE FUTURE BUILDING PAD IS NOT REQUIRED FOR ROUGH GRADING.
21. ALL FILL SHALL BE COMPACTED TO THE FOLLOWING MINIMUM RELATIVE COMPACTION CRITERIA:
    a. 90 PERCENT OF MAXIMUM DRY DENSITY WITHIN 40 FEET BELOW FINISH GRADE.
    b. 93 PERCENT OF MAXIMUM DRY DENSITY DEEPER THAN 40 FEET BELOW FINISH GRADE, UNLESS A LOWER RELATIVE COMPACTION (NOT LESS THAN 90 PERCENT OF MAXIMUM DRY DENSITY) IS JUSTIFIED BY THE GEOTECHNICAL ENGINEER.

       THE RELATIVE COMPACTION SHALL BE DETERMINED BY A.S.T.M. SOIL COMPACTION TEST D1557- 91 WHERE APPLICABLE; WHERE NOT APPLICABLE, A TEST ACCEPTABLE TO THE BUILDING OFFICIAL SHALL BE USED. (SECTION J107.5 OF THE COUNTY OF LOS ANGELES BUILDING CODE.)
22. FIELD DENSITY SHALL BE DETERMINED BY A METHOD ACCEPTABLE TO THE BUILDING OFFICIAL. (SECTION J107.5 OF THE COUNTY OF LOS ANGELES BUILDING CODE.) HOWEVER, NOT LESS THAN 10% OF THE REQUIRED DENSITY TEST, UNIFORMLY DISTRIBUTED, AND SHALL BE OBTAINED BY THE SAND CONE METHOD.
23. SUFFICIENT TESTS OF THE FILL SOILS SHALL BE MADE TO DETERMINE THE RELATIVE COMPACTION OF THE FILL IN ACCORDANCE WITH THE FOLLOWING MINIMUM GUIDELINES:
    a. ONE TEST FOR EACH TWO-FOOT VERTICAL LIFT.
    b. ONE TEST FOR EACH 1,000 CUBIC YARDS OF MATERIAL PLACED.
    c. ONE TEST AT THE LOCATION OF THE FINAL FILL SLOPE FOR EACH BUILDING SITE (LOT) IN EACH FOUR-FOOT VERTICAL LIFT OR PORTION THEREOF.
    d. ONE TEST IN THE VICINITY OF EACH BUILDING PAD FOR EACH FOUR-FOOT VERTICAL LIFT OR PORTION THEREOF.
24. SUFFICIENT TESTS OF FILL SOILS SHALL BE MADE TO VERIFY THAT THE SOIL PROPERTIES COMPLY WITH THE DESIGN REQUIREMENTS, AS DETERMINED BY THE SOIL ENGINEER INCLUDING SOIL TYPES, SHEAR STRENGTHS PARAMETERS AND CORRESPONDING UNIT WEIGHTS IN ACCORDANCE WITH THE FOLLOWING GUIDELINES:
    a. PRIOR AND SUBSEQUENT TO PLACEMENT OF THE FILL, SHEAR TESTS SHALL BE TAKEN ON EACH TYPE OF SOIL OR SOIL MIXTURE TO BE USED FOR ALL FILL SLOPES STEEPER THAN THREE (3) HORIZONTAL TO ONE VERTICAL.
    b. SHEAR TEST RESULTS FOR THE PROPOSED FILL MATERIAL MUST MEET OR EXCEED THE DESIGN VALUES USED IN THE GEOTECHNICAL REPORT TO DETERMINE SLOPE STABILITY REQUIREMENTS. OTHERWISE, THE SLOPE MUST BE REEVALUATED USING THE ACTUAL SHEAR TEST VALUE OF THE FILL MATERIAL THAT IS IN PLACE.
    c. FILL SOILS SHALL BE FREE OF DELETERIOUS MATERIALS.
25. FILL SHALL NOT BE PLACED UNTIL STRIPPING OF VEGETATION, REMOVAL OF UNSUITABLE SOILS, AND INSTALLATION OF SUBDRAIN (IF ANY) HAVE BEEN INSPECTED AND APPROVED BY THE SOIL ENGINEER. THE BUILDING OFFICIAL MAY REQUIRE A "TP AND ARD TEST METHOD FOR MOISTURE, ASH, ORGANIC MATTER, PEAT OR OTHER ORGANIC SOILS" ASTM D-2974-87 ON ANY SUSPECT MATERIAL. DETRIMENTAL AMOUNTS OF ORGANIC MATERIAL SHALL NOT BE PERMITTED IN FILLS. SOIL CONTAINING SMALL AMOUNTS OF ROOTS MAY BE ALLOWED PROVIDED THAT THE ROOTS ARE IN A QUANTITY AND DISTRIBUTED IN A MANNER THAT WILL NOT BE DETRIMENTAL TO THE FUTURE USE OF THE SITE AND THE SOILS ENGINEER APPROVES THE USE OF SUCH MATERIAL.
26. ROCK OR SIMILAR MATERIAL GREATER THAN 12 INCHES IN DIAMETER SHALL NOT BE PLACED IN THE FILL UNLESS RECOMMENDATIONS FOR SUCH PLACEMENT HAVE BEEN SUBMITTED BY THE SOIL ENGINEER AND APPROVED IN ADVANCE BY THE BUILDING OFFICIAL. LOCATION, EXTENT, AND ELEVATION OF ROCK DISPOSAL AREAS MUST BE SHOWN ON AN "AS BUILT" GRADING PLAN.
27. CONTINUOUS INSPECTION BY THE SOIL ENGINEER, OR A RESPONSIBLE REPRESENTATIVE, SHALL BE PROVIDED DURING ALL FILL PLACEMENT AND COMPACTION OPERATIONS WHERE FILLS HAVE A DEPTH GREATER THAN 30 FEET OR SLOPE SURFACE STEEPER THAN 2:1. (SECTION J107.8 OF THE COUNTY OF LOS ANGELES BUILDING CODE)
28. CONTINUOUS INSPECTION BY THE SOIL ENGINEER, OR A RESPONSIBLE REPRESENTATIVE, SHALL BE PROVIDED DURING ALL SUBDRAIN INSTALLATION. (PER THE CITY OF GARDENA BUILDING CODE)
29. FILL SLOPES IN EXCESS OF 2:1 STEEPNESS RATIO ARE TO BE CONSTRUCTED BY THE PLACEMENT OF SOIL AT SUFFICIENT DISTANCE BEYOND THE PROPOSED FINISH SLOPE TO ALLOW COMPACTION EQUIPMENT TO BE OPERATED AT THE OUTER LIMITS OF THE FINAL SLOPE SURFACE. THE EXCESS FILL IS TO BE REMOVED PRIOR TO COMPLETION OF ROUGH GRADING. OTHER CONSTRUCTION PROCEDURES MAY BE USED WHEN IT IS DEMONSTRATED TO THE SATISFACTION OF THE BUILDING OFFICIAL THAT THE ANGLE OF SLOPE, CONSTRUCTION METHOD AND OTHER FACTORS WILL HAVE EQUIVALENT EFFECT. (SECTION J107.5 OF THE COUNTY OF LOS ANGELES BUILDING CODE.)

PRIVATE ENGINEERS NOTICE TO CONTRACTOR(S)

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES AND/OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. APPROVAL OF THESE PLANS BY THE CITY DOES NOT CONSTITUTE A REPRESENTATION AS TO THE ACCURACY OR COMPLETENESS OF THE LOCATION OR THE EXISTENCE OR NONEXISTENCE OF ANY UTILITY AND/OR STRUCTURE WITHIN THE LIMITS OF THIS PROJECT. THE CONTRACTOR IS REQUIRED TO TAKE ALL DUE PRECAUTIONARY MEANS TO PROTECT THE UTILITIES OF RECORD OR NOT OF RECORD OR NOT SHOWN ON THESE PLANS.
2. RELOCATION OR REMOVAL OF ANY EXISTING UTILITIES SHALL BE PERFORMED BY THE RESPECTIVE UTILITY OWNERS, AT THE EXPENSE OF THE CONTRACTOR.
3. UNAUTHORIZED CHANGES & USES: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS AND THE CITY.

CONTRACTOR'S RESPONSIBILITY

THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES SHOWN OR NOT SHOWN ON THESE DRAWINGS.

THE CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY THAT THIS REQUIREMENT SHALL APPLY CONTINUOUS AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR ENGINEER.

EARTHWORK **

AREA DISTURBED:	0.85±	ACRES
CUT	900	CUBIC YARDS
FILL	175	CUBIC YARDS
STOCKPILE	725	CUBIC YARDS

* THE ABOVE CUT/FILL QUANTITIES ARE FOR PERMIT PURPOSES ONLY. THIS CALCULATION DOES NOT INCLUDE SOILS FROM BUILDING OR WALL FOOTINGS, NOR ANY UTILITY TRENCHING. CONTRACTOR SHALL REFER TO THE SOILS REPORT FOR STATEMENTS CONCERNING GRADING REQUIREMENTS.
THIS CALCULATION ALSO ASSUMES THAT THE EXISTING CONCRETE AND ASPHALT SURFACES WILL BE REMOVED FROM THE SITE AND NOT BE REPURPOSED FOR ONSITE FILL.

** NOTICE TO THE CONTRACTOR

THE ESTIMATES OF IMPROVEMENT AND GRADING QUANTITIES AS SHOWN HEREON ARE PROVIDED FOR SATISFYING PLAN CHECK INFORMATION REQUIREMENTS ONLY. THE CONTRACTOR SHALL PERFORM AN INDEPENDENT ESTIMATE OF ALL IMPROVEMENT QUANTITIES INCLUDING GRADING QUANTITIES, AND SHALL USE SAME AS A BASIS FOR HIS BID(S) AND CONTRACT(S).

THE GRADING CONTRACTOR SHALL BE RESPONSIBLE AND ACCOUNT FOR DISTRIBUTING ANY EXCESS MATERIAL OR SUPPLYING ANY DEFICIENCIES TO BRING THE SITE TO DESIGN GRADE.

FILL NOTES

1. GRADING WORK IS TO ONLY FOLLOW THE DEMOLITION RECOMMENDATIONS IN THE SOILS REPORT.
   a. OVEREXCAVATION AND PREP. FOR THE FUTURE BUILDING PAD IS NOT REQUIRED FOR ROUGH GRADING.
2. ALL FILL SHALL BE COMPACTED TO THE FOLLOWING MINIMUM RELATIVE COMPACTION CRITERIA:
   a. 90 PERCENT OF MAXIMUM DRY DENSITY WITHIN 40 FEET BELOW FINISH GRADE.
   b. 93 PERCENT OF MAXIMUM DRY DENSITY DEEPER THAN 40 FEET BELOW FINISH GRADE, UNLESS A LOWER RELATIVE COMPACTION (NOT LESS THAN 90 PERCENT OF MAXIMUM DRY DENSITY) IS JUSTIFIED BY THE GEOTECHNICAL ENGINEER.

   THE RELATIVE COMPACTION SHALL BE DETERMINED BY A.S.T.M. SOIL COMPACTION TEST D1557-91 WHERE APPLICABLE: WHERE NOT APPLICABLE, A TEST ACCEPTABLE TO THE BUILDING OFFICIAL SHALL BE USED. (SECTION J107.5 OF THE COUNTY OF LOS ANGELES BUILDING CODE.)

NOTE TO CONTRACTOR:

ALL UTILITIES SHOULD BE SHUT OFF AND CAPPED PER UTILITY COMPANY REQUIREMENTS. CONTRACTOR SHALL COORDINATE WITH APPROPRIATE UTILITY COMPANY PRIOR TO COMMENCEMENT OF WORK.

NOTE TO CONTRACTOR:

INSTALL 6-FOOT CHAIN LINK FENCE WITH WINDSCREEN AND GATES, WHERE NECESSARY, ALONG THE PERIMETER OF THE SITE AS NEEDED. CONTRACTOR SHALL PROTECT THESE FENCES AND KEEP AREA FULLY SECURE DURING DEMOLITION.

GARDENA COMMUNITY AQUATIC AND SENIOR CENTER PROJECT (JN 978)

ADDENDUM NO. 1

TO: ALL SPECIFICATION HOLDERS

ADDENDUM NO. 1, AS DECRIBED BELOW, IS FOR USE OF CONTRACTORS AND SUBCONTRACTORS SUBMITTING BIDS ON THIS PROJECT. ALL BIDDERS SHALL INDICATE ON THE BID PROPOSAL FORM, "ACKNOWLEDGEMENT OF ADDENDA RECEIVED", THAT THEY HAVE RECEIVED THIS ADDENDUM NO. 1.

REVISIONS TO THE SPECIFICATIONS:

1. CSI Technical Provisions, PART 1 – GENERAL, 1.1 SUMMARY (01 11 00-1, TP-77) – 'Or approved equal' products are permitted for all project-specified items, with the exception of custom-engineered and designed shades by the USA Shade Structures.

2. CSI Technical Provisions, PART 1 – GENERAL, 1.3 ALTERNATES (01 23 00–1, TP-84) and 1.2 SUBTITUIONS (01 25 00-1, TP-86) – Material reviews are not accepted during the bid process. All substitution requests will be considered within 35 days after the contract is awarded.

REVISIONS TO THE PLANS:

1. Note Sheet, '***NOTICE TO THE CONTRACTOR', Sheet 5 of 195 – The City estimate stockpile volume to be 46 CY (25'x10'x5'), not 232 CY. The revised volume matches the call out on the Demolition Plan, Sheet 9 of 195.

2. Demolition Plan D-1.01, Sheet 9 of 195 –
   - On Lot 12, the existing water meter and its onsite water valve has not been abandoned. Therefore, the contractor shall coordinate with Golden State Water District to include the abandonment of the service line as part of the demolition bid scope. However, the contractor may use this service line during construction and choose to delay the abandonment.

   - Attached to this addendum, find the Environmental Soil Stockpile Sampling Report dated October 31, 2023, by Nino & Moore. The existing onsite stockpile samples have been tested and confirmed as non-hazardous waste.

END OF ADDENDUM NO. 1

Gardena, California 90247

Dear Mr. Shaw:

In accordance with your authorization, Ninyo & Moore is pleased to provide the results of soil sampling and analysis performed on stockpiled soil at the site being developed as the Gardena Community Aquatics Center at 16004 South Harvard Avenue in Gardena, California. The purpose of the soil sampling was to evaluate the stockpiled soil for chemical contamination and acceptability for reuse at the development site. As requested by Griffin Structures, soil sampling was conducted on October 25, 2023. It is our understanding that approximately 46 cubic yards (cy) of soil was excavated and is currently stockpiled on site.

SOIL SAMPLING

Ninyo & Moore performed field work in accordance with standard field procedures, applicable regulatory guidelines, and under the direction of a California Professional Engineer/Geologist. On October 25, 2023, two soil borings were advanced into the stockpiled soil at the site using hand auger equipment. The approximate boring locations are shown on Figure 2.

Soil samples were collected at approximately 1 foot, 3 feet, and 5 feet below ground surface (bgs) at each boring location (Figure 2). The sample containers were labeled, placed in a cooler containing ice, and transported following standard chain-of-custody protocols to Eurofins Environmental Testing within 24 hours after their collection.

LABORATORY ANALYSES

The laboratory was instructed to composite the three depth-discrete samples from each boring location. The composited soil samples were tested for Title 22 Metals in accordance with EPA Method 6010B/7471A and Total Petroleum Hydrocarbons (TPH) using EPA Method 8015M for diesel range organics (DRO) and oil range organics (ORO). One discrete-depth sample from each boring

location was tested for volatile organic compounds (VOCs) and TPH gasoline range organics (GRO) in accordance with EPA Method 8260B.

ANALYTICAL RESULTS

Analytical results are discussed below. Laboratory reports are included in Attachment A.

Volatile Organic Compounds (VOCs)

Concentrations of VOCs were not reported exceeding the laboratory reporting limits in the soil samples analyzed.

Title 22 Metals

Reported metals concentrations are within the background levels found in California soils.

Total Petroleum Hydrocarbons (TPH)

Detectable concentrations of GRO were not reported exceeding the laboratory reporting limits. Low concentrations of petroleum hydrocarbons in the diesel range (8.5 to 14 mg/kg), C6-C44 range (24 to 43 mg/kg), and in the oil range C29-C32 (7.0 mg/kg) were reported.

CONCLUSIONS

Based on the laboratory analytical results of the soil samples analyzed during this sampling effort, the following findings and conclusions are provided:

- Detectable concentrations of VOCs were not reported in the samples analyzed.
- Detectable concentrations of metals were reported in the composite soil samples, but are below California background levels.
- Detectable concentrations of GRO were not reported in the samples analyzed. Diesel range petroleum hydrocarbons, and oil range petroleum hydrocarbons, were reported at 8.5 to 14 mg/kg, and 24 to 43 mg/kg mg/kg, respectively.

RECOMMENDATIONS

Based on the analytical results, the following recommendations are provided:

- Reuse of the stockpiled soil should be evaluated for compliance with the project specifications and requirements.
- For disposal, the soil should be characterized as petroleum hydrocarbon-impacted non-hazardous waste. Furthermore, the lab report should be forwarded to the accepting facility for waste profiling and facility acceptance.

Ninyo & Moore appreciates the opportunity to provide our services on this project. If you have any questions, please contact the undersigned at your convenience.

Respectfully submitted,
NINYO & MOORE

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Receipt
The samples were received on 10/25/2023 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.4º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-377372 and analytical batch 570-377966 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 7471A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-377307 and analytical batch 570-377732 were outside control limits for one or more analytes. See QC Sample Results for detail. The MSD was not spiked due to employee oversight. The associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

BID PROPOSAL

PROJECT NO. JN 978

BID SCHEDULE

The undersigned, having examined the proposed Contract Documents titled:

GARDENA COMMUNITY AQUATIC AND SENIOR CENTER

and having visited the site and examined the conditions affecting the work, hereby proposes and agrees to furnish all labor, materials, equipment, and appliances, and to perform operations necessary to complete the work as required by said proposed Contract Documents and itemized bid schedule below. All work shall be completed within **two hundred sixty (260) Working Days** from the date the Notice of Proceed is issued by the Engineer. The maintenance period, City Holidays, and unforeseen weather conditions or other "Acts of God" are not counted towards working days. The City will also consider waiving delayed workings days, potentially caused by long lead items, contingent on the submission of supporting documents.

Item No.	Item Description	Unit	Approx. Quantity	Unit Price in Figures	Item Total
1	**Mobilization (Maximum 2%)**	L.S.	1	$ 337,413.00	$ 337,413.00

9	**90-Day Landscape Maintenance Period**	L.S.	1	$ 12,982.00	$ 12,982.00

TOTAL CONTRACT BID:

(Figures) $ 16,870,644.00

(Words) Sixteen million eight hundred seventy thousand six hundred forty four dollars and zero cents

*** In case of error in extension of price into the total price column, the unit price will govern.**

PAYEMNT: All work required and shown on the construction plans and this specification for which no price or item is listed on this proposal, it shall be understood that such work, equipment, labor, tools and materials shall be provided without extra charge, allowance or direct payment of any kind. Payment for performing such work or furnishing such equipment, labor, tools and materials shall be included in the above lump sum or unit bid prices and no additional compensation will be paid, therefore. The Contractor is required to submit a detailed schedule of values within twenty-one (21) calendar days after award of contract.

If the City determines that any of the unit bid prices are significantly unbalanced to the potential detriment of the City, the bid will be replaced as non-responsive.

In case of any discrepancy between the words and the figures, the words shall prevail. If the unit price and the total amount for any item are not in agreement, the unit price alone shall be considered to represent the bidder's intention and all totals will be corrected to conform thereto.

Attached hereto is cash, a certified check, a cashier's check, or a bidder's bond in the amount of see attached bid bond: 10% of the total amount bid Dollars, said amount being not less than 10 percent of the amount bid. Pursuant to Public Contract Code Sections 20172 and 20174, it is agreed a portion equal to the difference between the low bid and second low bid shall be retained as a bid bond forfeiture by the City if the undersigned fails or refuses to execute the Contract and furnish the required bonds and certificates of insurance within the time provided.

BID PROPOSAL

PROJECT NO. JN 978

BIDDER'S DECLARATION

It is understood and agreed that:

1. The undersigned has carefully examined all documents which will form a part of the Contract; namely, the Notice Inviting Bids, the Instructions to Bidders, this Proposal, the Bid Bond, the Contract, the Faithful Performance Bond, the Payment Bond, the federal requirements, if any, the Plans and Specifications, the Special Provisions, and the Technical Provisions.

2. The undersigned has, by investigation at the site of the work and otherwise, satisfied himself as to the nature and location of the work and fully informed himself as to all conditions and matters, which can in any way affect the work or the cost thereof.

3. The undersigned fully understands the scope of work and has checked carefully all words and figures inserted in this Proposal and he further understands that the City will not be responsible for any errors or omissions in the preparation of the Proposal.

4. The undersigned agrees and acknowledges that he is aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that Code, and that the undersigned will comply with such provisions before commencing the performance of the Contract if it is awarded to the undersigned.

The undersigned will execute the Contract and furnish the required statutory bonds and certificates of insurance within the period of time specified in the Contract Documents.

The undersigned will begin work after award of Contract and a Notice to Proceed has been given as herein specified and will complete said work within the time specified in the Bidding Schedule.

5. The undersigned certifies that this Proposal is genuine and not sham or collusive, or made in the interest or on behalf of a person not herein named, and the undersigned has not directly or indirectly induced or solicited any other bidder to put in a sham bid nor induced any other person, firm, or corporation to refrain from bidding. The undersigned has not in any manner sought by collusion to secure for himself any advantage over any other bidder.

6. The undersigned will accept an award and enter into a Contract for all work scheduled herein on which he puts in a bid. The awards for such work are to be entirely at the discretion of the City after evaluation of the bids as submitted. The undersigned agrees that the City shall recover or retain as a bid bond forfeiture an amount equal to the difference between the low bid and amount of the bid of the bidder with whom the City enters into a Contract, and the surplus, if any, shall be returned to the lowest bidder in accordance with the provisions of the Public Contract Code Sections 20172 and 20174 in the event of his failure to execute a Contract and furnish required bonds and insurance therefor within the time provided.

BIDDER'S DECLARATION (Continued)

7. The undersigned bidder stated under penalty of perjury that the representations made in submitting this bid are, to the best of his/her knowledge, true, accurate, and complete.

Respectfully submitted,

BID PROPOSAL

PROJECT NO. JN 978

DECLARATION OF ELIGIBILITY TO CONTRACT

[Labor Code Section 1777.1; Public Contract Code Section 6109]

The undersigned, a duly authorized representative of the contractor, certifies and declares that:

1. The undersigned contractor is aware of Sections 1777.1 and 1777.7 of the California Labor Code, which prohibit a contractor or subcontractor who has been found by the Labor Commissioner or the Director of Industrial Relations to be in violation of certain provisions of the Labor Code, from bidding on, being awarded, or performing work as a subcontractor on a public works project for specified periods of time.

2. The undersigned contractor is not ineligible to bid on, be awarded or perform work as a subcontractor on a public works project by virtue of Sections 1771.1 or 1777.7 of the California Labor Code or any other provision of law.

3. The undersigned contractor is aware of California Public Contract Code Section 6109, which states:

> "(a) A public entity, as defined in Section 1100 [of the Public Contract Code], may not permit a contractor or subcontractor who is ineligible to bid or work on, or be awarded, a public works project pursuant to Section 1777.1 or 1777.7 of the Labor Code to bid on, be awarded, or perform work as a subcontractor on, a public works project. Every public works project shall contain a provision prohibiting a contractor from performing work on a public works project with a subcontractor who is ineligible to perform work on the public works project pursuant to Section 1771.1 or 1777.7 of the Labor Code."
>
> "(b) Any contract on a public works project entered into between a contractor and a debarred subcontractor is void as a matter of law. A debarred subcontractor may not receive any public money for performing work as a subcontractor on a public works contract, and any public money that may have been paid to a debarred subcontractor by a contractor on the project shall be returned to the awarding body. The contractor shall be responsible for the payment of wages to workers of a debarred subcontractor who has been allowed to work on the project."

4. The undersigned contractor has investigated the eligibility of each and every subcontractor the undersigned contractor intends to use on this public works project, and has determined that none of them are ineligible to perform work as a subcontractor on a public works project by virtue of the foregoing provisions of the Public Contract Code, Sections 1771.1 or 1777.7 of the Labor Code, or any other provision of law.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct. Executed this 21 day of November, 2023, at 3002 Dow Ave. Tustin, *(place of execution)*, California 92780.

BID PROPOSAL

PROJECT NO. JN 978

BID BOND

KNOW ALL MEN BY THESE PRESENTS:

THAT New Dynasty Construction Co., as Principal,
and Nationwide Mutual Insurance Company, as Surety,
are held firmly bound unto the City of Gardena in the sum of ~~$----------~~;
TEN PERCENT (10%) of the Total Amount Bid----------~~DOLLARS~~;
(not less than ten percent of total amount of bid)
for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, said Principal has submitted a bid to the City to perform all work required under the following:

PROJECT: **GARDENA COMMUNITY AQUATIC AND SENIOR CENTER**

NOW, THEREFORE, if said Principal is awarded a Contract by the City and, within the time and in the manner required in the Specifications for said project, enters into the written form of Contract bound with said Specifications and furnishes the required bonds, one to guarantee faithful performance and the other to guarantee payment for labor and materials, then this obligation shall be null and void, otherwise it shall remain in full force and effect. In the event suit is brought upon this bond by the City and judgment is recovered, said Surety shall pay all costs incurred by the City in such suit, including a reasonable attorneys' fee to be fixed by the court. Surety hereby waives the provisions of California Civil Code §2845.

SIGNED AND SEALED, this 14th day of November, 2023.

Power of Attorney

KNOW ALL MEN BY THESE PRESENTS THAT:

Nationwide Mutual Insurance Company, an Ohio corporation

hereinafter referred to severally as the "Company" and collectively as "the Companies" does hereby make, constitute and appoint:

EDWARD N. HACKETT

each in their individual capacity, its true and lawful attorney-in-fact, with full power and authority to sign, seal, and execute on its behalf any and all bonds and undertakings, and other obligatory instruments of similar nature, in penalties not exceeding the sum of

UNLIMITED

and to bind the Company thereby, as fully and to the same extent as if such instruments were signed by the duly authorized officers of the Company; and all acts of said Attorney pursuant to the authority given are hereby ratified and confirmed.

This power of attorney is made and executed pursuant to and by authority of the following resolution duly adopted by the board of directors of the Company:

"RESOLVED, that the president, or any vice president be, and each hereby is, authorized and empowered to appoint attorneys-in-fact of the Company, and to authorize them to execute and deliver on behalf of the Company any and all bonds, forms, applications, memorandums, undertakings, recognizances, transfers, contracts of indemnity, policies, contracts guaranteeing the fidelity of persons holding positions of public or private trust, and other writings obligatory in nature that the business of the Company may require; and to modify or revoke, with or without cause, any such appointment or authority; provided, however, that the authority granted hereby shall in no way limit the authority of other duly authorized agents to sign and countersign any of said documents on behalf of the Company."

"RESOLVED FURTHER, that such attorneys-in-fact shall have full power and authority to execute and deliver any and all such documents and to bind the Company subject to the terms and limitations of the power of attorney issued to them, and to affix the seal of the Company thereto; provided, however, that said seal shall not be necessary for the validity of any such documents."

This power of attorney is signed and sealed under and by the following bylaws duly adopted by the board of directors of the Company.

Execution of Instruments. Any vice president, any assistant secretary or any assistant treasurer shall have the power and authority to sign or attest all approved documents, instruments, contracts, or other papers in connection with the operation of the business of the company in addition to the chairman of the board, the chief executive officer, president, treasurer or secretary; provided, however, the signature of any of them may be printed, engraved, or stamped on any approved document, contract, instrument, or other papers of the Company.

IN WITNESS WHEREOF, the Company has caused this instrument to be sealed and duly attested by the signature of its officer the 20th day of August, 2021.

Antonio C. Albanese, **Vice President** of Nationwide Mutual Insurance Company

ACKNOWLEDGMENT

STATE OF NEW YORK COUNTY OF NEW YORK: ss

On this 20th day of August, 2021, before me came the above-named officer for the Company aforesaid, to me personally known to be the officer described in and who executed the preceding instrument, and he acknowledged the execution of the same, and being by me duly sworn, deposes and says, that he is the officer of the Company aforesaid, that the seal affixed hereto is the corporate seal of said Company, and the said corporate seal and his signature were duly affixed and subscribed to said instrument by the authority and direction of said Company.

BID PROPOSAL

PROJECT NO. JN 978

DESIGNATION OF SUBCONTRACTORS

In compliance with the "Subletting and Subcontracting Fair Practices Act" being Sections 4100-4113 of the Public Contract Code of the State of California, and any amendments thereto, each bidder shall set forth below the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime contractor in or about the construction of the work or improvement in an amount in excess of one-half (1/2) of one percent (1%) of the prime contractor's total bid, and shall further set forth the portion of the work which will be done by each subcontractor. Only one subcontractor for each such portion shall be listed.

If the contractor fails to specify a subcontractor for any portion of the work to be performed under the contract, he shall be deemed to have agreed to perform such portion himself, and he shall not be permitted to subcontract that portion of the work except under the conditions hereinafter set forth.

Subletting or subcontracting of any portion of the work to which subcontractor was designated in the original bid shall only be permitted in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the legislative body of the City.

BID PROPOSAL

PROJECT NO. JN 978

DESIGNATION OF SUBCONTRACTORS

In compliance with the "Subletting and Subcontracting Fair Practices Act" being Sections 4100-4113 of the Public Contract Code of the State of California, and any amendments thereto, each bidder shall set forth below the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime contractor in or about the construction of the work or improvement in an amount in excess of one-half (1/2) of one percent (1%) of the prime contractor's total bid, and shall further set forth the portion of the work which will be done by each subcontractor. Only one subcontractor for each such portion shall be listed.

If the contractor fails to specify a subcontractor for any portion of the work to be performed under the contract, he shall be deemed to have agreed to perform such portion himself, and he shall not be permitted to subcontract that portion of the work except under the conditions hereinafter set forth.

Subletting or subcontracting of any portion of the work to which subcontractor was designated in the original bid shall only be permitted in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the legislative body of the City.

GENEAL CONTRACTOR EXPERIENCE REQUIREMENTS

Contractor/Bidder certifies that it meets the qualifications and experience requirements established in the project specifications, plans and as follows: (Contractor may be immediately disqualified at the discretion of the City if the following conditions are not met)

General Contractor has, in the last ten (10) years, constructed at least three (3) comparable projects. The qualified comparable projects are as follows:

- Comparable projects in value of at least $5,000,000.
- (2) of the project must be public use aquatic facilities and include all aspects of pool construction including excavation, shell construction, pool electrical, pool plumbing, pool mechanical, and pool deck construction.
- (2) of the projects must demonstrate minimum two-story structural steel construction, with deep pile foundation and/or mat slab foundation.

Number of years as a contractor in construction work of this type: 12 years

Three (3) comparable projects at minimum (may additionally attach qualifications/ experiences):

1. Name (Firm/Agency): Fullerton Joint Union High School District
   Address: 1051 W. Bastanchury Rd, Fullerton, CA 92833
   Contact Person: Andy Kim Telephone No.: office:714-626-4384 cell: 714-458-9994
   Project Title: La Habra Aquatic Facility
   Project Location: 801 Highlander Ave., La Habra CA 90631
   Project Scope: New construction of aquatic facility for high school
   Date of Completion: September 2022 Contract Amount: $6,308,434.00

2. Name (Firm/Agency): Fullerton Joint Union High School District
   Address: 1051 W. Bastanchury Rd, Fullerton, CA 92833
   Contact Person: Andy Kim Telephone No.: office:714-626-4384 cell: 714-458-9994
   Title of Project: Buena Park High School New Pool
   Project Location: 8833 Academy Drive, Buena Park CA 90621
   Project Scope: Construction of an aquatic pool for high school / facility improvements

Date of Completion: November 2020 Contract Amount: $6,879,916.00

3. Name (Firm/Agency): Capistrano Unified School District
Address: 33122 Valle Road San Juan Capistrano, CA 92675
Contact Person: Greg Smith Telephone No.: 714-541-2390
Title of Project: Aliso Viejo High School 2-Story STEM Building
Project Location: 28000 Wolverine Way, Aliso Viejo, CA 92656
Project Scope: Construction of a 2-story labratory classroom STEM building (Building F)

Date of Completion: October 2022 Contract Amount: $11,531,439.14

NOTE: If requested by the City, the bidder shall furnish a certified financial statement, references, and other information sufficiently comprehensive to permit an appraisal of his current financial condition.

CERTIFICATE OF NON-DISCRIMINATION BY CONTRACTORS

As suppliers of goods or services to the City, the firm listed below certifies that it does not discriminate in its employment with regard to race, color, religion, sex, or national origin; that it is in compliance with all applicable federal, state, and local directives, and executive orders regarding non-discrimination in employment; and that it agrees to pursue positively and aggressively the principle of equal opportunity in employment.

We agree specifically:

1. To establish or observe employment policies which affirmatively promote opportunities for minority persons at all job levels.

2. To communicate this policy to all persons concerned, including all company employees, outside recruiting services, especially those serving minority communities, and to the minority communities at large.

3. To take affirmative steps to hire minority employees within the company.

BID PROPOSAL

PROJECT NO. JN 978

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS

(BEFORE COMPLETING CERTIFICATION, READ INSTRUCTIONS ON NEXT PAGE)

The Contractor shall not perform Work with any Subcontractor that has been debarred or suspended pursuant to California Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. The Contractor and Subcontractors shall not be debarred or suspended throughout the duration of the Contract pursuant to Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. If the Contractor or any Subcontractor becomes debarred or suspended during the duration of the Project, the Contractor shall immediately notify the City.

1. The prospective primary participant certifies to the best of its knowledge and belief, that it and its principals:

    a. Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

    b. Have not within a 5-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statement, or receiving stolen property;

    c. Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph 1b of this certification; and

    d. Have not within a 5-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

2. Where the prospective primary participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Signature: _____ Name: Sherwin Chegini

Title: President Company: New Dynasty Construction Co.

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS (Continued)

INSTRUCTIONS FOR CERTIFICATION

1. By signing and submitting this proposal, the prospective primary participant is providing the certification set out below.
2. The inability of a person to provide the certification required below will not necessarily result in denial of participation in this covered transaction. The prospective participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective primary participant to furnish a certification or an explanation shall disqualify such person from participation in this transaction.
3. The certification in this clause is a material representation of fact upon which reliance was placed when the department or agency determined to enter into this transaction. If it is later determined that the prospective primary participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.
4. The prospective primary participant shall provide immediate written notice to the department or agency to which this proposal is submitted if at any time the prospective primary participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
5. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower tier covered transaction," "participant," "person," "primary covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of the rules implementing Executive Order 12549. You may contact the department or agency to which this proposal is submitted for assistance in obtaining a copy of those regulations (13 CFR Part 145).
6. The prospective primary participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
7. The prospective primary participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Covered Transactions," provided by the department or agency entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions.
8. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the ineligibility of its principals. Each participant may, but is not required to, check the Nonprocurement List.
9. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
10. Except for transactions authorized under paragraph 6 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

Allan Rigg
City Engineer
City of Gardena, CA

Re: Proposal for Professional Design Services –Gardena Aquatics and Senior Community Center Preparation of Design-Build requirements for a Photovoltaic (PV) Generating system.

Dear Allan:

We are pleased to submit this scope of work and fee proposal for the Gardena Aquatics and Senior Community Center Project preparation of Design-Build requirements for a Photovoltaic (PV) Generating system.

1. Alternating Current (AC) Side Specification – this Scope of Work shall include Plans and Specifications for all components on AC side of inverter to include – AC cabling feeder, service disconnects, net metering equipment and tie into main electrical service assembly.
2. Direct Current (DC) Side Specification – this Scope of Work shall include Plans and Specifications for all components on DC side of inverter, including DC to AC inverter, DC cabling and collectors and PV panel array with racking system to connect to roof structure.
3. Structural calculations to the roof for bolt, penetration and embedment.
4. Project management of added scope.

This work requires additional scope from our electrical, structural, mechanical and architectural subconsultants. Compensation for the above professional services will be billed hourly not to exceed $**28,350.00**. When incurred, project reimbursable expenses will be billed at cost plus 15% administrative fee in addition to the professional services fee.

All other terms and conditions shall remain consistent with our original agreement.

Thank you for the opportunity to submit this proposal. We look forward to working with you on this exciting project.

Caution! This message was sent from outside your organization.

Hi Kevin, please see below from our electrical engineer and let me know your thoughts.

Also want to check on the add service fee request, it will be $6,325.00
Just shoot me back that you are good with the fees and I'll follow up with a letter, I recall we discussed billing this as a reimbursable, please let me know.

Are we producing LV plans? I think we should produce the plans as discussed and remove any duplicated items that are on the bid instructions. I thought the allowances were going to be for LV, security, and AV equipment so that money could be captured in the budget and included in the funding of the project.

Do we have approval of the add service? I need to get started on this soon.

Best regards,
Steve Roth
Project Manager

Subject: RE: Gardena Aquatic & Senior Center Project - Potential Security Camera Locations for future

Electrical subs always want to exclude the low voltage work, and Low-Voltage subs want to exclude the infrastructure for their devices. So, we definitely should include conduits, j-boxes, cables, and terminated connections for the A/V systems, and j-boxes with cover plates and any conduits needed for the future camera/security devices. Backing plates and any other misc. accoutrements should also be captured somewhere as well - Either by amending existing bid line items or adding new bid lines get added to the list.

Proposal No. 04-3850A

Mr. Jon Hughes
Griffin Structures
1 Technology Drive
Building I, Suite 829
Irvine, California 92618

Subject: Proposal for Specialty Inspection Services
Community Aquatics and Senior Center Project
Gardena, California

Dear Mr. Hughes:

Ninyo & Moore is pleased to submit this proposal for specialty inspection services during construction Community Aquatics and Senior Center project located at 1654 W. 160th Street in Gardena, California. Our proposal was prepared based on our review of the project RFP for Construction Management and Inspection services and project plans, and our discussions with you. We understand that the project will generally consist of a new 2-story senior center, a new swimming pool, shade structures, bleachers and a pool building. The new Senior Center Building will generally consist of concrete spread footings and slab on grade, masonry walls, steel framing, metal stud interior walls and concrete over metal decking. The Pool Building will generally consist of concrete foundations and masonry walls. The pool core and walls will be shotcrete. The shade structures will be structural steel framed supported on concrete caisson foundations. Other site improvements include a masonry site wall, underground utilities, outdoor fitness equipment, concrete low walls and concrete pavement.

SCOPE OF SERVICES

Based on our conversations with you, our understanding of the proposed construction, and our experience with similar projects, we propose to provide the following scope of services:

- Project coordination, management and technical support including review of the project plans and specifications, and liner related submittals, work scheduling and distribution of test data.
- Attendance at pre-construction meetings and as-requested field meetings.
- Special Inspector services during concrete, shotcrete and masonry including inspection of reinforcing steel type, grade, location, lap splices, anchors and formwork, as well as inspection during grout, shotcrete and concrete placement.

- Specialty Inspector services during structural steel welding and bolting at the site and at the fabrication plant. Non-destructive examination of welds will be performed in accordance with the approved project documents.
- Preparation of daily reports and test data sheets to document the items inspected.
- Preparation of a Final Inspection Report for project close-out with the Building Department.

ASSUMPTIONS

Based on our project understanding, the following assumptions have been made in the preparation of our scope of services:

- Our services will be coordinated and scheduled on an as-needed basis, as requested by our client's authorized field representative.
- Our services are subject to prevailing wage requirements.

ESTIMATED FEES

We propose to provide our services on a time-and-materials basis in accordance with the attached Schedule of Fees. Our estimated fee for the scope described herein is presented in the attached Table 1.

Ninyo & Moore appreciates the opportunity to provide this proposal and we look forward to working with you.

Respectfully submitted,
NINYO & MOORE

Alfredo "Tino" Rodriguez
Principal, Construction Services

Schedule of Fees

Hourly Charges for Personnel

Professional Staff

Principal Engineer/Geologist/Environmental Scientist/Certified Industrial Hygienist	$ 210
Senior Engineer/Geologist/Environmental Scientist	$ 200
Senior Project Engineer/Geologist/Environmental Scientist	$ 195
Project Engineer/Geologist/Environmental Scientist	$ 185
Senior Staff Engineer/Geologist/Environmental Scientist	$ 170
Staff Engineer/Geologist/Environmental Scientist	$ 155
GIS Analyst	$ 130
Technical Illustrator/CAD Operator	$ 110

Field Staff

Certified Asbestos/Lead Technician	$ 195
Field Operations Manager	$ 130
Nondestructive Examination Technician (UT, MT, LP)	$ 125
Supervisory Technician	$ 120
Special Inspector (Concrete, Masonry, Structural Steel, Welding, and Fireproofing)	$ 115
Senior Technician	$ 110
Technician	$ 110

Administrative Staff

Information Specialist	$ 90
Geotechnical/Environmental/Laboratory Assistant	$ 95
Data Processor	$ 75

Other Charges

Concrete Coring Equipment (includes technician)	$ 190/hr
Anchor Load Test Equipment (includes technician)	$ 190/hr
GPR Equipment	$ 180/hr
Inclinometer	$ 100/hr
Hand Auger Equipment	$ 80/hr
Rebar Locator (Pachometer)	$ 25/hr
Vapor Emission Kit	$ 65/kit
Nuclear Density Gauge	$ 12/hr
X-Ray Fluorescence	$ 70/hr
PID/FID	$ 25/hr
Air Sampling Pump	$ 10/hr
Field Vehicle	$ 15/hr
Expert Witness Testimony	$ 450/hr
Direct Expenses	Cost plus 15 %

Special equipment charges will be provided upon request.

Notes

For field and laboratory technicians and special inspectors, overtime rates at 1.5 times the regular rates will be charged for work performed in excess of 8 hours in one day Monday through Friday and all day on Saturday. Rates at twice the regular rates will be charged for all work in excess of 12 hours in one day, all day Sunday and on holidays.

Field technician and special inspection hours are charged at a 4-hour minimum, and 8-hour minimum for hours exceeding 4 hours.

Invoices are payable upon receipt. A service charge of 1.5 percent per month may be charged on accounts not paid within 30 days.

Our rates will be adjusted in conjunction with the increase in the Prevailing Wage Determination during the life of the project, as applicable.

The terms and conditions are included in Ninyo & Moore's Work Authorization and Agreement form.

Potential Reactivity of Aggregate (Chemical Method), C 289	$ 475
Sand Equivalent, T 176, CT 217	$ 125
Sieve Analysis, Coarse Aggregate, T 27, C 136	$ 120
Sieve Analysis, Fine Aggregate (including wash), T 27, C 136	$ 145
Sodium Sulfate Soundness, C 88	$ 450
Specific Gravity and Absorption, Coarse, C 127, CT 206	$ 115
Specific Gravity and Absorption, Fine, C 128, CT 207	$ 175

ROOFING

Roofing Tile Absorption, (set of 5), C 67	$ 250
Roofing Tile Strength Test, (set of 5), C 67	$ 250

Special preparation of standard test specimens will be charged at the technician's hourly rate.
Ninyo & Moore is accredited to perform the AASHTO equivalent of many ASTM test procedures.

City of Gardena

Gardena City Council Meeting

AGENDA REPORT SUMMARY

Agenda Item No. 16.B
Section: DEPARTMENTAL ITEMS - PUBLIC WORKS
Meeting Date: December 12, 2023

TO: THE HONORABLE MAYOR AND MEMBERS OF THE GARDENA CITY COUNCIL

AGENDA TITLE: Award Construction Contract for the Storm Drain Debris Screen FY 2020/2021 and 2021/2022 Project, JN 998 and 999, to United Strom Water, Inc. in the amount of $243,793.00. Additionally, Approve the Project Plans & Specifications, $8,784 Construction Support Services Contract with Cannon, 10% of Project Contingency and Declare California Environmental Quality Act (CEQA) Exemption.

COUNCIL ACTION REQUIRED:

Staff Recommendations:

- **Award Construction Contract**
- **Approve Project Plans and Specifications**
- **Approve Construction Support Services**
- **Approve Project Contingency**
- **Declare CEQA Exemption**

RECOMMENDATION AND STAFF SUMMARY:

In response to the Los Angeles Reginal Water Quality Control and its Water Code Section 13383 Order, the City of Gardena Statewide Trash Provisions Implementation Plan was prepared and submitted in 2017.

The first two out of five phases of the implementation was completed by 2017 and installed 189 Connector Pipe Screens (CPS) and/or Automatic Retractable Screens (ARS) out of 795 total catch basins in the City of Gardena. Subsequently, staff has prepared this third phase of the implementation plan and will be required to complete the remaining two phases by the year 2025.

This Phase of Storm Drain Debris Screens Project will install 211 Connector Pipe Screens (CPS) in catch basins throughout the City. CPS units are designed to prevent trash from getting to the ocean by capturing them at each catch basins. 179 of the catch basins belong to Los Angeles County Department of Public Works. Therefore, a permit is required for the installation. The remaining 32 catch basins belong to the City. The 211 catch basins were identified based on the priority land use characterizations (density level) as required by the Statewide Trash Provisions.

In October 2023, a bid request was published in CR Planwell, Gardena Valley News and the

City website and the following one (1) bid was received on November 8, 2023:

1. United Storm Water, Inc. $243,793.00

The L.A. County Department of Public Works requires that only pre-qualified contractors are eligible to bid for and install the debris screens. Presently, there are eight (8) pre-qualified contractors/manufactures in the County, and our responsible bidder, United Storm Water contractor is one of them. They are licensed in the State of California and have good and verified records of construction projects with various Counties and municipalities throughout Southern California. They have also previously completed two (2) projects for the City of Gardena. They will be required to meet all bonding and financial standards. The project is anticipated to start construction in March 2024 and will be completed in May 2024.

Construction support services for the project will be amended to the Cannon Corporation consultant's existing design contract as an additional service agreement in the amount of $8,784.

Staff recommends that the City Council approve the award of the construction contract for the Storm Drain Debris Screen FY 2020/2021 and FY 2021/2022 project, JN 998 and 999 to United Strom Water, Inc. in the amount of $243,793 and additionally:

a. Approve the Plans and Specifications.
b. Approve the Construction Support Services to Cannon Corporation in the amount of $8,784.
c. Approve 10% on the construction award amount, $24,400 to be utilized for construction Contingency.
d. Declare this project to be Categorically exempt under CEQA, Class 1, Section 15301, as rehabilitation of existing facilities.

FINANCIAL IMPACT/COST:

Source of Funds

JN 998, FY 2020-2021 Budget - Measure W Funds	$130,000
JN 999, FY 2021-2022 Budget - Measure W Funds	$165,000
Total	$295,000

Estimated Expenditures

Remaining Design Phase Expenditures	$8,904
Construction Support Services and Job Cost	$14,302
Construction Contract Award	$243,793
10% Construction Contingency	$24,400
Total	$291,399

Subject: Project No. JN 998 & 999, Storm Drain Debris Screen FY 2020/2021 & FY 2021/2022, Various Locations

To whom it may concern,

United Storm Water, Inc. (United) is pleased to submit the enclosed response to the bid for Storm Drain Debris Screens to be installed throughout the City of Gardena. United has vast experience providing the services relative to this request, and our firm and proposal meet all the qualifications and requirements of the bid.

Identification of Bidder

Contractor Information	
Legal Name	United Storm Water, Inc.
Address	14000 E. Valley Blvd., City of Industry, CA 91746
Legal Form of Company	S-Corporation
Year Incorporated	1999 (24 years)
California Corporation No.	C2155753
Tax Identification No.	95-4742126
DIR Registration No.	1000012438
Contractor License No.	768583 (A, HAZ, C21, C27, C31, C42)
Parent Company	N/A
DBE Designation	Minority Business Enterprise (MBE)
Contact Name/Title	Lydia Perry, Secretary/Treasurer
Contact Email/Telephone	lydia@unitedstormwater.com; (626) 890-7078

United Storm Water is a Class A MBE Contractor founded in 1999 having demonstrated experience and expertise in storm water maintenance and BMP fabrication and installation. United holds the licenses and permits required for fulfillment of the contract and have successfully provided these services to numerous public agencies for (24) years including the City of Gardena. United is the Contractor who fabricated and installed its Connector Pipe Screen (CPS) and Automatic Retractable Screen (ARS) devices within a total of approximately (125) catch basins for the City of Gardena in 2015 and 2017.

Scope of Work

United shall provide all materials, labor, and equipment required to install a total of approximately (225) CPS devices within (32) City owned and (179) County owned catch basins. Services include traffic control, pre-installation cleaning of the catch basins to be retrofitted, obtaining and paying for County flood construction permit, and the painting of staff gauges. This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations and prevailing wage rates apply. Per Addendum 1, the work is to be completed within (35) work days after notice to proceed pending receipt and closeout of County construction permit.

Products to be Installed

For this project United Storm Water proposes installation of its own CPS devices. United Storm Water's CPS devices have been approved by the Water Board, the Mosquito and Vector Control Association of California (MVCAC), and Los Angeles County Department of Public Works. Product names are provided below, and technical drawings are attached:

- USW-2M1 Fixed Screen With Swivel Access Plate (Fact Sheet, Exhibit A2.1)
- USW-2M2 Fixed Screen With Hinged Deflector Access (Fact Sheet, Exhibit A2.2)

Please note that Los Angeles County only approves the installation of fixed CPS screens, and removeable screens are prohibited by any manufacturer. With this said drawings of United's removable CPS models USW-1M1 and USW-1M2 were included in the bid specifications by the City in error, and the listing of Los Angeles County approved products (Appendix C) takes precedence.

United Storm Water offers quality services that aid public agencies to remain in compliance with local and regional storm water regulations in a professional and workmanlike manner. United is a firm who is a leader in its industry and is always evolving to provide its customers with leading edge solutions. Thank you for your consideration of our proposal!

Sincerely,

Lydia Perry

BID PROPOSAL

PROJECT NO. JN 998 & 999

BID SCHEDULE

The undersigned, having examined the proposed Contract Documents titled:

STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

and having visited the site and examined the conditions affecting the work, hereby proposes and agrees to furnish all labor, materials, equipment, and appliances, and to perform operations necessary to complete the work as required by said proposed Contract Documents and itemized bid schedule below. All work shall be completed within **75** **Working Days** from the date the Notice of Proceed is issued by the Engineer.

Item No.	Item Description	Unit	Approx. Quantity	Unit Price in Figures	Item Total
1	Traffic Control	LS	1	$500.00	$500.00
2	Install Connector Pipe Screen (CPS) in Existing City Catch Basin	EA	32	$863.00	$27,616.00
3	Install Connector Pipe Screen (CPS) in Existing County Catch Basin	EA	179	$1,204.00	$215,516.00
4	Los Angeles County Flood Construction Permit Fee	LS	1	$ 161	$ 161

BID SCHEDULE (Continued)

TOTAL CONTRACT BID:

(Figures) $ 243,793.00

(Words) TWO HUNDRED FORTY-THREE THOUSAND, SEVEN HUNDRED NINETY-THREE DOLLARS AND ZERO CENTS

*** In case of error in extension of price into the total price column, the unit price will govern.**

All work required and shown on the construction plans and this specification for which no price or item is listed on this proposal, it shall be understood that such work, equipment, labor, tools and materials shall be provided without extra charge, allowance or direct payment of any kind. Payment for performing such work or furnishing such equipment, labor, tools and materials shall be included in the above lump sum or unit bid prices and no additional compensation will paid therefor.

If the City determines that any of the unit bid prices are significantly unbalanced to the potential detriment of the City, the bid will be replaced as non-responsive.

In case of any discrepancy between the words and the figures, the words shall prevail. If the unit price and the total amount for any item are not in agreement, the unit price alone shall be considered to represent the bidder's intention and all totals will be corrected to conform thereto.

Attached hereto is cash, a certified check, a cashier's check, or a bidder's bond in the amount of Ten Percent of the Amount Bid Dollars, said amount being not less than 10 percent of the amount bid. Pursuant to Public Contract Code Sections 20172 and 20174, it is agreed a portion equal to the difference between the low bid and second low bid shall be retained as a bid bond forfeiture by the City if the undersigned fails or refuses to execute the Contract and furnish the required bonds and certificates of insurance within the time provided.

BIDDER'S DECLARATION

It is understood and agreed that:

1. The undersigned has carefully examined all documents which will form a part of the Contract; namely, the Notice Inviting Bids, the Instructions to Bidders, this Proposal, the Bid Bond, the Contract, the Faithful Performance Bond, the Payment Bond, the federal requirements, if any, the Plans and Specifications, the Special Provisions, and the Technical Provisions.

2. The undersigned has, by investigation at the site of the work and otherwise, satisfied himself as to the nature and location of the work and fully informed himself as to all conditions and matters, which can in any way affect the work or the cost thereof.

3. The undersigned fully understands the scope of work and has checked carefully all words and figures inserted in this Proposal and he further understands that the City will not be responsible for any errors or omissions in the preparation of the Proposal.

4. The undersigned agrees and acknowledges that he is aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that Code, and that the undersigned will comply with such provisions before commencing the performance of the Contract if it is awarded to the undersigned.

The undersigned will execute the Contract and furnish the required statutory bonds and certificates of insurance within the period of time specified in the Contract Documents.

The undersigned will begin work after award of Contract and a Notice to Proceed has been given as herein specified and will complete said work within the time specified in the Bidding Schedule.

5. The undersigned certifies that this Proposal is genuine and not sham or collusive, or made in the interest or on behalf of a person not herein named, and the undersigned has not directly or indirectly induced or solicited any other bidder to put in a sham bid nor induced any other person, firm, or corporation to refrain from bidding. The undersigned has not in any manner sought by collusion to secure for himself any advantage over any other bidder.

6. The undersigned will accept an award and enter into a Contract for all work scheduled herein on which he puts in a bid. The awards for such work are to be entirely at the discretion of the City after evaluation of the bids as submitted. The undersigned agrees that the City shall recover or retain as a bid bond forfeiture an amount equal to the difference between the low bid and amount of the bid of the bidder with whom the City enters into a Contract, and the surplus, if any, shall be returned to the lowest bidder in accordance with the provisions of the Public Contract Code Sections 20172 and 20174 in the event of his failure to execute a Contract and furnish required bonds and insurance therefor within the time provided.

BIDDER'S DECLARATION (Continued)

7. The undersigned bidder stated under penalty of perjury that the representations made in submitting this bid are, to the best of his/her knowledge, true, accurate, and complete.

Respectfully submitted,

BID PROPOSAL

PROJECT NO. JN 998 & 999

DECLARATION OF ELIGIBILITY TO CONTRACT

[Labor Code Section 1777.1; Public Contract Code Section 6109]

The undersigned, a duly authorized representative of the contractor, certifies and declares that:

1. The undersigned contractor is aware of Sections 1777.1 and 1777.7 of the California Labor Code, which prohibit a contractor or subcontractor who has been found by the Labor Commissioner or the Director of Industrial Relations to be in violation of certain provisions of the Labor Code, from bidding on, being awarded, or performing work as a subcontractor on a public works project for specified periods of time.

2. The undersigned contractor is not ineligible to bid on, be awarded or perform work as a subcontractor on a public works project by virtue of Sections 1771.1 or 1777.7 of the California Labor Code or any other provision of law.

3. The undersigned contractor is aware of California Public Contract Code Section 6109, which states:

> "(a) A public entity, as defined in Section 1100 [of the Public Contract Code], may not permit a contractor or subcontractor who is ineligible to bid or work on, or be awarded, a public works project pursuant to Section 1777.1 or 1777.7 of the Labor Code to bid on, be awarded, or perform work as a subcontractor on, a public works project. Every public works project shall contain a provision prohibiting a contractor from performing work on a public works project with a subcontractor who is ineligible to perform work on the public works project pursuant to Section 1771.1 or 1777.7 of the Labor Code."
>
> "(b) Any contract on a public works project entered into between a contractor and a debarred subcontractor is void as a matter of law. A debarred subcontractor may not receive any public money for performing work as a subcontractor on a public works contract, and any public money that may have been paid to a debarred subcontractor by a contractor on the project shall be returned to the awarding body. The contractor shall be responsible for the payment of wages to workers of a debarred subcontractor who has been allowed to work on the project."

4. The undersigned contractor has investigated the eligibility of each and every subcontractor the undersigned contractor intends to use on this public works project, and has determined that none of them is ineligible to perform work as a subcontractor on a public works project by virtue of the foregoing provisions of the Public Contract Code, Sections 1771.1 or 1777.7 of the Labor Code, or any other provision of law.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct. Executed this 6th day of November, 2023, at Industry _____ *(place of execution)*, California_____.

BID PROPOSAL

PROJECT NO. JN 998 & 999

BID BOND

KNOW ALL MEN BY THESE PRESENTS:

THAT United Storm Water, Inc., as Principal, and Arch Insurance Company, as Surety, are held firmly bound unto the City of Gardena in the sum of $10% ; Ten Percent of the Amount Bid DOLLARS, (not less than ten percent of total amount of bid) for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, said Principal has submitted a bid to the City to perform all work required under the following:

PROJECT: STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

NOW, THEREFORE, if said Principal is awarded a Contract by the City and, within the time and in the manner required in the Specifications for said project, enters into the written form of Contract bound with said Specifications and furnishes the required bonds, one to guarantee faithful performance and the other to guarantee payment for labor and materials, then this obligation shall be null and void, otherwise it shall remain in full force and effect. In the event suit is brought upon this bond by the City and judgment is recovered, said Surety shall pay all costs incurred by the City in such suit, including a reasonable attorneys' fee to be fixed by the court. Surety hereby waives the provisions of California Civil Code §2845.

SIGNED AND SEALED, this* day of November, 2023.

This Power of Attorney limits the acts of those named herein, and they have no authority to bind the Company except in the manner and to the extent herein stated. Not valid for Note, Loan, Letter of Credit, Currency Rate, Interest Rate or Residential Value Guarantees.

POWER OF ATTORNEY

Know All Persons By These Presents:
That the Arch Insurance Company, a corporation organized and existing under the laws of the State of Missouri, having its principal administrative office in Jersey City, New Jersey (hereinafter referred to as the "Company") does hereby appoint:

Ben Stong, Michael D. Stong and R. Nappi of Riverside, CA (EACH) Benjamin Wolfe, Chelsea Liberatore of Sacramento, CA (EACH) Adrian Langrell, Arturo Ayala, Daniel Huckabay, Dwight Reilly, Frank Morones and Shaunna Rozelle Ostrom of Orange, CA (EACH)

its true and lawful Attorney(s)in-Fact, to make, execute, seal, and deliver from the date of issuance of this power for and on its behalf as surety, and as its act and deed: Any and all bonds, undertakings, recognizances and other surety obligations, in the penal sum not exceeding One Hundred Fifty Million Dollars ($150,000,000.00). This authority does not permit the same obligation to be split into two or more bonds In order to bring each such bond within the dollar limit of authority as set forth herein.

The execution of such bonds, undertakings, recognizances and other surety obligations in pursuance of these presents shall be as binding upon the said Company as fully and amply to all intents and purposes, as if the same had been duly executed and acknowledged by its regularly elected officers at its principal administrative office in Jersey City, New Jersey.

This Power of Attorney is executed by authority of resolutions adopted by unanimous consent of the Board of Directors of the Company on August 31, 2022, true and accurate copies of which are hereinafter set forth and are hereby certified to by the undersigned Secretary as being in full force and effect:
"**VOTED**, That the Chairman of the Board, the President, or the Executive Vice President, or any Senior Vice President, of the Surety Business Division, or their appointees designated in writing and filed with the Secretary, or the Secretary shall have the power and authority to appoint agents and attorneys-in-fact, and to authorize them subject to the limitations set forth in their respective powers of attorney, to execute on behalf of the Company, and attach the seal of the Company thereto, bonds, undertakings, recognizances and other surety obligations obligatory in the nature thereof, and any such officers of the Company may appoint agents for acceptance of process."

This Power of Attorney is signed, sealed and certified by facsimile under and by authority of the following resolution adopted by the unanimous consent of the Board of Directors of the Company on August 31, 2022:

VOTED, That the signature of the Chairman of the Board, the President, or the Executive Vice President, or any Senior Vice President, of the Surety Business Division, or their appointees designated in writing and filed with the Secretary, and the signature of the Secretary, the seal of the Company, and certifications by the Secretary, may be affixed by facsimile on any power of attorney or bond executed pursuant to the resolution adopted by the Board of Directors on August 31, 2022, and any such power so executed, sealed and certified with respect to any bond or undertaking to which it is attached, shall continue to be valid and binding upon the Company. **In Testimony Whereof**, the Company has caused this instrument to be signed and its corporate seal to be affixed by their authorized officers, this **10th day of February, 2023**.

BID PROPOSAL

PROJECT NO. JN 998 & 999

DESIGNATION OF SUBCONTRACTORS

In compliance with the "Subletting and Subcontracting Fair Practices Act" being Sections 4100-4113 of the Public Contract Code of the State of California, and any amendments thereto, each bidder shall set forth below the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime contractor in or about the construction of the work or improvement in an amount in excess of one-half (1/2) of one percent (1%) of the prime contractor's total bid, and shall further set forth the portion of the work which will be done by each subcontractor. Only one subcontractor for each such portion shall be listed.

If the contractor fails to specify a subcontractor for any portion of the work to be performed under the contract, he shall be deemed to have agreed to perform such portion himself, and he shall not be permitted to subcontract that portion of the work except under the conditions hereinafter set forth.

Subletting or subcontracting of any portion of the work to which subcontractor was designated in the original bid shall only be permitted in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the legislative body of the City.

Portion of Work %	Subcontractor's Name & Address	Type of Work	State License Number	Class	D.I.R. Number
2%	United Pumping Service, Inc. 14000 E. Valley Blvd., Industry, CA 91746-2801	Transportation and Disposal	617639	A, HAZ, C21, C31, C42, ASB	1000006212

BID PROPOSAL

PROJECT NO. JN 998 & 999

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS

(BEFORE COMPLETING CERTIFICATION, READ INSTRUCTIONS ON NEXT PAGE)

The Contractor shall not perform Work with any Subcontractor that has been debarred or suspended pursuant to California Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. The Contractor and Subcontractors shall not be debarred or suspended throughout the duration of the Contract pursuant to Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. If the Contractor or any Subcontractor becomes debarred or suspended during the duration of the Project, the Contractor shall immediately notify the City.

1. The prospective primary participant certifies to the best of its knowledge and belief, that it and its principals:

    a. Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

    b. Have not within a 5-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statement, or receiving stolen property;

    c. Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph 1b of this certification; and

    d. Have not within a 5-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

2. Where the prospective primary participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Signature: Lydia Perry Name: Lydia Perry

Title: Secretary/Treasurer Company: United Storm Water, Inc.

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS (Continued)

INSTRUCTIONS FOR CERTIFICATION

1. By signing and submitting this proposal, the prospective primary participant is providing the certification set out below.
2. The inability of a person to provide the certification required below will not necessarily result in denial of participation in this covered transaction. The prospective participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective primary participant to furnish a certification or an explanation shall disqualify such person from participation in this transaction.
3. The certification in this clause is a material representation of fact upon which reliance was placed when the department or agency determined to enter into this transaction. If it is later determined that the prospective primary participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.
4. The prospective primary participant shall provide immediate written notice to the department or agency to which this proposal is submitted if at any time the prospective primary participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
5. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower tier covered transaction," "participant," "person," "primary covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of the rules implementing Executive Order 12549. You may contact the department or agency to which this proposal is submitted for assistance in obtaining a copy of those regulations (13 CFR Part 145).
6. The prospective primary participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
7. The prospective primary participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Covered Transactions," provided by the department or agency entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions.
8. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the ineligibility of its principals. Each participant may, but is not required to, check the Nonprocurement List.
9. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
10. Except for transactions authorized under paragraph 6 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

for
STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022, VARIOUS LOCATIONS
PROJECT NO. JN 998 & 999

Plans and Specifications are available through ARC Document Solutions. Please be advised that there is an additional charge for delivery. Upon payment of the purchase price, they become the property of the purchaser and may not be returned for refund.

You may access the plans through the following website under Public Planroom:

www.e-arc.com/location/costa-mesa/

For help accessing and ordering, please contact a Planwell Administrator at 562.436.9761.

Notice is hereby given that the City of Gardena will receive sealed bids at the office of the City Clerk, City Hall, 1700 W. 162nd Street, Gardena, California, until **1:00 pm** on **Nov. 8, 2023,** and shortly thereafter on this same day, they will be publicly opened and read in the City Clerk's office in-person and via Zoom.

The information to join the bid opening via ZOOM is the following:

Topic: Bid Opening
Time: 1:00 pm on Nov. 8, 2023 (Shortly thereafter the deadline)
Join ZOOM Meeting

https://us02web.zoom.us/j/82565139395
Meeting ID: 825 6513 9395
Dial by phone: +1 669 900 9128 US

Should you have any questions or concern in delivering a bid or joining the ZOOM Meeting, please contact City Clerk's office at (310) 217-9565 or via email at cityclerk@cityofgardena.org.

All bids must be in writing, must be sealed, and must be plainly marked on the outside: **"BID ON PROJECT NO. JN 998 & 999.** Any bid received after the hour stated above for any reason whatsoever, will not be considered for any purpose but will be returned unopened to the bidder.

Bids are required for the entire work as described below:

Install 225 connector pipe screens in existing catch basins around the City of Gardena.

All bidders for this project shall be included in the Los Angeles County Department of Public Works prequalified list of manufacturers/installers listed on Appendix C of these specifications. No bid will be accepted from a Contractor that does not comply with this requirement.

ENGINEER'S ESTIMATE: $ 240,000

The time of completion of contract including material procurement and construction shall be **75 working days** as defined in the latest Standard Specifications for Public Works ("Greenbook"). Liquidated Damages, as defined in Section 6-9, shall be **$800 per each consecutive calendar day**.

Each bidder must submit a proposal to the City, c/o City Clerk in accordance with the Plans and Specifications. Said proposal is to be accompanied by a cash deposit, a certified or cashier's check, or a bidder's bond, made payable to the City of Gardena, in an amount not less than 10 percent of the total bid submitted.

The envelope enclosing the proposal shall be sealed and addressed to the City of Gardena c/o City Clerk, and delivered or mailed to the City at 1700 W. 162nd Street, Gardena, California 90247-3778. The envelope shall be plainly marked in the upper left-hand corner as follows:

ATTENTION: CITY, c/o CITY CLERK
(Bidder's Name and Address) _____

(Number and title of this project) _____

The successful bidder will be required to furnish a faithful performance bond in the amount of 100 percent of the contract price, and a payment bond in the amount of 100 percent of the contract price, both in a form satisfactory to the City Attorney.

The contractor shall have an active **Class "A"** license from the Contractor's State License Board at the time of submitting bid.

Pursuant to Public Contract Code Section 22300, the Contractor may, at Contractor's sole cost and expense, substitute securities equivalent to any monies withheld by the City to insured performance under the contract unless applicable federal regulations or policies do not allow such substitution. Such security shall be deposited with the City, or a state or federally chartered bank as escrow agent, who shall pay such monies to the Contractor upon satisfactory completion of the Contract. The Contractor shall be the beneficial owner of any security substituted for monies withheld and shall receive any accrued interest thereon. Securities eligible for investment shall include those listed in Government Code Section 16430 or bank or savings and loan certificates of deposit. No such substitution shall be accepted until the escrow agreement, letter of credit, form of security and any other document related to said substitution is reviewed and found acceptable by the City Attorney.

The City reserves the right to reject any or all bids and to waive any informality or irregularity in any bid received and to be the sole judge of the merits of the respective bids received. The award, if made, will be made to the lowest responsive responsible bidder.

Bidders are advised that this Project is a public work for purposes of the California Labor Code, which requires payment of prevailing wages. Accordingly, the bidder awarded the Contract and all subcontractors shall be required to pay not less than the prevailing rate of per diem wages, as determined by the Director of the California Department of Industrial Relations, and otherwise comply with the provisions of Section 1770 et seq. of the California Labor Code, California Code of Regulations, Title 8, Section 16000 et seq., and any other applicable laws, rules and regulations adopted with respect thereto ("California Prevailing Wage Laws"). Copies of such prevailing rates of per diem wages are on file at the Gardena City Clerk's office and the office of the City Engineer, and copies shall be made available to any interested party on request. The prevailing rates of per diem wages referred to herein are hereby made a part of this Notice by reference.

Attention is directed to the provisions of Sections 1777.5 and 1777.6 of the Labor Code concerning the employment of apprentices by Contractor or any Subcontractor under it. Contractor and any Subcontractor under if shall comply with the requirements of said sections in the employment of apprentices.

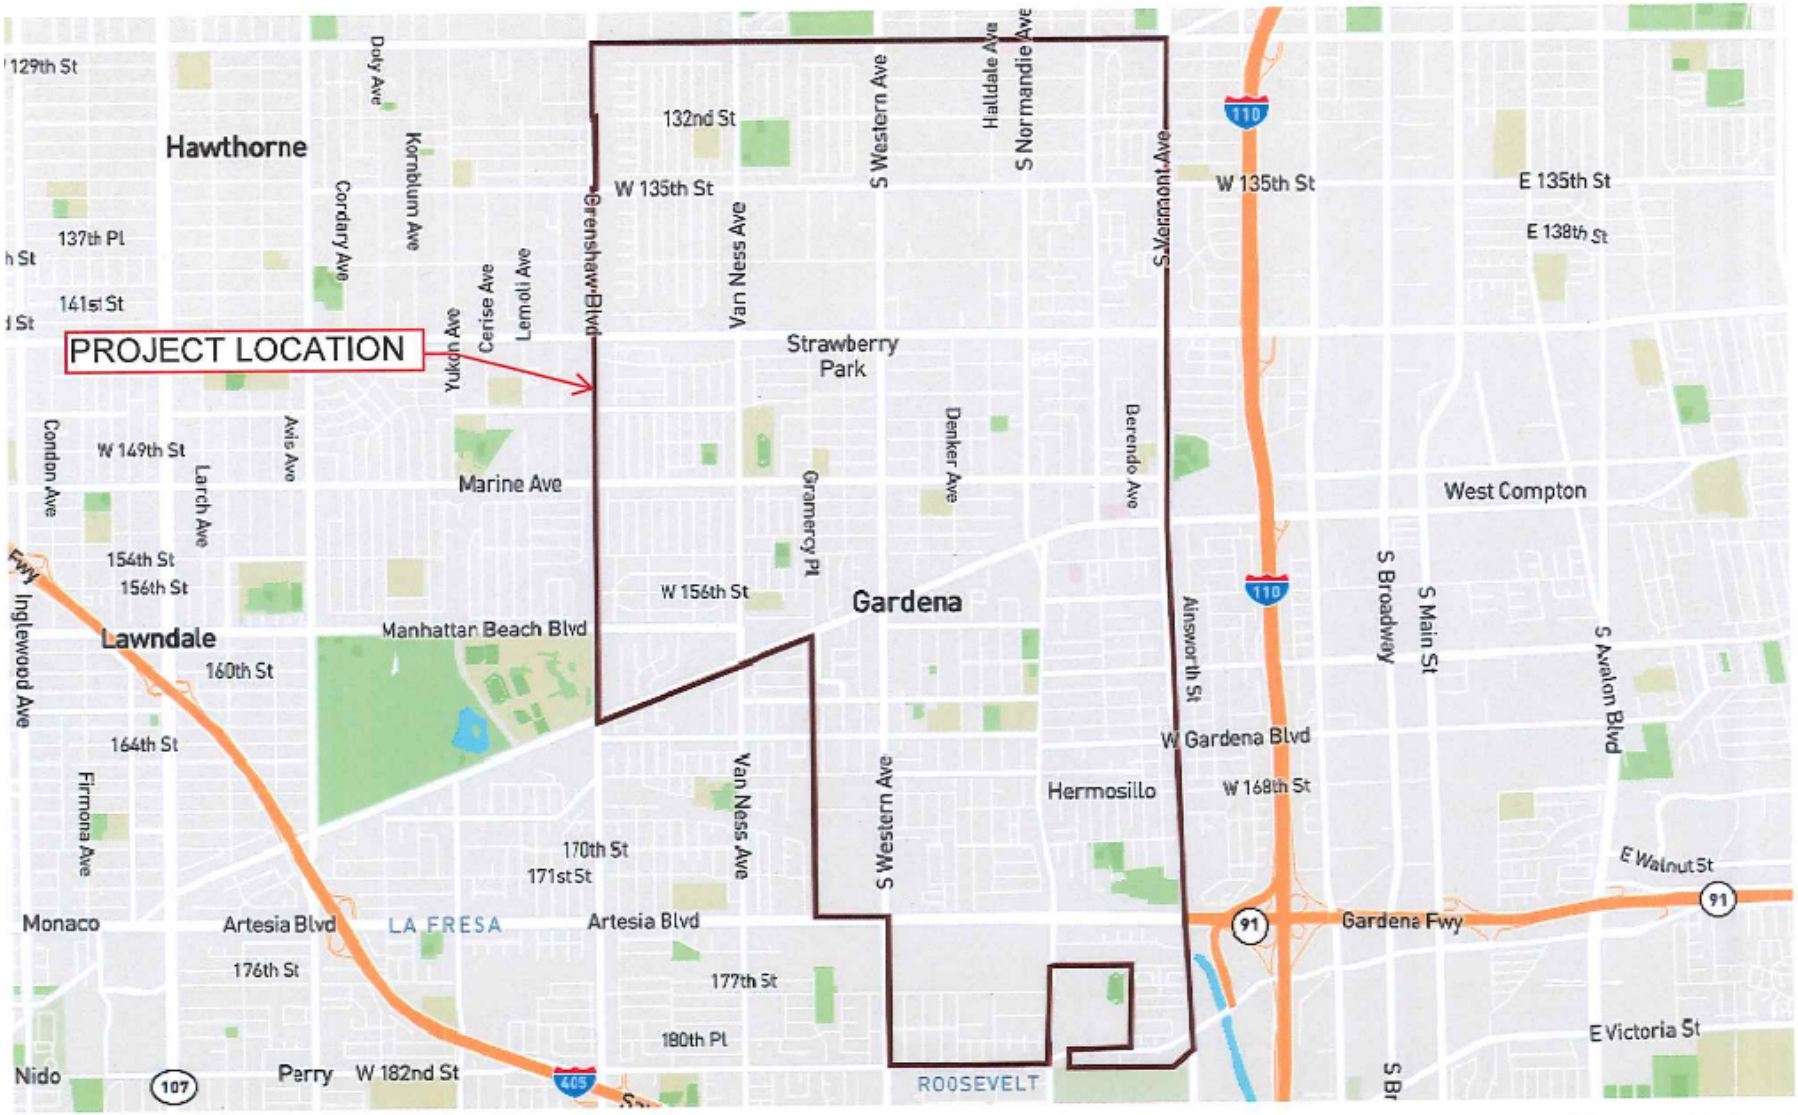
The Contractor is prohibited from performing work on this project with a subcontractor who is ineligible to perform work on the project pursuant to Section 1777.1 or 1777.7 of the Labor Code.
This project is subject to compliance monitoring and enforcement by the Department of Industrial Relations. All contractors and subcontractors must furnish electronic certified payroll records directly to the Labor Commissioner (aka Division of Labor Standards Enforcement) in a format prescribed by the Labor Commissioner no less than monthly.

As of **January 1, 2016**, the requirement to furnish electronic certified payroll records to the Labor Commissioner will apply to all public works projects, whether new or ongoing.

Exceptions: The Labor Commissioner may (but is not required to) excuse contractors and subcontractors from furnishing electronic certified payroll records to the Labor Commissioner on a project that is under the jurisdiction of one of the four legacy DIR-approved labor compliance programs (Caltrans, City of Los Angeles, Los Angeles Unified School District, and County of Sacramento) or that is covered by a qualifying project labor agreement.

These requirements will apply to all public works projects that are subject to the prevailing wage requirements of the Labor Code without regard to funding source.

The State General Prevailing Wage Determination is as established by the California Department of Industrial Relations (available at http://www.dir.ca.gov/DLSR/PWD/index.htm).



Skilled and Trained Workforce: This project is subject to Skilled and Trained Workforce Requirements per Sections 2600 through 2603 of the Public Contract Code.

Award of Contract: The following are conditions to the award of the contract:

I. Each contractor and subcontractor listed on the bid must be registered with the Department of Industrial Relations pursuant to Labor Code Section 1725.5. subject to the limited exceptions set forth in Labor Code Section 1771.1(a) (regarding the submission of a bid as authorized by Business & Professions Code Section 7029.1 or Public Contract Code Section 10164 or 20103.5 provided the contractor is registered to perform public work pursuant to Section 1725.5 at the time the contract was awarded): and
II. No contractor or subcontractor may be awarded this contract unless the contractor and each subcontractor listed on the bid is registered with the Department of Industrial Relations pursuant to Section 17265.5.

Any questions regarding this bid package may be referred to Jun De Castro, Public Works Engineering Division at 310.217.9642.

INSTRUCTIONS TO BIDDERS

FORM OF PROPOSAL

The Proposal shall be fully executed and submitted on the forms in the project specifications and shall be enclosed in a sealed envelope marked and addressed as directed in the Notice Inviting Bids.

PRPOSAL / BID DOCUMENTS

All Proposals shall include the following executed documents to be submitted with each bid:

Bidding Schedule

Acknowledgement of Addenda Received

Bidder's Declaration

Non-Collusion Affidavit

Declaration of Eligibility of Contract

Bid Bond

Designation of Subcontractors

Construction Project Reference

Certificate of Non-Discrimination by Contractors

Certification of Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – Primary Covered Transitions

DELIVERY OF PROPOSAL

The Proposal shall be delivered by the time and to the place stipulated in the Notice Inviting Bids. It is the bidder's sole responsibility to see that its Proposal is received as stipulated. Any Proposal received after the scheduled closing time for receipt of proposals will be returned to the bidder unopened.

WITHDRAWAL OF PROPOSAL

The Proposal may be withdrawn by the bidder by means of a written request, signed by the bidder or its properly authorized representative. Such written request must be delivered to the place stipulated in the Notice Inviting Bids for receipt of proposals prior to the scheduled closing time for receipt of proposals. No Proposal may be withdrawn after the hour fixed for opening bids.

MODIFICATIONS AND ALTERNATIVE PROPOSALS

Unauthorized conditions, limitations, or provisions attached to the Proposal will render it informal and may be grounds for its rejection as non-responsive. The completed Proposal forms shall be without interlineations, alterations, or erasures. Alternative proposals will not be considered unless specifically requested. Oral, telegraphic, or telephonic proposals or modifications will not be considered.

DISCREPANCIES IN PROPOSALS

In the event there is more than one bid item in a Bidding Schedule, the bidder shall furnish a price for all bid items in the Schedule, and failure to do so will render the Proposal informal and may be grounds for its rejection as non-responsive. The bidder shall state in words and figures the unit prices or the specific sums as the case may be, for which it proposes to supply the labor, materials, supplies, or machinery, and completely perform the Contract. The total amount of each item bid and the total amount of the bid shall be stated in words and figures.

In case of any discrepancy between the words and the figures, the words shall prevail. If the unit price and the total amount named by a bidder for any items are not in agreement, the unit price alone will be considered as representing the bidder's intention and the total will be corrected to conform thereto.

PROPOSAL GUARANTEE – BIDDER'S SECURITY

Each bidder shall submit with his Proposal cash, an unconditional certified or cashier's check, or a bidder's bond, in the sum of the percentage of the bid stated in the Notice Inviting Bids, payable to the City as a guarantee that the bidder will, if its Proposal is accepted, execute the Contract and furnish a satisfactory Faithful Performance Bond, a satisfactory Payment Bond and insurance certificates as specified herein.

If a bidder to whom an award is made, fails or refuses to sign the Contract or furnish the required bonds and certificates, all within the time stated in Section 2-1.5 of the Special Provisions herein, the funds represented by said cash, check or bidder's bond shall be forfeited and become and remain the property of the City; the amount thereof being agreed to by the bidder and the surety as a bid bond forfeiture due the City because of the delay in the execution of the Contract and in the performance of work thereunder, resulting from such failure or refusal, except that if the City awards the contract to the next lowest responsive responsible bidder, only that portion of the bidder's security equal to the difference between the two bids will be forfeited.

A Bid Bond must be obtained from a corporate surety authorized to do business as such in the State of California as an "admitted surety insurer" and shall be on the form furnished by the City or one substantially in conformance with it. Certified or cashier's checks must be drawn on a solvent state or nationally chartered bank or branch thereof in the State of California. The liability of the City in connection with the checks shall be limited to the return of the checks (without interest) as provided in Section 2-1.6 of the Special Provisions bound herein.

DISQUALIFICATION OF BIDDERS

A person, firm, or corporation shall NOT be allowed to make or file, or to be interested in, more than one bid, except an alternative bid when specifically requested; provided, however, a person, firm, or corporation who has submitted a sub-proposal to a bidder submitting a Proposal, or who has quoted prices on materials to such bidders, is not thereby disqualified from submitting a sub-proposal or from quoting prices to other bidders submitting proposals, or from submitting a Proposal as a prime contractor. Similarly, failure to comply with the registration requirements of Labor Code Section 1725.5, as further described in the Notice Inviting Bids, will disqualify a bidder.

ADDITIONAL REQUIREMENTS

The bidder's attention is directed to the Special Provisions and Technical Provisions bound herein for additional requirements of the Proposal and Contract Documents.

CONTRACT DOCUMENTS

Contract Documents are to be submitted within twenty-one (21) calendar days AFTER award of contract. Unless extended by agreement of the City, failure to timely submit executed Contract Documents may be grounds for rejecting the bid award and forfeiture of the bid security. See enclosed documents commencing on page CD-1.

BID PROPOSAL

PROJECT NO. JN 998 & 999

BID SCHEDULE

The undersigned, having examined the proposed Contract Documents titled:

STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

and having visited the site and examined the conditions affecting the work, hereby proposes and agrees to furnish all labor, materials, equipment, and appliances, and to perform operations necessary to complete the work as required by said proposed Contract Documents and itemized bid schedule below. All work shall be completed within **75** **Working Days** from the date the Notice of Proceed is issued by the Engineer.

Item No.	Item Description	Unit	Approx. Quantity	Unit Price in Figures	Item Total
1	Traffic Control	LS	1	$	$
2	Install Connector Pipe Screen (CPS) in Existing City Catch Basin	EA	32	$	$
3	Install Connector Pipe Screen (CPS) in Existing County Catch Basin	EA	179	$	$
4	Los Angeles County Flood Construction Permit Fee	LS	1	$ 161	$ 161

BID SCHEDULE (Continued)

TOTAL CONTRACT BID:

(Figures) $ _____

(Words) _____

*** In case of error in extension of price into the total price column, the unit price will govern.**

All work required and shown on the construction plans and this specification for which no price or item is listed on this proposal, it shall be understood that such work, equipment, labor, tools and materials shall be provided without extra charge, allowance or direct payment of any kind. Payment for performing such work or furnishing such equipment, labor, tools and materials shall be included in the above lump sum or unit bid prices and no additional compensation will paid therefor.

If the City determines that any of the unit bid prices are significantly unbalanced to the potential detriment of the City, the bid will be replaced as non-responsive.

In case of any discrepancy between the words and the figures, the words shall prevail. If the unit price and the total amount for any item are not in agreement, the unit price alone shall be considered to represent the bidder's intention and all totals will be corrected to conform thereto.

Attached hereto is cash, a certified check, a cashier's check, or a bidder's bond in the amount of _____Dollar
s, said amount being not less than 10 percent of the amount bid. Pursuant to Public Contract Code Sections 20172 and 20174, it is agreed a portion equal to the difference between the low bid and second low bid shall be retained as a bid bond forfeiture by the City if the undersigned fails or refuses to execute the Contract and furnish the required bonds and certificates of insurance within the time provided.

BID PROPOSAL

PROJECT NO. JN 998 & 999

BIDDER'S DECLARATION

It is understood and agreed that:

1. The undersigned has carefully examined all documents which will form a part of the Contract; namely, the Notice Inviting Bids, the Instructions to Bidders, this Proposal, the Bid Bond, the Contract, the Faithful Performance Bond, the Payment Bond, the federal requirements, if any, the Plans and Specifications, the Special Provisions, and the Technical Provisions.

2. The undersigned has, by investigation at the site of the work and otherwise, satisfied himself as to the nature and location of the work and fully informed himself as to all conditions and matters, which can in any way affect the work or the cost thereof.

3. The undersigned fully understands the scope of work and has checked carefully all words and figures inserted in this Proposal and he further understands that the City will not be responsible for any errors or omissions in the preparation of the Proposal.

4. The undersigned agrees and acknowledges that he is aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that Code, and that the undersigned will comply with such provisions before commencing the performance of the Contract if it is awarded to the undersigned.

The undersigned will execute the Contract and furnish the required statutory bonds and certificates of insurance within the period of time specified in the Contract Documents.

The undersigned will begin work after award of Contract and a Notice to Proceed has been given as herein specified and will complete said work within the time specified in the Bidding Schedule.

5. The undersigned certifies that this Proposal is genuine and not sham or collusive, or made in the interest or on behalf of a person not herein named, and the undersigned has not directly or indirectly induced or solicited any other bidder to put in a sham bid nor induced any other person, firm, or corporation to refrain from bidding. The undersigned has not in any manner sought by collusion to secure for himself any advantage over any other bidder.

6. The undersigned will accept an award and enter into a Contract for all work scheduled herein on which he puts in a bid. The awards for such work are to be entirely at the discretion of the City after evaluation of the bids as submitted. The undersigned agrees that the City shall recover or retain as a bid bond forfeiture an amount equal to the difference between the low bid and amount of the bid of the bidder with whom the City enters into a Contract, and the surplus, if any, shall be returned to the lowest bidder in accordance with the provisions of the Public Contract Code Sections 20172 and 20174 in the event of his failure to execute a Contract and furnish required bonds and insurance therefor within the time provided.

BIDDER'S DECLARATION (Continued)

7. The undersigned bidder stated under penalty of perjury that the representations made in submitting this bid are, to the best of his/her knowledge, true, accurate, and complete.

Respectfully submitted,

PROJECT NO. JN 998 & 999

DECLARATION OF ELIGIBILITY TO CONTRACT

[Labor Code Section 1777.1; Public Contract Code Section 6109]

The undersigned, a duly authorized representative of the contractor, certifies and declares that:

1. The undersigned contractor is aware of Sections 1777.1 and 1777.7 of the California Labor Code, which prohibit a contractor or subcontractor who has been found by the Labor Commissioner or the Director of Industrial Relations to be in violation of certain provisions of the Labor Code, from bidding on, being awarded, or performing work as a subcontractor on a public works project for specified periods of time.

2. The undersigned contractor is not ineligible to bid on, be awarded or perform work as a subcontractor on a public works project by virtue of Sections 1771.1 or 1777.7 of the California Labor Code or any other provision of law.

3. The undersigned contractor is aware of California Public Contract Code Section 6109, which states:

> "(a) A public entity, as defined in Section 1100 [of the Public Contract Code], may not permit a contractor or subcontractor who is ineligible to bid or work on, or be awarded, a public works project pursuant to Section 1777.1 or 1777.7 of the Labor Code to bid on, be awarded, or perform work as a subcontractor on, a public works project. Every public works project shall contain a provision prohibiting a contractor from performing work on a public works project with a subcontractor who is ineligible to perform work on the public works project pursuant to Section 1771.1 or 1777.7 of the Labor Code."
>
> "(b) Any contract on a public works project entered into between a contractor and a debarred subcontractor is void as a matter of law. A debarred subcontractor may not receive any public money for performing work as a subcontractor on a public works contract, and any public money that may have been paid to a debarred subcontractor by a contractor on the project shall be returned to the awarding body. The contractor shall be responsible for the payment of wages to workers of a debarred subcontractor who has been allowed to work on the project."

4. The undersigned contractor has investigated the eligibility of each and every subcontractor the undersigned contractor intends to use on this public works project, and has determined that none of them is ineligible to perform work as a subcontractor on a public works project by virtue of the foregoing provisions of the Public Contract Code, Sections 1771.1 or 1777.7 of the Labor Code, or any other provision of law.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct. Executed this _____ day of _____, 20___, at _____ _____ *(place of execution)*, California_____.

PROJECT NO. JN 998 & 999

BID BOND

KNOW ALL MEN BY THESE PRESENTS:

THAT _____, as Principal,
and _____, as Surety,
are held firmly bound unto the City of Gardena in the sum of $_____;
_____DOLLARS,
(not less than ten percent of total amount of bid)
for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, said Principal has submitted a bid to the City to perform all work required under the following:

PROJECT: STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

NOW, THEREFORE, if said Principal is awarded a Contract by the City and, within the time and in the manner required in the Specifications for said project, enters into the written form of Contract bound with said Specifications and furnishes the required bonds, one to guarantee faithful performance and the other to guarantee payment for labor and materials, then this obligation shall be null and void, otherwise it shall remain in full force and effect. In the event suit is brought upon this bond by the City and judgment is recovered, said Surety shall pay all costs incurred by the City in such suit, including a reasonable attorneys' fee to be fixed by the court. Surety hereby waives the provisions of California Civil Code §2845.

DESIGNATION OF SUBCONTRACTORS

In compliance with the "Subletting and Subcontracting Fair Practices Act" being Sections 4100-4113 of the Public Contract Code of the State of California, and any amendments thereto, each bidder shall set forth below the name and location of the place of business of each subcontractor who will perform work or labor or render service to the prime contractor in or about the construction of the work or improvement in an amount in excess of one-half (1/2) of one percent (1%) of the prime contractor's total bid, and shall further set forth the portion of the work which will be done by each subcontractor. Only one subcontractor for each such portion shall be listed.

If the contractor fails to specify a subcontractor for any portion of the work to be performed under the contract, he shall be deemed to have agreed to perform such portion himself, and he shall not be permitted to subcontract that portion of the work except under the conditions hereinafter set forth.

Subletting or subcontracting of any portion of the work to which subcontractor was designated in the original bid shall only be permitted in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the legislative body of the City.

CERTIFICATE OF NON-DISCRIMINATION BY CONTRACTORS

As suppliers of goods or services to the City, the firm listed below certifies that it does not discriminate in its employment with regard to race, color, religion, sex, or national origin; that it is in compliance with all applicable federal, state, and local directives, and executive orders regarding non-discrimination in employment; and that it agrees to pursue positively and aggressively the principle of equal opportunity in employment.

We agree specifically:

1. To establish or observe employment policies which affirmatively promote opportunities for minority persons at all job levels.

2. To communicate this policy to all persons concerned, including all company employees, outside recruiting services, especially those serving minority communities, and to the minority communities at large.

3. To take affirmative steps to hire minority employees within the company.

BID PROPOSAL

PROJECT NO. JN 998 & 999

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS

(BEFORE COMPLETING CERTIFICATION, READ INSTRUCTIONS ON NEXT PAGE)

The Contractor shall not perform Work with any Subcontractor that has been debarred or suspended pursuant to California Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. The Contractor and Subcontractors shall not be debarred or suspended throughout the duration of the Contract pursuant to Labor Code Section 1777.1 or any other federal or State law providing for the debarment of contractors from public works. If the Contractor or any Subcontractor becomes debarred or suspended during the duration of the Project, the Contractor shall immediately notify the City.

1. The prospective primary participant certifies to the best of its knowledge and belief, that it and its principals:

    a. Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

    b. Have not within a 5-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statement, or receiving stolen property;

    c. Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph 1b of this certification; and

    d. Have not within a 5-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

2. Where the prospective primary participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Signature: _____ Name: _____

Title: _____ Company: _____

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION – PRIMARY COVERED TRANSACTIONS (Continued)

INSTRUCTIONS FOR CERTIFICATION

1. By signing and submitting this proposal, the prospective primary participant is providing the certification set out below.
2. The inability of a person to provide the certification required below will not necessarily result in denial of participation in this covered transaction. The prospective participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective primary participant to furnish a certification or an explanation shall disqualify such person from participation in this transaction.
3. The certification in this clause is a material representation of fact upon which reliance was placed when the department or agency determined to enter into this transaction. If it is later determined that the prospective primary participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.
4. The prospective primary participant shall provide immediate written notice to the department or agency to which this proposal is submitted if at any time the prospective primary participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
5. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower tier covered transaction," "participant," "person," "primary covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of the rules implementing Executive Order 12549. You may contact the department or agency to which this proposal is submitted for assistance in obtaining a copy of those regulations (13 CFR Part 145).
6. The prospective primary participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
7. The prospective primary participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Covered Transactions," provided by the department or agency entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions.
8. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the ineligibility of its principals. Each participant may, but is not required to, check the Nonprocurement List.
9. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
10. Except for transactions authorized under paragraph 6 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022, VARIOUS LOCATIONS

PROJECT NO. JN 998 & 999

To be Submitted within twenty-one (21) calendar days

AFTER Award of Contract

CONTRACT DOCUMENT

PROJECT NO. JN 998 & 999

AGREEMENT

THIS AGREEMENT, made and entered into this _____ day of _____, 20_____, by and between CITY OF GARDENA in the State of California, hereinafter referred to as "CITY" and_____, hereinafter referred to as "CONTRACTOR."

The City and the Contractor mutually agree as follows:

ARTICLE I.

THE PROJECT

For and in consideration of the mutual promises set forth herein, Contractor agrees to perform and complete in a good and workmanlike manner all work required by the Contract Documents for City Project No. JN 998/999, which is described as follows:

Title: STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022, VARIOUS LOCATIONS
JN 998 & 999

Said work shall be performed in accordance with the Plans, Specifications and other Contract Documents, all of which are referenced in Article III hereof and incorporated herein as though fully set forth. Contractor shall furnish at its own expense all labor, materials, equipment and services necessary therefor, except such labor, materials, equipment and services as are provided in the Contract Documents to be furnished by City.

This project is subject to Skilled and Trained Workforce Requirements per Sections 2600 through 2603 of the Public Contract Code.

ARTICLE II.

CONTRACT SUM AND PAYMENT

For performing and completing the work in accordance with the Contract Documents, City shall pay Contractor, in full compensation therefor, the contract sum set forth in the Bidding Schedule. Said sum shall constitute payment in full for all work performed hereunder, including, without limitation, all labor, materials, equipment, tools and services used or incorporated in the work, supervision, administration, overhead, expenses and any and all other things required, furnished or incurred for completion of the work as specified in the Contract Documents. City shall make payments to Contractor on account of the contract sum at the time, in the manner, and upon the conditions specified in the Contract Documents.

ARTICLE III.

CONTRACT DOCUMENTS

The Contract Documents, which constitute the entire agreement between the City and the Contractor, are enumerated as follows: Proposal Documents, including the Notice Inviting Bids, Instructions to Bidders, Bidding Schedule, Bidder's Declaration, Designation of Subcontractors, Bidder's Assurance, and Fair Employment Practices documents; this Agreement; Standard Specifications; Special Provisions; Technical Provisions; Drawings; Plans; and all addenda issued prior to and all modifications issued after the execution of this Agreement. These form

the Contract, and all are as fully a part of the Contract as if attached to this Agreement or repeated herein.

ARTICLE IV.

EFFECTIVE DATE

This Agreement shall become effective and commence as of the date set forth below on which the last of the parties, whether City or Contractor, executes said Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed and attested by their proper officers thereunto duly authorized.

FAITHFUL PERFORMANCE BOND

WHEREAS, the City of Gardena has awarded to _____, hereinafter designated as the "Principal", a Contract for:

PROJECT: STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

WHEREAS, said Principal is required under the terms of said Contract to furnish a bond for the faithful performance of said Contract;

NOW, THEREFORE, we,_____
as Principal, and_____
as Surety, are held and firmly bound unto the City in the sum of_____
_____
Dollars ($_____), this amount being not less than one hundred percent (100%) of the total Contract price, lawful money of the United States of America, for payment of which sum well and truly to be made we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally, firmly by these presents. In case suit is brought upon this bond, the Surety will pay all court costs and reasonable attorneys' fees to the City of Gardena in an amount to be fixed by the court.

THE CONDITION OF THIS OBLIGATION IS SUCH THAT, if the hereby bounded Principal, his or its heirs, executors, administrators, successors, or assigns, shall in all things stand to and abide by, well and truly keep and perform all the undertakings, terms, covenants, conditions and agreements in the said Contract and any alteration thereof, made as therein provided, all within the time and in the manner therein designated and in all respects according to their true intent and meaning, then this obligation shall become null and void; otherwise, it shall be and remain in full force and effect.

FURTHER, the Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, addition, or modification to the terms of the Contract, or of the work to be performed thereunder, or the specifications for the same, shall in any way affect its obligations under this bond, and it does hereby waive notice of any such change, extension of time, alteration, addition, or modification to the terms of the Contract or to the work or to the specifications thereunder. Surety hereby waives the provisions of California Civil Code §§ 2845 and 2849. The City is the principal beneficiary of this bond and has all rights of a party hereto.

This bond shall remain in full force and effect for a warranty period of one full year after acceptance of the job by the City.

IN WITNESS WHEREOF, three (3) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and

Surety named herein, on the_____ day of_____, 20___, the name and corporate seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representative pursuant to authority of its governing body.

CONTRACT DOCUMENT

PROJECT NO. JN 998 & 999

PAYMENT BOND

WHEREAS, the City of Gardena has awarded to _____, as Contractor, a contract for the work described as follows:

PROJECT: STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

AND WHEREAS, said Contractor is required to furnish a bond in connection with said contract, to secure the payment of claims of laborers, mechanics, materialmen and other persons, as provided by law;

NOW, THEREFORE, we, the undersigned Contractor and Surety, are held firmly bound unto the City in the sum of _____, Dollars ($_____) this amount being not less than one hundred percent (100%) of the total Contract price, for which payment well and truly to be made we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH THAT, if said Contractor, its heirs, executors, administrators, successors, assigns, or subcontractors shall fail to pay any of the persons named in Civil Code Section 3181, or amounts due under the Unemployment Insurance Code with respect to work or labor performed under the contract, or any amounts required to be deducted, withheld, and paid over to the Employment Development Department from the wages of employees of the Contractor and its subcontractors pursuant to Section 13020 of the Unemployment Insurance Code, or any other amounts due to persons under any applicable project contract or law, with respect to such work and labor, then the Surety or Sureties herein will pay for the same in an amount not exceeding the sum specified in this bond, otherwise the above obligation shall be void. In case suit is brought upon this bond, the said Surety will pay all court costs and reasonable attorneys' fees to the plaintiff(s) and City in an amount to be fixed by the court.

This bond shall inure to the benefit of any of the persons named in Civil Code Section 3181 as to give a right of action to such persons or their assigns in any suit brought upon this bond.

Further, the Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, addition, or modification to the terms of the Contract, or of the work to be performed thereunder, or the specifications for the same, shall in any way affect its obligations under this bond, and it does hereby waive notice of such change, extension of time, alteration, addition, or modification to the terms of the Contract or to the work or to the specifications thereunder. Surety hereby waives the provisions of California Civil Code §§ 2845 and 2849.

This bond shall remain in full force and effect for six full months after the period in which verified claims may be filed as provided for in Section 3184 of the California Civil Code.

IN WITNESS WHEREOF, we have hereunto set our hands and seals on this_____day of _____20_____.

INDEMNIFICATION AND HOLD HARMLESS AGREEMENT AND WAIVER OF SUBROGATION AND CONTRIBUTION

STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,
VARIOUS LOCATIONS
JN 998 & 999

To the fullest extent permitted by law, Indemnitor hereby agrees, at its sole cost and expense, to defend, protect, indemnify, and hold harmless the City of Gardena and its respective elected officials, officers, attorneys, agents, employees, volunteers, successors, and assigns (collectively "Indemnitees") from and against any and all damages, costs, expenses, liabilities, claims, demands, causes of action, proceedings, expenses, judgments, penalties, liens, and losses of any nature whatsoever, including fees of accountants, attorneys, or other professionals and all costs associated therewith (collectively "Liabilities"), arising or claimed to arise, directly or indirectly, out of, in connection with, resulting from, or related to any act, failure to act, error, or omission of Indemnitor or any of its officers, agents, servants, employees, subcontractors, materialmen, suppliers or their officers, agents, servants or employees, arising or claimed to arise, directly or indirectly, out of, in connection with, resulting from, or related to the above-referenced contract, agreement, license, or permit (the "Agreement") or the performance or failure to perform any term, provision, covenant, or condition of the Agreement, including this indemnity provision. This indemnity provision is effective regardless of any prior, concurrent, or subsequent active or passive negligence by Indemnitees and shall operate to fully indemnify Indemnitees against any such negligence. This indemnity provision shall survive the termination of the Agreement and is in addition to any other rights or remedies which Indemnitees may have under the law. Payment is not required as a condition precedent to an Indemnitee's right to recover under this indemnity provision, and an entry of judgment against an Indemnitee shall be conclusive in favor of the Indemnitee's right to recover under this indemnity provision. Indemnitor shall pay Indemnitees for any attorney fees and costs incurred in enforcing this indemnification provision. Notwithstanding the foregoing, nothing in this instrument shall be construed to encompass (a) Indemnitees' sole negligence or willful misconduct to the limited extent that the underlying Agreement is subject to Civil Code 2782(a), or (b) the contracting public agency's active negligence to the limited extent that the underlying Agreement is subject to Civil Code 2782(b). This indemnity is effective without reference to the existence or applicability of any insurance coverages which may have been required under the Agreement or any additional insured endorsements which may extend to Indemnitees.

Indemnitor, on behalf of itself and all parties claiming under or through it, hereby waives all rights of subrogation and contribution against the Indemnitees, while acting within the scope of their duties, from all claims, losses and liabilities arising out of or incident to activities or operations performed by or on behalf of the Indemnitor regardless of any prior, concurrent, or subsequent active or passive negligence by the Indemnitees. Accountants, attorneys, or other professionals employed by Indemnitor to defend Indemnitees shall be selected by Indemnitees.

In the event there is more than one person or entity named in the Agreement as an Indemnitor, then all obligations, liabilities, covenants and conditions under this instrument shall be joint and several.

INSURANCE

CERTIFICATION OF INSURANCE (COI) SHALL BE SUBMITTED BY THE CONTRACTOR

1. **COMMENCEMENT OF WORK**. Contractor shall not be authorized to commence Work under this Contract until it has obtained approved insurance. Before beginning Work hereunder, during the entire period of this Contract, for any extensions hereto, and for periods after the end of this Contract as may be indicated below, Contractor must have and maintain in place not less than the insurance coverages required in this Section at his sole cost and expense. Contractor's insurance shall comply with all items specified by this Contract. Any subcontractors shall be subject to all of the requirements of this Section and Contractor shall be responsible to obtain evidence of insurance from each subcontractor and provide it to City before the subcontractor commences work. Alternatively, Contractor's insurance may cover all subcontractors. The insurance requirements are not intended to and shall not in any manner limit or qualify the liabilities and obligations assumed by Contractor under this Contract.

2. **INSURANCE COMPANY REQUIREMENTS.** All insurance policies used to satisfy the requirements imposed hereunder shall be issued by insurers admitted to do business in the State of California. Insurers shall have a current Best's rating of not less than A-:VII, unless otherwise approved by City.

3. **COVERAGES, LIMITS AND POLICY REQUIREMENTS**. Contractor shall maintain the types of coverages indicated below:

4. **COMPREHENSIVE GENERAL LIABILITY INSURANCE.** A policy of comprehensive general liability insurance written on a per occurrence basis in an amount not less than either one million dollars ($1,000,000) per occurrence or two million dollars ($2,000,000) aggregate.

5. **COMMERCIAL AUTO LIABILITY INSURANCE**. A policy including all coverages provided by and to the extent afforded by Insurance Services Office form CA 0001, ed. 12/93, including Symbol 1 (any auto) with no special limitations affecting City. The minimum auto insurance coverage shall be one million dollars ($1,000,000) combined single limit per accident.

6. **WORKER'S COMPENSATION AND EMPLOYER'S LIABILITY INSURANCE**. A policy which meets all statutory benefit requirements of the Labor Code, or other applicable law, of the State of California. The minimum coverage limits for said insurance shall be no less than one million dollars ($1,000,000) per claim. The policy shall be issued by an insurance company which is admitted to do business in the State of California and shall contain a clause that the policy may not be canceled without thirty (30) days prior written notice, return receipt requested, is mailed to City.

   In accordance with the provisions of section 1860 of the California Labor Code, Contractor's attention is directed to the requirement that in accordance with the provisions of section 3700 of the California Labor Code, Contractor and every subcontractor will be required to secure the payment of compensation of his or her employees, or obtain a certificate of consent to self-insurance by the Director of Industrial Relations in accordance with the requirements of Section 3700 of the California Labor Code.

In accordance with the provisions of section 1861 of the California Labor Code, Contractor shall sign and file with the awarding body the following certification prior to performing any work on the Project:

> "I am aware of the provisions of section 3700 of the Labor Code which require every employer to be insured against liability for worker's compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this contract."

7. **POLICY REQUIREMENTS.** The policies set forth above shall comply with the following, as evidenced by the policies or endorsements to the policies:

   (i) City and its appointed and elected officers, employees, agents and volunteers shall be added as additional insured to the policy as respects liabilities arising out of the performance of any work done under the Contract.

   (ii) The insurer shall agree to provide City with thirty (30) days prior written notice, return receipt requested, of any cancellation, non-renewal or material change in coverage.

   (iii) For any claims with respect to the Project covered by this Contract, Contractor's insurance coverage shall be primary insurance as respects City and its elected and appointed officers, employees, agents and volunteers. Any insurance or self-insurance maintained by City and its elected and appointed officers, employees, agents and volunteers shall be excess of Contractor's insurance and shall not contribute with it.

   (iv) The policy shall apply separately to each insured against whom claim is made or suit is brought except with respect to the limits of the company's liability.

8. **COURSE OF CONSTRUCTION INSURANCE.** Contractor shall provide course of construction insurance covering for "all risks" of loss in the amount of the completed value of the Work. The City shall be named as a loss payee and the insurer shall waive all rights of subrogation against the City. This policy shall be issued by an insurance company which is admitted to do business in the State of California and shall contain a clause that the policy may not be canceled until thirty (30) days written notice, return receipt requested, is mailed to the City. Course of Construction Insurance may be provided for each separate Phase.

9. **ADDITIONAL REQUIREMENTS.** The procuring of required insurance shall not be construed to limit Contractor's liability hereunder nor to fulfill the indemnification provisions and requirements of this Contract. City shall notify Contractor in writing of changes in the insurance requirements. If Contractor does not deposit copies of acceptable insurance policies or endorsements with City incorporating such changes within sixty (60) days of receipt of such notice, Contractor shall be deemed in default hereunder.

10. **DEDUCTIBLES.** Any deductible or self-insured retentions must be declared to and approved by City. Contractor shall guarantee that, at the option of the City, either: the insurer shall eliminate or reduce such deductibles or self-insured retentions with respect to City, its officers, employees, agents and volunteers (with additional premium, if any, to be paid by Contractor); or Contractor shall provide satisfactory financial guarantee for payment of losses and related investigations, claim administration and defense expenses in the amount of any deductibles or self-insured retentions.

11. **VERIFICATION OF COMPLIANCE.** Contractor shall furnish City with the required endorsements attached hereto. All documents are to be received and approved by City before Work commences. Not less than fifteen (15) days prior to the expiration date of any policy of insurance required by this Contract, Contractor shall deliver to City a binder or certificate of insurance with respect to each renewal policy, bearing a notation evidencing payment of the premium therefore, or accompanied by other proof of payment satisfactory to City. Contractor shall provide full copies of any requested policies to City within three (3) days of any such request by City.

12. **TERMINATION FOR LACK OF REQUIRED COVERAGE.** If Contractor, for any reason, fails to have in place, at all times during the term of this Contract, including any extension hereto, all required insurance and coverage, City may immediately obtain such coverage at Contractor's expense and/or terminate this Contract. Contractor shall indemnify, defend and hold harmless City and its elected and appointed officers, employees, agents and volunteers from any claim resulting from failure of either Contractor or any subcontractor to take out or maintain any insurance required by this Contract.

13. **EQUIPMENT COVERAGE**. Any policy or policies of insurance Contractor or his subcontractors elect to carry as insurance against loss or damage to construction equipment and tools or other personal property shall include a provision waiving the insurer's right of subrogation against City.

GENERAL PROVISIONS

STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022, VARIOUS LOCATIONS JN 998 & 999

PART 1 – GENERAL PROVISIONS

SECTION 1 – GENERAL

1-1 GENERAL. The Standard Specifications for Public Works Construction ("Greenbook") written and promulgated by the Southern California Chapter of the American Public Works Association and the Southern California Districts of the Associated General Contractors of California shall be the Standard Specifications of the City. All work shall conform to the 2021 edition, including supplements of the Standard Specifications, the Special Provisions which supplement or modify the Standard Specifications, and the Standard Drawings as issued by the City (defined herein as "Agency") available at the time bids are opened unless otherwise specified in the Contract Documents.

The above referenced Standard Specifications, Special Provisions and Standard Drawings are hereby made a part of the Contract Documents.

For the convenience of the Contractor, the section and subsection numbering system used in these Special Provisions corresponds to that used in the Standard Specifications.

1-2 TERMS AND DEFINITIONS. Whenever in the Standard Specification the following terms are used, they shall be understood to mean and refer to the following:

(a)	AGENCY	The City of Gardena, a California municipal corporation.
(b)	BOARD	The City Council of the City of Gardena
(c)	CONTRACT DOCUMENTS	Documents including but not limited to the proposal forms, Standard "Greenbook" Specifications, Special Provisions, Technical Provisions, Notice Inviting Bids, Instructions to Bidders, Bonds, Insurance, Contract and all Addenda setting forth any modifications of the documents.
(d)	ENGINEER	The City of Gardena Director of Public Works/City Engineer or his authorized representative.
(e)	BIDDER	An individual, co-partnership, association or corporation submitting a proposal for the work contemplated, acting directly or through a duly authorized representative.
(f)	LEGAL ADDRESS OF CONTRACTOR	The legal address of the Contractor to be the address given on the Contractor's bid and is hereby designated as the place to which all notices, letters or other communications to the Contractor shall be mailed or delivered.
(g)	LABORATORY	An established laboratory approved and authorized by the Engineer for testing materials and work involved in the contract.

1-7 AWARD AND EXECUTION OF THE CONTRACT.

1-7.1 General. The proposal shall be fully executed and submitted on the forms provided by the Agency and shall be enclosed in a sealed envelope marked and addressed as directed in the "Notice Inviting Bids".

If the proposal is made by an individual, it shall be signed and his or her full name and address shall be given; if it is made by a firm it shall be signed with co-partnership name by a general partner thereof, who shall also sign his or her known name, and the name and address of each member of such co-partnership shall be given; if made by a corporation, the name of the corporation shall be signed by its duly authorized officers and attested by the corporate seal.

Bidders are warned against making erasures or alterations of any kind on their Proposal. Proposals which contain omissions, erasures, alterations, conditions or additions not called for may be rejected.

At the time the Contract is awarded by the Agency, the Contractor shall be licensed under the provisions of Chapter 9, Division 3, of the Business and Professions Code of the State of California to do the type of work contemplated in the Contract and shall be skilled and regularly engaged in the general class or type of work required by this Contract.

1-7.2 Contract Bonds. The "Performance Bond" is equivalent to City's "Faithful Performance Bond".

1-7.3 Examination of Plans, Specifications and Project Site. Bidders shall read the specifications, review the drawings and examine the existing facilities to fully understand the project in order to plan for the improvements as shown in the contract, including local condition, uncertainty of weather and all other contingencies.

Bidders shall satisfy themselves by personal examination of the proposed work sites, and by such other means as they may choose as to actual conditions and requirements and as to the accuracy of the quantities stated in the Proposal forms. Information derived from the maps, plans, specifications, profiles, drawings, or from the Engineer/Architect of the record, shall not relieve the bidder of this responsibility, and the interpretation of the data disclosed by borings or other preliminary investigations is not guaranteed nor is any liability assumed by the Agency.

1-7.4 Interpretation of Drawings and Documents. If a prospective bidder is in doubt as to the true meaning or intent of any part of the Contract Documents including the Specifications, or discovers discrepancies in, or omissions from, the Specifications or Drawings, he may submit to the Engineer a written request for an interpretation or a correction thereof. Interpretations or corrections of the Contract Documents including the Specifications and Drawings, shall be made only by addendum duly issued by the Engineer, and a copy of such addendum will be sent by certified mail, postage prepaid, or delivered to each person receiving a set of the Contract Documents whose address is known to the Engineer and such addendum shall be considered a part of and incorporated in the Contract Documents.

1-7.5 Award of Contract. After the Proposals have been publicly opened and read aloud, they will be checked for accuracy and compliance with all provisions as specified herein.

The Agency reserves the right to reject any or all bids and to waive any informality or irregularity in any bid received and to be the sole judge of the merits of the respective bids received.

Bids subsequently shown to be mathematically unbalanced would be rejected as

nonresponsive.

A mathematically unbalanced bid is one containing lump sum or unit bid items which do not reflect reasonable actual costs plus a reasonable proportionate share of the bidder's anticipated profit, overhead costs, and other indirect costs, which he/she anticipates for the performance of the items in question.

"A bid is mathematically unbalanced if the bid is structured on the basis of nominal prices for some work and inflated prices for other work; that is, each element of the bid must carry its proportionate share of the total cost of the work plus profits."

"A bid is materially unbalanced if there is a reasonable doubt that award to the bidder submitting the mathematically unbalanced bid will result in the lowest ultimate cost to the Government. Consequently, a materially unbalanced bid may not be accepted."

Award of the Contract, if it be awarded, will ordinarily be made by the Agency within 30 days after opening of the bids. Award will be made to the lowest responsive responsible bidder.

In selecting the lowest responsive responsible bidder, consideration will be given to the general competency of the bidder for the performance of the work covered by the proposal. To receive favorable consideration, a bidder may be required to present evidence that he has successfully performed similar work of comparable magnitude or submit other evidence satisfactory to the Agency that he or his associates are competent to manage the proposed undertaking and to carry it forward to a successful conclusion. Professional integrity and honesty of purpose shall be essential requirements. A showing of adequate financial resources may be required but will not alone determine whether a bidder is competent to undertake the proposed work.

Only manufacturers or contractors of established reputation, or their duly authorized dealers or agency, having proper facilities for the manufacture of the materials or equipment and for servicing same, or for proper execution of the work called for in the contract, will be considered in making the award.

1-7.6 Execution of Contract. A bidder whose proposal is accepted shall properly sign a written contract with the Agency on the form attached hereto and return said contract together with good and approved bonds and insurance certificates as required by the Contract Documents **within twenty-one (21) calendar days** from the date of the mailing of a notice from the Agency to the bidder, according to the address given by him, of acceptance of his proposal.

Contract bonds and certificates of insurance, if required, shall be filed in all instances before delivering any equipment, materials, or performing any work under the contract; also before any purchase order shall be issued. An executed Power of Attorney form shall be submitted with all contract bonds herein specified.

If a bidder whose proposal is accepted fails or refuses to enter into a contract as herein provided, or to conform to any stipulated requirement in connection therewith, the money represented by his check or bidder's bond shall be refunded less the difference between the low bid and the bid of the bidder with whom the Agency enters into an agreement in accordance with the provisions of the Public Contracts Code Section 20174. At the discretion of the Agency, an award may be made to the bidder whose proposal is next most acceptable to the Agency, and such bidder and his surety shall fulfill every stipulation embraced herein as if he were the party to whom the first award was made.

A corporation to which an award is made may be required before the contract is finally signed to furnish evidence of its corporate existence, of its right to do business in California and of the authority of the officer signing the contract and bonds for the corporation to so sign.

1-7.7 Return of Proposal and Guarantee. The check or bond of a bidder to whom the contract has been awarded will be returned to him after all of the acts, for the performance of which said security is required, have been fully performed. The checks or bid bonds of the second and third lowest bidders will be returned when the bidder to whom the contract has been awarded has properly executed all of the required Contract Documents. Check or bid bonds of other bidders will be returned when their proposals are rejected or in any event at the expiration of forty-five (45) days from the date of opening bids.

1-7.8 Precedence of Contract Documents. The order of precedence of contract document shall be:

FIRST	Requirements of law, including the Code and Ordinances of the City of Gardena.
SECOND	Permits from other agencies as may be required by law.
THIRD	Permits from City of Gardena Departments as may be required by law or ordinance.
FOURTH	The Contract.
FIFTH	The Bid Proposal.
SIXTH	Addenda.
SEVENTH	Notice Inviting Bids.
EIGHTH	Instructions to Bidders.
NINTH	Technical Provisions.
TENTH	Plans.
ELEVENTH	General Provisions of the Standard Specifications.
TWELFTH	Standard Plans.
THIRTEENTH	Standard Specifications for Public Works Construction (current edition).
FOURTEENTH	Caltrans Standard Plans and Specifications.
FIFTEENTH	Reference Specifications.

Change orders, supplemental agreements and approved revisions to Plans and Specifications will take precedence over documents listed above, except those listed as FIRST, SECOND and THIRD. Detailed plans shall have precedence over general plans.

SECTION 2 – SCOPE OF THE WORK

2-2 PERMITS. The Contractor will obtain, at no cost to the Agency, all permits necessary to perform the work on streets, highways, railways or other rights-of-ways. The Contractor shall obtain and pay for all costs incurred for permits necessitated by its operations such as, but not

limited to those permits required for night work, overload, blasting and demolition. For private contracts, the Contractor shall obtain all permits incidental to the work or made necessary by its operations, and pay all costs incurred by the permit requirements.

Contractor shall be required to obtain and pay for the Los Angeles County Flood Construction Permit (Case #FCDP2022000237/Invoice #00345129). Los Angeles County permit contacts are listed below.

Name	Phone Number	Email Address
Eda P. Garcia	(626) 458-4937	egarcia@dpw.lacounty.gov
Joseph Min	(626) 979-5414	jomin@dpw.lacounty.gov

The Contractor and each subcontractor employed upon the work must have or obtain a valid City of Gardena Business License in accordance with the provisions of the Gardena Municipal Code.

2.10 DISPUTED WORK.

2.10.1 Retention of Imperfect Work. If any portion of the work done or materials furnished under the contract proves defective or not in accordance with the specifications and contract drawings, and if the imperfection in the same is not of sufficient magnitude or importance to make the work dangerous or undesirable, or if the removal of such work is impracticable or will create conditions which are dangerous or undesirable in the opinion of the Engineer, the Engineer shall have the right and authority to retain the work instead of requiring it to be removed and reconstructed, but he shall make deductions therefor in the payment of the contract item due Contractor as may be just and reasonable.

2-11. DISPUTE RESOLUTION.

2-11.1 Requests for Contract Adjustments and Relief. If either Contractor or the Agency believes that it is entitled to relief against the other for any event arising out of or related to the work or Project, such party shall provide written notice to the other party of the basis for its claim for relief. Such notice shall, if possible, be made prior to incurring any cost or expense and in accordance with any specific notice requirements contained in the applicable sections of this Contract.

In the absence of any specific notice requirement, written notice shall be given within a reasonable time, not to exceed fourteen (14) days, after the occurrence giving rise to the claim for relief or after the claiming party reasonably should have recognized the event or condition giving rise to the request, whichever is later. Such notice shall include sufficient information to advise the other party of the circumstances giving rise to the claim for relief, the specific contractual adjustment or relief requested and the basis of such request.

2-11.2 Dispute Avoidance and Resolution. The parties are fully committed to working with each other throughout the Project and agree to communicate regularly with each other at all times so as to avoid or minimize disputes or disagreements. If disputes or disagreements do arise, Contractor and the Agency each commit to resolving such disputes or disagreements in an amicable, professional and expeditious manner so as to avoid unnecessary losses, delays and disruptions to the work under the Contract.

Contractor and the Agency will first attempt to resolve disputes or disagreements at the field level through discussions between Contractor's Representative and the Engineer.

If a dispute or disagreement cannot be resolved through the Contractor's Representative and

the Engineer, Contractor's Chief Executive Officer or similar senior representative and the Gardena City Manager, or designee, upon the request of the other party, shall meet as soon as conveniently possible, but in no case later than twenty (20) days after such a request is made, to attempt to resolve such dispute or disagreement. Prior to any meeting between the parties' senior representatives, the parties will exchange relevant information that will assist the parties in resolving their dispute or disagreement.

If, after meeting, the senior representatives determine that the dispute or disagreement cannot be resolved on terms satisfactory to both parties, the parties may submit the dispute to binding or non-binding mediation. The mediation shall be conducted in any manner and by any person or mediation association mutually acceptable to the parties.

2-11.3 Arbitration. Any claims, disputes or controversies between the parties arising out of or relating to the Contract, or the breach thereof, which have not been resolved in accordance with the procedures set forth in Section 9-4.2 above may be decided by binding or non-binding arbitration. The arbitration shall be conducted in any manner and by any person or arbitration association mutually acceptable to the parties.

2-11.4 Claims Disputes. Any claims of Contractor, as "claims" are defined in California Public Contract Code Section 9204 shall be processed in accordance with that section. Section 9204 provides in relevant part that upon receiving a claim from a contractor, together with reasonable documentation to support the claim, a contracting public entity shall conduct a reasonable review of the claim and, within a period not to exceed 45 days [except as otherwise provided in Section 9204], shall provide the claimant a written statement identifying what portion of the claim is disputed and what portion is undisputed.

Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. If the public entity fails to issue a written statement, Section 9-4.3 shall apply. If the contractor disputes the public entity's written response, or if the public entity fails to respond to a claim within the time prescribed, the contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute.

Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the public entity shall schedule a meet and confer conference within 30 days for settlement of the dispute. Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the public entity shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed.

Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with the public entity and the contractor sharing the associated costs equally. The public entity and contractor shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to other applicable procedures.

2-13 DRAWINGS AND SPECIFICATIONS ("RECORD" DRAWINGS). At all times, the Contractor shall maintain at the project a "Record" set of Drawings and Specifications to include all executed addenda, change orders, and field orders.

Prior to each progress payment the Contractor shall deliver to the Engineer, a set of contract drawings with all applicable “as constructed” notes placed/recorded thereon. Failure to provide “as constructed” plans will cause progress payment to be withheld until information is provided to City.

After completion of the work and before final payment, the Contractor shall deliver to the Engineer a complete set of contract drawings with all applicable “as constructed” noted placed/record thereon. The final form and detail of these as constructed plans are subject to the acceptance of the Engineer.

2-14 MARKING REMOVAL. All markings placed by the Contractor, City, and Underground Service Alert (USA) during construction shall be removed at the completion of the work. These markings shall include, but not limited to, paint, stakes, and metal tags.

All cost associated with removal of markings shall be included in the bid prices for the applicable bid items. Failure of the Contractor to remove these markings shall be cause for the City to do the work and withhold the costs from the Contractor’s final payment.

SECTION 3 – CONTROL OF THE WORK

3-5 INSPECTION. Inspection shall be made once a day for areas ready for inspection. Areas or items that fail inspection or that are not ready for inspection shall be rescheduled by the contractor.

Inspection of the work shall not relieve the contractor of the obligation to fulfill all conditions and requirements of the contract.

3-6 THE CONTRACTOR’S REPRESENTATIVE. The Contractor shall furnish the Engineer with the name, address and cell/ business/home telephone numbers of the person responsible for the maintenance of barricades, traffic control signs, lights and other safety devices.

3-10 SURVEYING.

3-10.3 Line and Grade. Unless otherwise provided in the Technical Provisions, establishing lines and grades for construction shall be the responsibility of the Contractor, with the following provisions:

All work under this contract shall be built in accordance with the lines and grades shown on the plans. Field survey for establishing these, and for the control of construction, shall be the responsibility of the Contractor. All such surveys, including construction staking, shall be performed on all items ordinarily requiring grade and alignment, at intervals normally accepted by the agencies and trade involved.

The Contractor shall provide a copy of the office calculations and grade sheets to the Agency’s Inspector. The Contractor shall be responsible for any error in the finished work, and shall notify the Engineer within 24 hours of any discrepancies or design errors discovered during staking.

Unless a separate bid item is provided, the payment for surveying, construction staking, professional services, office calculations, furnishing all labor, materials, equipment, tools and incidentals, and for doing all work involved shall be considered as included in the various items of work, and no additional compensation will be allowed therefor.

3-10.4 Permanent Survey Markers. The Contractor is required to locate and tie out survey

monuments in the project area prior to construction involving street and highways, or City public right of way and to file with the County Surveyor a Corner Record of any such work. Prior to final payment and the issuance of a completion certificate, the Contractor is required to file a Corner Record for survey monumentation that is replaced. All such survey work shall be performed under the supervision of a California licensed Land Surveyor or a Civil Engineer authorized to perform such work.

The Contractor shall provide the Agency a copy of the office calculations and documents submitted to the County for filing in connection with the aforementioned work.

The payment for surveying, related professional services, office calculation, furnishing all labor, materials, equipment, tools and incidentals, and for doing all work involved shall be considered as included in the various items of work, and no additional compensation will be allowed therefor.

3-12 WORK SITE MAINTENANCE.

3-12.1 General. The Contractor shall keep the work site clean and free from rubbish and debris. The Contractor shall abate dust nuisance by cleaning, sweeping and sprinkling with water in keeping with the AQMD and NPDES requirements. Debris, soil or other matter shall not be washed into storm drains but shall be collected and disposed of in a legal, responsible manner. The construction area shall be cleaned with a power sweeper at the end of every workday and when deemed necessary by the Engineer.

The Contractor shall maintain drainage within and through the work areas. Earth dams will not be permitted in paved areas. Use temporary sandbags to control the site perimeter. At the completion of the project sandbags shall become the property of the City of Gardena and shall be remain in place.

The Contractor shall not spill on haul routes. Any such spillage shall be removed immediately and the area cleaned.

Stockpiling of construction materials or debris on City right-of-way shall be in accordance with the NPDES permit and shall be approved by the inspector. At the completion of work, the Contractor shall thoroughly clean all work areas.

3-12.2 Air Pollution and Surface Maintenance Control. The Contractor shall obtain a construction water meter from Golden State Water including required deposit and fees. The Contractor shall pay for the water used, at the current water rates. All arrangements for construction water shall be made by contractor with Golden State Water at Contractor expense.

3-12.4. Storage of Equipment and Material.

3-12.4.1 General. All costs associated with the disposal of all excavated or demolition materials, including any gate fees, shall be paid by the Contractor. These costs shall be included in the bid price for the applicable bid items.

Prior to any excavated or demolition material being removed from the construction site the Contractor shall notify the City as to the hauling route and destination for disposal. If the location for disposal is other than a county landfill then the Contractor shall provide the City with written permission and release of liability for the City from the owner of the property where the material will be deposited.

<u>The City has an exclusive agreement with Waste Resources, Inc. and no other firm may provide bulk trash bins in the event the work requires this service</u>.

3-12.4.2 Storage in Public Streets. Construction equipment shall not be stored at the construction site, any public street or publicly owned facilities without approval of the City. Contractor shall store equipment at a contractor's rental yard.

All excavated material that is to be hauled to and disposed of at a County landfill site by the Contractor is subject to a County gate fee based on tonnage.

3-12.5.4 Protection and Restoration of Existing Improvements. Any facilities, structures, water lines, landscaping, surfaces, signs, pavement markings, painted curbs, house numbers, etc., which are damaged during construction shall be restored to the satisfaction of the City. Damaged water lines shall be repaired immediately at no additional cost to the city.

3-12.5.5 Access to Private Property. The Contractor shall be aware that business and residential access must be maintained at all times. The Contractor shall schedule operations to minimize interference with access to private property.

The main access way to any business or home shall not be completely blocked for more than one four-hour period a day except blockage shall be limited to one twenty-four (24) hour period when concrete is poured.

Temporary access ways shall be provided from the street to the main access way of all businesses and homes by use of traffic rated steel plates or any other method approved by the city.

Payment for this item shall be included in the applicable contract work item.

3-13 COMPLETION, ACEPTANCE, AND WARRANTY.

3-13.3 Warranty. In addition to the guarantees as required in Section 1-7.2 and 3-13.3 of the Standard Specifications, the Faithful Performance Bond shall remain in full force and effect for a period of one year after acceptance of the work by the Agency to insure that defects, which may appear within said period, will be repaired, replaced, or corrected by the Contractor, at his own cost and expense, to the satisfaction of the Engineer within thirty (30) days after written notice thereof by the Agency.

SECTION 4 – CONTROL OF MATERIAL

4-1 GENERAL.

4-1.1 Warranty of Title. No materials, supplies or equipment for the work under this Contract shall be purchased subject to any chattel mortgage or under a conditional sale contract or other agreement by which an interest therein or any part thereof is retained by the seller or supplier.

The Contractor warrants clear and good title to all materials, supplies and equipment installed and incorporated in the work, and agrees upon completion of all work to deliver the premises, together with all improvements and appurtenances constructed or placed thereon by him to the Agency free from any claims, liens, encumbrances or charges, and further agrees that neither he nor any person, firm or corporation furnishing any material or labor for work covered by the Contract shall have any right to a lien upon the premises or any improvement or appurtenance thereon; provided, that this shall not preclude the Contractor from installing metering devices or other equipment of utility companies the title of which is commonly retained by the utility company. Nothing contained in this section, however, shall defeat or impair the right of such persons furnishing materials or labor under any bond given by the Contractor for their

protection, or any right under any law permitting such persons to look to funds due the Contractor, which are in the hands of the Agency.

The provisions of this section shall be inserted in all subcontractor's and material contracts, and notice of its provisions shall be given to all persons furnishing materials for the work when no formal contract is entered into regarding such materials.

SECTION 5 – LEGAL RELATIONS AND RESPONSIBLITIES

5-4 INSURANCE. In lieu of Section 5-4 of the Standard Specifications, refer to the City Contract Documents Section, CD-10, for detail requirements.

5-5 ANTITRUST CLAIMS. By entry into this Contract, Contractor hereby acknowledges the terms of Section 7103.5 of the Public Contract Code and hereby offers and agrees to assign to the Agency all rights, title and interest in all causes of action it may have as outlined above.

5-7 SAFETY.

5-7.4 Hazardous Substances. As required by Public Contract Code Section 7104, if this Contract involves digging trenches or other excavations that extend deeper than four (4) feet below the surface, Contractor shall promptly, and prior to disturbance of any conditions, notify the Agency of: (1) any material discovered in excavation that Contractor believes to be a hazardous waste that is required to be removed to a Class I, Class II or Class III disposal site; (2) subsurface or latent physical conditions at the site differing from those indicated by the Agency; and (3) unknown physical conditions of an unusual nature at the site, significantly different from those ordinarily encountered in such contract work. Upon notification, the Agency shall promptly investigate the conditions to determine whether a change order is appropriate. In the event of a dispute, Contractor shall not be excused from any scheduled completion date and shall proceed with all work to be performed under the Contract but shall retain all rights provided by the Contract and by law for making protests and resolving the dispute.

5-7.4.1 Edison Energized Conductors. Contractor hereby promises and agrees that in the performance of the work specified in this Contract, it will employ and utilized only qualified persons, as hereinafter defined, to work in proximity to Edison's secondary, primary and transmission facilities. The term "qualified person" is defined in Title 8, California Administrative Code, Section 2700, as follows:

> "Qualified Person: A person who by reason of experience or instruction is familiar with the operation to be performed and the hazards involved."
>
> Contractor further promises and agrees that the provisions of this section shall be and are binding upon any subcontractor or subcontractors that may be retained by it, and that Contractor shall take such steps as are necessary to assure compliance by said subcontractor or subcontractors with the requirements of this section.

5-7.4.2 Emergency Provisions. Unusual conditions may arise on the work which will require that immediate and unusual provision be made to protect the public from danger or loss or damage to life and property, due directly or indirectly to the prosecution of the work, and it is part of the service required of the Contractor to make such provisions and to furnish such protection.

Whenever, in the opinion of the Agency, an emergency exists of which the Agency is aware and against which the Contractor has not taken sufficient precaution for the safety of the public or the protection of utilities or of adjacent structures or property which may be injured by the

progress of construction; and whenever, in the opinion of the Agency, immediate action shall be considered necessary in order to protect public or private personnel or property interests, or prevent likely loss of human life or damage on account of the operations under the Contract, then in that event the Agency may provide suitable protection to said interests by causing such work to be done and material to be furnished, as in the opinion of the Agency may seem reasonable and necessary, all at the expense of the Contractor.

SECTION 6 – PROSECUTION AND PROGRESS OF THE WORK

6-1 CONSTRUCTION SCHEDULE AND COMMENCEMENT OF THE WORK

6-1.1 Construction Schedule. The Contractor's proposed construction schedule shall be submitted to the Engineer within fourteen (14) calendar days after the date of the contract execution. The schedule shall be supported by written statements from each supplier of materials or equipment indicating that all orders have been placed and acknowledged and setting forth the dates that each item will be delivered.

The Contractor shall include in his bid all costs to perform the work under this contract in stages. The Contractor shall begin and complete work in each stage prior to starting work in subsequent stages unless previous permission is obtained from the Engineer. The contractor shall stage the work to allow parking on the next adjacent streets. Restricting parking on multiple adjoining streets shall require approval of the engineer.

6-1.2 Commencement of the Work. City may establish a Notice to Proceed (NTP) date no later than thirty (30) calendar days after the date of the contract execution. Prior to issuing the Notice to Proceed, the Engineer will schedule a preconstruction meeting with the Contractor to review the proposed construction schedule and delivery dates, arrange utility coordination, discuss construction methods and clarify inspection procedures.

The names, addresses and telephone numbers of the Contractor and subcontractors, or their representatives, shall be filed with the Public Works Manager and the County Sheriff's Department or the City Police Department prior to beginning work.

The Contractor shall also notify the City of Gardena and the owners of all utilities and substructures within the Project area not less than 48 hours prior to starting construction. The following utility companies list of names and telephone numbers is intended for the convenience of the contractor and is not guaranteed to be complete or correct:

COMPANY	***CONTACT***	***TELEPHONE NO.***

The Contractor shall submit periodic Progress reports to the Engineer by the tenth day of each month. The report shall include an updated Construction Schedule. Any deviations from the original schedule shall be explained. Progress payments will be withheld pending receipt of any outstanding reports.

6-1.3 Working Day. The Contractor's working hours shall be limited to the hours between 7:30 A.M. and 4:30 P.M., Monday through Friday except holidays. Work which will cause loud or disruptive noise to adjacent residents and "No Parking" enforcement shall not begin prior to 8:00 a.m. Deviation from normal working hours will not be allowed unless written permission has been duly obtained beforehand from the office of the City Engineer. The Contractor shall provide adequate light for proper prosecution of the work, for the safety of the workmen and the public, and for proper inspection.

If the Contractor works beyond the allowed working hours without prior written approval from the Engineer, the Contractor may be charged Five Hundred ($500) for each occurrence as required by the Engineer. The amount will be deducted from a progress payment or bond.

Contractor hereby acknowledges and shall be required to comply with the provisions of California Labor Code Section 1810 et seq. According to those sections, eight (8) hours of labor shall constitute a legal day's work. Contractor shall pay to the Agency a penalty of Twenty-Five Dollars ($25.00) for each worker employed in the execution of this Contract by Contractor, or by any Subcontractor, for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any calendar day or forty (40) hours in any one (1) calendar week, except when payment for overtime is made at not less than one and one-half (1-1/2) times the basic rate for that worker.

In the event of either a requested or emergency deviation, inspection service fees will be charged against the Contractor. The service fees will be calculated at overtime rates including benefits, overhead and travel time. The service fees will be deducted from any amounts due to the Contractor.

6-1.4 Notice and Service Thereof. Any notice required or given by one party to the other under the contract shall be in writing and shall be dated and signed by the party giving such notice or by a duly authorized representative of such party. Any such notice shall not be effective for any purpose whatever unless served in the following manner:

Notice shall be given to the Agency by personal delivery thereof to the City of Gardena Engineer or by depositing the same in the United States mail enclosed in a sealed envelope, registered and with postage prepaid, addressed to:

Public Works Department
City of Gardena
1717 W. 162nd Street
Gardena, CA 90247-3778

Notice shall be given to the Contractor by personal delivery thereof to said Contractor or to his authorized representative at the site of the project, or by depositing the same in the United States mail, enclosed in a sealed envelope addressed to said Contractor at the address established for the conduct of the work under this Contract, postage prepaid and registered.

Notice shall be given to the Surety, or any other person, by personal delivery to said Surety or other person, or by depositing the same in the United States Mail, enclosed in a sealed envelope addressed to such Surety or persons at the address of said Surety or persons last communicated to the party giving the notice, postage prepaid and registered.

Notification of Property Owners and Tenants - The Contractor shall notify each property owner and/or tenant in the project area in writing five (5) working days prior to the start of construction. If pedestrian or vehicular access to private property is to be blocked, the Contractor shall again notify each property owner and/or tenant in writing five (5) working days prior to construction activities. The Contractor shall provide additional notices when a lapse time occurs during each phase/segment work.

The written notice shall be submitted to the Engineer for approval prior to being delivered.

6-2 PROSECUTION OF THE WORK.

6-2.1 Contractor's Responsibility for Work. Until the formal acceptance of the work by the Agency, the Contractor shall have the charge and care thereof and shall, subject to the insurance protection furnished in accordance with the Section 1-7.6 and 5-4 hereof, bear the risk of accident, loss or damage to any part thereof by action of the elements or from any other cause, whether arising from the execution or from the non-execution of the work. The Contractor shall rebuild, repair, restore and otherwise correct damages to any portion of the work occasioned by any of the above causes before its acceptance.

In case of suspension of work from any cause whatever, the Contractor shall be responsible for all materials and the proper temporary storage thereof.

6-3 TIME OF COMPLETION.

6-3.1 General. The contract time shall begin per the City's written notification. Work must be completed within working days specified for the project. In addition, the Contractor shall notify the City 24 hours in advance of the actual commencement of work.

No work shall be undertaken during the City's holiday closures. It is the Contractor's responsibility to determine the City's closure dates.

6-9 LIQUDATED DAMAGES. The amount of liquidated damages is hereby amended to **$800** for each consecutive calendar day.

SECTION 7 – MEASUREMENT AND PAYMENT

7-1 MEASUREMENT OF QUANTITIES FOR UNIT PRICE WORK.

7-1.2 Method of Measure. The quantities shown on the Bid Schedule are approximate only. The Contractor will be paid for the actual quantities of work based on approved field measurements as provided for in these Specifications. The City reserves the right to increase or decrease the amount of any item or portion of work to be performed or materials furnished, or to delete any item, in

accordance with the Specifications. Additional bid item work shall be completed within the total working days in these specifications. Additional working days maybe allowed with the approval of the engineer.

7-3 PAYMENT.

7-3.2 Partial and Final Payment. The closure date for periodic progress payments will be the twenty-fifth day of each month. Authorization to pay is commonly received on the tenth day of the following month. However, payments will be withheld pending receipt of any outstanding reports required by the Contract Documents.

7-3.3 Delivered Materials. The City will NOT honor or make any progress payments for materials ordered and delivered to the job site by the Contractor unless prior approval is obtained from the Engineer.

7-4 PAYMENT FOR EXTRA WORK.

7-4.3 EXTRA WORK. When work is performed on a "time and materials" basis, the following percentages shall be added to the Contractor's cost and shall constitute the markup for all overhead and profits:

1) Labor 20
2) Materials 15
3) Equipment Rental.....15
4) Other Items and Expenditures.....15

To the sum of the costs and markups provided for in this section, 1 percent shall be added as compensation for bonding.

When all or any part of the extra work is performed by a Subcontractor, the markup established above shall be applied to the Subcontractor's actual cost of such work. A markup of 10 percent on the first $5,000 of the subcontracted portion of the extra work and a markup of 5 percent on work added in excess of $5,000 of the subcontracted portion of the extra work may be added by the Contractor.

SECTION 8 – FACILITIES FOR AGENCY PERSONNEL

8-2 FIELD OFFICE FACILITIES. The Contractor shall provide the class of field office indicated below:

□ Class "A" □ Class "B" □ Class "C"

In the event none of the boxes are marked above, no specific field office will be required, and the use therefor of any field office will be at the Contractor's discretion. The location of any field office shall be as provided on the plans, in these Specifications or as designated by the Engineer.

END OF GENERAL PROVISIONS

TECHNICAL PROVISIONS

PREFACE: All work and materials shall conform to the "Standard Specification for Public Works Construction", 2021 edition, except as modified by the contract and these Technical Provisions.

Incidental Work - All work and materials required by the plans and specifications, and not specifically listed in the bid schedule items of work, shall be considered incidental and no additional payment shall be made therefore. Incidental items shall include, but not be limited to, mobilization; implementation of the SWPPP and Best Management Practices for the protection of storm drain structures; adjusting utility access covers to grade; saw cutting; excavation and disposal of materials; survey; traffic control and coordination of utilities.

PART 1 – GENERAL PROVISIONS

Section 9 “Mobilization,” is hereby added to the Standard Specifications.

SECTION 9 – MOBILIZATION

9-1. MOBILIZATION

9-1.1 General. Subsection 7-3.4 “Mobilization,” of the Standard Specifications is hereby deleted.

Mobilization shall consist of preparatory work and operations, including but not limited to, those necessary for the movement of personnel, equipment, supplies, and incidentals to the project site; for the establishment of all offices, buildings, construction yards, sanitary facilities, and any other facilities necessary for work on the project; pulling of all required permits including Los Angeles County Department of Public Works permit for the installation of connector pipe screens; providing required insurance coverages, and for all other work and operations which must be performed or costs incurred prior to beginning work on the various contract items on the project site.

Demobilization shall consist of all work and operations necessary to perform final clean-up, including but not limited to, those necessary for the movement of personnel, equipment, supplies, and incidentals from the project site, remove all offices, and other facilities that were necessary for work on the project, and for other work that must be performed or costs incurred prior to final acceptance of the work.

Mobilization is deemed to include all aspects of mobilization and demobilization work occurring during the life of the project for any reason.

The Contractor shall furnish equipment sufficient to execute the work within the period allowed in the approved schedule.

The Contractor shall promptly demobilize equipment no longer needed to perform the work.

All facilities required for Contractor’s use shall be furnished and maintained by the Contractor at the locations designated on the Contract Drawings or as directed by the Engineer.

The Contractor shall furnish and maintain adequate number of portable sanitary facilities throughout the project duration for use by their own personnel and Subcontractors.

The security of all materials and equipment in the Contractor storage area shall be the responsibility of the Contractor. The City of Gardena is not liable for any theft or damage to materials or equipment in Contractor's storage area.

9-1.2 Payment.

Payment for MOBILIZATION, cost of all bonds and insurance policies, and all costs incurred prior to beginning work shall be included under other items of work.

PART 2 – CONSTRUCTION MATERIALS

SECTION 218 – CONNECTOR PIPE SCREEN

218-1 GENERAL.

Connector pipe screen shall be Model USW-1M1 and USW-1M2 manufactured by United Storm Water, Inc. (626) 961-9326, unitedstormwater.com or approved equal and meet the requirements as shown in Appendices A & B. Manufacturer shall be limited to the Los Angeles County approved vendor list. See Appendix C.

PART 3 – CONSTRUCTION METHODS

SECTION 318 – CONNECTOR PIPE SCREEN INSTALLATION

318-1 GENERAL.

Connector pipe screen installation shall meet the requirements as shown in Appendices A & B.

318-2 PAYMENT.

Payment for INSTALL CONNECTOR PIPE SCREEN IN EXISTING CATCH BASIN shall be made at the contract unit price bid per EACH and shall include full compensation for furnishing all labor, materials, tools, equipment, incidentals, protecting existing improvements within and adjacent to the work, appurtenant work required to complete the work and no additional compensation will be allowed therefore.

PART 6 - TEMPORARY TRAFFIC CONTROL

SECTION 600 - ACCESS

600-1 GENERAL.

600-1.1 Public Convenience and Safety Access. The Contractor shall provide temporary "No Parking" and all other signs which are necessary for the safe and orderly conduct of vehicular traffic as directed by the Engineer and as specified herein. Contractor shall also provide an approval barricaded area in the parking lane for pedestrian traffic during such time as the parkway is unfit to be used for pedestrian traffic.

At such times as driveways are inaccessible due to the Contractor's work, they shall be blocked by two (2) Class II barricades or one (1) Class II barricade and two (2) delineators. Driveways that are ramped or planked for temporary access shall be provided with a barricade or delineator at each side. The Contractor shall give 24-hour notice to affected property owners prior to blocking any driveway.

The Contractor shall provide access for refuse collection on the regularly scheduled days. He shall also facilitate or assist in the collection where such work is hampered by his operations.

600-1.2 Street Closures, Detours, and Barricades. The Contractor shall not close any street within the City of Gardena without first obtaining the approval of the Engineer. Barricading, traffic control and detour diagrams in connection with street closures shall be submitted by the contractor as required by the Engineer.

The Contractor shall provide and install barricades, delineators, warning devices and construction signs in accordance with the California Manual of Temporary Traffic Controls or W.A.T.C.H. Handbook. During adverse weather or unusual traffic or working conditions additional traffic devices shall be placed as directed by the Engineer. All traffic signs and devices shall also conform to the California Manual of Temporary Traffic Controls or W.A.T.C.H. Handbook.

The Contractor shall provide and maintain Type II barricades along excavation edges parallel to the flow of traffic at a maximum spacing of twenty-five feet. Type II barricades mounted with flashers shall be installed around work areas in parkways. Type II barricades shall have alternating reflective orange and reflective white stripes at an angle of 45 degrees. The strip width shall be in accordance with Table 5-1 "Barricade Characteristics" "Manual of Traffic Controls for Construction and Maintenance Work Zones".

During paving operations, barricades may be supplemented with minimum size eighteen-inch high traffic cones and delineators such that spacing between barricades and/or cones or delineators is no greater than twenty feet. Traffic cones and delineators used within State right-of-way shall be a minimum size of twenty-eight inches high. At all access points such as intersecting streets, alleys and driveways, barricades and/or cones shall be provided at five-foot intervals so as to prevent vehicular access to the paving area. Where access from an intersecting street is prohibited, a "Road Closed" sign shall be provided at the nearest prior intersection. "No Left Turn" signs shall be provided wherever required by the Engineer.

When one-way access from a side street or alley is permitted, barricades and cones shall be provided at five-foot intervals for a distance of fifty feet on either side of the centerline of the intersecting street, or alley.

Should the Contractor fail to furnish a sufficient number of traffic and/or pedestrian safety devices, the Agency will place such necessary items and the Contractor shall be liable to the Agency for providing such devices in accordance with the following provisions:

1. For placing of barricades: $5.00 per barricade for the first day or any part thereof and $2.00 per barricade, per day, for each day thereafter or any part thereof. For flashers: $2.50 per flasher for the first day or any part thereof and $1.00 per flasher, per day, for each day thereafter or any part thereof. For traffic cones: $1.00 per cone for each day or any part thereof.

2. In the event that the services of the Agency are required between the hours of 5:00 P.M. and 8:00 A.M., during the normal week or at any time on Saturday,

Sunday or a Agency holiday, there shall be an additional charge to the above set forth minimums of $188.00 for each service trip required.

Contractor shall relocate, preserve and maintain the visibility of all existing signs within the project limits which affect the flow of traffic, as directed by the Engineer. Any signs which are damaged or found to be missing during the course of construction shall be replaced by the Contractor at his expense as directed by the Engineer. All other signs that interfere with the course of work and are not necessary for the safe flow of traffic will be removed and replaced by the Agency. Traffic control signs include Stop Signs, Speed Limit, Parking Restrictions and other regulatory signs.

SECTION 601 – TEMPORARY TRAFFIC CONTROL FOR CONSTRUCTION AND MAINTENANCE WORK ZONES

601-1 GENERAL. A minimum of two (2) lanes (one lane in each direction) shall be maintained at all times for a continuous flow of traffic, except as otherwise approved by the Engineer.

Lane closures shall be allowed between 8:00a.m. and 4:00p.m. only. No traveled lane shall be closed overnight without prior City approval. Access to private property shall be maintained at all times.

"Temporary No Parking" signs shall be posted no more than 100 feet apart at least 72 hours prior to work. The signs shall be mounted on either 1” x 2” X 3’ high wood stakes, Type II barricades, or 39-inch high delineators. Signs shall not be po sted on trees, traffic signal poles, utility poles, streetlights, or any other street furniture. Signs shall be professionally made of moisture-resistant, heavy duty cardboard or other approved material. "Temporary No Parking" signs shall be maintained by the contractor at all times and shall be approved by the Engineer prior to posting. Cover existing street signs as directed by the Engineer.

"Temporary No Parking" signs shall be implemented for one week only (M-F) at a time. Signs shall be removed and reposted each week as needed and approved by the City.

DURING PAVING OPERATIONS, THE CONTRACTOR SHALL PROVIDE INDIVIDUALS AND EQUIPMENT DESIGNATED TO PERFORM AND MAINTAIN TRAFFIC CONTROL ONLY. The Contractor shall furnish, place and maintain all temporary traffic control devices required for the safe and orderly flow of vehicular and pedestrian traffic during construction. All Traffic control shall conform to the California Manual of Temporary Traffic Controls (California M.U.T.C.D.) or Work Area Traffic Control Handbook (W.A.T.C.H. Handbook).

If traffic control measures are not in conformance with these provisions, the project shall be stopped until conformance is attained to the satisfaction of the Engineer.

At locations where excavations are left open overnight, flashing barricades shall be placed along the excavation at a maximum spacing of 20 feet. A minimum of 3 flashing barricades shall be placed at any one excavation.

Temporary striping will be permitted only on base course and pavement to be overlaid. Temporary pavement markings to be placed on new asphalt shall be spaced at 25 ft maximum and shall be removable without damage to the new overlay. Method of temporary markings shall be submitted to the Engineer for approval at the preconstruction meeting.

The Contractor shall submit and obtain written approval of traffic control plans from the Engineer five (5) working days prior to implementing.

Temporary lane closures shall be allowed during working hours specified in these Technical Provisions. Temporary lane closures maintained beyond the normal working hours may have a negative economic effect on the local residential, commercial/industrial business, and traveling public. Unless the Contractor secures prior written approval from the Engineer to maintain temporary lane closures beyond the working hours allowed, the Engineer may deduct a fee from a progress payment or bond for each temporary lane closure maintained beyond the allowed working hours. The fee will be accessed at a rate of Five Hundred ($500) per each travel lane per each thirty (30) minute interval, or fraction thereof as required by the Engineer. In no event will work be allowed past 5 p.m.

600-2 PAYMENT. Payment for TRAFFIC CONTROL shall be made at the contract LUMP SUM price bid and shall include full compensation for furnishing all labor, materials, tools, equipment, incidentals, and appurtenant work required to complete the work and no additional compensation will be allowed therefore.

All costs of preparing and obtaining approval of Temporary Traffic Control Plans, shall be included in the bid price for the various contract items of work, and no additional compensation shall be allowed therefore.

END OF TECHNICAL PROVISIONS

APPENDIX A

CPS REQUIREMENTS

STORM DRAIN DEBRIS SCREEN FY 2020/2021 & FY 2021/2022,

VARIOUS LOCATIONS

JN 998 & 999

Attachment A (cont.)

Connector Pipe Screen (CPS) Requirements

The CPS unit prevents trash and debris from entering the storm drain system during dry weather and moderate storm flows by keeping the trash and debris inside the CB. CPS units are not allowed in CBs at locations where sump conditions exist.

The CPS unit shall be designed to retain all trash larger than 5 mm (0.197 inch) in the CB, and shall comply with the following items:

1. The CPS shall be sized, fabricated, and installed conforming to the configurations shown in the CPS Sizing Table 1, Appendices A-1, A-2, A-3, and A-4.
2. The CPS shall not interfere with the operation of an existing or proposed ARS.
3. The CPS unit shall have a sufficient structural integrity to withstand a lateral force of standing water (62.4 lb/ft^3) within the CB area when the screen becomes 100% clogged. CPS units shall be bolted to the CB walls.
4. CPS units shall be configured with deflector plates or screens preventing trash from falling between the screen and connector pipe. The deflector plate shall be designed to withstand a vertical load of 10 lbs per square foot.
5. The gap at the bottom, sides, and joints of CPS units shall not exceed 5 mm (0.197 inch).
6. The perimeter of CPS units shall include a structural frame for stiffness, a bolting surface for fastening to the CB wall, and support for the opening referred to as the "bypass (H_b)" (see Appendix A-1).
7. All CPS parts/components must be sized to fit through the CB's manhole opening and/or CB curb opening.
8. The CPS unit may encroach into the manhole opening no more than 4 inches.
9. The CPS frame shall be fabricated from S-304 stainless steel, or an Agency approved equal stainless steel alloy. The Structural members shall have a minimum thickness of 3/16 inches.
10. The CPS screen shall be fabricated from perforated metal of Type S-304 stainless steel, or an Agency approved equal stainless steel alloy. The screen shall have a minimum thickness of fourteen (14) gauge (0.0781 inch) The geometrical opening shape shall have a diameter of 5 mm (0.197 inch).
11. The screen material used shall have at least 45% open area.
12. Any edge of the CPS that is not flush with the wall or floor of the CB shall be smooth with no prongs or jagged edges.
13. The assembly bolts, screws, nuts, and washers shall be fabricated entirely from S-316 stainless steel. The concrete anchor bolts shall use a Red Head Multi-Set II drop-in anchor, SSRM-38, with Type S-316 stainless steel threaded rods, nuts and washers, or Agency approved equal.

Attachment A (cont.)

Preliminary Measurements. The Contractor shall make detailed measurements of each CB's location, dimension, configuration, and operational condition, including the size and location of the connector pipe, for the proper fabrication of the devices. The Contractor shall submit written records of this information to the District for review and approval prior to fabrication of the CPS units. Improper fabrication of devices due to errors in the measurements shall be corrected at the Contractor's expense.

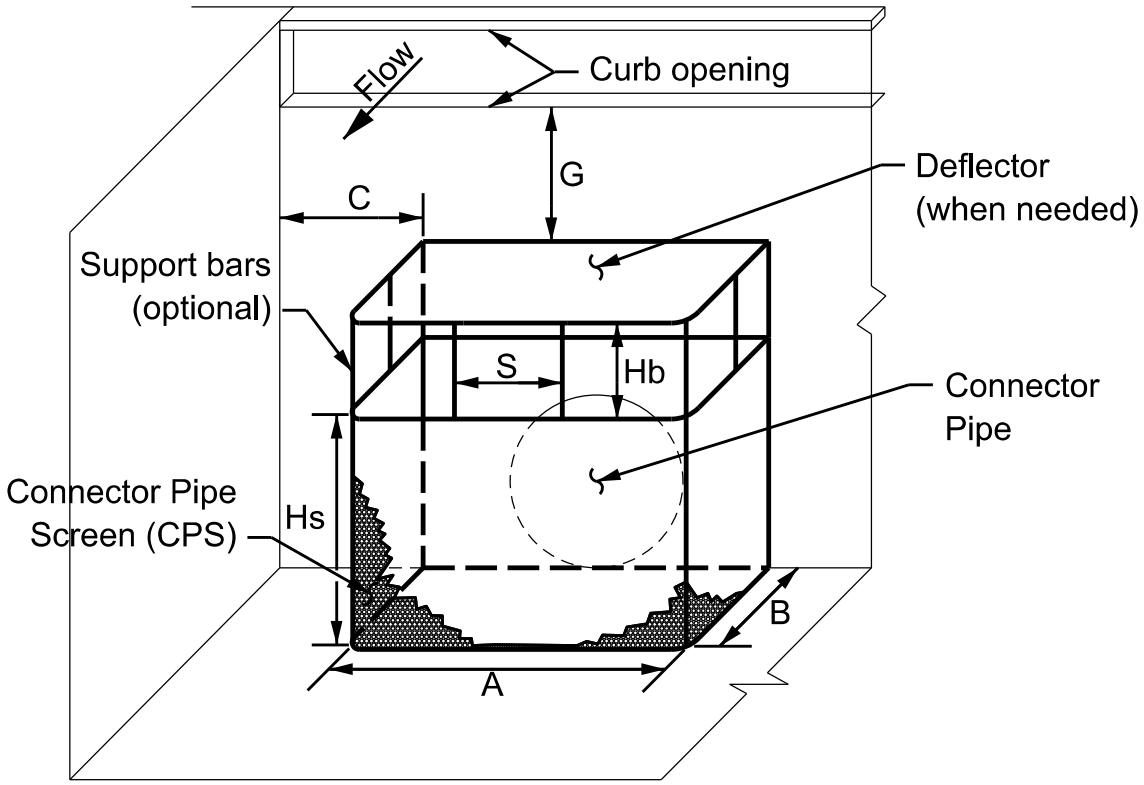
Cleaning of Existing Catch Basins. The Contractor shall furnish all materials, equipment, tools and labor to cleanout (i.e. remove and dispose of all debris from within and around) all CBs in which CPS units will be installed under this Contract to the maintenance standards specified. Cleanout shall also include the CB connector pipe openings and the first 6 feet thereof. The CB shall be clean at the time of the CPS installation. Any trash and debris that accumulates between the dates the CB is cleaned and the date the device is installed shall be removed prior to installation of the device at the Contractor's expense.

Maintenance Conditions and Maintenance Standards. Following are deficiencies in maintenance conditions and their corresponding maintenance standards which shall apply to this Contract. The cleanout of each CB shall meet the maintenance standards listed as follows:

	Description of Maintenance Condition Deficiency	Description of Maintenance Standard
1.	Trash and debris located immediately in front of curb opening or side opening of CB, and on top or between metal grates of grated CB.	No trash and debris located immediately in front of CB opening, and on top or between metal grates.
2.	Vegetation growing across and/or blocking the basin opening.	No vegetation blocking CB opening.
3.	Trash and debris in the CB.	No trash and debris within the CB.
4.	Trash and debris in the connector pipe opening, upstream or downstream.	No trash and debris in connector pipe opening and/or in the connector pipe for a distance of 6 feet from the opening.

Attachment A (cont.)

Trash and debris shall include, but is not limited to, mud, vegetation, and garbage.



Upon completion of a cleanout operation at a CB and before leaving it, the Contractor shall sweep the top surface of the CB and the area 2 feet around the CB, and shall remove any trash and debris resulting from the cleanout operations. No debris is to be left at a CB for future pick-up.

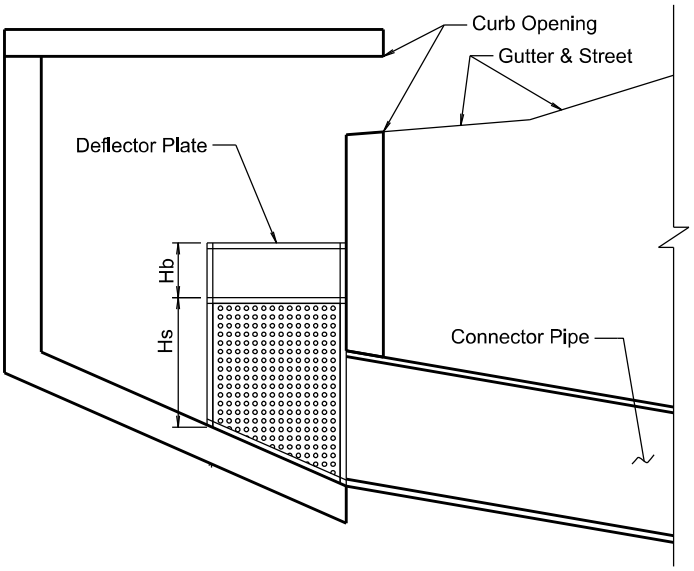
Method of Removal. All trash and debris required to be removed from the CBs shall be removed in a manner to be determined by the Contractor. The Contractor shall not allow any trash or debris to enter the connector pipe or main line as a result of the cleanout operations.

Debris Disposal. All trash and debris removed under this Contract shall become the property of the Contractor and shall be legally disposed of away from the CB sites. The Contractor is responsible for proper disposal of the trash and debris, including obtaining approvals from all jurisdictional agencies, as applicable. The contractor shall be responsible for contacting and coordinating with LA County Animal Care and Control for pickup and disposal of dead animals. However, the Contractor shall be responsible for removing any dead animal from inside a CB. A list of local Animal Care and Control offices may be obtained at:
http://animalcare.lacounty.gov/wps/portal/acc/aboutus/care_centers.

Staff Gauge. The contractor shall paint a staff gauge per Appendix A-4. The staff gauge shall be located such that it is visible through the CB curb opening or grating.

APPENDIX A-1: CPS CONFIGURATION

CATCH BASIN INTERIOR VIEW
(Not to scale)



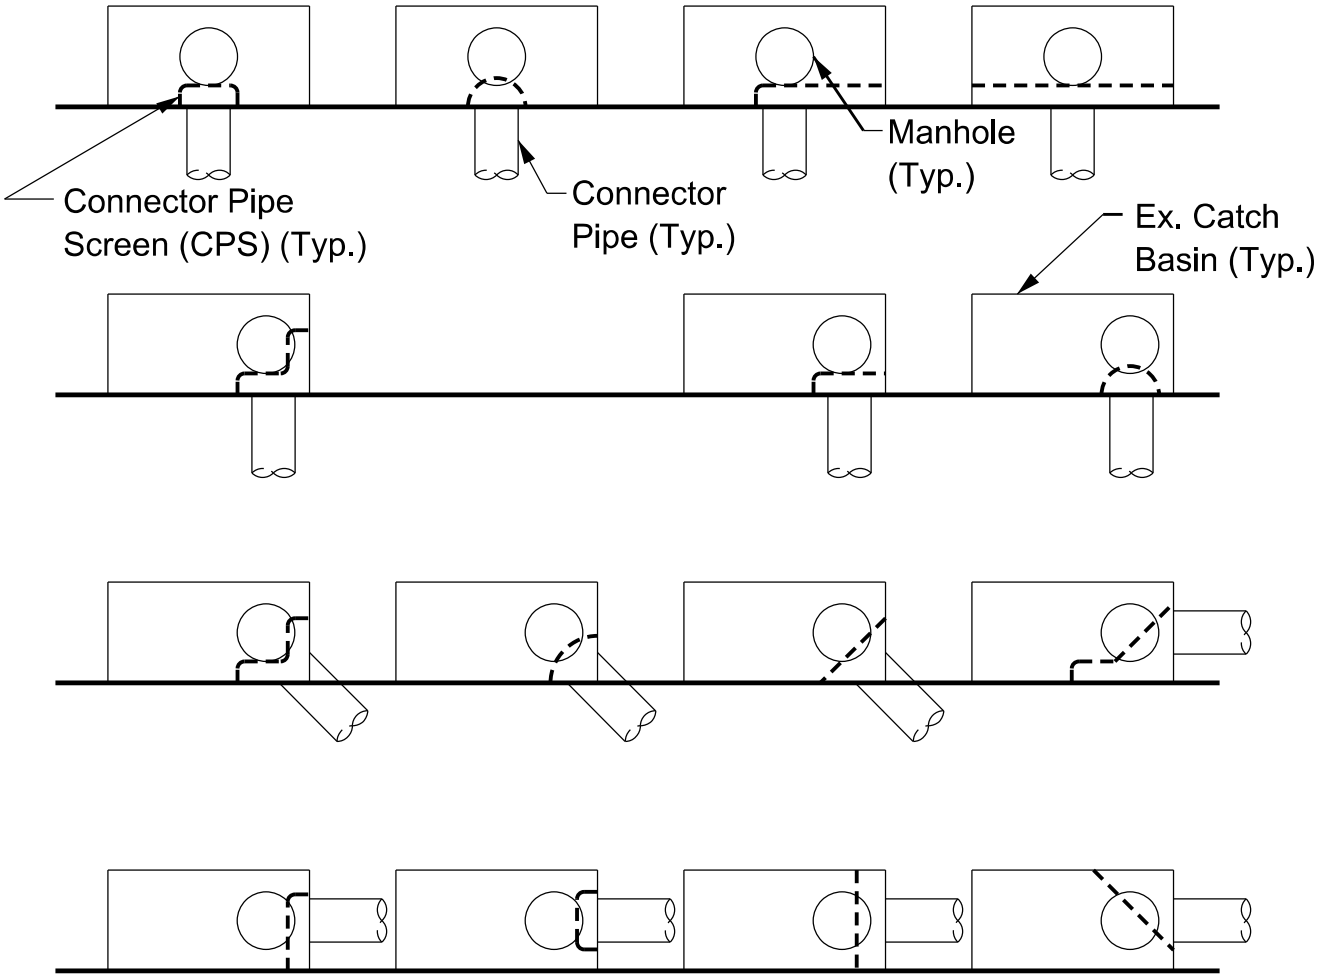
CPS Length	L = A + 2B
CPS Height	Hs
Bypass Height	Hb
Minimum Wall Clearance	C > = 4"
Minimum Bar Spacing	S > = 6"
Minimum Interior Spacing	B > = 10"
Minimum Distance from Street Flow Line	G > = 4"

NOTES

1. The CPS shown above is for illustrative purposes only. The catch basin connector pipe location and the shape and design of the CPS may significantly deviate from the above example.
2. For grated catch basins, "G" shall be measured from the bottom of the grate to the top of the deflector plate.

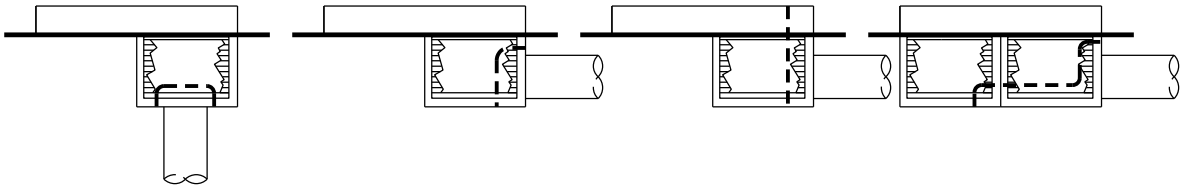
COUNTY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS

APPENDIX A-2: CATCH BASIN



ELEVATION VIEW
NTS

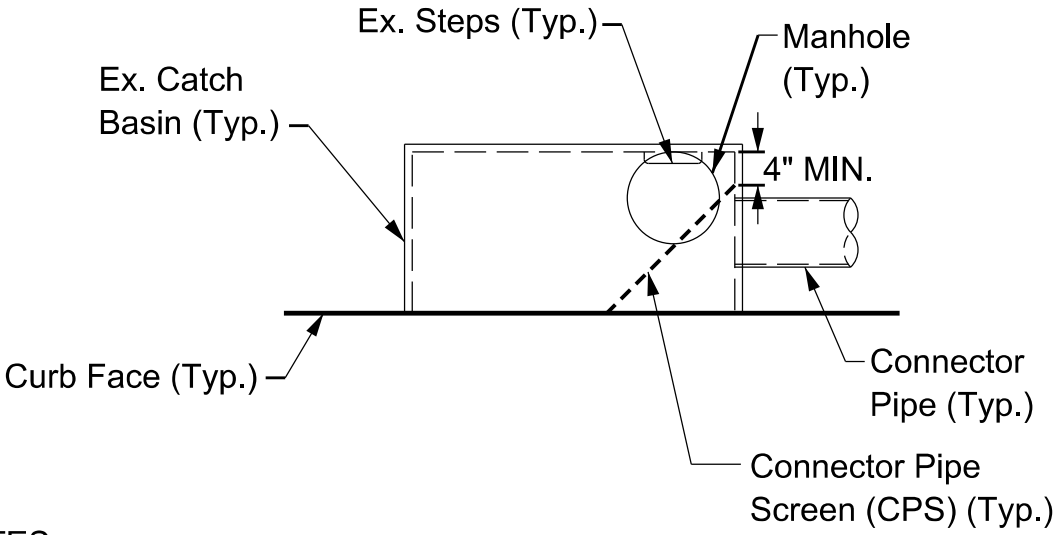
NOTES



1. The CPS shown above is for illustrative purposed only.
2. CPS shall be flush with catch basin walls and invert. Contractor to verify dimensions prior to fabrication.

APPENDIX A-3: EXAMPLE CPS LAYOUTS

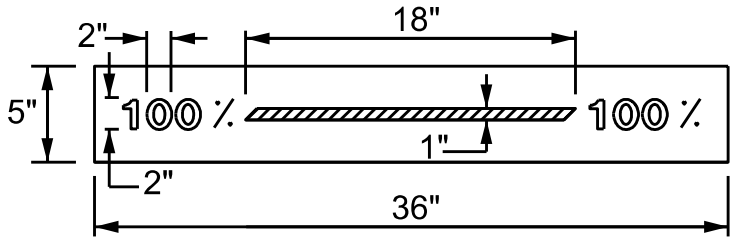
CURB OPENING CATCH BASINS (TYPES 300, 306)



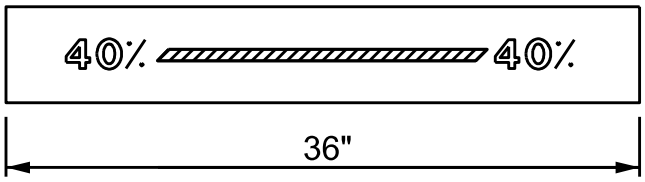
CURB OPENING CATCH BASINS WITH GRATES (TYPES 301, 302)

APPENDIX A-3: EXAMPLE CPS LAYOUTS (CONT.)

CURB OPENING CATCH BASINS (TYPES 300)

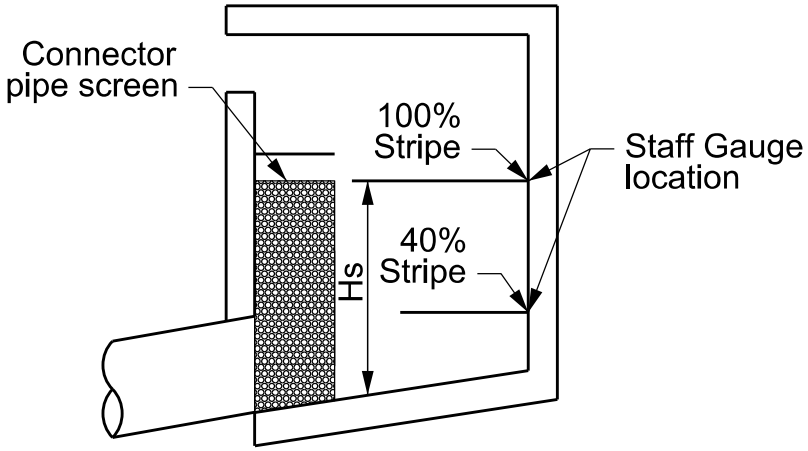


NOTES:



1. The CPS configurations shown above are for illustrative purposes only. This is not a comprehensive list.

2. The CPS unit may encroach into the manhole opening no more than 4 inches.



APPENDIX A-4: STAFF GAUGE

100% STRIPE
(Red Stripe and Numbers on White Background)

40% STRIPE
(Red Stripe and Numbers on White Background)

EXAMPLE LAYOUT

"THE PAINT TYPE AND SPECIFICATIONS MUST BE SUBMITTED TO THE DISTRICT FOR REVIEW AND APPROVAL PRIOR TO USE."

1. The Contractor shall paint a staff gauge as shown on an externally visible interior wall of each catch basin.

2. The Contractor shall paint red stripes and numbers on white background labeling 40% and 100% screen height (Hs) as shown above.

3. Surfaces must be clean, dry and free from all contaminants including rust that may impair adhesion.

Revised 07/21/2010

APPENDIX B - CPS SIZING TABLE

Revised 5/4/2016

TABLE 1

CPS SIZING TABLE FOR NON-SUMP CONDITIONS

NOTICE OF EXEMPTION

TO: ☐ Office of Planning & Research
1400 Tenth Street
Sacramento, CA 95814

☐ County Clerk / Registrar Recorder
ATTN: Environmental Filings Clerk
12400 East Imperial Highway, Room 1101
Norwalk, CA 90650

Project Title: Storm Drain Debris Screen FY 2020/2021 and FY 2021/2022, JN 998 & 999
Project Location (Specific): Various Locations
Project Location (City): Gardena **Location (County):** Los Angeles County
Description of nature, purpose and beneficiaries of project: This project will install Connector Pipe Screens at various storm drains within the City
Name of public agency approving project: City of Gardena

Name of person or agency carrying out project: City of Gardena

Exempt Status: (Check One)

☐ Ministerial: (P.R.C. Sec. 21080[b][1]; Guidelines Sec. 15268)
☐ Declared Emergency: (P.R.C. Sec. 21080[b][3]; Guidelines Sec. 15269[a])
☐ Emergency Project (P.R.C. Sec. 21080[b][4]; Guidelines Sec. 15269[b][c])
x Categorical Exemption: Section 15301 Class 1, Existing Facilities
☐Other: Guidelines Sec. 15061):

Reason why project is exempt: This project consists of minor alteration of existing public facilities and involves negligible or no expansion of use beyond that previously existing.

Contact person: Jun De Castro **Telephone:** 310-217-9642

If filed by applicant:
1. Attach certified document of exempting finding.
2. Has a notice of exemption been filed by the public agency approving the project? ☐ Yes ☐ No

Date received for filing:

11/8/23

CLINT OSORIO Date
Environmental Quality Officer

NOTE: Exempt from Dept. of Fish & Game Wildlife Fee in accordance with de minimis impact finding (735.5[c])

SUBJECT: **ADDITIONAL SERVICES AGREEMENT 01 – STORM DRAIN DEBRIS SCREEN FY 2020/2021 & 2021/2022, VARIOUS LOCATIONS (JN 998 & 999)**
SCOPE AMENDMENT FOR ADDITIONAL CONSTRUCTION SUPPORT SERVICES

Dear Mr. De Castro

Based on our discussions, this is a scope amendment proposal for additional construction support services. Our team is committed to the success of this project, and the following sections detail our project discussion, scope of services, and fees.

The fees quoted in this proposal are valid for 60 days from the date of this submittal and are based upon current California Prevailing Wages. Please contact me at GaryS@CannonCorp.us or 949-777-1580 with any questions regarding this proposal, or to further discuss project details.

Sincerely,

Gary Essex A. Solsona, PE, QSD
Public Works Manager

ADDITIONAL SERVICES AGREEMENT

Project Client:	City of Gardena	Date:	December 5, 2023
Project Name:	SD Debris Screen project (JN 998 & 999)	Project Number:	210811

Scope of Additional Services

Task 6000 Construction Support Services

We will provide periodic construction observation services for the Storm Drain Debris Screen FY 2020/2021 & FY 2021/2022 project (JN 998 & 999) at various locations to verify materials incorporated into the work generally conform to the approved project plans, specifications, and material submittals. We have included 6 site visits to perform this observation work and will coordinate the timing of each visit with the contractor and City staff. We will note any material deficiencies and provide photographs as requested by the City.

Assumptions and Exclusions

- Scope excludes inspection services and preparing daily reports

Fee:

Task 6000 Construction Support Services

(*Project Manager: 2 hrs; Asst. Resident Engineer: 48 hrs; Project Admin: 4 hrs)* $ 8,784

T&M Not to Exceed Fee ..... $ 8,784

Authorization:

In witness whereof, the parties hereto have caused this agreement consisting of the Request for Additional Services, and the original signed proposal letter dated October 25, 2021, and any other necessary and applicable documents to be executed and effective as of the date and year first above written. Payment is due within 15 days of completion of work.

Any additions and/or corrections to this agreement will be addressed in a separate agreement.

Gardena City Council Meeting

AGENDA REPORT SUMMARY

Agenda Item No. 18.A
Section: DEPARTMENTAL ITEMS - TRANSPORTATION
Meeting Date: December 12, 2023

TO: THE HONORABLE MAYOR AND MEMBERS OF THE GARDENA CITY COUNCIL

AGENDA TITLE: Approve Microtransit Pilot Service Concept

COUNCIL ACTION REQUIRED:
Staff Recommendation: Approve Pilot

RECOMMENDATION AND STAFF SUMMARY:
In 2017 GTrans hired Stantec Consulting Service, Inc. to conduct a comprehensive Line by Line Analysis of fixed route and Special Transit (Paratransit) Service. The purpose was to provide an in-depth study of GTrans' system, evaluating the overall structure and delivery of transit services. The analysis considered the performance of the current transit network and provided an assessment of areas where GTrans could make improvements and efficiencies that would benefit the overall network and its customers. Stantec provided recommendations designed to be implemented in a phased approach, in an effort to improve the system and maintain a more cost effective, sustainable operation.

Out of this study came a series of phased recommendations, including the recommendation to consider software-as-a-service and Microtransit on-demand service for its Paratransit service, to provide a short distance transit option with greater flexibility and convenience for the rider. The study also discussed the need for further evaluation of Line 4, and whether improvements and/or significant changes should be made to better serve our community. Recommendations for Line 4 included incorporating smaller vehicles to access residential areas and shopping plazas, and to target the senior population and major points of interest. Both of these recommendations can be accomplished through the deployment of a new Microtransit service, a flexible, demand-responsive transportation service that integrates technology enabled software for on-demand trip planning on smaller vehicles, similar to Uber and Lyft, in order to provide customers with greater accessibility and connectivity throughout the city.

After researching and soliciting a final bid, GTrans awarded a contract to RideCo for on-demand Microtransit software as approved by the City Council on June 27, 2023. This new software will allow GTrans to comingle the on-demand Microtransit service with its current Paratransit service and transform the current service using a fully automated scheduling and dispatching solution and providing additional features such as booking via website and smartphone applications.

GTrans proposed plan for the pilot is discussed in more detail in the attached Agenda Staff Report.

Therefore, GTrans Staff respectfully recommends that Council approves this 18-month pilot service.

FINANCIAL IMPACT/COST:

The additional costs, estimated at $638,492 were included in the FY24 operating budget previously approved by City Council. Subsequent years of the pilot will be included in the proposed budget for consideration. There is no impact to the General Fund.

AGENDA STAFF REPORT

AGENDA TITLE:

Approve Microtransit Service Pilot Concept

RECOMMENDATION:

Staff respectfully recommends that Council approve proposal for GTrans' 18-month Pilot for Microtransit Service Concept.

BACKGROUND:

In 2017 GTrans hired Stantec Consulting Service, Inc. to conduct a comprehensive Line by Line Analysis of fixed route and Special Transit (Paratransit) Service. The purpose was to provide an in-depth study of GTrans' system, evaluating the overall structure and delivery of transit services. The analysis considered the performance of the current transit network and provided an assessment of areas where GTrans could make improvements and efficiencies that would benefit the overall network and its customers. Stantec provided recommendations designed to be implemented in a phased approach, in an effort to improve the system and maintain a more cost effective, sustainable operation. Their work included outreach to the public, surveys, and on-board ride counts.

Out of this study came a series of phased recommendations, including the recommendation to consider software-as-a-service and Microtransit on-demand service for its Paratransit service, to provide a short distance transit option with greater flexibility and convenience for the rider. The study also discussed the need for further evaluation of Line 4, and whether improvements and/or significant changes should be made to better serve our community. Recommendations for Line 4 included incorporating smaller vehicles to access residential areas and shopping plazas, and to target the senior population and major points of interest. Both of these recommendations can be accomplished through the deployment of a new Microtransit service, a flexible, demand-responsive transportation service that integrates technology enabled software for on-demand trip planning on smaller vehicles, similar to Uber and Lyft, in order to provide customers with greater accessibility and connectivity throughout the city. This review and consideration included GTrans' own trip counts and performance data.

After researching and soliciting a final bid, GTrans awarded a contract to RideCo for on-demand Microtransit software as approved by the City Council on June 27, 2023. This new software will allow GTrans to comingle the on-demand Microtransit service with its current Paratransit service and transform the current service using a fully automated scheduling and dispatching solution and providing additional features such as booking via website and smartphone applications.

Below is a summary of the current service, proposed service, and the next steps in implementing a Microtransit Pilot Service.

Current Paratransit Service

GTrans currently provides special curb-to-curb transportation services for eligible customers within the Gardena, Hawthorne, and adjacent unincorporated areas of Los Angeles County, including Alondra Park and Del Aire, using a fleet of 100% wheelchair-accessible vehicles. Current service is provided by advanced reservation only, and eligible customers must call at least one day in advance (no same-day service). Below is a summary of the current Paratransit service.

Service Hours

- Monday – Friday: 7:00am-4:30pm
- Every other Saturday: 8:00am-2:00pm

Cost/Fares

- $0.75 each way

Eligibility Requirements

Residents within the city limits of Gardena and Hawthorne as well as unincorporated areas of Los Angeles County (Alondra Park and Del Aire) must fall within at least one of the following categories:

1. Must be ages 60 years or above and/or;
2. Certified as eligible under these rules;
3. Persons whose disability makes it impossible for them to travel to or from the nearest bus stop;
4. Any qualifying condition listed in the eligibility application.

GTrans adheres to the Los Angeles County Transit Operators Association (LACTOA) guidelines for passenger requirements to use paratransit services. Applicants are considered eligible if one of the following criteria applies to the applicant:

1. Medicare card
2. Valid California DMV placard receipt
3. Receive supplemental security income or Social Security disability insurance.

Residents of Gardena and Los Angeles County (Alondra Park and Del Aire) must register for the service by visiting the Gardena Senior Citizens Bureau. Residents of Hawthorne must register for service at the Hawthorne Memorial Center.

Current Service Ridership	
Year	**Passengers**
FY19	24,634
FY20	17,215
FY21	5,968
FY22	6,838
FY23	10,393

Current Service Statistics					
	2019	**2020**	**2021**	**2022**	**2023**
Total Hours	9,600	7,706	9,937	4,289	5,890
Service Hours	8,982	7,009	3,500	3,729	5,142
Passengers	22,567	16,949	5,968	6,838	10,357
National Transit Database (NTD) Operating Costs	$ 896,849	$ 880,125	$ 596,416	$ 612,625	$ 639,008
Cost Per Service Hour	$ 99.85	$ 125.57	$ 170.40	$ 164.29	$ 124.27
Cost Per Passenger	$ 39.74	$ 51.93	$ 99.94	$ 89.59	$ 61.70

With the drastic reduction in riders due to the pandemic and high operating costs for the service, GTrans sees Microtransit as way to increase the ridership for the paratransit service as well as maintain/improve the service for our customers and other potential Paratransit-eligible residents in qualifying areas. In addition, there would be a benefit to combining the Microtransit service with both Paratransit and general public customers, increasing mobility in and around the City of Gardena.

Fixed Route – Line 4

As part of Stantec's analysis of GTrans service and their recommendations to improve service and efficiencies, Line 4 was identified as a low performing and costly route. Prior to the pandemic, Line 4 operated on weekdays at approximately 45-minute frequencies. Line 4 served local destinations along Normandie Ave between 135th St and 182nd St, as well as school tripper service and the northern end of El Camino College at Crenshaw Blvd and Manhattan Beach Blvd. Line 4 received an average boarding of about 450 passengers per day and an average of 20 boardings per hour, pre-pandemic. Most trips throughout the day ranged around 14 total boardings, with a few peak-hour trips operating with high ridership around school start and dismissal times. By comparison, GTrans' most productive route pre-pandemic, Line 2, had an average of 6,241 daily passengers, an average of 35 boardings per hour, and a peak load of 65 passengers on weekdays.

Since the pandemic began in 2020, service on Line 4 was temporarily suspended. This modified schedule continues to remain effective due to continuing manpower shortages being experienced nationwide across multiple transit agencies. GTrans has been increasing its recruiting efforts and reevaluating Line 4's ridership trends to find ways to restore service given the current demand and available resources. Line 4 service accounts for only 3% of the systemwide ridership. Although Line 4's role was envisioned to a community circulator route that provides access to local destinations, this route's popularity is limited by its service frequency, indirect routing, and lack of connections to neighboring cities and transit agencies. By providing on-demand mobility through a new Microtransit service, GTrans will be able to provide coverage solutions, and allow access to major points of interest, while elevating the passenger experience. GTrans will further study Line 4 to determine if, in fact, the mobility needs of the community are provided through this new, flexible Microtransit service.

Proposed Service Concept

The Microtransit Pilot Service branded “Flexi, Powered by GTrans”, will focus on the use of on-demand Microtransit software and service as an effective alternative transportation method in geographies served by underperforming Line 4 and Paratransit service. By implementing Flexi, GTrans envisions a new service that will enable an efficient, fully automated scheduling, dispatching and reservation system that would comingle with its current paratransit service, as well as provide an alternate to riders who used Line 4. All Flexi customers will be able to book a reservation via the website, smart phone application or by calling GTrans customer service.

An added benefit to using the automatic dispatching software is that GTrans will be able to offer same day booking for both On-Demand and Paratransit passengers. We often have customers calling for same day services, and we cannot currently accommodate them. By utilizing this new system, we will be able to accommodate those same day requests and in a timely manner.

GTrans anticipates launching this service with a fleet of five Paratransit vehicles, some of which will be newly purchased. These new vehicles will replace already existing vehicles in our fleet that have far surpassed the end of their useful life of eight years. All vehicles will be ADA accessible and will be equipped to facilitate the use of TAP and cash payments.

Service Details

Between April and July of 2018, as part of the Stantec analysis of our services, GTrans held several community meetings to meet with current riders and get their feedback and opinion, this included our current Paratransit riders. In addition to these meetings, Stantec performed onboard surveys with our customers. The results of these conversations and surveys were that there was 95 percent overall satisfaction with the service. When asked about ways to improve the service, the two factors mentioned were wanting longer service hours and more service into Torrance.

As a result of this feedback, Flexi will be operating a total of 106 more hours a month than our current Paratransit service, the new service hours and fares are listed below.

Service Hours		
Type of Service	**Days of Service**	**Hours of Service**
On-Demand (Within Gardena Only)	Monday – Friday	7:00 AM – 9:00 PM
Paratransit (Hawthorne/LA County)	Monday – Friday	7:00 AM – 5:00 PM
Gardena (Paratransit and On-Demand) / Hawthorne / LA County (Del Aire & Alondra Park)	Saturday	10:00 AM – 5:00 PM
Sunday and Holidays	No Service	No Service

Fares	
Type of Service	**Fare One-Way**
On-Demand	$2.00
Paratransit	$0.75

In terms of our service area, the existing Paratransit service does travel outside the service area to a limited number of satellite locations on specific days. During the pandemic, GTrans eliminated or reduced frequency traveled to some of these locations due to a lack of drivers or customer demand. As we designed the Flexi service, we also received feedback from customers that there was a need to visit Torrance satellite locations more frequently, including the Del Amo Mall. This will be accomplished by providing service to the Del Amo mall on Tuesdays and Thursdays, as well as adding a Torrance location to our every Saturday service. Flexi service for on-demand, non-paratransit customers will be limited to locations within the City of Gardena.

Flexi Service Characteristics	
Flexi On-Demand	Within the City of Gardena city limits only
	Pick up and drop off locations will be at existing bus stops and virtual stops within Gardena: • Specific locations are still under consideration. • Stops will include businesses, key City locations and certain bus stops
Paratransit	Curb to Curb service
	Service will include any locations within the cities of Gardena, Hawthorne and unincorporated Los Angeles County areas of Del Aire and Alondra Park
	Service will include satellite locations on certain days

Flexi Satellite Locations		
Days	**Area**	**Location**
Mon	Redondo Beach	South Bay Galleria
Mon/Wed/Fri	Inglewood	Centinela Hospital
		Centinela Freeman Medical Center
		Inglewood Civic Area
		Inglewood Social Security Office
Tue/Thurs	Torrance/South Bay	Little Company of Mary
		Torrance Memorial
		Torrance Social Security Office
		UCLA/Harbor General Hospital
		Torrance Promenade
Saturday	Torrance	Torrance Promenade

Goals and Metrics

The primary goals for the new service are to provide a safe, reliable more cost-effective service for our current Paratransit users as well as better community access for residents and visitors to the City of Gardena, including those customers who used GTrans Line 4. This includes accommodating both scheduled and spontaneous passenger boarding in lower demand areas.

In an effort to streamline how we schedule and dispatch rides we will integrate on-demand trip planning and technology into GTrans service delivery.

To alleviate cost and help reduce the amount of vehicles on the roads we hope to replace short-distanced, local, single-occupancy vehicle trips with alternative transit or shared vehicle options for riders.

We are also looking to provide an updated and efficient paratransit service for our senior and disabled community.

<u>Service Metrics for Evaluation</u>

The pilot will be conducted over 18 months. After a year of data, GTrans will evaluate the effectiveness of the new service, using several transit industry benchmarks. These metrics include the efficiency of the service and the effectiveness and quality of service we are providing. Below are some examples of how we will track those areas:

1. Service Efficiency
    a. Percent of Total Shared Rides
    b. Vehicle Cost per Hour
    c. Ridership – Hourly, Daily, Monthly
2. Service Effectiveness
    a. Overall Passengers per Vehicle Hour (PVH)
    b. Total Completed Rides
3. Service Quality
    a. Average Ride Rating

Outreach

The introduction of any new service constitutes a change for our customers, which can be a challenge. Especially for our Paratransit passengers, we understand that adapting to new features, vehicles and drivers can be difficult to navigate. In anticipation of this, we have developed a comprehensive plan to not only announce the service to the general public, but also to contact our current Paratransit users and the Senior population of Gardena to make sure they understand these changes.

GTrans engaged Arellano and Associates to lead our outreach efforts to make this transition as smooth as possible. Outreach meetings will include an introduction to the service, information on how to create profiles in the new system, introduction to the new vehicles, and general questions and answers. To make the transition easier, we intend to deploy the service first to only the Paratransit customers before we introduce the general public, providing ample time and assistance to our customers who may need some additional help.

Meetings with our Paratransit riders and Paratransit eligible members of the community are already underway and detailed below. Once the service is introduced to our Flexi Paratransit customers, we will deploy our marketing and outreach campaign for the Flexi On-Demand customers as well. These meetings were designed to both provide information and education to both existing customers and non-customers. For existing customers, GTrans provides transportation to and from the meetings. To date we have held four meetings with our Paratransit customers and senior population, with another eight meetings planned before launch. Future meetings will include locations in Hawthorne, as well additional meetings at Gardena's Rowley Park and Nakaoka Center, etc.

- November 28th customer meeting at Nakaoka Community Center
- December 4th meeting with the seniors of the Second Time Around Senior Club at Rowley Park.
- December 4th customer meeting at Nakaoka Community Center.
- December 5th Senior Lunch at Nakaoka, including customers and non-customers.

During these meetings we heard that many customers were concerned that they would no longer be able to call to reserve their ride, but we assured them that this option will not be eliminated. There was also concern over having to share a ride with the general public, and we assured them that all of the same safety precautions our operators take on our fixed route service would be in effect for Flexi service. We heard that customers are looking forward to the added service hours and same day booking options. We will continue to meet with the senior populations to ease any worries on how to utilize the new Flexi service.

In terms of outreach for the on-demand customers, the plan includes additional community meetings that partner with the City's established Neighborhood Watch meetings and take advantage of the many City events in which GTrans already participates. The campaign will also include, print and digital advertising, advertising on social media, collateral on the (Take-Ones and Car Cards), meetings and outreach to local partners and businesses, on our website, and through two videos developed by our software vendor, RideCo.

Next Steps

1. Work with the City of Hawthorne and LA County to renegotiate service contracts to reflect the new service parameters.
2. Receive our first two new vehicles and will outfit them with the new Flexi livery.
3. Hire new Flexi Dispatcher and new Flexi Operator positions to cover extended service hours.

4. Conduct training (software and operational) with new Flexi team beginning in February 2024.
5. Deploy a partial launch of Flexi with our Paratransit customers in late February.
6. Deploy full launch of service to all parties at the end of April 2024.
7. Evaluate the success of service following 12 months of the 18-month pilot.
8. Provide results to Council in the Spring of 2025 to determine the future of the service.

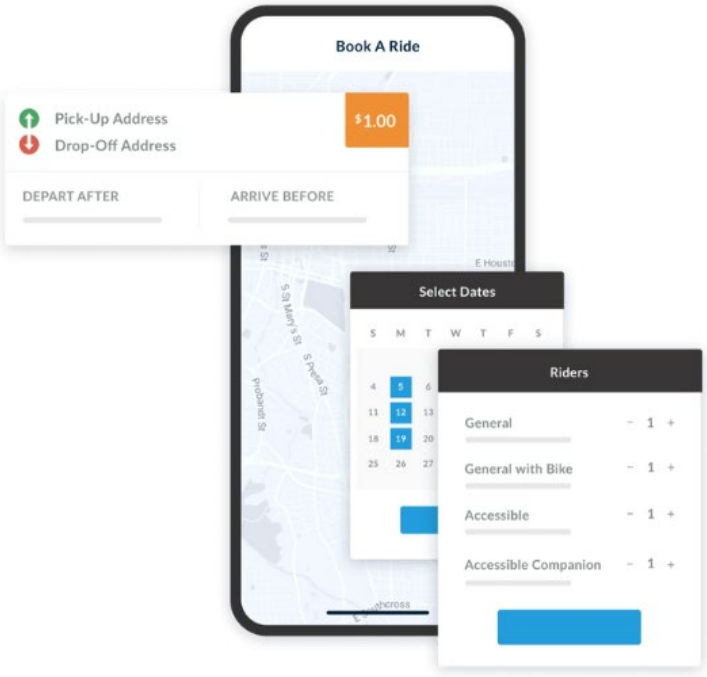
Service and Cost Comparison

The pilot period for the Flexi Microtranist service is 18 months. Flexi service will nearly triple the service hours provided under the current Paratransit service, as it will now be available for customers with a greater daily service span and on Saturdays. With the additional service hours provided, an increase in cost of $638,492 is estimated, or 67 percent. Despite the increased cost, the combining of both Paratransit and On-Demand trips results in a lower estimated cost per passenger, from $61.70 to $52.50, or roughly 18 percent. A comparison of the existing and proposed service is shown below.

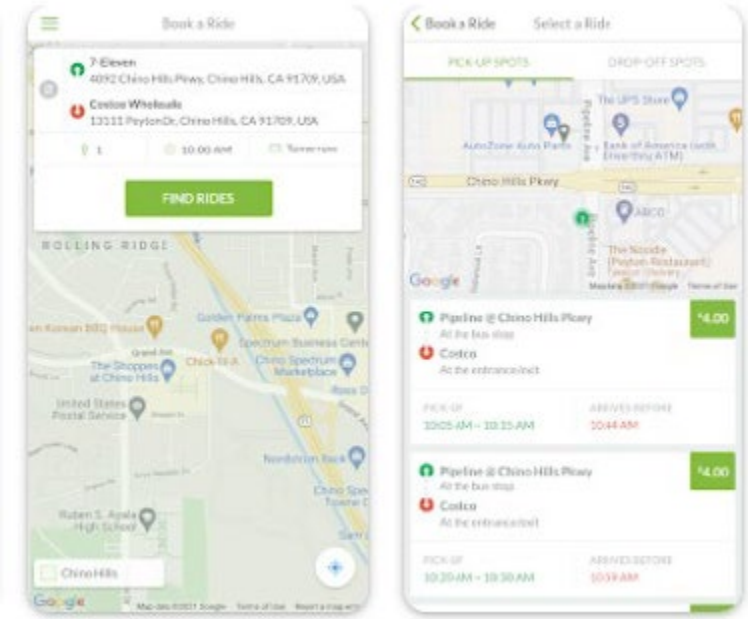
Cost Comparison – Over 18 Months		
	Current Paratransit Service	**Flexi Powered by GTrans***
Total Cost	$958,512	$1,597,004
Service Hours	7,713	20,436
Cost Per Service Hour	$124.27	$78.14
Passengers	15,536	30,420
Cost Per Passenger	$61.70	$52.50
Paratransit Service Comparison		
	Current Paratransit Service	**Flexi Powered by GTrans***
Fare	$0.75	$0.75 for Paratransit and $2.00 for General.
Citizens Eligible	60+ and disabled individuals	60+, disabled individuals and anyone traveling within Gardena city limits.
Reservation Timing	24 hours in advance	Same day bookings available

*Flexi performance numbers are estimates based on educated predictions during the 18-month pilot period.

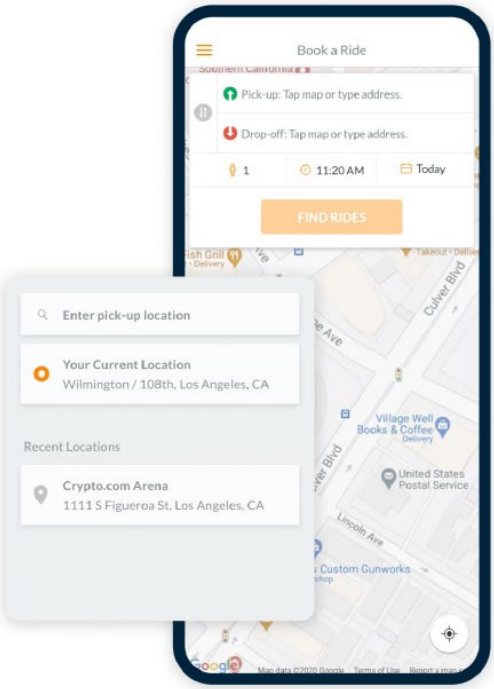
IN CONCLUSION,



Flexi service will provide solutions for two areas of operations that have had high operating costs and low performance for GTrans. We also believe that this new service will be beneficial to our current Paratransit customers as it will provide more hours of service and the opportunity for same day bookings, providing more options for events, outings, and appointments. Our goal is to provide our customers of Paratransit, those who utilize Line 4, as well as new customers, with a convenient, safe and fast way to travel within our City. This service may not only increase our ridership but also increase the ways citizens access our City and its many businesses and activities.



Staff respectfully recommends that Council approves 18-month Microtransit Service Pilot Concept



Submitted by: *Ernie Crespo, Director of Transportation* Date: December 6, 2023

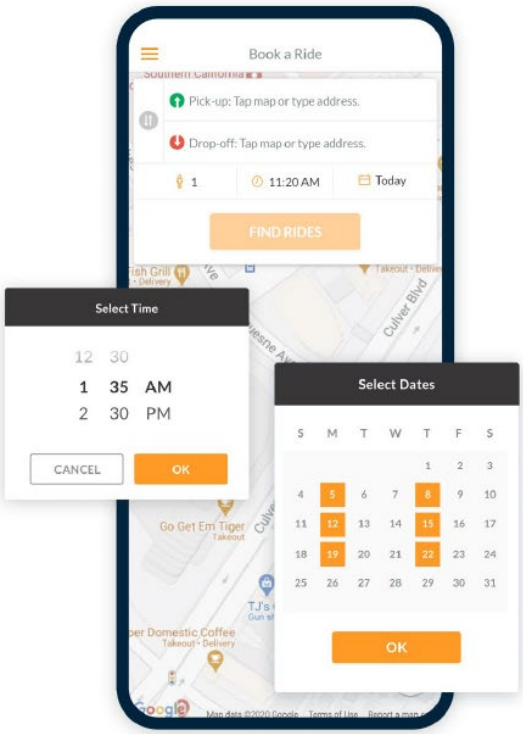
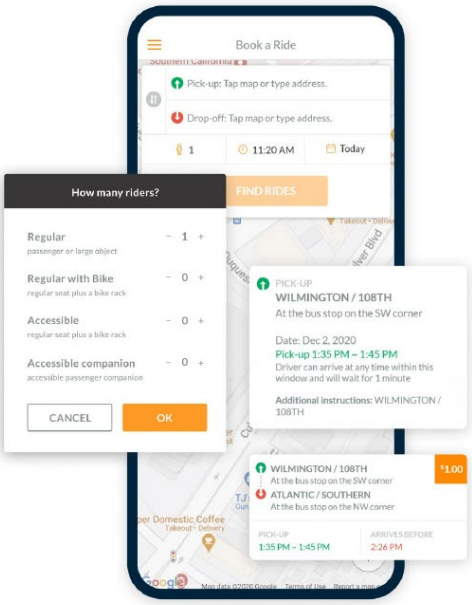
Examples of RideCo Booking Application



1

Type in pick-up or drop-off location

Or, choose locations from recent locations.



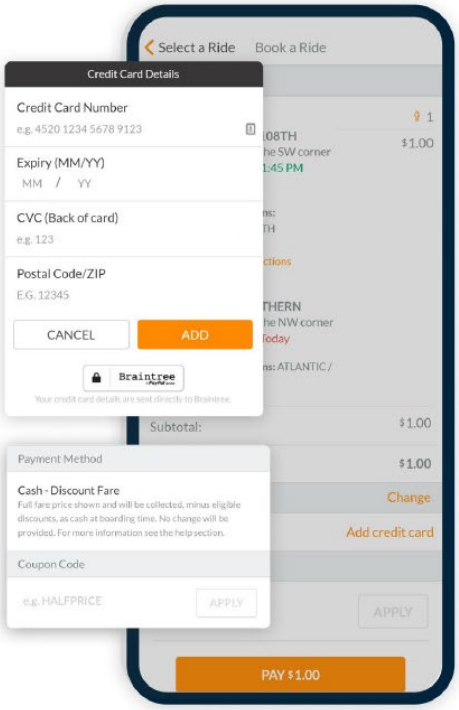
Or, drop pins on the map to select pick-up and drop-off location.

2

Select the time and date of the trip

To schedule single or multiple trips in the future, select the pick-up and drop-off times and dates.

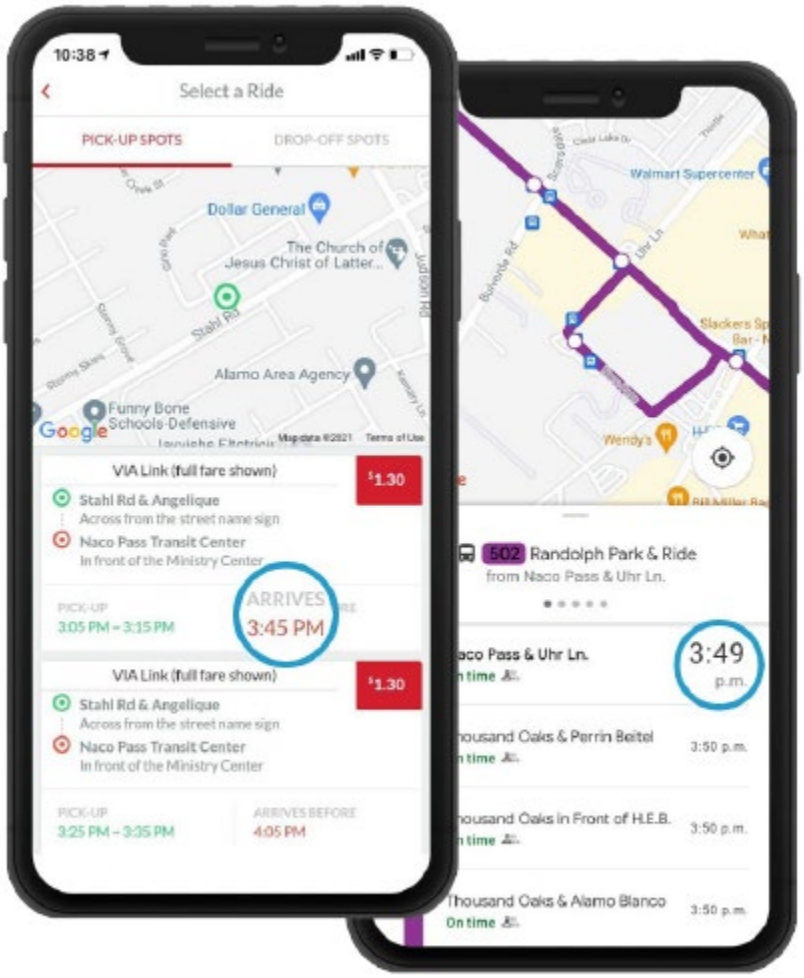
3



Select seat type

Seat type fields and supporting text are customizable to the mobility options you support. Different fares can be set-up for each rider type.

Each search result includes both a "pick-up" and "arrives before" time. This is our promise to pick-up and get riders to their destinations on time.



Additional instructions confirm origin and destination as well as remind the rider about the pick-up window.

RideCo's platform incorporates real-time inputs and analyses such as traffic data, current and pre-booked demand, vehicle locations and more in its dynamic routing engine. The out put is an on-time service that ensures riders know their pick-up and drop-off times across trip options in real time.

City of Gardena

Gardena City Council Meeting

AGENDA REPORT SUMMARY

Agenda Item No. 18.B
Section: DEPARTMENTAL ITEMS - TRANSPORTATION
Meeting Date: December 12, 2023

TO: THE HONORABLE MAYOR AND MEMBERS OF THE GARDENA CITY COUNCIL

AGENDA TITLE: Approve Purchase of Two Electric Microtransit Vans for a Total of $301,904 and a Program Total of $332,094

COUNCIL ACTION REQUIRED:
Staff Recommendation: Approve Purchase

RECOMMENDATION AND STAFF SUMMARY:
In preparation for GTrans' new On-Demand, Microtransit service, GTrans wishes to purchase new, ADA accessible vans that will replace aging minivan vehicles in the fleet. To operate this service, GTrans intends to replace four of its existing vans with new vehicles. In July of 2023, Council approved the purchase of two Braun Ability ProMaster 3500 gasoline vans, which are scheduled to arrive by the end of the year. GTrans is now ready to purchase two (2) battery-electric vans, in keeping with GTrans desire to eventually transition to a fully electric fleet.

Staff brought several types of these vehicles on-site to allow GTrans' operations, maintenance and administrative staff an opportunity to sit in the seats, inspect the engine, and test wheelchair accessibility and access, etc. Ultimately, staff settled on two types of vehicles: the Braun Ability ProMaster 3500 gasoline van, and the Ford E-Transit Electric passenger van. The E-Transit vans are now available for purchase.

GTrans will purchase two, Class Z1- Ford E-Transit Gamechanger vans. The E-Transit Gamechanger van is a modified Ford OEM chassis with an electric motor and rear wheel drive. The vehicle has a 68 kWh battery pack under the floor, can seat between six and eight passengers and allows up to two wheelchair positions, depending on the seating configuration. These vehicles provide more seating and space than the current minivans now used in GTrans' Special Transit service. The purchase will include installation of a nine-camera, on-board surveillance system, which will be connected with GTrans' current system on the rest of the fleet of buses, vans and trolleys. Among many of the new features, the vehicles will include backup cameras and a Seat Link system. Once purchased, GTrans will arrange for the installation of a new livery and GTrans-specific signage and decals.

GTrans is a member of the California Association for Coordinated Transportation (CALACT) and thus able to participate under an assignment clause with options authorized by CALACT/Morongo Basin Transit Authority (MBTA) under their joint procurement for Accessible

Transit/Paratransit Vehicles Contract No. 20-01 Class Z from Creative Bus Sales (d.b.a. Model1). For two vehicles and associated equipment, the cost is $301,904 inclusive of sales tax and fees. GTrans also wishes to include a 10 percent contingency, or $30,190, to account for any unforeseen changes, only to be approved in advance by GTrans staff.

Therefore, staff respectfully recommends that Council authorize the purchase of two vehicles from Creative Bus Sales (d.b.a. Model1) for the cost of $301,904, and a program total of $332,094 which includes a 10 percent contingency.

FINANCIAL IMPACT/COST:

GTrans has local capital funds available and designated for the purchase of these vehicles, and included in FY24 capital budget previously approved by the City Council. There is no impact to the General Fund.

CALACT CALIFORNIA ASSOCIATION FOR COORDINATED TRANSPORTATION

12/4/2023

Rachel Yoo
13999 S Western Avenue
Gardena, CA 90249

Dear Rachel:

The CALACT-MBTA Purchasing Cooperative is pleased to make an assignment as detailed in the Assignment to Purchase Agreement.

Additional information is available on the CALACT website at www.calact.org/purchasingco-op that documents the procurement process used by the Cooperative to solicit and award Contract No. 20-01. Prior to acceptance of the vehicles you order, a Post-Delivery Audit must be conducted by your agency if you are using Federal Transit Administration funding to purchase the vehicle.

Thank you for purchasing your vehicles through the Cooperative. Please don't hesitate to contact me if you have any questions at 916-920-8018 or email dan@calact.org.

Sincerely,

Daniel Mundy

CALACT CALIFORNIA ASSOCIATION FOR COORDINATED TRANSPORTATION

Assignment to Purchase Agreement

Assignment #20-01-0950

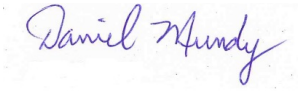
The CALACT-MBTA Purchasing Cooperative, "Assignor", hereby assigns to Gardena, City of, "Assignee", 2 options to purchase Transit Vehicles ("Vehicles") from the Joint Procurement Cooperative at a price and under the terms and conditions contained in Assignor's Contract No 20-01 with the Contractors awarded to on the Procurement. Only those vehicles and optional features may be purchased using the Solicitation and the purchase may only be from a Seller listed on the Schedule. Specifically, the Assignment shall have the right to purchase:

Quantity and Type of Vehicle(s):

(2) Mobility Trans Class Z-1

Total # of Vehicles: 2

Such ability to purchase commenced, per terms of Contract, on 12/4/2023, and may be exercised at any time on or before 11/4/2024. Assignee must communicate any changes in the order in particular cancellation to the Cooperative as soon as possible.



With respect to the Vehicles assigned hereunder and this Assignment, Assignee agrees to perform all covenants, conditions and obligations required of Assignor under said Contract and agrees to defend, indemnify and hold Assignor harmless from any liability or obligation under said Contract. Assignee further agrees to hold Assignor harmless from any deficiency or defect in the legality or enforcement of the terms of said Contract or option to purchase thereunder. Assignee agrees and understands that Assignor is not acting as a broker or agent in this transaction and is not representing Seller or Assignee, but rather is acting as a principal in assigning its interest in the above-referenced assignment to purchase the Vehicles under the Contract to Assignee.

Please be advised that assignment of said vehicles does not constitute a recommendation or endorsement of this product by the Cooperative. The Assignee is responsible for its choice of vehicle product and options selected. Assignee is responsible for vehicle inspection, acceptance and enforcement of any contract provisions. While PreAward verifications of Buy America, FMVSS and Purchaser's Requirements have been accomplished, Assignee is responsible for Post Award due diligence in this regard.

Purchasing agencies are responsible for and are to exercise due diligence in evaluating the suitability of these vehicles for their operating environment and are responsible for determining their eligibility for funding. In particular, the Cooperative urges you to review the Altoona test report for the vehicle you are purchasing.

Supporting documents for your records may be downloaded from our website at www.calact.org for any reviews or audits your agency will be subject to. Please contact CALACT staff for any assistance you may need at 916-920-8018.

Assignee hereby unconditionally releases and covenants not to sue Assignor upon any claims, liabilities, damages, obligations or judgments whatsoever, in law or in equity, whether known or unknown, or claimed, which they or either of them have or claim to have or which they or either of them may have or claim to have in the future against Assignor, with respect to the Vehicles or any rights whatsoever assigned hereunder.

Daniel Mundy
